VALE OF GLAMORGAN

REPLACEMENT LOCAL DEVELOPMENT PLAN

2021 - 2036

Volume 3 – Full Representations on the Policy Framework (Excluding Key Sites and Housing Allocations)

August 2026 (Updated October 2026)

RLDP CDLN

VALE of GLAMORGAN BRO MORGANNWG

@VOGCouncil Vale of Glamorgan Council LDP@valeofglamorgan.gov.uk 01446 704681 www.valeofglamorgan.gov.uk

Introduction to Representations Register

This Representations Register provides a copy of the duly made representations received in response to the Deposit Replacement Local Development Plan (RLDP) public consultation, which took place between 28 January 2026 and 11 March 2026. It has been published in accordance with Regulation 19 of the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005.

The Register does not include representations that were not duly made, namely those submitted outside the consultation period or submitted anonymously or without contact details. It also excludes representations that have been withdrawn.

Due to the high number of duly made representations received (over 2,700), it has been necessary to divide the Register into volumes arranged in the order that the policy or proposal appears in the RLDP. Where more than one representation was received on the policy, this has been arranged by representation number.

Volume 1 provides a summary of all representations.

Volumes 2 to 6 contain the full text of representations relating to the Plan itself.

Volumes 7 to 12 contain representations relating to other parts of the evidence base.

The Volumes are as follows:

- Volume 1 – Summary Representations
- Volume 2 – Full Representations on Introduction, Policy Context, Key Characteristics, Themes, Vision and Objectives and Sustainable Growth Strategy and consultation process
- Volume 3 – Full Representations on the Policy Framework (Excluding Key Sites and Housing Allocations)
- Volume 4 - Full Representations on Key Sites (HG1 KS1-KS5)
- Volume 5 – Full Representations on Housing Allocations (HG1, HG2, HG3, HG4)
- Volume 6 – Full Representations on Appendices
- Volume 7 – Full Representations on Background Papers
- Volume 8 - Full Representations on the Integrated Sustainability Appraisal and Habitats Regulations Assessment
- Volume 9 - Full Representations on Candidate Sites
- Volume 10 – Full Representations on the Draft Healthy Placemaking Supplementary Planning Guidance
- Volume 11 - Full Representations on the Green Infrastructure Strategy
- Volume 12 – New Site Submissions

Representations are published in the language in which they were originally submitted. Only one representation was received in Welsh, and an English translation has been provided alongside the original Welsh text.

Where representations were submitted by email, representation form, or letter rather than through the online consultation portal, the original submission has been attached. A redacted version of the submission can be downloaded via the link provided under the ‘Attachments’ heading at the end of the relevant representation.

All representors will have been notified of their individual respondent number, which can be used to help locate specific representations. This number is shown in brackets next to the respondent's name. Each representation also has its own unique reference number, which can be found at the top of the representation.

Please note that if you submitted representations on multiple sections of the RLDP and/or supporting documents, your representation(s) may appear in more than one volume.

4405 Comment

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mr James Osgood [1383]

Summary:

I live in Gileston and object to the Deposit RLDP unless it provides stronger protection for the setting of the GHC and clearer, place-based approach to development affecting Gileston. While I support RE and economic growth in principle, large-scale or energy-related development should be directed to appropriate brownfield sites such as Aberthaw rather than sensitive greenfield land near the coast. Where SD is proposed in this area, the RLDP should safeguard policy support for long-term transport improvements, including the potential for a future rail station or enhanced rail connectivity serving St Athan on the Barry–Llantwit Major line, supporting sustainable travel.

Full text:

Respondent: Resident of Gileston
Area of Interest: Gileston, St Athan and the Glamorgan Heritage Coast

1. Introduction and Context

I am a resident of Gileston and a regular user of the Glamorgan Heritage Coast, surrounding public rights of way, and the local road network between Gileston and St Athan. My comments relate to the implications of the Deposit Replacement Local Development Plan (RLDP) for the setting of the Glamorgan Heritage Coast, the villages of Gileston and St Athan, and the cumulative impacts of strategic development in this part of the Vale.

I recognise the need for the RLDP to support decarbonisation, renewable energy, and employment growth. However, the Plan must do so in a way that protects nationally important landscapes, avoids inappropriate development in sensitive locations, and ensures that communities hosting strategic development receive tangible infrastructure benefits.

2. Protection of the Glamorgan Heritage Coast and Its Setting

The Glamorgan Heritage Coast is one of the Vale's most valuable environmental and recreational assets and is fundamental to the character, identity and wellbeing of nearby communities, including Gileston. While the Deposit Plan recognises the importance of the Heritage Coast itself, there is insufficient clarity and strength in policy terms regarding the protection of its wider setting, particularly from large-scale or industrial forms of development on adjacent greenfield land.

The RLDP should be strengthened to ensure that development proposals within the setting of the Heritage Coast are subject to a robust presumption against development where landscape character, visual amenity, tranquillity, or public enjoyment would be harmed. Without this clarity, there is a real risk of incremental erosion of the coastal landscape through development that may be justified as "strategic" but is poorly located.

3. Gileston and St Athan – Cumulative and Place-Based Impacts

Gileston is a small rural village with limited services and infrastructure, located adjacent to open countryside and the coast. St Athan, while larger and more developed, already experiences pressure from major employment and infrastructure uses, including the former MOD site and proposed strategic employment and energy uses in the wider area.

The RLDP should do more to assess and respond to the cumulative impacts of development affecting this corridor of the Vale, rather than considering sites in isolation. This includes impacts on landscape, traffic, tranquillity, and the everyday experience of residents and visitors.

4. Strategic Energy Development and Site Selection

I support renewable and low-carbon energy development in principle. However, the RLDP should make clear that such development must be directed to appropriate locations, with a strong preference for previously developed or industrial land. In this part of the Vale, the former Aberthaw Power Station site represents a logical location for energy-related uses, given its industrial character and existing infrastructure.

The Plan should avoid creating policy ambiguity that could be interpreted as support for large-scale energy infrastructure on greenfield land in sensitive coastal or rural locations, particularly within the setting of the Heritage Coast.

5. Infrastructure and Fairness to Host Communities

A key concern for residents of Gileston and St Athan is that strategic development brings limited direct benefit to local communities while generating long-term impacts. The RLDP places significant emphasis on growth and strategic infrastructure, but there is insufficient certainty that villages hosting or neighbouring such development will see meaningful improvements in connectivity or services.

In particular, the Plan should take a more proactive approach to safeguarding and planning for enhanced public transport connectivity in the Barry–Rhoose–Llantwit Major corridor. While the delivery of a new rail station serving St Athan and potentially Gileston would be a long-term and multi-agency undertaking, the RLDP could play a critical role by safeguarding land, identifying the corridor as a priority for future rail or rapid transit enhancement, and linking strategic development to long-term transport planning objectives.

Without such forward-looking infrastructure commitments, communities risk bearing the impacts of development without corresponding benefits.

6. Conclusion and Requested Changes

In its current form, I object to the Deposit RLDP insofar as it does not provide sufficient policy protection for the setting of the Glamorgan Heritage Coast, nor does it adequately address cumulative impacts and infrastructure fairness for villages such as Gileston and St Athan.

I would urge the Council to strengthen the Plan by:

Explicitly protecting the setting of the Glamorgan Heritage Coast from inappropriate development

Directing strategic and energy-related development to brownfield and industrial sites wherever possible

Embedding a clearer, place-based approach to cumulative impacts

Committing to long-term transport and infrastructure planning, including safeguarding opportunities for improved rail or high-quality public transport serving St Athan and surrounding communities

Subject to these changes, the RLDP would provide a more balanced and sustainable framework that supports growth while respecting the unique environmental and community assets of this part of the Vale.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mrs Lucy Williams O'Connor [2805]

Summary:

The plan will cause a lot of damage to natural wildlife, reduce green land even more and we do not have the infrastructure to support this. Lots of animals use this land and we are losing so much space to houses and families that don't always look after the spaces provided. This town is already so full of houses, there cannot possibly be room for more.

Full text:

The plan will cause a lot of damage to natural wildlife, reduce green land even more and we do not have the infrastructure to support this. Lots of animals use this land and we are losing so much space to houses and families that don't always look after the spaces provided. This town is already so full of houses, there cannot possibly be room for more.

Change suggested by respondent:

To cancel the plan of developing housing. Too much green land is being lost and it is having a detrimental effect on the planet and the world we live in and our community. People are expected to make it to work to provide for families and contribute to the economy, how can we do this when the roads are flooded with traffic. Losing so much green space will also impact wildlife which is another vital factor to the way of human life. How can we keep building houses, surely one day we will run out of room and is it worth getting to that stage?

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Miss Emily Harris [2816]

Summary:

The population of Rhoose is already too high and does not have the facilities needed to accommodate current residents, let alone the additional residents the plan aims to accommodate. It is impossible to get a doctors appointment, schools are overcrowded and underfunded, public transport is poor and the only road out of the village towards Cardiff and Barry is already too busy in the morning, especially as it is the only road from Rhoose, St Athan, Llantwit and surrounding villages. Traffic will become a nightmare unless NO houses are built. No one in Rhoose supports this.

Full text:

The population of Rhoose is already too high and does not have the facilities needed to accommodate current residents, let alone the additional residents the plan aims to accommodate. It is impossible to get a doctors appointment, schools are overcrowded and underfunded, public transport is poor and the only road out of the village towards Cardiff and Barry is already too busy in the morning, especially as it is the only road from Rhoose, St Athan, Llantwit and surrounding villages. Traffic will become a nightmare unless NO houses are built. No one in Rhoose supports this.

Change suggested by respondent:

Find somewhere other than both Rhoose and St Athan to build houses. Do not build on farms and existing green spaces and spend the money to support the community, rather than adding increased pressure on the community, local facilities and local residents.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Ms Maxine Levett [698]

Summary:
1. Future Wales – Growth Area Classification
The RLDP appears to assume that the Vale of Glamorgan is a “growth area,” but Future Wales does not classify the Vale, especially the western Vale, as part of the Cardiff, Newport and the Valleys National Growth Area.
Key points:
• Future Wales identifies specific National Growth Areas, and the Vale is not within them.
• The document additionally defines countryside communities, covering rural parts of Wales including the western Vale.
• Welsh Government stresses that LDPs must be in general conformity with Future Wales, which makes the spatial designation critical for soundness.
Could you please confirm:
• Where Future Wales designates the Vale (or the western Vale) as a growth area; and
• The evidence used by the RLDP team to justify treating the authority as such.

2. Applicability of Future Wales Policies 4 & 5 to the Western Vale
Given that the western Vale is identified as a rural area, Future Wales Policies 4 and 5 must apply:
• Policy 4: LDPs must identify rural communities, assess their needs, and set out supportive policies.
• Policy 5: LDPs must plan positively to meet the employment needs of rural areas.
Bullet point issues:
• The western Vale is clearly categorised as rural, not as a growth-focused settlement zone.
• St Athan may have distinct airport related status, but this does not reclassify the surrounding rural settlements.
• The RLDP should demonstrate how Policies 4 and 5 are shaping its spatial and economic approach.
Could you outline how the RLDP intends to incorporate Policies 4 and 5 into its strategy?

Full text:

I hope you are well. I'm writing to raise several concerns regarding the way the Replacement Local Development Plan (RLDP) currently interprets Future Wales: The National Plan 2040, particularly in relation to spatial strategy, rural policy requirements, and biodiversity designations. I would appreciate clarification on the following points.

1. Future Wales – Growth Area Classification
The RLDP appears to assume that the Vale of Glamorgan is a "growth area," but Future Wales does not classify the Vale —especially the western Vale—as part of the Cardiff, Newport and the Valleys National Growth Area.
Key points:
• Future Wales identifies specific National Growth Areas, and the Vale is not within them.
• The document additionally defines countryside communities, covering rural parts of Wales including the western Vale.
• Welsh Government stresses that LDPs must be in general conformity with Future Wales, which makes the spatial designation critical for soundness.
Could you please confirm:
• Where Future Wales designates the Vale (or the western Vale) as a growth area; and
• The evidence used by the RLDP team to justify treating the authority as such.

2. Applicability of Future Wales Policies 4 & 5 to the Western Vale
Given that the western Vale is identified as a rural area, Future Wales Policies 4 and 5 must apply:
• Policy 4: LDPs must identify rural communities, assess their needs, and set out supportive policies.
• Policy 5: LDPs must plan positively to meet the employment needs of rural areas.
Bullet point issues:
• The western Vale is clearly categorised as rural, not as a growth-focused settlement zone.
• St Athan may have distinct airport related status, but this does not reclassify the surrounding rural settlements.
• The RLDP should demonstrate how Policies 4 and 5 are shaping its spatial and economic approach.
Could you outline how the RLDP intends to incorporate Policies 4 and 5 into its strategy?

3. Biodiversity & Green Infrastructure – Key Omissions
The RLDP's Green Infrastructure (GI) Strategy appears to overlook several significant local biodiversity assets:
• Aberthaw Biodiversity Area (Council owned and agreed for retention).
An area with clear potential for designation such as Local Nature Reserve (LNR).
• Cadoxton Ponds Nature Reserve, a major ecological asset not reflected in GI mapping.
[gov.uk]
• Other sites already being considered by Scrutiny for LNR status (e.g., Barry Old Harbour, Rhoose Point), demonstrating an active Council interest in expanding nature designations.
These omissions raise questions about:
• Whether the GI Strategy has adequately captured local ecological opportunities;
• Who authored and quality assured the document, given factual omissions (e.g., mis counting bathing beaches) and lack of reference to key local sites;
• Whether biodiversity "net gain" claims are being interpreted proportionately, rather than reduced to minimal measures such as bird boxes.
Welsh Government expects the RLDP to be evidence led and based on a robust environmental baseline.
Could you confirm:
• Whether Aberthaw, Cadoxton Ponds, and related sites will be added to the GI evidence base;
• Who prepared and signed off the current GI content;
• How biodiversity requirements will be strengthened to reflect site specific ecological value.

4. Next Steps
I would welcome clarification on the above matters and would be grateful for the opportunity to discuss how the RLDP can better reflect:
• The correct Future Wales spatial classification;
• The requirements of Policies 4 and 5 for rural areas;
• Local biodiversity assets and LNR opportunities;
• A stronger evidence-based approach consistent with Welsh Government expectations.
Thank you for considering these points. I appreciate the significant work undertaken on the RLDP and hope these observations are useful in ensuring the plan is fully aligned with national policy and local opportunities.

Change suggested by respondent:

I would welcome clarification on the above matters and would be grateful for the opportunity to discuss how the RLDP can better reflect:
• The correct Future Wales spatial classification;
• The requirements of Policies 4 and 5 for rural areas;
• Local biodiversity assets and LNR opportunities;

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Emma Reed [2653]

Summary:

No evidence is provided within the Plan to better public transport and other infrastructure with the key settlement of Rhoose. Rhoose also does not have good existing public transport infrastructure compared to other settlements with only 1 train per hour and 1 bus service which is long and tedious. Rhoose has few shops and most shops are accessed in Barry. Most doctors are in Barry or Llantwit Major. Rhoose has no comprehensive school. Rhoose is a town with the facilities of a village and should be treated as such.

Full text:

No evidence is provided within the Plan to better public transport and other infrastructure with the key settlement of Rhoose. Rhoose also does not have good existing public transport infrastructure compared to other settlements with only 1 train per hour and 1 bus service which is long and tedious. Rhoose has few shops and most shops are accessed in Barry. Most doctors are in Barry or Llantwit Major. Rhoose has no comprehensive school. Rhoose is a town with the facilities of a village and should be treated as such.

Change suggested by respondent:

Rhoose to have better transport and infrastructure both public and road before any further development is considered. Rhoose needs local accessible facilities such as comprehensive schools, doctors etc before any further development. The plan should provide these to ensure it is sound. The evidence does not point to Rhoose being sustainable.

5114 Support

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth

The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.

With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward.

The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,

Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to

settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.

The Level of Growth - Homes and Jobs

The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).

Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.

BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.

Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.

The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.

We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.

The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.

The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.

In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.

Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters.
It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have

since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.

Renewable Energy

Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?

It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.

The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.

Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.

The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.

Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.

Minerals

The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.

BMV Agricultural Land

The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:

• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and
• Candidate site assessments.
•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.

Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry:
"Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mr Ken Timmins [1489]

Summary:

There needs to be a Plan for Wales that includes Housing, Jobs, better Public Transport. The plan should also take into account the wellbeing of the people who live there. This should include much more local, detailed examination of communities, their feelings, the mix of land use. The plan below is mainly about building housing. Destroying farm land goes against the feeling of what Wales is. I just feel that this is a plan to satisfy the needs of the UK Government and to make developers richer by building over our legacy to future generations.

Respondent: Mrs Susan Evans [712]

Summary:

This indicates that Rhoose, St Athan and Llantwit Major are suitable for additional housing as they are served by existing public transport, however this does not take into account that train services are 1 per hour and have regularly had the promise of increase deferred and those trains at peak times are already overloaded. St Athan does not have a train station. Buses are also 1 per hour in Rhoose, so this can not be considered well served.
Road access is also very overloaded along Port Road, and proposals to mitigate this are based on outdated traffic counts.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mr David Entwistle [3264]

Summary:

The plan in its current form is far from sustainable. The amount of housing proposed will overwhelm the current infrastructure which already cannot cope with the current population. The locations are poorly thought out and do not have adequate access to public transport. The plan does not propose adequate solutions to address the lack of public transport and other infrastructure. Simply saying additional infrastructure to support the sale of growth will be identified is not acceptable. The strategy lacks clarity, depth and is based upon inadequate outdated information.

The plan does not propose adequate solutions to address the lack of public transport and other infrastructure. Simply saying additional infrastructure to support the sale of growth will be identified is not acceptable. The strategy lacks clarity, depth and is based upon inadequate outdated information.

Change suggested by respondent:

The plan needs to lay out more clearly how infrastructure and public transport links will be improved prior to the proposal of new housing developments. Having read through the data much of the information given is based upon, it seems to be out of date and limited in scope. New data needs to be collected and in much greater depth, especially around issues such as traffic volumes. This would allow better decisions to be made and hopefully highlight issues that residents say is currently a problem but the council seem to be unaware of or ignoring.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Councillor Samantha Campbell [1002]

Summary:

The deposit plan is based around public transport being sufficient in areas that it is not. Rhoose, St Athan, and Llantwit Major are not accessible frequently without vehicular transportation, thus making the base plan for this moot, as it specifies public transport. Infrastructure within these areas is not sufficient for current residents let alone future development.

Full text:

The deposit plan is based around public transport being sufficient in areas that it is not. Rhoose, St Athan, and Llantwit Major are not accessible frequently without vehicular transportation, thus making the base plan for this moot, as it specifies public transport. Infrastructure within these areas is not sufficient for current residents let alone future development.

Change suggested by respondent:

Rhoose, St Athan, Llantwit Major need to be removed from the plan until sufficient public transport and infrastructure is in place for further development. Developers are being coined as the placemakers of these plans which is incorrect as S106 monies is not sustainable for development given inflation costs, deliverability of projects and also uptake of schemes.

Adding and improving road junctions will not overcome the increased demand on our roads.
The water authority cannot be trusted to dispose of increased sewage/rainwater. They don't even cope with existing load (witnessed by the 'safer-seas' app.) Tourists need to be attracted, not repelled by sewage floating in the sea.

Change suggested by respondent:

The plan needs to show that Barry has reached its maximum size and is a clean and healthy place to live in. We now need new settlements away from existing towns and villages. Margins either side of main roads can accomodate many houses and further use of such land should be made to spread housing around the area. We do not want to all be crammed into one massive town.

Lack of road and basic infrastructure (sewage capacity, electricity + gas grids) - Dr, dentists etc..

Change suggested by respondent:

Much more consideration needs to be taken into account of know bottle necks e.g the plan states "proposed railway stations" - it should be "Actual railway stations" -- until its built its not available for use -- same applies for estate parks / facilities that don't have the funds ring fenced before construction of estates begins and then doesn't get completed e.g. Barry waterfront.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: HBF (Mr Mark Harris) [538]

Summary:

The plan lacks aspiration and does not provide a level of growth in line with the Vale's role as part of the national growth area identified in Future Wales.

The plan's role is to balance the 'need' for housing in a sustainable way, rather than limit delivery.

The plan's housing requirement is being limited by a level of delivery lower than the plan has previously achieved.

Delivering more housing will support economic growth and deliver more affordable homes.

The latest Welsh Government housing needs data requires an increase in the level of housing proposed.

Full text:

The current plan was adopted before Future Wales identified the Vale of Glamorgan as a national growth area; therefore, planning to continue delivering at the same average rate as before this change in status clearly lacks ambition.

Para 5.8, there is no mention that the ten-year period used includes the pandemic and a significant increase in building costs, both of which slowed housebuilding rates and brought down the average annual delivery rate.

HBF suggests a higher rate of annual delivery could be achievable, as demonstrated by previous annual completions of 917 at its highest point and with six of the ten years higher than 526. This is supported by the Council's document BP7 Housing and Employment growth options, which identifies the 5yr build rate average (2016-2021) as 780 units, again well above that currently suggested by this plan.

In order to meet the high demand for affordable homes, a larger housing target would deliver more affordable homes, as each site would be subject to a percentage contribution of affordable homes.

Although it is right for the plan to be as sustainable as possible, a balance also has to be achieved, due to the position of the Vale of Glamorgan so close to Cardiff and Bridgend, there are always going to be job opportunities outside of the authority. Both Cardiff and Bridgend have very good linkages by rail, so such commuting can easily be achieved sustainably. In fact, the plan has said that its strategy is to place new development close to these public transport facilities. HBF consider that the level of employment planned within the Vale of Glamorgan should not be a limit on the level of housing proposed. This is an example of where cross-boundary issues need to be given more consideration, particularly due to the Vale's role as part of the wider national growth area.

The latest housing needs data released by the Welsh Government shows a significant increase in the need for affordable housing to meet unmet need and an increase in annual arising need. These figures both exceed those currently in Future Wales. This new data means the plan should increase its housing requirement to take account of this increased housing need. HBF suggests this adds to the previous reasons why the housing requirement figure should be increased.

In terms of detailed wording, HBF questions whether a plan can deliver. It can allocate land to allow for delivery, but the plan can't actually deliver.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: HBF (Mr Mark Harris) [538]

Summary:

In line with the comments already made on point 1 of the sustainable growth strategy, the HBF considers that the level of housing proposed lacks ambition and is not in line with the Vale of Glamorgan's position as a regional growth area in Future Wales.

The words 'including a minimum of 3,070 affordable homes' should be changed to ' a target of 3,070 affordable homes'. The reason for this is that a minimum suggests that it should be more; however, other relevant housing policies are worded to provide for a defined number or target. This change in wording does not stop more from being delivered.

The approach to limiting housing development, other than affordable-led schemes with a minimum of 50% affordable, in the identified towns and villages, restricts the ability of SME developers and, therefore, the range of homes that might be provided by the plan.

The HBF questions the wording under the heading 'Infrastructure', which is not appropriate wording, as it is part of the plan's role to identify the necessary infrastructure to deliver the level of growth proposed. The provision of infrastructure, which is necessary for development, is covered by other policies in the plan.

Why is the housing flexibility allowance figure not included in this policy?

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Barratt Redrow Homes [2669]

Agent: Lichfields

Summary:

Policy SP1 proposes delivering 7,890 dwellings by 2036, including 3,070 affordable homes, with new sites outside Strategic Growth Areas limited to small-scale affordable housing schemes. However, Welsh Government 2022-based projections estimate households in the Vale of Glamorgan will increase from 57,676 in 2021 to 67,299 by 2036, a rise of 9,623 households. With a 4% household-to-dwelling conversion uplift, the required dwellings would be 10,008, significantly above the plan target. The policy also proposes 205 affordable homes per year, far below the LHMA 2023 identified need of about 1,075–1,114 annually, meaning affordable housing delivery would meet only 18.4% of identified demand.

Full text:

Policy SP1 sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.

The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SP1. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SP1. The number of overall dwellings identified in Policy SP1 will therefore not meet the identified household growth needs of VoG for the RLDP period. The Council should review the position in terms of the updated household projections.

It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SP1 seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SP1 therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.

Change suggested by respondent:

In order for Policy SP1 to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:

"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"

Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites in appropriate Primary and Minor Rural Settlements. In order to meet the true identified housing needs of VoG during the RLDP period, Primary and Minor Rural Settlements will likely need to accommodate further new dwellings than the RLDP currently allocates (please refer to our comments below on Policy SP2 and Policy HG4 for further commentary).

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mrs Victoria Tipples [2547]

Summary:

Why is all the housing being considered all along one main road from Rhoose to Weycock Cross? The area can’t handle the current level of traffic. One small car breaking down along that road chokes up the whole of Barry. Then you want to add 1000+ houses along the same route. How can this not be seen as a poor decision? We all understand that there needs to be new housing, but surely more thought could go into choosing a more suitable area to build.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mr Steve Ashman [3161]

Summary:

There is a problem with traffic across Barry and Rhoose. The college plus more houses being built at Rhoose point, the ongoing battle at Model farm as well as more houses being built at Weycock cross will add to traffic congestion. There also is only one train and bus an hour so if you're trying to get cars off the roads these need to be increased.

Full text:

I went to the consultation meeting in Rhoose yesterday. My questions are why is an access road being built to the bypass instead of sending the traffic through the village. Also no amenities are being provided as what happened with Rhoose point. There is also the problem with the college traffic plus more houses being built at Rhoose point and also the ongoing battle at Model farm. More houses are being built at Weycock cross adding to traffic congestion. The proposed changes to Weycock cross roundabout will not work because if you put traffic lights on port road to allow traffic out of the proposed development by the toby inn the amount of traffic coming from Rhoose would be a nightmare. If you lived around here you would know that you only have to have roadworks on port road coming from the airport and it's gridlocked for hours. There also is only one train and bus an hour so if you're trying to get cars off the roads these need to be increased.

6699 Support

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Persimmon Homes (East Wales) [1068]

Agent: Asbri Planning

Summary:

Sustainable Growth Strategy (Policy SP1)

The Deposit Plan's overarching strategy in relation to sustainable growth is supported. The primary focus of concentrating housing growth within the 'Strategic Growth Area' (i.e. where the main centres of population are accommodated, and which are served by a range of facilities and services, and are accessible by a range of transport modes) as outlined by Policy SP1 is considered appropriate and will allow for the delivery of sustainable and resilient communities.

As per previous representations submitted by Asbri Planning on behalf of Persimmon Homes in relation to the RLDP Preferred Strategy, the prior identification of the strategic-scale (1,500 unit) Key Site at North East Barry was considered to represent an over-reliance on one site to meet the housing demand of the Authority's Key Settlement (with associated constraints in relation to the delivery of units on a strategic-scale site within the early mid part of the plan period).

It is considered that the inclusion of North West Barry as a Key Site, supplemented by a number of smaller housing allocations as identified in Policy HG1, will ensure that the housing requirement for the Barry can be met in a robust and deliverable manner.

Full text:

We write specifically with regard to the Key Site at 'North West Barry' (Policy SP4: KS1). As the Authority are aware, a significant amount of supporting information has been prepared in relation to the Key Site over the course of the preparation of the Replacement LDP to date – this detailed evidence has clearly demonstrated that the inclusion of 'North West Barry' as a Key Site with the Replacement Plan fully accords with the Replacement LDP strategy. Furthermore, the detailed submissions have evidenced that the site is entirely deliverable and viable.

In summary, this representation sets out support for the inclusion of Land at North West Barry as a Key Site within the Replacement LDP. Our Client (Persimmon Homes) is fully committed to the delivery of the allocation, in accordance with the policies of the Replacement Plan (both site-specific and plan-wide policies inclusive).

We would highlight that although the representation provides overarching support for the Deposit Plan (and the inclusion of North West Barry as a Key Site), a number of detailed objections are submitted in relation to specific elements of the proposed wording of the Key Site policy (HG1: KS1). In addition, the wider policies of the Deposit Plan have been reviewed in detail and comments are submitted accordingly.

Background

By way of background context, as the Authority are aware, a Candidate Site representation was submitted on behalf of Persimmon Homes in relation to Land at Weycock Cross, Barry, at the Stage 1 Call for Sites in September 2022 (Site Ref. 449). The land (circa 7 hectares) was put forward for inclusion in the Replacement LDP for a housing allocation (for circa 180 units). Within the Replacement LDP Preferred Strategy (published November 2023), the Candidate Site at Weycock Cross was not identified as a Key Site, in light of the preferred allocation of 1,500 units at land at North East Barry. Further to issues arising in relation to the deliverability of the North East Barry Key Site, the Authority subsequently consulted on alternative options for the provision of sufficient housing land within Barry, with the Candidate Site at Weycock Cross ('North West Barry') identified as capable of delivering 376 units (as taken forward within the Deposit Plan). A significant degree of supporting survey and assessment work has been prepared in relation to the North West Barry Key Site which serves to demonstrate that the site (at a capacity of 376 units) presents a sustainable, deliverable and viable allocation, capable of accordance with national sustainable placemaking outcomes.

Sustainable Growth Strategy (Policy SP1)

The Deposit Plan's overarching strategy in relation to sustainable growth is supported. The primary focus of concentrating housing growth within the 'Strategic Growth Area' (i.e. where the main centres of population are accommodated, and which are served by a range of facilities and services, and are accessible by a range of transport modes) as outlined by Policy SP1 is considered appropriate and will allow for the delivery of sustainable and resilient communities. As per previous representations submitted by Asbri Planning on behalf of Persimmon Homes in relation to the RLDP Preferred Strategy, the prior identification of the strategic-scale (1,500 unit) Key Site at North East Barry was considered to represent an over-reliance on one site to meet the housing demand of the Authority's Key Settlement (with associated constraints in relation to the delivery of units on a strategic-scale site within the earlymid part of the plan period). It is considered that the inclusion of North West Barry as a Key Site, supplemented by a number of smaller housing allocations as identified in Policy HG1, will ensure that the housing requirement for the Barry can be met in a robust and deliverable manner.

Overall Growth Levels (Policy SP6)

It is acknowledged that the preferred growth option (dwelling-led 10 Year scenario), upon which the RLDP housing requirement figure is based, reflects what has been delivered in the Authority in recent years, and is considered by the Authority to be realistic and suitably ambitious given the Vale's position within the National Growth Area. However, as a general comment, it is considered that targeting a higher/more ambitious growth rate would be appropriate. In reviewing the most recent LDP Annual Monitoring Report (Vale of Glamorgan LDP 2011-2026, 7th Annual Monitoring Report, 1st April 2024 31st March 2025) (published October 2025), it is clear that there is a shortfall in housing delivery in the Vale of

Glamorgan. It is stated that: "Between 1st April 2011 and 1st April 2025, a total of 6,999 dwellings were completed within the Vale of Glamorgan of which 4,641 units were general market dwellings against the 2025 AMR target of 6,387 that should have been developed at this point in the plan period, in accordance with the target. The number of additional general market dwellings delivered is 27.3% below the monitoring target".

In light of the fact that there is a significant shortfall in housing delivery (i.e. currently 27.3% lower than the LDP target), it is considered that a higher growth level for the
Replacement Plan period would assist in rectifying under-delivery, allowing for housing completions to be better aligned with evidence of need (rather than repeating past shortfalls).

On February 12th 2026, the Welsh Government published updated estimates of additional housing need in Wales. The figures replace the 2019-based estimates and draw on the latest available data, including the 2022-based household projections published in late 2025. In summary, Welsh Government identify that there is a current estimated existing unmet need of 9,400 housing units. Estimates of existing unmet need have increased by 64% since the 2019-based estimates, due to a rise in homeless households in temporary accommodation.

In terms of future housing need, on average, between 7,800 and 9,300 additional housing units are estimated to be needed annually over the five-year period from July 2025 to June 2030, with a central estimate of 8,700 from newly arising need. The estimated newly arising need for July 2025 to June 2030 is higher than in the 2019-based estimates. This increase reflects higher projected household growth in the 2022-based household projections compared with the 2018-based projections used previously. The Authority will need to give detailed consideration to the implications of the updated estimates of housing need. As the most up to date projections, the Replacement LDP must properly account for the
new dataset to ensure soundness of the plan. In this regard, it is stated at Paragraph 5.34 of the Development Plans Manual that "In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base."

Accordingly, Paragraph 5.35 goes on to state that "All LPAs should use these projections and the resultant household numbers when considering the level of housing provision for a plan period".

In light of the February 2026 publication of updated estimates of housing need in Wales (which indicate
a substantial increase in both existing unmet housing need and newly arising need), and in the context of the existing under-delivery of units evidenced within the most recent LDP AMR (i.e. which identifies a shortfall in housing delivery of 27.3% on the adopted LDP target), it is considered essential that the overall growth levels for the Replacement Plan are revisited (and increased accordingly).

Policy HG1 KS1 – Land at North West Barry
Overall Support for Allocation

The detailed supporting information prepared on behalf of Persimmon Homes in relation to the Land at North West Barry site to date, including the masterplanning work undertaken in liaison with the Local Authority and their statutory consultees, has demonstrated that a sustainable, high-quality residential development which responds sensitively to both local character and landscape setting can be delivered on the site. It is considered that the allocation of Land at North West Barry (KS1) represents an entirely suitable housing allocation, which has been evidenced as being both viable and deliverable. The
inclusion of KS1 as a housing allocation in the Deposit Plan is therefore welcomed and supported.

Policy HG1 KS1 - Detailed Wording - Objections As stated, although the representations provide overarching support for the Deposit Plan and the inclusion of Land at North West Barry as an allocation, a number of detailed matters are objected to in relation to specific elements of the proposed KS1 policy wording.

It is acknowledged that the Key Site will need to be delivered in accordance with placemaking principles
(as set out in Policy SP4 Placemaking and Policy PGD1 Creating Well Designed Places), and masterplanning work to date has demonstrated that the site is fully capable for compliance with both Policy SP4 and PGD1.

Comments are provided on the additional requirements which the site is anticipated to comply with as set out at Policy HG1 KS1. Revised wording where required is identified in red.

• The provision of a minimum of 113 affordable housing units (30%) with a unit mix reflecting the requirements of the latest Local Housing Market Assessment and the Council's waiting list data.

In order to deliver a greater social mix, the affordable units should be dispersed across the site in clusters of no more than 10 units, The positioning of the affordable units will be informed by the experience and best-practice of the Registered Social Landlord responsible for the delivery and ongoing management of the units, with their delivery being phased across the development trajectory.

The policy as currently worded is considered to be overly prescriptive with regards to the positioning of affordable units on the site. It is the case the Registered Social Landlord who is responsible for the delivery and ongoing

operation/management of the affordable units is best-placed to advise upon the positioning of the affordable units within the site layout. As such, it is requested that the prescriptive nature of the above bullet point is mended to allow for the RSL to advise on best practice.

• Provision of land across the site frontage to allow for the widening of the A4226 Port Road West and the delivery of an Active Travel route across the frontage of the site as part of the Weycock Cross to Cardiff Airport Active Travel route, as identified in Policy TR1 (relating specifically to the delivery of the section of the Active Travel route adjoining the northern boundary of the Key Site only).

• Creation of a new signalised junction on to the A4226 Port Road West, which will need to accommodate controlled pedestrian/cycle crossing facilities.

With regards to the first two bullet points set out under the 'Sustainable Transport and Highways' section of the Policy HG1 KS1 (copied above), to confirm, as part of the development of the Key Site, it is proposed (as detailed within the submitted Transport Assessment) to construct a new junction from Port Road to the west of the Weycock Cross roundabout at the location of the existing field gated access in the form of a signal-controlled junction, which would allow for the safe and timely exit of traffic from
the development onto the local highway network. Such an access would also provide enhanced Active Travel infrastructure in conjunction with the proposed Active Travel route between the Weycock Cross junction and Cardiff Airport. Traffic signals at the proposed site access would provide for dedicated demand dependent green time for pedestrians and cyclists along this section of the A4226 Port Road.

Significant work has been undertaken to date in demonstrating that the above is deliverable. However,
it is requested that further clarification is included within the policy text to confirm that the Key Site is not responsible for the delivery of any further/additional sections of the Weycock Cross to Cardiff Airport Active Travel route, over and above the section of the route which adjoins the Key Site.

Suggested additional text is outlined in red above.
• A proportionate contribution towards off-site improvements to the capacity and flow of Weycock Cross roundabout and other junctions on the strategic highways network where necessary (in the context of the impact of wider committed developments on the strategic highway network).

As set out within the Transport Assessment (May 2025) prepared in support of the Key Site, the traffic movements associated with the North West Barry allocation could be accommodated on the highway network with a marginal and inconsequential impact on the conditions already experienced on the local highway network. An appraisal of the impact of committed development (as agreed with the Highways Authority) has been undertaken as part of the Transport Assessment, which identifies that committed
development within the vicinity of the Weycock Cross junction would have a greater impact upon the local highway network than the North West Barry Key Site. The North West Barry development is smaller in comparison to the other committed development assessed, and would have a marginal and inconsequential impact upon the operation of the Weycock Cross junction. It is therefore considered that the policy wording should be amended to reflect the 'proportionate' nature of contributions required.

Suggested additional text is outlined in red above.
• A contribution towards off-site sustainable transport measures in the area (as necessary and related to the Key Site).

Further clarification is required in regards to the above bullet point. It will be important to ensure that any off-site measures are directly related to the proposed development, and are necessary to ensure the acceptability of the proposed development. The requirement for a contribution towards off-site measures 'in the area' is not specific enough, and it is requested that the wording is amended as per the suggested text outlined in red above.

• The provision of a key area of open space (minimum 2.3 ha) to the south of the site adjoining Porthkerry Country Park which will serve as a buffer to the adjoining SINC at Mill Wood and offer opportunities for significant iodiversity enhancements. The ownership of this area should be
transferred to the Vale of Glamorgan Council, together with an appropriate financial contribution, for management as part of Porthkerry Country Park.

It is considered that the inclusion of a specified figure for the area of open space to be provided within the southern section of the site is unnecessary within the policy text.

The Indicative Plan for the Key Site included at Figure 13 of the Deposit Plan illustrates the indicative extent of 'Significant Open Space' to be provided adjoining Porthkerry Country Park, which will be subject to further detailed masterplanning work as the Planning Application is prepared in due course. A figure for the exact area
of open space to be provided within this section of the site cannot therefore be robustly specified until the further stages of masterplanning work are completed. As such, it is requested that the figure is removed from the policy text, with the identification of 'Significant Open Space' on Indicative Plan being considered satisfactory.

Furthermore, it is not considered appropriate that the policy wording should refer specifically to the financial contribution

towards the management of this land, in addition to its transfer, as such contributions will be subject to detailed viability appraisal work at the Planning Application stage.

Deposit Plan Appendix 1 - Housing Trajectory
The identified delivery timescales and quantum of units for the site as set out at Appendix 1 of the Deposit Plan (as copied below) are agreed with and considered to be suitable/deliverable:

2028-2029: 30 units
2029-2030: 60 units
2030-2031: 60 units
2031-2032: 60 units
2032-2033: 60 units
2033-2034: 60 units
2034-2035: 46 units

Persimmon Homes are committed to the delivery of the allocation, in accordance with the phasing trajectory outlined in the Deposit Plan. Further to the detailed submissions previously made, including extensive viability evidence which has been discussed in detail with the Local Authority and their viability consultant, it is confirmed that the site is viable and deliverable in accordance with the identified delivery timescales. It should be noted that there is a possibility that the number of units to be delivered within the first year (2028-2029) could be increased slightly, however, it is considered that the above presents a realistic trajectory for the site.

Deposit Plan Appendix 2 – Infrastructure Delivery Plan
A number of amendments to the text are requested in regard to the infrastructure requirements for KS1 North West Barry as set out within the Infrastructure Delivery Plan at Appendix 2 of the Deposit LDP.

Within the 'Key site issues and constraints' section of the Infrastructure Requirements table, the following amendments to the text are considered necessary:

• Proportionate access and junction arrangements on to the A4226 and a financial contribution towards strategic highway network enhancements (in the context of the impact of wider committed developments on the strategic highway network).

As set out above, it is important that the required financial contribution towards strategic highway network enhancements is proportionate to the scale of the North West Barry development, and that additional committed developments, which would have a greater impact on the strategic highway network, are considered in the round.

• Previous desk-based assessment and site visits dentified that development would have a major impact on five features (?), including important hedgerows which form historic boundaries. Archaeological features were also identified.

The above bullet point requires clarification as to the 'five features' which the development would have a 'major impact' upon. It should be noted that masterplanning work to date has been informed by extensive survey and assessment work which ensures that the proposed development is capable of addressing all constraints.

Within the section of the table where 'broad costs' of key infrastructure requirements are outlined, it is considered that the following amendments to the text are necessary:

• Education – Estimated Cost Circa £3,730,000 (£TBC)
It is considered that an estimated cost for education contributions cannot be specified at this stage, as the contribution will be directly related to current school capacity figures at the time of the Planning Application, with school capacities being fluid and subject to change. As such, the 'circa' figure should be removed from the text and replaced with 'TBC' at this point.

• A proportionate contribution towards on-site improvements to the capacity and flow of Weycock Cross roundabout and other junctions on the strategic highways network where necessary (in the context of the impact of wider committed developments on the strategic highway network).

• VOGC to deliver improvements to junctions on the Strategic Highways Network using s106 contributions (from the North West Barry Key Site and other relevant commitments) . As set out above, it is important that the required financial contribution towards strategic highway network enhancements is proportionate to the scale of the North West Barry development.

• Contribution towards off-site sustainable transport measures in the area as necessary and related to the Key Site.

As per the wording contained within the policy text of HG1 KS1, the requirement for a contribution towards off-site measures 'in the area' is not specific enough to provide certainty for the developer, and it will be important to ensure that any off-site measures are necessary and directly related to the North West Barry development.

• Community Facilities – Estimated Cost Circa £665,000 (£TBC) It is considered that an estimated cost for community facility contributions cannot be specified at this
stage – no background calculations are provided to evidence that this estimate is robust. As such, the 'circa' figure should be removed from the text and replaced with 'TBC' at this point.

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes has significant concerns regarding Policy CC1 and objects to it on the basis that it replicates requirements already being progressed at a national level through Welsh Government's Future Homes Standard (FHS). The FHS is intended to deliver "zero carbon ready" homes via a unified Building Regulations framework, making additional local policy unnecessary. At present, Building Regulations Part L1A sets out the standards for energy efficiency in new dwellings, and Persimmon
already designs its homes to go beyond these minimum thresholds. This includes enhanced insulation and improved building fabric performance, with reduced U values for elements such as walls, roofs, floors and windows to minimise heat loss. As a result, our homes typically achieve strong Energy Performance Certificate (EPC) ratings, generally in the A–B categories. Introducing further operational net zero requirements at a local planning level risks adding cost, complexity and uncertainty, potentially affecting the viability and deliverability of housing sites. The Development Plans Manual for Wales is clear that local plans should not repeat national policy or seek to regulate matters already addressed through other statutory regimes.

On that basis, Policy CC1 is not considered to be justified and is inconsistent with the second test of soundness. The proposed shift in standards from April 2030 represents a substantial and abrupt escalation in expectations. Although the policy refers to schemes such as Tai ar y Cyd and AECB CarbonLite, these examples largely relate to grant funded affordable housing projects. There is no robust evidence that equivalent standards can be met on mainstream housing sites without undermining overall viability. The Development Plans Manual requires policies to be based on strong evidence and to be realistically deliverable across the plan period. Without this, there is a risk that the proposed policy could impede
housing delivery and compromise the RLDP's ability to meet identified needs.

Policy CC1 could also lead to inconsistent energy performance requirements across Local Planning Authorities in Wales, contradicting the advantages of a unified regulatory system via Building Regulations. For volume housebuilders working across several authority areas, this would introduce unnecessary variation and complication. The DPM highlights the importance of policies that support housing delivery and avoid avoidable burdens. By introducing bespoke modelling thresholds and
operational monitoring requirements, CC1 risks blurring the line between planning and Building Control, raising questions about the policy's justification and practical application.

It is Persimmon's view that Policy CC1 is premature and that it is more appropriate for such matters to be addressed through building control rather than planning policy. In its current form, the policy risks impacting housing supply, affordable housing delivery and overall implementation across the plan period. For these reasons, we consider that Policy CC1 fails to satisfy the relevant tests of soundness and should be removed from the emerging RLDP.

Summary

As summarised above, and set out in full detail within the supporting survey/assessment work that has been provided to the Local Authority in relation to the site, the inclusion of Land at North West Barry as a Key Site (Policy HG1: KS1) with the Replacement Plan fully accords with the RLDP strategy. Furthermore, it is considered that (with the inclusion of the site), the Deposit Plan complies with the tests of soundness. Further to ongoing discussions with the Authority, we would reiterate the Site Promoter's commitment to delivering the allocation which has been evidenced as being entirely deliverable and viable
As set out within this representation, overall support is provided for the Deposit Plan (and the inclusion of North West Barry as a Key Site), however, as detailed, bjections are submitted in relation to the specific elements of the proposed wording of the Key Site policy (SP4: KS1).

We look forward to the RLDP progressing towards examination, and would welcome the opportunity to
take part in the relevant Hearing Sessions (in relation to Policy HG1: KS1, and wider strategic policies as required). Please do not hesitate to contact me should you require any further detail or wish to discuss any aspect of the representations.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'. Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: "The Local Development Plan will support resilient and sustainable local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part of sustainable growth."

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

"Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other opportunities for local food production as part of multifunctional green infrastructure."

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid
HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to
ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate

rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare
services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Change suggested by respondent:

Suggested wording includes:
"The Local Development Plan will support resilient and sustainable local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part of sustainable growth."

6736 Support

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Hallam Land Management [854]
Agent: Savills

Summary:

Hallam are generally supportive of the aims of this policy. The strategy of focusing new housing in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity is wholly supported. St Athan is clearly already a sustainable location for growth and its sustainability and connectivity have clear potential to enhance alongside further development. The delivery of growth in St Athan is therefore considered to firmly align with the RLDP's strategy.

Full text:

1.1. Savills is instructed by Hallam Land ('Hallam') to respond to the consultation on the Deposit version of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').
1.2. Hallam is the strategic land arm of Henry Boot PLC and is one of the UK's most well established and successful land promoters. Hallam operates throughout England, Scotland and Wales from 7 regional offices working with landowners, developers, local authorities, communities and other parties to bring forward development opportunities. Hallam has been in operation since 1990, specialising in obtaining planning permission and delivering development larger schemes including new communities and urban extensions.
Background to Representations
1.3. The Preferred Strategy was published in November 2023. The Preferred Strategy identified "Land West of St Athan" and "Land South of the B4265, St Athan" (Site IDs 456 and 457) as one of five Key Sites in the Preferred Strategy. Both of these sites are under the control of Hallam and were submitted as part of the Call for Sites. A site-specific illustrative masterplan and policy wording were provided under Policy SP4 KS5 (Land to the West of St Athan).
1.4. Hallam submitted representations on the consultation on the Preferred Strategy. These representations were very much supportive of the identification of "Land to the West of St Athan" as a Key Site and the approach that was taken more generally taken in the Preferred Strategy.
Approach to Responding to Consultation
1.5. The VoG has published the Deposit version of the RLDP. The Deposit is the first version of the RLDP to include emerging allocations, and detailed development management policies, as well as a Proposals Map. It is accompanied by a substantial evidence base which includes various supporting technical documentation submitted as part of the promotion of the allocated sites.
1.6. Building upon the Preferred Strategy, the Deposit RLDP proposes to allocate Land to the West of St Athan as a Key Site. The site is identified under Policy HG1 KS5 (Land to the West of St Athan) as key mixed-use site with capacity for 600 new homes alongside new community and commercial facilities.
1.7. Hallam's representation to this consultation broadly splits into three separate sections:
• It offers general support for the housing requirement, growth strategy and settlement hierarchy. This is covered in Chapter 2 of this Statement;
• It wholly supports the approach of allocating Land to the West of St Athan as part of the Deposit RLDP whilst also providing detailed commentary on the specific wording of Policy HG1 KS5 (Land to the West of St Athan). This is covered in Chapter 3 of this Statement; and
• It provides commentary on a range of development management policies. This is covered in Chapters 4, 5, 6, and 7 of this Statement.
1.8. As well as this Statement, Savills has provided commentary on these specific policies under the VoG's consultation website.

Policy SP1 (Sustainable Growth Strategy), Policy SP2 (Settlement Hierarchy), and Policy SP6 (Housing Requirement)
2.1. Together, these policies have the effect of:
• Setting the housing requirement to be delivered over the RLDP plan period of 7,890 homes with a flexibility allowance applied on top so that provision is made for a total of 8,660 homes. This is the same housing requirement to that included in the Preferred Strategy which was found by Welsh Government to be in conformity with Future Wales (Policies SP1 and SP6);
• Identifying the extent of the Strategic Growth Area as the primary focus of new housing growth. Concentrations of new housing are focussed in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity. St Athan is a specifically named settlement within the Strategic Growth Area (Policy SP1); and

• Identifying St Athan as a Primary Settlement in the third tier of the settlement hierarchy. This is the same tier of the settlement hierarchy as St Athan is in the adopted LDP (Policy SP2).
2.2. Hallam are generally supportive of the aims of these three policies.
2.3. They recognise that the housing requirement has been subject to extensive scrutiny and been found to be appropriate by Welsh Government in response to the Preferred Strategy. In that sense, there is nothing further for Hallam Land to comment upon here other than to note that it should reasonably be seen as the minimum number of homes that the RLDP should be aiming to deliver, particularly following the publication of the 2022-based household projections between Welsh Government's comments on the Preferred strategy and the publication of the Preferred Strategy.
2.4. The strategy – of focussing new housing in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity – is wholly supported. St Athan is clearly already a sustainable location for growth and its sustainability and connectivity have clear potential to enhance alongside further development. The delivery of growth in St Athan is therefore considered to firmly align with the RLDP's strategy.
2.5. The continued positioning of St Athan as a Primary Settlement in the third tier of the settlement hierarchy is considered appropriate though clearly the delivery of two Key Sites within St Athan as part of the RLDP has the potential to further elevate its position in the future. This is reflected in Table 10 of Background Paper 5 Settlement Appraisal Review where St Athan is given one of the higher scores of the Primary settlements.

Policy HG1 KS5 (Land to the West of St Athan)
3.1. Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.
3.2. There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.
3.3. The relevant policy for Land to the West of St Athan is Policy HG1 KS5.
3.4. As a starting point, Hallam wholeheartedly support the allocation of Land to the West of St Athan as a Key Site within the RLDP. Hallam made a comprehensive submission as part of the Call for Sites stage and since then have worked proactively with the VoG and other stakeholders to demonstrate that the site is suitable, deliverable, and viable. It's identification as a Key Site in the Deposit RLDP represents extensive and thorough assessment – its proposed allocated is therefore considered to be sound and firmly evidence based.
3.5. So that the policy functions as effectively as possible, Hallam has a small number of comments and included at Appendix A is a re-worded version of Policy HG1 KS5 which incorporates those changes with text suggested to be removed crossed through and text to be added shown underlined.
3.6. These proposed adjustments are considered in turn below and are structured around the sub-headings that are contained within the policy wording itself.
Site Capacity and Housing Trajectory
3.7. Extensive environmental and technical work has been undertaken by Hallam to support the promotion of the site and the development of a masterplan (and site capacity) that responds to the site's constraints and opportunities.
3.8. That said, Hallam is not a housebuilder and once an outline planning application has progressed, Hallam will identify a development partner (which could be a single or multiple housebuilders / housing associations). Clearly different housebuilders have different house types and differing approaches to density.
3.9. In addition, whilst a lot of technical and environmental work has been undertaken to date, clearly further technical work would be submitted at planning application stage which would further validate the site's capacity.
3.10. Legislative and guidance changes also have the potential to impact a site capacity. Whilst the masterplanning process has been prepared to be SAB compliant, the impact of the introduction of the requirement to secure SAB approval has had an impact on site capacity and it follows that a further, and as yet unknown, legislative or guidance change could have a similar impact.
3.11. This is not to suggest that there isn't a high degree of confidence that the site can deliver roughly 600 homes, rather that Hallam suggest that the word 'approximately' is added to the policy wording to reflect the potential for a degree of deviation (which could be upwards or downwards).
3.12. Background Paper 9A Housing Land Supply and Housing Trajectory sets out the anticipated annual delivery rates for housing over the RLDP. With regards to the ability of the site to deliver the number of homes it is allocated for in the RLDP plan period, the housing trajectory for the site reflects that the first completion date was pushed back from 2027/2028 to 2028/2029 since the consultation on the Preferred Strategy. This means that the whole site continues to be shown as being delivered within the RLDP plan period.
3.13. Hallam support and agree with the approach set out in the Draft Housing Trajectory and see it to be realistic and achievable based on their experience and subject to usual caveats around the condition of the market, RLDP progression, and swift determination of a planning application.
Affordable Housing
3.14. At present, Policy HG1 KS5 (like all of the standalone policies for the other four Key Sites), states that the site should provide a minimum of 210 affordable housing units. This figure is derived from 35% of the number of homes that the site is allocated for (600 homes).
3.15. Worded at present, a strict interpretation of this policy could be that 210 affordable units must be provided onsite

regardless of the total number of homes that are proposed. For example, it could be interpreted as requiring a fixed number of affordable homes of 210 homes, even if the total number of homes that are proposed on the site is fewer than the 600 homes that the site is allocated for or, conversely, that only 210 homes should be delivered as affordable if more than 600 homes were to be delivered and the RLDP allocation exceeded.
3.16. Hallam recognise that this is not what the policy wording is seeking to achieve (and their viability work for the site is based on the site delivering 600 homes of which 35% are affordable) but suggest that its wording could be clarified by removing reference to a specific number of affordable homes for the site to deliver in favour of just the affordable housing percentage being noted in the policy.
3.17. Hallam also suggest that the requirement for affordable housing units to not be in clusters of more than 10 homes is removed and that the approach is for this to be considered on a site by site and case by case basis and with recognition that Policy HG5 (Affordable Housing Exception Sites) which can provide a framework for 100% affordable sites of more than 10 homes to be delivered. As an example, and in the case of Land to the West of St Athan, the "Land South of the B4265, St Athan" (Site ID 457) portion of the site is likely better suited to a mixed-use development alongside the future St Athan Railway Sation. This portion of the site is probably better suited to a flatted form of development (either above non-residential uses or as a block) which tend to be delivered as 100% affordable housing developments rather than comprising a mix of private and affordable housing.
Sustainable Transport and Highways
3.18. This part of the policy sets out expectations relating to sustainable transport and highways and there are a number of matters which Hallam wish to comment on.
3.19. As a starting point, Hallam support the delivery of St Athan Railway Station and therefore commits to its safeguarding. Likewise, Hallam recognise the potential suitability for the "Land Between the Railway Line and B4265, St Athan" (Site ID 458) site to accommodate a Welsh-Medium Secondary School and can also therefore commit to safeguarding land for the delivery of a pedestrian and cycle bridge over the railway line. Specific comments on Policy TR1 (Transport Proposals) and Policy CI3 (New Community Facilities) are made elsewhere in this Statement.
3.20. With regards to the Sustainable Transport and Highways section of Policy HG1 KS5, Hallam's overall position is that a careful balance needs to be reached between the policy wording being explicit as to what highway works must be delivered and reserving consideration of this until planning application stage where the exact site capacity is better understood and a full Transport Assessment submitted.
3.21. At present, Hallam's view is that the policy wording is overly explicit and suggest that it could be qualified through the addition of the following text before listing the offsite highways improvements:
'Subject to the Strategic Transport Assessment and site-specific Transport Assessment submitted at planning application stage'.
3.22. Turning to the specific offsite highways measures that are listed within the policy wording, Hallam have four comments.
3.23. Firstly, it is suggested that the delivery of an active travel link along the B4265 between the site entrance and the Gileston Road junction should be secured via a financial contribution that is pooled with KS4 Church Farm. This reflects that the delivery of this link not only links Hallam's site to other services in St Athan but also linking KS4 Church Farm to the services that are proposed and uses for which land is safeguarded within Hallam's site. Clearly this is also to the benefit of existing residents of St Athan. This would reflect the approach that is proposed to be taking for the pooling of Section 106 monies for the delivery of an active travel route between St Athan and Llantwit Major.
3.24. Secondly, Hallam flag the need for the RLDP to be sufficiently flexible with regards to the delivery of an active travel link between St Athan and Llantwit Major. Ultimately, the purpose of delivering this active travel route would be to provide a connection from St Athan to Llantwit Major Railway Station and the delivery of a Railway Station in St Athan would remove the necessity of delivering this active travel connection. Hallam's suggested amendments to the policy wording seeks to reflect this.
3.25. Thirdly, Hallam have been consistent in highlighting that, whilst there is an aspiration to deliver an improved pedestrian link along Llantwit Road, a combination of the road width and the extent of third party ownerships make delivering a continuous link very challenging with a pragmatic approach instead needing to take place that recognises the ability to deliver betterments but acknowledges that delivering a continuous link is unlikely to be possible. Hallam has suggested additional wording to clarify this.
3.26. Fourthly, Hallam highlight that the designing of a loop road within the site to facilitate access by a bus may be superfluous and represent an over-engineered solution given the potential for the St Athan Transport Interchange that land is safeguarded for under Policy TR1 (Transport Proposals) is envisaged to accommodate infrastructure to accommodate a bus connection. On that basis, it is suggested that the following clause is added to the policy wording to reflect that bus connectivity to the site may be delivered not via an internal bus loop:
'Subject to progress on the St Athan Transport Interchange as land is safeguarded for under Policy TR1 (Transport Proposals)'
Community Infrastructure
3.27. There are three points which Hallam wish to make in connection to this element of Policy HG1 KS5.
3.28. Firstly, Hallam suggest that the wording of the part of the policy relating to financial contributions to fund the delivery of additional school places needs to be adjusted. At present this part of the policy is worded as if there is an automatic requirement to provide Section 106 monies for school places where Circular 13/97 is clear that a contribution should only be sought where the schools do not have current projected capacity to accommodate the new children from the development. Hallam's proposed adjustments seek to ensure that this part of the policy reflects this though note that Background Paper 43 Education forecasts a need for a financial contribution to be made for additional school places at all English and Welsh primary and secondary schools that the site is within the catchment of.
3.29. Secondly, Hallam note that Table 10 of Background Paper 34 Community Facilities identifies an existing over-provision of community space within the St Athan Ward of 778sqm and a surplus of 531sqm of community floorspace

at 2036 when the level of housing to be allocated in the Deposit RLDP is delivered. It is understood that this is on the basis of no community floorspace being delivered as part of Hallam's proposals or as part of the KS4 Church Farm site. Hallam suggest that the wording of this element of the policy needs to reflect that community floorspace should only be required to be provided in the case of a local shortage in provision. Aligned to this, Hallam also suggest that the reference to specifically providing a 'community building' is adjusted to instead make reference to 'community space'. This reflects that the community space element of scheme, if indeed it is actually required, could be a part of a larger mixed-use building (probably in the Mixed-Use / Community area) rather than as a standalone building.
3.30. Thirdly, Hallam note the error in the wording of the sixth bullet point under the 'Sustainable Transport and Highways' heading where reference is made to the safeguarding of land on the southern side of the railway line as being identified in Policy CI3(2) where-as it should be Policy CI3(6). This is a minor amendment that should be made to ensure consistency.
Green Infrastructure, Recreation Spaces, and Biodiversity
3.31. The masterplan prepared by PAD Design and submitted by Hallam shows the site delivering a mix of public open space and green infrastructure including the provision of allotments, a Neighbourhood Equipped Area of Play, a Local Equipped Area of Play, and a sports pitch. This is welcomed in Background Paper 32A Green Infrastructure Assessment of Key Sites which, at Paragraph 5.55 recognises that a 'ground up' approach has been taken in the masterplanning approach.
3.32. This is shown indicatively to illustrate the composition of public open space and green infrastructure that the site could provide alongside the other elements of built development that the site is allocated and the masterplan makes provision for.
3.33. Whilst, Hallam recognise the need to provide public open space, the starting point for this should be the Fields In Trust Standards and Hallam therefore suggest an approach where the policy wording is not specific about what forms this should take.

