This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority. Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making

perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.
Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual
As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement
From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified "has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area." It also notes that this level of growth has been chosen so that it is "complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).".
Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst

Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than

the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.
A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.
Policy SP5 – Creating Healthy & Inclusive Places and Spaces
Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing

services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small

industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the

plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.

Policy SP8 – Affordable Housing Requirements

Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.

On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Policy SP10 – Sustainable Transport

Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.

In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.

In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.

Policy TR1 – Transport Proposals

Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.

In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.

Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.

Policy SP13 – Community Infrastructure and Planning Obligations

Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

Policy CI1 – Open Space Provision

Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.

The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.

Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.
The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.
Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.
Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.
Distinctive and Natural Places
Policy SP19 – Green Infrastructure
In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.
The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.
Policy SP20 – Biodiversity and Ecosystem Resilience
In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas
Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.
Policy DNP2 – Green Wedges
Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.
Policy DNP8 – Severn Estuary Recreational Pressure
Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute “visitor pressure” or an “adverse impact” on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan’s ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes’ most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale’s position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan’s ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government’s Future Homes Standard (FHS), which is intended to ensure all new homes are “zero-carbon ready” through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys’ (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council’s proposed housing trajectory.

Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

6924 Object

Document Element: Dyffryn Basin & ridge slopes;

Respondent: Barratt Redrow Homes [2669]

Agent: Boyer Planning

Summary:

Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.

As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).

Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.

However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.

A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east.

The visual appraisal establishes that site development has
the potential to partially change the appearance of this edge within available views.

However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.

When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.

Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.

Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be
removed.

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:

• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the

role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which

is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make

provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.

5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.

5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.

5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.

5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any

evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development

Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.
5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.
5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.
5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.
5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.
5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.
5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.
Policy SP4 - Placemaking
5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy

framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the

level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.

• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.

•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.

• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.

• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.

• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.

• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.

• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.

• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.

•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.

• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent

national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).

• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).

•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.

• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.

• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.

• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:

•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:

i. Space heating demand less than or equal to 40kWh/m2/year;

ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.

• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not

considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is

very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure

SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These

principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Respondent: H Jones, L Sungur and P John [3741]
Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis.

Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both

open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the

area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is

achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: Between Llantwit Major and

Respondent: Mr Graeme Smith [3029]

Summary:

I strongly support designating this area as a Green Wedge in the RLDP Deposit Plan to prevent urban encroachment and protect the visual and physical separation of Llantwit Major and Llanmaes, including the Llanmaes Conservation Area. This green space faces significant development pressure, evidenced by recent housing, mixed-use, and retail proposals. The area scores highest among all Green Wedges in the Vale of Glamorgan, meeting the Welsh Government's designation purposes. I appreciate the RLDP team's positive evaluation and have no objections to most of the area's proposed boundaries, except for the tentative retail site.

Full text:

I strongly support this allocation within the RLDP Deposit Plan. This designation protects this area of open countryside against intrusions from the urban form. It also protects against the visual and physical coalescence of the Town of Llantwit Major and the Village of Llanmaes and protects the setting of the Llanmaes Conservation Area consistent with its adopted Management Plan. Development pressure on this strip of green space is significant as evidenced by the various housing, mixed and retail proposals made to date as part of the RLDP process. Having studied the background papers on the allocation of Green Wedges throughout the Vale of Glamorgan I note that this area scores the highest of all the Green Wedges across the county, including the five existing ones, as recorded in RLDP Background Paper 27 and tested against the Welsh Government's five purposes for designation of a Green Wedge. I am most grateful to the RLDP team for their positive evaluation of this site for this classification. I also note the adjustments made to the area covered by the Green Wedge between that originally proposed by and that in the Deposit Plan and with the exception of the tentative retail designation of the Bridge House Farm parcel have no objections to these.

Respondent: Rik Stevens [3360]

Summary:

I would like to express my support for the proposal to designate the land between the Village of Llanmaes and the Llantwit Major Bypass as a Green Wedge. Maintaining this land as protected open space is important in order to:
- Prevent the visual and physical coalescence of Llantwit Major and Llanmaes
- Protect the rural setting and landscape character of the area
- Preserve the setting of the Llanmaes Conservation Area
- Safeguard countryside from incremental development pressures

Designating this land as a Green Wedge is a sensible and necessary planning measure to ensure the long-term separation and identity of the two settlements and to maintain the character of the surrounding countryside.

Full text:

I am writing in response to the Replacement Local Development Plan (RLDP) consultation regarding proposals affecting Llanmaes.

Green Wedge – Land between Llantwit Major and Llanmaes Site ID 436 – Proposal Number DNP2(6)

I would like to express my support for the proposal to designate the land between the Village of Llanmaes and the Llantwit Major Bypass as a Green Wedge. Maintaining this land as protected open space is important in order to:

- Prevent the visual and physical coalescence of Llantwit Major and Llanmaes
- Protect the rural setting and landscape character of the area
- Preserve the setting of the Llanmaes Conservation Area
- Safeguard countryside from incremental development pressures

Designating this land as a Green Wedge is a sensible and necessary planning measure to ensure the long-term separation and identity of the two settlements and to maintain the character of the surrounding countryside.

Retail Development – Bridge House Farm
Site ID 379 – Proposal Number SP12(2)

I would like to register my objection to the proposed retail development at Bridge House Farm.

The proposed store would represent a significant and inappropriate intrusion into the countryside and would undermine the purpose of the proposed Green Wedge. In particular:

- The development would contribute to the visual and physical coalescence of Llantwit Major and Llanmaes.
- It would introduce a large-scale retail building and associated infrastructure into a sensitive rural setting.
- The proposal would be incongruous with the landscape character of the area and detrimental to the setting of the Llanmaes Conservation Area.
- The site lies outside the defined Strategic Growth Area, making it an unsuitable location for this type of development.

For these reasons I strongly urge the Council to reject the allocation of this site for retail development.

Thank you for considering these comments as part of the consultation process.

Respondent: Mrs Janet Harris [1846]

Summary:

I would strongly support the proposal for a 'green wedge' for the land between the village of Llanmaes and the Llantwit major bypass, but this should also include the land currently under proposal for the above retail development site. This would protect this land from further hostile development proposals, protect the intrusion into the countryside and the setting of the Llanmaes Conservation Area and protect the village against physical and visual coalescence with a town, protecting its rural and village character. It would protect the setting of the Llanmaes Conservation Area as per the adopted Management Plan.

Full text:

As a resident of the village of Llanmaes for the last 37 years, I would like to make the following comments:
Flood Alleviation
There is a desperate need for not just a flood alleviation plan, but action to protect the residents of Llanmaes from the continuing effects of flooding in the area. More properties have been affected this year. Recently our own 400-year-old property, which has never been previously affected was subjected to a backlog of sewage from the main sewer in the road on which we live. Fortunately, a manhole on our drive gave way under the pressure, releasing water and sewage down the road. Otherwise, like other properties in the village we would be at risk of the property itself flooding with sewage.
I would call upon both the Vale of Glamorgan Council and the Welsh Government to come up with a coherent, joined up plan and solution to this long running problem and implement it with urgency.
No building should be allowed in the village until a solution has been completed, there is too much risk to existing properties.
Retail - Land at Bridge Farm House site ID 379 Proposal Number SP12(2)
This proposed development, currently subject to a 'Call In' by the Welsh government is at clashing odds with the village and rural community setting of Llanmaes. The large store and supporting structures and developments would be significant intrusions into the countryside and would result in the physical and visual coalescence of a small rural village with the town of Llantwit Major. It represents a significant intrusion into the countryside, is at odds with the proposal of a green wedge to protect the rural setting of the village and would be clearly detrimental to the Llanmaes Conservation Area. It is outside the RLDP's Strategic Growth Area.
Green Wedge/Conservation. Land Between Llantwit Major and Llanmaes Site D436 Proposal Number DNP2(6)
I would strongly support the proposal for a 'green wedge' for the land between the village of Llanmaes and the Llantwit major bypass, but this should also include the land currently under proposal for the above retail development site. This would protect this land from further hostile development proposals, protect the intrusion into the countryside and the setting of the Llanmaes Conservation Area and protect the village against physical and visual coalescence with a town, protecting its rural and village character. It would protect the setting of the Llanmaes Conservation Area as per the adopted Management Plan.
I would be grateful if these comments could be duly noted and considered.

I understand that the Draft Plan for the RLDP is now open for consultation. I would be grateful if my comments below would be included please.

Site ID 436 — Proposal Number DNP2(6)
Conservation / Green Wedge
I support the proposal for a green wedge conservation area protecting it from development.

Site ID 379 — Proposal Number SP12(2)
Retail — land at Bridge House Farm
My main concern is for the survival of the town of Llantwit Major and its small owner-managed shops, Post Office, chemists, charity shops, hairdressers, etc. And to some extent existing supermarkets. I am also concerned about maintaining green spaces and conservation areas as per the adopted Management Plan.
Building an 'out of town' supermarket will significantly and detrimentally affect footfall to the town centre — people who use the current town centre retail and hospitality opportunities simply will not visit as they will be parked away from them and will not return. The town will slowly die. Shops and other premises will be boarded up. Livelihoods will be lost. Time-and-again we have seen many towns across Wales and the rest of the UK suffer. Simple desk-based research will reveal many.
Taking one town as an example — Chepstow. Tesco built a supermarket about 150 metres from Chepstow high street across a main road — not dissimilar to the situation in Llantwit Major / Llanmaes. Few now visit Chepstow high street so the town itself is dying. Shops and other premises have closed, remaining empty for years — and at a time when retail outlets are increasingly under pressure from on-line shopping.
The council and planners must do everything it can to ensure that Llantwit Major remains a vibrant and varying environment for generations to come — providing employment and facilities for all to enjoy.
Building out-of-town will destroy the community of Llantwit Major for ever.
Housing — land to the south of Millands Farm etc.

HG1(5), HG2(21) and HG2(3)
I am silent on this proposal

Respondent: Andrew Jack [3465]

Summary:

I support Proposal Number ID 436 Number DNP2 (6), for the Conservation /Green Wedge to prevent the coalescence of Llanmaes and Llantwit Major and hence preserve the unique village amenity of the Llanmaes setting which is enjoyed by residents of both locations and the many walkers, runners and cyclists who daily frequent the village and adjoining countryside.