Policy TR1 (Transport Proposals)
4.1. This policy identifies three active travel routes and two public transport schemes that the Deposit RLDP safeguards land for, as well as three highway improvement schemes that are identified as being required to mitigate the impact of development. Two of these are in St Athan – one being the St Athan Transport Interchange for which land is safeguarded for and the second being the Gileston Road Junction which is identified as a required highway improvement. Both are considered in turn below.
St Athan Transport Interchange
4.2. Hallam support the safeguarding of land for the St Athan Transport Interchange and see that its delivery would be to the benefit of the Key Site itself but also more broadly to St Athan and western parts of the VoG.
4.3. It is clear from discussions with Transport for Wales that there is a strong business case for the delivery of a railway station and that the creation of "critical mass" through residential development around it has a key role in driving its delivery, as does the nationally significant economic role that the Bro Tathan Enterprise Zone has and the Aberthaw Green Energy Park will have. The proximity of St Athan to both of these hubs clearly contributes to its fundamental sustainability and suitability for growth whilst the further development of a critical mass of housing and employment generating uses will further support linkages between them and strengthen the business case for a new railway station at St Athan. This is reflected in TFW's 'Today, Tomorrow, Together: A Vision for Rail Across Wales and the Borders' which confirms that the delivery of St Athan Railway Station remains in TFW's pipeline which has been endorsed by the Westminster Government.
4.4. The location that is identified on the Proposals Map is Transport for Wales' preferred location within the site and has been incorporated into the masterplanning approach which seeks to create a node around it by incorporating a bus interchange and a mix of uses.
4.5. At present, the Proposals Map identifies the location of the Railway Station using a red star which is positioned on the railway line itself but without the required land take not spatially being defined.
4.6. Whilst Hallam recognise that the exact land take required will need to be refined further through discussion with TFW, it may be the case that the mixed-use element on this portion of the site comes forward before the Railway Station.
4.7. The early delivery of these elements should be welcomed as clearly the mixed-use element both enhances the range of services and facilities in St Athan but also would mean that the Railway Station is integrated upon delivery.
4.8. On that basis, it is imperative that the safeguarding of land for the Transport Interchange is limited only to that land required to deliver the Transport Interchange and is done in such a way such the safeguarding does not sterilise non-transport related development from this portion of the site until the Railway Station has been delivered.
Gileston Road Junction, St Athan
4.9. Paragraphs 6.199 and 6.200 relate to the expectation that vehicle trips as a result of RLDP allocations in St Athan are anticipated to trigger the need to upgrade the Gileston Road Junction to a signal-controlled arrangement. This is informed by the conclusions of Table 3 of the Strategic Transport Assessment which forecasts that the junction will be operating above capacity during both the weekday AM and PM peak by the RLDP's end point.
4.10. Hallam note that Technical Note 08 of the Strategic Transport Assessment identifies that the improvements to the Gileston Road Junction are to be delivered by VoG and funded through financial contributions from seven sites that the RLDP proposes to allocate.
4.11. Improvements to this junction are to be funded by a number of sites; however it is unclear whether (and if so, when) forward funding will be secured by the Council and clearly there cannot be a situation where none of the sites can deliver homes until strategic highways works are funded / completed. We therefore seek further clarification over the phasing of these works and note that early delivery of homes ahead of strategic highway improvements is likely to be important for deliverability of each strategic site.
4.12. To respond to Hallam's above comments, one approach could be for references to highway improvement works to

be entirely removed from this policy or, if they are to remain, that qualifying text is added to note that the need for and format of any improvements will be subject to detailed consideration at planning application stage and that such contributions must be justified in planning terms, particularly where (in the case of Pen Y Turnpike Road and Waycock Cross for Land to the West of St Athan), the distance from a site and the junction to be improved is significant and therefore thee number of vehicle trips that would be generated modest.
4.13. This aligns with Hallam's suggested approach to the specific wording of Policy HG1 KS5.

Policy CI1 (Open Space Provision)
5.1. This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.
5.2. Hallam note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.
5.3. Hallam is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter.

Policy CI3 (New Community Facilities)
6.1. As well as allocating land for five new or improved education developments, this policy safeguards 'Land South of the Railway Line, St Athan' for the delivery of a Welsh-medium secondary school.
6.2. This policy is clearly of interest to Hallam because Paragraph 6.250 places a requirement for the safeguarding of land on the northern side of the railway line on their Land to the West of St Athan Key Site for a footbridge to land on.
6.3. With the policy wording being intentionally light-touch, Paragraph 6.250 of the Deposit RLDP provides greater detail about the safeguarding of this land (and other paragraphs in the Deposit RLDP relate to other community facilities that Policy CI3 covers). It effectively does two things.
6.4. Firstly, it notes that the delivery of this school will require active travel improvements including the safeguarding of land for a pedestrian and cyclist footbridge over the railway line.
6.5. Secondly, it is clear that the safeguarding of this land is in response to a forecast increase in demand for Welsh-medium secondary school places across the whole of the VoG as a result of expanded capacity at Welsh-medium primary schools across the VoG. On this basis, it follows that this location has been selected as a preferred location because of its ability to serve the wider sub-region.
6.6. Hallam recognise that this site could be a suitable location for a Welsh Medium Secondary School and, as a principle, is agreeable to the safeguarding of land for the footbridge landing on the northern side of the railway line.
6.7. Paragraph 6.250 of the Deposit RLDP is clear that the delivery of a Welsh-Medium secondary school is in response to a regional / sub-regional demand rather than a local need as a result generated either by the development of Land West of St Athan or other emerging allocations within St Athan and it cannot be the case that Hallam are expected to make disproportionate contributions to either the delivery of the school or required active travel improvements just because they have control of the site or that it is next to the Key Site.

Policy CC1 (Residential Operational Net Zero Carbon Development)
7.1. The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) before the policy wording sets out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.
7.2. As a starting point, Hallam share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) can present challenges. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this will result in an uneven framework for housebuilders, significantly adding cost and reducing certainty.
7.3. The justification for using planning policy to set requirements exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.
7.4. There are two points to be made by Hallam here:
7.5. Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage that such an approach would not be sound. This Written Ministerial Statement was subject to an unsuccessful judicial review.
7.6. Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations. Where there are existing Local Plans in England that take this approach, they do not align with the Westminster Government's position and there will be no Local Plans emerging including such policies.
7.7. Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking

into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs (Bridgend and Merthyr Tydfil) do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound at Examination stage.
7.8. Secondly, Hallam have concerns with the approach that has been taken with regards to viability.
7.9. From Hallam's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.
7.10. As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated. This is important as it demonstrates that, whilst Hallam do not believe such a policy approach should be taken, the development of the site at the time of the completion of the Development Viability Model for the site is viable whilst meeting the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development).
7.11. Hallam's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. This concern is particularly exacerbated by the fact that, as recognised at Paragraph 6.47 of Background Paper 42 Viability Assessment, takes the lowest estimate for the works required to achieve these policy expectations, Savills' experience – both that of their development land team based in Wales and their environmental sustainability team based across England - is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.
7.12. Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy DNP3 (Glamorgan Heritage Coast)
8.1. This policy relates to the Glamorgan Heritage Coast, identifying a series of land uses that are permissible within the policy area before setting three tests that must be satisfied for development within the Glamorgan Heritage Coast to be permissible where there is an adverse environmental impact.
8.2. Hallam note that the 'Land South of the B4265, St Athan' portion of the land that they control is both proposed to be retained as part of the Glamorgan Heritage Coast (a continuation of the position taken in the adopted LDP) whilst also forming part of the Land to the West of St Athan Key Site where the masterplan at Figure 17 shows it as accommodating the potential new railway station and a mixed-use area (including car parking).
8.3. The relevant extract of the Proposals Map is replicated below:
8.4. The exact composition of the buildings proposed on this portion will require further refinement and will need to be driven by occupier requirements, but the masterplanning work undertaken by pad Design envisages that they could provide a mix of retail and food and drink uses most likely across some or all of the ground floor, alongside workshop, co-working or office incubator space at upper floor levels and perhaps at ground floor level. There could also be the potential for additional homes, likely in the form of apartments at upper floors, as part of a mix of uses. It is realistic therefore to anticipate that this portion of the site will accommodate buildings of up to three or four storeys with a high plot ratio to reflect the uses and supporting infrastructure that it is to accommodate.
8.5. Hallam's position is that the continued inclusion of this parcel of land as part of the wider Glamorgan Heritage Coast is inappropriate for two reasons.
8.6. Firstly, and its most basic level, the approach of allocating the site for development whilst retaining a designation that inherently seeks to restrict the type, form, and quantum of development, is wholly contradictory.
8.7. Designation of this portion of the site as part of the Glamorgan Heritage Coast will mean, given that the uses that Figure 17 envisages as being delivered on the site are not those that the first part of Policy DNP3 (Glamorgan Heritage Coast) allows for, any application for development will need to demonstrate that there is a compelling need for the development, that the benefits outweigh the harm, and that appropriate mitigation measures are in place. This the potential to prejudice its development or, at very least, greatly impact how it is developed whilst requiring.
8.8. Secondly, it is difficult to see how this land warrants ongoing inclusion within the designated Glamorgan Heritage Coast. This is something that is considered in more detail in the Review of Landscape Character and Visual Amenity (December 2022) prepared by FPCR and submitted as part of the Call for Sites (and also available as part of the consultation on the Deposit RLDP as a piece of Key Site Supporting Information). Paragraph 5.13 of the FPCR document concludes on this piece of land that:
'Through the fieldwork it is considered that the Site does not display any "special environmental qualities" identified by the Policy and plays no intrinsic role in the Policy designation, as it is effectively forms a rather ordinary grazing field. It is influenced by the urbanising elements of the adjacent B4265, the Railway Line, the Tarmac Cement works, and to some degree the built edge of St Athan. Furthermore, it is bound and contained by trees and woodland beside the railway line, which prevents wider intervisibility with the coastline.'
8.9. Taking the above together, Hallam suggest that the preparation of the RLDP provides the opportunity to define the extent of the Glamorgan Heritage Coast to respond to both the landscape value of certain sites but also the wider aspirations of the RLDP. If it is not within the gift of VoG to redefine the boundaries of the Glamorgan Heritage Coast through the RLDP then Hallam suggest that an additional element could be added to this policy to confirm that it does not apply to land which is allocated for development.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mr Ian Fairweather [1225]

Agent: Boyer Planning

Summary:

There is concern that the proposed primary focus of housing growth within the Vale being within the Strategic Growth Area. Limiting development at suitable settlements outside the Strategic Growth Area is not the correct approach and greater flexibility is required to deliver the housing need. Clearly there is a requirement to provide further allocations in sustainable Minor Rural settlements identified as being 'Outside of the Strategic Growth Area' – namely St Nicholas.

Full text:

The Spinney, St Nicholas (Site Ref: 460)
Boyer have prepared the following representation on behalf of Mr Fairweather in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021-2036 Deposit Plan Consultation.

A summary of our main representations is as follows:
• Significant concern is raised regarding the lack of residential allocations within the Minor Rural Settlements, in particular St Nicholas.
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance.
• Questions asked regarding the spatial distribution and the lack of other allocations to provide a range and choice of housing.
• Confirmation of the limited constraints for The Spinney, St Nicholas (Site Ref: 460).
• Review of the Candidate Site Assessment; and
• Need to review the Settlement Boundary of St Nicholas.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the main concern for Mr Fairweather is the proposed primary focus of housing growth within the Vale being within the Strategic Growth Area. Whilst it is understood and supported by Mr Fairweather that new housing developments would be concentrated in locations which are served by existing public transport routes and provide the opportunity to enhance sustainable transport connectivity, it is shortsighted to concentrate this growth specifically along the railway line. The justification being that those settlements identified as being 'Outside of the Strategic Growth Area' – including St Nicholas, are equally as important as those within. St Nicholas is a sustainable location and located on an important public transport route (A48) and is well served by bus transport.

The principle of locating development at sustainable settlement is supported, however Mr Fairweather considered that limiting development at suitable settlements outside the Strategic Growth Area is not the correct approach and that greater flexibility is required to deliver the housing need. Currently under Policies HG1 and HG4, the only allocations in any Minor Rural Settlements amount to 122 dwellings in total (excluding any from St Nicholas). This also needs to be considered in the context of the 1,303 dwellings expected from large and small windfall developments. Clearly there is a requirement to provide further allocations in sustainable Minor Rural settlements identified as being 'Outside of the Strategic Growth Area' – namely St Nicholas.

In context of above, Mr Fairweather strongly recommends that appropriate consideration is given to the widening of the Strategic Growth Areas to include St Nicholas as a sustainable settlement which is capable of accommodating a new allocation at The Spinney (Site Ref: 460).

SP2: Settlement Hierarchy
Mr Fairweather previously supported the identification of St Nicholas as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Cardiff to the east and access to Bridgend to the West. The Deposit Plan retains St Nicholas within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.

Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as St Nicholas, should be subject to such constrained growth.

In this context, Mr Fairweather highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.

Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all buildings upon the identified importance of Minor Rural Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to St Nicholas under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of St Nicholas, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, The Spinney, St Nicholas (Site Ref: 460) is considered to naturally round-off the existing boundary, enclosing the envelope of development, without encroaching or sprawling beyond the existing line of built form, in a sustainable location which can accommodate an appropriate allocation.

SP6: Housing Requirement
As per Mr Fairweather's previous comments to the Preferred Strategy, the concerns regarding a need for a higher housing level and the need for development to be appropriate placed in sustainable allocations in a settlement in which people want to live is still relevant.

Currently Policy SP6 establishes the overall housing requirement and applies a 10% flexibility allowance. The Policy suggests that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes and this will be delivered by:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments

As per previous representations, Mr Fairweather considers that it's important to take account of recent guidance provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan. For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
More recently in Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery.
Applying the same approach to other current Local Development Plans, it is evident that a flexible housing allowance above the current 10% threshold will be required. Having reviewed the Council's evidence base Mr Fairweather considered that a minimum allowance of 15% would be reflective of the County's growth aspirations and would seek an additional circa 400 dwellings (equating to a housing requirement of 9,074 dwellings inclusive of the 15% flexibility).

To accommodate this increased in flexibility allowance and over all housing numbers, it should be outlined that smaller sites typically deliver more quickly, are less infrastructure-dependent, and increase build-out rates through diversification. The Spinney represents precisely the type of deliverable site that should form part of an enhanced flexibility allowance.

Policy SP6 should therefore be amended to increase the flexibility margin to up to 15%, with consequential allocation of additional small and medium-sized sites.
HG1: Housing Allocations Table 3 spatial distribution
Mr Fairweather does not comment on any of the proposed housing allocations, however, does highlight that the delivery in incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller

allocations in the Minor Rural Settlements. Only 161 units are proposed on smaller allocated sites, equating to approximately 7% of newly allocated supply.
In the context of the above, there remains significant concern that the spatial strategy continues to exclude allocations within Minor Rural Settlements, including St Nicholas.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.

There is therefore a clear disconnect between the identified role and function of settlements such as St Nicholas and the absence of any allocated sites (excluding the affordable led schemes under Policy HG4) capable of delivering an appropriate range and choice of dwellings. The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.

This approach is inconsistent with the settlement's accessibility and functional role. St Nicholas is:
• Well connected to the A48 strategic highway network.
• Served by bus routes within close proximity to the site.
• Within commuting distance of Cardiff and Cowbridge.
• A sustainable and established residential community.

Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.
Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at The Spinney would represent proportionate growth consistent with the scale and character of the settlement.
HG4 – Affordable Housing Allocations

It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, but in the context of them being affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing to meet the affordable housing needs of the local community. Mr Fairweather has no objection in principle to this but does object to the fact that there is no development in St Nicholas (despite it being sustainably located on the A48).

Furthermore, The Spinney, St Nicholas (Site Ref: 460) proposes a 40% affordable housing provision which accords with Policy SP8 of the Deposit Plan. Should the Authority consider that the site is suitable for allocation under Policy HG4 then the provision can be amended to 50% to accord with the policy.

Candidate Site Response: The Spinney, St Nicholas (Site Ref: 460)
From a review of the Background Paper (BP18 a) - Candidate Site Assessment at Preferred Strategy Stage, we are aware that the candidate site The Spinney, St Nicholas (Site Ref: 460) has not progressed beyond Stage 2: Detailed Site Assessment: Site Characteristics and Physical Constraints.

The justification provided states that 'The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area'. Whilst this is disputed and it is considered that the site should have progressed, it is important to highlight that of all the Candidate Sites within St Nicholas, The Spinney has the least issues raised.

Other sites within the assessment raised concerns regarding Best and Most Versatile Land, intrusion into the open countryside and the loss of a sites identified as providing important views. Ultimately, Site Ref: 460, is clearly the most appropriate site for any development within St Nicholas and with limited constraints raised.
Turning to the reasons for not taking the site forward, the following is reiterated in the context of the impact on the character and setting of the Conservation Area.

Conservation Area Impact
St Nicholas is described in the Conservation Area Appraisal and Management Plan as 'a low density, linear village located on the A48' and the candidate site is located towards the west of the village and lies partially within the current

Conservation Area boundary. The Authority will be aware that the Conservation Area has been amended over the years to its current illogical designation regarding the Paddock area, similar to that of the Settlement Boundary.

The development of the Candidate Site is a clearly a logical and sensible infill development, which would have limited impact upon the Conservation Area. The majority of the site is already hidden from the A48 via mature vegetation and existing boundary features, and any proposed development would maintain this approach and minimise the visual appearance on the Conservation Area.
Listed buildings and other historic buildings of special interest are identified in the Conservation Area Appraisal as 'County Treasures'. These are situated at the heart of the Conservation Area. The buildings and their settings establish a scale and density for the historic area of the village to the south of St Nicholas' Church.

More modern development, away from the centre of the village at Ger-y-Llan to the northeast, Dyffryn Close to the southeast and Old Rectory Drive to the west are suburban in character with larger houses and generous gardens. These are all excluded from the Conservation Area and represent development at a lower density than the historic core of the village.

Whilst only a part of the Candidate Site is located within the Conservation Area, it has to be seen in the context of an appropriate infill site that links the southern part of the village with the more modern suburban type of development at Old Rectory Drive to the west. More significantly, the site provides an opportunity for a development to make a positive contribution to the character and appearance of the Conservation Area as well as respect or enhance the special architectural or historic interest.

This can be achieved by providing a new front boundary to the site and houses with gardens, of the type identified in the Conservation Area Appraisal and Management Plan that help define the character of the village. Whilst the Candidate Site extends to the A48, this is to allow the appropriate minimal access junction, whilst the majority of the generous grass verge will be retained, meaning that development will be clearly set back a considerable distance from the road and the opposite pavement.

Thus, the development will be totally screened when travelling along the A48 and is therefore not considered to affect the views to the north of the site. The development will complement and enhance the character of the rural and built environment surrounding the site.
In line with the objectives of the St Nicholas Conservation Appraisal and Management Plan, the boundary treatments proposed will be sympathetic and in keeping with the surrounding area, such that they do not detract from the historic assets and desired lines of view. Again, whilst detailed design has not yet been progressed, any boundary treatments proposed will avoid the use of stained close boarded timber fencing, over-elaborate modern metal railings and gates. It is reiterated that the building line for the front of the development will not encroach any further forward that the existing boundary and will be designed to be innkeeping and not detract from the existing character of the Conservation Area. Moreover, the layout of the site has been designed in such a way that the spaciousness and green infrastructure is retained and enhanced from a redundant Paddock.

Furthermore, the characteristics that give the Conservation Area its special interest, as identified in the Conservation Area Appraisal and Management Plan have been used as references for the design of the illustrative site layout.

The proposal is to use local materials and design details designed to preserve or enhance the special interest of the Conservation Area. Limestone laid as rubble external walling, slate roofs and roadside walls of varying sizes predominate. More modern houses in the area are rendered and painted white. This, according to the Conservation Area Appraisal gives 'some cohesiveness [to the area] despite their modern details'.

Elsewhere in the appraisal the village is described as having a 'rural character', a character that is reinforced by the existence of mature trees, singularly or in groups and simple pavements with narrow stone curves. The use of modern railings or timber fences are considered to be detrimental to the historic character of the conservation area.

Given the sites relationship with the Conservation Area, the proposal has been designed in to ensure that the development endeavours to protect, preserve and enhance the character of the area.

The site layout has been designed to avoid having the appearance of a suburban estate by providing a range of house types on plots that vary in size thereby maintaining the open structure of the conservation area as described.
Furthermore, the existing boundaries to the east and west, which are subject to TPOs, will be retained and enhanced and not detract from the character of the Conservation Area.

The site marks a transition point between the western end of the linear historic core of the village and the lower density development at Old Rectory Drive.
The landscape proposals have been designed to include sustainable drainage, and the tree planting reflects the isolated trees or groups of trees referred to in the Conservation Area Appraisal as significant areas of character.

The illustrative site layout represents an appropriate scale of development and an efficient use of land and as such the proposed development will not have any detrimental impact upon the Conservation Area.
Deposit Plan Amendments

Settlement Boundary

Given the above and the further assessment below, the strong preference would be for the site to be allocated for residential development within St Nicholas. This would form a logical amendment to the Settlement Boundary to include the western parcel (former Paddock) of Candidate Site - The Spinney, St Nicholas (Site Ref: 460). The current Settlement Boundary is illogical as the site is surrounded by development on 3 boundaries and the simple rounding off along the southern boundary would allow for an appropriate windfall infill development.
Conservation Area

Given the above then it is considered that the Conservation Area boundary would need to be amended to reflect the allocation of the site.
These amendments would be required to the Deposit Proposals Map.

Site Assessment
The site was promoted through the Candidate Site process and assessed at Preferred Strategy stage. However, it is not allocated within the Deposit Plan and thus was not subject to updated reassessment as part of this stage of plan preparation.

For completeness, and in order to clearly demonstrate the limited and proportionate nature of the site's constraints, the previous site assessment summary table is reproduced below. This is included to highlight that the site performs favourably in sustainability and deliverability terms, and that the matters previously cited as constraints are capable of mitigation through design.

A table comparing an updated site assessment prepared by Boyer against the Council's assessment has been provided.

This representation, submitted on behalf of Mr Fairweather in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Significant concern remains regarding the absence of residential allocations within Minor Rural Settlements, particularly St Nicholas, and the continued reliance on a limited flexibility allowance under Policy HG1. An increased flexibility margin of up to 15% would necessitate the identification of additional sustainable and deliverable sites. Such growth should be directed, in part, toward appropriate locations within Minor Rural Settlements to ensure a genuine range and choice of housing and to support rural community sustainability.

It is further noted that the site performs favourably in the Council's Candidate Site Assessment, with limited constraints identified. The matters previously raised, including Conservation Area considerations, are capable of sensitive mitigation through design and have been subject to detailed review. There is no substantive evidence demonstrating that the site is unsuitable for development.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.
The Deposit Plan should therefore be amended to allocate Land adjoining The Spinney, St Nicholas (Site Ref: 460), or alternatively identify it as a reserve or flexibility site, in order to ensure the Plan is justified, effective and deliverable.

Change suggested by respondent:

It is strongly recommended that appropriate consideration is given to the widening of the Strategic Growth Areas to include St Nicholas as a sustainable settlement which is capable of accommodating a new allocation.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Taylor Wimpey [386]
Agent: Savills

Summary:

Taylor Wimpey consider that to date the growth strategy has placed disproportionate emphasis on identifying an alternative site within Barry, rather than giving due consideration to potential sites in nearby high-performing settlements such as Sully. Taylor Wimpey therefore strongly encourage the VoG to widen the search for additional allocations beyond the administrative boundary of Barry Town Council and to consider locations that represent a logical and sustainable extension to neighbouring primary settlements that are located within the Strategic Growth Area, including Sully.

The six key elements of the Sustainable Growth Strategy are noted and Taylor Wimpey support a spatial strategy that locates major new development for the delivery of sustainable housing growth in appropriate locations, such as Sully, that are supported by the relevant infrastructure, services and facilities. Providing new homes within Phase 3 aligns with the Strategic Growth Area identified within the RLDP Strategy which forms the primary focus for housing growth.

Policy SPG1 continues to identify Sully as a location where new housing development will be concentrated, therefore establishing a principle of development for Phase 3 and help to further align the provision of new housing with the existing facilities of Sully, reducing the need to travel. Sully represents an inherently sustainable location for future growth and aligns well with the Sustainable Transport Oriented Growth Option. As identified in the Deposit RLDP, Sully is classified as a Primary Settlement and performs a complementary role to Barry as a key centre. Its position within the Strategic Growth Area further indicates that an appropriate level of development at Sully would be acceptable, with both existing housing delivery and the current allocation at Swanbridge Road supporting its established role.

With existing development ongoing to the north of the Site, at Phases 1 and 2 of Land West of Swanbridge Road, Phase 3 is considered to provide an appropriate level of growth in a sustainable location that would form a logical extension to existing allocations. The sustainability and suitability of Sully to accommodate residential development is reinforced by the allocation of 500 dwellings under Policy MG2(37) ('Land West of Swanbridge Road, Sully') on land directly north of the site promoted by Taylor Wimpey. The progression of this location into a phase 3 development would continue to strengthen Sully's function as a primary settlement and would constitute a logical and coherent extension to the existing built form.

Taylor Wimpey appreciate the aspirations of the Council to deliver housing to meet the identified future housing needs of the VoG and wider growth aspirations of the South East Wales Region at a strategic level. Taylor Wimpey support the revised strategy moving away from North East Barry, however maintain the position that this level of growth should be re-allocated to those locations that are most suitable for growth, including sustainable settlements outside of Barry. Growth should not be focuses solely on Barry.

Full text:

1. Introduction

1.1.1 Savills is instructed by Taylor Wimpey PLC ('Taylor Wimpey') to respond to the consultation on the Deposit Plan as part of the preparation of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').

1.1.2 The submission is made in the context of Taylor Wimpey's position as the promoter of Site ID 376 (Land West of Swanbridge Road, Phase 3). The site is being promoted for a residential development comprising of 260 homes.

1.1.3 Taylor Wimpey is one of the UK's leading national housebuilders, with extensive experience in delivering high-quality residential developments across a wide range of local authority areas. The company has an established presence within the VoG area. Taylor Wimpey is in the process of delivering Phase 1 of the site with development of Phase 2 close to commencing to dovetail with the completion of Phase 1. Phase 3 would act as a logical extension to the site, effectively rounding off development in this part of Sully and dovetailing with Phase 2 which is anticipated to be completed in 2029.

1.1.4 The site was originally submitted as a candidate site as part of the Call for Candidate Sites stage in September 2022 by Taylor Wimpey. This was a comprehensive site submission demonstrating that the site was viable, deliverable and sustainable – the three tests for Candidate Sites to satisfy as set out in Paragraph 3.36 of the Development Plans Manual. The Candidate Site submission consisted of the following information:

• Archaeological Desk-based Assessment (prepared by RPS);
• Design Vision (prepared by Pegasus Group);
• Drainage Strategy & Flood Risk Assessment (prepared by Pheonix Design);
• Landscape Appraisal (prepared by Pegasus Group);
• Preliminary Ecological Appraisal (prepared by Soltys Brewster);
• High Level Viability Statement (prepared by Savills);
• Transport Technical Note (prepared by Vectos); and
• Supporting Statement (prepared by Savills).

1.1.5 Since then, and on behalf of Taylor Wimpey , Savills have also responded to the consultation on the Preferred Strategy in February 2024 as well as the Housing Growth in Barry consultation in July 2025 and the Housing Trajectory in October 2025.

1.1.6 This supporting statement is structured to initially comment on the approach taken by the VoG in assessing the

Land West of Swanbridge Road, Phase 3 site before commenting on specific policies that are contained within the Deposit RLDP.

1.1.7 In general, Taylor Wimpey's position is that, at present, the Deposit RLDP is not sound but that it could be made sound through the amendments as suggested throughout this Statement.

2. Candidate Site Assessment Process and Integrated Sustainability Assessment
Introduction

2.1.1 Candidate sites are in essence assessed through two means – the Candidate Site Assessment Background Papers and the Integrated Sustainability Appraisal.

2.1.2 Taylor Wimpey's position is that both of these documents do not provide an adequate assessment of the Land West of Swanbridge Road, Phase 3 site.

2.1.3 Each is considered in turn below.

Candidate Site Assessment Process

2.1.4 All candidate sites have been assessed at Preferred Strategy stage (reported as Background Paper 18) and Deposit stage (reported as Background Paper 18a).

2.1.5 The reason for the Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site not being carried forward as part of these assessments was presented in Background Paper 18 at the time of publication of the Preferred Strategy with Backgropund Paper 18a providing no further site analysis. The reason for the site not progressing this stage of the Candidate Site assessment process is as follows:

"Development of the site would lead to a loss of the Best and Most Versatile Grade 3a agricultural land contrary to national policy."

2.1.6 Whilst parts of the site do constitute Best and Most Versatile (BMV) land, Taylor Wimpey's position is that there are compelling reasons relating to the site's context and how it is utilised that mean a more nuanced position needs to be taken. Without such nuance, the RLDP risks not allocating a site that, whilst perhaps containing BMV, is otherwise suitable for development and more suitable for development then sites that the Deposit RLDP proposes to instead allocate.

2.1.7 Included at Appendix A, and included as part of Taylor Wimpey's representations on the Preferred Strategy and the Housing Growth in Barry consultations, is an Agricultural Assessment prepared by The Andersons Centre.

2.1.8 The key conclusions from this Assessment are that:

• The site is farmed by a tenant farmer whose main base is approximately 12km away which presents logistical and practical challenges. These challenges are exacerbated by the lack of farm buildings and the fact that there is no mains electricity;

• The site forms part of a wider 230 acre farm and so the cessation of agricultural practices on this parcel will not, by virtue of its size, prejudice the continued farming of the wider land parcel;

• The tenant farmer farms approximately 3,000 acres of land and so the loss of the ability to farm this parcel will have a negligible impact on the continuation of their agricultural operations;

• The site is bound on two sides by existing or permitted housing, on a third boundary by a railway line, and on its eastern boundary by a road; and

• Farming of the land does not support a high level of employment and if the land was lost for development, 0.15 of a full time labour unit's equivalent work would be lost.

2.1.9 Taking the above together, the conclusion needs to be reached that the site's size and context presents challenges for farming and that the development of Phase 2 by Taylor Wimpey has the potential to exacerbate these challenges. Aligned to this, the level of employment that the farming of the site supports is negligible and the cessation of farming of this particular parcel of land will not materially impact either the continued farming operations of the wider farm that the land sits apart of or the tenant farmer that farms the land.

Integrated Sustainability Appraisal

2.1.10 The Initial Integrated Sustainability Appraisal undertaken at Preferred Strategy stage provides a GIS based appraisal of all sites against 17 objectives. Inherently the Initial Integrated Sustainability Appraisal can be a bit of a blunt tool but Taylor Wimpey's position is that the site performs better against a substantial number of the 17 objectives than

the current assessment.

2.1.11 Included at Appendix B is an assessment undertaken by Taylor Wimpey which provides commentary against certain objectives and suggests why the site performs considerably better than forecast in the Initial Integrated Sustainability Appraisal.

2.1.12 A summary of this is presented below:
Table 1 Summary of ISA and Suggested Taylor Wimpey Approach

2.1.13 Taylor Wimpey's position here is clear – the inadequacy of the Integrated Sustainability Appraisal as a tool for assessing candidate sites can only be appropriate where the Integrated Sustainability Appraisal is done correctly and considers the mitigation measures that a candidate site submission proposed to put in place. Without this, the Integrated Sustainability Appraisal risks a situation – as Taylor Wimpey suggest has been the case in Policy HG1 KS1 – where a Key Site is selected in favour of alternative sites that are better performing.

3. Deposit Plan

3.1 Introduction

3.1.1 The following section of this Statement comments on the relevant Key Themes, Strategic Objectives and draft Policy Framework forming part of the Deposit Plan Consultation.

3.1.2 The Policy Framework has been reviewed with comments provided on only those policies considered to be of most relevance to Land West of Swanbridge Road (Phase 3), Sully. The position on individual policies contained within the Deposit RLDP are summarised in the table below:

Table 2 Taylor Wimpey Policy Position

Relevant Policy Support or Object
SP1 Sustainable Growth Strategy - Object
SP2 Settlement Hierarchy - Support
SP 6 Housing Requirement - Object
HG1 Housing Allocations: HG1 KS1 – Land at North West Barry - Object
TR1 Transport Proposals: TR1(2) Active Travel Route Sully to Cosmeston - Support
TR1 Transport Proposals: TR1(6) Highway Improvement Works Weycock Cross Roundabout - Object
CC1 Residential Operational Net Zero Carbon Development - Object
CI1 Open Space Provision - Clarity required
DNP5 Environmental Protection - Object as currently worded

3.2 Key Themes and Strategic Objectives

Homes For All

3.2.1 As noted in paragraphs 3.17 and 3.18 of the Deposit Plan the VoG has the highest affordability ratio in Wales with average house prices 9.7 times the average workplace earnings compared to the Welsh average, giving rise to a significant need for affordable homes which is under significant pressure. This highlights the ever increasing need for sufficient high quality housing, which Taylor Wimpey are committed to provide and supply the mix, type and tenure of housing needed within the local authority's growing population.

Placemaking

3.2.2 Taylor Wimpey embed strong placemaking standards across their developments as detailed within their Placemaking Charter. Taylor Wimpey consider Land West of Swanbridge Road (Phase 3) to present an opportunity to provide a comprehensive residential development that is accessible and well-connected with the existing settlement of Sully and compliments the earlier phases of development. As demonstrated in the earlier phases of development, the Site offers a sustainable location for future growth with easy access to a range of services and facilities in Sully.

Protecting and Enhancing the Natural Environment

3.2.3 Taylor Wimpey support the VoG's commitment to protect and enhance the natural environment through the integration of green/blue infrastructure network and the sustainable management of resources within the VoG. However where Objective 5 seeks to safeguard land from inappropriate development, proposals must be subject to the relevant planning balance giving weight to the surrounding land use and appropriateness of safeguarding agricultural land that would otherwise be unconstrained and considered suitable for development given the outstanding need for housing.

Promoting Active and Sustainable Travel Choices

3.2.4 Taylor Wimpey support the promotion of sustainable travel and active modes of transport, including the provision

of designated active travel routes that improve the connectivity between primary and key settlements, such as the Sully to Cosmeston active travel route.

3.2.5 As demonstrated in the earlier phases of Land West of Swanbridge Road, Taylor Wimpey support the promotion of active travel within new developments and provide opportunities for residents to easily engage with active travel.

3.3 Policy Framework

Policy SP1 Sustainable Growth Strategy

3.3.1 Taylor Wimpey's comments on this policy relate to the sustainable growth strategy in so much as it relates to the spatial strategy rather than the housing requirement that the RLDP adopts with further comments on the housing requirement provided in connection to Policy SP6 (Housing Requirement).

3.3.2 Taylor Wimpey appreciate the need to balance the ten strategic objectives against the need for growth and protection of the VoG's natural and built environment, and strongly support the strategic objective to provide homes for all. Taylor Wimpey maintain their position on the proposed growth strategy that has been established within earlier consultation responses submitted throughout the RLDP process, including the most recent consultation on 'Growth Options in Barry'.

3.3.3 Taylor Wimpey consider that to date the growth strategy has placed disproportionate emphasis on identifying an alternative site within Barry, rather than giving due consideration to potential sites in nearby high-performing settlements such as Sully. Taylor Wimpey therefore strongly encourage the VoG to widen the search for additional allocations beyond the administrative boundary of Barry Town Council and to consider locations that represent a logical and sustainable extension to neighbouring primary settlements that are located within the Strategic Growth Area, including Sully.

3.3.4 The six key elements of the Sustainable Growth Strategy are noted and Taylor Wimpey support a spatial strategy that locates major new development for the delivery of sustainable housing growth in appropriate locations, such as Sully, that are supported by the relevant infrastructure, services and facilities. Providing new homes within Phase 3 aligns with the Strategic Growth Area identified within the RLDP Strategy which forms the primary focus for housing growth.

3.3.5 Policy SPG1 continues to identify Sully as a location where new housing development will be concentrated, therefore establishing a principle of development for Phase 3 and help to further align the provision of new housing with the existing facilities of Sully, reducing the need to travel. Sully represents an inherently sustainable location for future growth and aligns well with the Sustainable Transport Oriented Growth Option. As identified in the Deposit RLDP, Sully is classified as a Primary Settlement and performs a complementary role to Barry as a key centre. Its position within the Strategic Growth Area further indicates that an appropriate level of development at Sully would be acceptable, with both existing housing delivery and the current allocation at Swanbridge Road supporting its established role.
3.3.6 With existing development ongoing to the north of the Site, at Phases 1 and 2 of Land West of Swanbridge Road, Phase 3 is considered to provide an appropriate level of growth in a sustainable location that would form a logical extension to existing allocations. The sustainability and suitability of Sully to accommodate residential development is reinforced by the allocation of 500 dwellings under Policy MG2(37) ('Land West of Swanbridge Road, Sully') on land directly north of the site promoted by Taylor Wimpey. The progression of this location into a phase 3 development would continue to strengthen Sully's function as a primary settlement and would constitute a logical and coherent extension to the existing built form.

Figure 1 Extract of Growth Strategy

3.3.7 Taylor Wimpey appreciate the aspirations of the Council to deliver housing to meet the identified future housing needs of the VoG and wider growth aspirations of the South East Wales Region at a strategic level. Taylor Wimpey support the revised strategy moving away from North East Barry, however maintain the position that this level of growth should be re-allocated to those locations that are most suitable for growth, including sustainable settlements outside of Barry. Growth should not be focuses solely on Barry.

Policy SP2 Settlement Hierarchy

3.3.8 Taylor Wimpey support the conclusions of the Settlement Appraisal Review Background Paper which identifies Sully as a Primary Settlement, reflecting its important role in providing a level of housing growth, in addition to key local services and facilities. Within this Background Paper, Sully is recognised for its vital role as a sustainable community, scoring highly across all key principles in demonstrating its sustainability by providing for the day-to-day needs of its residents. Taylor Wimpey concur with the supporting evidence which reinforces Sully's importance within the settlement hierarchy.

3.3.9 Whilst Draft Policy SP2 presents a 'broad distribution of development within the Strategic Growth Area..', serious concerns continue to be raised around the level of growth around Barry and the emphasis placed on it as the focus for future development. Taylor Wimpey do not dispute the identification of Barry as a Key Settlement, given its position as the largest town within the VoG, however believe Barry should not remain the sole focus for growth where there are

opportunities available around primary settlements located within the Strategic Growth Area.

3.3.10 Put another way, it seems perverse for the Deposit RLDP to direct no new growth to a Primary Settlement within the identified Strategic Growth Area.

Policy SP 6 Housing Requirement

3.3.11 The purpose of this policy is to set the housing requirement and then identify the components of supply that are anticipated to meet this housing requirement. A number of Background Papers (nos. BP7, BP8, BP8A, ad BP9A) underpin the approach that is taken. Taylor Wimpey have a number of comments to make on the approach taken in this policy.

Housing Requirement

3.3.12 The approach taken in the Deposit RLDP, as with the Preferred Strategy beforehand, is for the housing requirement to make use of a 10 year dwelling-led scenario, an approach that reflects past completions and looks to extrapolate this forward over the lifetime of the RLDP.

3.3.13 Taylor Wimpey provided detailed commentary on the proposed housing requirement in their comments on the Preferred Strategy but note that Welsh Government have subsequently provided their comments on the Preferred Strategy raising no objection with the housing requirement proposed to be taken.

3.3.14 Taylor Wimpey's position though remains – if a dwelling-led scenario is to be used to determine the housing requirement then it needs to have a far shorter scenario length then 10 years as the first three years of the 10 year period selected were when supply was suppressed as a result of the current LDP not having been adopted.

3.3.15 That said, there is a clear contextual change since the Preferred Strategy was adopted, this being the publication of the 2022-based household projections have been published. Table 5 of Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections provides a comparison of the 2022-based projections with the 2018-based projections and the Deposit RLDP's housing requirement. A simplified version of this table is shown overleaf:

Table 3 RLDP Housing Requirement
Scenario Housing Requirement
RLDP 7,587
2018-based projections 6,214
2022-based projections 9,623

3.3.16 This is important as Paragraph 4.2.6 of PWW states that:

'The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans.'

3.3.17 The proposed approach of continuing to use the 10 year dwelling-led scenario, as a methodology, clearly does not do this.

3.3.18 The approach of using the 2022-based household projections would comply with the aspirations of PPW. Taylor Wimpey's position is that the commentary provided in the Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections for not using 2022-based projections is wholly inadequate and that these projections should be used.

Flexibility Allowance

3.3.19 Paragraph 5.58 of Edition 3 the Development Plans Manual (March 2020) makes it clear that there is a requirement for a flexibility allowance to be added on top of the housing requirement to derive the number of homes the RLDP should plan for. This is in the interest of ensuring that sufficient housing is delivered in the event of some allocated sites either not delivering in their entirety or delivering less homes than anticipated. Paragraph 5.59 of the Manual clarifies that the extent of the flexibility allowance should be informed by local issues with 10% as a starting point (i.e. as the minimum).

3.3.20 The Adopted Local Development Plan (ALDP) applies a 10% flexibility allowance on top of the housing requirement for 9,460 homes so that provision is made for 10,408 homes.

3.3.21 Paragraph 1.2.34 of the Annual Monitoring Report 2024-2025 provides a comparison of the number of homes that have been completed and the level of completions that the ALDP anticipates. This shows that 6,999 homes have been delivered up to 1st April 2025 against a cumulative dwelling target of 8,829 homes, representing a shortfall of 20.7%.

3.3.22 Taylor Wimpey's point here is that the ALDP's flexibility allowance of 10% is insufficient to ensure that the ALDP's housing requirement is actually being delivered. This is clear evidence that a higher flexibility allowance should be used

for the RLDP. Although for different reasons, but following a direction from the Welsh Government Planning Inspector, Bridgend County Borough Council has increased its flexibility allowance to 20% and, it is considered that such a buffer is appropriate for the VoG's RLDP.

Non-Delivery Allowance on Land Bank

3.3.23 Line C of Table 2 of the Preferred Strategy relates to those sites that either benefit from planning permission or are subject to a resolution to grant planning permission subject to planning permission. Combined, these sites are identified as having capacity for 1,860 homes.

3.3.24 The current approach, which assumes that all other sites which are under construction or sites where there is either a planning permission in place or sites where there is a resolution to grant planning permission subject to the signing of a Section 106 agreement will be completed in full, causes concern for Taylor Wimpey.

3.3.25 There are multiple reasons why homes that benefit from either planning permission or a resolution to grant planning may not be delivered. These relate to viability, but also to specific site constraints and landowner intentions.

3.3.26 A point that is separate, but inherently linked, to the above is that often the capacity of a site for which reserved matters approval is sought is less than that permitted at outline stage. Requirements for SAB approval and the demonstration of a biodiversity net benefit, for example, reduce the capacity of a site at detailed design stage but are often not factored in at outline stage, particularly where the outline application is not progressed by a housebuilder.

3.3.27 Research undertaken by the Local Government Association for England (no such data is available for Wales) suggests that, between 2010/2011 and 2019/2020 a total of 2,782,300 dwelling were granted planning permission whilst there were only 1,627,730 completions. This means that during this period just 58.5% of those homes which were granted planning permission were completed.

3.3.28 Taylor Wimpey is not suggesting that applying a discount of 41.5% is necessarily correct and the above is both from England and a few years out of date but the need for a discount that relates specifically to Line C is very clear.

3.3.29 It's difficult to know what this figure should be but Taylor Wimpey suggest that a 20% figure is used to reflect the flexibility allowance.

Windfall Allowances

3.3.30 The approach taken in the Deposit RLDP is to assume that 1,303 homes will be delivered across Windfall Sites. This has been calculated on the basis of previous completion delivered as windfalls.

3.3.31 Taylor Wimpey's concern is that the delivery of homes on Windfall Sites inherently becomes more challenging over time as the easier to develop sites have been delivered and the buildings and land that hasn't been developed is subject to increasing levels of policy protection. The approach taken by Cardiff Council in their Deposit RLDP is to assume that 75% of the 10 year average Windfall Sites will be delivered and such an approach seems entirely appropriate in this case.

3.3.32 An Urban Capacity Study (October 2023) prepared by the VoG, seeks to corroborate this by identifying 2,627 homes that could be delivered across the VoG. Whilst the windfall allowances would be less than the suggested urban capacity, this shouldn't be seen as problematic or as a conflict as the purpose of the Urban Capacity Study is, as the name suggests, just to identify sites which may have capacity. It doesn't account for land ownership (and whether the land owners have aspirations to dispose of the site) or development viability. In addition, the approach taken to site capacity to is to assume a density based on site type but it does this without an appreciation of site constraints and is based on the gross rather than net area.

Rolled Forward Sites

3.3.33 Taylor Wimpey have concerns with the approach that is taken in Table 2 of the Deposit RLDP which identifies allocations for 959 homes that are to be rolled over from the ALDP to the RLDP.

3.3.34 Concerns are raised around two sites in particular - Land to the west of Pencoedtre Lane, Barry and Land between new Northern Access Road and Eglwys Brewis Road, These sites are allocated in the ALDP but have failed to be delivered. Given the longstanding period during which there has been clear policy support for development but no completions, it follows that there are serious concerns around the deliverability of these two sites which, together, are allocated for 370 homes.

3.3.35 The failure to deliver these dwellings is due to a number of factors which are detailed in Taylor Wimpey's Preferred Strategy consultation response, which questions whether these sites will deliver at all or at a significantly reduced capacity due to the following reasons:

■ Viability constraints;

■ Site specific constraints;
■ Landowner intentions;
■ Requirements for SAB approval; and
■ Biodiversity net benefit;

3.3.36 Whilst it is recognised that there may be policy support for the delivery of these two sites, there deliverability is clearly uncertain and they should be removed from Table 2.

Conclusion

3.3.37 The following table summarises the approach previously proposed in the Deposit RLDP and compares it to the amendments suggested by Taylor Wimpey in the preceding sections of this Statement.

Table 4 Deposit RLDP Housing Supply and Taylor Wimpey's Suggested Approach
Housing Supply - Deposit Plan (December 2025) - Taylor Wimpey Suggested Approach (March 2026)
Housing Requirement - 7,890 - 9,623
Flexibility Allowance - 10% - 20%
Flexibility Allowance – 770 - 1,925
Housing Requirement + Flexibility Allowance - 8,660 - 11,548
A – Completions - 1,747 - 1,747
B – Units Under Construction - 313 - 313
C and D- Units with Planning Permission Minus Non-Delivery Allowance - 1,777 1,488
Existing Supply - 3,827 - 3,548
E – Large Windfall Sites - 720 - 540
F – Small Windfall Sites - 583 - 438
E+ F Total Windfall Allowance - 1,303 - 978
RLDP Allocations - 3,520 - 3,150

3.3.38 The conclusion reached in Taylor Wimpey's analysis is that, as a result of both the suggested housing requirement and flexibility allowance combined with Taylor Wimpey's comments on the components of supply, the Deposit RLDP needs to find allocations to deliver a further 3,872 homes.

Policy HG1 KS1 – Land at North West Barry
3.3.39 Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. Taylor Wimpey has provided comments on the housing requirement that is set in the RLDP and the components of supply that are anticipated to meet it in the proceeding sections of this Statement.

3.3.40 As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.

3.3.41 There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.

3.3.42 Policy HG1 KS1 proposes to allocate the site known as 'Land at North West Barry'.

3.3.43 The proposed allocation of this site follows a consultation – entitled 'Housing Growth in Barry' - undertaken by the VoG in July 2025 which proposed to allocate three sites in Barry as an alternative to the North East Barry site that was identified as a Key Site in the Preferred Strategy but was considered to no longer be deliverable.

3.3.44 Taylor Wimpey responded as part of the 'Housing Growth in Barry' consultation, supporting the removal of North East Barry as a Key Site but raising serious concerns with the proposed allocation of 'Land at North West Barry' as an alternative.
3.3.45 These concerns remain and Taylor Wimpey strongly consider there need to be other alternative sites – such as Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) - within nearby settlements that perform better than the Land at North West Barry site and should be allocated for housing.
3.3.46 To support this conclusion, Taylor Wimpey has undertaken a review of the Integrated Sustainability Appraisal (ISA) which provides a scoring of different candidate sites against the 17 objectives as well as considering and comparing the sustainability and accessibility of the two sites.

Integrated Sustainability Appraisal

3.3.47 The below table provides a comparison of how the Integrated Sustainability Appraisal scores Land West of

Swanbridge Road (Phase 3), Sully (Ref. 376) compared to the Land at North West Barry site. Two different comparisons are provided – one which compares the actual scoring in the ISA and a second which compares the two sites following Taylor Wimpey's suggested scoring which is included as Appendix A.

3.3.48 These tables clearly highlight where the subject site out performs North West Barry across numerous objectives.

Table 5 Comparison of Phase 3 Land West of Swanbridge Road (Site ID 376) and North West Barry (Site ID 490) ISA performance

3.3.49 From an initial review, the Integrated Sustainability Appraisal shows that Land West of Swanbridge significantly outperforms North West Barry in terms of the number of significantly positive scores '++' and the number of '—' scores. To this end the subject site provides clear advantages above and beyond North West Barry in terms of homes, health, and transport. As such Land West of Swanbridge is considered to have the capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge; The site is within 800m of a health service and an active travel route; and, The site is within close proximity (≤800m) to a railway station or bus stop, town/ retail centre and an active travel route. Taylor Wimpey consider this assessment should go further to recognise the associated benefits to the leisure than be provided by the site's development.

3.3.50 Following Taylor Wimpey's re-assessment of the site against the Integrated Sustainability Appraisal ISA objectives it is also considered to obtain notably more positive '+' scores than North West Barry. It is also worth noting that North West Barry has more unknown impacts than Land West of Swanbridge which introduces a level of uncertainty around its potential for further negative impacts. Moreover, North West Barry scores a significant number of negative impacts across the ISA, with the extension site obtaining double the amount than Land West of Swanbridge Road.

3.3.51 Taylor Wimpey's position is that it would be unsound to allocate a site that performs considerably poorer in the Integrated Sustainability Appraisal than a site that is not proposed to be allocated.

Accessibility and Sustainability

3.3.52 SLR Consulting have prepared an updated document demonstrating the Site's sustainability credentials and providing a detailed overview of existing and future active travel and public transport infrastructure. This is included as Appendix C.

3.3.53 As a starting point, it considers those services within Sully. In terms of local amenities, the population size of Sully, naturally benefits from a good range of local amenities and services, and therefore it is anticipated that a high proportion of future residents' day-to-day journeys would be contained within the village and undertaken via walking or cycling. The Walking Catchment Map prepared by SLR demonstrates this and illustrates services within walking distance from the Site.

3.3.54 The proposed development benefits from local existing and future / planned infrastructure which will help support travel by sustainable modes such as walking, cycling and public transport. The Site falls within the less than 15 minutes Public Transport Catchment for bus and rail services. The Site is supported by the existing bus network, connecting Sully with Barry, Penarth and Cardiff – the nearest bus stop approximately 400m from the centre of the site; Moreover the Site is within proximity to Cadoxton and Penarth railway stations which have regular services in each direction in addition to the existing walking and cycling infrastructure in and around Sully.

3.3.55 The future accessibility of the Site will be further enhanced through the ongoing and planned South Wales Metro improvements, future active travel routes and the proposed Sully to Penarth mixed use link. The below figure shows several newly proposed active travel routes running close to the site including a new walking / cycling route along Swanbridge Road. Planning applications are now being submitted to support the delivery of these new active travel links. In March 2025 a planning application was submitted proposing a new route between Palmerstown and Dinas Powys.

3.4 SLR have undertaken further assessment work comparing the sustainability credentials of Land West of Swanbridge Road to Land North West of Barry. Land North West of Barry, is separated from the existing built-up area by the B4266 Pontypridd Road where the eastern and southern boundaries abut residential properties. As such, the proposed access for all modes would be taken from the A4226 Port Road West. The A4226 and B4266 can be a barrier to the promotion of active travel in that they facilitate vehicular travel and do not provide an attractive environment for pedestrians.

3.5 Furthermore, Land North West of Barry is on the fringes of Barry and had few if any facilities within a 10 minute walk, other than bus stops. In comparison, Land West of Swanbridge Road in Sully benefits from its proximity to the High Street in Sully and the services there.

3.6 The below table demonstrates differences in accessibility to amenities between the two sites, where Land West of Swanbridge Road presents a more favourable location for future development.

Table 6 Comparison of Local Facilities Between Land North West of Barry (Site ID 449) and Land West of Swanbridge Road (Phase 3) (Site ID 376)

3.7 Whilst the walking distance shown from Land North West of Barry to the nearest bus stop is slightly less than the Swanbridge Road Site, it should be noted that the bus services that can be accessed from Sully are more frequent and more direct than those which can be accessed from Land North West of Barry.

Conclusion

3.8 Taking the above together, the conclusion Taylor Wimepy reach is that their Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site performs more strongly than the Land North West of Barry site.

Policy TR1 Transport Proposals

3.9 The draft transport proposals contained within the Deposit RLDP have been reviewed with the following proposals considered to be pertinent to the Site and draft residential allocations.

TR 1 (2) Active Travel Route: Sully to Cosmeston

3.10 Taylor Wimpey support the designation of an active travel route connection the eastern side of Sully with Cosmeston in the north-east. Most notably the proposed route will pass Swanbridge Road which provides direct access to Land West of Swanbridge Road Site, with Phase 3 in close proximity to the travel route. The proposal would further enhance the accessibility and sustainability of the Site as a logical extension for residential development in Sully.

Figure 4 Extract of Deposit RLDP Proposals Map with Land West of Swanbridge Road (Phase 3) Identified

TR1 (6) Highway Improvement works: Weycock Cross Roundabout, Barry

3.11 Taylor Wimpey raise concerns around the proposed works at the Wyecock Cross Roundabout, compared to the other improvement works proposed. As noted in the Deposit RLDP, this roundabout forms a key connection within the wider strategic highway network and therefore of high importance for the local area and surrounding communities. The proposed options presented within the Deposit RLDP provide little certainty of the scope of works required with no preferred option identified. This raises concerns around the impacts of the highway improvements on the deliverability of the adjacent draft allocation of North West Barry. The same concerns arise when considering the roundabout improvement works in combination with the proposed access strategy contained within North West Barry's supporting information package. The proposed road widening measures (c.11m increase) required to make the draft allocation accessible would have a significant impact on the wider transport network at this strategic junction.

Policy CC1 (Residential Operational Net Zero Carbon Development)

3.12 The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) then setting out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.

3.13 As a starting point, Taylor Wimpey share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) is not appropriate. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this results to an uneven framework for housebuilders, significantly adding cost and reducing certainty.

3.14 The justification for exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.

3.15 There are two points to be made here:

3.16 Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage. This Written Ministerial Statement was subject to a judicial review which was dismissed with the position taken in it found to be legally sound.

3.17 Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations.

3.18 Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking

into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound.

3.19 Secondly, Taylor Wimpey have concerns with the approach that has been taken with regards to viability.

3.20 From Taylor Wimpey's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.

3.21 As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated.

3.22 Taylor Wimpey's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. Savills' experience is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.

3.23 Taylor Wimpey's other concern with this approach is that the figure assumed as being required to achieve the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is driven from a Cost Assessment report published in January 2024. With the Background Paper 9A Housing Land Supply and Housing Trajectory not forecasting first completion onsite until 2028/2029, there is likely to be a period of approximately five years from the establishment of the figure for delivering the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) and when the first units would be delivered onsite.

3.24 Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy CI1 (Open Space Provision)

3.25 This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.

3.26 Taylor Wimpey note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.

3.27 Taylor Wimpey is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter, Policy DNP5 Environmental Protection

3.28 Taylor Wimpey consider the inclusion of 'the loss of the best and most versatile agricultural land' to be at odds with the other elements listed, where unlike the others mentioned, the loss of agricultural land would have limited, if any, impact on people, residential amenity and property.

3.29 It is acknowledged that the loss of BMV agricultural land may impact the VoG's overall amount of high quality agricultural land, however this should be assessed against the existing high level of BMV agricultural land within the County. The extent to which its loss is considered "unacceptable" should be subject to the planning balance against the overriding need for affordable housing and local housing need. Consideration towards the farming business case and economic viability are also required within the planning balance. In the case of Land West of Swanbridge Road, the loss of BMV agricultural land remains the only constraint that cannot be overcome, as noted in the Candidate Site Assessment. Whilst the loss of high quality agricultural land should be avoided, Taylor Wimpey consider that where the merits of the Site are overwhelmingly in favour for sustainable residential development in a suitable and logical location, Policy DNP5 should not stand in the way of housing delivery.

3.30 Whilst Taylor Wimpey support the clause within the draft policy: "Where impacts are identified the Council will require applicants to demonstrate that appropriate measures can be taken to minimise the impact identified to an acceptable level. Planning conditions may be imposed, or legal obligation entered into, to secure any necessary mitigation and monitoring processes." However, in the context of BMV agricultural land, it is not clear how the mitigating measures, in the form of planning conditions or legal obligations, can be applied. This reinforces the earlier view that the inclusion of 'the loss of the best and most versatile agricultural land', as currently worded within the draft policy, is at odds with the other elements listed where mitigation strategies for pollution can be suitably conditioned.

Change suggested by respondent:

I advocate for a broader search beyond Barry and recognise Sully's role within the Strategic Growth Area. Growth should be allocated to the most suitable, sustainable locations, not solely within Barry.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Mr Andrew Raymond [1170]
Agent: Boyer Planning

Summary:

The approach adopted within the RLDP places an overly narrow emphasis on growth within the Strategic Growth Area, primarily focused along rail corridors. This approach risks overlooking other sustainable rural settlements which also demonstrate appropriate connectivity and capacity to accommodate proportionate growth.

Settlements outside the Strategic Growth Area continue to perform an important role within the Vale's settlement hierarchy and rural economy. Villages such as Colwinston provide an established residential community and contribute to the vitality and sustainability of rural areas. Restricting opportunities for modest growth within such settlements risks undermining the long-term sustainability of rural communities.

The principle of directing development to sustainable settlements is supported. However, limiting development opportunities exclusively within the Strategic Growth Area is not considered to represent the most balanced or flexible spatial strategy.

Full text:

Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409)
Boyer have prepared the following representation on behalf of Andrew Raymond regarding their land interests associated with Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021– 2036 consultation.

A summary of the main representations are as follows:
• Concern regarding the absence of proportionate residential growth opportunities within rural settlements such as Colwinston;
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance within the housing trajectory;
• Questions regarding the spatial distribution of development and the limited range and choice of sites outside the Strategic Growth Area;
• Confirmation that Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a logical and sustainable opportunity for modest residential development;
• Review of the Candidate Site Assessment process and the current status of the site within the Candidate Site Register; and
• The need to consider appropriate settlement boundary adjustments to facilitate proportionate growth in sustainable rural settlements.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the principal concern in relation to the site promotion is the concentration of the majority of future housing growth within the defined Strategic Growth Area.
It is understood and supported that new housing development should be located in sustainable locations with access to public transport and services. However, the approach adopted within the RLDP places an overly narrow emphasis on growth within the Strategic Growth Area, primarily focused along rail corridors. This approach risks overlooking other sustainable rural settlements which also demonstrate appropriate connectivity and capacity to accommodate proportionate growth.

Settlements outside the Strategic Growth Area continue to perform an important role within the Vale's settlement hierarchy and rural economy. Villages such as Colwinston provide an established residential community and contribute to the vitality and sustainability of rural areas. Restricting opportunities for modest growth within such settlements risks undermining the long-term sustainability of rural communities.

The principle of directing development to sustainable settlements is supported. However, limiting development opportunities exclusively within the Strategic Growth Area is not considered to represent the most balanced or flexible

spatial strategy. Greater flexibility should be introduced to allow appropriate small-scale allocations within sustainable rural settlements.

In this context, Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a sustainable opportunity for a modest residential development that would align with the scale and character of the settlement. The site lies adjacent to existing built form and would represent a logical and contained extension to the village.
SP2: Settlement Hierarchy

Mr Raymond supports the identification of Colwinston as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Bridgend to the west and Cowbridge, Barry and Cardiff to the east. The Deposit Plan retains Colwinston within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.
Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as Colwinston, should be subject to such constrained growth.

In this context, Mr Raymond highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all building upon the identified importance of Minor Rual Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to Colwinston under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of Colwinston, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, a modest allocation at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) would represent proportionate growth that reflects the scale and character of the settlement. The site sits adjacent to existing development and would consolidate the existing settlement pattern without resulting in sprawl into the open countryside.

The current approach within Policy SP2 risks constraining flexibility within the spatial strategy and limiting opportunities to support sustainable rural communities.

SP6: Housing Requirement
Concerns are raised regarding the overall housing requirement and the level of flexibility incorporated within the Plan.

Policy SP6 currently establishes a housing requirement of 7,890 dwellings over the Plan period and includes a flexibility allowance of 10%, resulting in an overall provision of 8,660 dwellings.
The proposed supply is anticipated to be delivered through:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments
Whilst the inclusion of a flexibility allowance is supported, it is considered that a 10% allowance may not be sufficient to ensure resilience within the housing trajectory.
Recent experience from other Local Development Plans across Wales has demonstrated the importance of incorporating higher flexibility allowances to account for delivery uncertainty, infrastructure constraints and potential delays to larger strategic sites.

For example, other authorities have incorporated flexibility allowances in excess of the standard 10% to ensure the robustness of their housing supply and to provide a greater degree of adaptability should circumstances change during the Plan period.

In this context, it is considered that the Vale of Glamorgan RLDP should incorporate a flexibility allowance of at least 15%. This would provide additional resilience within the housing trajectory and reduce reliance on a limited number of larger strategic allocations.
Smaller sites such as Candidate Site 409 at Waterton Lodge, Colwinston are particularly valuable in this context. Smaller sites are typically:
• More deliverable in the short term
• Less dependent on major infrastructure investment
• Capable of contributing to early housing delivery
• Able to increase overall build-out rates
Such sites can therefore play an important role in supporting the delivery of the Plan's housing requirement and enhancing flexibility within the supply.

HG1: Housing Allocations
Mr Raymond does not comment on any of the proposed housing allocations, however, does highlight that the delivery is incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements are required. Only 122 units are proposed on smaller allocated sites, equating to approximately 2.6% of newly allocated supply under (E) Rural Affordable Housing Led Sites – policy HG4.

In the context of the above, there remains significant concern that the spatial strategy continues to exclude the required number of allocations within Minor Rural Settlements, including Colwinston.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.
It is agreed that the inclusion of smaller allocations can:
• Improve overall housing delivery rates
• Provide greater choice within the housing market
• Reduce delivery risk by diversifying supply
• Support rural communities through proportionate growth

Whilst it is noted that there is a proposed allocation within Colwinston – HG4 (1) – Land to the East of Colwinston for 25 units, Mr Raymond maintains that there is still a clear disconnect between the identified role and function of settlements such as Colwinston and the absence of any further allocated sites capable of delivering an appropriate range and choice of dwellings.

The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.
This approach is inconsistent with the settlement's accessibility and functional role. Colwinston is:
• Well connected to the A48 strategic highway network;
• Served by bus routes within close proximity to the site;
• Within commuting distance of Bridgend, Cowbridge, Barry and Cardiff;
• A sustainable and established residential community.
Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.

Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at Waterton Lodge would represent proportionate growth consistent with the scale and character of the settlement.

HG4 – Affordable Housing Allocations
It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, and in particular within Colwinston HG4 (1) – Land to the East of Colwinston for 25 units. In the context of Policy HG4 they will be affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing. This is to meet the affordable housing needs of the local community. Mr Raymond has no objection in principle to this but does object to the fact that there is no other development opportunities recognised in Colwinston (despite it being sustainably

located on the A48).

Furthermore, Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) could be reduced in size and could be amended to offer 50% affordable housing to accord with the policy (or even 100% affordable if the Authority sought this).

A balanced approach which allows both affordable housing led schemes and modest mixed-tenure developments would provide greater flexibility and assist in delivering a broader range of housing needs.

A modest development at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) could provide an opportunity to deliver both market and affordable housing in accordance with Policy SP8. This would support local housing needs whilst maintaining the scale and character of the settlement.

Candidate Site Response: Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409)
Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) was submitted to the Vale of Glamorgan Council during the 2022 Call for Candidate Sites as part of the preparation of the Replacement Local Development Plan (RLDP) 2021–2036.

The site is currently included within the Candidate Site Register, which represents a list of sites submitted for consideration through the plan-making process. Inclusion within the register does not in itself indicate that a site will be allocated for development, as all sites are subject to a structured assessment process.

These stages consider a range of factors including sustainability, accessibility, environmental constraints and deliverability.

As part of the ongoing plan preparation process, the Council produced an updated Candidate Site Register following the initial submissions. Sites continue to be evaluated as part of the evidence base supporting the RLDP.

In this context, Land adjacent to Waterton Lodge, Colwinston represents a sustainable and deliverable opportunity for modest residential development which could contribute positively towards the Plan's housing supply.

The site is located adjacent to the existing settlement and is well related to the current built form. Development in this location would represent a logical and contained extension to the village, rather than an isolated incursion into open countryside.

Furthermore, the site has been promoted through the formal candidate site process and should therefore be considered fully within the Council's site assessment framework.

Deposit Plan Considerations
Settlement Boundary

Given the location of Candidate Site 409 adjacent to the existing settlement of Colwinston, consideration should be given to whether a modest adjustment to the settlement boundary would enable the site to be appropriately integrated within the settlement.

A logical rounding-off of the existing settlement edge would allow development to occur in a manner that respects the existing built form and maintains a clear and defensible settlement boundary.

Such an approach would represent a proportionate response to the need for modest housing growth within rural settlements.

Site Assessment
The site was formally submitted through the Candidate Site process and is currently listed within the Council's Candidate Site Register.

Given the role that smaller deliverable sites can play in supporting housing delivery, it is important that sites such as Land adjacent to Waterton Lodge, Colwinston are fully considered as part of the ongoing assessment process. Smaller sites can provide valuable flexibility within the housing trajectory and contribute to early housing delivery within the Plan period.

Turning to the main reasons the site was not taken forward Mr Raymond provides the following response:
(a) Alleged intrusion into the open countryside
The Stage 2 Register cites "unacceptable intrusion into the open countryside". Mr Raymond submits that this conclusion fails to reflect the site's physical containment and relationship to the built form.
• The site directly adjoins existing dwellings at Waterton Lodge and mature boundary hedgerows; development here would constitute rounding-off rather than isolated sprawl.
• A strong landscape framework already exists, and additional planting could reinforce defensible boundaries.
Accordingly, the site's development would not materially extend the settlement into open countryside or harm landscape character, consistent with PPW paragraph 3.60.

(b) Highways and accessibility constraints
The Council refers to “major highways constraints” but no evidence highway assessment has been published by the Authority. Mr Raymond’s preliminary review confirms that safe vehicular access can be achieved from the adjoining local highway with modest engineering works and that the scale envisaged would generate limited traffic, well within local-road capacity.
Future submission of a Transport Statement can demonstrate compliance with PPW (Section 5: Active and Socially Just Places) and LDP Policy MD2 (criteria 6 and 8).
The site lies within walking distance of Colwinston’s core facilities (village hall, public house, bus stops), enabling sustainable travel choices for residents.
(c) Scale of development
Development at a scale that represents proportionate growth for Colwinston can be provided and would be entirely consistent with the “limited expansion” envisaged for minor rural settlements under PPW and the RLDP.
This level of growth would strengthen local demographics, support the rural housing supply and modestly contribute to the Vale’s overall housing requirement, without exceeding infrastructure capacity.
(d) Ecology, landscape and agricultural land classification
The land is semi-improved grassland with no statutory designations. Preliminary review indicates no SINC coverage or protected species constraints. Detailed ecological and agricultural-land surveys can be provided to confirm that any residual impacts are minor and capable of full mitigation.

Development can achieve net biodiversity gain through buffer planting, sustainable drainage and native-hedgerow reinforcement, fully consistent with PPW and RLDP environmental objectives.

5. Sustainability and deliverability
• Availability: Mr Raymond, as landowner/promoter, confirms the site is immediately available for development.
• Deliverability: The site is modest, unconstrained by flood risk or abnormal infrastructure requirements, and can deliver homes within the early part of the plan period.
The proposal supports rural-settlement vitality, contributes to local housing choice, and allows design to embody placemaking principles (PPW Ed. 12 Section 2).

Conclusion
This representation, submitted on behalf of Mr Raymond in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.

Change suggested by respondent:
Greater flexibility should be introduced to allow appropriate small-scale allocations within sustainable rural settlements.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Catesby Estates [3713]
Agent: Turley

Summary:
Policy SP1 - Sustainable Growth Strategy reiterates that the Plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that, outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.

In order to ensure that the minimum target figure is met, it is important that the Plan identifies a sufficient number of sites / housing allocations to meet both the short and longer term development needs. As previously stated, Catesby SUPPORTS the overall growth strategy across the Vale of Glamorgan contained in the Deposit RLDP. However, it is questioned whether or not there is sufficient land allocated to deliver the growth required.

Of the overall housing target of 7,890 dwellings, approximately half of these are to be delivered via rolled forward allocations and extant consents. Whilst some such sites can be expected to come forward, Catesby would caution against the over-reliance on delivery of historically allocated sites.

Catesby suggests that VoGC considers the inclusion of additional sites to deliver the predicted growth strategy identified in the RLDP. This will strengthen the land supply position ensuring a robust RLDP can be adopted which has the ability to ensure the delivery of the necessary growth. Catesby supports growth along the ‘Connectivity’ corridor, particularly in Minor Rural Settlements such as Llandow to assist with this.

Full text:

VALE OF GLAMORGAN DEPOSIT REPLACEMENT LOCAL DEVELOPMENT PLAN - REPRESENTATION ON BEHALF OF CATESBY ESTATES

This response to the consultation on the Vale of Glamorgan Council ('VoGC') Deposit Replacement Local Development Plan ('RLDP') is submitted by Turley on behalf of Catesby Estates ('Catesby'). It sets out Catesby's comments on the Vale of Glamorgan Deposit Replacement LDP published for consultation on 28th January 2026.

Catesby control a significant amount of land at, and surrounding Llandow Airfield, and sought promotion (previously promoted by L&Q Estates prior to its acquisition by Catesby) of the site during the call for Candidate Sites (Site ID Ref: 448). The Stage 2 Candidate Site Register confirms that the site was not considered suitable for further consideration by VoGC. This was primarily due to its location outside of existing settlement boundaries and the scale of dwellings/services proposed. It was concluded that the scale of development proposed could be considered a new settlement, which should only be proposed as part of a joint LDP, an SDP or Future Wales.

Catesby acknowledges that promotion of a site of this scale falls outside the scope of the RDLP. The site will be promoted through the emerging South East Wales Strategic Development Plan in due course. Catesby maintains that the site is capable of accommodating major development and that its promotion for strategic scale regeneration is entirely appropriate given its sustainable credentials and the contribution that it can make to the Vale of Glamorgan and wider Cardiff Capital Region. Catesby remains keen to working collaboratively with VoGC to bring forward development at Llandow in the medium to long term and looks forward to continuing the largely positive discussions that have taken place to date.

VISION AND STRATEGIC OBJECTIVES

The vision for the Deposit RLDP maintains that, by 2036, VoGC will provide housing growth which responds to the authority's growing population and caters for all. This should be shaped through successful placemaking, delivering diverse communities and ensuring that the Vale is a healthy and inclusive place for everyone.

VoGC identifies key themes and strategic objectives to deliver the vision of the Deposit RLDP. This includes "ensuring that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population", to address the accommodation needs of all the Vale's communities (Objective 3 - Homes for All). Objective 4 – Placemaking also seeks for new development to be appropriately located, contribute towards creating active, safe and accessible places, and protect and enhance the character of existing communities.

The provision of a mix of new homes is also crucial in fostering diverse, vibrant and connected communities in line with Objective 7. Consequently, physical, economic and social regeneration are facilitated, reflecting the needs and aspirations of local communities. Vital and vibrant rural communities are also provided through the delivery of growth in sustainable locations and supporting infrastructure.

Catesby broadly SUPPORTS the vision and strategic objectives of the Deposit RLDP to deliver a mix of high-quality new housing which responds to the authority's growing population, caters for all, and has placemaking at its heart. This new housing should be facilitated across the Vale in a variety of sustainable locations to best serve as many communities as possible.

SUSTAINABLE GROWTH STRATEGY

A key part of the Sustainable Growth Strategy for the Deposit RLDP is to deliver a sustainable level of housing growth which accords with the Vale's position within the Cardiff Capital Region (CCR). Specifically, the Deposit RLDP makes provision for a housing requirement of 7,980 dwellings over the Plan period (526 dwellings per annum). The Deposit RLDP makes clear that this is both deliverable and ambitious, reflecting the Vale's position in the Future Wales national growth area. Crucially, the housing requirement will be achieved through a range of housing opportunities, to encourage existing residents to live and work in the Vale and encourage inward migration of new residents, at a level commensurate with the CCR.

However, Catesby would suggest that this level of growth is still too low, taking into account the aspirations of Future Wales for the area and the latest population and household projections, which suggest a higher level of need is required for the Vale.
The Sustainable Growth Strategy also seeks for new and existing housing, employment, services and facilities to be co-located to reduce the need to travel. New housing development shall be specifically located in places that are already well served by existing and/or proposed services, facilities and employment opportunities. This includes, where appropriate, those offered by the business parks and industrial estates already established in the Vale. The Strategy also allows for regeneration opportunities on previously developed and under-utilised land.

The Key Diagram (Figure 1) identifies the proposed Strategic Growth Area (SGA), connectivity routes, key locations for future development, the Plan's hierarchy of settlements and interrelationships with adjoining local authorities.

Figure 1: Key Diagram

Catesby considers that the Minor Rural Settlements dispersed within the 'Connectivity' corridor, such as Llandow, should play a supporting role in accommodating housing growth, given their important range of services and facilities that reduce the need to travel. The Sustainable Growth Strategy also allows for small scale affordable housing led developments in Minor Rural Settlements, where appropriate.

Noting Llandow's accessible location and proximity to existing and emerging strategic employment opportunities, Catesby broadly SUPPORTS the Sustainable Growth Strategy insofar as seeking to achieve the housing requirement through a range of housing opportunities. This includes the co-locating of housing and employment growth, with a focus on established business parks and industrial estates.

Paragraph 5.14 notes that "where appropriate, the broad principle is that the spatial strategy should look to ensure that new housing is in places where employment opportunities already exist or are proposed." Catesby supports this principle, noting that the Llandow Airfield site offers the potential to deliver co-located residential and employment opportunities at scale, as identified within the promotion document submitted in support of its response to the call for Candidate Sites. This will remain a key aspiration of the site's future promotion via the emerging SDP.

However, Catesby reiterates that the housing requirement for the Vale should be higher, accounting for the aspirations of Future Wales for the area and the latest population and household projections. A more ambitious Growth Strategy is needed to accommodate this increased housing requirement.

POLICY FRAMEWORK

Policy SP1 - Sustainable Growth Strategy reiterates that the Plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that, outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.

In order to ensure that the minimum target figure is met, it is important that the Plan identifies a sufficient number of sites / housing allocations to meet both the short and longer term development needs. As previously stated, Catesby SUPPORTS the overall growth strategy across the Vale of Glamorgan contained in the Deposit RLDP. However, it is questioned whether or not there is sufficient land allocated to deliver the growth required.

Of the overall housing target of 7,890 dwellings, approximately half of these are to be delivered via rolled forward allocations and extant consents. Whilst some such sites can be expected to come forward, Catesby would caution against the over-reliance on delivery of historically allocated sites.

Catesby suggests that VoGC considers the inclusion of additional sites to deliver the predicted growth strategy identified in the RLDP. This will strengthen the land supply position ensuring a robust RLDP can be adopted which has the ability to ensure the delivery of the necessary growth. Catesby supports growth along the 'Connectivity' corridor, particularly in Minor Rural Settlements such as Llandow to assist with this.

Policy SP2 – Settlement Hierarchy broadly distributes development in line with the hierarchy of settlements, reflecting the role and function of places and directing growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision. Llandow is identified as a Minor Rural Settlement, new development associated with which should be mainly limited to infill opportunities and small-scale affordable housing led schemes (sites of up to 25 dwellings with a minimum of 50% affordable provision).

Catesby would suggest that specific sites in and around all settlement types may be suitable for a greater level of development than that suggested by the settlement hierarchy, and these should be explored accordingly. As part of this, Catesby SUPPORTS the recognition in the Policy Framework that the existing services and facilities in and around the Minor Rural Settlements should be safeguarded, supported and enhanced, and that in order to do this, growth should still be balanced in a way which supports these rural communities (Paras 6.16 and 6.17).

Policy SP3 – Development in the Countryside is clear that development will only be permitted in the countryside where it falls within one of the specified uses. This only includes Affordable Housing Exception Sites in respect of housing development. Catesby suggests that further development sites are required across the Vale in order to meet the Council's housing requirement, which should consider locations within the countryside where appropriate.

Catesby reiterates that the co-location of housing with existing infrastructure and facilities will be crucial to achieving the overall Growth Strategy of the RLDP. Development in and adjacent to Minor Rural Settlements is also key to this, especially those located in proximity to the 'Connectivity' corridor on the Key Diagram.

Catesby SUPPORTS development within these locations, particularly at Llandow. This is key in order for the Vale of Glamorgan to achieve part of its overarching vision, which states that "growth within rural settlements has provided for the needs of residents and supports balanced multi-generational communities that contribute to the vibrancy of the rural area".

SUMMARY

We trust that the above representations can be considered duly made and look forward to receiving confirmation accordingly. Catesby welcomes the opportunity to comment further as the RLDP progresses through to adoption. Catesby looks forward to engaging with the Council over the months ahead to continue a dialogue regarding the future delivery of development at Llandow. If you require any further information, please do not hesitate to contact me on the details below.

Change suggested by respondent:

Catesby suggests that VoGC considers the inclusion of additional sites to deliver the predicted growth strategy identified in the RLDP. This will strengthen the land supply position ensuring a robust RLDP can be adopted which has the ability to ensure the delivery of the necessary growth.

6939 Comment

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Penarth Town Council (Mr Pete Newton, Principal Policy, Innovation and Development Officer) [1125]

Summary:

Members noted that there was not much focus on Penarth or identified potential future development for Penarth beyond that already underway at the location near to Cosmeston but welcomed flexibility in its approach. Members expected to be more closely involved in the decisions and planning of this, and other such developments, and provide opportunity for wider consultation where appropriate, such as pre-application consultations, as well as would expect to be included in consultations concerning sites adjacent to Llandough, Dinas Powys, and Sully given their impact upon the town.

Penarth as a town is currently developed to its boundaries, save for the development at Cosmeston. It is, therefore, more dependent than other Service Centres on windfalls of land or buildings which may arise during the currency of the Plan. In 2023, an extensive assessment of the potential of the town concluded the following:

“There is marginally less capacity in Penarth [and Llandough] than the projected figures. However, this does not mean that the projections are incorrect or unjustifiable. The reported figures have not included a significant amount of capacity on open space land, and the projected figures for conversion of existing buildings and intensifications will be surpassed if the extant consents that exist this early in the Plan period are implemented.”

The degree of flexibility, however, is substantially depending on one large site. P009, Headland School, is identified as both a potentially disused building and as a site with a capacity of 111-120 units. This special school is full to capacity and used by many Council in both Wales and England.

Full text:

Penarth Town Council Deposit RLDP Consultation Response

Comments collated at a meeting of the Council’s Consultation Task and Finish Group on 9th February 2026

Some Members attended the RLDP consultation drop-in session in Penarth and in general found it to be very informative.

Members support the general development strategy but did note the lack of information concerning discussions with adjacent and other nearby Principal Councils in the CJC Region. In view of the forthcoming Strategic Development Plan, encompassing the ten authorities, members felt that some further commentary regarding this is warranted.1

It is clear that the approach taken in the Cardiff paper is still that ideally, each Council is self-contained and “consumes its own smoke,” which does not show any wider strategic thinking between the ten authorities in preparation for a regional Strategic Development Plan.

Members agreed with the view that infrastructure to support new housing developments was required in order to create successful developments, although they acknowledged that logistically it was difficult to pre-empt demand for some services such as travel and health services. Members also noted that predicting developmental needs and opportunities within wider context surrounding the UK’s economic, political, and social landscapes.

Members noted that there was not much focus on Penarth or identified potential future development for Penarth beyond that already underway at the location near to Cosmeston but welcomed flexibility in its approach. Members expected to be more closely involved in the decisions and planning of this, and other such developments, and provide opportunity for wider consultation where appropriate, such as pre-application consultations, as well as would expect to be included in

consultations concerning sites adjacent to Llandough, Dinas Powys, and Sully given their impact upon the town.

Penarth as a town is currently developed to its boundaries, save for the development at Cosmeston. It is, therefore, more dependent than other Service Centres on windfalls of land or buildings which may arise during the currency of the Plan. In 2023, an extensive assessment of the potential of the town concluded the following:

"There is marginally less capacity in Penarth [and Llandough] than the projected figures. However, this does not mean that the projections are incorrect or unjustifiable. The reported figures have not included a significant amount of capacity on open space land, and the projected figures for conversion of existing buildings and intensifications will be surpassed if the extant consents that exist this early in the Plan period are implemented."

The degree of flexibility, however, is substantially depending on one large site. P009, Headland School, is identified as both a potentially disused building and as a site with a capacity of 111-120 units. This special school is full to capacity and used by many Council in both Wales and England.

Members did note the inclusion of Cogan Transport Interchange under section 6.196 but would have liked to see more information about its future developments as they see it as key to increasing public transport use to Barry and further to West Wales in general.

Members wished to advise that issues with both the bridge and the platforms at Cogan have been long term, with accessibility being central to these issues. Members felt that improvements to accessibility should be a priority at this site, with planting and landscaping considered secondary to this.

Members felt it was key to consider the additional stress on Penarth from increased anticipated demand of public transport needs and emphasised the need for this to be aptly considered by bus route providers as part of development work.

Members wanted to see a strategy that actively protects the town's heritage and culture whilst still being able to provide for current and future generations.

Members welcomed the inclusion of specific climate change mitigation and adaptation measures under SP16 and section CC1-CC6, noting the considerable attention given to Net Zero transition proposal relating to public buildings and energy. Whilst the evidence presented does not include the UK Climate Change Committee Report2, Members were pleased to see that CC1-CC6 largely reflect the Committee's finds and are tailored to a transition which reflects what is presently feasible. This is providing that the necessary skills to understand and undertake carbon assessments within a policy implementation and regulation context are readily available.

Under CC2, it was noted that the presumption against demolition3 in favour of retrofit and reuse may constrain maximum transition to net zero as, whilst there is grant aid available for public buildings and social housing, the retrofit monies available for private stock is limited.

Additional considerations will also need to be made as part of the Third Carbon Budget (2026-2030), Local Area Energy Plans and the climate change ISA theme.

Members also felt similar about the inclusion and consideration of sustainable development through the specific strategy outlined in section 5 of the document and felt this linked in well with ongoing Placemaking work and its strategic approach as detailed in SP4.

Members were pleased to see mention of the diversification of high streets, although noted that Penarth was above average in terms of occupancy. They hoped that the RLDP would be able to support the town centre and support other ways it could be improved, such as a fishmonger or identifying a site for a new Cemetery.

With Penarth classified as a Service Centre, they are identified as having a defined role. However, the decline of in-person retailing means that defining role is not that evident, and Members felt there is potentially a need to move away from the traditional retail role of Town Centres in favour of "repurposing, creating multifunctional, commercial, and service centres that meet the needs of the communities they serve" in line with Future Wales Town Centre First Policy. The term 'repurposing' suggests a stronger role for the public sector in enabling these new purposes, and Members felt that Placemaking Plans could be one potential framework for this.

Members felt that potential functional support that could be provided could include:
• The appointment of a Town Centre Manager
• Using supporting interventions such as an extension or reshaping of normal services such as Neighbourhood Services.
• Using existing or emerging new powers, such as compulsory purchases.

Members wished for the RLDP to facilitate the safeguarding of essential public services, including health, policing, fire and rescue in the town, which would help to develop the defining role of a Service Centre, and felt that specific reference to these would be beneficial.

Members supported the avoidance of coalescence with adjacent settlements through the reconfirmation of Green Wedges as it allows for relevant extensions to those settlements whilst allowing them to retain their identity.

Members noted that the Quiet Area provision under DNP6 only applies to Penarth and wished to know why this was the case.

Members advised that they welcomed further opportunity for consultation, particularly in relation to developments in the neighbouring Cardiff Bay area whilst acknowledging that this is not necessarily an RLDP concern.

Footnotes

1 There is an evidence paper concerning relations with Cardiff and a Statement of Common Ground with Bridgend. However, there is only a reference in the RLDP text to discussions with other regional Councils and not the paper itself. We would be grateful if you could provide the paper as it does impact on the soundness of this Plan.

2The UK Climate Change Committee's 'Progress Report: Reducing Emissions in Wales' highlighted the following aspects of import: Skills, Vehicle Charging Networks, Improving Recycling, Energy Plans, Decarbonising Public Buildings and Social Housing, and reducing Road transport Demand (Car-Kilometres).

3The UK Environmental Audit Committee (2022) noted that "the evidence we received consistently recommended that retrofit and reuse be prioritised over new build."

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Marion morgan [2413]

Agent: Geraint John Planning Ltd

Summary:

We object to the spatial growth strategy set out within the Deposit Plan and therefore question the delivery and soundness of the Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain an over-reliance of housing growth on this defined area, and the associated absence of growth in other Rural parts of the plan area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan, which includes enabling opportunities to provide employment and business premises within/near to rural settlements. The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the principal settlement and Strategic Growth Area of Talbot Green/Pontyclun/Llantrisant to the north. The current strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural and bus services should be appropriately assessed and focused on in terms of promoting sustainable development. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to deliver housing in the short and medium term of the Plan period.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the

Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ystradowen area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:
VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ystradowen. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within

the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months
• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject

to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is

very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.
Extract of Housing Trajectory (annotated by GJP - red dotted line)

It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.
HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.
It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land at Ystradowen (Site ID: 430 / 4060) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) and Annex 2 for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 230 affordable homes in the Cowbridge housing market area / ward - which Ystradowen is located within. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation – see Annex 2.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ystradowen and the proposed site. As outlined within these representations, it is considered that the site (ID 430) represents a sustainable, deliverable and acceptable site. The site is located within 2.7 miles Cowbridge and 2.8 miles of Pontyclun. Due to the availability of frequent bus services, and active travel links, key services are readily available to access for any residents within Ystradowen without the need to travel by car. The site is within a maximum 9- and 14-minute bus journey (respectively) of the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and

• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Accordingly, the settlement of Ystradowen represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ystradowen, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."
The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.
SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• Provision of circa 67 new-build residential dwellings (including 50% affordable housing provision);
• A mix of house-types and tenures across the site to cater for a variety of needs;
• Creation of a new primary access into the site;
• Connection to pedestrian links within the wider area;
• Public open space; and
• Green Infrastructure; and
SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to

be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

Land at Ystradowen (Site ID: 4060)

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site. The 'Candidate Sites Assessment Deposit Plan Stage v2' for 'Land at Ystradowen (Site ID: 4060)' sets out that the position of the site at the Deposit Stage is as follows:

"Amendment of proposed use from housing to affordable housing led. Previous site reference 430. The original assessment concluded that whilst the site was adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.
The LDP site in question has subsequently been granted planning permission for housing. This site will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location."

In terms of the first paragraph, the assessment/conclusion implies and suggests that 'Land at Ystradowen' (4060)' does not adjoin the existing LDP settlement boundary as the allocated site ('Land off Sandy Lane, Ystradowen') has not been built out – "by virtue of an existing adopted plan LDP allocation this is currently under review". Detailed representations have been made and submitted previously at the Housing Trajectory (see Appendix B& C) that outlines that this is fundamentally incorrect. This is not repeated in full here, with just the main points re-iterated.

First and foremost, 'Land at Ystradowen (4060)' directly adjoins the existing LDP settlement boundary. Secondly, there has been a significant change in the position and circumstances. The allocated site ('Land off Sandy Lane, Ystradowen') is currently being "built out", with work commencing on site (see photographic evidence in Appendix C)
- post the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024). Accordingly, the site no longer adjoins "the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review". Given this, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.

With regards to the second paragraph, the assessment/conclusion outlines that "The LDP site … will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location". The arguments and case presented in Appendix B & C. There is a clear overreliance on 'rolled forward' sites / existing allocated sites. A total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%). We believe that a greater level of growth is achievable and should be considered. Not least as there is an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings). As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy. Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. The provision of housing should be adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply. The "future needs of residents in the area" will therefore not be met/served by just this site, and it is considered that additional land should be allocated in this location.

Furthermore, to reinforce, illustrate, and evidence the point in specific reference to the site the subject to this

representation (located in Ystradowen), reference is made to application ref. 2013/00856/OUT – 'Land off Badgers Brook Rise, Ystradowen'. The Final Report of the application states that "Ystradowen is considered a sustainable settlement for further housing development" – i.e. "additional land should be allocated in this location".

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan (see Appendix B), a similar 'scoring' exercise has been undertaken as part evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage can be seen below for reference:
BP18 Candidate Ste Assessment at Preferred Strategy Stage
As demonstrated above, there has been a positive change to the scoring attributed to the site ('Land at Ystradowen'). The change is a positive change to the 'Infrastructure Availability' section changing from: 'Grey' (no score) to 'Amber'. Infrastructure Availability is outlined as: "Existing or proposed services would be suitable subject to local improvements without impacting on development viability and/or delivery timescales" (see below):
The explanation for the scoring provided by the Vale sets out that "Sites will be assessed against the availability of water connections to the site, in addition to the method of foul sewage disposal from the site. Consultation shall be undertaken with DCWW to determine whether there is sufficient capacity to the wastewater treatments works, and how it links into DCWW's Capital Investment Programme.
Where consultation indicates limited capacity, or the site is located away from a viable connection this may impact on the deliverability/viability of a site should this require significant connection costs or upgrades. Consequently, the Council shall require site proposers to undertake detailed site viability assessment to determine the impact that additional cost shall have on development cost and deliverability timescales."

As set out above, this is a positive change. This is most likely derived from the allocated site ('Land off Sandy Lane, Ystradowen') currently being "built out", with work commencing on site that would facilitate and improve the 'Infrastructure Availability'. This re-iterates the point made previously re the incorrect assessment reached, and the ever changing position of this site – which will only improve given the neighbouring allocated site ('Land off Sandy Lane, Ystradowen') being "built out".

Land West of Maendy Road, Aberthin (Site ID: 2299)

There are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and the site the subject of these representations. It is therefore considered pertinent to assess and compare the suitability of 'Land West of Maendy Road, Aberthin'. Not least as 'Land at Ystradowen (Site ID: 4060)' is for a "small-scale affordable housing led development in a minor rural settlement", within "the ward of Cowbridge".

The site 'Land West of Maendy Road (Site ID: 2299)' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however from our review of the evidence base submitted as part of the Housing Trajectory consultation, there was no assessment and critique of this site at this stage. This raises questions regarding the "soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

The site ('Land West of Maendy Road') has since had a detailed assessment and critique published, however concerns still remain regarding the "soundness" of the site which forms part of the intended housing land supply. The 'Stage 2 Detailed Site Assessment' summary undertaken for 'Land West of Maendy Road' has been extracted below:

"The site is proposed for a small-scale affordable housing led development in a minor rural settlement, which would accord in principle with the strategy. Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent.
The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."

As mentioned previously, there are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)' (the subject of these representations). Firstly 'Land at Ystradowen (Site ID: 4060)' is also for a "small-scale affordable housing led development", that is "in a minor rural settlement" (Ystradowen). Accordingly, it should follow that as 'Land West of Maendy Road, Aberthin (Site ID: 2299)' "would accord in principle with the strategy", 'Land at Ystradowen (Site ID: 4060)' would also "accord in principle with the strategy".

Furthermore, there is no material difference between the following assessment of Aberthin and Ystradowen:

"Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent."

There is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms.

As set out in our representations to the Preferred Strategy, we reviewed the key services in proximity to the site. The following services were identified as part of that review:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green;

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin;

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn; and

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Given the above, "The settlement (Ystradowen) is also served by public transport".
Furthermore, Ystradowen is located only 2.7 miles from Cowbridge (9-minute bus journey). The "primary and secondary school provision with the wider range of services and facilities in Cowbridge" mentioned in relation to Aberthin are therefore also in close proximity to Ystradowen.

Given the above, any candidate site at 'Land at Ystradowen' (the subject of these representations – Site ID: 430 / 4060) is no less sustainable than the site at Aberthin (Site ID: 2299).

Not least as the following additional key services are located within Ystradowen and therefore in close proximity to the promoted site:

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'; and
• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Furthermore it is important to note that the above scoring criteria is very limiting, and does not take into account the important role and proximity of settlements in a wider context. For example, it does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant) – see Appendix B for full details.

In addition, as set out within the representations made in relation to the House Trajectory (Appendix C), the following extracts have been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view extract is outlined below to give spatial context:
As set out above, it is important to note that the Final Report of application ref. 2013/00856/OUT states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement". Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• "Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area"; and
• "Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above."

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally suitable to be an Affordable Housing Led Allocation.

The second section/paragraph of the assessment states:

"The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."
'Land at Ystradowen (Site ID: 4060)' is also located within "the ward of Cowbridge". As per the above and outlined by the Authority, there is "a need for 230 additional affordable units over the next 15 years". It is clear therefore that there is a need for additional affordable units in this ward, and this site would therefore also help to alleviate this need.

This position is a direct contradiction of course of the assessment/conclusion for 'Land at Ystradowen (Site ID: 4060)' which stated "it is not considered that additional land should be allocated in this location". It is clear from the above however that "additional land should be allocated in this location" to satisfy this "need for 230 additional affordable units

over the next 15 years" – which 'Land at Ystradowen (Site ID: 4060)' can do. This is not least the case given the detailed arguments, case and representations presented and evidenced previously above and in Appendix B & C.
To briefly reiterate there is a clear overreliance on 'rolled forward' sites / existing allocated sites which has resulted in the unmet need deriving from the existing LDP being still present. A greater level of provision for new allocations should therefore be applied in order to meet the housing requirement. The provision of housing should be adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply, so these can "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do.

As set out within the representations made in relation to the housing trajectory (see Appendix C), a further key consideration to note and one which does differentiate between the relative merits of the 'Land at Maendy Road, Aberthin' and 'Land at Ystradowen' is that the LDP Proposals Map demonstrates that 'Land West of Maendy Road' is within a Special Landscape Area - see below:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red
Under Policy MG17 'Special Landscape Areas' it is considered that development in SLA could pose an "unacceptable harm to the important landscape of the area". Accordingly, this development and proposed allocation could therefore cause "unacceptable harm to the important landscape of the area".

'Land at Ystradowen' by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any "unacceptable harm to the important landscape of the area".
Vale of Glamorgan Proposals Map (Land at Ystradowen in red)
It is noted that the detailed assessment scores the site 'amber' in respect to Special Landscape Area (refer to / see later section for full details), with the assessment methodology setting out that "the site is located within a Special Landscape Area/The Glamorgan Heritage Coast and the development may result in little or no change in character and little or no significant effect on landscape character and visual amenity."
A detailed assessment of the impact upon the SLA in respect to the development of 'Land West of Maendy Road, Aberthin' should therefore be, and will need to be, undertaken as part of any planning application. If it is found that the site causes "unacceptable harm to the important landscape of the area", this will lead to this proposed allocation being at risk of not being delivered. This will be as a result of its impacts and acceptability at the planning application stage that the landscape and visual impact of development of the site is unacceptable. As such, these proposed affordable units are at a potential considerable risk of being lost and not satisfying the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do as it is not located in an SLA.

In addition the draft housing trajectory set out that "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" is not provided for. This is clearly an issue. Given however 'Land at Ystradowen' does not sit within a SLA – and so not pose any potential concern or cause any "unacceptable harm to the important landscape of the area" – the allocation of this site would be more suitable and "safer" - as there would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for, and the need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" would be satisfied.

As mentioned previously, a detailed assessment and critique has now been undertaken of 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part evidence base for the Deposit Plan using the similar 'scoring' exercise. As such, it is again pertinent to consider and respond to the Council's 'scoring' exercise assessment of the site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part of these representations.

The 'Summary of Assessment of New Candidate Sites' table can be seen overleaf for reference:
BP18A Candidate Site Assessment at Deposit Plan Stage
A comparison between the site assessments undertaken for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' (on the left), and 'Land at Ystradowen (Site ID: 4060)' (on the right) has been undertaken, and can be seen below for reference:

Having undertaken a review of the scoring for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)', it is clear that 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)':

• 'Land at Ystradowen (Site ID: 4060)': 17/33 criteria are scored green = 52%

• 'Land West of Maendy Road, Aberthin (Site ID: 2299)': 12/34 criteria are scored green = 36%

It is clear therefore given the above that 'Land at Ystradowen (Site ID: 4060)' is a better site, and should be allocated accordingly.

One key example to note is how the criterion 'Access to Services and Facilities' has been scored. For 'Land at Ystradowen (Site ID: 4060)' this has been scored green, yet for 'Land West of Maendy Road, Aberthin (Site ID: 2299)', this has been scored red. Given this, this corroborates the position outlined previously above that, if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally as sustainable – in fact considered more suitable (given its higher scoring in this respect).

Furthermore, we question the "soundness" of the assessment of 'Land West of Maendy Road, Aberthin (Site ID: 2299)', given that 7/34 (21%) of the criteria do not appears to have not been assessed – i.e. 7/34 (21%) of the criteria are scored grey. This raises questions regarding the "soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

It is clear therefore that if 'Land West of Maendy Road, Aberthin (Site ID: 2299)' has been deemed acceptable for allocation, yet 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than this site, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and be allocated. Not least as the site is "proposed for a small-scale affordable housing led development in a minor rural settlement … would accord in principle with the strategy", and "could make an important contribution in meeting "a "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

Summary and Conclusion

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Deposit Plan published as part of the consultation.

In terms of SECTION 4, and a response to the Candidate Site Assessment at Deposit Plan Stage, the following key points have been made:

• The Council's 'Stage 2 Detailed Site Assessment' justification for 'Land at Ystradowen (Site ID: 4060)' is fundamentally incorrect;

• Given the material positive similarities between 'Land at Ystradowen (Site ID: 4060)' and 'Land West of Maendy Road, Aberthin (Site ID: 2299)', which has been deemed acceptable and allocated, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and allocated accordingly;

• 'Land at Ystradowen (Site ID: 4060)' would help to alleviate and satisfy "a need for 230 additional affordable units over the next 15 years" within "the ward of Cowbridge"; and
• 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)', and so should also be deemed acceptable and be allocated;

Ultimately, 'Land at Ystradowen (Site ID: 4060)' is "proposed for a small-scale affordable housing led development in a minor rural settlement", and as such "would accord in principle with the strategy". It would therefore "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

We would therefore object the Council's assessment that the site is not considered suitable for development.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;

8. Detailed comments in respect to 'new' sites;
9. Credentials of this site subject to this submission; and
10. Conclusions Procedural Consultation Matters
Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing-led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:
Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the east of Coliwinston, Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal

submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicted in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.
Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.
The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of

Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward
The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.
Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its

current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision.
Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".
As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision, and as such, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations

Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
Candidate Site Stage 2 Assessment (Site Ref. 404)
The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:
"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clearly evident deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National

Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Despite the absence of site-specific assessment criteria, as the RLDP preferred strategy states a key objective guiding site selection is that the Plan will "provide for vital and vibrant rural communities whilst protecting the countryside through the delivery of growth in sustainable locations related to the settlement hierarchy alongside the provision of supporting infrastructure" (Objective 7 'Fostering Diverse Vibrant and Connected Communities'), it is reasonable to assume that the Council considers 'Land West of Maendy Road' to be a 'sustainable' location.

Given this, we have reviewed the key services in proximity to the site. The following services were identified:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green.

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn.

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Aberthin is in close proximity (1.2 miles/14-minute walk) to the key settlement of Cowbridge - which is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Considering this, there is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms. Given that Ystradowen is located only 2.7 miles from Cowbridge (9- minute bus journey), the candidate site at 'Land at Ystradowen' is no less sustainable than the site at Aberthin. The following key services are within Ystradowen and therefore in close proximity to the promoted site:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin.
• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen' is equally suitable to be an Affordable Housing Led Allocation.
Furthermore, to reinforce the above position and to illustrate and evidence the site's sustainability, the following has been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view extract is outlined below to give spatial context:
Reference is made in the Final Report of app ref. 2013/00856/OUT which states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement".

Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• "Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area."

• “Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above.”

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

A further key consideration to note and one which does differentiate between the relative merits of the ‘Land at Maendy Road, Aberthin’ and ‘Land at Ystradowen’ is that the LDP Proposals Map demonstrates that ‘Land West of Maendy Road’ is within a Special Landscape Area - see overleaf:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red)
Under Policy MG17 ‘Special Landscape Areas’ it is considered that development in SLA could pose an “unacceptable harm to the important landscape of the area”. Accordingly, this development and proposed allocation could therefore cause “unacceptable harm to the important landscape of the area”.

‘Land at Ystradowen’ by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any “unacceptable harm to the important landscape of the area”.
Vale of Glamorgan Proposals Map (Land at Ystradowen in red)

This is a significant factor to consider. ‘Land West of Maendy Road, Aberthin’ causing “unacceptable harm to the important landscape of the area” will lead to this proposed allocation being at risk of not being delivered by virtue of detailed assessments of its impacts and acceptability at planning application stage holding that the landscape and visual impact of development of the site is unacceptable. As such 25 affordable units will be lost from the proposed affordable 122 units, and ultimately being lost from the overall housing land supply. As stated in the draft housing trajectory “there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities”. There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a “small scale affordable housing led development” which is needed to “respond to local affordable needs and help sustain services and facilities within these rural communities” is not provided for. This is clearly an issue. Given however ‘Land at Ystradowen’ does not sit within a SLA – and so not pose any potential concern or cause any “unacceptable harm to the important landscape of the area” – the allocation of this site would be more suitable and “safer” - as therefore would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where “there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities”, are provided for. As such the proposed housing trajectory would be maintained.
Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of ‘Land to north and west of Westwinds Business Park’:

Candidate Site Stage 2 Assessment (Site Ref. 398)
As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in ‘Sustainable Transport – Public Transport’, this shows the site is not served by public transport connections within 800m, as outlined in the key below:
Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states “New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes”. Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states “new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport.”

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:
In respect of the above, Preferred Strategy 6.40 states the need “To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy”. To further

highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Ystradowen', the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below. With reference to the above:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green.

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities.

Furthermore, the settlement of Ystradowen has been ranked highly in the VoG Sustainable Settlements Appraisal, scoring a total of 14 points according to the distance to key services and facilities available. This places Ystradowen 26th out of a total of 87 settlements. As a result, this would be deemed a suitable area to accommodate growth.

As stated above the key settlement of Cowbridge is located in close proximity being only 2.7 miles to the south and a 9-minute bus journey. Cowbridge is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Furthermore, it is important to note that the above criteria does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant). These areas comprise for example the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Given the above, 'Land at Ystradowen' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Ystradowen' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural

communities", are provided for. As such the proposed housing trajectory would be maintained.
Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref. 2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.
Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Credentials of this site subject to this submission

There has been a significant change in the position and circumstances since the promoted site herein was assessed at Candidate Site Stage and the Assessment undertaken. The Stage 2 Assessment of the site concluded the following: 'Whilst adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.' The assessment/conclusion implies that as this site ('Land off Sandy Lane, Ystradowen') has not been built out and is "currently under review", it suggests that 'Land at Ystradowen' (430) does not adjoin the existing LDP settlement boundary. Given recent developments however associated with the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024) and the site being currently being "built out" and work commencing on site, the site no longer adjoins "the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review". Accordingly, and given this, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.
The following specific photo evidences 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48) is being built out the western boundary of the promoted Site ID 430. This therefore clearly highlights that the site's boundary is representing the existing settlement limit in the existing development plan. Accordingly, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the existing LDP settlement boundary.
Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

7057 Support

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:

Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle.

Full text:

Introduction

These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.

Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.

Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.

That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.

The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.

The remainder of these representations address the specific policies of the Deposit Plan.

Deposit Plan Plan Period Position: Object

Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.

On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.

Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.

Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part

Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.

Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.

This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.

St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.

Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:

"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)

Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:

St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper

(June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains

rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.
5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.
In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of

new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.

Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.

The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.

There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.

In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.

Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part

Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.

The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix. The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part
Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.
The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.
8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part
Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for

sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1

alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health

implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486

Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.

Stage 2 Candidate Site Assessment

The Council's Stage 2 Candidate Site Assessment states:

"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."

The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:

Impact upon Character and Setting of the St Nicholas Conservation Area

Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.

The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:

• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;

• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;

• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and

• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.

Countryside Impacts

The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.

The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.

Agricultural Land Quality

Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.

As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.

Appendix 2 – Summary of Assessment

We comment on the Council's Summary of Assessment as follows:

• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.

• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.

• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.

• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.

• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.

• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.

• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the

retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:

Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence, and which can accommodate proportionate growth in a highly sustainable way. The strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. SP1 should be amended to reflect this.
In our view, the current Deposit strategy has moved too far away from the balanced position on Minor Rural Settlements in the adopted LDP. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's

consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.

Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.

There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.

For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.

Policy SP2 – Settlement Hierarchy Position: Object

Barratt Redrow objects to Policy SP2 in its current form.

The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.

That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.

However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.

The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.

In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.

Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.

Policy SP6 – Housing Requirement Position: Object

Barratt Redrow objects to Policy SP6.

Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.

PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:

"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what

the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."

The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:

"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.

5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.

5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."

Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:

• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;

• Does not actively seek to address the area's ageing demographic;

• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;

• Does not seek to leverage any of the investment into the region through the CCR City Deal;

• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and

• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.

In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.

That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.

The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.

This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.

The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.

There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.

The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.

There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.

In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.

Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part

Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.

The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix. The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of

rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.
8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part
Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-

sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-

adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of

the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national

policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the

candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Change suggested by respondent:
Amend SP1.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:
The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed.

Full text:
Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly

restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.

The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.

The remainder of these representations address the specific policies of the Deposit Plan.

Deposit Plan Plan Period Position: Object

Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.

On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.

Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.

Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part

Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.

Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.

This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.

St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.

Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:

"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)

Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:

St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.

Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.

Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.

There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.

For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic

Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of

homes and jobs.
5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.
In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing

delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.

The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.

The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a

1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.

Policy SP6 – Flexibility, housing land supply and trajectory Position: Object

Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.

The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.

In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.

The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.

The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.

Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.

The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.

There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.

In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.

Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part

Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.

The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.

The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability,

that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.

The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.

Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:

• the Plan is overly reliant on a small number of key sites;

• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;

• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and

• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.

The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.

Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.

The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:

• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.

• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.

• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.

All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.

In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.

Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part

Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.

However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the

community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive

and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a

Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.

There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.

The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.

Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.

Land at St Nicholas / omission from the Deposit Plan Position: Object to omission

Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.

The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.

Deposit Plan Conclusion

Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.

In particular:

• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;

• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;

• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;

• the Plan relies too heavily on key sites, rolled forward sites and windfalls;

• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and

• the omission of St Nicholas is not justified by the Council's own evidence base.

The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.

For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.

Candidate Site Register - Site ID 486

Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.

Stage 2 Candidate Site Assessment

The Council's Stage 2 Candidate Site Assessment states:

"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."

The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:

Impact upon Character and Setting of the St Nicholas Conservation Area

Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.

The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:

• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;

• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its

setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.

Countryside Impacts

The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.

The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.

Agricultural Land Quality

Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.

As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.

Appendix 2 – Summary of Assessment

We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.

Suitability for Allocation and Key Benefits

For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.

The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the

Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

The identification of St Athan as a settlement where development should be concentrated is supported.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be

concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan

Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be

required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling

metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy CII requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

7136 Object

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Peter Stone Properties Ltd [1182]
Agent: Geraint John Planning Ltd

Summary:

We object to the spatial growth strategy within the Deposit Plan and consequently question its soundness and delivery. Specifically, we object to the 'Strategic Growth Area' (SGA) strategy, which creates an over-reliance on a single defined area while neglecting the Rural Vale.