Full text:

I wish to oppose RLDP ID 379 Proposal Number SP12(2), on the grounds of the position and proposed access road to and from this Lidle development will be a major safety concern and danger both to the traffic through the village of Llanmaes and to the traffic on the Llantwit Major bypass B-4265. The current Llanmaes village traffic consists of mainly light vehicles and some HGV, whilst the B-4265 is increasingly HGV, supplying quarried materials to Aberthaw Cement works. Both roads are used extensively by cyclists particularly through the village since this is the recognised Vale cycleway to Ewenny. The single footpath through the village to the traffic light controlled crossings is more importantly the main route used by pedestrians both residents and visitors, including local school children going to and from the schools in Llantwit Major, plus many runners and walkers from the larger recreational areas. In addition there are stables and a riding school just before the exit of the village with the junction with the B-4265. I am of the opinion that as indicated on the Lidl proposal it will only be a matter of time before serious accidents, injuries and fatalities will occur.

Additionally I support Proposal Number ID 436 Number DNP2 (6), for the Conservation /Green Wedge to prevent the coalescence of Llanmaes and Llantwit Major and hence preserve the unique village amenity of the Llanmaes setting which is enjoyed by residents of both locations and the many walkers,runners and cyclists who daily frequent the village and adjoining countryside.

Document Element: Between Llantwit Major and

Respondent: Richard Hughes [3475]

Summary:

All of the land between the village of Llanmaes and the Llantwit Major by-pass should be dedicated to a Green Wedge and thus exempted from any development. It is important to resist a coalescence between town and village. Any single development would undermine the principle of countryside protection and provide a precedent for further intrusions. The Llanmaes Conservation area should be protected. I understand that, at present, the site of the proposed retail development is unprotected, pending the outcome of the Inquiry. Granting permission for the store to be developed would undermine, render pointless the idea of coalescence-avoidance and countryside protection.

Full text:

I would like to submit comments with regard to the consultation process on the Deposit (Draft) Plan for the RLDP.

Conservation/ Green Wedge. Site ID 436 Proposal Number DNP2(6)

All of the land between the village of Llanmaes and the Llantwit Major by-pass should be dedicated to a Green Wedge and thus exempted from any development. It is important to resist a coalescence between town and village. Any single development would undermine the principle of countryside protection and provide a precedent for further intrusions. The Llanmaes Conservation area should be protected. I understand that, at present, the site of the proposed retail development is unprotected, pending the outcome of the Inquiry. Granting permission for the store to be developed would undermine, render pointless the idea of coalescence-avoidance and countryside protection.

Retail - Land at Bridge House Farm Site ID 379 Proposal Number SP12(2)

The proposed Lidll development should be rejected for the following reasons:

It would introduce a coalescence of town and Village, an action that goes against present policy. The coalescing effect would be accentuated by the increased traffic, the increase in visitors and the negative effects such as littering that would accompany greater human presence.

It would be situated outside the RDLP's defined Strategic Growth Area.

It would mark a major intrusion into the countryside, visually and in terms of human movement.

It may be the case that, especially with prospect of 500 houses to be built near St Athan, that an additional supermarket might be necessary to meet the needs of the growing population. It doesn't make more sense to site the development in Green Wedge land, on a difficult corner, resulting in an inevitable increase in traffic, a loss of countryside and adding a visual plight to the local perspective.

Document Element: DNP2 – GREEN WEDGES

Respondent: Ms Lucie Taylor [2506]

Summary:

SF&G recognise the importance of green wedges and other countryside land, for food production and suggest safeguarding land accordingly, aligned with housing growth. Our communities face challenges like poor health, climate change, and inequality, with a fragile food system vulnerable to shocks. The Welsh Government Community Food Strategy (2025) aims to develop diverse local food networks. Supportive policies are needed for small-scale horticultural farms to enable essential infrastructure, moving away from strict scrutiny and towards recognising genuinely necessary structures for agriculture, ensuring resilient and sustainable local food businesses.

Full text:

Green wedges are particular opportunities to encourage food production and this should be mentioned under this policy. We can use green wedge land and land that has high agricultural value to more specifically safeguard land for food growing – perhaps commensurate to the level of housing growth in a region, city, town or village.
The levels of housing growth referred to in the RLDP requires land outside settlements - in green wedge and other countryside locations to be protected for food production which will happen alongside the growth.
Our communities are facing many challenges - poor health, climate change, nature loss, disconnection and loneliness, and the cost of living. These intensifying pressures are straining communities and deepening inequality. Our food system is very fragile. The ground-breaking report last year by Tim Lang, Just in Case: narrowing the UK civil food resilience gap, shows how our highly centralised just-in-time food distribution system, on which we are wholly dependent, is not resilient to shocks that we already see happening - cyber-attacks, closed ports, global conflict, extreme climate events. The launch of the Community Food Strategy in 2025, saw a Welsh Government commitment to deliver representative, diverse and active local food networks working to increase the number of collaborative community food projects. Their commitment is long term and whole system. There is now a national realisation that infrastructure change is needed and that joined up thinking and policy support is the core foundation to that. Horticultural food production often happens on small areas of land where farmers benefit from little permitted development rights. they need supportive policy for their often absolutely essential infrastructure that allow food growing initiatives to thrive. We must move away from the old-fashioned approach of stricter scrutiny and regard such structures as ‘genuinely necessary’ for the purposes of agriculture, if reasonable and proportionate information is provided to support their need.

I would call upon both the Vale of Glamorgan Council and the Welsh Government to come up with a coherent, joined up plan and solution to this long running problem and implement it with urgency.
No building should be allowed in the village until a solution has been completed, there is too much risk to existing properties.

Summary:

I support establishing a Green Wedge between Llantwit Major and Llanmaes to protect Llanmaes' rural character, historic sites, and listed buildings. The Green Wedge will prevent coalescence with Llantwit Major and preserve Llanmaes as a small, thriving village with agricultural roots. It is accessed via narrow lanes used by pedestrians, cyclists, horse riders, and agricultural traffic. This measure aligns with the Boundary Commission's proposed changes and aims to maintain Llanmaes as part of a network of small villages.

Conservation /Green Wedge - land between Llantwit Major and Llanmaes Ste ID 436 Proposal Number DNP (6)
In order to preserve the conservation status of Llanmaes as a small rural village community with agriculture as its mainstay, including a Church dating back to 1234, ancient ruins, listed dwellings, the setting up of this Green Wedge is essential. It will also ensure there is no risk of coalescence betwee Llanmaes and the nearby small town of Llantwit Major.
Llanmaes is a small , but thriving community accessed from Siggingston, St Mary Church, St Athan, Eglwys Brewis, and indeed Llantwit Major by a network of narrow unclassed lanes. These are enjoyed by walkers, horse riders, cyclists and of course shared by motor vehicles, incuding numerous working agricultural traffic. The proposed Green Wedge would serve to conserve this village as part of a network of small villages , which it is important to preserve, and is of particuar relevance as Llanmaes will form part of a group of villages as part of the Boundary Commission's recommended changes.

Summary:

I was pleased to see that in the RLDP that the fields adjacent to the LLantwit Major Bypass (site ID 436 Proposal number DN2(6)) is designated as a Green wedge. That application was made by our Community council and I fully support this proposal. The reasons they gave and I agree with this, are the protection of the open country side, protects against the coalescence of the town and our rural village, and protects the setting of the conservation area.

Full text:

I attended the consultation at CF61 about the RLDP and was advised to write to you with my comments.

I was pleased to see that in the RLDP that the fields adjacent to the LLantwit Major Bypass (site ID 436 Proposal number DN2(6) is designated as a Green wedge That application was made by our Community council and I fully support this proposal. the reasons they gave and I agree with this , are that protection of the open country side, protects against the coalescence of the town and our rural village, and protects the setting of the conservation area.

I see that the Planning policy has ring fenced the location of the proposed Lidl development (ID 379 Proposal number SP12(2) that is currently called in by the Welsh government . You will be aware that the Planning committee voted against the recommendation of the planning officer. when they made there decision, that is now being challenged as procedurally against a lot of Vale and Welsh Government policies. Looking forward to this site being included in the green wedge when this ridicules decision is over turned

I note with interest that several fields to the north east of Llanmaes have been designated as potential solar farm sites. These very fields are partially responsible for the flooding risk in Llanmaes. I suspect that solar farms would not help this problem.

The deferred flood alleviation scheme for Llanmaes affected our land in Siginstone lane. The RLDP mentions this scheme several times but no response has been forth coming. The village floods and for many many years The council and the Welsh government have put in funding in 2023, the Welsh government allocated £3,090,855 and in 24/25 £16,000 to solve this. Nothing has yet happened, indeed in the RLDP it is mentioned extensively that the village floods but we cannot see what specific directions have been made to resolve this problem. I urge the Vale council to liaise with the Welsh government about bringing this forward and mention in the deposit plan.
I appreciate that the costs of the plan increased substantially with the fuel costs of the Ukraine war and probable is increasing again. however parts of the plan , reprofiling the road and channeling flood water away from housing could have made a difference without the extensive earth works in fields referred too above. If my suggestion of extensive tree planting in above fields instead of bunds and channels had been implemented the risks may already be reduced.

Respondent: Llanmaes Community Council (Mrs C Alexander, Clerk) [240]

Summary:

1. Green Wedge/Conservation DNP2 Site 6 Land between Llantwit Major and Llanmaes
Llanmaes Community Council strongly supports this allocation (originally proposed and promoted by ourselves) within the RLDP Deposit Plan. This designation protects this area of open countryside against intrusions from the urban form. It also protects against the visual and physical coalescence of the Town of Llantwit Major and the Village of Llanmaes and protects the setting of the Llanmaes Conservation Area consistent with its adopted Management Plan. Development pressure on this strip of green space is significant as evidenced by the various housing, mixed and retail proposals made to date as part of the RLDP process. Having studied the background papers on the allocation of Green Wedges throughout the Vale of Glamorgan we note that this area scores the highest of all the Green Wedges across the county, including the five existing ones, as recorded in RLDP Background Paper 27 and tested against the Welsh Government's five purposes for designation of a Green Wedge. Therefore, we are very grateful to the RLDP team for their positive evaluation of this site for this classification. We also note the adjustments made to the area covered by the Green Wedge between that originally proposed by ourselves and that in the Deposit Plan and with the exception of the tentative retail designation of the Bridge House Farm parcel we have no objections to these.