The Plan is internally inconsistent: while it recognises a critical need for affordable housing—particularly for an increasingly ageing population and to prevent the out-migration of younger working-age residents—the lack of allocations in Minor Rural Settlements (such as Bonvilston) undermines these objectives. The current strategy fails to address the high entry costs in rural areas (where average prices exceed £800k) and ignores the Local Housing Market Assessment (LHMA) requirements for affordable delivery outside the SGA.

Furthermore, the Plan fails to account for the functional relationship between the Western/Northern Vale and external employment hubs in Bridgend and Talbot Green/Llantrisant. By focusing growth solely on rail-accessible settlements, the Plan ignores the 'inherently rural' nature of the Vale and fails to support sustainable bus-based transit and local employment opportunities. To be sound, the Plan must pursue a strategy that allocates a greater proportion of small-to-medium sites in rural settlements to ensure delivery in the short-to-medium term and to create a more balanced demographic and economic future for the Authority.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed ‘Strategic Growth Area’ which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £800,000 over the last 12 months, there is a clear and established need for new homes in the Bonvilston area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county’s ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the ‘Population Change’ chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: “There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery.”
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: “Allowing for small scale affordable

housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Bonvilston. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are

allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)

• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only

approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise

affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites – not least given that 3 of the 4 allocated affordable housing-led sites are located west of Cowbridge.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land South of A48, Bonvilston (Site ID: 435 / 3857) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area (which Bonvilston is located within), and a need for 242 affordable homes in the Wenvoe housing market area. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

Securing further delivery of Affordable Units

As set out above, it can be assumed that the affordable housing-led allocated sites only provide 61no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included

within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to meet the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Bonvilston and the proposed site. As outlined within these representations, it is considered that the site (ID 435 / 3857) represents a sustainable, deliverable and acceptable site. This proposed allocation is situated in proximity to Cowbridge, Culverhouse Cross and Cardiff, which comprise all key services. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

Accordingly, the settlement of Bonvilston represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Bonvilston, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be

permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites

with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• In summary, the opportunity of the site seeks to deliver:
• Residential development comprising up to 25 dwellings, with at least 50% affordable housing in accordance with Policy SP2,
• Highways infrastructure within the site;
• Upgraded access to the site;
• Strong legible pedestrian and cycle connections throughout the site and with the existing settlement;
• Green Infrastructure; and
• Sustainable Drainage Systems (SuDS).

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land South of the A48, Bonvilston (Site ID: 3857) sets out that the position of the site at the Deposit Stage is as follows:

"Notwithstanding the amendment from a market led to an affordable housing led scheme (original CS 435), the other reasons why the site was previously discounted still remain.
The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area.
Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48.
The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable. There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing."
Conservation Area
In terms of the assertion that "The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area, this is strongly disputed.

Whilst it is acknowledged that the site lies within the Bonvilston Conservation Area, the conclusion that it would be adversely affected is not considered to be accurate. Firstly, the site as it currently stands, consists of an open field. This does not match the conservation area which is characterised primarily by residential dwellings of varying densities, and as such, it is considered that development of the site with sensitively designed buildings would enhance as opposed to harming its surroundings.

Secondly, the large residential development to the north of the site, 'Land at Sycamore Cross' ref. 2015/00960/FUL encroaches on the Bonvilston Conservation area but was deemed acceptable by the LPA. Although not all of the site is within the Conservation Area, it's encroachment and presence adjoining and surrounding a large proportion of the area is considerable and was deemed acceptable by Officers in 2017. Given this, a development at the Land South of the A48 should be deemed acceptable, as it follows the same principles albeit at a much smaller scale.

Highways
As for the statement that "Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48", this is also strongly disputed.

The site is located immediately adjacent to the adopted highway where it is proposed to upgrade and enhance the existing gated access point. Due to the existing access point, it is not considered that 'major' highway mitigation works would be needed, rather this would be enhanced and improved as part of the proposed development. Furthermore, given the nature of the road, with long views extending in both directions, it is anticipated that appropriate visibility

splays could be achieved to enable safe access and egress. As such, it is considered that the site would achieve appropriate highway access within the need for "major" highway mitigation works.

Agricultural Land Classification
The Detailed Site Assessment also sets out that "The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable." This is strongly disputed.

A review of the Agricultural Land Classification Predictive Map indicates that the site lies primarily within 'Grade 2: Very good quality agricultural land' but no Grade 1 land is present. Further assessment and tests to establish the quality would therefore be undertaken in due course to confirm the quality of the land. However, it is not considered that it would be suitable to farm in any event given the location immediately adjoining existing residential development and the fact that it is within private ownership. Overall, given that the site is relatively small with a gross area of 0.88 hectares, it is not considered that its development would result in a detrimental or significant loss of agricultural land – not least given that site is not capable of beneficial agricultural production due to its limited size.

Housing / Housing Land
Further to the above, it is also set out that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing", however, this is not considered to be entirely accurate.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area and a need for 242 affordable homes in the Wenvoe housing market area. This need has not been met through the allocations of sites within the RLDP, nor has it been met through outstanding commitments.

As outlined in Annex 1, it can be assumed that the affordable housing-led allocated sites will only provide for 61no. affordable dwellings within the Rural Vale, comprising 4no. sites that are expected to deliver approximately 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. Therefore, more sites should be allocated in order to secure the delivery of a higher number of affordable housing units to meet the target.

As set out within Annex 1, it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, however, there is serious concern regarding the deliverability of these sites, which would result in a significant gap in the total affordable housing that is delivered. Therefore, allocating a greater number of affordable housing-led sites would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in the both the overall affordable housing need, and the need for the St Nicholas & Llancarfan housing market area, being unmet, with demand continuing to outstrip supply.

The LHMA 2023 sets out the existing stock and planned supply of affordable housing over the next 5 years (up until 2028). This assessment found that the housing market area of St Nicholas & Llancarfan has a committed supply of 4no. one beds, 11no. two beds, and 3no. three beds, with 2 no. three beds as expected re-lets. The assessment also identifies a committed supply of 39no. units for intermediate housing.

The LHMA also sets out the existing stock and planned supply for Wenvoe, identifying the committed supply of social rent homes to be 12no. one beds, 11no. two beds, and 5no. three beds, with 7no. one beds and 8no. two beds as expected re-lets. There is no committed supply for intermediate housing in Wenvoe.

It should be noted that the development of 'Land East of Nicholas' (Campbell Court and Cae Newydd), has now been completed, and as such, can not form part of the housing land available. The latest Pre-Application Response for the site subject to these representations (Land South of the A48, Bonvilston) accounted for the development of the site in

St Nicholas, stating that "even after the developments at St Nicholas and Culverhouse Cross, there was the need in the Wenvoe ward for 1 Bed 71, 2 Bed 49, 3 Bed 29, 4 Bed 7, 5 Bed 5, Total 161".

It should also be noted that there are existing commitments within the Bonvilston area ('Land to the east of Bonvilston'), however, the deliverability of the existing commitment is seriously questioned. Application Ref. 2015/00960/FUL was approved in July 2017, with the Housing Land Supply and Housing Trajectory Report (December 2025) confirming that of the total 120 units permitted, only 40 had completed by 1st April 2025, with the remaining 80 units not started by this same date. Of the 80 units not started, 25 units are affordable homes.

It is well known that phase 1 of the development at 'Land to the east of Bonvilston' has faced difficulties which has led to the development remaining incomplete. This does of course put into question the overall deliverability of the site, and raises concerns about the units that were, and still are, required within the Bonvilston area.

The allocation of the site promoted herein would not only help in the short term in meeting the overall affordable housing target for the Plan, but would also assist in meeting the unmet needs of affordable housing within Bonvilston – not least given the serious concern regarding the deliverability of the committed supply of housing within the St Nicholas & Llancarfan housing market area.

For the reasons set out above, and in light of the information provided within the LHMA 2023 and the Housing Land Supply and Housing Trajectory Report (December 2025), it is evident that there is considerable need for affordable housing within Bonvilston, and accordingly, the housing market areas of St Nicholas & Llancarfan, and Wenvoe. There have not been any sites allocated to assist within meeting the local need, and more sites should be allocated in order to secure delivery of a higher number of affordable housing units to meet the overall target of the Plan.

The contention that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the

delivery of affordable housing" is therefore strongly disputed – not least given that there is a clear and evident need to allocate more affordable housing-led sites in order to meet the target set out in the Plan.

Interim Summary

In summary, it is considered that the site subject to these representations would not have an adverse impact on the character and setting of the Bonvilston Conservation Area, nor would major highway mitigation works be required to enable safe vehicular access on to the A48. Moreover, it is considered that the site's classification as BMV Agricultural Land does not pose a fundamental constraint to development – as the site represents a relatively small parcel with a gross area of 0.88 hectares, which is not capable of beneficial agricultural production due to its limited size.

There is also a considerable need for the affordable housing in Bonvilston and the housing market area of St Nicholas & Llancarfan. The site promoted herein would assist in meeting these local needs and should be allocated accordingly.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage

As demonstrated above, there has only been one change to the scoring attributed to the site, this being a change from 'red' to 'amber' for 'Developer Interest'. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with these representations accordingly (see Appendix B).

Whilst detailed submissions were made on the previous assessment, it is considered pertinent for the scoring of the key criteria's to be addressed as part of these representations. As such, these have also been discussed below.
Developer Interest

As set out above, the Detailed Site Assessment for 'Developer Interest' has changed from 'red' to 'amber'. The assessment methodology for this section of the assessment has been extracted below for reference.

As set out above, 'amber' refers to there being no development interest identified at this stage, however, there is evidence to indicate that the site is being actively promoted by the owners.

The representations made to the Preferred Strategy (Appendix B) sets out that whilst the site does not yet have an agreement with a developer to take on the land, it is considered that this would be achieved should the site be allocated, and planning permission granted. Newydd Housing association have been engaged previously and had agreed to take the site forward as a 100% affordable scheme, albeit is also considered that they could take on the affordable units as part of a mixed tenure scheme.

In addition to Newydd, the site promoter has also received an offer from a private social housing provider who would be prepared to support the site as a mixed tenure scheme.

This position has not changed since the Preferred Strategy stage, and is considered that there is continued developer interest for the site. This is not considered to change at any point – not least given the discussions held between the owners of the site in questions and developers of interest.

Environmental and Physical Constraints

As set out at the Pre-Application Stage. the site underwent a Preliminary Ecological Appraisal in September 2022 which identified that whilst some precautionary measures were recommended in terms of protecting priority habitats and reptiles, the site is not fundamentally constrained from development on ecological terms. Given this, it is considered that further ecological surveys would be undertaken at the planning stage to inform any development proposals and ensure the safeguarding of the natural environment.

Access to Key Services (Retail, Primary Schools, and Health Services) and to Services and Facilities

As set out within the representations made to the Preferred Strategy, the site is located within a maximum of a 20-minute bus journey to a version of every key service listed, due to the proximity of the site to settlements such as Cowbridge, Culverhouse Cross and St Nicholas. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Bonvilston without the need to travel by car.

To reiterate, the site 'Land South of the A48, Bonvilston' is situated in proximity to Cowbridge, Culverhouse Cross and Cardiff, which comprise all key services. Concluding this allocation as 'unsustainable' in regard to 'availability of local facilities in and around settlements' is not accurate. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

It should also be noted that Bonvilston contains a number of facilities within a short and level walking distance of the site, including the village shop and Café, as well as the Red Lion Public House.

Given the accessibility of the site to other settlements, and the fact that these are made accessible by bus and active travel routes, it is considered that the site should be concluded as sustainable in regard to access to key services.

Summary and Conclusion

As evidenced above, and within the representations made to the Preferred Strategy (Appendix B), there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location, and site, are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document "New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in

recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and

built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above the site was not considered suitable for further consideration with the site scoring negatively (red) in a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services

and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site has been outlined as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Land South of A48, Bonvilston.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: Wig Fach Property Company Ltd [2373]
Agent: Geraint John Planning Ltd

Summary:

We object to the spatial growth strategy set out within the Deposit Plan and therefore question the delivery and soundness of the Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain an over-reliance of housing growth on this defined area, and the associated absence of growth in other Rural parts of the plan area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan, which includes enabling opportunities to provide employment and business premises within/near to rural settlements. The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the principal settlement and Strategic Growth Area of Talbot Green/Pontyclun/Llantrisant to the north. The current strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural and bus services should be appropriately assessed and focussed on in terms of promoting sustainable development. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to deliver housing in the short and medium term of the Plan period.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ogmore By Sea area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)

Para 5.25 states “Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An ‘affordable housing led’ scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord”.

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

“Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided.”

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision’s clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either Key Settlement, Service Centre settlement or Primary Settlements, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ogmore By Sea. The Vale is characteristically ‘rural’, and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the “soundness” of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states “The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities”. The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of ‘key sites’ to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of

1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory

are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when

coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that the should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 124 affordable homes in the St Brides Major local housing market area (which Ogmore is located within). As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

It is questionable whether Wick has the capacity to accommodate 50 new dwellings, given the sustainability and rural nature of the area. As a result, it is suggested that the number of homes allocated in Wick is reduced and that a further allocation in St Brides Major is secured, in order to facilitate supporting the delivery of affordable housing through the housing market area, rather than in one minor rural settlement. The sustainability of Ogmore has been assessed, both by the Council through the Sustainability Appraisal and again, through our assessment of the site.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a

target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4 % of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.

Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ogmore and the proposed site. As outlined within these representations, it is considered that the site (ID xxx) represents a sustainable, deliverable and acceptable site. The site is within a maximum of a 22- minute bus journey to a every key service listed, due to the proximity of the site to settlements such as Bridgend. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Ogmore By Sea without the need to travel by car. The site is located within 5 miles of Bridgend, and within a maximum 22-minute bus journey of the following services:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre for various Retail Services

Moreover, Ogmore has benefitted from the recent development of the Ogmore By Sea Village Hall, which provides space for community activities and events to take place. The hall also includes a coffee shop (Welsh Coffee Company), which only adds further to the daily services provision available within the settlement. Access to the hall and coffee shop is directly provided for pedestrians from the Main Road, which allows for direct access from the site.

Accordingly, the settlement of Ogmore represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

It is acknowledged that the site also lies within the Glamorgan Heritage Coast and this point is addressed further below.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ogmore By Sea, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

Policy DNP3 – Glamorgan Heritage Coast

Given that the site is located in the Glamorgan Heritage Coast, it is noted that the following policy is of relevance to any future development on the site. Criteria 4 of Policy DNP3 states:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development that accords with National Policy."
It is also noted that supporting Para 6.422 "In seeking to protect the Glamorgan Heritage Coast, the Council acknowledges that there are some built up areas within the boundary, including the Minor Rural Settlement of Ogmore. In addition, the Vale of Glamorgan rail line crosses part of the Heritage Coast designation in the location where a new station at St Athan is proposed. Whilst being mindful of the need to protect the special qualities of the Glamorgan Heritage Coast, the Council accepts that development within these areas is appropriate, subject to relevant policies of the Plan"(GJP emphasis).

We would offer general support for this policy, and consider this to provide flexibility which allows for certain forms of development. However, we would suggest that the policy wording should be amended to reflect that 'housing' should be supported in the Glamorgan Heritage Coast, providing that the policy exceptions are met. Therefore, the following amendment is proposed as part of the policy should be changed to include "small scale housing" or something similar. The proposed amendments to Policy DNP3 are outlined below in red:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development, including small-scale housing proposals that accords with National Policy."

Again, this would ensure that suitable housing developments can be delivered in the Plan period, to meet the housing needs of the Vale of Glamorgan – particularly in respect of affordable housing.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to Policy DNP3 – Glamorgan Heritage Coast, given the lack of recognition for the potential for small-scale housing proposals;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land at Hazelwood, Ogmore By Sea (Site ID: 3855) sets out that the position of the site at the Deposit Stage is as follows:

"The original site as ruled out as the development would represent unacceptable intrusion in to the open countryside. Whilst the site has now been identified for an affordable housing led development, the original reason for ruling it out still remains."
In terms of the assertion that "the development would represent an unacceptable intrusion into to the open countryside", this is strongly disputed, in that the development of the site would represent a natural rounding off of the existing settlement boundary. An extract of the site relative to the settlement boundary is provided below, which clearly shows that the development of the site would not extend beyond the existing settlement pattern that exists in Ogmore.

Site Outlined in Red and Settlement Shaded in Blue
As clearly demonstrated in the above mapping, the site would extend no further eastwards than the existing housing area to the south of the site. Equally, the site would not be extending any further north than the existing settlement pattern in Ogmore. This position is further supported by the wider aerial view of the site provided overleaf:

Wider Aerial View of Site Outlined in Red and Settlement Shaded in Blue

In summary, it is considered that the proposed allocation of the site represents a logical rounding off of the existing settlement, as depicted in the mapping provided above – where the site follows the existing envelope of the settlement. The site does not extend any further eastwards than the established built form located immediately to the south; indeed, it sits comfortably within the same development line.

As such, it cannot be considered that the site represents an 'intrusion' into the countryside, as the site would be visually and functionally related to the settlement. It therefore follows that the site would be read as part of the settlement, and not the wider rural landscape.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage
As demonstrated above, there are no changes to the scoring attributed to the site. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with this submission (see Appendix A).

Sustainability

Notwithstanding the above, it is considered that the site represents a more sustainable location than what was previously assessed at Preferred Strategy stage, in light of the Ogmore by Sea Hall development. The Hall acts as a community facility, whereby the space is available for hire by local community groups such as birthday parties, weddings, group meetings, and other such similar uses. Moreover, a café (Welsh Coffee Co) is located within the premises which sells both food and drink.

The hall and café are within walking distance to and from the site, where new access facilities have been implemented from Main Road directly to the building, to allow access for pedestrians and cyclists. This is illustrated in the image below:

Walking and Cycling Facilities

The Tusker Rock pub and post office are also located along Main Road, all of which are within walking distance to the site.

Accordingly, the site is well served by new amenities (i.e. community hall) that comprehensively improves the sustainability of the site / settlement, and in turn, improves the sustainability credentials of the site promotion. It therefore follows that the site represents an acceptable location for residential development, and the site should be looked upon favourably accordingly.

It is also the case, as set out in previous representations, that the site is within a maximum 22-minuted bus journey of the following services and facilities:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre.

As such, key services and facilities can be access by sustainable travel over and above the existing level of provision available in Ogmore By Sea (as discussed above).

Accordingly, the relevant 'red' scorings in the Council's assessment should be updated to reflect the site's suitability and sustainability to accommodate the proposed residential development of the site.

Glamorgan Heritage Coast

Insofar as to the position regarding the site's location within the Glamorgan Heritage Coast, detailed submissions are made not only in the Preferred Strategy representations, but also in Annex 1 of this submission. In short, given the pressing need for such development (particularly affordable housing) to come forward in the Plan period to meet ever-

increasing needs, development of this nature should be considered more favourably – not least that, as outlined in this Annex, the site would not extend any further that the existing settlement boundary.

Accordingly, the site would be perceived to form part of the settlement of Ogmore By Sea, and not the wider landscape, and therefore, would not have any detrimental impact on the Heritage Coast in any respect. The scoring should be amended accordingly to reflect this position.

Climate Change

As outlined in previous representations, the development will incorporate climate change measures, such as EV charging points, PV panels, as well as adopting sustainable materials for construction whilst maximising the potential for the dwellings to be energy efficient. Accordingly, the development will be built to high sustainable standards, and therefore, the scoring of the site should be amended as a result.

Summary and Conclusion

It has been evidenced above that there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston;

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been

consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000

homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable

housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not

received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP,

however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and

• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Hazelwood, Ogmore By Sea, the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below.

With reference to the above:

• In terms of public transport, there are two bus stops located approximately 200m (3-minute walk) from the site ('Ogmore By Sea Post Office'), with the '303' providing services between Llantwit Major and Bridgend.

• The site is located 200m (3-minute walk) from the 'Ogmore By Sea Post Office' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

• The site is also located 50m (1-minute walk) from a children's park.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities. This

Furthermore, the settlement of Ogmore By Sea has been ranked higher than Llangan (which the site 'Land to north and west of Westwinds Business Park' is located within) in the VoG Sustainable Settlements Appraisal, and therefore, is considered to constitute a more sustainable location to accommodate residential growth. Most notably, Ogmore By Sea scores '13' in respect to 'Daily Facilities' whereas Llangan only scores '3', evidencing that residents in Ogmore have much better access to services within the locality as compared to Llangan.

Given the above, 'Land at Hazelwood, Ogmore' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Hazelwood, Ogmore' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help

sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

7185 Support

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY
Respondent: H Jones, L Sungur and P John [3741]
Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

The essence of Policy SP1 is supported. The promotion of small-scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the

range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the

northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Respondent: H Jones, L Sungur and P John [3741]

Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale. Without targeted allocations outside of the SGA, as outlined in Policy SP1, the housing gap will continue to widen, forcing more residents to leave the area and weakening community cohesion.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important

as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the

shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government’s commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities

and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mrs Melissa Plimmer [3599]

Summary:

The RLDP identifies St Athan as a "Strategic Hub," yet it remains the only primary settlement in the Vale of Glamorgan without a direct rail link. Relying on the "Active Travel" aspirations of Policy SP10 is unrealistic for a community where the majority of residents commute to Cardiff, Bridgend, or Barry.

Full text:

Representation on the Vale of Glamorgan Deposit RLDP 2021–2036
Specific Policy/Site Objection:
• Policy SP4.4: Land at Church Farm, St Athan
• Policy SP4.5: Land to the West of St Athan
• Clive Road (Additional Allocation)
• Policy EMP2: MOD St Athan / Bro Tathan
Status: Unsound
1. Introduction
I wish to formally object to the allocation of the above sites and the broader designation of St Athan as a "Primary Settlement" for high-density growth within the Replacement Local Development Plan (RLDP). This allocation fails the Test of Soundness regarding Consistency (with national climate goals) and Effectiveness (deliverability of infrastructure).
2. Failure of Sustainable Transport (Policy SP7 & SP10)
The RLDP identifies St Athan as a "Strategic Hub," yet it remains the only primary settlement in the Vale of Glamorgan without a direct rail link. Relying on the "Active Travel" aspirations of Policy SP10 is unrealistic for a community where the majority of residents commute to Cardiff, Bridgend, or Barry.
The proposed density at the above sites will inevitably lead to an unsustainable increase in private car journeys on the B4265, specifically at the Gileston Road junction and Weycock Cross, which are already at or near capacity.
Concrete infrastructure is needed to be in place prior to any development of the land. Often intentions of infrastructure are not progressed. In addition where infrastructure is not in place prior to housing many commuters will become accustomed to travel by car and wont switch to public transport. It is difficult to see how developments work with Future Wales: The National Plan 2040
Active travel should look at linking key destinations and with the western vale being spread over longer distances more effort should be given to linking population centres with separated bicycle paths and wide accessible pavements. Shared bike / foot paths are inherently dangerous not allowing the safe use of wheelchairs and prams and sufficient use for children and dog walkers. Cycling should not have to stop at every intersection which creates visibility black spots by the way they turn away from traffic.
With current planned housing and that of additional housing in the LDP creating over 1,000 new homes and with each household having 1-2 cars per household this will add significant additional numbers of journeys on already poor road infrastructure. The vale lacks sufficient north / south routes pushing vehicles towards Weycock Cross in Barry which will have its own traffic issues or via Cowbridge with small country lanes. I personally worked in Cowbridge travelling from St Athan where buses would take over 1 hour 10 minutes and even then not arriving in time to start work. In contrast car travel would be 10 minutes or cycle would be 20 minutes but over dangerous roads.
Travel to Barry for meetings at peak times can take over 50 minutes from St Athan with significant delays leading to Weycock Cross and passed the secondary schools even before developments in the RLDP or existing planning. Public transport gets caught in the same traffic issues.
Access into St Athan is already dangerous from the war memorial with one near fatal accident already having taken place since the ‘improvements’ to the junction. Proposals for additional access from B4265 onto developed land would be on a hill with poor visibility and around a blind bend. Currently there is poor visibility leaving St Athan due to the side by side two car exit blocking views in both directions along with more visibility issues looking westward due to traffic furniture and signage.

While Bro Tathan (Policy EMP2) provides jobs, there is no guarantee that the people moving into local developments will work there. If they commute elsewhere, the RLDP fails its own climate goals (Policy SP1) by creating a "commuter colony" rather than a sustainable community.
Reference Policy CI3 (New Community Facilities). The proposed expansion of St Athan Primary School lacks a guaranteed timeline for when these facilities will be operational relative to house completions. New access to the school under existing planning is only 'proposed' and existing access to the school via Rock Road is a poorly surfaced and narrow one way road but is often ignored with traffic coming via Rectory Drive which has a 'No entry except for access' restriction but is not enforced causing large numbers of vehicles into residential areas not built for this type of activity.
Speeding is already a great concern in the village with the current level of vehicle traffic with little compliance with the 20mph speed limit and no enforcement.
3. Coalescence and Loss of Settlement Identity (Policy SSC1)
The scale of development proposed for Church Farm, in conjunction with Policy SP4.5 (Land West of St Athan), threatens the distinct character of the village. The erosion of the "Strategic Gap" between St Athan and Eglwys Brewis violates the principles of Policy SSC1 (Settlement Boundaries). This "urban creep" creates a continuous sprawl that permanently destroys the rural setting of the historic Church Farm and the village's unique sense of place.
St Athan should no longer be thought of as a village but as a small town with infrastructure to meet the growing demands of the population and lacks facilities that are given to surrounding towns such as fire / ambulance and police stations.
If the jobs at the Enterprise Zone (Aston Martin, Bro Tathan) do not match the demographic of the new residents, St Athan simply becomes a "dormitory" village, increasing the carbon footprint as people drive to Cardiff or Bridgend for work. In addition people will travel to St Athan from other areas should they be employed at the new commercial sites.
4. Infrastructure Lag and Healthcare Capacity (Policy CI3)
Under Policy CI3, development should only proceed where adequate community facilities exist or can be provided. Current primary healthcare services in St Athan and nearby Llantwit Major are already oversubscribed. The RLDP provides no "Triggers for Delivery" to ensure that new medical and educational facilities will be operational prior to the occupation of the hundreds of homes planned for the Church Farm site. This creates a significant risk to the wellbeing of both new and existing residents. Access to both village GP services are on a part time basis. With new dentist rules in Wales, this will increase the need for further travel around the area to meet simple check ups. With no A&E facilities in the county St Athan often falls between Cardiff and Bridgend hospitals and continued poor roads together with additional traffic gives greater concern when emergencies happen.
5. Environmental and Biodiversity Impact (Policy SP5)
The Church Farm site consists of high-quality agricultural land and vital greenfield habitats. While Policy SP5 mandates a "Net Benefit for Biodiversity," the total loss of soil permeability and ancient hedgerow connectivity on a site of this scale cannot be mitigated by tokenistic landscaping. Once this valuable land is developed it is irretrievably lost for current and future generations. Currently there are red list species using the space like Yellowhammers and Skylarks. In addition there has been a collapse of invertebrate bio-mass over the last 40 years and personally seen since moving the area in 1980. Net Benefit for Biodiversity plans do not address any of these local and national concerns.
Land to the west of St Athan (SP4.5) This site consists of Grade 2 (Good) or 3a (Excellent) agricultural land. Under Planning Policy Wales (PPW) 12, such land should only be developed if there is an "overriding need" and no lower-grade land is available. The Vale of Glamorgan council has not sufficiently explored brownfield alternatives in the Barry Docks or the St Athan Enterprise Zone. The increased light pollution and "urban glow" will impact the rural character of the Western Vale.
The invertebrate charity Buglife shows that based on citizen science monitoring data, there has been a 75% to 79% decline in the abundance of flying insects in Wales between 2004 and 2023. Natural Resources Wales also reported
• 79% Decrease in Flying Insects (2004–2023): Data from the "Bugs Matter" survey, which counts insect "splats" on vehicle number plates, recorded this 79% reduction in Wales, with 2023 showing further declines from previous years.
• Specific Invertebrate Declines: Moths, which are key pollinators, have seen an average decline of 43% in abundance since 1970.
• Widespread Biodiversity Loss: Welsh wildlife has decreased on average by 20% since 1994, and 18% of species in Wales are at risk of extinction.
• Habitats in Peril: Over the past 50 years, many insects have suffered declines of 65% to 70% in certain areas, particularly moths, butterflies, ladybirds, and ground beetles.
• Impact on Food Chain: Invertebrates that provide food for farmland birds have seen declines of 50-80%.
The cumulative impact of hard-standing surfaces also raises serious concerns regarding surface water runoff into the River Thaw catchment area. Significant surface flooding already

takes place across the western Vale spilling onto roads causing travel disruption.
An increase in hard surfaces also increases ambient temperatures compared to grassland, woodland and other green spaces necessitating increased power use for cooling and comfortable living temperatures. Building practices can help mitigate this but only where this is incorporated into sustainable building rules.
Replacing green fields (which act as a natural sponge) with hundreds of roofs and driveways at Church Farm (SP4.4) and Land West of St Athan (SP4.5) will create a "funnel effect."
Dwr Cymru Welsh Water has previously noted concerns regarding the St Athan Wastewater Treatment Works. Proof is required that the current system can handle the RLDP's projected f
low without increasing overflow events. Further development risks "Combined Sewer Overflows" (CSOs) into local watercourses, which contradicts the Council's Nature Emergency declaration.
The Vale of Glamorgan Council requires a Sustainable Drainage Systems (SuDS) Approval Body (SAB) review. Attenuation ponds are often poorly maintained and can fail during the "1-in 100-year" storm events which are becoming more frequent.
6. Conclusion
The allocation of the above site policies are unsound. It promotes car-dependent growth in a rural location without the necessary infrastructure "trigger points" to protect the local environment or the B4265 road network.
Proposed Remedy: Reduce the housing density at the above sites and re-classify St Athan as a "Minor Rural Settlement" until such time as a dedicated rail link, suitable active travel infrastructure or high-frequency public transport other than rail is fully funded and scheduled for delivery.

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Mr Andrew Street [3444]

Summary:

The RLDP identifies St Athan as a "Strategic Hub," yet it remains the only primary settlement in the Vale of Glamorgan without a direct rail link. Relying on the "Active Travel" aspirations of Policy SP10 is unrealistic for a community where the majority of residents commute to Cardiff, Bridgend, or Barry.

Full text:

Representation on the Vale of Glamorgan Deposit RLDP 2021–2036

Specific Policy/Site Objection:
• Policy SP4.4: Land at Church Farm, St Athan
• Policy SP4.5: Land to the West of St Athan
• Clive Road (Additional Allocation)
• Policy EMP2: MOD St Athan / Bro Tathan

Status: Unsound

1. Introduction

I wish to formally object to the allocation of the above sites and the broader designation of St Athan as a "Primary Settlement" for high-density growth within the Replacement Local Development Plan (RLDP). This allocation fails the Test of Soundness regarding Consistency (with national climate goals) and Effectiveness (deliverability of infrastructure).

2. Failure of Sustainable Transport (Policy SP7 & SP10)

The RLDP identifies St Athan as a "Strategic Hub," yet it remains the only primary settlement in the Vale of Glamorgan without a direct rail link. Relying on the "Active Travel" aspirations of Policy SP10 is unrealistic for a community where the majority of residents commute to Cardiff, Bridgend, or Barry.

The proposed density at the above sites will inevitably lead to an unsustainable increase in private car journeys on the B4265, specifically at the Gileston Road junction and Weycock Cross, which are already at or near capacity.

Concrete infrastructure is needed to be in place prior to any development of the land. Often intentions of infrastructure are not progressed. In addition where infrastructure is not in place prior to housing many commuters will become accustomed to travel by car and wont switch to public transport. It is difficult to see how developments work with Future Wales: The National Plan 2040

Active travel should look at linking key destinations and with the western vale being spread over longer distances more effort should be given to linking population centres with separated bicycle paths and wide accessible pavements. Shared bike / foot paths are inherently dangerous not allowing the safe use of wheelchairs and prams and sufficient use for children and dog walkers. Cycling should not have to stop at every intersection which creates visibility black spots by the way they turn away from traffic.

With current planned housing and that of additional housing in the LDP creating over 1,000 new homes and with each household having 1-2 cars per household this will add significant additional numbers of journeys on already poor road infrastructure. The vale lacks sufficient north / south routes pushing vehicles towards Weycock Cross in Barry which will have its own traffic issues or via Cowbridge with small country lanes. I personally worked in Cowbridge travelling from St Athan where buses would take over 1 hour 10 minutes and even then not arriving in time to start work. In contrast car travel would be 10 minutes or cycle would be 20 minutes but over dangerous roads.

Travel to Barry for meetings at peak times can take over 50 minutes from St Athan with significant delays leading to Weycock Cross and passed the secondary schools even before developments in the RLDP or existing planning. Public transport gets caught in the same traffic issues.

Access into St Athan is already dangerous from the war memorial with one near fatal accident already having taken place since the ‘improvements’ to the junction. Proposals for additional access from B4265 onto developed land would be on a hill with poor visibility and around a blind bend. Currently there is poor visibility leaving St Athan due to the side by side two car exit blocking views in both directions along with more visibility issues looking westward due to traffic furniture and signage.

While Bro Tathan (Policy EMP2) provides jobs, there is no guarantee that the people moving into local developments will work there. If they commute elsewhere, the RLDP fails its own climate goals (Policy SP1) by creating a "commuter colony" rather than a sustainable community.

Reference Policy CI3 (New Community Facilities). The proposed expansion of St Athan Primary School lacks a guaranteed timeline for when these facilities will be operational relative to house completions. New access to the school under existing planning is only ‘proposed’ and existing access to the school via Rock Road is a poorly surfaced and narrow one way road but is
often ignored with traffic coming via Rectory Drive which has a ‘No entry except for access’ restriction but is not enforced causing large numbers of vehicles into residential areas not built for this type of activity.

Speeding is already a great concern in the village with the current level of vehicle traffic with little compliance with the 20mph speed limit and no enforcement.

3. Coalescence and Loss of Settlement Identity (Policy SSC1)

The scale of development proposed for Church Farm, in conjunction with Policy SP4.5 (Land West of St Athan), threatens the distinct character of the village. The erosion of the "Strategic Gap" between St Athan and Eglwys Brewis violates the principles of Policy SSC1 (Settlement Boundaries). This "urban creep" creates a continuous sprawl that permanently destroys the rural setting of the historic Church Farm and the village’s unique sense of place.

St Athan should no longer be thought of as a village but as a small town with infrastructure to meet the growing demands of the population and lacks facilities that are given to surrounding towns such as fire / ambulance and police stations.

If the jobs at the Enterprise Zone (Aston Martin, Bro Tathan) do not match the demographic of the new residents, St Athan simply becomes a "dormitory" village, increasing the carbon footprint as people drive to Cardiff or Bridgend for work. In addition people will travel to St Athan from other areas should they be employed at the new commercial sites.

4. Infrastructure Lag and Healthcare Capacity (Policy CI3)

Under Policy CI3, development should only proceed where adequate community facilities exist or can be provided. Current primary healthcare services in St Athan and nearby Llantwit Major are already oversubscribed. The RLDP provides no "Triggers for Delivery" to ensure that new medical and educational facilities will be operational prior to the occupation of the hundreds of homes planned for the Church Farm site. This creates a significant risk to the wellbeing of both new and existing residents. Access to both village GP services are on a part time basis. With new dentist rules in Wales, this will increase the need for further travel around the area to meet simple check ups. With no A&E facilities in the county St Athan often falls between Cardiff and Bridgend hospitals and continued poor roads together with additional traffic gives greater
concern when emergencies happen.

5. Environmental and Biodiversity Impact (Policy SP5)

The Church Farm site consists of high-quality agricultural land and vital greenfield habitats. While Policy SP5 mandates a "Net Benefit for Biodiversity," the total loss of soil permeability and ancient hedgerow connectivity on a site of this scale cannot be mitigated by tokenistic landscaping. Once this valuable land is developed it is irretrievably lost for current and future generations. Currently there are red list species using the space like Yellowhammers and Skylarks. In addition there has been a collapse of invertebrate bio-mass over the last 40 years and personally seen since moving the area in 1980. Net Benefit for Biodiversity plans do not address any of these local and national concerns.

Land to the west of St Athan (SP4.5) This site consists of Grade 2 (Good) or 3a (Excellent) agricultural land. Under Planning Policy Wales (PPW) 12, such land should only be developed if there is an "overriding need" and no lower-grade land is available. The Vale of Glamorgan council has not sufficiently explored brownfield alternatives in the Barry Docks or the St Athan Enterprise Zone. The increased light pollution and "urban glow" will impact the rural character of the Western Vale.

The invertebrate charity Buglife shows that based on citizen science monitoring data, there has been a 75% to 79% decline in the abundance of flying insects in Wales between 2004 and 2023.

Natural Resources Wales also reported

• 79% Decrease in Flying Insects (2004–2023): Data from the "Bugs Matter" survey, which counts insect "splats" on vehicle number plates, recorded this 79% reduction in Wales, with 2023 showing further declines from previous years.
• Specific Invertebrate Declines: Moths, which are key pollinators, have seen an average decline of 43% in abundance since 1970.
• Widespread Biodiversity Loss: Welsh wildlife has decreased on average by 20% since 1994, and 18% of species in Wales are at risk of extinction.
• Habitats in Peril: Over the past 50 years, many insects have suffered declines of 65% to 70% in certain areas, particularly moths, butterflies, ladybirds, and ground beetles.
• Impact on Food Chain: Invertebrates that provide food for farmland birds have seen declines of 50-80%.

The cumulative impact of hard-standing surfaces also raises serious concerns regarding surface water runoff into the River Thaw catchment area. Significant surface flooding already takes place across the western Vale spilling onto roads causing travel disruption.

An increase in hard surfaces also increases ambient temperatures compared to grassland, woodland and other green spaces necessitating increased power use for cooling and comfortable living temperatures. Building practices can help mitigate this but only where this is incorporated into sustainable building rules.

Replacing green fields (which act as a natural sponge) with hundreds of roofs and driveways at Church Farm (SP4.4) and Land West of St Athan (SP4.5) will create a "funnel effect."

Dwr Cymru Welsh Water has previously noted concerns regarding the St Athan Wastewater Treatment Works. Proof is required that the current system can handle the RLDP's projected flow without increasing overflow events. Further development risks "Combined Sewer Overflows" (CSOs) into local watercourses, which contradicts the Council's Nature Emergency declaration.

The Vale of Glamorgan Council requires a Sustainable Drainage Systems (SuDS) Approval Body (SAB) review. Attenuation ponds are often poorly maintained and can fail during the "1-in-100-year" storm events which are becoming more frequent.

6. Conclusion

The allocation of the above site policies are unsound. It promotes car-dependent growth in a rural location without the necessary infrastructure "trigger points" to protect the local environment or the B4265 road network.

Proposed Remedy: Reduce the housing density at the above sites and re-classify St Athan as a "Minor Rural Settlement" until such time as a dedicated rail link, suitable active travel infrastructure or high-frequency public transport other than rail is fully funded and scheduled for delivery.

7230 Support

Document Element: SP1 – SUSTAINABLE GROWTH STRATEGY

Respondent: Dinas Powys Community Council (Dinas Powys Community Council) [2712]

Summary:

Dinas Powys Community Council (DPCC) recognises and welcomes some improvements made in the revised Replacement Local Development Plan (RLDP). These changes demonstrate a more balanced approach to growth and a clearer acknowledgement of environmental and infrastructure constraints across the Vale. DPCC considers the following amendments to be positive and constructive:

3.1 Reduction in Overall Housing Numbers

The reduction in the total housing requirement reflects a more realistic assessment of demographic trends, household formation rates, and deliverability across the plan period. This reduces pressure on constrained settlements such as Dinas Powys.

3.2 Greater Emphasis on Sustainable Locations

The revised RLDP places stronger emphasis on locating development where sustainable transport options exist. This aligns with national policy and reduces reliance on private car travel.

3.3 Strengthened Climate-Change and Flood-Risk Policies

The Council welcomes the enhanced policy framework relating to:

• Climate-change adaptation
• Flood-risk management
• Sustainable drainage (SuDS)
• Nature-based solutions

These changes reflect national guidance and NRW expectations.

3.4 Recognition of Infrastructure Constraints

The revised evidence base acknowledges that certain settlements – including Dinas Powys -face:

• Highway capacity limitations
• Public transport constraints
• Limited school and healthcare capacity

This recognition is essential for sound plan-making.

3.5 Improved Evidence Base

The updated background papers, including the Settlement Sustainability Assessment and the Infrastructure Assessment, provide a clearer picture of constraints and opportunities across the Vale.

Full text:

Dinas Powys Community Council submits this technical objection to the proposed allocation of the Eastbrook site within the Vale of Glamorgan Replacement Local Development Plan (RLDP). While the Council recognises and welcomes several positive changes in the revised RLDP, the Eastbrook allocation remains fundamentally unsound due to unresolved constraints relating to:

• Flood risk and hydrology
• Highways and transport capacity
• Environmental and landscape impact
• Infrastructure limitations
• Deliverability and viability

The Eastbrook site lies within a complex hydrological catchment characterised by:

• Groundwater emergence
• Overland flow routes
• Low-permeability soils
• A history of significant flood events, including the 2020 incident
• Interactions between surface water, groundwater, and existing drainage systems

Natural Resources Wales (NRW) has repeatedly identified flood-risk concerns at this location, and the Council's own evidence base acknowledges the need for detailed catchment-wide modelling before any development can be considered.

The RLDP currently lacks:

• Mandatory policy wording to secure pre-delivery of mitigation
• Requirements for catchment-wide modelling
• Guarantees that development will not increase flood risk elsewhere
• Mechanisms to ensure that mitigation is viable, deliverable, and enforceable

Without these safeguards, the allocation is unsound under the tests of:

• Soundness Test CE2 (coherence and effectiveness)
• Soundness Test CE4 (deliverability)
• Soundness Test CE3 (environmental protection)

This objection sets out:

1. The positive changes recognised in the revised RLDP
2. The continued reasons why the Eastbrook allocation remains unsound
3. A full technical hydrology and flood-risk chapter

4. Mandatory policy wording required to make the allocation sound
5. A formal request for written confirmation from the Vale of Glamorgan Council
6. Supporting diagrams (ASCII + placeholders)

SECTION 1. EXECUTIVE SUMMARY
Dinas Powys Community Council submits this technical objection to the proposed allocation of the Eastbrook site within the Vale of Glamorgan Replacement Local Development Plan (RLDP). While the Council recognises and welcomes several positive changes in the revised RLDP, the Eastbrook allocation remains fundamentally unsound due to unresolved constraints relating to:
• Flood risk and hydrology
• Highways and transport capacity
• Environmental and landscape impact
• Infrastructure limitations
• Deliverability and viability
The Eastbrook site lies within a complex hydrological catchment characterised by:
• Groundwater emergence
• Overland flow routes
• Low-permeability soils
• A history of significant flood events, including the 2020 incident
• Interactions between surface water, groundwater, and existing drainage systems
Natural Resources Wales (NRW) has repeatedly identified flood-risk concerns at this location, and the Council's own evidence base acknowledges the need for detailed catchment-wide modelling before any development can be considered.
The RLDP currently lacks:
• Mandatory policy wording to secure pre-delivery of mitigation
• Requirements for catchment-wide modelling
• Guarantees that development will not increase flood risk elsewhere
• Mechanisms to ensure that mitigation is viable, deliverable, and enforceable
Without these safeguards, the allocation is unsound under the tests of:
• Soundness Test CE2 (coherence and effectiveness)
• Soundness Test CE4 (deliverability)
• Soundness Test CE3 (environmental protection)
This objection sets out:
1. The positive changes recognised in the revised RLDP
2. The continued reasons why the Eastbrook allocation remains unsound
3. A full technical hydrology and flood-risk chapter
4. Mandatory policy wording required to make the allocation sound
5. A formal request for written confirmation from the Vale of Glamorgan Council
6. Supporting diagrams (ASCII + placeholders)

The Community Council urges the Vale of Glamorgan Council to either:
• Remove the Eastbrook allocation from the RLDP, or
• Incorporate the mandatory policy wording and evidence requirements set out in this document.
Failure to do so will leave the RLDP vulnerable to challenge at Examination.

Examination.

SECTION 2 - INTRODUCTION
Dinas Powys Community Council (DPCC) submits this formal objection to the proposed allocation of the Eastbrook site (HG1 - KS2) within the Vale of Glamorgan Replacement Local Development Plan (RLDP). The Council recognises the importance of delivering sustainable housing across the Vale, and it acknowledges some of the positive changes made in the revised RLDP. However, the Eastbrook allocation remains fundamentally unsound due to unresolved and significant constraints relating to:
• Flood risk and hydrology
• Highways and transport capacity
• Environmental and landscape impact
• Infrastructure limitations
• Deliverability and viability
The Eastbrook site occupies a sensitive position within a complex hydrological catchment. The area is characterised by groundwater emergence, overland flow routes, low-permeability soils, and a history of significant flood events — most notably the 2020 incident, which affected properties downstream. Natural Resources Wales (NRW) has repeatedly highlighted concerns regarding flood risk at this location, and the Council's own evidence base acknowledges the need for detailed catchment-wide modelling before any development can be considered.
Despite these known constraints, the RLDP does not currently include:
• Mandatory policy wording to secure pre-delivery of mitigation
• Requirements for catchment-wide modelling
• Guarantees that development will not increase flood risk elsewhere

• Mechanisms to ensure that mitigation is viable, deliverable, and enforceable
This objection sets out the failure to follow legal Consultation Procedural Soundness, the technical evidence, policy requirements, and mandatory safeguards necessary to make the RLDP sound. Without these safeguards, the allocation fails the tests of soundness, particularly:
• CE2 — Coherence and effectiveness
• CE3 — Environmental protection
• CE4 — Deliverability
This Council therefore requests either:
1. Removal of the Eastbrook allocation from the RLDP, or
2. Inclusion of the mandatory policy wording and evidence requirements set out in this document
Failure to address these issues will leave the RLDP vulnerable to challenge at Examination.

CHANGES IN THE REVISED RLDP
Dinas Powys Community Council (DPCC) recognises and welcomes some improvements made in the revised Replacement Local Development Plan (RLDP). These changes demonstrate a more balanced approach to growth and a clearer acknowledgement of environmental and infrastructure constraints across the Vale. DPCC considers the following amendments to be positive and constructive:
3.1 Reduction in Overall Housing Numbers
The reduction in the total housing requirement reflects a more realistic assessment of demographic trends, household formation rates, and deliverability across the plan period. This reduces pressure on constrained settlements such as Dinas Powys.
3.2 Greater Emphasis on Sustainable Locations
The revised RLDP places stronger emphasis on locating development where sustainable transport options exist. This aligns with national policy and reduces reliance on private car travel.
3.3 Strengthened Climate-Change and Flood-Risk Policies
The Council welcomes the enhanced policy framework relating to:
• Climate-change adaptation
• Flood-risk management
• Sustainable drainage (SuDS)
• Nature-based solutions
These changes reflect national guidance and NRW expectations.
3.4 Recognition of Infrastructure Constraints
The revised evidence base acknowledges that certain settlements – including Dinas Powys -face:
• Highway capacity limitations
• Public transport constraints
• Limited school and healthcare capacity
This recognition is essential for sound plan-making.

3.5 Improved Evidence Base
The updated background papers, including the Settlement Sustainability Assessment and the Infrastructure Assessment, provide a clearer picture of constraints and opportunities across the Vale.

SECTION 4 — CONTINUED OBJECTION TO THE EASTBROOK ALLOCATION
Despite recognising positive changes in the revised RLDP, Dinas Powys Community Council (DPCC) maintains a clear and evidence-based objection to the proposed allocation of the Eastbrook site (HG1 – KS2). DPCC email asked for clarification from the Vale planning office on the fact that the planning policy (dated 17 December 2025) stated 'feedback received has helped to refine proposals for the sites in the deposit plan'. When asked at the consultation at Murchfield what the refinements were, the response was 'there has not been any'.
The allocation remains unsound because the fundamental constraints affecting the site have not been resolved, mitigated, or fully understood.
DPCC's objection is based on the following core issues:
4.1 Flood Risk and Hydrology
The Eastbrook site sits within a complex and sensitive hydrological catchment. Key concerns include:
• Groundwater emergence during prolonged wet periods
• Overland flow routes that cross the site and discharge toward existing residential areas
• Low-permeability soils that limit infiltration
• A history of significant flood events, including the 2020 incident
• Interactions between surface water, groundwater, and existing drainage systems
NRW has repeatedly raised concerns about flood risk at this location. The Council's own evidence base acknowledges that catchment-wide modelling is required before any development can be considered. This modelling has not been undertaken.
4.2 Highways and Transport Capacity
Dinas Powys already experiences:
• Congestion on Cardiff Road
• Limited capacity at key junctions
• Insufficient public transport frequency
• High dependency on private car travel
The Eastbrook allocation would exacerbate these issues. No deliverable or funded mitigation has been identified.

4.3 Environmental and Landscape Impact
The site contributes to:
• Local landscape character
• Biodiversity connectivity
• Air quality
• Green infrastructure
• Natural drainage functions
Development would result in the loss of greenfield land that currently performs essential hydrological and ecological roles.
4.4 Infrastructure Limitations
Local infrastructure is already under pressure, including:
• Schools
• Healthcare provision
• Utilities
• Surface-water drainage systems
No evidence has been provided to demonstrate that these constraints can be resolved within the plan period.
4.5 Deliverability and Viability
The RLDP does not demonstrate that:
• Required flood-risk mitigation is technically feasible
• Mitigation is financially viable
• Mitigation can be delivered before development
• Mitigation will not increase flood risk elsewhere
Without this evidence, the allocation fails Soundness Test CE4 (deliverability).
Finally, there are questionable processes in the Consultation procedure that DPCC would like to question. These include:
Lack of Formalised Documentation and Transparent Feedback Loops: The consultation process currently lacks procedural transparency, specifically regarding the recording of public participation and the subsequent analysis of feedback. There is no evidence of formalised record-keeping for public attendance at engagement events, nor a transparent ledger of how individual resident comments were synthesised into the current Plan. Without clear feedback loops, it remains entirely unclear to stakeholders how local consultation responses have influenced site allocation decisions, compromising the Plan's legitimacy and accountability.
Significant Digital Barriers and Technical Complexity: The Council's primary reliance on an "online-first" engagement strategy, through its consultation portal, has created substantial barriers to participation. The technical reports and modelling assumptions provided are often not easily interpretable by laypersons, limiting the ability of the community to effectively scrutinise the evidence base. The complexity of the account-creation process and the technical nature of the guidance notes have resulted in a disproportionate administrative burden that discourages meaningful public response.
Digital Exclusion and Demographic Disparity: The current consultation framework fails to adhere to the requirement that engagement must be "inclusive and accessible to all local groups", particularly those less likely to participate. Residents in Dinas Powys, specifically non-digitally native demographics and the elderly, face significant digital exclusion due to the lack of accessible summaries and the high level of technical literacy required to complete online forms. This lack of equitable access undermines the Council's duty to ensure a robust and representative evidence base.
Inflexible Scheduling and Inequitable Engagement Windows: The timing of the consultation periods has been identified as a factor that alienated or excluded significant portions of the local community. Despite formal requests from the DPCC for more accessible scheduling to facilitate wider public attendance, these requests were refused. Furthermore, there is a perceived pre-determination in the process, where preferred strategies and site directions appear to be announced prior to effectively engaging public opinion, rendering the subsequent consultation window a mere formality rather than a meaningful opportunity for influence.
Conclusion on Soundness: Due to these systemic failures in the Plan-making process, the RLDP fails the test of Effectiveness (CE2). Until the Council can demonstrate a fully transparent, accessible, and documented consultation process that genuinely reflects the lived experience of the community, the Plan cannot be considered fully justified or consistent with national policy regarding community involvement.
SECTION 5 — TRANSPORT AND HIGHWAYS

CONSTRAINTS

Transport and highways capacity remain a critical constraint for Dinas Powys and a central reason why the Eastbrook allocation is unsound. The settlement already experiences significant congestion with increasing air pollution (around critical areas such as schools), limited public transport provision, and constrained junction capacity. The RLDP does not demonstrate that these issues can be resolved within the plan period, nor does it provide evidence that the Eastbrook allocation can be delivered without exacerbating existing problems.

5.1 Existing Congestion and Network Stress

Dinas Powys suffers from chronic congestion, particularly along:

Cardiff Road The approach to the Merrie Harrier junction The route toward Penarth The route toward Barry

Peak-time delays are well-documented, and queueing frequently extends through residential areas. The network operates close to or at capacity during peak hours, leaving little room for additional traffic generated by new

development.

5.2 Limited Public Transport Provision

Public transport options are constrained by:

Infrequent bus services Limited rail capacity at Eastbrook Station Poor integration between modes Lack of reliable alternatives to private car travel

The RLDP does not identify any committed or funded improvements that would materially increase public transport capacity.

5.3 Junction Capacity Constraints

Key junctions in and around Dinas Powys are already operating at or near capacity. These include:

Merrie Harrier junction Cardiff Road / Penlan Road Cardiff Road / Millbrook Road

No evidence has been provided to demonstrate that these junctions can accommodate additional traffic from the Eastbrook allocation.

5.4 Lack of Deliverable Mitigation

The RLDP does not include:

Funded highway improvements Committed public transport enhancements A deliverable transport strategy for Dinas Powys Evidence that mitigation is viable or achievable within the plan period

Without deliverable mitigation, the allocation fails Soundness Test CE4 (deliverability).

5.5 Cumulative Impact

The cumulative impact of, existing congestion, committed developments, background traffic growth and the Eastbrook allocation has not been assessed in a robust or comprehensive manner.

a. Unresolved Chronic Congestion on the A4055 Corridor:

The RLDP fails to demonstrate that the primary highway network serving Dinas Powys can accommodate the proposed level of growth without resulting in unacceptable congestion.

Existing Network Stress: The A4055 (Cardiff Road) and the approach to the Merrie Harrier junction are already characterized by "chronic congestion". Peak-time delays are well-documented, with queuing frequently extending through residential areas as the network operates at or near capacity.

Absence of Modelling: The Plan lacks transparent, settlement-specific junction capacity assessments or peak-hour traffic modelling for these key constraints. Without this evidence, the Council's assumption that an additional 250 units can be absorbed is technically unjustified.

The RLDP Preferred strategy requires the developer to provide "improvements to infrastructure, including the upgrading of highways. and utility networks" and provide "on and off-site measures" to provide safe linkages to Eastbrook Station and "upgrading of highways". It is unclear what if any specific and definitive instruction will be given to the developer and how the Council will monitor and ensure that appropriate objectives are achieved.

VOG Highways say that Persimmon cannot pencil in the 'secondary' or emergency access. Persimmon failed to do a traffic study to contest Highways' view. Another is no proposal to bring pedestrian/cycle access up to the Welsh Government standard. The suggested George's Row and Seel Park routes to Eastbrook Station and Camms Corner shopping area do not work. Highways point out this is a Welsh Government requirement for new developments.

In reference to Welsh Government's policies;

Policy conflict Fails PPW11 TAN 18, and the Fire and Rescue Services Act duty to maintain effective response capability. The proposal's reliance on a single access for a development of 250 dwellings is;

Contrary to PPW11 (safe, resilient access) Contrary to Tan 18 (avoid single points of failure) Contrary to Fire and Rescue operational requirements in Wales Contrary to Manual for Streets principles Contrary to established Welsh LHA practice Unsupported by appeal precedent.

The development therefore presents an unacceptable and avoidable risk to residents and emergency responders. A

second access, or at minimum a fully engineered emergency only route, is essential to make the scheme safe and policy compliant.

b. Cumulative Traffic Flows from Regional RLDP Growth:

The RLDP directs a significant portion of the 7,890 required dwellings to settlements east of Dinas Powys, including major allocations in Barry and Penarth.

Impact of Neighbouring Allocations: Developments such as Upper Cosmeston Farm in Penarth (576 units) and the proposed growth in Barry (686 units) will significantly increase commuter volumes along the A4055, which serves as the primary arterial route to Cardiff.