6688 Object

Document Element: North of Wenvoe;

Respondent: Powells (Mr Stuart Leaver, Head of Planning & Land Promotion) [887]

Summary:

Green Wedges are typically designated where there is demonstrable development pressure and where reliance solely on settlement boundaries would not be sufficient to maintain the desired urban form. Their purpose is therefore strategic rather than absolute: they are intended to guide the form and direction of development rather than impose a blanket prohibition on all development.

The Council's own Green Wedge Background Paper (BP27) assesses the land surrounding Culverhouse Cross as part of Green Wedge MG18 (3) – North of Wenvoe. The study divides the designation into a number of parcels (NW1, NW2 and NW3) and assesses their contribution against the five Green Wedge purposes.

Importantly, the assessment demonstrates that land immediately adjoining the urban edge of Culverhouse Cross does not perform a uniformly strong Green Wedge function.

For example, Parcel NW1 – which lies adjacent to the commercial and highway infrastructure associated with Culverhouse Cross – is identified as making only a weak contribution to the purpose of preventing settlement coalescence and a weak contribution to protecting the setting of the urban area, with an overall contribution rating of Moderate.

Similarly, Parcel NW2 – which also lies adjacent to the settlement edge – is assessed as making only a moderate contribution to preventing settlement coalescence and managing urban form, while again making only a weak contribution to protecting the setting of the settlement.

The study explicitly notes that some parcels around Culverhouse Cross do not lie within a gap where coalescence between settlements would occur, and therefore make only a limited contribution to that purpose.

These findings are important because they demonstrate that the Green Wedge designation in this location performs a varied and nuanced role rather than representing land of uniformly high strategic importance.

Importantly, the Green Wedge assessment itself acknowledges that the area around Culverhouse Cross experiences development pressure due to its relatively sustainable location on the western edge of Cardiff and its strong highway accessibility.

In this context, it is necessary for the development plan to strike a balance between protecting the strategic purposes of the Green Wedge and responding to identified housing needs.

Full text:

1. Introduction

This representation is submitted on behalf of Powells as land promoters of Candidate Site CS387 at Culverhouse Cross. The representation seeks to set out our comments on the RLDP draft deposit as well as set forward the case for the allocation of the site within the Vale of Glamorgan Replacement Local Development Plan (RLDP) for residential development of up to 50 dwellings, including a minimum of 50% affordable housing.

The site presents a deliverable, sustainable and policy-aligned opportunity to address significant affordable housing need within the Wenvoe housing market area. Despite Culverhouse Cross being identified as a Primary Settlement within the RLDP settlement hierarchy, the Deposit Plan does not allocate any residential development within the settlement.

This approach results in a number of fundamental inconsistencies within the Plan including:

• A settlement hierarchy that identifies Culverhouse Cross as a Primary Settlement but provides no growth.

• Evidence of significant affordable housing need within the Wenvoe ward that is not spatially addressed.

• Policy mechanisms intended to support affordable housing delivery (HG4 and HG5) that cannot realistically operate due to Green Wedge constraints.

• A spatial strategy that places disproportionate emphasis on rail-based settlements despite national policy promoting a wider placemaking-led approach to sustainability.

The representation therefore demonstrates that the RLDP is unsound in respect of Culverhouse Cross and that Candidate Site CS387 represents a sustainable and deliverable allocation capable of addressing identified housing need.

2. Settlement Hierarchy and Spatial Strategy

2.1 Primary Settlement Status

The Deposit RLDP identifies Culverhouse Cross as a Primary Settlement outside the Strategic Growth Area within the settlement hierarchy. Under Policy SP2, Primary Settlements represent the highest tier of settlement outside the strategic growth corridor and are identified as locations capable of accommodating limited but proportionate levels of development, reflecting their relative accessibility, services, employment opportunities and role within the wider settlement network.

In spatial planning terms, the identification of a settlement as a Primary Settlement carries clear strategic implications. It indicates that the settlement performs an important functional role within the authority and that it represents one of the most sustainable locations for accommodating development outside the Strategic Growth Area. The hierarchy therefore provides the principal framework through which the Plan distributes housing growth across the authority.

However, despite this designation, the RLDP allocates no housing growth whatsoever within Culverhouse Cross.

This creates a clear inconsistency between the settlement hierarchy and the spatial distribution of development. If a settlement is identified within the hierarchy as capable of supporting development, the development plan should logically identify opportunities through which that growth can occur. The absence of any allocations, windfall capacity or clearly

defined delivery mechanisms means that the designation has no practical effect within the spatial strategy.
In technical planning terms this weakens the internal coherence of the Plan. The Development Plans Manual requires that the spatial strategy and settlement hierarchy operate as a clear and consistent framework guiding the distribution of development. Where a hierarchy identifies settlements as sustainable locations for growth but the Plan subsequently provides no mechanism for that growth to occur, the hierarchy risks becoming descriptive rather than operational.
In the case of Culverhouse Cross, the RLDP acknowledges the settlement's role within the hierarchy but does not translate that role into spatial planning outcomes. The settlement was identified as a Primary Settlement largely due to its functional role as a significant retail, employment and transport hub, together with the recent residential redevelopment of the former ITV studios which has increased its residential function. Whilst the Council appears to treat this redevelopment as a one-off brownfield opportunity that does not justify further greenfield growth, the reality is that the decision to redevelop the site for housing rather than employment has established the principle that residential development is appropriate in this location. When considered alongside the settlement's designation as a Primary Settlement, this demonstrates that the Council itself has already accepted the sustainability of residential growth at Culverhouse Cross. Despite these characteristics, the allocation strategy effectively treats Culverhouse Cross as if it were a settlement where growth is not supported, thereby failing to reflect the very factors that justified its elevation within the settlement hierarchy.
The complete absence of housing allocations at Culverhouse Cross therefore undermines the credibility of the hierarchy and creates an incoherent spatial strategy, particularly where other settlements within the same tier of the hierarchy are expected to accommodate growth. Applying unequal weight to settlements within the same settlement category introduces inconsistency into the spatial strategy and raises concerns regarding the overall soundness of the Plan.
2.2 Consequences of the Current Approach
The failure to allocate development in Culverhouse Cross has several important consequences for the effectiveness of the Plan.
• Unmet Local Housing Need – Local affordable housing needs within the Wenvoe ward are not addressed within the spatial distribution of development. The RLDP therefore fails to demonstrate how identified housing need within this part of the authority will be met.
• Ineffective Settlement Hierarchy – The settlement hierarchy fails to operate as a meaningful spatial planning tool. If Primary Settlements are not expected to accommodate any development, the distinction between settlement tiers becomes blurred and the hierarchy ceases to function as a mechanism for directing growth.
• Displacement of Development Pressure – Housing demand associated with the eastern Vale is displaced to other settlements rather than being distributed across the settlement network in accordance with the hierarchy. This results in an imbalanced spatial strategy.
• Loss of Sustainable Small-Scale Opportunities – Opportunities for small-scale affordable housing delivery in locations close to employment, services and public transport are lost. This is particularly relevant in the case of Culverhouse Cross which functions as a significant employment and retail centre.
• Policy Mechanisms That Cannot Operate – The Plan relies on affordable housing exception mechanisms to deliver housing within settlements such as Culverhouse Cross. However, the extent of Green Wedge designation means that these mechanisms cannot realistically function without explicit clarification within the Plan.
Taken together these issues demonstrate that the current spatial strategy does not fully respond to the functional role of Culverhouse Cross within the settlement hierarchy and results in a distribution of development that is neither balanced nor responsive to local housing needs.
3. Affordable Housing Need and Delivery
3.1 Evidence of Need
The Council's own housing evidence demonstrates a substantial requirement for affordable housing across the Vale of Glamorgan, including within rural settlements and the Wenvoe housing market area. The Local Housing Market Assessment identifies a significant backlog of need together with an ongoing annual requirement for additional affordable homes throughout the plan period. Whilst Welsh Government has queried the justification for elevating Culverhouse Cross to Primary Settlement status during the plan preparation process, the available evidence demonstrates that the settlement performs a clear functional role within the eastern Vale. In particular, the settlement benefits from strong bus connectivity to Cardiff and Barry together with established cycle and active travel links, and it sits within a ward where unmet affordable housing need has been clearly identified. When these factors are considered together, they reinforce the rationale for recognising Culverhouse Cross as a sustainable location capable of accommodating proportionate residential growth. This evidence confirms that the need for affordable housing is not confined to the authority's largest settlements but exists across the wider settlement network, including rural wards.
Affordable housing need is particularly acute for smaller one to three bedroom homes, reflecting the changing composition of households and the prevalence of single person and smaller family households. Waiting list data demonstrates significant unmet demand across the authority, particularly for social rented and intermediate homes that are accessible to lower and middle income households.
Within the Wenvoe ward specifically, housing register data identifies a clear need for affordable housing that cannot currently be met through existing supply. This indicates that households with a local connection to the area are unable to access suitable housing within their own community and must either remain in unsuitable accommodation or relocate to other settlements.
Despite this evidence, the RLDP does not allocate any sites capable of delivering affordable housing within Culverhouse Cross or Wenvoe. The absence of allocations means that the Plan does not clearly demonstrate how identified affordable housing needs arising within this part of the authority will be addressed. In spatial planning terms this raises concerns regarding the effectiveness of the Plan, as development plans are expected to respond directly to evidenced housing need and ensure that opportunities for affordable housing delivery are distributed across the settlement hierarchy rather than concentrated solely within a limited number of locations.

3.2 Role of Affordable Housing in the RLDP
The RLDP identifies a requirement to deliver a significant number of affordable homes during the plan period in order to respond to the substantial backlog of need identified within the Local Housing Market Assessment. In practice the Plan relies upon several delivery mechanisms to achieve this target, including:
• Affordable housing contributions secured through Section 106 agreements on market housing sites • Affordable housing-led allocations delivering a minimum proportion of affordable homes • Affordable housing exception sites outside settlement boundaries • Windfall development opportunities that may arise during the plan period
For the overall strategy to be effective, these mechanisms must operate across the settlement hierarchy so that affordable housing delivery is not overly concentrated in a small number of locations. However, in the case of Culverhouse Cross none of these mechanisms realistically provide delivery opportunities. There are no allocated housing sites within the settlement capable of generating affordable housing contributions, no affordable housing-led allocations within the settlement boundary, and the extensive Green Wedge designation surrounding the settlement significantly constrains the realistic operation of the affordable housing exception site policy. In practical terms this means that, despite clear evidence of unmet affordable housing need within the Wenvoe ward, the RLDP does not identify any credible mechanism through which that need could be addressed locally. This further reinforces the conclusion that the spatial strategy fails to respond effectively to evidenced housing need in this part of the authority.
4. Policy HG4 and HG5 – Practical Deliverability
4.1 Affordable Housing Led Sites (HG4)
Policy HG4 identifies affordable housing-led allocations delivering a minimum of 50% affordable housing.
However these sites are located within settlement boundaries.
At Culverhouse Cross there are no available sites within the settlement boundary capable of delivering such schemes.
As a result HG4 cannot operate as an effective delivery mechanism in this settlement.
4.2 Affordable Housing Exception Sites (HG5)
Policy HG5 allows small-scale affordable housing exception sites outside settlement boundaries where a clear local need is demonstrated.
Culverhouse Cross is specifically identified as a settlement where exception sites may be appropriate.
However the majority of land surrounding the settlement is designated as Green Wedge.
The RLDP does not clearly explain how Policy HG5 should operate where land is also designated as Green Wedge.
This creates a policy ambiguity.
If Green Wedge policy prevents the operation of HG5 entirely, then the policy mechanism identified by the Council for delivering affordable housing in these settlements cannot realistically function.
If HG5 is intended to operate within Green Wedges where the strategic function of the designation is not harmed, then the Plan should make this clear.
Without this clarification the Plan risks creating theoretical delivery mechanisms that cannot be implemented in practice.
5. Green Wedge Considerations
5.1 Purpose of Green Wedges
Green Wedge designations are local planning policy tools used to manage the form of settlements and prevent inappropriate expansion of built development into open countryside. Planning Policy Wales explains that Green Wedges perform a similar function to Green Belts at a local level and are primarily intended to protect the spatial separation between settlements and maintain the distinction between urban areas and the countryside.
Green Wedges are typically designated where there is demonstrable development pressure and where reliance solely on settlement boundaries would not be sufficient to maintain the desired urban form. Their purpose is therefore strategic rather than absolute: they are intended to guide the form and direction of development rather than impose a blanket prohibition on all development.
National policy identifies five principal purposes for Green Wedges:
• Preventing the coalescence of large towns or cities with neighbouring settlements. • Managing urban form through controlled expansion of urban areas. • Assisting in safeguarding the countryside from encroachment. • Protecting the setting of urban areas. • Assisting urban regeneration by encouraging the recycling of urban land.
Planning Policy Wales also makes clear that Green Wedges should be reviewed as part of the development plan process and should only be retained where there is a demonstrable need for their continued designation.
5.2 Evidence from the Green Wedge Assessment
The Council's own Green Wedge Background Paper (BP27) assesses the land surrounding Culverhouse Cross as part of Green Wedge MG18 (3) – North of Wenvoe. The study divides the designation into a number of parcels (NW1, NW2 and NW3) and assesses their contribution against the five Green Wedge purposes.
Importantly, the assessment demonstrates that land immediately adjoining the urban edge of Culverhouse Cross does not perform a uniformly strong Green Wedge function.
For example, Parcel NW1 – which lies adjacent to the commercial and highway infrastructure associated with Culverhouse Cross – is identified as making only a weak contribution to the purpose of preventing settlement coalescence and a weak contribution to protecting the setting of the urban area, with an overall contribution rating of Moderate.
Similarly, Parcel NW2 – which also lies adjacent to the settlement edge – is assessed as making only a moderate contribution to preventing settlement coalescence and managing urban form, while again making only a weak contribution to protecting the setting of the settlement.
The study explicitly notes that some parcels around Culverhouse Cross do not lie within a gap where coalescence between settlements would occur, and therefore make only a limited contribution to that purpose.
These findings are important because they demonstrate that the Green Wedge designation in this location performs a varied and nuanced role rather than representing land of uniformly high strategic importance.
5.3 Relationship of the Site to the Green Wedge

Candidate Site CS387 occupies a contained position immediately adjacent to the existing urban edge of Culverhouse Cross. In spatial terms the site sits within an area where the Green Wedge assessment identifies only a moderate contribution to the strategic purposes of the designation.
The Green Wedge study also recognises that the retail park, major highway infrastructure and recent residential development at the former ITV studios site exert an urbanising influence on the surrounding land.
Against this context, the development of a small and contained residential scheme adjacent to the settlement boundary would represent a logical rounding-off of the urban edge rather than a significant extension of built form into the wider countryside.
The proposal has been carefully designed to retain areas of open land and maintain visual openness across the wider Green Wedge. Landscape buffers and retained open areas would ensure that the remaining Green Wedge continues to fulfil its strategic function.
Importantly, the Green Wedge assessment itself acknowledges that the area around Culverhouse Cross experiences development pressure due to its relatively sustainable location on the western edge of Cardiff and its strong highway accessibility.
In this context, it is necessary for the development plan to strike a balance between protecting the strategic purposes of the Green Wedge and responding to identified housing needs. The limited and carefully contained development proposed at Candidate Site CS387 would achieve this balance by delivering much needed affordable housing while maintaining the wider strategic function of the Green Wedge.
5.4 Implications for the Spatial Strategy
Candidate Site CS387 occupies a contained position adjacent to the existing urban edge of Culverhouse Cross. Green Wedge in this location has been defined as performing a low function in terms of preventing coalescence which is set out within the Councils' own Green Wedge study.
Development of the site would represent a logical rounding-off of the settlement rather than an incursion into open countryside.
The proposal has been carefully designed to retain areas of open land and maintain visual openness across the wider Green Wedge.
The development would therefore not undermine the strategic objective of preventing coalescence between Culverhouse Cross and Cardiff.
6. Sustainability of Culverhouse Cross
6.1 Functional Sustainability
Culverhouse Cross functions as a significant employment, retail and service centre within the eastern Vale of Glamorgan and forms one of the principal commercial hubs on the western edge of Cardiff. Although the settlement has historically been characterised primarily by commercial uses, recent residential development has strengthened its role as a mixed-use location where people can live, work and access services within close proximity.
The settlement benefits from a number of key sustainability characteristics which support its role within the settlement hierarchy, including:
• Major retail and employment areas including the Valegate and Culverhouse Cross retail parks which provide a substantial range of jobs and services. • Frequent bus services linking the settlement with Cardiff, Barry and surrounding communities. • Access to established active travel routes connecting the settlement with nearby residential areas and employment locations. • Immediate proximity to strategic highway infrastructure including the A48 and A4232, providing direct connectivity to Cardiff and the wider regional road network.
Taken together, these characteristics mean that Culverhouse Cross operates as a highly accessible location where residents are able to access employment, retail and service opportunities within walking distance or via short public transport journeys. The presence of significant employment uses within the settlement further reduces the need for long-distance commuting and supports the creation of a more self-contained and sustainable community.
Importantly, sustainability within national planning policy is not defined solely by the presence of rail infrastructure but rather by the ability of residents to access services, employment and facilities through a range of transport modes. In this respect Culverhouse Cross performs strongly due to the combination of employment opportunities, public transport connectivity and proximity to Cardiff.
6.2 Alignment with National Policy
National planning policy promotes development in locations where people are able to access jobs, services and community facilities without the need for excessive travel. Planning Policy Wales in particular emphasises the importance of locating new housing in places that support sustainable placemaking outcomes and reduce reliance on private car travel.
Culverhouse Cross clearly meets these criteria. The settlement provides immediate access to employment, retail, healthcare and service facilities together with strong public transport connections into Cardiff and other nearby settlements. This level of accessibility is entirely consistent with the principles of sustainable development promoted through national planning policy.
The absence of a rail station does not in itself render a location unsustainable. Many settlements across Wales function successfully as sustainable communities without direct rail connectivity where other transport options and local services are available.
An approach to spatial planning which places disproportionate emphasis on rail-based settlements risks overlooking locations such as Culverhouse Cross which already function as important employment and service centres within the wider settlement network. A transport strategy focused solely on rail connectivity fails to recognise the role of bus services, active travel and proximity to employment in supporting sustainable communities.
7. Site Suitability and Deliverability
7.1 Deliverability
The site is available, viable and capable of being delivered within the early years of the Plan period. Importantly, the site