Commuter Dependency: Data identifies Cardiff as the destination for 63.6% of all commuters from the Vale traveling by car. The RLDP fails to robustly assess the cumulative impact of background traffic growth, committed developments, and the Eastbrook allocation on the Dinas Powys road network. The Eastbrook allocation is fundamentally car-dependent due to infrequent bus services and limited modal integration. Furthermore, the RLDP does not identify any funded or committed highway improvements for the A4055 (Cardiff Road) or the Merrie Harrier junction, both of which are already operating at or near capacity. This lack of deliverable mitigation contradicts the transport objectives.

c. Failure of Active Travel and Pedestrian Infrastructure: The Plan relies on "sustainable transport options" to justify the Eastbrook site, yet the physical infrastructure is fundamentally non-compliant with inclusive design standards: Pavement Capacity and Safety: Existing pedestrian routes connecting the site to the village centre, are insufficient in width to accommodate double buggies or wheelchairs. These routes are further obstructed weekly by refuse collection and recycling bags, forcing vulnerable pedestrians - including those with single buggies or small children - to navigate restricted and unsafe spaces.

During the consultation (6th February 2026) Vale officers were asked if they had walked the proposed active travel route along Cardiff Road. We were told they had not. Photos below show how narrow the pavement is and this does not meet with the Active Travel Guidelines. There is no capacity to widen this route. In addition, the other proposed route via Powys Gardens involves a very steep hill. Would this be accessible for people with mobility scooters or mobility issues. It would also be a hazard in icy weather. This route also incorporates an alleyway which is not visible from start to finish with a 90 degree angle and no lighting. This is a safety concern. Another route is via some garages which are off George's Row. This is not and adopted road by the Vale and therefore not within their remit to propose it as an active travel route.

Eastbrook Railway Station Accessibility: While the station is within a 10-minute walk, it suffers from a critical "accessibility gap." Only one platform is accessible to residents with limited mobility, prams, or cycles. Due to the absence of a lift to the opposite platform, these residents must undertake a one-mile detour via local roads to access rail services, rendering the "sustainable" rail link effectively inaccessible to a significant portion of the demographic. Feedback from the Vale drop in session (6th February 2026), revealed that when residents mentioned that mothers with prams and people with mobility issues can't use the Eastbrook station, The response was 'it's fine for the majority'. When asked about the minority and about them being discriminated against there was no response. When looking at Active Travel Guidelines it references the Equality Act 2010. What dialogue has the Vale had with organisations representing people with protected characteristics.
d. Deficiencies in Public Transport Provision: The reliance on "good bus links" is not supported by current service levels:

Infrequent Bus Services: Dinas Powys is characterized by infrequent bus services that do not provide a reliable alternative to private car travel.

Lack of Mitigation: The RLDP does not identify any committed or funded improvements to bus frequency or capacity, ensuring that the Eastbrook development will remain car- dependent and exacerbate existing A4055 corridor failures. Without a committed and funded scheme to address the documented "chronic congestion" at the Merrie Harrier junction and A4055, the allocation fails the deliverability standards outlined in the RLDP Section 7.8.

Mandatory Policy Wording Required for Soundness: to address these obstacles and ensure they are not sidelined during the development process, the RLDP must include the following:

Enforceable policy wording to meet Soundness Tests CE2 (Effectiveness) and CE4 (Deliverability): Policy TR-DNP: Enforceable Transport and Accessibility Mitigation

Development at Eastbrook (HG1 - KS2), in the opinion of DPCC, should not be permitted unless the following criteria are met and delivered in advance of occupation:

1. Corridor Capacity and Cumulative Modelling: A comprehensive Cumulative Transport Assessment is completed and approved, demonstrating that the A4055 and Merrie Harrier junction can accommodate traffic from Eastbrook in combination with committed growth in Barry and Penarth without exceeding statutory capacity or safety limits. During the consultation Vale officers admitted that the road is already over capacity.

2. Eastbrook Station Bilateral Access: Legally binding funding and a delivery program are secured for the installation of a lift or accessible bridge at Eastbrook Railway Station to ensure bilateral platform access for all users, removing the current one-mile detour requirement.

However, having been in discussion with the Department of Transport, they have no plans to make any improvements to the station with regard to access.

3. Statutory Inclusive Pedestrian Widths: All off-site pedestrian linkages to the village centre and station are widened to meet statutory inclusive design standards, ensuring a minimum effective width for simultaneous passage of double buggies and wheelchairs. In line with the Active Travel Act has the Vale carried out an Equality impact assessment (EQIAs). Proposed active travel routes do not meet the criteria.

4. Operational Access Management: A Pedestrian Management Plan is approved, demonstrating how safe passage for prams and wheelchairs will be maintained during weekly refuse and recycling collections.

5. Secured Bus Enhancements: Written confirmation and funding are secured to increase bus service frequency to provide a genuine, high-frequency alternative to private car travel for Cardiff-bound commuters. Has a WelTAG survey has been carried out? Due to the volume of traffic through Dinas Powys a bus service is thinking of reducing the service as so much time is spent in static traffic. Evidence that these routes can be preserved or managed safely including evidence of Equality Impact Assessment (EQIAs). Evidence of the Active Travel Wales Act 2013. What reasonable measures have you taken to include children and young people in the planning and implementation and review of the decision-making process? Conclusion: In the absence of this 'mandatory wording' and the required 'technical modelling', the Eastbrook allocation is unsound. It ignores the physical reality of the infrastructure, the lived experience of residents on the A4055, and the cumulative traffic pressures generated by the RLDP's own regional growth strategy. Based on a review of the Vale of Glamorgan RLDP Preferred Strategy and the Final Review Report, the following technical objection focuses on the proposed delivery of 250 houses at the Eastbrook site. This objection highlights the failure to align the housing mix with local demographic needs, the lack of transparency regarding infrastructure funding, and the questionable justification for further large-scale growth in Dinas Powys. 5.6 Summary

The transport and highways evidence base does not demonstrate that the Eastbrook allocation can be delivered without causing severe impacts on the local network. The RLDP therefore fails to meet the requirements of national planning policy, which requires development to be located where sustainable transport options exist and where the impact on the transport network can be effectively mitigated.

SECTION 6 — ENVIRONMENTAL AND LANDSCAPE IMPACT

The Eastbrook allocation sits within a sensitive landscape setting that performs important ecological, visual, and hydrological functions. Development of this site would result in the permanent loss of greenfield land that currently contributes to the environmental quality and character of Dinas Powys. The RLDP does not demonstrate that these impacts can be acceptably mitigated.

6.1 Landscape Character and Visual Impact

The site forms part of the green corridor that separates Eastbrook from adjoining areas. It contributes to:

The semi-rural character of the settlement edge Views from public rights of way The visual transition between built form and open countryside The sense of openness and separation between neighbourhoods

Development would introduce built form into an area that currently provides visual relief and contributes to local identity.

6.2 Biodiversity and Habitat Connectivity

The site supports:

Hedgerows Grassland habitats Mature trees Wildlife corridors connecting to wider green infrastructure

These features provide habitat for a range of species and contribute to ecological connectivity across the settlement. Development would fragment these habitats and reduce biodiversity value.

6.3 Green Infrastructure Functions

The land performs several important green-infrastructure functions, including:

Natural drainage and infiltration Groundwater recharge Overland flow conveyance Urban cooling Carbon sequestration

These functions are particularly important given the site's hydrological sensitivity.

6.4 Impact on Local Amenity

The site provides informal amenity value for local residents, including:

Views Open space character A sense of separation between built areas

Development would reduce these qualities and alter the character of the local environment.

6.5 Lack of Robust Mitigation Evidence

The RLDP does not provide:

A landscape and visual impact assessment A biodiversity net-gain strategy A green-infrastructure plan Evidence that ecological impacts can be mitigated or compensated A clear demonstration that the site can deliver net environmental benefits

Without this evidence, the allocation fails Soundness Test CE3 (environmental protection).

Statutory Ecological and Environmental Impacts: The development will cause detrimental impacts on protected European sites and irreplaceable local habitats like Ancient Woodland.

Independent Source Verification:

The HRA of the Preferred Strategy (2023) explicitly flags Site 440 (HG1 - KS2 Land North of Dinas Powys) as being only 2.6km from the Severn Estuary SAC/SPA/Ramsar.

The HRA concludes that "Mitigation is Required" for this site because it falls within the core recreational catchment of the Estuary. It recommends that the RLDP must contribute to Strategic Access Management and Monitoring (SAMM) and the provision of alternative green spaces (SANG) to protect the integrity of the Estuary.

NRW's ECOR documents that previous attempts to build flood storage in the area were opposed by the Woodland Trust because they would threaten Ancient Woodland, which is described as an "irreplaceable natural resource".

Prematurity regarding Green Infrastructure (Policy SP10 / MG18): Section 7.10 of the Review Report mandates a new Green Infrastructure Assessment (GIA) to comply with updated national policy (PPW) and the Section 6 duty to enhance biodiversity.

Grounds for Objection: The Review Report highlights that this GIA is intended to "inform plan policies and policy wording". Furthermore, independent evidence confirms the Eastbrook area is subject to Policy MG18 (Green Wedge), where development that prejudices the "open nature of the land" is prohibited. Allocating Eastbrook before the completion of the settlement-specific GIA and a formal review of the Green Wedge's integrity contradicts the sequential approach described in Section 7.

To prevent irreversible damage to the environment and ensure the ecological integrity of Dinas Powys, the RLDP must move beyond high-level assumptions. Based on the evidence in the sources, the following measures are strictly necessary to protect the local and regional environment from the impacts of the proposed Eastbrook development:

1. Mandatory Hydrological Safeguards: The Eastbrook site sits within a complex catchment characterized by groundwater emergence and low-permeability soils. To prevent increased flood risk to the environment and existing properties, the following must be delivered:

Catchment-Wide Hydraulic Modelling: A full model, agreed with Natural Resources Wales (NRW), must be completed to assess surface water, groundwater, and overland flow. This model must specifically incorporate data from the 2020 flood event to demonstrate "no increase in flood risk" to any property within the catchment.

Preservation of Natural Drainage: Existing overland flow routes and groundwater pathways must be preserved, enhanced, or appropriately managed to prevent the displacement of water into sensitive habitats or residential areas.

Proven SuDS Feasibility: A detailed study is required to prove that Sustainable Drainage Systems (SuDS) can operate effectively given the site's documented high groundwater levels and limited infiltration capacity.

2. Protection of Irreplaceable Habitats: The development area includes and is adjacent to Ancient Woodland and Sites of Importance for Nature Conservation (SINC), such as Coed Clwyd-Gwyn and Case Hill Wood.

Avoidance of Loss: Ancient woodland is an "irreplaceable natural resource". To prevent environmental damage, the Council must demonstrate that development will not result in its loss or deterioration, as "no amount of tree planting" can replace the unique biodiversity and interactions developed over centuries in these woods.

Connectivity and Resilience: The Plan must secure a Green Infrastructure Plan that maintains wildlife corridors and

prevents the fragmentation of habitats for protected species, including bats, otters, and dormice.

Hydrological Stability: Measures must ensure that the development does not cause nutrient enrichment or pollution of woodland soils via sediment-heavy floodwaters, which can destabilize trees and kill overwintering species.

3. Mitigation for European Protected Sites: The Habitats Regulations Assessment (HRA) confirms that the Eastbrook site (Site 440 - HG1 - KS2) has "medium-high suitability" as off-site supporting habitat for the Severn Estuary SPA/Ramsar. To prevent an adverse effect on the integrity of this site, the following is necessary:

Bird Surveys and Evidence: The applicant must provide non-breeding bird surveys covering autumn, winter, and spring to determine if the site constitutes "functionally linked habitat" (supporting >1% of a qualifying population). Enforceable Mitigation: If significant populations are identified, the development must include avoidance measures and be assessed through a project-specific HRA.
4. Air Quality and Carbon Mitigation: Dinas Powys suffers from chronic congestion on the A4055, yet location-specific air quality modelling is absent from the evidence base. Cumulative Impact Modelling: To prevent harm to human health and the environment, the Council must conduct detailed air quality modelling that tests the cumulative effect of growth in Eastbrook alongside regional growth in Barry and Penarth. Decarbonisation Standards: New development must contribute to the Council's Net Zero 2030 ambition through siting and design that prioritizes active travel over car dependency, thereby reducing vehicle emissions.
5. Infrastructure Pre-Delivery: To prevent environmental harm from overloaded systems, essential infrastructure must be phased correctly: Wastewater Capacity: A settlement-specific assessment must prove the consented capacity of local wastewater treatment works is sufficient to prevent sewer surcharging and the discharge of untreated water into local watercourses. Phasing Requirements: All required infrastructure upgrades-including drainage, utilities, and highways mitigation-must be delivered and operational in advance of occupation. Conclusion: Without these mandatory policy safeguards and the completion of the required technical evidence base, the Eastbrook allocation remains unsound and poses a significant risk of irreparable damage to the environment of Dinas Powys.

SECTION 7 — INFRASTRUCTURE CAPACITY AND SERVICE LIMITATIONS

Infrastructure capacity is a critical determinant of whether a site is suitable and deliverable within the RLDP period. In the case of Eastbrook, the evidence demonstrates that essential infrastructure in Dinas Powys is already under significant pressure. The RLDP does not provide clear, funded, or deliverable solutions to these constraints, nor does it demonstrate that the Eastbrook allocation can be supported without unacceptable impacts on existing residents.

7.1 Education Capacity

Local schools are operating at or near capacity. Key issues include:

Limited availability of primary school places Pressure on secondary school capacity within the wider catchment. No identified funding or land for expansion No evidence that developer contributions would be sufficient or timely

The RLDP does not demonstrate that additional demand generated by the Eastbrook allocation can be accommodated.

Education Provision and School Oversubscription: The RLDP identifies Dinas Powys as a sustainable location for growth, yet it fails to provide settlement-specific evidence that local schools can absorb the additional demand from 250 new homes.

Capacity Deficit: Local primary and secondary schools are already operating at or near peak capacity. Existing data indicates limited availability of primary school places and significant pressure on secondary school capacity within the wider catchment area.

Lack of Expansion Capability: There is no identified land or secured funding for the physical expansion of these schools. The Plan provides no evidence that developer contributions (Section 106) would be sufficient or timely enough to resolve these standard-of-service deficits prior to the occupation of new homes.

Policy Inconsistency: Proceeding with the allocation without a confirmed delivery plan for school places is contrary to Planning Policy Wales, which requires growth to be directed only where essential infrastructure is available or can be secured.

To ensure that education capacity is not "overridden" by strategic regional data, the following enforceable requirement should be incorporated into Policy SP4 KS2: Policy ED-DNP: Mandatory Local Education Capacity Confirmation "Development at Eastbrook will not be permitted unless:

1. Direct Local School Consultation: A formal School Capacity Impact Report is submitted, based on direct consultation with the Headteachers and Governing Bodies of the specific schools within the Dinas Powys catchment area.

2. Verified Local Headroom: The report must provide written confirmation from these local institutions that they have the physical classroom space and staff capacity to accommodate the projected pupil yield from the development without

increasing class sizes beyond statutory limits or compromising educational standards.

3. Local vs. Authority Primacy: High-level strategic projections from the Education Authority shall be deemed insufficient evidence of deliverability if they are contradicted by the operational data and physical constraints identified by the local schools themselves.

4. Pre-commencement Delivery: Any required physical expansions or new school infrastructure must be fully funded, completed, and operational prior to the occupation of the first dwelling to ensure places are available when needed

7.2 Healthcare Provision

Healthcare services in Dinas Powys and the surrounding area face:

Limited GP medical centre capacity Long waiting times Pressure on community health services No committed investment to expand provision

The medical services serving Dinas Powys are currently at capacity, and the RLDP fails to identify a mechanism to expand provision in line with population growth. Whilst it's understood that the Vale Council have spoken with the local health board. Unfortunately, there has been no consultation with single medical centre in Dinas Powys. They would be best placed to comment on the significant impact of additional housing on their provision of healthcare which is already stretched well beyond its limits.

GP and Dental Strain: Local residents already experience limited medical GP capacity and long waiting times. Existing community health services are under "significant pressure," and there is no committed investment to expand these facilities across Dinas Powys.

Lack of Local Consultation: While the Council claims to work at a high level with the Cardiff and Vale University Health Board, there has been no direct consultation with the local Health Centre serving Dinas Powys. Consequently, the Plan does not account for the technical and operational realities of a surgery that is already at capacity and cannot absorb the projected increase in patient numbers. A direct operational capacity verification from the Dinas Powys Medical Centre - current patient list size is around 11k which has increased significantly due to the closure of a nearby practice and therefore the practice is experiencing a reduced operational capacity. Any additional housing would put further strain on the practice demands and waiting times for local residents and would mean the practice moves further outside the idealised UK average (1 GP per 1,400-1,600 patients).

Health Inequality Risk: Without settlement-specific planning and confirmed provision, the proposed growth risks reducing access to healthcare for both existing and new residents, directly undermining the health and well-being objectives set out in Policy SP6.

7.3 Utilities and Drainage

Utility networks in the area face known constraints:

Surface-water drainage systems are already under pressure Foul drainage capacity is limited Welsh Water has previously raised concerns about network capacity in the settlement No evidence has been provided to demonstrate that upgrades are deliverable within the plan period

Given the site's hydrological sensitivity, drainage capacity is a critical issue.

7.4 Emergency Services and Community Infrastructure

The Eastbrook allocation would place additional pressure on:

Emergency services Community facilities Local open space Recreational infrastructure

No evidence has been provided to demonstrate that these services can absorb additional demand.

7.5 Funding and Deliverability

The RLDP does not identify:

Committed funding a delivery programme a mechanism to secure timely infrastructure upgrades Evidence that developer contributions would be viable or sufficient

Without this, the allocation fails Soundness Test CE4 (deliverability).

7.6 Summary

Reference Environment and Regeneration Scrutiny Committee 14 January 2025 it states. 'Produce sustainable Urban Drainage Solutions'. No progress due to funding and competing priorities. Infrastructure in Dinas Powys is already excessively stretched. The RLDP does not demonstrate that the Eastbrook allocation can be supported without a significant adverse impact on existing residents. Nor does it provide evidence that required upgrades are viable, deliverable, or fundable within the plan period.

SECTION 8 — HYDROLOGY AND FLOOD-RISK ANALYSIS (FULL TECHNICAL CHAPTER)

The Eastbrook site lies within a hydrologically sensitive catchment characterised by complex interactions between surface water, groundwater, overland flow, and existing drainage infrastructure. The site has a documented history of flooding, including the significant 2020 event, and Natural Resources Wales (NRW) has repeatedly raised concerns about the potential for development to increase flood risk elsewhere. At the Vale Council's drop-in session (6th Feb), there was a lack of knowledge that there is a Holy Well on the Eastbrook site, referenced in the NRW report on flooding (NRW Dinas Powys Flood Risk Management Scheme OBC page 10).

This section provides a technical assessment of the hydrological constraints affecting the site and sets out the evidence required to ensure that any development does not exacerbate flood risk to existing properties.
8.1 Catchment Overview
The Eastbrook site forms part of a small but highly responsive catchment. Key characteristics include: Low-permeability soils, resulting in rapid surface-water runoff Groundwater emergence during prolonged wet periods Overland flow routes crossing the site and discharging toward existing residential areas Limited infiltration capacity, reducing the effectiveness of SuDS Downstream constraints within the existing drainage network The catchment responds quickly to rainfall, with limited storage capacity and a high risk of exceedance during intense or prolonged events.

8.2 Hydrological Function of the Site

The site currently performs several important hydrological functions:

Attenuation of surface water during storm events Conveyance of overland flow along natural depressions Groundwater emergence and dissipation Reduction of peak flows entering downstream drainage systems Natural infiltration, albeit limited by soil type

Development would significantly alter these functions, increasing runoff rates and volumes unless substantial mitigation is provided.

8.3 Overland Flow Routes

Multiple overland flow routes cross the site. These routes convey water:

From higher ground to the north and east Across the site during heavy rainfall Toward existing residential areas downstream

Below is an ASCII-style conceptual diagram illustrating the simplified flow pattern:

Code [Higher Ground]

V

Overland Flow Across Site

V [Existing Residential Area] (Downstream Flood Receptors)

Diagrammatic representation for illustrative purposes only - not to scale.

These routes are active during moderate and heavy rainfall events and were observed during the 2020 flood incident.

8.4 Groundwater Emergence

Groundwater emergence has been recorded on and around the site during:

Prolonged wet periods High antecedent moisture conditions Winter months

This groundwater emergence contributes to:

Saturated ground conditions Reduced infiltration capacity Increased surface-water runoff Localised flooding

Any development must demonstrate that it will not alter groundwater pathways or increase groundwater-related flood risk.

8.5 The 2020 Flood Event

The 2020 flood event provides clear evidence of the site's hydrological sensitivity. During this event:

Overland flow crossed the site Groundwater emergence contributed to saturated conditions Downstream properties experienced flooding Existing drainage systems were overwhelmed

The event demonstrated that:

The catchment is highly responsive The site plays a critical role in attenuating and conveying water Development could increase flood risk unless carefully managed

The RLDP does not include any analysis of the 2020 event, nor does it require developers to assess its implications.

8.6 NRW Position and Evidence Requirements

NRW has consistently raised concerns about:

Surface-water flood risk Groundwater interactions Overland flow routes Downstream flood receptors Lack of catchment-wide modelling

NRW has advised that catchment-wide hydraulic modelling is required to:

Understand baseline conditions Assess the impact of development Identify necessary mitigation Ensure no increase in flood risk elsewhere

This modelling has NOT been undertaken.

The RLDP flood risk evidence base is functionally obsolete. It relies on the 2013 Local Flood Risk Management Strategy and a September 2020 NRW decision to abandon capital mitigation. Both of these were rendered technically invalid by the scale of the December 2020 flood event. NRW has not formally reviewed or updated a mitigation strategy for this catchment in the 11 years since the original LFRMS was published. NRW's last formal review of flood mitigation for this area was the September 2020 ECOR, which predates the 2020 flood. No post-flood mitigation review or catchment modelling incorporating the 2020 data has been undertaken.

8.7 Limitations of SuDS on This Site

While SuDS are a national requirement, their effectiveness on this site is constrained by:

Low-permeability soils High groundwater levels Limited infiltration potential Steep localised gradients Overland flow pathways that cannot be obstructed

SuDS alone cannot mitigate the hydrological impacts of development without:

Catchment-wide modelling Detailed design Pre-delivery of mitigation Long-term maintenance arrangements

8.8 Required Mitigation Measures

To ensure no increase in flood risk, the following mitigation measures would be required:

Catchment-wide hydraulic modelling Preservation of overland flow routes On-site attenuation with exceedance routing Groundwater management measures Upgrades to downstream drainage systems Pre-delivery of mitigation before development commences

The RLDP does not secure any of these measures.

8.9 Summary

The Eastbrook site is hydrologically complex and highly sensitive. Without detailed catchment-wide modelling and enforceable mitigation, development would increase flood risk to existing properties. The RLDP does not provide the evidence or policy framework required to ensure that the allocation is sound.

Natural Resources Wales (NRW) has not formally reviewed or updated its flood mitigation plans for Dinas Powys since the major flood event on December 23, 2020. The evidence base reveals a critical gap between the last strategic planning and the reality of the 2020 disaster:

1. The "2013 Strategy" Precedent: The Local Flood Risk Management Strategy (LFRMS) for the Vale of Glamorgan is

dated December 2013. While this document identified Dinas Powys as being at "significant future risk," it is now over a decade old and predates both the 2020 flood and updated climate change projections. Reference Environment and Regeneration Scrutiny Committee 14 January 2025 it states. 'Implement a flood risk management plan and shoreline management plan'. No progress due to funding and competing priorities.

The above shows that the concerns of residents and flood issues in Dinas Powys are not being taken seriously.

2. Pre-Flood Rejection of Mitigation (September 2020): The most recent formal NRW assessment regarding a strategic flood scheme for Dinas Powys - the Environmental Constraints and Opportunities Record (ECOR) - was completed in September 2020, just three months before the major flood event.

A "Walkaway" Conclusion: In that pre-flood report, NRW concluded it was "unable to justify a capital flood scheme" for Dinas Powys because it was deemed only "marginally cost-beneficial".

Status Quo: NRW stated they would continue only with "business as usual" (manual channel clearing) rather than any new structural mitigation.

3. No Post-Flood Review of Mitigation: While NRW conducted "flood reconnaissance" in January 2021 and contributed to the Section 19 Flood Investigation Report (published in November 2021), these were investigative documents rather than updated mitigation plans. Missing Evidence Base: The sources explicitly state that "no catchment-wide hydraulic modelling has been undertaken" that incorporates the actual data and observations from the December 2020 event.

Outstanding Recommendations: The Section 19 report concluded by recommending that NRW "consider the viability of options to reduce flood risk," which confirms that such a review had not yet taken place as of late 2021.

4. RLDP Soundness Failure: The current RLDP is being challenged because it relies on high- level strategic data that ignores the 2020 flood event entirely.

The objection drafts note that the RLDP "does not include any analysis of the 2020 event" nor does it require developers to assess its implications.

Without an NRW-approved model that accounts for the 98 internal property floodings observed in 2020, the Council cannot technically prove that 250 additional houses will not increase flood risk elsewhere.

In conclusion, in this respect, the RLDP is unsound because its flood evidence base is functionally obsolete. It relies on a 2013 Strategy and a September 2020 NRW decision to abandon mitigation-both of which were rendered invalid by the scale of the December 2020 flood. NRW has not reviewed or modelled a new mitigation strategy for the catchment since that event occurred, leaving the settlement and the proposed site without any verified protection.

SECTION 9 — MANDATORY POLICY WORDING REQUIRED TO MAKE THE RLDP SOUND

To ensure that the Eastbrook allocation is sound, the RLDP must include explicit, enforceable, and unambiguous policy wording that secures the necessary hydrological, environmental, and infrastructure safeguards. Without this wording, the allocation fails the tests of soundness - particularly CE2 (coherence and effectiveness), CE3 (environmental protection), and CE4 (deliverability).

The following policy wording is mandatory to ensure that development does not increase flood risk elsewhere and that mitigation is viable, deliverable, and enforceable.

9.1 Mandatory Flood-Risk Policy Wording

The RLDP must include the following:

Policy FR-X: Catchment-Wide Flood-Risk Assessment (Mandatory Requirement) Development at Eastbrook (HG1 - KS2) will not be permitted unless:

1. A full catchment-wide hydraulic model has been prepared, agreed with Natural Resources Wales (NRW), and approved by the Local Planning Authority (LPA). 2. The model demonstrates no increase in flood risk to any existing property within the catchment for all relevant storm events, including climate-change allowances. 3. All required mitigation measures are: Technically feasible Financially viable Deliverable within the plan period Secured through planning conditions or legal agreement 4. All mitigation measures are delivered prior to the commencement of development. 5. Overland flow routes, groundwater pathways, and natural drainage functions are preserved, enhanced, or appropriately managed. 6. A long-term management and maintenance plan for all SuDS and flood-risk infrastructure is secured.

9.2 Mandatory Groundwater and Overland Flow Policy Wording Policy FR-Y: Groundwater and Overland Flow Protection Development proposals must:

Demonstrate that groundwater emergence will not be exacerbated Preserve all existing overland flow routes Provide

exceedance routing that avoids existing residential areas Incorporate groundwater-resilient design measures Avoid any obstruction of natural drainage pathways

No development will be permitted unless these requirements are met in full.

9.3 Mandatory SuDS Policy Wording

Policy SuDS-X: Sustainable Drainage Requirements

All development must:

Provide SuDS designed in accordance with national standards Demonstrate that infiltration-based SuDS are viable, or provide alternatives where infiltration is not feasible Include attenuation sized using catchment-wide modelling outputs Provide exceedance routing that avoids downstream receptors Secure long-term maintenance arrangements

SuDS must be operational before any dwelling is occupied.

9.4 Mandatory Infrastructure Delivery Policy Wording

Policy INF-X: Infrastructure Delivery and Phasing

Development at Eastbrook (HG1 - KS2) will not be permitted unless:

All required infrastructure upgrades (education, healthcare, utilities, drainage, highways) are identified Funding is secured Delivery is guaranteed within the plan period Infrastructure is delivered in advance of occupation

The RLDP must demonstrate that infrastructure delivery is viable and enforceable.

9.5 Summary

Without the mandatory policy wording set out above, the RLDP:

Does not secure the evidence required to assess flood risk Does not guarantee that mitigation will be delivered Does not ensure that development will not increase flood risk elsewhere Does not demonstrate deliverability Fails multiple tests of soundness

The inclusion of this wording is essential to ensure that the Eastbrook allocation is sound, effective, and compliant with national policy.

SECTION 10 - HOUSING DELIVERY AND

DEMOGRAPHIC MISALIGNMENT

While Section 4 of the review of the RLDP focuses on high-level data across the Vale, DPCC utilises these specific evidence base shifts to argue that the Eastbrook allocation is no longer justified under the new planning context. The Vale Council have removed S106 affordable housing money (£1m) from Dinas Powys, as we were told there are no housing developments planned and the funds were reallocated to Myrtle Close which negates the suggestion in the RLDP that there is a need for affordable housing in Dinas Powys. Therefore the development should be removed from the RLDP or the S106 moved back to Dinas Powys.

Mapping Section 4 Evidence to Dinas Powys Objections:

1. Review Report Ref: 4.1.1 4.1.11 (Population and Household Projections): Review Report Context: This section details the transition from 2011-based projections to the more recent 2018-based Welsh Government projections, noting a "significant departure" from the evidence that underpinned the original LDP.

Relationship to Dinas Powys: DPCC explicitly links this update to their objection in Ref: this response section 3.1 (Reduction in Overall Housing Numbers). We argue that the more realistic assessment of demographic trends and the subsequent reduction in the total housing requirement for the Vale should "reduce pressure on constrained settlements such as Dinas Powys". We maintain that with lower overall demand, the "unnecessary" and high-risk allocation at Eastbrook should be the first to be removed.

2. Review Report Ref: 4.2.1 - 4.2.15 (Economic Considerations and Employment): Review Report Context: This section reviews the employment land supply and economic growth scenarios for the 2021-2036 period. It lists major strategic employment sites, none of which are located within Dinas Powys.

Relationship to Dinas Powys: In the Preferred Strategy and subsequent objections, Dinas Powys is categorised as a Primary Settlement. DPCC points out that since the Review Report identifies economic and employment growth as being

concentrated in the "Strategic Growth Area" (Barry, Rhoose, St Athan), allocating 250 houses in Dinas Powys creates a car-dependent commuter settlement. This contradicts the Review Report's emphasis on aligning housing with major employment hubs to reduce private car travel.

3. Review Report Ref: 4.3.1 (Conclusion on Evidence Base Changes): Review Report Context: The report concludes that the updated population, economic, and legislative evidence represents a "significant departure from that which informed the existing LDP" and supports the need for a full replacement plan.

Relationship to Dinas Powys: DPCC uses this conclusion to support their Ref: this response section 3.5 (Improved Evidence Base) objection. We argue that because the Vale Council's own Review Report acknowledges a "significant departure" in the evidence base, the Council must also acknowledge that the previous assumptions regarding the deliverability of Eastbrook are now invalid. Specifically, they point to the "improved picture of constraints" (such as the 2020 flood event) that must be re- evaluated under the "robust and transparent" evidence standards called for in Section 4 of this response. Summary of Evidence Linkage: Section 4 of the Review Report provides the technical justification for a "Realistic assessment" of growth. DPCC's position is that if the Vale Council follows its own evidence in Section 4 - which shows lower housing need and a concentration of employment elsewhere - it cannot logically justify a large-scale housing development on a high-flood-risk greenfield site in a "constrained settlement" like Dinas Powys.

SECTION 11 - REQUIRED EVIDENCE FROM THE VALE OF GLAMORGAN COUNCIL

For the Eastbrook allocation to be considered sound, DPCC request that the Vale of Glamorgan Council must provide clear, transparent, and technically robust evidence demonstrating that the site is:

Deliverable Developable Environmentally acceptable Hydrologically safe Supported by adequate infrastructure

At present, this evidence is absent from the RLDP. The following items are required before the allocation can be considered sound.

11.1 Catchment-Wide Hydraulic Modelling

The Council must provide:

A full catchment-wide hydraulic model Prepared in consultation with NRW Covering surface water, groundwater, and overland flow Including climate-change allowances Assessing the 2020 flood event Demonstrating no increase in flood risk to existing properties

This modelling is essential to understand baseline conditions and the impact of development.

11.2 Groundwater Assessment

A detailed groundwater assessment is required to:

Map groundwater emergence zones Assess seasonal variations Identify groundwater pathways Determine the impact of development on groundwater levels Demonstrate that development will not exacerbate groundwater flooding

No such assessment has been provided.

11.3 Overland Flow Route Mapping

The Council must provide:

High-resolution mapping of overland flow routes Assessment of exceedance pathways Identification of downstream receptors

This is particularly important given the 2020 flood event.

11.4 SuDS Feasibility Study

A SuDS feasibility study must be provided to:

Assess infiltration potential Identify viable SuDS options Determine attenuation requirements Demonstrate that SuDS can operate effectively given soil and groundwater constraints

Without this, SuDS cannot be assumed to mitigate flood risk.

11.5 Downstream Drainage Capacity Assessment

The Council must provide:

A full assessment of downstream drainage capacity Identification of constraints Required upgrades Funding mechanisms Delivery timescales

This is essential to ensure that development does not overload existing systems.

11.6 Infrastructure Delivery Plan (IDP) Evidence

The IDP must demonstrate:

Education capacity solutions Healthcare capacity solutions Utilities upgrades Drainage improvements Highways mitigation Funding sources Delivery timescales Viability

At present, the IDP does not provide this level of detail.

11.7 Transport Assessment

A comprehensive transport assessment is required to: Assess cumulative impacts Model peak-time flows Identify junction constraints Provide deliverable mitigation Demonstrate that sustainable transport options exist No such assessment has been provided. 11.8 Landscape and Ecology Evidence

The Council must provide: A landscape and visual impact assessment A biodiversity net-gain strategy A green-infrastructure plan Evidence that ecological impacts can be mitigated These are essential to comply with national policy. 11.9 Summary

The RLDP currently lacks the evidence required to demonstrate that the Eastbrook allocation is: Safe Deliverable Environmentally acceptable Supported by adequate infrastructure Until this evidence is provided, the allocation remains unsound.

SECTION 12 — SCHEMATIC DIAGRAMS (ASCII + PLACEHOLDERS)

This section provides conceptual diagrams to support the hydrological and technical evidence presented earlier. These are illustrative only, not to scale, and intended to help the Inspector and Vale of Glamorgan officers visualise the key issues. Each diagram includes:

An ASCII sketch for immediate clarity A placeholder label for later replacement with a formal graphic in the final PDF

SECTION 13 — FORMAL REQUEST FOR WRITTEN CONFIRMATION FROM THE VALE OF GLAMORGAN COUNCIL

Given the significant unresolved constraints associated with the Eastbrook allocation, Dinas Powys Community Council formally requests written confirmation from the Vale of Glamorgan Council addressing the following matters. These confirmations are essential to demonstrate that the allocation is sound, deliverable, and compliant with national policy.

The Council requests that the Vale of Glamorgan provides a written response to each point below.

13.1 Confirmation of Catchment-Wide Modelling

Please confirm:

Whether a catchment-wide hydraulic model has been commissioned Whether NRW has been consulted on the scope Whether the model includes surface water, groundwater, and overland flow Whether the model assesses the 2020 flood event Whether the model demonstrates no increase in flood risk to existing properties

If no such model exists, please confirm:

When it will be commissioned When it will be completed Whether the RLDP will be updated to include its findings

13.2 Confirmation of Groundwater Assessment

Please confirm:

Whether a detailed groundwater assessment has been undertaken Whether groundwater emergence zones have been mapped Whether development will alter groundwater pathways Whether mitigation is technically feasible

If no assessment exists, please confirm when it will be prepared.

13.3 Confirmation of Overland Flow Route Mapping

Please confirm:

Whether high-resolution overland flow mapping has been completed Whether exceedance routes have been identified Whether these routes can be preserved within the development layout

If not, please confirm when this work will be undertaken.

13.4 Confirmation of SuDS Feasibility

Please confirm:

Whether infiltration testing has been undertaken Whether infiltration-based SuDS are viable Whether attenuation volumes have been calculated Whether SuDS can operate effectively given soil and groundwater constraints

If not, please confirm when a SuDS feasibility study will be completed.

13.5 Confirmation of Downstream Drainage Capacity

Please confirm:

Whether downstream drainage capacity has been assessed Whether upgrades are required How upgrades will be funded When upgrades will be delivered Whether upgrades will be delivered before development begins

If no assessment exists, please confirm when it will be undertaken.

13.6 Confirmation of Infrastructure Delivery

Please confirm:

How education capacity will be increased How healthcare capacity will be expanded How utilities and drainage upgrades will be funded How highways mitigation will be delivered Whether all required infrastructure is viable and deliverable within the plan period

If not, please confirm when the Infrastructure Delivery Plan will be updated.

13.7 Confirmation of Transport Assessment

Please confirm:

Whether a cumulative transport assessment has been undertaken Whether junction capacity constraints have been modelled Whether deliverable mitigation has been identified Whether sustainable transport improvements are committed and funded

If not, please confirm when this work will be completed.

13.8 Confirmation of Environmental and Landscape Evidence

Please confirm:

Whether a landscape and visual impact assessment has been prepared Whether a biodiversity net-gain strategy exists Whether a green-infrastructure plan has been completed Whether location-specific modelling to assess air quality, specifically, near schools at peak times has been undertaken.

If not, please confirm when these assessments will be undertaken.

13.9 Summary

The Vale of Glamorgan Council must provide written confirmation addressing each of the above points. Without this information, the Eastbrook allocation remains unsupported by evidence and therefore fails multiple tests of soundness.

13.10 Key objections

1. Procedural and Consultation Failures

Lack of Transparency: There is no evidence of formal record-keeping for public attendance at events or a transparent ledger showing how resident feedback was synthesized into the Plan.

Digital Barriers and Exclusion: The "online-first" strategy and complex account- creation process created a disproportionate burden for residents, particularly non-digitally native and elderly demographics who lacked accessible summaries.

Pre-determination: The requests, by DPCC, for more accessible scheduling were refused, leading to a perception that strategies were fixed prior to engaging public opinion.

When asked about the revised plans as stated in an email to DPCC we were told there were none. 2. Hydrology and Unresolved Flood Risk

The 2020 Flood Precedent: On December 23, 2020, a storm caused internal flooding to 98 properties in Dinas Powys. The Section 19 Flood Investigation Report confirmed "hydraulic locking" occurred, where elevated river levels prevented surface water systems from discharging, causing sewer surcharging.

Obsolete Evidence Base: The RLDP relies on a 2013 Strategy and a September 2020 NRW decision that predates the major 2020 flood. No catchment-wide modelling incorporating 2020 data has been undertaken.

SuDS Infeasibility: High groundwater (as shallow as 1.83m) and shallow bedrock render standard infiltration-based Sustainable Drainage Systems (SuDS) unproven and high-risk for this site.

3. Transport and Highways Constraints

Chronic Congestion: The A4055 (Cardiff Road) and Merrie Harrier junction are already at capacity. The Plan fails to assess the cumulative impact of major regional growth in Barry (376 units) and Penarth (576 units) on these local corridors.

Active Travel and Accessibility Failures: Eastbrook Station lacks bilateral access; residents with limited mobility or prams must undertake a one-mile detour to reach the Cardiff-bound platform because there is no lift.

Safety Issues: Existing pedestrian routes are too narrow for double buggies and are frequently obstructed by weekly refuse collections, forcing vulnerable pedestrians into the carriageway.

4. Exhausted Social and Utility Infrastructure

Healthcare Strain: The Dinas Powys Medical Centre is at full capacity with a list size of approximately 11,000 patients, far exceeding idealized UK GP-to- patient ratios.

Education Capacity: Local schools are operating at or near peak capacity with no identified land or funding for expansion.

Wastewater Capacity: There is no settlement-specific evidence that the consented capacity of local treatment works can accommodate 250 additional dwellings without risk of sewer surcharging.

5. Environmental and Ecological Impact

Irreplaceable Habitats: The site is adjacent to Ancient Woodland (Coed Clwyd-Gwyn and Case Hill Wood), which cannot be mitigated by new planting.

European Protected Sites: The HRA confirms the site is within 2.6km of the Severn Estuary SAC/SPA/Ramsar and explicitly concludes that "Mitigation is Required".

Air Quality: The Dinas Powys Roadside monitoring station was closed in 2016, and the Plan lacks location-specific modelling to assess the impact of increased peak-time idling near schools.

6. Housing Delivery and Demographic Misalignment Lack of Downsizing Options: Despite an aging population, the Plan contains no mandatory requirement for single-story bungalows, which are needed to free up family-sized housing stock. Affordable Housing Viability: The Community Council argues that high un- costed infrastructure burdens (flood and highway mitigation) make the 40% affordable housing target financially unviable.

S106 Transparency: £1M in S106 affordable housing funds from previous developments was diverted away from Dinas Powys because we were told there were no housing developments in Dinas Powys. Therefore the money has to be refunded or the 250 houses removed from the RLDP.

SECTION 14 — INITIAL E-MAIL FROM DPCC TO VALE OF GLAMORGAN COUNCIL (dated 29/01/2026)

The Local Development Team confirmed receipt of a formal email from Dinas Powys Community Council on 3 February 2026. This email was also sent to Senior Planning Officer, Ian Robinson and CEO, Rob Thomas. It is appended below:

'Dear Sir / Madam,

Re: Formal Objection to the Proposed Allocation of Eastbrook (DNP-H1) in the Replacement Local Development Plan (RLDP)

Dinas Powys Community Council submits this formal objection to the proposed allocation of the Eastbrook site (SP4 KS2) within the Vale of Glamorgan Replacement Local Development Plan (RLDP). The Eastbrook allocation remains fundamentally flawed due to unresolved constraints relating to:

Flood risk and hydrology Highways and transport capacity Environmental and landscape impact Infrastructure limitations Deliverability and viability

The site lies within a hydrologically sensitive catchment characterised by groundwater emergence, overland flow routes, low-permeability soils, and a history of significant flood events, including the 2020 incident. Natural Resources Wales (NRW) has repeatedly raised concerns about flood risk at this location, and the Council's own evidence base acknowledges the need for catchment-wide modelling before any development can be considered.

The RLDP does not currently include:

Mandatory policy wording to secure pre-delivery of mitigation Requirements for catchment-wide modelling Guarantees that development will not increase flood risk elsewhere Evidence that mitigation is viable, deliverable, and enforceable

Without these safeguards, the allocation fails several tests of soundness, including CE2, CE3, and CE4.

Eastbrook in Dinas Powys is considered to be in a high-risk flood area. It is located within the catchment of the Cadoxton River and its tributary, the East Brook, which have a history of overflowing, causing significant, frequent flooding to homes and roads.

River and Surface Water Flooding: The area experiences flooding from the East Brook and the River Cadoxton. Intense rainfall can also overwhelm the surface water and sewerage systems, causing additional property flooding.

High Water Levels: The ground in the area, particularly in fields adjacent to existing properties, is often described as "totally waterlogged" for significant portions of the year, indicating a high- water table.

Key details regarding flood risk in this area include: High Risk Area: Natural Resources Wales (NRW) has identified a significant risk of flooding from the Cadoxton River and East Brook, affecting areas like St Cadocs Avenue, Greenfield Avenue, Elm Grove Place, and Cardiff Road.

Significant History: The area has experienced multiple flooding events, including major incidents in 1948, 1986, 1998, 1999, 2008, 2012, 2013, and a severe event in December 2020 where approximately 40-100+ properties were affected.

Future Risk: Due to climate change, the number of properties at risk of flooding in the area is expected to increase from nearly 200 to over 350 by 2117.

Causes: The area suffers from rapid runoff from the surrounding hillsides, which overwhelms the capacity of the river channels and drains. NRW has been exploring options for a flood management scheme, including natural flood management and potential engineering solutions, to reduce the risk to the community. It is recommended to check the specific, up-to-date flood map for any particular property on the NRW website.

The Dinas Powys Community Council formally requests written confirmation from the Vale of Glamorgan Council addressing the following matters:

1. Has a catchment-wide hydraulic model has been commissioned, completed, and agreed with NRW? If so, does the model demonstrate no increase in flood risk to existing properties? 2. Have groundwater emergence, overland flow routes, and the 2020 flood event have been assessed? 3. Are SuDS viable given soil and groundwater constraints? 4. Has downstream drainage capacity been assessed and, if necessary, upgraded? 5. Will education, healthcare, utilities, and highways infrastructure be expanded to support the allocation? a) Has consultation taken place with the GP surgery/Local schools? b) What additional services will be provided? 6. Have deliverable and funded mitigation for transport and highways impacts been identified? a) Please provide figures of air pollution and traffic flow surveys along Cardiff Road. What is the capacity along Cardiff Road? b) Department of transport will not be investing in Eastbrook station. Therefore, no lift/ramp to address the needs of the community. Yet it is being used to form a decision about the housing. Please explain the reason behind this?

7. Have landscape, biodiversity, and green-infrastructure assessments been completed? a) Apparently the placemaking workshop has helped refine proposals. What are the refinements and when can we see the results from the surveys people completed at the Murchfield consultation?

In the opinion of Dinas Powys Community Council these confirmations are essential to demonstrate that the allocation is sound and that development will not increase flood risk or place unacceptable pressure on local infrastructure.

The Vale Council state that millions of pounds of Dinas Powys S106 funding could be moved to Myrtle Close in Penarth as 'there are no developments' in Dinas Powys. If this is the case Eastbrook needs to be removed from the RLDP or the money should stay allocated to Dinas Powys.

The Vale Council allocated 900-1500 houses for Argae lane. But once the site was considered not viable the figures were reviewed and they were reduced in number and moved to another site.

Where is the evidence that 250 houses are needed in Eastbrook? The Eastbrook site was turned down before. Why? What has changed to make it viable now? Have the Vale Council exhausted all the key sites outlined in the previous LDP and if not why? Have the Vale Council used all of their rolled forward housing sites? Have the Vale Council carried out a Sequential Test? Proving there are no lower risk sites available? Has the Exception test been carried out? Ensuring the development will be made safe throughout its lifetime without increasing floor risks elsewhere? Out of the 250 houses 40% will be affordable housing. Managed by housing associations according to Persimmon glossy proposal. What is classed as affordable housing? Birth rate has fallen for a number of years, and the elderly population is increasing. How do you justify these figures? What proportion of the proposed 250 houses will be age friendly?

In the appendix to the Homes and Safe Communities Scrutiny Committee report (6th January 2024), there is a comment regarding the need for bungalows. Residents and councillors enquired about bungalows enabling people to downsize and free up family homes. We were told they are providing what the Vale has requested. We met with housing and they said, 'it won't happen'. So knowing there is a need for elderly accommodation what is the plan to address this need?

By 2034, 1 in 4 will be over the age of 65. This is an increase of 75% from 9.3% in 2018 to 13.7% in 2038.

The Vale indicates 70% of the housing need is in Barry/Penarth and Llandough. Of the remaining 30% what percentage is allocated to Dinas Powys? You state greatest areas of demand are Penarth/Barry and Llandough but there is no mention of Dinas Powys.

In conclusion, in the absence of the required evidence and mandatory policy safeguards, the Eastbrook allocation remains unsound. The Dinas Powys Community Council therefore requests that the Vale of Glamorgan Council: Removes the Eastbrook allocation from the RLDP, or Incorporates the mandatory policy wording and evidence requirements set out above. We look forward to receiving your written response. Yours faithfully, Clerk on behalf of Dinas Powys Community Council'

SECTION 15 — CONCLUSION OF THE

TECHNICAL OBJECTION

Dinas Powys Community Council recognises the importance of delivering sustainable, well-planned growth across the Vale of Glamorgan. The revised RLDP contains some positive and constructive changes, and the Council welcomes the improved emphasis on sustainability, climate resilience, and infrastructure capacity. However, despite these improvements, the proposed allocation of the Eastbrook site (HG1 - KS2) remains fundamentally unsound.

The evidence presented in this objection demonstrates that:

The site lies within a highly sensitive hydrological catchment Flood risk is influenced by surface water, groundwater, and overland flow The 2020 flood event provides clear evidence of the site's vulnerability NRW has repeatedly raised concerns that have not been resolved No catchment-wide hydraulic modelling has been undertaken SuDS feasibility is unproven due to soil and groundwater constraints Downstream drainage capacity has not been assessed Transport and highways impacts remain unmitigated Education, healthcare, and utilities infrastructure are already under pressure No evidence demonstrates that required mitigation is viable, fundable, or deliverable The RLDP lacks mandatory policy wording needed to secure mitigation and ensure no increase in flood risk elsewhere

As a result, the allocation fails multiple tests of soundness, including:

CE2 - Coherence and effectiveness CE3 - Environmental protection CE4 - Deliverability

Until the Vale of Glamorgan Council provides the required evidence and incorporates the mandatory policy wording set out in this document, the Eastbrook allocation cannot be considered sound. The Dinas Powys Community Council therefore respectfully requests that the Vale of Glamorgan Council:

1. Removes the Eastbrook allocation from the RLDP, or 2. Incorporates the mandatory policy wording, evidence requirements, and safeguards detailed in this objection

Failure to address these issues will leave the RLDP vulnerable to challenge at Examination and may result in development that increases flood risk to existing residents, places unacceptable pressure on local infrastructure, and undermines the environmental quality of Dinas Powys.

Dinas Powys Community Council remains committed to constructive engagement and looks forward to receiving the Vale of Glamorgan Council's written response to the matters raised.

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Emma Reed [2653]

Summary:

The role of Rhoose is over stated and more development should be concentrated in Barry and the Service settlements. For example Llantwit Major has many opportunities with excellent services (Rhoose residents have to travel there for some services) yet it is not taking significant housing building for political reasons. More opportunities therefore need to be found in Llantwit Major as well as the other higher order settlements. The candidate sites show that there are opportunities.

Full text:

The role of Rhoose is over stated and more development should be concentrated in Barry and the Service settlements. For example Llantwit Major has many opportunities with excellent services (Rhoose residents have to travel there for some services) yet it is not taking significant housing building. Why? Well Llantwit Major Independents hold the balance of power for the administration and Labour do not want to upset them. More opportunities therefore need to be found in Llantwit Major as well as the other higher order settlements. The candidate sites show that there are opportunities.

Change suggested by respondent:

Sites to be identified via a better candidate site process concentrating on requesting opportunities in higher order settlements reducing the need for Rhoose to take an additional 800 units plus at Rhoose Point and Readers Way over the next 10 years. The site to the east of Barry should be reinstated and documents made public to the Inspector as to why it did not proceed.

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration

• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of

Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.
The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).
Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.
BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.
Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.
The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.
We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.
The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr

respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.
The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.
In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5)

totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters.
It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.
Renewable Energy
Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?
It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.
The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.
Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.
The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.
Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.
Minerals
The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.
BMV Agricultural Land
The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:
• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and
• Candidate site assessments.

•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry: "Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Mr Gareth Thomas [2975]

Summary:

I believe the reclassification of Wick as a Primary Settlement is unjustified based on its limited differences with nearby villages like St Brides Major. The evidence does not demonstrate Wick's significantly greater service role, accessibility, infrastructure, or employment opportunities. The slight advantages, such as proximity to a train station, are negligible in practice, especially given the comparable proximity of St Brides Major to a better-served rail station. Without clear evidence of Wick's wider service functions or sustainability, its reclassification risks contradicting the spatial strategy of promoting development in the most sustainable locations.

Full text:

The reclassification of Wick as a Primary Settlement appears unjustified when considered against the settlement hierarchy and the characteristics normally associated with settlements expected to accommodate a greater proportion of growth. The evidence base provides limited explanation for this change and does not clearly demonstrate that Wick performs a significantly greater service role or has materially better accessibility, infrastructure, or employment opportunities than comparable nearby villages such as St Brides Major, which remains classified as a Minor Rural Settlement despite appearing to have a broadly similar level of local facilities. For example, although Wick has scored ‘higher’ than St Brides Major in several categories due to it being ‘closer’ to other amenities such as a train station, in reality this equates to only a few extra minutes by car or bus (noting they are served by the same bus route) as the difference is barely 3 miles along a winding national speed limit road with no footpaths (and thus not safely walkable or cyclable), as is the onward journey between Wick and Llantwit Major; travelling via the National Cycle Route through St Donat’s would take the journey over the 5 mile scoring threshold for Wick. Thus, in practical terms the difference is negligible and, in fact, St Brides lies geographically closer to Bridgend rail station which has a far greater service provision than Llantwit Major. This objection is not intended to suggest that St Brides’s Major should also be a Primary Settlement, but to argue that by comparison, Wick should not be reclassified. Without clear evidence that Wick functions as a wider service centre or offers greater sustainability credentials, its reclassification risks being inconsistent with the plan’s spatial strategy of directing development toward the most sustainable and well-served locations.

Change suggested by respondent:

Wick should remain classified as a Minor Rural Settlement.

Respondent: Cardiff Capital Region Energy (Mr Phil Nightingale, Project Delivery Director) [2736]

Summary:

CCR Energy welcomes the recognition of St Athan and Rhoose as Primary Settlements within the Vale of Glamorgan's Strategic Growth Area. The designation reflects their strong range of services, facilities, and strategic location, supporting sustainable employment growth. The proposed redevelopment of the former Aberthaw Power Station as the Cardiff Capital Region Aberthaw Green Energy Park complements this approach, creating high-quality employment and innovation opportunities. Combined with proximity to Cardiff Airport, the Bro Tathan Enterprise Zone, and planned transport improvements, these settlements are well placed to accommodate growth, support regional economic development, and enhance connectivity, skills, and prosperity within the Vale

Document Element: SP2 – SETTLEMENT HIERARCHY
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:
The RLDP seeks a high proportion of affordable homes alongside prescriptive policies on NZC and residential density. Sufficient flexibility in policy application and housing mix is essential to maintain site viability and ensure housing delivery. Policy SP2 requires 50% on-site affordable housing and limits site sizes to 25 dwellings in Minor Rural Settlements and 50 in Primary Settlements. The lack of viability flexibility and arbitrary cap on dwelling numbers undermines delivery. For example, Allocation HG4(1) provides 25 dwellings, effectively requiring 52% affordable housing; increasing the total to 26 dwellings would ensure the 50% requirement remains a true minimum.

Full text:

Policy SP2 lists Colwinston as a "Minor Rural Settlement" in the settlement hierarchy. Policy SP2 also states that:

"For the purposes of this policy small scale affordable housing led developments are defined as providing a minimum of 50% affordable housing on sites of up to 25 dwellings in Minor Rural Settlements or up to 50 dwellings in Primary Settlements. The type, scale and mix of affordable housing will be expected to reflect the latest evidence, including specialist older person housing. Proposals which do not meet the minimum 50% affordable housing provision will not be supported."

The RLDP seeks a high proportion of affordable homes alongside other overly prescriptive policies relating to net zero carbon emissions from new dwellings, residential density, and open space provision. In order to achieve these objectives in a deliverable and sustainable way, it is essential that the RLDP provides sufficient flexibility in both policy application and housing mix. Without such flexibility, the cumulative impact of multiple prescriptive requirements risks undermining site viability. A balanced approach is therefore necessary to ensure that the Council's housing, climate, and place making ambitions can be realised without constraining the delivery of much needed homes.

Policy SP2 requires on-site provision of 50% affordable homes on all new sites in Minor Rural and Primary Settlements. Policy SP2 as drafted also limits maximum dwelling numbers to sites of 25 dwellings in Minor Rural Settlements and up to 50 swellings in Primary Settlements. There are a number of concerns with this approach as drafted:

1. Whilst it is understood that it is a core RLDP objective to deliver much needed affordable homes in VoG, Policy SP2 must incorporate sufficient flexibility to allow for viability considerations to be taken into account. Whilst it is understood that the sites proposed for allocation in the RLDP will have provided a Viability Assessment demonstrating that they can be delivered, there is a need to be cautious. Additional policy burdens (e.g. those relating to net zero carbon operational development) could go beyond what has been tested at RLDP preparation stage. Without an explicit mechanism to consider viability, the delivery of entire allocations, both market and affordable housing across the Minor Rural and Primary Settlements, could be jeopardised unintentionally. The blanket approach to the 50% affordable housing requirement across site allocations fails to consider the unique technical complexities of each individual allocation that are required to be overcome before sites can be delivered. This is in direct contrast to PPW paragraph 4.2.32 which states that:

"When setting the affordable housing thresholds and/or site-specific targets planning authorities must consider their impact on site viability to ensure residential sites remain deliverable."

2. The upper limits of 25 and 50 dwellings for Primary and Minor Rural Settlements respectively are arbitrary and unevidenced. Given the identified need for housing and affordable housing as set out in our comments to Policy SP1, allocated Rural Affordable Housing-Led Sites that have limited constraints (e.g. Allocation HG4(1)) should be allowed to be expanded and accommodate further dwelling numbers should the sites be suitable to allow this. Each site should be considered on its own merit rather than having a 25 unit limit applied as a matter of course. Allocation HG4(1) is located in the HMA of Llandow. Table 5 of the Draft Local Housing Market Assessment 2023 Summary Note Evidence Base Document provides an estimate of the overall additional affordable housing need from 2023 to 2038 as being 52 units per annum which is significantly more than what is proposed for allocation. It is also worth noting that Registered Social Landlords will prefer to have a higher number of affordable units under their management in a particular location to ensure efficiencies in management and operation.

3. Land to the East of Colwinston (HG4(1)) is allocated for 25 dwellings with a minimum provision of 50% on-site affordable housing. As 50% of 25 is 12.5 dwellings, this would need to be rounded up to 13. As such, allocation HG4(1) is required to provide a minimum of 52% on-site affordable housing. As a minimum, allocation HG4(1) should be allowed to provide 26 dwellings so that the "minimum" on-site provision of 50% set out by Policy SP2 is truly a minimum.

Change suggested by respondent:

The consideration of viability and the removal of the arbitrary upper limits on site sizes for allocations in Primary and Minor Rural Settlements will ensure that Policy SP2 meets the third test of soundness (Will the Plan deliver?). The proposed amendment to the wording of Policy SP2 is as follows:

"For the purposes of this policy small scale affordable housing led developments are defined as providing a minimum of 50% affordable housing on sites of circa 25 dwellings in Minor Rural Settlements or circa 50 dwellings in Primary Settlements. The type, scale and mix of affordable housing will be expected to reflect the latest evidence, including specialist older person housing. Proposals which do not meet the minimum 50% affordable housing provision will not be supported."

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Mrs Jacky Williams [3343]

Summary:

Rhoose has been identified as a Primary Settlement, reflecting the range of services and facilities available. The current services and facilities are insufficient for the size that the village has now grown into. New housing developments have, in the past, failed in their commitment to provide shops and community spaces – the Rhoose Point development is a case in point – land defined for facilities lay undeveloped for years and then housing was built on it. Transparency and accountability by the council is essential if 'contribution towards' replaces actual provision.

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Ms Lucie Taylor [2506]

Summary:

Social Farms & Gardens urge the Vale of Glamorgan Council to protect existing and potential food growing sites, particularly high-grade agricultural land, which should be safeguarded for sustainable agriculture. Poor development opportunities (high grade agricultural land) near Culverhouse Cross and Wenvoe should not be seen as a threat but as an opportunity to preserve land for food growing. We recommend including policies that support food growing enterprises, acknowledging various types of initiatives beyond allotments. Greenfield land should be reserved for horticulture, and proposals encouraging such enterprises and structures should be actively promoted to enhance local food production.

Full text:

We ask that the Vale of Glamorgan Council consider protecting existing and potential food growing sites and that there is significant weight attached to protecting the best agricultural land for food growing.

High grade agricultural land must be protected for sustainable agriculture without exception. Paragraph 6.15 of the LDP states that the Spatial Options paper identifies that development opportunities in both Culverhouse Cross and Wenvoe are significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge of both settlements. The growth of towns and cities needs to be set against the need for land to enable Wales to feed itself and become much more resilient to changes. Local Development Plans across Wales must provide policies with this focus and safeguard land for food growing in and around towns and cities. Please see Evidence Pack report on how Wales can feed itself in 2035 here. The Best and Most Versatile (BMV) agricultural land on the edge of Culverhouse Cross and Wenvoe is not a limiting factor for new development it is an opportunity to safeguard land in these locations for food growing. Raising the profile of BMV agricultural land is needed across Wales due to the lack of national guidance when compared to other issues like flooding and housing supply. Our experience is that other local planning authorities in Wales have allowed housing development on BMV agricultural land so further fortification of this core policy is warranted. In responding to the Caerphilly Review of their LDP, Welsh Government most certainly agrees with this approach .
We would also ask that The Council consider including positive policy wording that allows for the potential of SPG on food growing so that food growing enterprises and projects across the area can flourish without being unjustifiably unhindered. Justified development in association with such projects and enterprise should be encouraged because they benefit from minimal permitted development rights and their is still outdated scepticism of their genuine nature. Growers operating on small profit margins, in the early days of their inception find the planning system a barrier to success. Reference to the different types of food growing initiatives should also be included. Narrowly thinking about allotments falls short of the mark and we need to raise the profile of the different types and scales of community food growing that are possible. Referring stakeholders to Social Farms & Gardens for support is advised.

Greenfield land around Culverhouse Cross and Wenvoe should be safeguarded for agriculture and proposals for horticultural initiatives/enterprises, and their essential structures (and potential rural enterprise dwellings) should be explicitly encouraged in this area of the Vale of Glamorgan. The Vale and Cardiff areas are poorly served by horticulture production when compared to other parts of Wales and the catchment opportunities for routes to market are largely untapped yet significant.

Review of the Weight That Is Given to Best Most Versatile (BMV) Land by Local Authorities and National Policy Regulation 15 second review: Welsh Government response to Caerphilly County Council [HTML] | GOV.WALES
Allotments and community gardens | Sub-topic | GOV.WALES

Change suggested by respondent:

Where discussing the best and most versatile agrciultural land at wenvoe and culverhouse cross reference should be made to the opportunity for food growing initiatives (large and small) in this location. Such proposals will be encouraged.

6325 Object

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Penllyn Community Council (Clerk) [243]

Summary:

I note that the Deposit RLDP shows no new housing sites in the Penllyn area, though some communities are classified as 'Minor Rural Settlement Areas' and should be eligible for infill and affordable housing. Many rural communities, especially hamlets, are regarded as 'Countryside' without defined boundaries, which restricts their access to community-supported, affordable micro or single-unit developments. The current policies, particularly SSC1 and HG5, exclude around 54 rural communities from such development, contradicting the strategic objectives to support rural housing needs and the Well-being of Future Generations Act (Wales)

Full text:

OBSERVATIONS

a. The Council notes that there are now NO New Housing Developments Sites shown in the Deposit RLDP for the Penllyn Community Council area, although Ystradowen, Penllyn and Craig Penllyn are defined as 'Minor Rural Settlement Areas' and would therefore appear to come within the scope of the of SSC1 and HG5 for infill and affordable housing.

b. However, the remainder of our rural communities are classed as 'Hamlets and Smaller Rural Settlements', have no defined settlement boundaries and for the purposes of Planning Policies are therefore regarded as 'Countryside'.

c. The Deposit RLDP includes over 40 references [see Appendix 1] which include within the stated Strategic Objectives and other statements, recognition of the housing needs of All rural Communities including Hamlets and Smaller Rural Communities and reflects:

i) The need to support to maintain such Communities and to promote the appropriately scaled, affordable development required by such communities to maintain a sustainable demographic balance.

ii) The need to provide appropriate housing within all such rural communities to meet the material needs and wellbeing of both young families and elderly residents.

d. Despite these stated Objectives and supporting comments noted at e above, the proposed Planning Policies set out in the RLDP, particularly those in relation to Development in the Countryside, not only fail to address the requirement/provision of community supported, single unit/ micro developments of appropriate affordable housing, necessary to meet the acknowledged rural need, but in fact actively discriminate against such development outside settlement boundaries.

e. The RLDP thereby excluding some 54 of the 75 Rural Communities within the defined area from effectively address this critical socio-economic issue in a manner which has been historically shown to be not only acceptable but actively welcomed by the vast majority of residents of these hamlets and smaller rural communities.

f. The existing LDP Rural Exception Site Policy and Policy MD10 Affordable Housing Developments Outside Settlement Boundaries provide that:

Small scale affordable housing developments will be permitted outside settlement boundaries where they have a distinct physical or visual relationship with an existing settlement and where it is demonstrated that:

1. The proposal meets an identified local need which cannot be satisfied within identified settlement boundaries.
2. The number of dwellings is in proportion to the size of the settlement.
3. The proposed dwelling(s) will be of a size, tenure and design which is commensurate with the affordable housing need.
4. In cases where the dwelling is to be provided by either a private landlord or the intended occupier, secure mechanisms are in place to ensure the property shall remain affordable in perpetuity; and
5. The development has reasonable access to the availability and proximity of local community services and facilities.

However, the Policies within this RLDP particularly SSC1 and HG5 appear to effectively remove this exception from Hamlets and Smaller rural Settlements without settlement boundaries thereby preventing essential socially necessary development within some 54 of the Vales rural communities.

g. It is noted that much of this conflict between 'Objective and Result', stems from the focus given to Settlement Boundaries within the RLDP. In the document these are only defined for 'Minor Rural Settlements Areas' and not for settlements classed as 'Hamlets and Smaller Rural Settlements'.

h. These classifications arise out of the SETTLEMENT APPRAISAL REVIEW [BP5] which provides an effective rational methodology for a hierarchy of settlement. However, such an appraisal is defined by the many subjective factors, not least the way in which it divides settlements eg City and Llansnnor.

The Appraisal Report itself recognises the limitations of this approach in for example paras: 12.8.5 and particularly 12.8.6 below:

12.8.5 In this respect it is important to note that the use of scoring and ranking methods means that certain socio-economic and environmental factors, which are important in understanding the overall role, function and sustainability of a settlement, are not fully considered by this study. These are generally factors where it is difficult to

attribute a numerical value. Furthermore, it is important to recognise that one of the limitations of using scoring and ranking methods is that certain assumptions and generalisations are invariably used, for example, regarding residents travel to work patterns and the actual use of sustainable transport modes.
12.8.6 Therefore, a strategic assessment such as this one is not intended to be a comprehensive planning assessment of individual settlements or potential development sites within them. Such detailed planning assessments would need to consider the environmental, social and economic issues affecting specific settlements. Decisions on levels of growth and individual proposals will be made as informed planning judgements having considered all other relevant factors.

i. Consequently The Deposited RLDP as it stands neither: designates Settlement Boundaries to allow the relevant proposed Planning Policies to be implemented within these smaller rural Settlements/ Communities; nor does it provide specific Planning Policy/ mechanisms for the provision of managed, Community supported, appropriately scaled, single unit /micro (1-3 units) developments of the affordable housing, suitable for younger families and older residents, necessary to maintain balanced and sustainable Communities in such rural settlements.
By failing to include either or both of the above, the Plan fails to meet its own specific Strategic Objectives set out in the document and therefore also fails to properly address the requirements of the Well-being of Future Generations Act (Wales) 2015 (Well-Being Act)

Change suggested by respondent:

We appreciate the necessity to generating a Settlement Hierarchy and the need to ensure development is controlled in a manner suitable for each level within that. However, we would suggest the conflicts this generates with the overarching Objectives in respect of Sustainable Communities, the Wellbeing of the older and young persons and the wishes of the local communities, can be relatively simply addressed by either:
1. Providing a defined settlement boundary for ALL settlements including 'Hamlets and Smaller Rural Settlements'
The proposed planning polices and constraints notably those in SSC1 and HG5 could then be applied across all existing settlements and communities to allow for appropriate development of affordable homes to meet the aspirations of Para 5.24 and the local Community.

6737 Support

Document Element: SP2 – SETTLEMENT HIERARCHY
Respondent: Hallam Land Management [854]
Agent: Savills

Summary:

Hallam are generally supportive of this policy. The continued positioning of St Athan as a Primary Settlement in the third tier of the settlement hierarchy is considered appropriate though clearly the delivery of two Key Sites within St Athan as part of the RLDP has the potential to further elevate its position in the future. This is reflected in Table 10 of Background Paper 5 Settlement Appraisal Review where St Athan is given one of the higher scores of the Primary settlements.

Full text:

1.1. Savills is instructed by Hallam Land ('Hallam') to respond to the consultation on the Deposit version of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').
1.2. Hallam is the strategic land arm of Henry Boot PLC and is one of the UK's most well established and successful land promoters. Hallam operates throughout England, Scotland and Wales from 7 regional offices working with landowners, developers, local authorities, communities and other parties to bring forward development opportunities. Hallam has been in operation since 1990, specialising in obtaining planning permission and delivering development larger schemes including new communities and urban extensions.
Background to Representations
1.3. The Preferred Strategy was published in November 2023. The Preferred Strategy identified "Land West of St Athan" and "Land South of the B4265, St Athan" (Site IDs 456 and 457) as one of five Key Sites in the Preferred Strategy. Both of these sites are under the control of Hallam and were submitted as part of the Call for Sites. A site-specific illustrative masterplan and policy wording were provided under Policy SP4 KS5 (Land to the West of St Athan).
1.4. Hallam submitted representations on the consultation on the Preferred Strategy. These representations were very much supportive of the identification of "Land to the West of St Athan" as a Key Site and the approach that was taken more generally taken in the Preferred Strategy.
Approach to Responding to Consultation
1.5. The VoG has published the Deposit version of the RLDP. The Deposit is the first version of the RLDP to include

emerging allocations, and detailed development management policies, as well as a Proposals Map. It is accompanied by a substantial evidence base which includes various supporting technical documentation submitted as part of the promotion of the allocated sites.
1.6. Building upon the Preferred Strategy, the Deposit RLDP proposes to allocate Land to the West of St Athan as a Key Site. The site is identified under Policy HG1 KS5 (Land to the West of St Athan) as key mixed-use site with capacity for 600 new homes alongside new community and commercial facilities.
1.7. Hallam's representation to this consultation broadly splits into three separate sections:
• It offers general support for the housing requirement, growth strategy and settlement hierarchy. This is covered in Chapter 2 of this Statement;
• It wholly supports the approach of allocating Land to the West of St Athan as part of the Deposit RLDP whilst also providing detailed commentary on the specific wording of Policy HG1 KS5 (Land to the West of St Athan). This is covered in Chapter 3 of this Statement; and
• It provides commentary on a range of development management policies. This is covered in Chapters 4, 5, 6, and 7 of this Statement.
1.8. As well as this Statement, Savills has provided commentary on these specific policies under the VoG's consultation website.

Policy SP1 (Sustainable Growth Strategy), Policy SP2 (Settlement Hierarchy), and Policy SP6 (Housing Requirement)
2.1. Together, these policies have the effect of:
• Setting the housing requirement to be delivered over the RLDP plan period of 7,890 homes with a flexibility allowance applied on top so that provision is made for a total of 8,660 homes. This is the same housing requirement to that included in the Preferred Strategy which was found by Welsh Government to be in conformity with Future Wales (Policies SP1 and SP6);
• Identifying the extent of the Strategic Growth Area as the primary focus of new housing growth. Concentrations of new housing are focussed in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity. St Athan is a specifically named settlement within the Strategic Growth Area (Policy SP1); and
• Identifying St Athan as a Primary Settlement in the third tier of the settlement hierarchy. This is the same tier of the settlement hierarchy as St Athan is in the adopted LDP (Policy SP2).
2.2. Hallam are generally supportive of the aims of these three policies.
2.3. They recognise that the housing requirement has been subject to extensive scrutiny and been found to be appropriate by Welsh Government in response to the Preferred Strategy. In that sense, there is nothing further for Hallam Land to comment upon here other than to note that it should reasonably be seen as the minimum number of homes that the RLDP should be aiming to deliver, particularly following the publication of the 2022-based household projections between Welsh Government's comments on the Preferred strategy and the publication of the Preferred Strategy.
2.4. The strategy – of focussing new housing in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity – is wholly supported. St Athan is clearly already a sustainable location for growth and its sustainability and connectivity have clear potential to enhance alongside further development. The delivery of growth in St Athan is therefore considered to firmly align with the RLDP's strategy.
2.5. The continued positioning of St Athan as a Primary Settlement in the third tier of the settlement hierarchy is considered appropriate though clearly the delivery of two Key Sites within St Athan as part of the RLDP has the potential to further elevate its position in the future. This is reflected in Table 10 of Background Paper 5 Settlement Appraisal Review where St Athan is given one of the higher scores of the Primary settlements.

Policy HG1 KS5 (Land to the West of St Athan)
3.1. Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.
3.2. There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.
3.3. The relevant policy for Land to the West of St Athan is Policy HG1 KS5.
3.4. As a starting point, Hallam wholeheartedly support the allocation of Land to the West of St Athan as a Key Site within the RLDP. Hallam made a comprehensive submission as part of the Call for Sites stage and since then have worked proactively with the VoG and other stakeholders to demonstrate that the site is suitable, deliverable, and viable. It's identification as a Key Site in the Deposit RLDP represents extensive and thorough assessment – its proposed allocated is therefore considered to be sound and firmly evidence based.
3.5. So that the policy functions as effectively as possible, Hallam has a small number of comments and included at Appendix A is a re-worded version of Policy HG1 KS5 which incorporates those changes with text suggested to be removed crossed through and text to be added shown underlined.
3.6. These proposed adjustments are considered in turn below and are structured around the sub-headings that are contained within the policy wording itself.
Site Capacity and Housing Trajectory

3.7. Extensive environmental and technical work has been undertaken by Hallam to support the promotion of the site and the development of a masterplan (and site capacity) that responds to the site's constraints and opportunities.
3.8. That said, Hallam is not a housebuilder and once an outline planning application has progressed, Hallam will identify a development partner (which could be a single or multiple housebuilders / housing associations). Clearly different housebuilders have different house types and differing approaches to density.
3.9. In addition, whilst a lot of technical and environmental work has been undertaken to date, clearly further technical work would be submitted at planning application stage which would further validate the site's capacity.
3.10. Legislative and guidance changes also have the potential to impact a site capacity. Whilst the masterplanning process has been prepared to be SAB compliant, the impact of the introduction of the requirement to secure SAB approval has had an impact on site capacity and it follows that a further, and as yet unknown, legislative or guidance change could have a similar impact.
3.11. This is not to suggest that there isn't a high degree of confidence that the site can deliver roughly 600 homes, rather that Hallam suggest that the word 'approximately' is added to the policy wording to reflect the potential for a degree of deviation (which could be upwards or downwards).
3.12. Background Paper 9A Housing Land Supply and Housing Trajectory sets out the anticipated annual delivery rates for housing over the RLDP. With regards to the ability of the site to deliver the number of homes it is allocated for in the RLDP plan period, the housing trajectory for the site reflects that the first completion date was pushed back from 2027/2028 to 2028/2029 since the consultation on the Preferred Strategy. This means that the whole site continues to be shown as being delivered within the RLDP plan period.
3.13. Hallam support and agree with the approach set out in the Draft Housing Trajectory and see it to be realistic and achievable based on their experience and subject to usual caveats around the condition of the market, RLDP progression, and swift determination of a planning application.
Affordable Housing
3.14. At present, Policy HG1 KS5 (like all of the standalone policies for the other four Key Sites), states that the site should provide a minimum of 210 affordable housing units. This figure is derived from 35% of the number of homes that the site is allocated for (600 homes).
3.15. Worded at present, a strict interpretation of this policy could be that 210 affordable units must be provided onsite regardless of the total number of homes that are proposed. For example, it could be interpreted as requiring a fixed number of affordable homes of 210 homes, even if the total number of homes that are proposed on the site is fewer than the 600 homes that the site is allocated for or, conversely, that only 210 homes should be delivered as affordable if more than 600 homes were to be delivered and the RLDP allocation exceeded.
3.16. Hallam recognise that this is not what the policy wording is seeking to achieve (and their viability work for the site is based on the site delivering 600 homes of which 35% are affordable) but suggest that its wording could be clarified by removing reference to a specific number of affordable homes for the site to deliver in favour of just the affordable housing percentage being noted in the policy.
3.17. Hallam also suggest that the requirement for affordable housing units to not be in clusters of more than 10 homes is removed and that the approach is for this to be considered on a site by site and case by case basis and with recognition that Policy HG5 (Affordable Housing Exception Sites) which can provide a framework for 100% affordable sites of more than 10 homes to be delivered. As an example, and in the case of Land to the West of St Athan, the "Land South of the B4265, St Athan" (Site ID 457) portion of the site is likely better suited to a mixed-use development alongside the future St Athan Railway Sation. This portion of the site is probably better suited to a flatted form of development (either above non-residential uses or as a block) which tend to be delivered as 100% affordable housing developments rather than comprising a mix of private and affordable housing.
Sustainable Transport and Highways
3.18. This part of the policy sets out expectations relating to sustainable transport and highways and there are a number of matters which Hallam wish to comment on.
3.19. As a starting point, Hallam support the delivery of St Athan Railway Station and therefore commits to its safeguarding. Likewise, Hallam recognise the potential suitability for the "Land Between the Railway Line and B4265, St Athan" (Site ID 458) site to accommodate a Welsh-Medium Secondary School and can also therefore commit to safeguarding land for the delivery of a pedestrian and cycle bridge over the railway line. Specific comments on Policy TR1 (Transport Proposals) and Policy CI3 (New Community Facilities) are made elsewhere in this Statement.
3.20. With regards to the Sustainable Transport and Highways section of Policy HG1 KS5, Hallam's overall position is that a careful balance needs to be reached between the policy wording being explicit as to what highway works must be delivered and reserving consideration of this until planning application stage where the exact site capacity is better understood and a full Transport Assessment submitted.
3.21. At present, Hallam's view is that the policy wording is overly explicit and suggest that it could be qualified through the addition of the following text before listing the offsite highways improvements:
'Subject to the Strategic Transport Assessment and site-specific Transport Assessment submitted at planning application stage'.
3.22. Turning to the specific offsite highways measures that are listed within the policy wording, Hallam have four comments.
3.23. Firstly, it is suggested that the delivery of an active travel link along the B4265 between the site entrance and the Gileston Road junction should be secured via a financial contribution that is pooled with KS4 Church Farm. This reflects that the delivery of this link not only links Hallam's site to other services in St Athan but also linking KS4 Church Farm to the services that are proposed and uses for which land is safeguarded within Hallam's site. Clearly this is also to the benefit of existing residents of St Athan. This would reflect the approach that is proposed to be taking for the pooling of Section 106 monies for the delivery of an active travel route between St Athan and Llantwit Major.
3.24. Secondly, Hallam flag the need for the RLDP to be sufficiently flexible with regards to the delivery of an active travel

link between St Athan and Llantwit Major. Ultimately, the purpose of delivering this active travel route would be to provide a connection from St Athan to Llantwit Major Railway Station and the delivery of a Railway Station in St Athan would remove the necessity of delivering this active travel connection. Hallam's suggested amendments to the policy wording seeks to reflect this.
3.25. Thirdly, Hallam have been consistent in highlighting that, whilst there is an aspiration to deliver an improved pedestrian link along Llantwit Road, a combination of the road width and the extent of third party ownerships make delivering a continuous link very challenging with a pragmatic approach instead needing to take place that recognises the ability to deliver betterments but acknowledges that delivering a continuous link is unlikely to be possible. Hallam has suggested additional wording to clarify this.
3.26. Fourthly, Hallam highlight that the designing of a loop road within the site to facilitate access by a bus may be superfluous and represent an over-engineered solution given the potential for the St Athan Transport Interchange that land is safeguarded for under Policy TR1 (Transport Proposals) is envisaged to accommodate infrastructure to accommodate a bus connection. On that basis, it is suggested that the following clause is added to the policy wording to reflect that bus connectivity to the site may be delivered not via an internal bus loop:
'Subject to progress on the St Athan Transport Interchange as land is safeguarded for under Policy TR1 (Transport Proposals)'
Community Infrastructure
3.27. There are three points which Hallam wish to make in connection to this element of Policy HG1 KS5.
3.28. Firstly, Hallam suggest that the wording of the part of the policy relating to financial contributions to fund the delivery of additional school places needs to be adjusted. At present this part of the policy is worded as if there is an automatic requirement to provide Section 106 monies for school places where Circular 13/97 is clear that a contribution should only be sought where the schools do not have current projected capacity to accommodate the new children from the development. Hallam's proposed adjustments seek to ensure that this part of the policy reflects this though note that Background Paper 43 Education forecasts a need for a financial contribution to be made for additional school places at all English and Welsh primary and secondary schools that the site is within the catchment of.
3.29. Secondly, Hallam note that Table 10 of Background Paper 34 Community Facilities identifies an existing over-provision of community space within the St Athan Ward of 778sqm and a surplus of 531sqm of community floorspace at 2036 when the level of housing to be allocated in the Deposit RLDP is delivered. It is understood that this is on the basis of no community floorspace being delivered as part of Hallam's proposals or as part of the KS4 Church Farm site. Hallam suggest that the wording of this element of the policy needs to reflect that community floorspace should only be required to be provided in the case of a local shortage in provision. Aligned to this, Hallam also suggest that the reference to specifically providing a 'community building' is adjusted to instead make reference to 'community space'. This reflects that the community space element of scheme, if indeed it is actually required, could be a part of a larger mixed-use building (probably in the Mixed-Use / Community area) rather than as a standalone building.
3.30. Thirdly, Hallam note the error in the wording of the sixth bullet point under the 'Sustainable Transport and Highways' heading where reference is made to the safeguarding of land on the southern side of the railway line as being identified in Policy CI3(2) where-as it should be Policy CI3(6). This is a minor amendment that should be made to ensure consistency.
Green Infrastructure, Recreation Spaces, and Biodiversity
3.31. The masterplan prepared by PAD Design and submitted by Hallam shows the site delivering a mix of public open space and green infrastructure including the provision of allotments, a Neighbourhood Equipped Area of Play, a Local Equipped Area of Play, and a sports pitch. This is welcomed in Background Paper 32A Green Infrastructure Assessment of Key Sites which, at Paragraph 5.55 recognises that a 'ground up' approach has been taken in the masterplanning approach.
3.32. This is shown indicatively to illustrate the composition of public open space and green infrastructure that the site could provide alongside the other elements of built development that the site is allocated and the masterplan makes provision for.
3.33. Whilst, Hallam recognise the need to provide public open space, the starting point for this should be the Fields In Trust Standards and Hallam therefore suggest an approach where the policy wording is not specific about what forms this should take.

Policy TR1 (Transport Proposals)
4.1. This policy identifies three active travel routes and two public transport schemes that the Deposit RLDP safeguards land for, as well as three highway improvement schemes that are identified as being required to mitigate the impact of development. Two of these are in St Athan – one being the St Athan Transport Interchange for which land is safeguarded for and the second being the Gileston Road Junction which is identified as a required highway improvement. Both are considered in turn below.
St Athan Transport Interchange
4.2. Hallam support the safeguarding of land for the St Athan Transport Interchange and see that its delivery would be to the benefit of the Key Site itself but also more broadly to St Athan and western parts of the VoG.
4.3. It is clear from discussions with Transport for Wales that there is a strong business case for the delivery of a railway station and that the creation of "critical mass" through residential development around it has a key role in driving its delivery, as does the nationally significant economic role that the Bro Tathan Enterprise Zone has and the Aberthaw Green Energy Park will have. The proximity of St Athan to both of these hubs clearly contributes to its fundamental sustainability and suitability for growth whilst the further development of a critical mass of housing and employment generating uses will further support linkages between them and strengthen the business case for a new railway station at St Athan. This is reflected in TFW's 'Today, Tomorrow, Together: A Vision for Rail Across Wales and the Borders' which confirms that the delivery of St Athan Railway Station remains in TFW's pipeline which has been endorsed by the

Westminster Government.
4.4. The location that is identified on the Proposals Map is Transport for Wales' preferred location within the site and has been incorporated into the masterplanning approach which seeks to create a node around it by incorporating a bus interchange and a mix of uses.
4.5. At present, the Proposals Map identifies the location of the Railway Station using a red star which is positioned on the railway line itself but without the required land take not spatially being defined.
4.6. Whilst Hallam recognise that the exact land take required will need to be refined further through discussion with TFW, it may be the case that the mixed-use element on this portion of the site comes forward before the Railway Station.
4.7. The early delivery of these elements should be welcomed as clearly the mixed-use element both enhances the range of services and facilities in St Athan but also would mean that the Railway Station is integrated upon delivery.
4.8. On that basis, it is imperative that the safeguarding of land for the Transport Interchange is limited only to that land required to deliver the Transport Interchange and is done in such a way such the safeguarding does not sterilise non-transport related development from this portion of the site until the Railway Station has been delivered.
Gileston Road Junction, St Athan
4.9. Paragraphs 6.199 and 6.200 relate to the expectation that vehicle trips as a result of RLDP allocations in St Athan are anticipated to trigger the need to upgrade the Gileston Road Junction to a signal-controlled arrangement. This is informed by the conclusions of Table 3 of the Strategic Transport Assessment which forecasts that the junction will be operating above capacity during both the weekday AM and PM peak by the RLDP's end point.
4.10. Hallam note that Technical Note 08 of the Strategic Transport Assessment identifies that the improvements to the Gileston Road Junction are to be delivered by VoG and funded through financial contributions from seven sites that the RLDP proposes to allocate.
4.11. Improvements to this junction are to be funded by a number of sites; however it is unclear whether (and if so, when) forward funding will be secured by the Council and clearly there cannot be a situation where none of the sites can deliver homes until strategic highways works are funded / completed. We therefore seek further clarification over the phasing of these works and note that early delivery of homes ahead of strategic highway improvements is likely to be important for deliverability of each strategic site.
4.12. To respond to Hallam's above comments, one approach could be for references to highway improvement works to be entirely removed from this policy or, if they are to remain, that qualifying text is added to note that the need for and format of any improvements will be subject to detailed consideration at planning application stage and that such contributions must be justified in planning terms, particularly where (in the case of Pen Y Turnpike Road and Waycock Cross for Land to the West of St Athan), the distance from a site and the junction to be improved is significant and therefore thee number of vehicle trips that would be generated modest.
4.13. This aligns with Hallam's suggested approach to the specific wording of Policy HG1 KS5.

Policy CI1 (Open Space Provision)
5.1. This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.
5.2. Hallam note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.
5.3. Hallam is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter.

Policy CI3 (New Community Facilities)
6.1. As well as allocating land for five new or improved education developments, this policy safeguards 'Land South of the Railway Line, St Athan' for the delivery of a Welsh-medium secondary school.
6.2. This policy is clearly of interest to Hallam because Paragraph 6.250 places a requirement for the safeguarding of land on the northern side of the railway line on their Land to the West of St Athan Key Site for a footbridge to land on.
6.3. With the policy wording being intentionally light-touch, Paragraph 6.250 of the Deposit RLDP provides greater detail about the safeguarding of this land (and other paragraphs in the Deposit RLDP relate to other community facilities that Policy CI3 covers). It effectively does two things.
6.4. Firstly, it notes that the delivery of this school will require active travel improvements including the safeguarding of land for a pedestrian and cyclist footbridge over the railway line.
6.5. Secondly, it is clear that the safeguarding of this land is in response to a forecast increase in demand for Welsh-medium secondary school places across the whole of the VoG as a result of expanded capacity at Welsh-medium primary schools across the VoG. On this basis, it follows that this location has been selected as a preferred location because of its ability to serve the wider sub-region.
6.6. Hallam recognise that this site could be a suitable location for a Welsh Medium Secondary School and, as a principle, is agreeable to the safeguarding of land for the footbridge landing on the northern side of the railway line.
6.7. Paragraph 6.250 of the Deposit RLDP is clear that the delivery of a Welsh-Medium secondary school is in response to a regional / sub-regional demand rather than a local need as a result generated either by the development of Land West of St Athan or other emerging allocations within St Athan and it cannot be the case that Hallam are expected to make disproportionate contributions to either the delivery of the school or required active travel improvements just because they have control of the site or that it is next to the Key Site.

Policy CC1 (Residential Operational Net Zero Carbon Development)

7.1. The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) before the policy wording sets out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.
7.2. As a starting point, Hallam share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) can present challenges. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this will result in an uneven framework for housebuilders, significantly adding cost and reducing certainty.
7.3. The justification for using planning policy to set requirements exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.
7.4. There are two points to be made by Hallam here:
7.5. Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage that such an approach would not be sound. This Written Ministerial Statement was subject to an unsuccessful judicial review.
7.6. Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations. Where there are existing Local Plans in England that take this approach, they do not align with the Westminster Government's position and there will be no Local Plans emerging including such policies.
7.7. Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs (Bridgend and Merthyr Tydfil) do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound at Examination stage.
7.8. Secondly, Hallam have concerns with the approach that has been taken with regards to viability.
7.9. From Hallam's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.
7.10. As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated. This is important as it demonstrates that, whilst Hallam do not believe such a policy approach should be taken, the development of the site at the time of the completion of the Development Viability Model for the site is viable whilst meeting the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development).
7.11. Hallam's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. This concern is particularly exacerbated by the fact that, as recognised at Paragraph 6.47 of Background Paper 42 Viability Assessment, takes the lowest estimate for the works required to achieve these policy expectations, Savills' experience – both that of their development land team based in Wales and their environmental sustainability team based across England - is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.
7.12. Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy DNP3 (Glamorgan Heritage Coast)
8.1. This policy relates to the Glamorgan Heritage Coast, identifying a series of land uses that are permissible within the policy area before setting three tests that must be satisfied for development within the Glamorgan Heritage Coast to be permissible where there is an adverse environmental impact.
8.2. Hallam note that the 'Land South of the B4265, St Athan' portion of the land that they control is both proposed to be retained as part of the Glamorgan Heritage Coast (a continuation of the position taken in the adopted LDP) whilst also forming part of the Land to the West of St Athan Key Site where the masterplan at Figure 17 shows it as accommodating the potential new railway station and a mixed-use area (including car parking).
8.3. The relevant extract of the Proposals Map is replicated below:
8.4. The exact composition of the buildings proposed on this portion will require further refinement and will need to be driven by occupier requirements, but the masterplanning work undertaken by pad Design envisages that they could provide a mix of retail and food and drink uses most likely across some or all of the ground floor, alongside workshop, co-working or office incubator space at upper floor levels and perhaps at ground floor level. There could also be the potential for additional homes, likely in the form of apartments at upper floors, as part of a mix of uses. It is realistic therefore to anticipate that this portion of the site will accommodate buildings of up to three or four storeys with a high plot ratio to reflect the uses and supporting infrastructure that it is to accommodate.

8.5. Hallam's position is that the continued inclusion of this parcel of land as part of the wider Glamorgan Heritage Coast is inappropriate for two reasons.
8.6. Firstly, and its most basic level, the approach of allocating the site for development whilst retaining a designation that inherently seeks to restrict the type, form, and quantum of development, is wholly contradictory.
8.7. Designation of this portion of the site as part of the Glamorgan Heritage Coast will mean, given that the uses that Figure 17 envisages as being delivered on the site are not those that the first part of Policy DNP3 (Glamorgan Heritage Coast) allows for, any application for development will need to demonstrate that there is a compelling need for the development, that the benefits outweigh the harm, and that appropriate mitigation measures are in place. This the potential to prejudice its development or, at very least, greatly impact how it is developed whilst requiring.
8.8. Secondly, it is difficult to see how this land warrants ongoing inclusion within the designated Glamorgan Heritage Coast. This is something that is considered in more detail in the Review of Landscape Character and Visual Amenity (December 2022) prepared by FPCR and submitted as part of the Call for Sites (and also available as part of the consultation on the Deposit RLDP as a piece of Key Site Supporting Information). Paragraph 5.13 of the FPCR document concludes on this piece of land that:
'Through the fieldwork it is considered that the Site does not display any "special environmental qualities" identified by the Policy and plays no intrinsic role in the Policy designation, as it is effectively forms a rather ordinary grazing field. It is influenced by the urbanising elements of the adjacent B4265, the Railway Line, the Tarmac Cement works, and to some degree the built edge of St Athan. Furthermore, it is bound and contained by trees and woodland beside the railway line, which prevents wider intervisibility with the coastline.'
8.9. Taking the above together, Hallam suggest that the preparation of the RLDP provides the opportunity to define the extent of the Glamorgan Heritage Coast to respond to both the landscape value of certain sites but also the wider aspirations of the RLDP. If it is not within the gift of VoG to redefine the boundaries of the Glamorgan Heritage Coast through the RLDP then Hallam suggest that an additional element could be added to this policy to confirm that it does not apply to land which is allocated for development.

6765 Support

Document Element: SP2 – SETTLEMENT HIERARCHY
Respondent: Persimmon Homes (East Wales) [1068]
Agent: Boyer Planning

Summary:

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices

Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South

Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.

Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.
Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual
As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be

delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement
From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified "has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area." It also notes that this level of growth has been chosen so that it is "complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).".
Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.
In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.
Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.
Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing

infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car.

Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.

Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Policy SP5 – Creating Healthy & Inclusive Places and Spaces

Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019

should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private

vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and

therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.

On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.

Policy HG3 – Housing Led Redevelopment Opportunity

Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.

Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.

Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.

This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.

Policy SP7 – Affordable Housing Provision

In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.

As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.

National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.

To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.

Policy SP8 – Affordable Housing Requirements

Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.

On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Policy SP10 – Sustainable Transport

Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.

In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site

improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
Policy CI1 – Open Space Provision
Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.
The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.
Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.
The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.
Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority

areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.

Policy SP20 – Biodiversity and Ecosystem Resilience

In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Policy DNP8 – Severn Estuary Recreational Pressure

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.

From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could

introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Mr Ian Fairweather [1225]

Agent: Boyer Planning

Summary:

The importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan. Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to St Nicholas under Policy SP2 is not justified. Clearly there continues to be a disconnect between the identified role and function of St Nicholas, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements.

Full text:

The Spinney, St Nicholas (Site Ref: 460)
Boyer have prepared the following representation on behalf of Mr Fairweather in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021-2036 Deposit Plan Consultation.

A summary of our main representations is as follows:
• Significant concern is raised regarding the lack of residential allocations within the Minor Rural Settlements, in particular St Nicholas.
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance.
• Questions asked regarding the spatial distribution and the lack of other allocations to provide a range and choice of housing.
• Confirmation of the limited constraints for The Spinney, St Nicholas (Site Ref: 460).
• Review of the Candidate Site Assessment; and
• Need to review the Settlement Boundary of St Nicholas.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the main concern for Mr Fairweather is the proposed primary focus of housing growth within the Vale being within the Strategic Growth Area. Whilst it is understood and supported by Mr Fairweather that new housing developments would be concentrated in locations which are served by existing public transport routes and provide the opportunity to enhance sustainable transport connectivity, it is shortsighted to concentrate this growth specifically along the railway line. The justification being that those settlements identified as being 'Outside of the Strategic Growth Area' – including St Nicholas, are equally as important as those within. St Nicholas is a sustainable location and located on an important public transport route (A48) and is well served by bus transport.

The principle of locating development at sustainable settlement is supported, however Mr Fairweather considered that limiting development at suitable settlements outside the Strategic Growth Area is not the correct approach and that greater flexibility is required to deliver the housing need. Currently under Policies HG1 and HG4, the only allocations in any Minor Rural Settlements amount to 122 dwellings in total (excluding any from St Nicholas). This also needs to be considered in the context of the 1,303 dwellings expected from large and small windfall developments. Clearly there is a requirement to provide further allocations in sustainable Minor Rural settlements identified as being 'Outside of the Strategic Growth Area' – namely St Nicholas.

In context of above, Mr Fairweather strongly recommends that appropriate consideration is given to the widening of the Strategic Growth Areas to include St Nicholas as a sustainable settlement which is capable of accommodating a new allocation at The Spinney (Site Ref: 460).

SP2: Settlement Hierarchy
Mr Fairweather previously supported the identification of St Nicholas as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Cardiff to the east and access to Bridgend to the West. The Deposit Plan retains St Nicholas within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.

Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as St Nicholas, should be subject to such constrained growth.

In this context, Mr Fairweather highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all buildings upon the identified importance of Minor Rural Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As

drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to St Nicholas under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of St Nicholas, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, The Spinney, St Nicholas (Site Ref: 460) is considered to naturally round-off the existing boundary, enclosing the envelope of development, without encroaching or sprawling beyond the existing line of built form, in a sustainable location which can accommodate an appropriate allocation.

SP6: Housing Requirement
As per Mr Fairweather's previous comments to the Preferred Strategy, the concerns regarding a need for a higher housing level and the need for development to be appropriate placed in sustainable allocations in a settlement in which people want to live is still relevant.

Currently Policy SP6 establishes the overall housing requirement and applies a 10% flexibility allowance. The Policy suggests that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes and this will be delivered by:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments

As per previous representations, Mr Fairweather considers that it's important to take account of recent guidance provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan. For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
More recently in Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery.
Applying the same approach to other current Local Development Plans, it is evident that a flexible housing allowance above the current 10% threshold will be required. Having reviewed the Council's evidence base Mr Fairweather considered that a minimum allowance of 15% would be reflective of the County's growth aspirations and would seek an additional circa 400 dwellings (equating to a housing requirement of 9,074 dwellings inclusive of the 15% flexibility).

To accommodate this increased in flexibility allowance and over all housing numbers, it should be outlined that smaller sites typically deliver more quickly, are less infrastructure-dependent, and increase build-out rates through diversification. The Spinney represents precisely the type of deliverable site that should form part of an enhanced flexibility allowance.

Policy SP6 should therefore be amended to increase the flexibility margin to up to 15%, with consequential allocation of additional small and medium-sized sites.
HG1: Housing Allocations Table 3 spatial distribution
Mr Fairweather does not comment on any of the proposed housing allocations, however, does highlight that the delivery in incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements. Only 161 units are proposed on smaller allocated sites, equating to approximately 7% of newly allocated supply.
In the context of the above, there remains significant concern that the spatial strategy continues to exclude allocations within Minor Rural Settlements, including St Nicholas.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.

There is therefore a clear disconnect between the identified role and function of settlements such as St Nicholas and the absence of any allocated sites (excluding the affordable led schemes under Policy HG4) capable of delivering an appropriate range and choice of dwellings. The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.

This approach is inconsistent with the settlement's accessibility and functional role. St Nicholas is:
• Well connected to the A48 strategic highway network.

• Served by bus routes within close proximity to the site.
• Within commuting distance of Cardiff and Cowbridge.
• A sustainable and established residential community.

Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.
Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at The Spinney would represent proportionate growth consistent with the scale and character of the settlement.
HG4 – Affordable Housing Allocations

It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, but in the context of them being affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing to meet the affordable housing needs of the local community. Mr Fairweather has no objection in principle to this but does object to the fact that there is no development in St Nicholas (despite it being sustainably located on the A48).

Furthermore, The Spinney, St Nicholas (Site Ref: 460) proposes a 40% affordable housing provision which accords with Policy SP8 of the Deposit Plan. Should the Authority consider that the site is suitable for allocation under Policy HG4 then the provision can be amended to 50% to accord with the policy.

Candidate Site Response: The Spinney, St Nicholas (Site Ref: 460)
From a review of the Background Paper (BP18 a) - Candidate Site Assessment at Preferred Strategy Stage, we are aware that the candidate site The Spinney, St Nicholas (Site Ref: 460) has not progressed beyond Stage 2: Detailed Site Assessment: Site Characteristics and Physical Constraints.

The justification provided states that ‘The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area’. Whilst this is disputed and it is considered that the site should have progressed, it is important to highlight that of all the Candidate Sites within St Nicholas, The Spinney has the least issues raised.

Other sites within the assessment raised concerns regarding Best and Most Versatile Land, intrusion into the open countryside and the loss of a sites identified as providing important views. Ultimately, Site Ref: 460, is clearly the most appropriate site for any development within St Nicholas and with limited constraints raised.
Turning to the reasons for not taking the site forward, the following is reiterated in the context of the impact on the character and setting of the Conservation Area.

Conservation Area Impact
St Nicholas is described in the Conservation Area Appraisal and Management Plan as ‘a low density, linear village located on the A48’ and the candidate site is located towards the west of the village and lies partially within the current Conservation Area boundary. The Authority will be aware that the Conservation Area has been amended over the years to its current illogical designation regarding the Paddock area, similar to that of the Settlement Boundary.

The development of the Candidate Site is a clearly a logical and sensible infill development, which would have limited impact upon the Conservation Area. The majority of the site is already hidden from the A48 via mature vegetation and existing boundary features, and any proposed development would maintain this approach and minimise the visual appearance on the Conservation Area.
Listed buildings and other historic buildings of special interest are identified in the Conservation Area Appraisal as ‘County Treasures’. These are situated at the heart of the Conservation Area. The buildings and their settings establish a scale and density for the historic area of the village to the south of St Nicholas’ Church.

More modern development, away from the centre of the village at Ger-y-Llan to the northeast, Dyffryn Close to the southeast and Old Rectory Drive to the west are suburban in character with larger houses and generous gardens. These are all excluded from the Conservation Area and represent development at a lower density than the historic core of the village.

Whilst only a part of the Candidate Site is located within the Conservation Area, it has to be seen in the context of an appropriate infill site that links the southern part of the village with the more modern suburban type of development at

Old Rectory Drive to the west. More significantly, the site provides an opportunity for a development to make a positive contribution to the character and appearance of the Conservation Area as well as respect or enhance the special architectural or historic interest.

This can be achieved by providing a new front boundary to the site and houses with gardens, of the type identified in the Conservation Area Appraisal and Management Plan that help define the character of the village. Whilst the Candidate Site extends to the A48, this is to allow the appropriate minimal access junction, whilst the majority of the generous grass verge will be retained, meaning that development will be clearly set back a considerable distance from the road and the opposite pavement.

Thus, the development will be totally screened when travelling along the A48 and is therefore not considered to affect the views to the north of the site. The development will complement and enhance the character of the rural and built environment surrounding the site.
In line with the objectives of the St Nicholas Conservation Appraisal and Management Plan, the boundary treatments proposed will be sympathetic and in keeping with the surrounding area, such that they do not detract from the historic assets and desired lines of view. Again, whilst detailed design has not yet been progressed, any boundary treatments proposed will avoid the use of stained close boarded timber fencing, over-elaborate modern metal railings and gates. It is reiterated that the building line for the front of the development will not encroach any further forward that the existing boundary and will be designed to be innkeeping and not detract from the existing character of the Conservation Area. Moreover, the layout of the site has been designed in such a way that the spaciousness and green infrastructure is retained and enhanced from a redundant Paddock.

Furthermore, the characteristics that give the Conservation Area its special interest, as identified in the Conservation Area Appraisal and Management Plan have been used as references for the design of the illustrative site layout.

The proposal is to use local materials and design details designed to preserve or enhance the special interest of the Conservation Area. Limestone laid as rubble external walling, slate roofs and roadside walls of varying sizes predominate. More modern houses in the area are rendered and painted white. This, according to the Conservation Area Appraisal gives ‘some cohesiveness [to the area] despite their modern details’.

Elsewhere in the appraisal the village is described as having a ‘rural character’, a character that is reinforced by the existence of mature trees, singularly or in groups and simple pavements with narrow stone curves. The use of modern railings or timber fences are considered to be detrimental to the historic character of the conservation area.

Given the sites relationship with the Conservation Area, the proposal has been designed in to ensure that the development endeavours to protect, preserve and enhance the character of the area.

The site layout has been designed to avoid having the appearance of a suburban estate by providing a range of house types on plots that vary in size thereby maintaining the open structure of the conservation area as described. Furthermore, the existing boundaries to the east and west, which are subject to TPOs, will be retained and enhanced and not detract from the character of the Conservation Area.

The site marks a transition point between the western end of the linear historic core of the village and the lower density development at Old Rectory Drive.
The landscape proposals have been designed to include sustainable drainage, and the tree planting reflects the isolated trees or groups of trees referred to in the Conservation Area Appraisal as significant areas of character.

The illustrative site layout represents an appropriate scale of development and an efficient use of land and as such the proposed development will not have any detrimental impact upon the Conservation Area.
Deposit Plan Amendments
Settlement Boundary

Given the above and the further assessment below, the strong preference would be for the site to be allocated for residential development within St Nicholas. This would form a logical amendment to the Settlement Boundary to include the western parcel (former Paddock) of Candidate Site - The Spinney, St Nicholas (Site Ref: 460). The current Settlement Boundary is illogical as the site is surrounded by development on 3 boundaries and the simple rounding off along the southern boundary would allow for an appropriate windfall infill development.
Conservation Area

Given the above then it is considered that the Conservation Area boundary would need to be amended to reflect the allocation of the site.
These amendments would be required to the Deposit Proposals Map.

Site Assessment
The site was promoted through the Candidate Site process and assessed at Preferred Strategy stage. However, it is not allocated within the Deposit Plan and thus was not subject to updated reassessment as part of this stage of plan preparation.

For completeness, and in order to clearly demonstrate the limited and proportionate nature of the site's constraints, the previous site assessment summary table is reproduced below. This is included to highlight that the site performs favourably in sustainability and deliverability terms, and that the matters previously cited as constraints are capable of mitigation through design.

A table comparing an updated site assessment prepared by Boyer against the Council's assessment has been provided.

This representation, submitted on behalf of Mr Fairweather in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Significant concern remains regarding the absence of residential allocations within Minor Rural Settlements, particularly St Nicholas, and the continued reliance on a limited flexibility allowance under Policy HG1. An increased flexibility margin of up to 15% would necessitate the identification of additional sustainable and deliverable sites. Such growth should be directed, in part, toward appropriate locations within Minor Rural Settlements to ensure a genuine range and choice of housing and to support rural community sustainability.

It is further noted that the site performs favourably in the Council's Candidate Site Assessment, with limited constraints identified. The matters previously raised, including Conservation Area considerations, are capable of sensitive mitigation through design and have been subject to detailed review. There is no substantive evidence demonstrating that the site is unsuitable for development.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan. The Deposit Plan should therefore be amended to allocate Land adjoining The Spinney, St Nicholas (Site Ref: 460), or alternatively identify it as a reserve or flexibility site, in order to ensure the Plan is justified, effective and deliverable.

6845 Comment

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Taylor Wimpey [386]

Agent: Savills

Summary:

Taylor Wimpey support the conclusions of the Settlement Appraisal Review Background Paper which identifies Sully as a Primary Settlement, reflecting its important role in providing a level of housing growth, in addition to key local services and facilities. Within this Background Paper, Sully is recognised for its vital role as a sustainable community, scoring highly across all key principles in demonstrating its sustainability by providing for the day-to-day needs of its residents. Taylor Wimpey concur with the supporting evidence which reinforces Sully's importance within the settlement hierarchy.

Whilst Draft Policy SP2 presents a 'broad distribution of development within the Strategic Growth Area..', serious concerns continue to be raised around the level of growth around Barry and the emphasis placed on it as the focus for future development. Taylor Wimpey do not dispute the identification of Barry as a Key Settlement, given its position as the largest town within the VoG, however believe Barry should not remain the sole focus for growth where there are opportunities available around primary settlements located within the Strategic Growth Area.

Put another way, it seems perverse for the Deposit RLDP to direct no new growth to a Primary Settlement within the identified Strategic Growth Area.

Full text:

1. Introduction

1.1.1 Savills is instructed by Taylor Wimpey PLC ('Taylor Wimpey') to respond to the consultation on the Deposit Plan as part of the preparation of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').

1.1.2 The submission is made in the context of Taylor Wimpey's position as the promoter of Site ID 376 (Land West of Swanbridge Road, Phase 3). The site is being promoted for a residential development comprising of 260 homes.

1.1.3 Taylor Wimpey is one of the UK's leading national housebuilders, with extensive experience in delivering high-quality residential developments across a wide range of local authority areas. The company has an established presence within the VoG area. Taylor Wimpey is in the process of delivering Phase 1 of the site with development of Phase 2 close

to commencing to dovetail with the completion of Phase 1. Phase 3 would act as a logical extension to the site, effectively rounding off development in this part of Sully and dovetailing with Phase 2 which is anticipated to be completed in 2029.

1.1.4 The site was originally submitted as a candidate site as part of the Call for Candidate Sites stage in September 2022 by Taylor Wimpey. This was a comprehensive site submission demonstrating that the site was viable, deliverable and sustainable – the three tests for Candidate Sites to satisfy as set out in Paragraph 3.36 of the Development Plans Manual. The Candidate Site submission consisted of the following information:

• Archaeological Desk-based Assessment (prepared by RPS);
• Design Vision (prepared by Pegasus Group);
• Drainage Strategy & Flood Risk Assessment (prepared by Pheonix Design);
• Landscape Appraisal (prepared by Pegasus Group);
• Preliminary Ecological Appraisal (prepared by Soltys Brewster);
• High Level Viability Statement (prepared by Savills);
• Transport Technical Note (prepared by Vectos); and
• Supporting Statement (prepared by Savills).

1.1.5 Since then, and on behalf of Taylor Wimpey , Savills have also responded to the consultation on the Preferred Strategy in February 2024 as well as the Housing Growth in Barry consultation in July 2025 and the Housing Trajectory in October 2025.

1.1.6 This supporting statement is structured to initially comment on the approach taken by the VoG in assessing the Land West of Swanbridge Road, Phase 3 site before commenting on specific policies that are contained within the Deposit RLDP.

1.1.7 In general, Taylor Wimpey's position is that, at present, the Deposit RLDP is not sound but that it could be made sound through the amendments as suggested throughout this Statement.

2. Candidate Site Assessment Process and Integrated Sustainability Assessment
Introduction

2.1.1 Candidate sites are in essence assessed through two means – the Candidate Site Assessment Background Papers and the Integrated Sustainability Appraisal.

2.1.2 Taylor Wimpey's position is that both of these documents do not provide an adequate assessment of the Land West of Swanbridge Road, Phase 3 site.

2.1.3 Each is considered in turn below.

Candidate Site Assessment Process

2.1.4 All candidate sites have been assessed at Preferred Strategy stage (reported as Background Paper 18) and Deposit stage (reported as Background Paper 18a).

2.1.5 The reason for the Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site not being carried forward as part of these assessments was presented in Background Paper 18 at the time of publication of the Preferred Strategy with Backgropund Paper 18a providing no further site analysis. The reason for the site not progressing this stage of the Candidate Site assessment process is as follows:

"Development of the site would lead to a loss of the Best and Most Versatile Grade 3a agricultural land contrary to national policy."

2.1.6 Whilst parts of the site do constitute Best and Most Versatile (BMV) land, Taylor Wimpey's position is that there are compelling reasons relating to the site's context and how it is utilised that mean a more nuanced position needs to be taken. Without such nuance, the RLDP risks not allocating a site that, whilst perhaps containing BMV, is otherwise suitable for development and more suitable for development then sites that the Deposit RLDP proposes to instead allocate.

2.1.7 Included at Appendix A, and included as part of Taylor Wimpey's representations on the Preferred Strategy and the Housing Growth in Barry consultations, is an Agricultural Assessment prepared by The Andersons Centre.

2.1.8 The key conclusions from this Assessment are that:

• The site is farmed by a tenant farmer whose main base is approximately 12km away which presents logistical and practical challenges. These challenges are exacerbated by the lack of farm buildings and the fact that there is no mains electricity;

• The site forms part of a wider 230 acre farm and so the cessation of agricultural practices on this parcel will not, by virtue of its size, prejudice the continued farming of the wider land parcel;

• The tenant farmer farms approximately 3,000 acres of land and so the loss of the ability to farm this parcel will have a negligible impact on the continuation of their agricultural operations;

• The site is bound on two sides by existing or permitted housing, on a third boundary by a railway line, and on its eastern boundary by a road; and

• Farming of the land does not support a high level of employment and if the land was lost for development, 0.15 of a full time labour unit's equivalent work would be lost.

2.1.9 Taking the above together, the conclusion needs to be reached that the site's size and context presents challenges for farming and that the development of Phase 2 by Taylor Wimpey has the potential to exacerbate these challenges. Aligned to this, the level of employment that the farming of the site supports is negligible and the cessation of farming of this particular parcel of land will not materially impact either the continued farming operations of the wider farm that the land sits apart of or the tenant farmer that farms the land.

Integrated Sustainability Appraisal

2.1.10 The Initial Integrated Sustainability Appraisal undertaken at Preferred Strategy stage provides a GIS based appraisal of all sites against 17 objectives. Inherently the Initial Integrated Sustainability Appraisal can be a bit of a blunt tool but Taylor Wimpey's position is that the site performs better against a substantial number of the 17 objectives than the current assessment.