does not rely on complex land assembly, strategic infrastructure investment or long lead-in times that often delay the delivery of larger strategic allocations.
Key deliverability characteristics include:
• Single land ownership – The site is controlled by a single, motivated landowner working in partnership with an experienced land promoter. This removes the risk of fragmented ownership which can frequently delay the delivery of allocated sites.
• No abnormal infrastructure requirements – The site does not require strategic highway works, major utility diversions or significant ground remediation. Development can therefore proceed without the need for substantial upfront infrastructure investment.
• Existing access arrangements – The site benefits from an established access point which currently serves the lawful dog-walking business operating on the land. This demonstrates that the site already functions as an accessible and serviced parcel of land and reduces the complexity of future development.
• Demonstrated viability – Preliminary development appraisal work indicates that the site can support a scheme delivering approximately 50 dwellings including a minimum of 50% affordable housing while remaining financially viable. This reflects realistic build costs and values within the local housing market.
Taken together, these factors demonstrate that the site represents a deliverable short-term opportunity capable of contributing to the Council's housing supply early in the plan period. This is particularly important given the well-recognised need for development plans to allocate sites that can deliver housing quickly rather than relying solely on longer-term strategic sites.
7.2 Development Capacity
The proposed site could deliver approximately 50 dwellings, including a minimum of 50% affordable housing, in accordance with the objectives of Policy HG4 and the wider affordable housing strategy within the RLDP.
This scale of development has been carefully considered to ensure that it reflects the role of Culverhouse Cross within the settlement hierarchy while remaining proportionate to the size and character of the settlement. As a Primary Settlement outside the Strategic Growth Area, Culverhouse Cross is identified as a location capable of accommodating limited but meaningful levels of growth that support local housing needs.
A scheme of around 50 homes represents an appropriate and sustainable level of development which would:
• Provide a meaningful contribution towards meeting local affordable housing need within the Wenvoe ward. • Integrate effectively with the existing built form at the edge of Culverhouse Cross. • Avoid the need for large-scale urban expansion or major infrastructure investment. • Maintain the wider strategic function of the surrounding Green Wedge through a contained and well-designed development footprint.
Importantly, the proposed capacity reflects a small-scale extension to the existing settlement, rather than a strategic urban expansion. This approach aligns with the spatial strategy for Primary Settlements outside the Strategic Growth Area, where proportionate growth is expected to occur through modest and deliverable sites capable of meeting local needs.
The proposed allocation would therefore represent a logical and sustainable opportunity for residential development that complements the role of Culverhouse Cross within the settlement hierarchy while supporting the delivery of much-needed affordable housing.
8. Soundness of the RLDP
For a development plan to be considered sound it must satisfy the key tests set out within the Development Plans Manual and national planning policy. In summary, a sound plan must be:
• Justified – founded on a robust and credible evidence base and representing the most appropriate strategy when considered against reasonable alternatives. • Effective – deliverable over the plan period with clear and realistic mechanisms for implementation. • Consistent with national policy – aligned with the principles and objectives of Planning Policy Wales and the wider framework for sustainable placemaking.
The current RLDP approach to Culverhouse Cross raises significant concerns in relation to each of these tests.
Justified
The Plan identifies Culverhouse Cross as a Primary Settlement outside the Strategic Growth Area, recognising its accessibility, employment function and role within the wider settlement network. However, despite this designation, the RLDP allocates no housing growth whatsoever within the settlement.
This creates a clear disconnect between the evidence underpinning the settlement hierarchy and the spatial strategy that flows from it. If the evidence base demonstrates that Culverhouse Cross is sufficiently sustainable to be classified as a Primary Settlement, it logically follows that the Plan should provide opportunities for proportionate residential growth within or adjoining the settlement.
The absence of any allocations therefore raises questions as to whether the spatial strategy represents the most appropriate approach when considered against reasonable alternatives. In particular, the Plan does not adequately explain why modest growth opportunities adjacent to the settlement boundary – such as the proposed allocation of Candidate Site CS387 – have been discounted despite their potential to deliver significant levels of affordable housing.
Effective
A development plan must demonstrate that its strategy can be realistically delivered over the plan period. In this case the RLDP relies heavily on a number of policy mechanisms to deliver affordable housing, including market-led allocations, affordable housing-led sites and rural exception sites.
However, these mechanisms are not capable of operating effectively within Culverhouse Cross. There are no allocated sites within the settlement capable of generating affordable housing contributions, no affordable housing-led allocations within the settlement boundary, and the extensive Green Wedge designation surrounding the settlement severely restricts the realistic operation of affordable housing exception sites.
As a result, although the Plan identifies a clear need for affordable housing within the Wenvoe ward, it fails to identify any credible delivery mechanism through which that need could be addressed locally. This creates a clear risk that the Plan

will not deliver the spatial distribution of affordable housing that its evidence base identifies as necessary.
Consistent with National Policy
Planning Policy Wales places strong emphasis on sustainable placemaking and the creation of communities where people are able to access employment, services and facilities without the need for excessive travel. National policy also promotes the efficient use of land and encourages development in locations that already benefit from strong transport connections and established infrastructure.
Culverhouse Cross performs strongly against these principles. The settlement functions as a major retail and employment hub on the western edge of Cardiff and benefits from frequent bus services, active travel links and immediate access to strategic road infrastructure.
The spatial strategy set out in the RLDP does not fully reflect these placemaking principles. By directing growth away from Culverhouse Cross despite its accessibility and service base, the Plan risks overlooking opportunities to deliver sustainable residential development in locations where people can live close to employment and services.
Taken together, these issues demonstrate that the current strategy for Culverhouse Cross is not fully justified by the evidence, cannot be shown to operate effectively in practice, and does not fully reflect the wider objectives of national planning policy. The allocation of Candidate Site CS387 would provide a practical and proportionate means of addressing these shortcomings while supporting the delivery of affordable housing within a sustainable settlement location.
9. Proposed Modification
To address the issues identified throughout this representation it is recommended that the RLDP be modified to allocate Candidate Site CS387, Land at Culverhouse Cross, for residential development. The allocation would represent a modest and proportionate extension to the existing settlement boundary and would provide a practical mechanism through which the Plan could respond to clearly identified affordable housing needs within the Wenvoe ward.
The modification would ensure that the spatial strategy properly reflects the role of Culverhouse Cross within the settlement hierarchy while maintaining the strategic purposes of the surrounding Green Wedge designation.
The allocation should provide for:
• Up to 50 dwellings delivered as a carefully planned settlement edge scheme which integrates with the existing built form at Culverhouse Cross.
• A minimum of 50% affordable housing, ensuring that the development makes a meaningful contribution towards meeting the substantial backlog of affordable housing need identified within the Local Housing Market Assessment and the housing register for the Wenvoe ward.
• Landscape buffers and retained open space, designed to maintain visual openness and ensure that the remaining Green Wedge continues to fulfil its strategic function in preventing the coalescence of settlements.
Incorporating this allocation within the RLDP would enable the Plan to:
• Address locally evidenced housing need by providing an opportunity to deliver affordable homes within the community where demand has been identified.
• Support the role of Culverhouse Cross as a Primary Settlement by allowing proportionate residential growth that reflects the settlement's accessibility, employment base and transport connectivity.
• Deliver affordable housing in a sustainable location, close to employment areas, retail services and public transport routes.
• Provide a deliverable short-term housing site capable of contributing to housing supply early in the plan period.
• Maintain the strategic function of the Green Wedge by focusing development on a contained parcel of land adjacent to the urban edge while retaining substantial areas of open land.
• Improve the effectiveness and soundness of the RLDP by ensuring that the spatial strategy properly aligns with the settlement hierarchy and that credible delivery mechanisms exist for affordable housing within this part of the authority.
Alternative Policy Approach
In the event that the Council is not minded to allocate Candidate Site CS387, an alternative and equally effective modification would be to introduce a policy mechanism that allows affordable housing-led windfall sites within Primary Settlements located in Green Wedge designations, where it can be clearly demonstrated that development would not undermine the strategic purpose of the Green Wedge.
Such a policy could allow modest residential schemes where:
• the development is affordable housing-led, providing a significant proportion of affordable homes; • the site is adjacent to the existing settlement boundary and represents a logical rounding-off of the urban edge; • it can be demonstrated that the development would not result in unacceptable coalescence between settlements; • the scheme retains sufficient open land and landscape buffers to maintain the wider openness of the Green Wedge.
Introducing such a mechanism would provide a practical means of ensuring that affordable housing needs in settlements such as Culverhouse Cross can be addressed without undermining the strategic purpose of the Green Wedge designation. It would also resolve the current policy ambiguity whereby the Plan identifies settlements such as Culverhouse Cross as suitable locations for affordable housing exception sites but does not clearly explain how such sites can come forward where surrounding land lies within the Green Wedge.
This approach would therefore improve the effectiveness, flexibility and soundness of the RLDP by ensuring that affordable housing delivery mechanisms can operate in practice across the full settlement hierarchy.
10. Conclusion
Culverhouse Cross represents a sustainable and appropriate location for small-scale residential growth when considered against the evidence base underpinning the RLDP and the wider objectives of national planning policy. The settlement functions as an established employment, retail and service hub on the western edge of Cardiff and benefits from strong public transport connections, active travel links and direct access to strategic highway infrastructure. These characteristics have already been recognised through the Council's decision to designate Culverhouse Cross as a Primary Settlement within the settlement hierarchy.

Despite this designation, the RLDP does not allocate any housing within the settlement and does not identify any credible mechanism through which locally arising housing needs can be addressed. This creates a clear inconsistency within the spatial strategy. A settlement which is recognised as sustainable and capable of accommodating proportionate levels of development cannot logically be treated as a location where no growth is expected to occur.
The absence of allocations also prevents the delivery of much-needed affordable housing within the Wenvoe ward, where the Council's own evidence identifies a clear and persistent backlog of need. Without opportunities for development within or adjoining Culverhouse Cross, households with a local connection to the area are likely to be displaced to other settlements, undermining the objective of creating balanced and inclusive communities across the Vale of Glamorgan.
Candidate Site CS387 provides a deliverable and policy-compliant opportunity to address this issue. The site represents a modest and contained extension to the existing settlement boundary and is capable of delivering approximately 50 dwellings including a minimum of 50% affordable housing. The proposal has been carefully designed to integrate with the existing built form, maintain the wider function of the surrounding Green Wedge and provide a meaningful contribution towards meeting local housing needs.
Allocating the site would therefore provide a practical and proportionate means of improving the effectiveness of the RLDP. It would ensure that the spatial strategy properly reflects the role of Culverhouse Cross within the settlement hierarchy, provide a credible mechanism for delivering affordable housing within this part of the authority and support sustainable placemaking in accordance with national planning policy.
For these reasons it is considered that Candidate Site CS387 should be allocated within the RLDP. Doing so would help ensure that the Plan provides a coherent, deliverable and policy-compliant framework for guiding development across the Vale of Glamorgan over the plan period.

6792 Support

Document Element: Between Dinas Powys, Penarth

Respondent: Persimmon Homes (East Wales) [1068]

Agent: Boyer Planning

Summary:

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need

In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.

Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.

Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.

Section 4: Key Themes, Vision & Objectives

Key Themes

Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.

In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.

Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.

Vision

In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.

The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.

In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.

Strategic Objectives

Objective 3 – Home for All

Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.

Objective 4 – Placemaking

As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.

Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.

Objective 8 – Promoting Active and Sustainable Travel Choices

Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.

Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.

Section 5: Sustainable Growth Strategy

RLDP Sustainable Growth Strategy comprises six key elements as follows:

1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).

In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.

Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.

Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.

Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.

In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.

From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.

Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.

As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.

Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.

Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.

Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.

Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)

3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.

The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.

Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.

In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps

which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either

adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.
Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual
As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement

From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.

Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Policy SP5 – Creating Healthy & Inclusive Places and Spaces

Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.

The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.

The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the

Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing

industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.

Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.

As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

Loss of Allocated Employment Land

Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.

Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.

By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)

Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.

According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.

On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.

Policy HG3 – Housing Led Redevelopment Opportunity

Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.

Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that

these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements
Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.
Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives.
Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement

capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.

In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.

Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.

Policy SP13 – Community Infrastructure and Planning Obligations

Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

Policy CI1 – Open Space Provision

Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.

The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.

Productive and Enterprising Places

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.

Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.

Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places
Policy SP19 – Green Infrastructure
In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.
The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.
Policy SP20 – Biodiversity and Ecosystem Resilience
In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.
Policy DNP1 – Special Landscape Areas
Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.
Policy DNP2 – Green Wedges
Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.
Policy DNP8 – Severn Estuary Recreational Pressure
Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a

higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Document Element: North of Wenvoe;

Respondent: Barratt Redrow Homes [2669]

Agent: Boyer Planning

Summary:

Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2.

Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.

From a landscape and visual perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.

1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and

are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to

positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.
5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.
5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.
5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.
5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is

able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.

5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.

5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.

5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.

Policy SP4 - Placemaking

5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.

5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:

5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.

5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.

5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.

5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

Policy PGD1 – Creating Well Designed and Inclusive Places

5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.

5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent

with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the

region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.

• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.

•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.

• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.

• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.

• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.

• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.

• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.

• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.

•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)

• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the

Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.

• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the

thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.

• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of

housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Penarth Town Council Deposit RLDP Consultation Response

Comments collated at a meeting of the Council's Consultation Task and Finish Group on 9th February 2026

Some Members attended the RLDP consultation drop-in session in Penarth and in general found it to be very informative.

Members support the general development strategy but did note the lack of information concerning discussions with adjacent and other nearby Principal Councils in the CJC Region. In view of the forthcoming Strategic Development Plan, encompassing the ten authorities, members felt that some further commentary regarding this is warranted.1

It is clear that the approach taken in the Cardiff paper is still that ideally, each Council is self-contained and "consumes its own smoke," which does not show any wider strategic thinking between the ten authorities in preparation for a regional Strategic Development Plan.

Members agreed with the view that infrastructure to support new housing developments was required in order to create successful developments, although they acknowledged that logistically it was difficult to pre-empt demand for some services such as travel and health services. Members also noted that predicting developmental needs and opportunities within wider context surrounding the UK's economic, political, and social landscapes.

Members noted that there was not much focus on Penarth or identified potential future development for Penarth beyond that already underway at the location near to Cosmeston but welcomed flexibility in its approach. Members expected to be more closely involved in the decisions and planning of this, and other such developments, and provide opportunity for wider consultation where appropriate, such as pre-application consultations, as well as would expect to be included in consultations concerning sites adjacent to Llandough, Dinas Powys, and Sully given their impact upon the town.

Penarth as a town is currently developed to its boundaries, save for the development at Cosmeston. It is, therefore, more dependent than other Service Centres on windfalls of land or buildings which may arise during the currency of the Plan. In 2023, an extensive assessment of the potential of the town concluded the following:

"There is marginally less capacity in Penarth [and Llandough] than the projected figures. However, this does not mean that the projections are incorrect or unjustifiable. The reported figures have not included a significant amount of capacity on open space land, and the projected figures for conversion of existing buildings and intensifications will be surpassed if the extant consents that exist this early in the Plan period are implemented."

The degree of flexibility, however, is substantially depending on one large site. P009, Headland School, is identified as both a potentially disused building and as a site with a capacity of 111-120 units. This special school is full to capacity and used by many Council in both Wales and England.

Members did note the inclusion of Cogan Transport Interchange under section 6.196 but would have liked to see more information about its future developments as they see it as key to increasing public transport use to Barry and further to West Wales in general.

Members wished to advise that issues with both the bridge and the platforms at Cogan have been long term, with accessibility being central to these issues. Members felt that improvements to accessibility should be a priority at this site, with planting and landscaping considered secondary to this.

Members felt it was key to consider the additional stress on Penarth from increased anticipated demand of public transport needs and emphasised the need for this to be aptly considered by bus route providers as part of development work.

Members wanted to see a strategy that actively protects the town's heritage and culture whilst still being able to provide for current and future generations.

Members welcomed the inclusion of specific climate change mitigation and adaptation measures under SP16 and section CC1-CC6, noting the considerable attention given to Net Zero transition proposal relating to public buildings and energy. Whilst the evidence presented does not include the UK Climate Change Committee Report2, Members were pleased to see that CC1-CC6 largely reflect the Committee's finds and are tailored to a transition which reflects what is presently feasible. This is providing that the necessary skills to understand and undertake carbon assessments within a policy implementation and regulation context are readily available.

Under CC2, it was noted that the presumption against demolition3 in favour of retrofit and reuse may constrain maximum transition to net zero as, whilst there is grant aid available for public buildings and social housing, the retrofit monies available for private stock is limited.

Additional considerations will also need to be made as part of the Third Carbon Budget (2026-2030), Local Area Energy Plans and the climate change ISA theme.

Members also felt similar about the inclusion and consideration of sustainable development through the specific strategy outlined in section 5 of the document and felt this linked in well with ongoing Placemaking work and its strategic approach as detailed in SP4.

Members were pleased to see mention of the diversification of high streets, although noted that Penarth was above average in terms of occupancy. They hoped that the RLDP would be able to support the town centre and support other ways it could be improved, such as a fishmonger or identifying a site for a new Cemetery.

With Penarth classified as a Service Centre, they are identified as having a defined role. However, the decline of in-person retailing means that defining role is not that evident, and Members felt there is potentially a need to move away from the traditional retail role of Town Centres in favour of "repurposing, creating multifunctional, commercial, and service centres that meet the needs of the communities they serve" in line with Future Wales Town Centre First Policy. The term 'repurposing' suggests a stronger role for the public sector in enabling these new purposes, and Members felt that Placemaking Plans could be one potential framework for this.

Members felt that potential functional support that could be provided could include:
• The appointment of a Town Centre Manager
• Using supporting interventions such as an extension or reshaping of normal services such as Neighbourhood Services.
• Using existing or emerging new powers, such as compulsory purchases.

Members wished for the RLDP to facilitate the safeguarding of essential public services, including health, policing, fire and rescue in the town, which would help to develop the defining role of a Service Centre, and felt that specific reference to these would be beneficial.

Members supported the avoidance of coalescence with adjacent settlements through the reconfirmation of Green Wedges as it allows for relevant extensions to those settlements whilst allowing them to retain their identity.

Members noted that the Quiet Area provision under DNP6 only applies to Penarth and wished to know why this was the case.

Members advised that they welcomed further opportunity for consultation, particularly in relation to developments in the neighbouring Cardiff Bay area whilst acknowledging that this is not necessarily an RLDP concern.

Footnotes

1 There is an evidence paper concerning relations with Cardiff and a Statement of Common Ground with Bridgend. However, there is only a reference in the RLDP text to discussions with other regional Councils and not the paper itself. We would be grateful if you could provide the paper as it does impact on the soundness of this Plan.

2The UK Climate Change Committee's 'Progress Report: Reducing Emissions in Wales' highlighted the following aspects of import: Skills, Vehicle Charging Networks, Improving Recycling, Energy Plans, Decarbonising Public Buildings and Social Housing, and reducing Road transport Demand (Car-Kilometres).

3The UK Environmental Audit Committee (2022) noted that "the evidence we received consistently recommended that retrofit and reuse be prioritised over new build."

Summary:

POLICY DNP2 – GREEN WEDGES

Lidl objects to the inclusion of land at Penlan Road, Llandough (see Site Location Plan, drawing no. 3744 F420) within the Green Wedge designation under Policy DNP2. The site forms a distinct and enclosed parcel of land on the north-eastern edge of the designated Green Wedge, and its physical characteristics demonstrate that it does not serve the strategic purposes of the wider designation.

The northern and western boundaries are formed by Llandough Hospital, including the hospital access road and surface car parking, which clearly separate the site from the wider Green Wedge. The southern boundary is defined by residential properties along Corbett Road and the Merrier Harrier public house. The south-western and western boundaries are formed by further residential properties within Llandough. As such, built development extends beyond the site in multiple directions, meaning it does not contribute to the open land between settlements that Green Wedges are intended to protect.

The site is physically and visually contained with strong, defensible boundaries. Its close association with existing built form means that it does not exhibit the level of openness required for Green Wedge designation under PPW or BP27. BP27 requires Green Wedge boundaries to include only land that must remain open in the long term. When assessed against the four-stage SE Wales Green Wedge methodology, the site performs weakly. In terms of openness (Stage A), the site has low perceived openness as it is enclosed by development. Under development pressure (Stage B), the influence of surrounding built form means the site is already urban in character. In relation to Green Wedge purposes (Stage C), the site does not materially contribute to preventing coalescence, safeguarding open countryside, or protecting the setting of an urban area. The conclusion (Stage D) is therefore that the site's inclusion within the Green Wedge is anomalous.

Recent decisions in the emerging RLDP, such as the allocation of HG1 KS2, demonstrate that selective Green Wedge boundary amendments are acceptable where supported by evidence. Not all areas within the current designation are equally sensitive, and the site represents one of the least sensitive parts.

The Council's own evidence further supports the suitability of the land for development. The site does not lie within the Special Landscape Area that covers much of the remaining Green Wedge, highlighting its lower landscape sensitivity. The Candidate Site Assessment (BP18a examined the wider parcel (Site ID 400) for housing and concluded that it would form a natural extension to the Llandough settlement boundary. It noted that the land would represent an incursion only if less sensitive sites could not be delivered and discounted the site solely because housing need had been met elsewhere, not due to landscape or Green Wedge harm. This confirms the Council recognises the land is capable of development. The same land can therefore appropriately meet other evidenced needs, including retail provision.

In separate representations, Lidl is promoting land to the south of Llandough Hospital via 'RDLP New site submissions'. It is considered that the site can be developed in a low-impact, landscape-led and sensitively designed manner that respects its transitional position between the urban edge and the wider Green Wedge. A modest single storey medium sized foodstore delivers a built form that can sit comfortably below surrounding tree lines and hospital structures. A comprehensive landscape strategy, including reinforced boundary planting, native woodland edge enhancement, and carefully designed building can soften building edges, strengthen the site's defensible boundaries, and integrate the scheme with its surroundings. The development would therefore appear as an infill of the existing urban area, rather than any intrusion into the open countryside, and can be designed to maintain the wider Green Wedge's openness and character by delivering a strong defensible physical boundary which prevents any further development beyond the site.