2.1.11 Included at Appendix B is an assessment undertaken by Taylor Wimpey which provides commentary against certain objectives and suggests why the site performs considerably better than forecast in the Initial Integrated Sustainability Appraisal.

2.1.12 A summary of this is presented below:
Table 1 Summary of ISA and Suggested Taylor Wimpey Approach

2.1.13 Taylor Wimpey's position here is clear – the inadequacy of the Integrated Sustainability Appraisal as a tool for assessing candidate sites can only be appropriate where the Integrated Sustainability Appraisal is done correctly and considers the mitigation measures that a candidate site submission proposed to put in place. Without this, the Integrated Sustainability Appraisal risks a situation – as Taylor Wimpey suggest has been the case in Policy HG1 KS1 – where a Key Site is selected in favour of alternative sites that are better performing.

3. Deposit Plan

3.1 Introduction

3.1.1 The following section of this Statement comments on the relevant Key Themes, Strategic Objectives and draft Policy Framework forming part of the Deposit Plan Consultation.

3.1.2 The Policy Framework has been reviewed with comments provided on only those policies considered to be of most relevance to Land West of Swanbridge Road (Phase 3), Sully. The position on individual policies contained within the Deposit RLDP are summarised in the table below:

Table 2 Taylor Wimpey Policy Position

Relevant Policy Support or Object
SP1 Sustainable Growth Strategy - Object
SP2 Settlement Hierarchy - Support
SP 6 Housing Requirement - Object
HG1 Housing Allocations: HG1 KS1 – Land at North West Barry - Object
TR1 Transport Proposals: TR1(2) Active Travel Route Sully to Cosmeston - Support
TR1 Transport Proposals: TR1(6) Highway Improvement Works Weycock Cross Roundabout - Object
CC1 Residential Operational Net Zero Carbon Development - Object
CI1 Open Space Provision - Clarity required
DNP5 Environmental Protection - Object as currently worded

3.2 Key Themes and Strategic Objectives

Homes For All

3.2.1 As noted in paragraphs 3.17 and 3.18 of the Deposit Plan the VoG has the highest affordability ratio in Wales with average house prices 9.7 times the average workplace earnings compared to the Welsh average, giving rise to a

significant need for affordable homes which is under significant pressure. This highlights the ever increasing need for sufficient high quality housing, which Taylor Wimpey are committed to provide and supply the mix, type and tenure of housing needed within the local authority's growing population.

Placemaking

3.2.2 Taylor Wimpey embed strong placemaking standards across their developments as detailed within their Placemaking Charter. Taylor Wimpey consider Land West of Swanbridge Road (Phase 3) to present an opportunity to provide a comprehensive residential development that is accessible and well-connected with the existing settlement of Sully and compliments the earlier phases of development. As demonstrated in the earlier phases of development, the Site offers a sustainable location for future growth with easy access to a range of services and facilities in Sully.

Protecting and Enhancing the Natural Environment

3.2.3 Taylor Wimpey support the VoG's commitment to protect and enhance the natural environment through the integration of green/blue infrastructure network and the sustainable management of resources within the VoG. However where Objective 5 seeks to safeguard land from inappropriate development, proposals must be subject to the relevant planning balance giving weight to the surrounding land use and appropriateness of safeguarding agricultural land that would otherwise be unconstrained and considered suitable for development given the outstanding need for housing.

Promoting Active and Sustainable Travel Choices

3.2.4 Taylor Wimpey support the promotion of sustainable travel and active modes of transport, including the provision of designated active travel routes that improve the connectivity between primary and key settlements, such as the Sully to Cosmeston active travel route.

3.2.5 As demonstrated in the earlier phases of Land West of Swanbridge Road, Taylor Wimpey support the promotion of active travel within new developments and provide opportunities for residents to easily engage with active travel.

3.3 Policy Framework

Policy SP1 Sustainable Growth Strategy

3.3.1 Taylor Wimpey's comments on this policy relate to the sustainable growth strategy in so much as it relates to the spatial strategy rather than the housing requirement that the RLDP adopts with further comments on the housing requirement provided in connection to Policy SP6 (Housing Requirement).

3.3.2 Taylor Wimpey appreciate the need to balance the ten strategic objectives against the need for growth and protection of the VoG's natural and built environment, and strongly support the strategic objective to provide homes for all. Taylor Wimpey maintain their position on the proposed growth strategy that has been established within earlier consultation responses submitted throughout the RLDP process, including the most recent consultation on 'Growth Options in Barry'.

3.3.3 Taylor Wimpey consider that to date the growth strategy has placed disproportionate emphasis on identifying an alternative site within Barry, rather than giving due consideration to potential sites in nearby high-performing settlements such as Sully. Taylor Wimpey therefore strongly encourage the VoG to widen the search for additional allocations beyond the administrative boundary of Barry Town Council and to consider locations that represent a logical and sustainable extension to neighbouring primary settlements that are located within the Strategic Growth Area, including Sully.

3.3.4 The six key elements of the Sustainable Growth Strategy are noted and Taylor Wimpey support a spatial strategy that locates major new development for the delivery of sustainable housing growth in appropriate locations, such as Sully, that are supported by the relevant infrastructure, services and facilities. Providing new homes within Phase 3 aligns with the Strategic Growth Area identified within the RLDP Strategy which forms the primary focus for housing growth.

3.3.5 Policy SPG1 continues to identify Sully as a location where new housing development will be concentrated, therefore establishing a principle of development for Phase 3 and help to further align the provision of new housing with the existing facilities of Sully, reducing the need to travel. Sully represents an inherently sustainable location for future growth and aligns well with the Sustainable Transport Oriented Growth Option. As identified in the Deposit RLDP, Sully is classified as a Primary Settlement and performs a complementary role to Barry as a key centre. Its position within the Strategic Growth Area further indicates that an appropriate level of development at Sully would be acceptable, with both existing housing delivery and the current allocation at Swanbridge Road supporting its established role.
3.3.6 With existing development ongoing to the north of the Site, at Phases 1 and 2 of Land West of Swanbridge Road, Phase 3 is considered to provide an appropriate level of growth in a sustainable location that would form a logical extension to existing allocations. The sustainability and suitability of Sully to accommodate residential development is reinforced by the allocation of 500 dwellings under Policy MG2(37) ('Land West of Swanbridge Road, Sully') on land directly north of the site promoted by Taylor Wimpey. The progression of this location into a phase 3 development would continue to strengthen Sully's function as a primary settlement and would constitute a logical and coherent extension to

the existing built form.

Figure 1 Extract of Growth Strategy

3.3.7 Taylor Wimpey appreciate the aspirations of the Council to deliver housing to meet the identified future housing needs of the VoG and wider growth aspirations of the South East Wales Region at a strategic level. Taylor Wimpey support the revised strategy moving away from North East Barry, however maintain the position that this level of growth should be re-allocated to those locations that are most suitable for growth, including sustainable settlements outside of Barry. Growth should not be focuses solely on Barry.

Policy SP2 Settlement Hierarchy

3.3.8 Taylor Wimpey support the conclusions of the Settlement Appraisal Review Background Paper which identifies Sully as a Primary Settlement, reflecting its important role in providing a level of housing growth, in addition to key local services and facilities. Within this Background Paper, Sully is recognised for its vital role as a sustainable community, scoring highly across all key principles in demonstrating its sustainability by providing for the day-to-day needs of its residents. Taylor Wimpey concur with the supporting evidence which reinforces Sully's importance within the settlement hierarchy.

3.3.9 Whilst Draft Policy SP2 presents a 'broad distribution of development within the Strategic Growth Area..', serious concerns continue to be raised around the level of growth around Barry and the emphasis placed on it as the focus for future development. Taylor Wimpey do not dispute the identification of Barry as a Key Settlement, given its position as the largest town within the VoG, however believe Barry should not remain the sole focus for growth where there are opportunities available around primary settlements located within the Strategic Growth Area.

3.3.10 Put another way, it seems perverse for the Deposit RLDP to direct no new growth to a Primary Settlement within the identified Strategic Growth Area.

Policy SP 6 Housing Requirement

3.3.11 The purpose of this policy is to set the housing requirement and then identify the components of supply that are anticipated to meet this housing requirement. A number of Background Papers (nos. BP7, BP8, BP8A, ad BP9A) underpin the approach that is taken. Taylor Wimpey have a number of comments to make on the approach taken in this policy.

Housing Requirement

3.3.12 The approach taken in the Deposit RLDP, as with the Preferred Strategy beforehand, is for the housing requirement to make use of a 10 year dwelling-led scenario, an approach that reflects past completions and looks to extrapolate this forward over the lifetime of the RLDP.

3.3.13 Taylor Wimpey provided detailed commentary on the proposed housing requirement in their comments on the Preferred Strategy but note that Welsh Government have subsequently provided their comments on the Preferred Strategy raising no objection with the housing requirement proposed to be taken.

3.3.14 Taylor Wimpey's position though remains – if a dwelling-led scenario is to be used to determine the housing requirement then it needs to have a far shorter scenario length then 10 years as the first three years of the 10 year period selected were when supply was suppressed as a result of the current LDP not having been adopted.

3.3.15 That said, there is a clear contextual change since the Preferred Strategy was adopted, this being the publication of the 2022-based household projections have been published. Table 5 of Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections provides a comparison of the 2022-based projections with the 2018-based projections and the Deposit RLDP's housing requirement. A simplified version of this table is shown overleaf:

Table 3 RLDP Housing Requirement
Scenario Housing Requirement
RLDP 7,587
2018-based projections 6,214
2022-based projections 9,623

3.3.16 This is important as Paragraph 4.2.6 of PWW states that:

'The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans.'

3.3.17 The proposed approach of continuing to use the 10 year dwelling-led scenario, as a methodology, clearly does not do this.

3.3.18 The approach of using the 2022-based household projections would comply with the aspirations of PPW. Taylor Wimpey's position is that the commentary provided in the Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections for not using 2022-based projections is wholly inadequate and that these projections should be used.

Flexibility Allowance

3.3.19 Paragraph 5.58 of Edition 3 the Development Plans Manual (March 2020) makes it clear that there is a requirement for a flexibility allowance to be added on top of the housing requirement to derive the number of homes the RLDP should plan for. This is in the interest of ensuring that sufficient housing is delivered in the event of some allocated sites either not delivering in their entirety or delivering less homes than anticipated. Paragraph 5.59 of the Manual clarifies that the extent of the flexibility allowance should be informed by local issues with 10% as a starting point (i.e. as the minimum).

3.3.20 The Adopted Local Development Plan (ALDP) applies a 10% flexibility allowance on top of the housing requirement for 9,460 homes so that provision is made for 10,408 homes.

3.3.21 Paragraph 1.2.34 of the Annual Monitoring Report 2024-2025 provides a comparison of the number of homes that have been completed and the level of completions that the ALDP anticipates. This shows that 6,999 homes have been delivered up to 1st April 2025 against a cumulative dwelling target of 8,829 homes, representing a shortfall of 20.7%.

3.3.22 Taylor Wimpey's point here is that the ALDP's flexibility allowance of 10% is insufficient to ensure that the ALDP's housing requirement is actually being delivered. This is clear evidence that a higher flexibility allowance should be used for the RLDP. Although for different reasons, but following a direction from the Welsh Government Planning Inspector, Bridgend County Borough Council has increased its flexibility allowance to 20% and, it is considered that such a buffer is appropriate for the VoG's RLDP.

Non-Delivery Allowance on Land Bank

3.3.23 Line C of Table 2 of the Preferred Strategy relates to those sites that either benefit from planning permission or are subject to a resolution to grant planning permission subject to planning permission. Combined, these sites are identified as having capacity for 1,860 homes.

3.3.24 The current approach, which assumes that all other sites which are under construction or sites where there is either a planning permission in place or sites where there is a resolution to grant planning permission subject to the signing of a Section 106 agreement will be completed in full, causes concern for Taylor Wimpey.

3.3.25 There are multiple reasons why homes that benefit from either planning permission or a resolution to grant planning may not be delivered. These relate to viability, but also to specific site constraints and landowner intentions.

3.3.26 A point that is separate, but inherently linked, to the above is that often the capacity of a site for which reserved matters approval is sought is less than that permitted at outline stage. Requirements for SAB approval and the demonstration of a biodiversity net benefit, for example, reduce the capacity of a site at detailed design stage but are often not factored in at outline stage, particularly where the outline application is not progressed by a housebuilder.

3.3.27 Research undertaken by the Local Government Association for England (no such data is available for Wales) suggests that, between 2010/2011 and 2019/2020 a total of 2,782,300 dwelling were granted planning permission whilst there were only 1,627,730 completions. This means that during this period just 58.5% of those homes which were granted planning permission were completed.

3.3.28 Taylor Wimpey is not suggesting that applying a discount of 41.5% is necessarily correct and the above is both from England and a few years out of date but the need for a discount that relates specifically to Line C is very clear.

3.3.29 It's difficult to know what this figure should be but Taylor Wimpey suggest that a 20% figure is used to reflect the flexibility allowance.

Windfall Allowances

3.3.30 The approach taken in the Deposit RLDP is to assume that 1,303 homes will be delivered across Windfall Sites. This has been calculated on the basis of previous completion delivered as windfalls.

3.3.31 Taylor Wimpey's concern is that the delivery of homes on Windfall Sites inherently becomes more challenging over time as the easier to develop sites have been delivered and the buildings and land that hasn't been developed is subject to increasing levels of policy protection. The approach taken by Cardiff Council in their Deposit RLDP is to assume that 75% of the 10 year average Windfall Sites will be delivered and such an approach seems entirely appropriate in this case.

3.3.32 An Urban Capacity Study (October 2023) prepared by the VoG, seeks to corroborate this by identifying 2,627

homes that could be delivered across the VoG. Whilst the windfall allowances would be less than the suggested urban capacity, this shouldn't be seen as problematic or as a conflict as the purpose of the Urban Capacity Study is, as the name suggests, just to identify sites which may have capacity. It doesn't account for land ownership (and whether the land owners have aspirations to dispose of the site) or development viability. In addition, the approach taken to site capacity to is to assume a density based on site type but it does this without an appreciation of site constraints and is based on the gross rather than net area.

Rolled Forward Sites

3.3.33 Taylor Wimpey have concerns with the approach that is taken in Table 2 of the Deposit RLDP which identifies allocations for 959 homes that are to be rolled over from the ALDP to the RLDP.

3.3.34 Concerns are raised around two sites in particular - Land to the west of Pencoedtre Lane, Barry and Land between new Northern Access Road and Eglwys Brewis Road, These sites are allocated in the ALDP but have failed to be delivered. Given the longstanding period during which there has been clear policy support for development but no completions, it follows that there are serious concerns around the deliverability of these two sites which, together, are allocated for 370 homes.

3.3.35 The failure to deliver these dwellings is due to a number of factors which are detailed in Taylor Wimpey's Preferred Strategy consultation response, which questions whether these sites will deliver at all or at a significantly reduced capacity due to the following reasons:

- Viability constraints;
- Site specific constraints;
- Landowner intentions;
- Requirements for SAB approval; and
- Biodiversity net benefit;

3.3.36 Whilst it is recognised that there may be policy support for the delivery of these two sites, there deliverability is clearly uncertain and they should be removed from Table 2.

Conclusion

3.3.37 The following table summarises the approach previously proposed in the Deposit RLDP and compares it to the amendments suggested by Taylor Wimpey in the preceding sections of this Statement.

Table 4 Deposit RLDP Housing Supply and Taylor Wimpey's Suggested Approach

Housing Supply - Deposit Plan (December 2025)	Taylor Wimpey Suggested Approach (March 2026)
Housing Requirement	7,890	9,623
Flexibility Allowance	10%	20%
Flexibility Allowance –	770	1,925
Housing Requirement + Flexibility Allowance	8,660	11,548
A – Completions	1,747	1,747
B – Units Under Construction	313	313
C and D- Units with Planning Permission Minus Non-Delivery Allowance	1,777	1,488
Existing Supply	3,827	3,548
E – Large Windfall Sites	720	540
F – Small Windfall Sites	583	438
E+ F Total Windfall Allowance	1,303	978
RLDP Allocations	3,520	3,150

3.3.38 The conclusion reached in Taylor Wimpey's analysis is that, as a result of both the suggested housing requirement and flexibility allowance combined with Taylor Wimpey's comments on the components of supply, the Deposit RLDP needs to find allocations to deliver a further 3,872 homes.

Policy HG1 KS1 – Land at North West Barry

3.3.39 Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. Taylor Wimpey has provided comments on the housing requirement that is set in the RLDP and the components of supply that are anticipated to meet it in the proceeding sections of this Statement.

3.3.40 As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.

3.3.41 There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered

and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.

3.3.42 Policy HG1 KS1 proposes to allocate the site known as 'Land at North West Barry'.

3.3.43 The proposed allocation of this site follows a consultation – entitled 'Housing Growth in Barry' - undertaken by the VoG in July 2025 which proposed to allocate three sites in Barry as an alternative to the North East Barry site that was identified as a Key Site in the Preferred Strategy but was considered to no longer be deliverable.

3.3.44 Taylor Wimpey responded as part of the 'Housing Growth in Barry' consultation, supporting the removal of North East Barry as a Key Site but raising serious concerns with the proposed allocation of 'Land at North West Barry' as an alternative.
3.3.45 These concerns remain and Taylor Wimpey strongly consider there need to be other alternative sites – such as Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) - within nearby settlements that perform better than the Land at North West Barry site and should be allocated for housing.
3.3.46 To support this conclusion, Taylor Wimpey has undertaken a review of the Integrated Sustainability Appraisal (ISA) which provides a scoring of different candidate sites against the 17 objectives as well as considering and comparing the sustainability and accessibility of the two sites.

Integrated Sustainability Appraisal

3.3.47 The below table provides a comparison of how the Integrated Sustainability Appraisal scores Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) compared to the Land at North West Barry site. Two different comparisons are provided – one which compares the actual scoring in the ISA and a second which compares the two sites following Taylor Wimpey's suggested scoring which is included as Appendix A.

3.3.48 These tables clearly highlight where the subject site out performs North West Barry across numerous objectives.

Table 5 Comparison of Phase 3 Land West of Swanbridge Road (Site ID 376) and North West Barry (Site ID 490) ISA performance

3.3.49 From an initial review, the Integrated Sustainability Appraisal shows that Land West of Swanbridge significantly outperforms North West Barry in terms of the number of significantly positive scores '++' and the number of '—' scores. To this end the subject site provides clear advantages above and beyond North West Barry in terms of homes, health, and transport. As such Land West of Swanbridge is considered to have the capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge; The site is within 800m of a health service and an active travel route; and, The site is within close proximity (≤800m) to a railway station or bus stop, town/ retail centre and an active travel route. Taylor Wimpey consider this assessment should go further to recognise the associated benefits to the leisure than be provided by the site's development.

3.3.50 Following Taylor Wimpey's re-assessment of the site against the Integrated Sustainability Appraisal ISA objectives it is also considered to obtain notably more positive '+' scores than North West Barry. It is also worth noting that North West Barry has more unknown impacts than Land West of Swanbridge which introduces a level of uncertainty around its potential for further negative impacts. Moreover, North West Barry scores a significant number of negative impacts across the ISA, with the extension site obtaining double the amount than Land West of Swanbridge Road.

3.3.51 Taylor Wimpey's position is that it would be unsound to allocate a site that performs considerably poorer in the Integrated Sustainability Appraisal than a site that is not proposed to be allocated.

Accessibility and Sustainability

3.3.52 SLR Consulting have prepared an updated document demonstrating the Site's sustainability credentials and providing a detailed overview of existing and future active travel and public transport infrastructure. This is included as Appendix C.

3.3.53 As a starting point, it considers those services within Sully. In terms of local amenities, the population size of Sully, naturally benefits from a good range of local amenities and services, and therefore it is anticipated that a high proportion of future residents' day-to-day journeys would be contained within the village and undertaken via walking or cycling. The Walking Catchment Map prepared by SLR demonstrates this and illustrates services within walking distance from the Site.

3.3.54 The proposed development benefits from local existing and future / planned infrastructure which will help support travel by sustainable modes such as walking, cycling and public transport. The Site falls within the less than 15 minutes Public Transport Catchment for bus and rail services. The Site is supported by the existing bus network, connecting Sully with Barry, Penarth and Cardiff – the nearest bus stop approximately 400m from the centre of the site; Moreover the Site is within proximity to Cadoxton and Penarth railway stations which have regular services in each direction in addition to the existing walking and cycling infrastructure in and around Sully.

3.3.55 The future accessibility of the Site will be further enhanced through the ongoing and planned South Wales Metro improvements, future active travel routes and the proposed Sully to Penarth mixed use link. The below figure shows several newly proposed active travel routes running close to the site including a new walking / cycling route along Swanbridge Road. Planning applications are now being submitted to support the delivery of these new active travel links. In March 2025 a planning application was submitted proposing a new route between Palmerstown and Dinas Powys.

3.4 SLR have undertaken further assessment work comparing the sustainability credentials of Land West of Swanbridge Road to Land North West of Barry. Land North West of Barry, is separated from the existing built-up area by the B4266 Pontypridd Road where the eastern and southern boundaries abut residential properties. As such, the proposed access for all modes would be taken from the A4226 Port Road West. The A4226 and B4266 can be a barrier to the promotion of active travel in that they facilitate vehicular travel and do not provide an attractive environment for pedestrians.

3.5 Furthermore, Land North West of Barry is on the fringes of Barry and had few if any facilities within a 10 minute walk, other than bus stops. In comparison, Land West of Swanbridge Road in Sully benefits from its proximity to the High Street in Sully and the services there.

3.6 The below table demonstrates differences in accessibility to amenities between the two sites, where Land West of Swanbridge Road presents a more favourable location for future development.

Table 6 Comparison of Local Facilities Between Land North West of Barry (Site ID 449) and Land West of Swanbridge Road (Phase 3) (Site ID 376)

3.7 Whilst the walking distance shown from Land North West of Barry to the nearest bus stop is slightly less than the Swanbridge Road Site, it should be noted that the bus services that can be accessed from Sully are more frequent and more direct than those which can be accessed from Land North West of Barry.

Conclusion

3.8 Taking the above together, the conclusion Taylor Wimepy reach is that their Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site performs more strongly than the Land North West of Barry site.

Policy TR1 Transport Proposals

3.9 The draft transport proposals contained within the Deposit RLDP have been reviewed with the following proposals considered to be pertinent to the Site and draft residential allocations.

TR 1 (2) Active Travel Route: Sully to Cosmeston

3.10 Taylor Wimpey support the designation of an active travel route connection the eastern side of Sully with Cosmeston in the north-east. Most notably the proposed route will pass Swanbridge Road which provides direct access to Land West of Swanbridge Road Site, with Phase 3 in close proximity to the travel route. The proposal would further enhance the accessibility and sustainability of the Site as a logical extension for residential development in Sully.

Figure 4 Extract of Deposit RLDP Proposals Map with Land West of Swanbridge Road (Phase 3) Identified

TR1 (6) Highway Improvement works: Weycock Cross Roundabout, Barry

3.11 Taylor Wimpey raise concerns around the proposed works at the Wyecock Cross Roundabout, compared to the other improvement works proposed. As noted in the Deposit RLDP, this roundabout forms a key connection within the wider strategic highway network and therefore of high importance for the local area and surrounding communities. The proposed options presented within the Deposit RLDP provide little certainty of the scope of works required with no preferred option identified. This raises concerns around the impacts of the highway improvements on the deliverability of the adjacent draft allocation of North West Barry. The same concerns arise when considering the roundabout improvement works in combination with the proposed access strategy contained within North West Barry's supporting information package. The proposed road widening measures (c.11m increase) required to make the draft allocation accessible would have a significant impact on the wider transport network at this strategic junction.

Policy CC1 (Residential Operational Net Zero Carbon Development)

3.12 The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) then setting out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.

3.13 As a starting point, Taylor Wimpey share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) is not appropriate. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this results to an uneven framework for housebuilders, significantly adding cost and reducing certainty.

3.14 The justification for exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.

3.15 There are two points to be made here:

3.16 Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage. This Written Ministerial Statement was subject to a judicial review which was dismissed with the position taken in it found to be legally sound.

3.17 Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations.

3.18 Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound.

3.19 Secondly, Taylor Wimpey have concerns with the approach that has been taken with regards to viability.

3.20 From Taylor Wimpey's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.

3.21 As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated.

3.22 Taylor Wimpey's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. Savills' experience is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.

3.23 Taylor Wimpey's other concern with this approach is that the figure assumed as being required to achieve the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is driven from a Cost Assessment report published in January 2024. With the Background Paper 9A Housing Land Supply and Housing Trajectory not forecasting first completion onsite until 2028/2029, there is likely to be a period of approximately five years from the establishment of the figure for delivering the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) and when the first units would be delivered onsite.

3.24 Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy CI1 (Open Space Provision)

3.25 This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.

3.26 Taylor Wimpey note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.

3.27 Taylor Wimpey is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter, Policy DNP5 Environmental Protection

3.28 Taylor Wimpey consider the inclusion of 'the loss of the best and most versatile agricultural land' to be at odds with the other elements listed, where unlike the others mentioned, the loss of agricultural land would have limited, if any, impact on people, residential amenity and property.

3.29 It is acknowledged that the loss of BMV agricultural land may impact the VoG's overall amount of high quality agricultural land, however this should be assessed against the existing high level of BMV agricultural land within the County. The extent to which its loss is considered "unacceptable" should be subject to the planning balance against the overriding need for affordable housing and local housing need. Consideration towards the farming business case and economic viability are also required within the planning balance. In the case of Land West of Swanbridge Road, the loss of BMV agricultural land remains the only constraint that cannot be overcome, as noted in the Candidate Site Assessment. Whilst the loss of high quality agricultural land should be avoided, Taylor Wimpey consider that where the merits of the Site are overwhelmingly in favour for sustainable residential development in a suitable and logical location, Policy DNP5 should not stand in the way of housing delivery.

3.30 Whilst Taylor Wimpey support the clause within the draft policy: "Where impacts are identified the Council will require applicants to demonstrate that appropriate measures can be taken to minimise the impact identified to an acceptable level. Planning conditions may be imposed, or legal obligation entered into, to secure any necessary mitigation and monitoring processes." However, in the context of BMV agricultural land, it is not clear how the mitigating measures, in the form of planning conditions or legal obligations, can be applied. This reinforces the earlier view that the inclusion of 'the loss of the best and most versatile agricultural land', as currently worded within the draft policy, is at odds with the other elements listed where mitigation strategies for pollution can be suitably conditioned.

Document Element: SP2 – SETTLEMENT HIERARCHY
Respondent: Mr Andrew Raymond [1170]
Agent: Boyer Planning

Summary:

Support for the identification of Colwinston as a Minor Rural Settlement and acknowledgement of its capacity to accommodate proportionate and sustainable growth. However, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as Colwinston, should be subject to such constrained growth.

There continues to be a disconnect between the identified role and function of Colwinston, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. A modest allocation in Colwinston (Candidate Site 409) would represent proportionate growth that reflects the scale and character of the settlement. The current approach within Policy SP2 risks constraining flexibility within the spatial strategy and limiting opportunities to support sustainable rural communities.

Full text:

Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409)
Boyer have prepared the following representation on behalf of Andrew Raymond regarding their land interests associated with Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021– 2036 consultation.

A summary of the main representations are as follows:
• Concern regarding the absence of proportionate residential growth opportunities within rural settlements such as Colwinston;
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance within the housing trajectory;
• Questions regarding the spatial distribution of development and the limited range and choice of sites outside the Strategic Growth Area;
• Confirmation that Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a logical and sustainable opportunity for modest residential development;
• Review of the Candidate Site Assessment process and the current status of the site within the Candidate Site Register; and

• The need to consider appropriate settlement boundary adjustments to facilitate proportionate growth in sustainable rural settlements.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the principal concern in relation to the site promotion is the concentration of the majority of future housing growth within the defined Strategic Growth Area.
It is understood and supported that new housing development should be located in sustainable locations with access to public transport and services. However, the approach adopted within the RLDP places an overly narrow emphasis on growth within the Strategic Growth Area, primarily focused along rail corridors. This approach risks overlooking other sustainable rural settlements which also demonstrate appropriate connectivity and capacity to accommodate proportionate growth.

Settlements outside the Strategic Growth Area continue to perform an important role within the Vale's settlement hierarchy and rural economy. Villages such as Colwinston provide an established residential community and contribute to the vitality and sustainability of rural areas. Restricting opportunities for modest growth within such settlements risks undermining the long-term sustainability of rural communities.

The principle of directing development to sustainable settlements is supported. However, limiting development opportunities exclusively within the Strategic Growth Area is not considered to represent the most balanced or flexible spatial strategy. Greater flexibility should be introduced to allow appropriate small-scale allocations within sustainable rural settlements.

In this context, Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a sustainable opportunity for a modest residential development that would align with the scale and character of the settlement. The site lies adjacent to existing built form and would represent a logical and contained extension to the village.
SP2: Settlement Hierarchy

Mr Raymond supports the identification of Colwinston as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Bridgend to the west and Cowbridge, Barry and Cardiff to the east. The Deposit Plan retains Colwinston within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.
Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as Colwinston, should be subject to such constrained growth.

In this context, Mr Raymond highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all building upon the identified importance of Minor Rual Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to Colwinston under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of Colwinston, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, a modest allocation at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) would represent proportionate growth that reflects the scale and character of the settlement. The site sits adjacent to existing development and would consolidate the existing settlement pattern without resulting in sprawl into the open countryside.

The current approach within Policy SP2 risks constraining flexibility within the spatial strategy and limiting opportunities to support sustainable rural communities.

SP6: Housing Requirement
Concerns are raised regarding the overall housing requirement and the level of flexibility incorporated within the Plan.

Policy SP6 currently establishes a housing requirement of 7,890 dwellings over the Plan period and includes a flexibility allowance of 10%, resulting in an overall provision of 8,660 dwellings.
The proposed supply is anticipated to be delivered through:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments
Whilst the inclusion of a flexibility allowance is supported, it is considered that a 10% allowance may not be sufficient to ensure resilience within the housing trajectory.
Recent experience from other Local Development Plans across Wales has demonstrated the importance of incorporating higher flexibility allowances to account for delivery uncertainty, infrastructure constraints and potential delays to larger strategic sites.

For example, other authorities have incorporated flexibility allowances in excess of the standard 10% to ensure the robustness of their housing supply and to provide a greater degree of adaptability should circumstances change during the Plan period.

In this context, it is considered that the Vale of Glamorgan RLDP should incorporate a flexibility allowance of at least 15%. This would provide additional resilience within the housing trajectory and reduce reliance on a limited number of larger strategic allocations.
Smaller sites such as Candidate Site 409 at Waterton Lodge, Colwinston are particularly valuable in this context. Smaller sites are typically:
• More deliverable in the short term
• Less dependent on major infrastructure investment
• Capable of contributing to early housing delivery
• Able to increase overall build-out rates
Such sites can therefore play an important role in supporting the delivery of the Plan's housing requirement and enhancing flexibility within the supply.

HG1: Housing Allocations
Mr Raymond does not comment on any of the proposed housing allocations, however, does highlight that the delivery is incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements are required. Only 122 units are proposed on smaller allocated sites, equating to approximately 2.6% of newly allocated supply under (E) Rural Affordable Housing Led Sites – policy HG4.

In the context of the above, there remains significant concern that the spatial strategy continues to exclude the required number of allocations within Minor Rural Settlements, including Colwinston.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.
It is agreed that the inclusion of smaller allocations can:
• Improve overall housing delivery rates
• Provide greater choice within the housing market
• Reduce delivery risk by diversifying supply
• Support rural communities through proportionate growth

Whilst it is noted that there is a proposed allocation within Colwinston – HG4 (1) – Land to the East of Colwinston for 25 units, Mr Raymond maintains that there is still a clear disconnect between the identified role and function of settlements such as Colwinston and the absence of any further allocated sites capable of delivering an appropriate range and choice of dwellings.

The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.
This approach is inconsistent with the settlement's accessibility and functional role. Colwinston is:
• Well connected to the A48 strategic highway network;
• Served by bus routes within close proximity to the site;
• Within commuting distance of Bridgend, Cowbridge, Barry and Cardiff;
• A sustainable and established residential community.
Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and

character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.

Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at Waterton Lodge would represent proportionate growth consistent with the scale and character of the settlement.

HG4 – Affordable Housing Allocations
It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, and in particular within Colwinston HG4 (1) – Land to the East of Colwinston for 25 units. In the context of Policy HG4 they will be affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing. This is to meet the affordable housing needs of the local community. Mr Raymond has no objection in principle to this but does object to the fact that there is no other development opportunities recognised in Colwinston (despite it being sustainably located on the A48).

Furthermore, Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) could be reduced in size and could be amended to offer 50% affordable housing to accord with the policy (or even 100% affordable if the Authority sought this).

A balanced approach which allows both affordable housing led schemes and modest mixed-tenure developments would provide greater flexibility and assist in delivering a broader range of housing needs.

A modest development at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) could provide an opportunity to deliver both market and affordable housing in accordance with Policy SP8. This would support local housing needs whilst maintaining the scale and character of the settlement.

Candidate Site Response: Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409)
Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) was submitted to the Vale of Glamorgan Council during the 2022 Call for Candidate Sites as part of the preparation of the Replacement Local Development Plan (RLDP) 2021–2036.

The site is currently included within the Candidate Site Register, which represents a list of sites submitted for consideration through the plan-making process. Inclusion within the register does not in itself indicate that a site will be allocated for development, as all sites are subject to a structured assessment process.

These stages consider a range of factors including sustainability, accessibility, environmental constraints and deliverability.

As part of the ongoing plan preparation process, the Council produced an updated Candidate Site Register following the initial submissions. Sites continue to be evaluated as part of the evidence base supporting the RLDP.

In this context, Land adjacent to Waterton Lodge, Colwinston represents a sustainable and deliverable opportunity for modest residential development which could contribute positively towards the Plan's housing supply.

The site is located adjacent to the existing settlement and is well related to the current built form. Development in this location would represent a logical and contained extension to the village, rather than an isolated incursion into open countryside.

Furthermore, the site has been promoted through the formal candidate site process and should therefore be considered fully within the Council's site assessment framework.

Deposit Plan Considerations
Settlement Boundary

Given the location of Candidate Site 409 adjacent to the existing settlement of Colwinston, consideration should be given to whether a modest adjustment to the settlement boundary would enable the site to be appropriately integrated within the settlement.

A logical rounding-off of the existing settlement edge would allow development to occur in a manner that respects the existing built form and maintains a clear and defensible settlement boundary.

Such an approach would represent a proportionate response to the need for modest housing growth within rural

settlements.

Site Assessment
The site was formally submitted through the Candidate Site process and is currently listed within the Council's Candidate Site Register.

Given the role that smaller deliverable sites can play in supporting housing delivery, it is important that sites such as Land adjacent to Waterton Lodge, Colwinston are fully considered as part of the ongoing assessment process. Smaller sites can provide valuable flexibility within the housing trajectory and contribute to early housing delivery within the Plan period.

Turning to the main reasons the site was not taken forward Mr Raymond provides the following response:
(a) Alleged intrusion into the open countryside
The Stage 2 Register cites "unacceptable intrusion into the open countryside". Mr Raymond submits that this conclusion fails to reflect the site's physical containment and relationship to the built form.
• The site directly adjoins existing dwellings at Waterton Lodge and mature boundary hedgerows; development here would constitute rounding-off rather than isolated sprawl.
• A strong landscape framework already exists, and additional planting could reinforce defensible boundaries.
Accordingly, the site's development would not materially extend the settlement into open countryside or harm landscape character, consistent with PPW paragraph 3.60.
(b) Highways and accessibility constraints
The Council refers to "major highways constraints" but no evidence highway assessment has been published by the Authority. Mr Raymond's preliminary review confirms that safe vehicular access can be achieved from the adjoining local highway with modest engineering works and that the scale envisaged would generate limited traffic, well within local-road capacity.
Future submission of a Transport Statement can demonstrate compliance with PPW (Section 5: Active and Socially Just Places) and LDP Policy MD2 (criteria 6 and 8).
The site lies within walking distance of Colwinston's core facilities (village hall, public house, bus stops), enabling sustainable travel choices for residents.
(c) Scale of development
Development at a scale that represents proportionate growth for Colwinston can be provided and would be entirely consistent with the "limited expansion" envisaged for minor rural settlements under PPW and the RLDP.
This level of growth would strengthen local demographics, support the rural housing supply and modestly contribute to the Vale's overall housing requirement, without exceeding infrastructure capacity.
(d) Ecology, landscape and agricultural land classification
The land is semi-improved grassland with no statutory designations. Preliminary review indicates no SINC coverage or protected species constraints. Detailed ecological and agricultural-land surveys can be provided to confirm that any residual impacts are minor and capable of full mitigation.

Development can achieve net biodiversity gain through buffer planting, sustainable drainage and native-hedgerow reinforcement, fully consistent with PPW and RLDP environmental objectives.

5. Sustainability and deliverability
• Availability: Mr Raymond, as landowner/promoter, confirms the site is immediately available for development.
• Deliverability: The site is modest, unconstrained by flood risk or abnormal infrastructure requirements, and can deliver homes within the early part of the plan period.
The proposal supports rural-settlement vitality, contributes to local housing choice, and allows design to embody placemaking principles (PPW Ed. 12 Section 2).

Conclusion
This representation, submitted on behalf of Mr Raymond in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.

6894 Comment

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: Catesby Estates [3713]
Agent: Turley

Summary:

Policy SP2 – Settlement Hierarchy broadly distributes development in line with the hierarchy of settlements, reflecting the role and function of places and directing growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision. Llandow is identified as a Minor Rural Settlement, new development associated with which should be mainly limited to infill opportunities and small-scale affordable housing led schemes (sites of up to 25 dwellings with a minimum of 50% affordable provision).

Catesby would suggest that specific sites in and around all settlement types may be suitable for a greater level of development than that suggested by the settlement hierarchy, and these should be explored accordingly. As part of this, Catesby SUPPORTS the recognition in the Policy Framework that the existing services and facilities in and around the Minor Rural Settlements should be safeguarded, supported and enhanced, and that in order to do this, growth should still be balanced in a way which supports these rural communities (Paras 6.16 and 6.17).

Full text:

VALE OF GLAMORGAN DEPOSIT REPLACEMENT LOCAL DEVELOPMENT PLAN - REPRESENTATION ON BEHALF OF CATESBY ESTATES

This response to the consultation on the Vale of Glamorgan Council ('VoGC') Deposit Replacement Local Development Plan ('RLDP') is submitted by Turley on behalf of Catesby Estates ('Catesby'). It sets out Catesby's comments on the Vale of Glamorgan Deposit Replacement LDP published for consultation on 28th January 2026.

Catesby control a significant amount of land at, and surrounding Llandow Airfield, and sought promotion (previously promoted by L&Q Estates prior to its acquisition by Catesby) of the site during the call for Candidate Sites (Site ID Ref: 448). The Stage 2 Candidate Site Register confirms that the site was not considered suitable for further consideration by VoGC. This was primarily due to its location outside of existing settlement boundaries and the scale of dwellings/services proposed. It was concluded that the scale of development proposed could be considered a new settlement, which should only be proposed as part of a joint LDP, an SDP or Future Wales.

Catesby acknowledges that promotion of a site of this scale falls outside the scope of the RDLP. The site will be promoted through the emerging South East Wales Strategic Development Plan in due course. Catesby maintains that the site is capable of accommodating major development and that its promotion for strategic scale regeneration is entirely appropriate given its sustainable credentials and the contribution that it can make to the Vale of Glamorgan and wider Cardiff Capital Region. Catesby remains keen to working collaboratively with VoGC to bring forward development at Llandow in the medium to long term and looks forward to continuing the largely positive discussions that have taken place to date.

VISION AND STRATEGIC OBJECTIVES

The vision for the Deposit RLDP maintains that, by 2036, VoGC will provide housing growth which responds to the authority's growing population and caters for all. This should be shaped through successful placemaking, delivering diverse communities and ensuring that the Vale is a healthy and inclusive place for everyone.

VoGC identifies key themes and strategic objectives to deliver the vision of the Deposit RLDP. This includes "ensuring that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population", to address the accommodation needs of all the Vale's communities (Objective 3 - Homes for All). Objective 4 – Placemaking also seeks for new development to be appropriately located, contribute towards creating active, safe and accessible places, and protect and enhance the character of existing communities.

The provision of a mix of new homes is also crucial in fostering diverse, vibrant and connected communities in line with Objective 7. Consequently, physical, economic and social regeneration are facilitated, reflecting the needs and aspirations of local communities. Vital and vibrant rural communities are also provided through the delivery of growth in sustainable locations and supporting infrastructure.

Catesby broadly SUPPORTS the vision and strategic objectives of the Deposit RLDP to deliver a mix of high-quality new housing which responds to the authority's growing population, caters for all, and has placemaking at its heart. This new housing should be facilitated across the Vale in a variety of sustainable locations to best serve as many communities as possible.

SUSTAINABLE GROWTH STRATEGY

A key part of the Sustainable Growth Strategy for the Deposit RLDP is to deliver a sustainable level of housing growth which accords with the Vale's position within the Cardiff Capital Region (CCR). Specifically, the Deposit RLDP makes provision for a housing requirement of 7,980 dwellings over the Plan period (526 dwellings per annum). The Deposit RLDP makes clear that this is both deliverable and ambitious, reflecting the Vale's position in the Future Wales national growth area. Crucially, the housing requirement will be achieved through a range of housing opportunities, to encourage

existing residents to live and work in the Vale and encourage inward migration of new residents, at a level commensurate with the CCR.

However, Catesby would suggest that this level of growth is still too low, taking into account the aspirations of Future Wales for the area and the latest population and household projections, which suggest a higher level of need is required for the Vale.
The Sustainable Growth Strategy also seeks for new and existing housing, employment, services and facilities to be co-located to reduce the need to travel. New housing development shall be specifically located in places that are already well served by existing and/or proposed services, facilities and employment opportunities. This includes, where appropriate, those offered by the business parks and industrial estates already established in the Vale. The Strategy also allows for regeneration opportunities on previously developed and under-utilised land.

The Key Diagram (Figure 1) identifies the proposed Strategic Growth Area (SGA), connectivity routes, key locations for future development, the Plan's hierarchy of settlements and interrelationships with adjoining local authorities.

Figure 1: Key Diagram

Catesby considers that the Minor Rural Settlements dispersed within the 'Connectivity' corridor, such as Llandow, should play a supporting role in accommodating housing growth, given their important range of services and facilities that reduce the need to travel. The Sustainable Growth Strategy also allows for small scale affordable housing led developments in Minor Rural Settlements, where appropriate.

Noting Llandow's accessible location and proximity to existing and emerging strategic employment opportunities, Catesby broadly SUPPORTS the Sustainable Growth Strategy insofar as seeking to achieve the housing requirement through a range of housing opportunities. This includes the co-locating of housing and employment growth, with a focus on established business parks and industrial estates.

Paragraph 5.14 notes that "where appropriate, the broad principle is that the spatial strategy should look to ensure that new housing is in places where employment opportunities already exist or are proposed." Catesby supports this principle, noting that the Llandow Airfield site offers the potential to deliver co-located residential and employment opportunities at scale, as identified within the promotion document submitted in support of its response to the call for Candidate Sites. This will remain a key aspiration of the site's future promotion via the emerging SDP.

However, Catesby reiterates that the housing requirement for the Vale should be higher, accounting for the aspirations of Future Wales for the area and the latest population and household projections. A more ambitious Growth Strategy is needed to accommodate this increased housing requirement.

POLICY FRAMEWORK

Policy SP1 - Sustainable Growth Strategy reiterates that the Plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that, outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.

In order to ensure that the minimum target figure is met, it is important that the Plan identifies a sufficient number of sites / housing allocations to meet both the short and longer term development needs. As previously stated, Catesby SUPPORTS the overall growth strategy across the Vale of Glamorgan contained in the Deposit RLDP. However, it is questioned whether or not there is sufficient land allocated to deliver the growth required.

Of the overall housing target of 7,890 dwellings, approximately half of these are to be delivered via rolled forward allocations and extant consents. Whilst some such sites can be expected to come forward, Catesby would caution against the over-reliance on delivery of historically allocated sites.

Catesby suggests that VoGC considers the inclusion of additional sites to deliver the predicted growth strategy identified in the RLDP. This will strengthen the land supply position ensuring a robust RLDP can be adopted which has the ability to ensure the delivery of the necessary growth. Catesby supports growth along the 'Connectivity' corridor, particularly in Minor Rural Settlements such as Llandow to assist with this.

Policy SP2 – Settlement Hierarchy broadly distributes development in line with the hierarchy of settlements, reflecting the role and function of places and directing growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision. Llandow is identified as a Minor Rural Settlement, new development associated with which should be mainly limited to infill opportunities and small-scale affordable housing led schemes (sites of up to 25 dwellings with a minimum of 50% affordable provision).

Catesby would suggest that specific sites in and around all settlement types may be suitable for a greater level of development than that suggested by the settlement hierarchy, and these should be explored accordingly. As part of this, Catesby SUPPORTS the recognition in the Policy Framework that the existing services and facilities in and around the Minor Rural Settlements should be safeguarded, supported and enhanced, and that in order to do this, growth should still

be balanced in a way which supports these rural communities (Paras 6.16 and 6.17).

Policy SP3 – Development in the Countryside is clear that development will only be permitted in the countryside where it falls within one of the specified uses. This only includes Affordable Housing Exception Sites in respect of housing development. Catesby suggests that further development sites are required across the Vale in order to meet the Council's housing requirement, which should consider locations within the countryside where appropriate.

Catesby reiterates that the co-location of housing with existing infrastructure and facilities will be crucial to achieving the overall Growth Strategy of the RLDP. Development in and adjacent to Minor Rural Settlements is also key to this, especially those located in proximity to the 'Connectivity' corridor on the Key Diagram.

Catesby SUPPORTS development within these locations, particularly at Llandow. This is key in order for the Vale of Glamorgan to achieve part of its overarching vision, which states that "growth within rural settlements has provided for the needs of residents and supports balanced multi-generational communities that contribute to the vibrancy of the rural area".

SUMMARY

We trust that the above representations can be considered duly made and look forward to receiving confirmation accordingly. Catesby welcomes the opportunity to comment further as the RLDP progresses through to adoption. Catesby looks forward to engaging with the Council over the months ahead to continue a dialogue regarding the future delivery of development at Llandow. If you require any further information, please do not hesitate to contact me on the details below.

Change suggested by respondent:

Catesby would suggest that specific sites in and around all settlement types may be suitable for a greater level of development than that suggested by the settlement hierarchy, and these should be explored accordingly.

6898 Object

Document Element: SP2 – SETTLEMENT HIERARCHY
Respondent: Barratt Redrow Homes [2669]
Agent: Boyer Planning

Summary:

In principle, Barratt Redrow supports the Settlement Pattern set out in the Deposit Plan, particularly the identification of Wenvoe as a Primary Settlement.

Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification.

Full text:

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;

• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement

is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage

contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that

to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.

5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.

5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.

5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.

5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to

establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.

5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.

5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.

5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.

Policy SP4 - Placemaking

5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.

5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:

5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.

5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.

5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.

5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

Policy PGD1 – Creating Well Designed and Inclusive Places

5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.

5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should

be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and

would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.

• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.

•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.

• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.

• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.

• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.

• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.

• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.

• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.

•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting

Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at

the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).

• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).

•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.

• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.

• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.

• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:

•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:

i. Space heating demand less than or equal to 40kWh/m2/year;

ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.

• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes

access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge

of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site

437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to

account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Document Element: SP2 – SETTLEMENT HIERARCHY
Respondent: Lidl GB Limited [1459]
Agent: CarneySweeney

Summary:

The settlement boundary, defined by Policy SP2, excludes allocation site SP12 'Land at Bridge House Farm, Llanmaes, Llantwit Major' which is for a retail foodstore. Instead, the draft allocation abuts, but lies outside, the settlement boundary as currently drawn. Although draft Policy SP3 states that "Areas outside settlement boundaries that are not allocated or protected for a specific use will be defined as countryside we consider the settlement boundary must be extended at this location to include the allocation. Its exclusion is illogical and would fail to reflect the 'on the ground' position when this allocation is delivered. Moreover, its exclusion could confuse and may constrain any future minor development changes at the site (e.g. those needed to meet operational needs the subject of any planning application). The draft proposals map shows the allocation as a dot which does not cover the full extent of the allocation. See below: see plan in attachment

By not including the extent of the site/allocation within the defined settlement boundary, the draft plan fails to recognise the allocation will form an important part of the settlement, the delivery of which is crucial to meeting identified needs. Accordingly, we believe this fails Test 2 (Is the plan appropriate?), and it may fail Test 3 (

Full text:

Draft RCS2 sets out three criteria for new A1, A2 or A3 uses on new sites or existing retail areas which are as follows:
1. "It can be demonstrated that there is an additional need for the proposal which cannot be provided within an existing retail, commercial and service centre; and
2. The proposal would not either individually or cumulatively with other recent or proposed consented developments have an unacceptable impact on the trade, turnover, vitality and viability of the retail, commercial and service centres.
3. The proposal would serve local needs in a neighbourhood or rural village."
We consider the policy should read as follows:
"1 It can be demonstrated that there is an additional need for the proposal which, when applying the sequential approach to locating development as outlined in national guidance, it has been demonstrated that the site is sequentially preferable; and
2 The proposal would not either individually or cumulatively with other recent or proposed consented developments have an unacceptable impact on the trade, turnover, vitality and viability of the retail, commercial and service centres.
3 Proposals serving only local needs should be of a scale and type which does not undermine the vibrancy, attractiveness and viability of neighbourhood centres."

The settlement boundary, defined by Policy SP2, excludes allocation site SP12 'Land at Bridge House Farm, Llanmaes, Llantwit Major' which is for a retail foodstore. Instead, the draft allocation abuts, but lies outside, the settlement boundary as currently drawn. Although draft Policy SP3 states that "Areas outside settlement boundaries that are not allocated or protected for a specific use will be defined as countryside we consider the settlement boundary must be extended at this location to include the allocation. Its exclusion is illogical and would fail to reflect the 'on the ground' position when this allocation is delivered. Moreover, its exclusion could confuse and may constrain any future minor development changes at the site (e.g. those needed to meet operational needs the subject of any planning application). The draft proposals map shows the allocation as a dot which does not cover the full extent of the allocation. See below: See plan in attachment

By not including the extent of the site/allocation within the defined settlement boundary, the draft plan fails to recognise the allocation will form an important part of the settlement, the delivery of which is crucial to meeting identified needs. Accordingly, we believe this fails Test 2 (Is the plan appropriate?), and it may fail Test 3 (Will the plan deliver) as its exclusion from the boundary may unduly impact the future site operation.

Lidl Great Britain Ltd objects to draft policy SP11 (Retail, commercial and service centre hierarchy) as worded as it fails to meet Test 2 (Is the plan appropriate?). Draft Policy SP11 sets out the proposed retail hierarchy (See extract below), but it does not accord with the settlement hierarchy as set out in draft Policy SP2 and it is not justified.
The adopted LDP Settlement Hierarchy lists:
Key Settlement: Barry
Service Centre Settlements: Cowbridge, Llantwit Major and Penarth
The adopted LDP Retail hierarchy lists:
Town centres: Barry
District centres: Barry (high street/broad street), Cowbridge, Llantwit Major, Penarth
Draft SP2 of the Deposit Plan identifies Cowbridge, Llantwit Major and Penarth as Service Centre Settlements in the Settlement Hierarchy.
However, draft SP11 lists a retail hierarchy as follows:
Town Centres – Barry (Holton Rd), Penarth, Cowbridge
District Centres – Barry (High Street), Llantwit Major
It is unexplained and unjustified that the SP11 retail hierarchy upgrades Cowbridge to Town Centre status, while Llantwit Major and Barry High Street remain District Centres.
The Deposit Plan includes two retail allocations, neither are intended to directly serve Penarth or Cowbridge. Cowbridge is not a focus for growth. It is therefore unjustified that Llantwit Major, which is served by a train station, is a settlement roughly twice the size of Cowbridge (by population) and is a manifestly more sustainable location and more appropriate focus for growth, is proposed to rank below Cowbridge in the retail hierarchy. Barry, Penarth and Llantwit Major should rank as Town Centres as the most sustainable locations for growth.
Penarth is an accessible settlement and an appropriate focus for growth. Indeed, the Council's BP13 (Retail and Commercial Leisure Study (June 2023)) recommends a medium to large supermarket to serve Penarth (Zone 5) but the Deposit Plan is absent of any food retail allocation for Penarth/Llandough. In addition to Llantwit Major and St Athan (Deposit Policy SP12) Penarth should be a focus for additional convenience provision over the plan period.

SP12 – RETAIL FLOORSPACE PROVISION

Lidl Great Britain Ltd firmly supports the allocation within draft Policy SP12 (Retail Floorspace Provision) for 1,251sqm of convenience floorspace at Land at Bridge House Farm, Llanmaes, Llantwit Major. This allocation is needed to ensure the plan is sound, by addressing unmet need at Llantwit Major which is a Service Centre and focus for growth. This should be made clear in the reasoned justification.

In respect to Penarth, Policy SP12, together with supporting paragraphs 6.208–6.210, do not, however, adequately reflect the findings of the Council's Retail & Leisure Study (BP13). Policy SP12 should also plan positively for the identified convenience retail needs within Zone 5 (Penarth/ Llandough). BP13 confirms that Penarth District Centre is not served by a medium to larger supermarket (para. 9.2). The BP13 Study finds quantitative and qualitative capacity for a medium to larger supermarket by 2036 in Penarth (paras. 9.23, 12.24).

It finds overall quantitative convenience capacity of up to c.5,862sqm net floorspace (assuming deep discounter operators). In qualitative terms the following Centres have been identified in potential need for a medium to larger supermarket: Barry Holton Road town centre; Penarth district centre and Llantwit Major district centre. Quantitative and qualitative need is identified.

Despite the evidence of unmet need, the Deposit LDP Policy SP12 allocates only two sites for convenience retail totalling c. 3,109sqm net; one site at Llanwit Major and a second site at St Athan. This is below the overall (up to 4,282–5,862sqm net) requirement identified in BP13. The allocation of land at Llantwit Major aligns with the evidence base, has been thoroughly tested at application stage and this is fully supported.

Policy SP12 is silent on the need for additional floorspace at Penarth/Llandough (Zone 5) and as such does not reflect the evidence base findings and address identified need in Penarth, with a 'residual' quantitative capacity of c.1,173–2,753sqm net unmet/unallocated. We note Policy SP12 states that any additional convenience and comparison retail floorspace beyond that provided by the identified sites should be directed towards the town and district centres outlined in Policy SP11. However, this merely reflects national guidance in respect to directing growth to town/district centres (i.e. applying a sequential approach). The Policy should go further and seek to allocate the residual unmet need to Penarth/ Llandough. We note the BP13 is silent on additional need at St Athan.

Planning Policy Wales (PPW) 12 requires LPAs to identify the appropriate form, scale and location to meet retail needs (para. 4.3.8) and emphasises ensuring communities have access to adequate retail provision (para. 4.3.13). PPW therefore places a duty on LPAs to plan positively for evidenced retail needs. In respect to Penarth/Llandough Policy SP12 should seek to address this requirement.

Under PPW and TAN4, LPAs must apply the sequential test, directing new retail development to locations that are:

• In-centre,
• Edge-of-centre, and only then,
• Out-of-centre locations that are accessible and well-connected to the catchment.

Penarth Centre is physically constrained. In the absence of any in-centre or edge-of-centre sites capable of accommodating a medium/larger supermarket, the next sequentially preferable option is the most accessible, well-connected site within the same catchment, capable of meeting identified need and reducing expenditure leakage.

Policy SP12 should plan positively for needs in Zone 5 (Penarth/Llandough) and include provision for a medium to large convenience foodstore in Zone 5 in accordance with BP13.

Enclosed with this representation is a separate representation (Under 8. New site submission) promoting a site for food retail development to meet identified needs within the Zone 5 Penarth/Llandough catchment. The site is considered accessible and sequentially preferable to meeting identified needs in Penarth.