As set out in separate representations the Council's Retail and Leisure Study (BP13) identifies a clear quantitative and qualitative need for a medium to larger supermarket within Zone 5, alongside notable levels of convenience expenditure leakage to Zone 3 (Cardiff). The promoted site is well positioned to intercept this leakage, meet the identified convenience floorspace requirement, and provide improved local convenience retail provision for Llandough/Penarth. There is, therefore, a clear needs-based justification for release of this parcel of land from the Green Wedge designation.

Full text:

Draft RCS2 sets out three criteria for new A1, A2 or A3 uses on new sites or existing retail areas which are as follows:

1. "It can be demonstrated that there is an additional need for the proposal which cannot be provided within an existing retail, commercial and service centre; and
2. The proposal would not either individually or cumulatively with other recent or proposed consented developments have an unacceptable impact on the trade, turnover, vitality and viability of the retail, commercial and service centres.
3. The proposal would serve local needs in a neighbourhood or rural village."

We consider the policy should read as follows:

"1 It can be demonstrated that there is an additional need for the proposal which, when applying the sequential approach to locating development as outlined in national guidance, it has been demonstrated that the site is sequentially preferable; and

2 The proposal would not either individually or cumulatively with other recent or proposed consented developments have an unacceptable impact on the trade, turnover, vitality and viability of the retail, commercial and service centres.

3 Proposals serving only local needs should be of a scale and type which does not undermine the vibrancy, attractiveness and viability of neighbourhood centres."

The settlement boundary, defined by Policy SP2, excludes allocation site SP12 'Land at Bridge House Farm, Llanmaes, Llantwit Major' which is for a retail foodstore. Instead, the draft allocation abuts, but lies outside, the settlement boundary as currently drawn. Although draft Policy SP3 states that "Areas outside settlement boundaries that are not allocated or protected for a specific use will be defined as countryside we consider the settlement boundary must be

extended at this location to include the allocation. Its exclusion is illogical and would fail to reflect the 'on the ground' position when this allocation is delivered. Moreover, its exclusion could confuse and may constrain any future minor development changes at the site (e.g. those needed to meet operational needs the subject of any planning application).
The draft proposals map shows the allocation as a dot which does not cover the full extent of the allocation. See below:
See plan in attachment
By not including the extent of the site/allocation within the defined settlement boundary, the draft plan fails to recognise the allocation will form an important part of the settlement, the delivery of which is crucial to meeting identified needs. Accordingly, we believe this fails Test 2 (Is the plan appropriate?), and it may fail Test 3 (Will the plan deliver) as its exclusion from the boundary may unduly impact the future site operation.

Lidl Great Britain Ltd objects to draft policy SP11 (Retail, commercial and service centre hierarchy) as worded as it fails to meet Test 2 (Is the plan appropriate?). Draft Policy SP11 sets out the proposed retail hierarchy (See extract below), but it does not accord with the settlement hierarchy as set out in draft Policy SP2 and it is not justified.
The adopted LDP Settlement Hierarchy lists:
Key Settlement: Barry
Service Centre Settlements: Cowbridge, Llantwit Major and Penarth
The adopted LDP Retail hierarchy lists:
Town centres: Barry
District centres: Barry (high street/broad street), Cowbridge, Llantwit Major, Penarth
Draft SP2 of the Deposit Plan identifies Cowbridge, Llantwit Major and Penarth as Service Centre Settlements in the Settlement Hierarchy.
However, draft SP11 lists a retail hierarchy as follows:
Town Centres – Barry (Holton Rd), Penarth, Cowbridge
District Centres – Barry (High Street), Llantwit Major
It is unexplained and unjustified that the SP11 retail hierarchy upgrades Cowbridge to Town Centre status, while Llantwit Major and Barry High Street remain District Centres.
The Deposit Plan includes two retail allocations, neither are intended to directly serve Penarth or Cowbridge. Cowbridge is not a focus for growth. It is therefore unjustified that Llantwit Major, which is served by a train station, is a settlement roughly twice the size of Cowbridge (by population) and is a manifestly more sustainable location and more appropriate focus for growth, is proposed to rank below Cowbridge in the retail hierarchy. Barry, Penarth and Llantwit Major should rank as Town Centres as the most sustainable locations for growth.
Penarth is an accessible settlement and an appropriate focus for growth. Indeed, the Council's BP13 (Retail and Commercial Leisure Study (June 2023)) recommends a medium to large supermarket to serve Penarth (Zone 5) but the Deposit Plan is absent of any food retail allocation for Penarth/Llandough. In addition to Llantwit Major and St Athan (Deposit Policy SP12) Penarth should be a focus for additional convenience provision over the plan period.

SP12 – RETAIL FLOORSPACE PROVISION
Lidl Great Britain Ltd firmly supports the allocation within draft Policy SP12 (Retail Floorspace Provision) for 1,251sqm of convenience floorspace at Land at Bridge House Farm, Llanmaes, Llantwit Major. This allocation is needed to ensure the plan is sound, by addressing unmet need at Llantwit Major which is a Service Centre and focus for growth. This should be made clear in the reasoned justification.
In respect to Penarth, Policy SP12, together with supporting paragraphs 6.208–6.210, do not, however, adequately reflect the findings of the Council's Retail & Leisure Study (BP13). Policy SP12 should also plan positively for the identified convenience retail needs within Zone 5 (Penarth/ Llandough). BP13 confirms that Penarth District Centre is not served by a medium to larger supermarket (para. 9.2). The BP13 Study finds quantitative and qualitative capacity for a medium to larger supermarket by 2036 in Penarth (paras. 9.23, 12.24).
It finds overall quantitative convenience capacity of up to c.5,862sqm net floorspace (assuming deep discounter operators). In qualitative terms the following Centres have been identified in potential need for a medium to larger supermarket: Barry Holton Road town centre; Penarth district centre and Llantwit Major district centre. Quantitative and qualitative need is identified.
Despite the evidence of unmet need, the Deposit LDP Policy SP12 allocates only two sites for convenience retail totalling c. 3,109sqm net; one site at Llanwit Major and a second site at St Athan. This is below the overall (up to 4,282–5,862sqm net) requirement identified in BP13. The allocation of land at Llantwit Major aligns with the evidence base, has been thoroughly tested at application stage and this is fully supported.
Policy SP12 is silent on the need for additional floorspace at Penarth/Llandough (Zone 5) and as such does not reflect the evidence base findings and address identified need in Penarth, with a 'residual' quantitative capacity of c.1,173–2,753sqm net unmet/unallocated. We note Policy SP12 states that any additional convenience and comparison retail floorspace beyond that provided by the identified sites should be directed towards the town and district centres outlined in Policy SP11. However, this merely reflects national guidance in respect to directing growth to town/district centres (i.e. applying a sequential approach). The Policy should go further and seek to allocate the residual unmet need to Penarth/ Llandough. We note the BP13 is silent on additional need at St Athan.
Planning Policy Wales (PPW) 12 requires LPAs to identify the appropriate form, scale and location to meet retail needs (para. 4.3.8) and emphasises ensuring communities have access to adequate retail provision (para. 4.3.13). PPW therefore places a duty on LPAs to plan positively for evidenced retail needs. In respect to Penarth/Llandough Policy SP12 should seek to address this requirement.
Under PPW and TAN4, LPAs must apply the sequential test, directing new retail development to locations that are:
• In-centre,
• Edge-of-centre, and only then,

• Out-of-centre locations that are accessible and well-connected to the catchment.
Penarth Centre is physically constrained. In the absence of any in-centre or edge-of-centre sites capable of accommodating a medium/larger supermarket, the next sequentially preferable option is the most accessible, well-connected site within the same catchment, capable of meeting identified need and reducing expenditure leakage.
Policy SP12 should plan positively for needs in Zone 5 (Penarth/Llandough) and include provision for a medium to large convenience foodstore in Zone 5 in accordance with BP13.
Enclosed with this representation is a separate representation (Under 8. New site submission) promoting a site for food retail development to meet identified needs within the Zone 5 Penarth/Llandough catchment. The site is considered accessible and sequentially preferable to meeting identified needs in Penarth.
The policy should be clear that identified need should be delivered in accordance with the sequential approach as set out in national guidance. As set out in Policy SP12 any additional convenience and comparison retail floorspace beyond that provided by identified sites should be directed towards the town and district centres in accordance with the sequential approach. We support that the inclusion of retail floorspace as part of a mix of uses on allocated sites will also be supported.

POLICY DNP2 – GREEN WEDGES
Lidl objects to the inclusion of land at Penlan Road, Llandough (see Site Location Plan, drawing no. 3744 F420) within the Green Wedge designation under Policy DNP2. The site forms a distinct and enclosed parcel of land on the north-eastern edge of the designated Green Wedge, and its physical characteristics demonstrate that it does not serve the strategic purposes of the wider designation.
The northern and western boundaries are formed by Llandough Hospital, including the hospital access road and surface car parking, which clearly separate the site from the wider Green Wedge. The southern boundary is defined by residential properties along Corbett Road and the Merrier Harrier public house. The south-western and western boundaries are formed by further residential properties within Llandough. As such, built development extends beyond the site in multiple directions, meaning it does not contribute to the open land between settlements that Green Wedges are intended to protect.
The site is physically and visually contained with strong, defensible boundaries. Its close association with existing built form means that it does not exhibit the level of openness required for Green Wedge designation under PPW or BP27. BP27 requires Green Wedge boundaries to include only land that must remain open in the long term. When assessed against the four-stage SE Wales Green Wedge methodology, the site performs weakly. In terms of openness (Stage A), the site has low perceived openness as it is enclosed by development. Under development pressure (Stage B), the influence of surrounding built form means the site is already urban in character. In relation to Green Wedge purposes (Stage C), the site does not materially contribute to preventing coalescence, safeguarding open countryside, or protecting the setting of an urban area. The conclusion (Stage D) is therefore that the site's inclusion within the Green Wedge is anomalous.
Recent decisions in the emerging RLDP, such as the allocation of HG1 KS2, demonstrate that selective Green Wedge boundary amendments are acceptable where supported by evidence. Not all areas within the current designation are equally sensitive, and the site represents one of the least sensitive parts.
The Council's own evidence further supports the suitability of the land for development. The site does not lie within the Special Landscape Area that covers much of the remaining Green Wedge, highlighting its lower landscape sensitivity. The Candidate Site Assessment (BP18a examined the wider parcel (Site ID 400) for housing and concluded that it would form a natural extension to the Llandough settlement boundary. It noted that the land would represent an incursion only if less sensitive sites could not be delivered and discounted the site solely because housing need had been met elsewhere, not due to landscape or Green Wedge harm. This confirms the Council recognises the land is capable of development. The same land can therefore appropriately meet other evidenced needs, including retail provision.
In separate representations, Lidl is promoting land to the south of Llandough Hospital via 'RDLP New site submissions'. It is considered that the site can be developed in a low-impact, landscape-led and sensitively designed manner that respects its transitional position between the urban edge and the wider Green Wedge. A modest single storey medium sized foodstore delivers a built form that can sit comfortably below surrounding tree lines and hospital structures. A comprehensive landscape strategy, including reinforced boundary planting, native woodland edge enhancement, and carefully designed building can soften building edges, strengthen the site's defensible boundaries, and integrate the scheme with its surroundings. The development would therefore appear as an infill of the existing urban area, rather than any intrusion into the open countryside, and can be designed to maintain the wider Green Wedge's openness and character by delivering a strong defensible physical boundary which prevents any further development beyond the site.
As set out in separate representations the Council's Retail and Leisure Study (BP13) identifies a clear quantitative and qualitative need for a medium to larger supermarket within Zone 5, alongside notable levels of convenience expenditure leakage to Zone 3 (Cardiff). The promoted site is well positioned to intercept this leakage, meet the identified convenience floorspace requirement, and provide improved local convenience retail provision for Llandough/Penarth. There is, therefore, a clear needs-based justification for release of this parcel of land from the Green Wedge designation.
The Green Wedge boundary should be amended at this location to remove the promoted site from Policy DNP2 (Green Wedge designation) and from the Proposals Map. In parallel, the settlement boundary defined by Policy SP2 should be realigned to include the promoted site, reflecting the site's physical relationship with existing development, its defensible boundaries, and its suitability to meet an evidenced strategic retail need.