The policy should be clear that identified need should be delivered in accordance with the sequential approach as set out in national guidance. As set out in Policy SP12 any additional convenience and comparison retail floorspace beyond that provided by identified sites should be directed towards the town and district centres in accordance with the sequential approach. We support that the inclusion of retail floorspace as part of a mix of uses on allocated sites will also be supported.

POLICY DNP2 – GREEN WEDGES

Lidl objects to the inclusion of land at Penlan Road, Llandough (see Site Location Plan, drawing no. 3744 F420) within the Green Wedge designation under Policy DNP2. The site forms a distinct and enclosed parcel of land on the north-eastern edge of the designated Green Wedge, and its physical characteristics demonstrate that it does not serve the strategic purposes of the wider designation.

The northern and western boundaries are formed by Llandough Hospital, including the hospital access road and surface car parking, which clearly separate the site from the wider Green Wedge. The southern boundary is defined by residential properties along Corbett Road and the Merrier Harrier public house. The south-western and western boundaries are formed by further residential properties within Llandough. As such, built development extends beyond the site in multiple directions, meaning it does not contribute to the open land between settlements that Green Wedges are intended to protect.

The site is physically and visually contained with strong, defensible boundaries. Its close association with existing built form means that it does not exhibit the level of openness required for Green Wedge designation under PPW or BP27. BP27 requires Green Wedge boundaries to include only land that must remain open in the long term. When assessed against the four-stage SE Wales Green Wedge methodology, the site performs weakly. In terms of openness (Stage A), the site has low perceived openness as it is enclosed by development. Under development pressure (Stage B), the influence of surrounding built form means the site is already urban in character. In relation to Green Wedge purposes (Stage C), the site does not materially contribute to preventing coalescence, safeguarding open countryside, or protecting the setting of an urban area. The conclusion (Stage D) is therefore that the site's inclusion within the Green Wedge is anomalous.

Recent decisions in the emerging RLDP, such as the allocation of HG1 KS2, demonstrate that selective Green Wedge boundary amendments are acceptable where supported by evidence. Not all areas within the current designation are equally sensitive, and the site represents one of the least sensitive parts.
The Council's own evidence further supports the suitability of the land for development. The site does not lie within the Special Landscape Area that covers much of the remaining Green Wedge, highlighting its lower landscape sensitivity. The Candidate Site Assessment (BP18a examined the wider parcel (Site ID 400) for housing and concluded that it would form a natural extension to the Llandough settlement boundary. It noted that the land would represent an incursion only if less sensitive sites could not be delivered and discounted the site solely because housing need had been met elsewhere, not due to landscape or Green Wedge harm. This confirms the Council recognises the land is capable of development. The same land can therefore appropriately meet other evidenced needs, including retail provision.
In separate representations, Lidl is promoting land to the south of Llandough Hospital via 'RDLP New site submissions'. It is considered that the site can be developed in a low-impact, landscape-led and sensitively designed manner that respects its transitional position between the urban edge and the wider Green Wedge. A modest single storey medium sized foodstore delivers a built form that can sit comfortably below surrounding tree lines and hospital structures. A comprehensive landscape strategy, including reinforced boundary planting, native woodland edge enhancement, and carefully designed building can soften building edges, strengthen the site's defensible boundaries, and integrate the scheme with its surroundings. The development would therefore appear as an infill of the existing urban area, rather than any intrusion into the open countryside, and can be designed to maintain the wider Green Wedge's openness and character by delivering a strong defensible physical boundary which prevents any further development beyond the site.
As set out in separate representations the Council's Retail and Leisure Study (BP13) identifies a clear quantitative and qualitative need for a medium to larger supermarket within Zone 5, alongside notable levels of convenience expenditure leakage to Zone 3 (Cardiff). The promoted site is well positioned to intercept this leakage, meet the identified convenience floorspace requirement, and provide improved local convenience retail provision for Llandough/Penarth. There is, therefore, a clear needs-based justification for release of this parcel of land from the Green Wedge designation.
The Green Wedge boundary should be amended at this location to remove the promoted site from Policy DNP2 (Green Wedge designation) and from the Proposals Map. In parallel, the settlement boundary defined by Policy SP2 should be realigned to include the promoted site, reflecting the site's physical relationship with existing development, its defensible boundaries, and its suitability to meet an evidenced strategic retail need.

The Policy text should be changed as follows:
"Proposals involving the change of use at ground floor level uses from A1 retail use within Service Centres will permitted where the proposal would:…"
The Policy RCS1 (Resilient retail, commercial and service centres) supporting text adds new policy requirements which are not within the draft policy. Paragraph 6.214 states that:
"Changes of use class in Retail, Commercial and Service Centres must be justified by evidence that the property has been affected by a sustained period of long-term vacancy and that proactive marketing has been undertaken by a property agent for a minimum of 12 months in an effort to secure tenants. The marketing report should include:
• Details of the existing use or previous use if vacant;
• The length of time the unit has been vacant, if applicable;
• The type of use which the unit has been marketed for, what the marketing strategy involved and its duration;
• The amount of interest in the unit during the marketing period – this should detail the number of queries, the type of uses sought, and if known, the reason for not pursuing any initial enquiries."
However, nowhere in the draft policy wording does it explicitly state to include 12 months of marketing activity. The draft supporting text reads as though this is a policy requirement, rather than supportive guidance. This is contrary to caselaw which confirms that supporting text cannot be used to expand the policy beyond its wording (R (Cherkley Campaign Ltd) v Mole Valley District Council). A proposal could meet the requirements of the criteria sets out in draft policy RCS1 without being marketed for a minimum of 12 months. If the Plan is adopted as currently set out, there is a risk of internal inconsistency between policy RSC1 and the supporting text. Accordingly, this would fail Test 2 (Is the plan appropriate?) as it is not coherent or consistent.
We also have concerns with criterion 5 which states to "Avoid an over-concentration of non-retail uses that would undermine the retail function of the centre". This is because 'over-concentration' has not been defined within the draft policy. This contrasts with draft policy RCS3 which includes a definition of what an over-concentration of hot food takeaways would be. Without a definition of what an over-concentration of non-retail uses is, the draft policy will remain and lack clarity. Additionally, without a definition, the draft policy may fail Tests 2 and 3 as it is currently unclear (Test 2: Is the plan appropriate?) and cannot be effective (Test 3: Will the plan deliver?).

At present, we consider the Deposit Plan inadequately supports the Welsh language. Although the Welsh Language is included within Objective 6 (Embracing Culture and Heritage), the Deposit Plan does not contain a policy which seeks to promote the Welsh language, nor is the promotion of the Welsh language referenced in other Deposit Plan policies where this may be appropriate. Without a clear policy, applicants do not need to explicitly consider impact on the Welsh language so the role of the RLDP will be limited.
Local Development Plans should accord with national policy and guidance. For instance, the supporting text to Policy 1 of Future Wales states that "Key issues, including … the Welsh language, are core elements of policy 1 and are common threads underpinning all Future Wales policies." However, we believe that the Welsh language is not currently underpinning the policies within the Deposit Plan.

Additionally, paragraph 3.25 of PPW states that “The Welsh language is part of the social and cultural fabric and its future well being will depend upon a wide range of factors, particularly education, demographic change, community activities and a sound economic base to maintain thriving sustainable communities and places. The land use planning system should take account of the conditions which are essential to the Welsh language and in so doing contribute to its, use and the Thriving Welsh Language well being goal.” Paragraph 3.29 goes on to suggest language impact assessments are required for “large developments not allocated in a development plan which are proposed in areas of particular sensitivity or importance for the language” with these areas defined in the LDP. In this instance, PPW sets out guidance for developers which is not present in the Deposit Plan.
The Vale of Glamorgan Council commissioned AECOM to produce the Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan (November 2025). Paragraph 9.5.9 recommends including a specific policy that supports and protects the Welsh language within the Deposit Plan. This contrasts with the Welsh Language (November 2025) Background paper, produced by the VoGC, which concludes that a specific Welsh Language policy is not warranted, albeit it does acknowledge the Plan’s statutory duty to consider the Welsh language and embed relevant provisions within broader thematic policies. However, this is currently lacking as the Deposit Plan does not reference the Welsh language within other policies. Although the Background Paper considers that the RLDP is “unlikely to adversely affect the existing patterns of Welsh language use within the Vale of Glamorgan”, the Plan should seek to promote the Welsh language.
Developers should be encouraged to promote the Welsh language where this may be reasonable and appropriate e.g. bilingual signage and announcements. Lidl actively promotes the Welsh language through their business. The Deposit Plan should be amended to strengthen the importance of the Welsh language, helping to meet Objective 6 over the RLDP period. Overall, without clear Welsh Language policy promotion, the Deposit Plan cannot positively impact the Welsh language. The Deposit Plan needs to go further.

Document Element: SP2 – SETTLEMENT HIERARCHY
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:

Barratt Redrow objects to Policy SP2 in its current form.
The policy framework remains highly restrictive and the approach towards Minor Rural Settlements is considered to be too blunt and is not justified by evidence.
Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council’s consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council’s work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council’s own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council’s own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council’s

established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points

and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.
5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such

matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.
In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing

need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility

allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.

Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part

Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.

The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.

The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly

treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.

The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.

Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:

• the Plan is overly reliant on a small number of key sites;

• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;

• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and

• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.

The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.

Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.

The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:

• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.

• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.

• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.

All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.

In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.

Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part

Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.

However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.

Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities

and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible

acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings

may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.

The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.

Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.

Land at St Nicholas / omission from the Deposit Plan Position: Object to omission

Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.

The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.

Deposit Plan Conclusion

Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.

In particular:

• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;

• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;

• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;

• the Plan relies too heavily on key sites, rolled forward sites and windfalls;

• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and

• the omission of St Nicholas is not justified by the Council's own evidence base.

The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.

For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.

Candidate Site Register - Site ID 486

Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.

Stage 2 Candidate Site Assessment

The Council's Stage 2 Candidate Site Assessment states:

"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."

The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:

Impact upon Character and Setting of the St Nicholas Conservation Area

Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.

The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:

• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;

• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;

• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and

• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.

Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW.
In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located

close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Change suggested by respondent:

Amend SP2.

Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

The identification of St Athan as a 'Primary Settlement' is supported.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits

from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer

Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.

The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy CII requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

7187 Support

Document Element: SP2 – SETTLEMENT HIERARCHY

Respondent: H Jones, L Sungur and P John [3741]

Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported.
Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units).

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition,

based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis.

Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both

open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the

area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is

achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: SP3 – DEVELOPMENT IN THE COUNTRYSIDE

Respondent: Ms Lucie Taylor [2506]

Summary:

SF&G recognise the importance of green wedges and other countryside land, for food production and suggest safeguarding land accordingly, aligned with housing growth. Our communities face challenges like poor health, climate change, and inequality, with a fragile food system vulnerable to shocks. The Welsh Government Community Food Strategy (2025) aims to develop diverse local food networks that work with nature not against it. Supportive policies are needed for small-scale horticultural farms to enable essential infrastructure, moving away from strict scrutiny and towards recognising genuinely necessary structures for agriculture, ensuring resilient and sustainable local food businesses.

Document Element: SP3 – DEVELOPMENT IN THE COUNTRYSIDE

Respondent: Ms Lucie Taylor [2506]

Summary:

SF&G note that TAN 6 is outdated, requiring local authorities to update their local development plans with more current rural related policies. Wales faces challenges in self-sufficiency for fruit and vegetables, and the outdated TAN 6 hampers sustainable rural community development. We suggest the Vale of Glamorgan Council adopt planning guidance on Rural Enterprise Dwellings for horticulture, as Powys Council has, to support rural enterprise development. We are happy to collaborate on policy wording and approaches based on existing evidence to encourage sustainable rural growth.

Full text:

Due to the outdated nature of TAN 6 it is incumbent on local authorities to include more up to date policy in their local development plans.
We know Wales is not producing enough fruit and vegetables to feed ourselves in the future when we are likely to need it. see here - https://www.wcpp.org.uk/wp-content/uploads/2023/07/How-could-Wales-feed-itself-in-2035.pdf. Social Farms & Gardens is very concerned that Technical Advice Note 6 – Planning for Sustainable Rural Communities is considerably out of date (July 2010) and no longer delivering sustainable rural communities. It therefore falls on local authorities delivering replacement local development plan, to consider the latest evidence, trends, previous decisions and other written approaches. The Practice Guidance on Rural Enterprise Dwellings, although only considered an exemplar approach, has the potential to be used too prescriptively and in a way that is out of line with the needs of our rural economy and communities, especially given the climate and nature emergencies that have been declared.
We ask the Vale of Glamorgan Council to consider adopting planning guidance on Rural Enterprise Dwellings for horticulture - like Powys Council have done. see here - https://en.powys.gov.uk/article/16407/Rural-Enterprise-Dwellings-for-Small-Scale-Horticulture. This guidance can be more or less copied from Powys version like Bannau Brynchieniog have done. Therefore it is important that the RLDP provides positive wording in policies to encourage development in association horticultural enterprises including rural enterprise dwellings. We have an abundance of of evidence to support this approach and would be keen to collaborate on any potential wording or approaches.

Document Element: SP3 – DEVELOPMENT IN THE COUNTRYSIDE

Respondent: Penllyn Community Council (Clerk) [243]

Summary:

Provide additional or amended Planning policies [either free standing or within SP3 or HG5] to allow for single unit/micro development, by companies or individuals, of appropriate, affordable housing units within all communities including 'Hamlets and Smaller Rural Settlements' [in the Countryside] where this is supported by the local community and meets the requirements of SSC1.

These new/amended policy statements [alongside the existing requirements of SSC1 and HG5] could then be applied across all existing settlements and communities
currently classified as undefined 'Hamlets and Smaller Rural Settlements' and hence 'Countryside' to allow for controlled appropriate development of affordable homes to
meet the aspirations of Para 5.24. and the local Community.

Document Element: SP3 – DEVELOPMENT IN THE COUNTRYSIDE

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

Where developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.

Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design

can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal

gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of

multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.

3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and

Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.

• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Document Element: SP3 – DEVELOPMENT IN THE COUNTRYSIDE
Respondent: Catesby Estates [3713]
Agent: Turley

Summary:

Policy SP3 – Development in the Countryside is clear that development will only be permitted in the countryside where it falls within one of the specified uses. This only includes Affordable Housing Exception Sites in respect of housing development. Catesby suggests that further development sites are required across the Vale in order to meet the Council's housing requirement, which should consider locations within the countryside where appropriate.

Catesby reiterates that the co-location of housing with existing infrastructure and facilities will be crucial to achieving the overall Growth Strategy of the RLDP. Development in and adjacent to Minor Rural Settlements is also key to this, especially those located in proximity to the 'Connectivity' corridor on the Key Diagram.

Catesby SUPPORTS development within these locations, particularly at Llandow. This is key in order for the Vale of Glamorgan to achieve part of its overarching vision, which states that "growth within rural settlements has provided for the needs of residents and supports balanced multi-generational communities that contribute to the vibrancy of the rural area".

Full text:

VALE OF GLAMORGAN DEPOSIT REPLACEMENT LOCAL DEVELOPMENT PLAN - REPRESENTATION ON BEHALF OF CATESBY ESTATES

This response to the consultation on the Vale of Glamorgan Council ('VoGC') Deposit Replacement Local Development Plan ('RLDP') is submitted by Turley on behalf of Catesby Estates ('Catesby'). It sets out Catesby's comments on the Vale of Glamorgan Deposit Replacement LDP published for consultation on 28th January 2026.

Catesby control a significant amount of land at, and surrounding Llandow Airfield, and sought promotion (previously promoted by L&Q Estates prior to its acquisition by Catesby) of the site during the call for Candidate Sites (Site ID Ref: 448). The Stage 2 Candidate Site Register confirms that the site was not considered suitable for further consideration by VoGC. This was primarily due to its location outside of existing settlement boundaries and the scale of dwellings/services proposed. It was concluded that the scale of development proposed could be considered a new settlement, which should only be proposed as part of a joint LDP, an SDP or Future Wales.

Catesby acknowledges that promotion of a site of this scale falls outside the scope of the RDLP. The site will be promoted through the emerging South East Wales Strategic Development Plan in due course. Catesby maintains that the site is capable of accommodating major development and that its promotion for strategic scale regeneration is entirely appropriate given its sustainable credentials and the contribution that it can make to the Vale of Glamorgan and wider Cardiff Capital Region. Catesby remains keen to working collaboratively with VoGC to bring forward development at Llandow in the medium to long term and looks forward to continuing the largely positive discussions that have taken place to date.

VISION AND STRATEGIC OBJECTIVES

The vision for the Deposit RLDP maintains that, by 2036, VoGC will provide housing growth which responds to the authority's growing population and caters for all. This should be shaped through successful placemaking, delivering diverse communities and ensuring that the Vale is a healthy and inclusive place for everyone.

VoGC identifies key themes and strategic objectives to deliver the vision of the Deposit RLDP. This includes "ensuring that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population", to address the accommodation needs of all the Vale's communities (Objective 3 - Homes for All). Objective 4 – Placemaking also seeks for new development to be appropriately located, contribute towards creating active, safe and accessible places, and protect and enhance the character of existing communities.

The provision of a mix of new homes is also crucial in fostering diverse, vibrant and connected communities in line with Objective 7. Consequently, physical, economic and social regeneration are facilitated, reflecting the needs and aspirations of local communities. Vital and vibrant rural communities are also provided through the delivery of growth in sustainable locations and supporting infrastructure.

Catesby broadly SUPPORTS the vision and strategic objectives of the Deposit RLDP to deliver a mix of high-quality new housing which responds to the authority's growing population, caters for all, and has placemaking at its heart. This new housing should be facilitated across the Vale in a variety of sustainable locations to best serve as many communities as possible.

SUSTAINABLE GROWTH STRATEGY

A key part of the Sustainable Growth Strategy for the Deposit RLDP is to deliver a sustainable level of housing growth which accords with the Vale's position within the Cardiff Capital Region (CCR). Specifically, the Deposit RLDP makes provision for a housing requirement of 7,980 dwellings over the Plan period (526 dwellings per annum). The Deposit RLDP makes clear that this is both deliverable and ambitious, reflecting the Vale's position in the Future Wales national growth area. Crucially, the housing requirement will be achieved through a range of housing opportunities, to encourage existing residents to live and work in the Vale and encourage inward migration of new residents, at a level

commensurate with the CCR.

However, Catesby would suggest that this level of growth is still too low, taking into account the aspirations of Future Wales for the area and the latest population and household projections, which suggest a higher level of need is required for the Vale.
The Sustainable Growth Strategy also seeks for new and existing housing, employment, services and facilities to be co-located to reduce the need to travel. New housing development shall be specifically located in places that are already well served by existing and/or proposed services, facilities and employment opportunities. This includes, where appropriate, those offered by the business parks and industrial estates already established in the Vale. The Strategy also allows for regeneration opportunities on previously developed and under-utilised land.

The Key Diagram (Figure 1) identifies the proposed Strategic Growth Area (SGA), connectivity routes, key locations for future development, the Plan's hierarchy of settlements and interrelationships with adjoining local authorities.

Figure 1: Key Diagram

Catesby considers that the Minor Rural Settlements dispersed within the 'Connectivity' corridor, such as Llandow, should play a supporting role in accommodating housing growth, given their important range of services and facilities that reduce the need to travel. The Sustainable Growth Strategy also allows for small scale affordable housing led developments in Minor Rural Settlements, where appropriate.

Noting Llandow's accessible location and proximity to existing and emerging strategic employment opportunities, Catesby broadly SUPPORTS the Sustainable Growth Strategy insofar as seeking to achieve the housing requirement through a range of housing opportunities. This includes the co-locating of housing and employment growth, with a focus on established business parks and industrial estates.

Paragraph 5.14 notes that "where appropriate, the broad principle is that the spatial strategy should look to ensure that new housing is in places where employment opportunities already exist or are proposed." Catesby supports this principle, noting that the Llandow Airfield site offers the potential to deliver co-located residential and employment opportunities at scale, as identified within the promotion document submitted in support of its response to the call for Candidate Sites. This will remain a key aspiration of the site's future promotion via the emerging SDP.

However, Catesby reiterates that the housing requirement for the Vale should be higher, accounting for the aspirations of Future Wales for the area and the latest population and household projections. A more ambitious Growth Strategy is needed to accommodate this increased housing requirement.

POLICY FRAMEWORK

Policy SP1 - Sustainable Growth Strategy reiterates that the Plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that, outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.

In order to ensure that the minimum target figure is met, it is important that the Plan identifies a sufficient number of sites / housing allocations to meet both the short and longer term development needs. As previously stated, Catesby SUPPORTS the overall growth strategy across the Vale of Glamorgan contained in the Deposit RLDP. However, it is questioned whether or not there is sufficient land allocated to deliver the growth required.

Of the overall housing target of 7,890 dwellings, approximately half of these are to be delivered via rolled forward allocations and extant consents. Whilst some such sites can be expected to come forward, Catesby would caution against the over-reliance on delivery of historically allocated sites.

Catesby suggests that VoGC considers the inclusion of additional sites to deliver the predicted growth strategy identified in the RLDP. This will strengthen the land supply position ensuring a robust RLDP can be adopted which has the ability to ensure the delivery of the necessary growth. Catesby supports growth along the 'Connectivity' corridor, particularly in Minor Rural Settlements such as Llandow to assist with this.

Policy SP2 – Settlement Hierarchy broadly distributes development in line with the hierarchy of settlements, reflecting the role and function of places and directing growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision. Llandow is identified as a Minor Rural Settlement, new development associated with which should be mainly limited to infill opportunities and small-scale affordable housing led schemes (sites of up to 25 dwellings with a minimum of 50% affordable provision).

Catesby would suggest that specific sites in and around all settlement types may be suitable for a greater level of development than that suggested by the settlement hierarchy, and these should be explored accordingly. As part of this, Catesby SUPPORTS the recognition in the Policy Framework that the existing services and facilities in and around the Minor Rural Settlements should be safeguarded, supported and enhanced, and that in order to do this, growth should still be balanced in a way which supports these rural communities (Paras 6.16 and 6.17).

Policy SP3 – Development in the Countryside is clear that development will only be permitted in the countryside where it falls within one of the specified uses. This only includes Affordable Housing Exception Sites in respect of housing development. Catesby suggests that further development sites are required across the Vale in order to meet the Council's housing requirement, which should consider locations within the countryside where appropriate.

Catesby reiterates that the co-location of housing with existing infrastructure and facilities will be crucial to achieving the overall Growth Strategy of the RLDP. Development in and adjacent to Minor Rural Settlements is also key to this, especially those located in proximity to the 'Connectivity' corridor on the Key Diagram.

Catesby SUPPORTS development within these locations, particularly at Llandow. This is key in order for the Vale of Glamorgan to achieve part of its overarching vision, which states that "growth within rural settlements has provided for the needs of residents and supports balanced multi-generational communities that contribute to the vibrancy of the rural area".

SUMMARY

We trust that the above representations can be considered duly made and look forward to receiving confirmation accordingly. Catesby welcomes the opportunity to comment further as the RLDP progresses through to adoption. Catesby looks forward to engaging with the Council over the months ahead to continue a dialogue regarding the future delivery of development at Llandow. If you require any further information, please do not hesitate to contact me on the details below.

Change suggested by respondent:

Catesby suggests that further development sites are required across the Vale in order to meet the Council's housing requirement, which should consider locations within the countryside where appropriate.

Catesby reiterates that the co-location of housing with existing infrastructure and facilities will be crucial to achieving the overall Growth Strategy of the RLDP. Development in and adjacent to Minor Rural Settlements is also key to this, especially those located in proximity to the 'Connectivity' corridor on the Key Diagram.

Document Element: SP3 – DEVELOPMENT IN THE COUNTRYSIDE
Respondent: Lidl GB Limited [1459]
Agent: CarneySweeney

Summary:

The settlement boundary, defined by Policy SP2, excludes allocation site SP12 'Land at Bridge House Farm, Llanmaes, Llantwit Major' which is for a retail foodstore. Instead, the draft allocation abuts, but lies outside, the settlement boundary as currently drawn. Although draft Policy SP3 states that "Areas outside settlement boundaries that are not allocated or protected for a specific use will be defined as countryside we consider the settlement boundary must be extended at this location to include the allocation. Its exclusion is illogical and would fail to reflect the 'on the ground' position when this allocation is delivered. Moreover, its exclusion could confuse and may constrain any future minor development changes at the site (e.g. those needed to meet operational needs the subject of any planning application). The draft proposals map shows the allocation as a dot which does not cover the full extent of the allocation. See below: See plan on attachment.
By not including the extent of the site/allocation within the defined settlement boundary, the draft plan fails to recognise the allocation will form an important part of the settlement, the delivery of which is crucial to meeting identified needs. Accordingly, we believe this fails Test 2 (Is the plan appropriate?), and it may fail Test 3 (Will the plan deliver) as its exclusion from the boundary may unduly impact the future site operation.

Full text:

Draft RCS2 sets out three criteria for new A1, A2 or A3 uses on new sites or existing retail areas which are as follows:
1. "It can be demonstrated that there is an additional need for the proposal which cannot be provided within an existing retail, commercial and service centre; and
2. The proposal would not either individually or cumulatively with other recent or proposed consented developments have an unacceptable impact on the trade, turnover, vitality and viability of the retail, commercial and service centres.
3. The proposal would serve local needs in a neighbourhood or rural village."
We consider the policy should read as follows:
"1 It can be demonstrated that there is an additional need for the proposal which, when applying the sequential approach to locating development as outlined in national guidance, it has been demonstrated that the site is sequentially preferable; and
2 The proposal would not either individually or cumulatively with other recent or proposed consented developments have

an unacceptable impact on the trade, turnover, vitality and viability of the retail, commercial and service centres.
3 Proposals serving only local needs should be of a scale and type which does not undermine the vibrancy, attractiveness and viability of neighbourhood centres."

The settlement boundary, defined by Policy SP2, excludes allocation site SP12 'Land at Bridge House Farm, Llanmaes, Llantwit Major' which is for a retail foodstore. Instead, the draft allocation abuts, but lies outside, the settlement boundary as currently drawn. Although draft Policy SP3 states that "Areas outside settlement boundaries that are not allocated or protected for a specific use will be defined as countryside we consider the settlement boundary must be extended at this location to include the allocation. Its exclusion is illogical and would fail to reflect the 'on the ground' position when this allocation is delivered. Moreover, its exclusion could confuse and may constrain any future minor development changes at the site (e.g. those needed to meet operational needs the subject of any planning application).
The draft proposals map shows the allocation as a dot which does not cover the full extent of the allocation. See below:
See plan in attachment
By not including the extent of the site/allocation within the defined settlement boundary, the draft plan fails to recognise the allocation will form an important part of the settlement, the delivery of which is crucial to meeting identified needs. Accordingly, we believe this fails Test 2 (Is the plan appropriate?), and it may fail Test 3 (Will the plan deliver) as its exclusion from the boundary may unduly impact the future site operation.

Lidl Great Britain Ltd objects to draft policy SP11 (Retail, commercial and service centre hierarchy) as worded as it fails to meet Test 2 (Is the plan appropriate?). Draft Policy SP11 sets out the proposed retail hierarchy (See extract below), but it does not accord with the settlement hierarchy as set out in draft Policy SP2 and it is not justified.
The adopted LDP Settlement Hierarchy lists:
Key Settlement: Barry
Service Centre Settlements: Cowbridge, Llantwit Major and Penarth
The adopted LDP Retail hierarchy lists:
Town centres: Barry
District centres: Barry (high street/broad street), Cowbridge, Llantwit Major, Penarth
Draft SP2 of the Deposit Plan identifies Cowbridge, Llantwit Major and Penarth as Service Centre Settlements in the Settlement Hierarchy.
However, draft SP11 lists a retail hierarchy as follows:
Town Centres – Barry (Holton Rd), Penarth, Cowbridge
District Centres – Barry (High Street), Llantwit Major
It is unexplained and unjustified that the SP11 retail hierarchy upgrades Cowbridge to Town Centre status, while Llantwit Major and Barry High Street remain District Centres.
The Deposit Plan includes two retail allocations, neither are intended to directly serve Penarth or Cowbridge. Cowbridge is not a focus for growth. It is therefore unjustified that Llantwit Major, which is served by a train station, is a settlement roughly twice the size of Cowbridge (by population) and is a manifestly more sustainable location and more appropriate focus for growth, is proposed to rank below Cowbridge in the retail hierarchy. Barry, Penarth and Llantwit Major should rank as Town Centres as the most sustainable locations for growth.
Penarth is an accessible settlement and an appropriate focus for growth. Indeed, the Council's BP13 (Retail and Commercial Leisure Study (June 2023)) recommends a medium to large supermarket to serve Penarth (Zone 5) but the Deposit Plan is absent of any food retail allocation for Penarth/Llandough. In addition to Llantwit Major and St Athan (Deposit Policy SP12) Penarth should be a focus for additional convenience provision over the plan period.

SP12 – RETAIL FLOORSPACE PROVISION
Lidl Great Britain Ltd firmly supports the allocation within draft Policy SP12 (Retail Floorspace Provision) for 1,251sqm of convenience floorspace at Land at Bridge House Farm, Llanmaes, Llantwit Major. This allocation is needed to ensure the plan is sound, by addressing unmet need at Llantwit Major which is a Service Centre and focus for growth. This should be made clear in the reasoned justification.
In respect to Penarth, Policy SP12, together with supporting paragraphs 6.208–6.210, do not, however, adequately reflect the findings of the Council's Retail & Leisure Study (BP13). Policy SP12 should also plan positively for the identified convenience retail needs within Zone 5 (Penarth/ Llandough). BP13 confirms that Penarth District Centre is not served by a medium to larger supermarket (para. 9.2). The BP13 Study finds quantitative and qualitative capacity for a medium to larger supermarket by 2036 in Penarth (paras. 9.23, 12.24).
It finds overall quantitative convenience capacity of up to c.5,862sqm net floorspace (assuming deep discounter operators). In qualitative terms the following Centres have been identified in potential need for a medium to larger supermarket: Barry Holton Road town centre; Penarth district centre and Llantwit Major district centre. Quantitative and qualitative need is identified.
Despite the evidence of unmet need, the Deposit LDP Policy SP12 allocates only two sites for convenience retail totalling c. 3,109sqm net; one site at Llanwit Major and a second site at St Athan. This is below the overall (up to 4,282–5,862sqm net) requirement identified in BP13. The allocation of land at Llantwit Major aligns with the evidence base, has been thoroughly tested at application stage and this is fully supported.
Policy SP12 is silent on the need for additional floorspace at Penarth/Llandough (Zone 5) and as such does not reflect the evidence base findings and address identified need in Penarth, with a 'residual' quantitative capacity of c.1,173–2,753sqm net unmet/unallocated. We note Policy SP12 states that any additional convenience and comparison retail floorspace beyond that provided by the identified sites should be directed towards the town and district centres outlined in Policy SP11. However, this merely reflects national guidance in respect to directing growth to town/district centres (i.e. applying a sequential approach). The Policy should go further and seek to allocate the residual unmet need to

Penarth/ Llandough. We note the BP13 is silent on additional need at St Athan.
Planning Policy Wales (PPW) 12 requires LPAs to identify the appropriate form, scale and location to meet retail needs (para. 4.3.8) and emphasises ensuring communities have access to adequate retail provision (para. 4.3.13). PPW therefore places a duty on LPAs to plan positively for evidenced retail needs. In respect to Penarth/Llandough Policy SP12 should seek to address this requirement.
Under PPW and TAN4, LPAs must apply the sequential test, directing new retail development to locations that are:
• In-centre,
• Edge-of-centre, and only then,
• Out-of-centre locations that are accessible and well-connected to the catchment.
Penarth Centre is physically constrained. In the absence of any in-centre or edge-of-centre sites capable of accommodating a medium/larger supermarket, the next sequentially preferable option is the most accessible, well-connected site within the same catchment, capable of meeting identified need and reducing expenditure leakage.
Policy SP12 should plan positively for needs in Zone 5 (Penarth/Llandough) and include provision for a medium to large convenience foodstore in Zone 5 in accordance with BP13.
Enclosed with this representation is a separate representation (Under 8. New site submission) promoting a site for food retail development to meet identified needs within the Zone 5 Penarth/Llandough catchment. The site is considered accessible and sequentially preferable to meeting identified needs in Penarth.
The policy should be clear that identified need should be delivered in accordance with the sequential approach as set out in national guidance. As set out in Policy SP12 any additional convenience and comparison retail floorspace beyond that provided by identified sites should be directed towards the town and district centres in accordance with the sequential approach. We support that the inclusion of retail floorspace as part of a mix of uses on allocated sites will also be supported.

POLICY DNP2 – GREEN WEDGES
Lidl objects to the inclusion of land at Penlan Road, Llandough (see Site Location Plan, drawing no. 3744 F420) within the Green Wedge designation under Policy DNP2. The site forms a distinct and enclosed parcel of land on the north-eastern edge of the designated Green Wedge, and its physical characteristics demonstrate that it does not serve the strategic purposes of the wider designation.
The northern and western boundaries are formed by Llandough Hospital, including the hospital access road and surface car parking, which clearly separate the site from the wider Green Wedge. The southern boundary is defined by residential properties along Corbett Road and the Merrier Harrier public house. The south-western and western boundaries are formed by further residential properties within Llandough. As such, built development extends beyond the site in multiple directions, meaning it does not contribute to the open land between settlements that Green Wedges are intended to protect.
The site is physically and visually contained with strong, defensible boundaries. Its close association with existing built form means that it does not exhibit the level of openness required for Green Wedge designation under PPW or BP27. BP27 requires Green Wedge boundaries to include only land that must remain open in the long term. When assessed against the four-stage SE Wales Green Wedge methodology, the site performs weakly. In terms of openness (Stage A), the site has low perceived openness as it is enclosed by development. Under development pressure (Stage B), the influence of surrounding built form means the site is already urban in character. In relation to Green Wedge purposes (Stage C), the site does not materially contribute to preventing coalescence, safeguarding open countryside, or protecting the setting of an urban area. The conclusion (Stage D) is therefore that the site's inclusion within the Green Wedge is anomalous.
Recent decisions in the emerging RLDP, such as the allocation of HG1 KS2, demonstrate that selective Green Wedge boundary amendments are acceptable where supported by evidence. Not all areas within the current designation are equally sensitive, and the site represents one of the least sensitive parts.
The Council's own evidence further supports the suitability of the land for development. The site does not lie within the Special Landscape Area that covers much of the remaining Green Wedge, highlighting its lower landscape sensitivity. The Candidate Site Assessment (BP18a examined the wider parcel (Site ID 400) for housing and concluded that it would form a natural extension to the Llandough settlement boundary. It noted that the land would represent an incursion only if less sensitive sites could not be delivered and discounted the site solely because housing need had been met elsewhere, not due to landscape or Green Wedge harm. This confirms the Council recognises the land is capable of development. The same land can therefore appropriately meet other evidenced needs, including retail provision.
In separate representations, Lidl is promoting land to the south of Llandough Hospital via 'RDLP New site submissions'. It is considered that the site can be developed in a low-impact, landscape-led and sensitively designed manner that respects its transitional position between the urban edge and the wider Green Wedge. A modest single storey medium sized foodstore delivers a built form that can sit comfortably below surrounding tree lines and hospital structures. A comprehensive landscape strategy, including reinforced boundary planting, native woodland edge enhancement, and carefully designed building can soften building edges, strengthen the site's defensible boundaries, and integrate the scheme with its surroundings. The development would therefore appear as an infill of the existing urban area, rather than any intrusion into the open countryside, and can be designed to maintain the wider Green Wedge's openness and character by delivering a strong defensible physical boundary which prevents any further development beyond the site.
As set out in separate representations the Council's Retail and Leisure Study (BP13) identifies a clear quantitative and qualitative need for a medium to larger supermarket within Zone 5, alongside notable levels of convenience expenditure leakage to Zone 3 (Cardiff). The promoted site is well positioned to intercept this leakage, meet the identified convenience floorspace requirement, and provide improved local convenience retail provision for

Llandough/Penarth. There is, therefore, a clear needs-based justification for release of this parcel of land from the Green Wedge designation.
The Green Wedge boundary should be amended at this location to remove the promoted site from Policy DNP2 (Green Wedge designation) and from the Proposals Map. In parallel, the settlement boundary defined by Policy SP2 should be realigned to include the promoted site, reflecting the site's physical relationship with existing development, its defensible boundaries, and its suitability to meet an evidenced strategic retail need.

The Policy text should be changed as follows:
"Proposals involving the change of use at ground floor level uses from A1 retail use within Service Centres will permitted where the proposal would:…"
The Policy RCS1 (Resilient retail, commercial and service centres) supporting text adds new policy requirements which are not within the draft policy. Paragraph 6.214 states that:
"Changes of use class in Retail, Commercial and Service Centres must be justified by evidence that the property has been affected by a sustained period of long-term vacancy and that proactive marketing has been undertaken by a property agent for a minimum of 12 months in an effort to secure tenants. The marketing report should include:
• Details of the existing use or previous use if vacant;
• The length of time the unit has been vacant, if applicable;
• The type of use which the unit has been marketed for, what the marketing strategy involved and its duration;
• The amount of interest in the unit during the marketing period – this should detail the number of queries, the type of uses sought, and if known, the reason for not pursuing any initial enquiries."
However, nowhere in the draft policy wording does it explicitly state to include 12 months of marketing activity. The draft supporting text reads as though this is a policy requirement, rather than supportive guidance. This is contrary to caselaw which confirms that supporting text cannot be used to expand the policy beyond its wording (R (Cherkley Campaign Ltd) v Mole Valley District Council). A proposal could meet the requirements of the criteria sets out in draft policy RCS1 without being marketed for a minimum of 12 months. If the Plan is adopted as currently set out, there is a risk of internal inconsistency between policy RSC1 and the supporting text. Accordingly, this would fail Test 2 (Is the plan appropriate?) as it is not coherent or consistent.
We also have concerns with criterion 5 which states to "Avoid an over-concentration of non-retail uses that would undermine the retail function of the centre". This is because 'over-concentration' has not been defined within the draft policy. This contrasts with draft policy RCS3 which includes a definition of what an over-concentration of hot food takeaways would be. Without a definition of what an over-concentration of non-retail uses is, the draft policy will remain and lack clarity. Additionally, without a definition, the draft policy may fail Tests 2 and 3 as it is currently unclear (Test 2: Is the plan appropriate?) and cannot be effective (Test 3: Will the plan deliver?).

At present, we consider the Deposit Plan inadequately supports the Welsh language. Although the Welsh Language is included within Objective 6 (Embracing Culture and Heritage), the Deposit Plan does not contain a policy which seeks to promote the Welsh language, nor is the promotion of the Welsh language referenced in other Deposit Plan policies where this may be appropriate. Without a clear policy, applicants do not need to explicitly consider impact on the Welsh language so the role of the RLDP will be limited.
Local Development Plans should accord with national policy and guidance. For instance, the supporting text to Policy 1 of Future Wales states that "Key issues, including … the Welsh language, are core elements of policy 1 and are common threads underpinning all Future Wales policies." However, we believe that the Welsh language is not currently underpinning the policies within the Deposit Plan.
Additionally, paragraph 3.25 of PPW states that "The Welsh language is part of the social and cultural fabric and its future well being will depend upon a wide range of factors, particularly education, demographic change, community activities and a sound economic base to maintain thriving sustainable communities and places. The land use planning system should take account of the conditions which are essential to the Welsh language and in so doing contribute to its, use and the Thriving Welsh Language well being goal." Paragraph 3.29 goes on to suggest language impact assessments are required for "large developments not allocated in a development plan which are proposed in areas of particular sensitivity or importance for the language" with these areas defined in the LDP. In this instance, PPW sets out guidance for developers which is not present in the Deposit Plan.
The Vale of Glamorgan Council commissioned AECOM to produce the Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan (November 2025). Paragraph 9.5.9 recommends including a specific policy that supports and protects the Welsh language within the Deposit Plan. This contrasts with the Welsh Language (November 2025) Background paper, produced by the VoGC, which concludes that a specific Welsh Language policy is not warranted, albeit it does acknowledge the Plan's statutory duty to consider the Welsh language and embed relevant provisions within broader thematic policies. However, this is currently lacking as the Deposit Plan does not reference the Welsh language within other policies. Although the Background Paper considers that the RLDP is "unlikely to adversely affect the existing patterns of Welsh language use within the Vale of Glamorgan", the Plan should seek to promote the Welsh language.
Developers should be encouraged to promote the Welsh language where this may be reasonable and appropriate e.g. bilingual signage and announcements. Lidl actively promotes the Welsh language through their business. The Deposit Plan should be amended to strengthen the importance of the Welsh language, helping to meet Objective 6 over the RLDP period. Overall, without clear Welsh Language policy promotion, the Deposit Plan cannot positively impact the Welsh language. The Deposit Plan needs to go further.

Document Element: SSC1 - DEVELOPMENT WITHIN SETTLEMENT BOUNDARIES
Respondent: Persimmon Homes (East Wales) [1068]
Agent: Boyer Planning

Summary:

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes

which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable

homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales

Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority. Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-

based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.
Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual
As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement
From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.
Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.
Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30

dwellings per net hectare in Minor Rural Settlements.
From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.
A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.
Policy SP5 – Creating Healthy & Inclusive Places and Spaces
Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes,

representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.

Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.

In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.

By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.

Policy HG1 (B) – Housing Allocations

HG1 (3) Barry - Land at Hayes Lane

Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:

Unsustainable Location & Poor Connectivity

Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.

Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.

As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

Loss of Allocated Employment Land

Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable

parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements

Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.
Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
Policy CI1 – Open Space Provision
Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.
The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.
Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.

Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.

Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.

Policy SP20 – Biodiversity and Ecosystem Resilience

In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges
Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.
Policy DNP8 – Severn Estuary Recreational Pressure
Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

6965 Support

Document Element: SSC1 - DEVELOPMENT WITHIN SETTLEMENT BOUNDARIES

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection

points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and

Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: SP4 - PLACEMAKING

Respondent: Emma Reed [2653]

Summary:

I believe place making should occur in all settlements, including Rhoose, before major developments are approved. The community has not been involved but has been informed. Initial comments were summarised by officers rather than genuinely considered. Plan making should be community-led to ensure local acceptance, but the current drafts have failed to do so. Despite feedback, no positive changes have been made, except increasing housing on the Readers Ways site to balance the books.

Full text:

Place making should happen in all settlements before major developments are permitted. This includes Rhoose. The community have not been involved in this plan rather told it is happening. Even comments made on the first drafts for Rhoose were reported as what the officer felt were the themes. Plan making needs to start from the bottom up not be enforced down for there to be local acceptance. Communities need to be heard. The drafts of this plan have not done that and regardless of comments no positive changes (except to increase housing numbers on the Readers Ways site to make the books balance!)

Change suggested by respondent:

Rhoose to have a place plan before any further development is approved.

Sound: No

Document Element: SP4 - PLACEMAKING

Respondent: Mr Shayne Wilford [2132]

Summary:

Placemaking is a joke. This policy destroys existing communities. There can be zero benefit from imposing huge inner city density housing estates on the green outskirts of smaller communities with little or no infrastructure or facilities. The resulting gridlock and poorer air quality together with the destruction of green spaces and hedgerow habitats can never be undone. History shows that all developments of this nature result in isolated communities and commuter brick box deserts. There is nothing of benefit to existing communities.

Placemaking is a joke. This policy destroys existing communities. There can be zero benefit from imposing huge inner city density housing estates on the green outskirts of smaller communities with little or no infrastructure or facilities. The resulting gridlock and poorer air quality together with the destruction of green spaces and hedgerow habitats can never be undone. History shows that all developments of this nature result in isolated communities and commuter brick box deserts. There is nothing of benefit to existing communities.

Change suggested by respondent:

The Authority need to revise their ideological fantasy policies around creating communities and active travel and recognise what happens in the real world outside of their offices and computers. We recognise the need for housing but better use of brownfield sites where more high-rise could be built together with smaller (max 100) developments that will have less local impact and therefore more community acceptance and nicer places to live..

Document Element: SP4 - PLACEMAKING

Respondent: HBF (Mr Mark Harris) [538]

Summary:

The HBF objects to the phrase at para 6.33 'Development will be favoured'.

The following wording should be added at an appropriate point: 'the Placemaking Statement should be proportionate to the scale of the development proposed.'

Remove the requirement for a placemaking statement.

Full text:

The HBF objects to the phrase at para 6.33 'Development will be favoured'. Community engagement is already included in the planning process, and consultations take place during the LDP at various stages, so any development on an allocated site will have already been consulted on. There is also a requirement for a PAC to take place prior to an application being submitted and statutory consultation by the LPA once the application is submitted. If the place plans cover the application site, these have also undergone consultation. There is no justification for the LPA to suggest that one application will be favoured more, just based on the level of additional consultation which has taken place.

Para 6.34 The following wording should be added at an appropriate point: 'the Placemaking Statement should be proportionate to the scale of the development proposed.' The type of placemaking that can be achieved on each site varies considerably for several reasons, including the size/scale of the development.

The HBF objects to the requirement for a 'place-making statement' as it is unnecessary; all of the information required is already required to be included in a Design and Access statement, which is a mandatory requirement of a planning application. The requirement for unnecessary additional documentation solely adds delays to the planning process.

Change suggested by respondent:

Amend the wording of the supporting text and policy accordingly.

Remove the requirement for a placemaking statement.

Sound: Yes

Document Element: SP4 - PLACEMAKING
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:

Policy SP4 requires “Placemaking Statements” for “all major developments”. It is observed that supporting paragraph 6.34 of the RLDP states that “Major development proposals6 must be supported by a Placemaking Statement to demonstrate clearly how proposals for new development will achieve placemaking. This Placemaking Statement should form part of the Design and Access Statement that will be a requirement for most major planning applications.”

It should be made clear in the wording of Policy SP4 that Placemaking Statements are not expected to be standalone documents as per supporting paragraph 6.34 of the RLDP.

Full text:

Policy SP4 requires “Placemaking Statements” for “all major developments”. It is observed that supporting paragraph 6.34 of the RLDP states that “Major development proposals6 must be supported by a Placemaking Statement to demonstrate clearly how proposals for new development will achieve placemaking. This Placemaking Statement should form part of the Design and Access Statement that will be a requirement for most major planning applications.”

It should be made clear in the wording of Policy SP4 that Placemaking Statements are not expected to be standalone documents as per supporting paragraph 6.34 of the RLDP.

Change suggested by respondent:

Policy SP4 should therefore be amended as follows:

“…Placemaking Statements will be required as part of Design and Access Statements for all major developments setting out how the proposal accords with Placemaking Principles…”

This amendment is necessary to ensure that Policy CI1 meets the second test of soundness (Is the Plan appropriate?).

6617 Comment

Document Element: SP4 - PLACEMAKING

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Policies that support the role of a Designing out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD)
Planning Policy Wales (PPW)
Technical Advice Note (TAN) 12: Design
Section 17 of the Crime and Disorder Act 1998
Violence against women and Girls
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public
The Terrorism (protection of premises) Act 2025 (Martyn's Law)
Standard Tier and Enhanced Tier
Public Spaces

South Wales Police ask that all new developments are built to Secured by Design standards and that they work with The Vale of Glamorgan planning Department at the pre planning stage.
It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred to the designing out crime at the pre planning stage.
Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025.
When planning parks and community space. Public consultation should take place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the

plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the

House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.

2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment

Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.

• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built

to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where

redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

6715 Comment

Document Element: SP4 - PLACEMAKING

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are
included as one of the principles.

The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local diets, biodiversity, and community engagement.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning
guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are
involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the
deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community
amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient
communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: "The Local Development Plan will support resilient and sustainable
local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part
of sustainable growth."

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local
diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

"Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other
opportunities for local food production as part of multifunctional green infrastructure."

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their
proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative
impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid
HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to
ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Change suggested by respondent:

Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

"Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other
opportunities for local food production as part of multifunctional green infrastructure."

6714-6733 Submission Cardiff and Vale LHB Redacted - https://valeofglamorgan.oc2.uk/a/4tf

6773 Support

Document Element: SP4 - PLACEMAKING

Respondent: Persimmon Homes (East Wales) [1068]

Agent: Boyer Planning

Summary:

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):

- Test 1 – Does the Plan Fit?
- Test 2 – Is the Plan Appropriate?
- Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.

Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to

acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include

ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar

implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.
Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual
As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement
From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates

a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.
Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.
In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.
Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.
Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.
Policy SSC1 – Development within Settlement Boundaries
Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.
Policy SP4 – Placemaking
In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.
In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.
Policy PGD1 – Creating Well Designed and Inclusive Places
Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.
On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.
A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.
Policy SP5 – Creating Healthy & Inclusive Places and Spaces
Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and

clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On

the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing

requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements
Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.
Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required.

This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

Policy CI1 – Open Space Provision

Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.

The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.

Productive and Enterprising Places

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.

Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.

Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is

reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.

Policy SP20 – Biodiversity and Ecosystem Resilience

In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Policy DNP8 – Severn Estuary Recreational Pressure

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

The policy also provides no clear threshold or criteria for determining what level of activity would constitute “visitor pressure” or an “adverse impact” on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.

From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan’s ability to meet its housing requirements and risk finding the RLDP unsound.

Conclusion

Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes’ most pertinent comments on the consultation document are summarised below:

• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.

• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.

• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale’s position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan’s ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

• Whilst Persimmon welcome the majority of the proposed planning policies from a development management

perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Summary:

In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

Full text:

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.

Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered

Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor,

it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of

provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus

959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.

5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.

5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.
5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.
Policy SP4 - Placemaking
5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the

Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary

School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.

• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By

introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.

• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.

• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.

• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:

•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:

i. Space heating demand less than or equal to 40kWh/m2/year;

ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.

• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.

• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.

• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.

•

Developments that secure a planning permission from 1st April 2030 onwards will require:

i. Space heating demand less than or equal to 15kWh/m2/year;

ii. Energy use intensity less than or equal to 40kWh/m2/year; and

Policy SP13 - Community Infrastructure and Planning Obligations

Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges

• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute “visitor pressure” or an “adverse impact” on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan’s ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and

e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet

Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Penarth Town Council Deposit RLDP Consultation Response

Comments collated at a meeting of the Council's Consultation Task and Finish Group on 9th February 2026

Some Members attended the RLDP consultation drop-in session in Penarth and in general found it to be very informative.

Members support the general development strategy but did note the lack of information concerning discussions with adjacent and other nearby Principal Councils in the CJC Region. In view of the forthcoming Strategic Development Plan, encompassing the ten authorities, members felt that some further commentary regarding this is warranted.1

It is clear that the approach taken in the Cardiff paper is still that ideally, each Council is self-contained and "consumes its own smoke," which does not show any wider strategic thinking between the ten authorities in preparation for a regional Strategic Development Plan.

Members agreed with the view that infrastructure to support new housing developments was required in order to create successful developments, although they acknowledged that logistically it was difficult to pre-empt demand for some services such as travel and health services. Members also noted that predicting developmental needs and opportunities within wider context surrounding the UK's economic, political, and social landscapes.

Members noted that there was not much focus on Penarth or identified potential future development for Penarth beyond that already underway at the location near to Cosmeston but welcomed flexibility in its approach. Members expected to be more closely involved in the decisions and planning of this, and other such developments, and provide opportunity for wider consultation where appropriate, such as pre-application consultations, as well as would expect to be included in consultations concerning sites adjacent to Llandough, Dinas Powys, and Sully given their impact upon the town.

Penarth as a town is currently developed to its boundaries, save for the development at Cosmeston. It is, therefore, more dependent than other Service Centres on windfalls of land or buildings which may arise during the currency of the Plan. In 2023, an extensive assessment of the potential of the town concluded the following:

"There is marginally less capacity in Penarth [and Llandough] than the projected figures. However, this does not mean that the projections are incorrect or unjustifiable. The reported figures have not included a significant amount of capacity on open space land, and the projected figures for conversion of existing buildings and intensifications will be surpassed if the extant consents that exist this early in the Plan period are implemented."

The degree of flexibility, however, is substantially depending on one large site. P009, Headland School, is identified as both a potentially disused building and as a site with a capacity of 111-120 units. This special school is full to capacity and used by many Council in both Wales and England.

Members did note the inclusion of Cogan Transport Interchange under section 6.196 but would have liked to see more information about its future developments as they see it as key to increasing public transport use to Barry and further to West Wales in general.

Members wished to advise that issues with both the bridge and the platforms at Cogan have been long term, with accessibility being central to these issues. Members felt that improvements to accessibility should be a priority at this site, with planting and landscaping considered secondary to this.

Members felt it was key to consider the additional stress on Penarth from increased anticipated demand of public transport needs and emphasised the need for this to be aptly considered by bus route providers as part of development work.

Members wanted to see a strategy that actively protects the town's heritage and culture whilst still being able to provide for current and future generations.

Members welcomed the inclusion of specific climate change mitigation and adaptation measures under SP16 and section CC1-CC6, noting the considerable attention given to Net Zero transition proposal relating to public buildings and energy. Whilst the evidence presented does not include the UK Climate Change Committee Report2, Members were pleased to see that CC1-CC6 largely reflect the Committee's finds and are tailored to a transition which reflects what is presently feasible. This is providing that the necessary skills to understand and undertake carbon assessments within a policy implementation and regulation context are readily available.

Under CC2, it was noted that the presumption against demolition3 in favour of retrofit and reuse may constrain maximum transition to net zero as, whilst there is grant aid available for public buildings and social housing, the retrofit monies available for private stock is limited.

Additional considerations will also need to be made as part of the Third Carbon Budget (2026-2030), Local Area Energy Plans and the climate change ISA theme.

Members also felt similar about the inclusion and consideration of sustainable development through the specific strategy outlined in section 5 of the document and felt this linked in well with ongoing Placemaking work and its strategic approach as detailed in SP4.

Members were pleased to see mention of the diversification of high streets, although noted that Penarth was above average in terms of occupancy. They hoped that the RLDP would be able to support the town centre and support other ways it could be improved, such as a fishmonger or identifying a site for a new Cemetery.

With Penarth classified as a Service Centre, they are identified as having a defined role. However, the decline of in-person retailing means that defining role is not that evident, and Members felt there is potentially a need to move away from the traditional retail role of Town Centres in favour of "repurposing, creating multifunctional, commercial, and service centres that meet the needs of the communities they serve" in line with Future Wales Town Centre First Policy. The term 'repurposing' suggests a stronger role for the public sector in enabling these new purposes, and Members felt that Placemaking Plans could be one potential framework for this.

Members felt that potential functional support that could be provided could include:
• The appointment of a Town Centre Manager
• Using supporting interventions such as an extension or reshaping of normal services such as Neighbourhood Services.
• Using existing or emerging new powers, such as compulsory purchases.

Members wished for the RLDP to facilitate the safeguarding of essential public services, including health, policing, fire and rescue in the town, which would help to develop the defining role of a Service Centre, and felt that specific reference to these would be beneficial.

Members supported the avoidance of coalescence with adjacent settlements through the reconfirmation of Green Wedges as it allows for relevant extensions to those settlements whilst allowing them to retain their identity.

Members noted that the Quiet Area provision under DNP6 only applies to Penarth and wished to know why this was the case.

Members advised that they welcomed further opportunity for consultation, particularly in relation to developments in the neighbouring Cardiff Bay area whilst acknowledging that this is not necessarily an RLDP concern.

Footnotes

1 There is an evidence paper concerning relations with Cardiff and a Statement of Common Ground with Bridgend. However, there is only a reference in the RLDP text to discussions with other regional Councils and not the paper itself. We would be grateful if you could provide the paper as it does impact on the soundness of this Plan.

2The UK Climate Change Committee's 'Progress Report: Reducing Emissions in Wales' highlighted the following aspects of import: Skills, Vehicle Charging Networks, Improving Recycling, Energy Plans, Decarbonising Public Buildings and Social Housing, and reducing Road transport Demand (Car-Kilometres).

3The UK Environmental Audit Committee (2022) noted that "the evidence we received consistently recommended that retrofit and reuse be prioritised over new build."

Document Element: SP4 - PLACEMAKING

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the

constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of “areas of high ecological value” will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of ‘High Ecological Value’ (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger “policy hook” within

Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
“the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale.”
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
“Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value”.
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term “high ecological value” in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan’s alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
"There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value".

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as 'search areas'). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to '6 broad habitat types' including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to '6 broad ecosystems' to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP's Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).