The Policy text should be changed as follows:

"Proposals involving the change of use at ground floor level uses from A1 retail use within Service Centres will permitted where the proposal would:…"
The Policy RCS1 (Resilient retail, commercial and service centres) supporting text adds new policy requirements which are not within the draft policy. Paragraph 6.214 states that:
"Changes of use class in Retail, Commercial and Service Centres must be justified by evidence that the property has been affected by a sustained period of long-term vacancy and that proactive marketing has been undertaken by a property agent for a minimum of 12 months in an effort to secure tenants. The marketing report should include:
• Details of the existing use or previous use if vacant;
• The length of time the unit has been vacant, if applicable;
• The type of use which the unit has been marketed for, what the marketing strategy involved and its duration;
• The amount of interest in the unit during the marketing period – this should detail the number of queries, the type of uses sought, and if known, the reason for not pursuing any initial enquiries."
However, nowhere in the draft policy wording does it explicitly state to include 12 months of marketing activity. The draft supporting text reads as though this is a policy requirement, rather than supportive guidance. This is contrary to caselaw which confirms that supporting text cannot be used to expand the policy beyond its wording (R (Cherkley Campaign Ltd) v Mole Valley District Council). A proposal could meet the requirements of the criteria sets out in draft policy RCS1 without being marketed for a minimum of 12 months. If the Plan is adopted as currently set out, there is a risk of internal inconsistency between policy RSC1 and the supporting text. Accordingly, this would fail Test 2 (Is the plan appropriate?) as it is not coherent or consistent.
We also have concerns with criterion 5 which states to "Avoid an over-concentration of non-retail uses that would undermine the retail function of the centre". This is because 'over-concentration' has not been defined within the draft policy. This contrasts with draft policy RCS3 which includes a definition of what an over-concentration of hot food takeaways would be. Without a definition of what an over-concentration of non-retail uses is, the draft policy will remain and lack clarity. Additionally, without a definition, the draft policy may fail Tests 2 and 3 as it is currently unclear (Test 2: Is the plan appropriate?) and cannot be effective (Test 3: Will the plan deliver?).

At present, we consider the Deposit Plan inadequately supports the Welsh language. Although the Welsh Language is included within Objective 6 (Embracing Culture and Heritage), the Deposit Plan does not contain a policy which seeks to promote the Welsh language, nor is the promotion of the Welsh language referenced in other Deposit Plan policies where this may be appropriate. Without a clear policy, applicants do not need to explicitly consider impact on the Welsh language so the role of the RLDP will be limited.
Local Development Plans should accord with national policy and guidance. For instance, the supporting text to Policy 1 of Future Wales states that "Key issues, including … the Welsh language, are core elements of policy 1 and are common threads underpinning all Future Wales policies." However, we believe that the Welsh language is not currently underpinning the policies within the Deposit Plan.
Additionally, paragraph 3.25 of PPW states that "The Welsh language is part of the social and cultural fabric and its future well being will depend upon a wide range of factors, particularly education, demographic change, community activities and a sound economic base to maintain thriving sustainable communities and places. The land use planning system should take account of the conditions which are essential to the Welsh language and in so doing contribute to its, use and the Thriving Welsh Language well being goal." Paragraph 3.29 goes on to suggest language impact assessments are required for "large developments not allocated in a development plan which are proposed in areas of particular sensitivity or importance for the language" with these areas defined in the LDP. In this instance, PPW sets out guidance for developers which is not present in the Deposit Plan.
The Vale of Glamorgan Council commissioned AECOM to produce the Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan (November 2025). Paragraph 9.5.9 recommends including a specific policy that supports and protects the Welsh language within the Deposit Plan. This contrasts with the Welsh Language (November 2025) Background paper, produced by the VoGC, which concludes that a specific Welsh Language policy is not warranted, albeit it does acknowledge the Plan's statutory duty to consider the Welsh language and embed relevant provisions within broader thematic policies. However, this is currently lacking as the Deposit Plan does not reference the Welsh language within other policies. Although the Background Paper considers that the RLDP is "unlikely to adversely affect the existing patterns of Welsh language use within the Vale of Glamorgan", the Plan should seek to promote the Welsh language.
Developers should be encouraged to promote the Welsh language where this may be reasonable and appropriate e.g. bilingual signage and announcements. Lidl actively promotes the Welsh language through their business. The Deposit Plan should be amended to strengthen the importance of the Welsh language, helping to meet Objective 6 over the RLDP period. Overall, without clear Welsh Language policy promotion, the Deposit Plan cannot positively impact the Welsh language. The Deposit Plan needs to go further.

Change suggested by respondent:

The Green Wedge boundary should be amended at this location to remove the promoted site from Policy DNP2 (Green Wedge designation) and from the Proposals Map. In parallel, the settlement boundary defined by Policy SP2 should be realigned to include the promoted site, reflecting the site's physical relationship with existing development, its defensible boundaries, and its suitability to meet an evidenced strategic retail need.

7021 Support

Document Element: Between Llantwit Major and
Respondent: Mrs Linda Green [1072]

Summary:

I support the proposal of a green wedge.

Full text:

I strongly object to the development of this field which is a natural border between the rural settlement of Llanmaes and the town of Llantwit Major. Development in this open countryside area and next to the llanmaes conservation area is against Welsh planning policy, and coalescence of town and village should be avoided.
I support the proposal of a green wedge

7055 Object

Document Element: Between Llantwit Major and
Respondent: Mr and Mrs Merchant [3736]
Agent: Geraint John Planning Ltd

Summary:

We object to the green wedge designation between Llantwit Major and Llanmaes, specifically the inclusion of the West Croft site.
It is considered the assessment for this green wedge is not soundly based. The decision to include the West Croft site is not justified given its clear relationship with the village and the absence of development pressure. A more appropriate, evidence-led boundary is therefore put forward, following clear defensible physical features by adjusting the northern edge of the Green Wedge to correspond with Llanmaes Brook.

Full text:

As part of the Deposit Plan, updated Proposals and Constraints Maps have been published by the Council. The Deposit Plan Proposals Map sets out the Vale of Glamorgan's green wedge designations. For context, a number of Green Wedge designations (7 in total) are made by the existing adopted LDP (the Development Plan). The Deposit Plan Proposals Map sets out that the Vale of Glamorgan Council proposes a designated Green Wedge between Llantwit Major and Llanmaes, accordingly, one of 2 new / additional green wedges (responding to submissions made through the RLDP Candidate Site Process). For ease of reference, an extract of the relevant Proposals Map is provided below:

Deposit Plan Proposals Map

Alongside the Proposals Map, the Deposit Plan RLDP Written Statement sets out and includes Policy DNP2 (Green Wedges) which states the following:

"Green wedges have been identified to prevent the coalescence of settlements and to retain the openness of land at the following locations:
1. Between Dinas Powys, Penarth and Llandough;
2. North West of Sully;
3. North of Wenvoe;
4. Between Barry and Rhoose;
5. South Penarth to Sully; and
6. Between Llantwit Major and Llanmaes.
Within these areas development which prejudices the open nature of the land will not be permitted."

The subtext to the policy also sets out the following:

"6.417. Therefore, within the areas defined by the green wedges there will be a presumption against inappropriate development19 which would contribute to urban coalescence, prejudice the open nature of the land, or have an adverse impact upon the setting of an urban area. In applying this protection, however, it is recognised that individual or small groups of dwellings exist within the designations and that activities such as agriculture, forestry and recreation, occur. Consequently, development associated with existing uses will be limited to minor structures which are strictly ancillary to existing uses. Details of each of the designations are contained within the Green Wedge Background Paper".

These Representations (Objections)

We appreciate the intention of the Llanmaes and Llantwit Major green wedge is to “prevent the coalescence of settlements and to retain the openness of land” – in this case and instance Llantwit Major and Llanmaes.

Whilst we do not raise objection to the designation of a Green Wedge per se (i.e. an outright objection to the principle and / or extent of some of the designation proposed) we do object to the particular extent of, and precise definition of, its extent. Accordingly, our clients’ representations seek to omit their land ‘West Croft, Llanmaes’ from the proposed Green Wedge, for the reasons set out below, and evidenced as follows.

Again, and for clarity, our client’s property extends to the following:
Aerial image of our client’s site (outlined in red)

The clients land relative to the proposed green wedge designation is shown more precisely and closely by the following extract from the proposals map.

In terms of evidence behind the inferred designation, importantly, the Green Wedges Background Paper (BP27) November 2025 sets out the following guidance on Green Wedge designations, paragraph 2.5. states “Planning Policy Wales Edition 12 (February 2024) (PPW) advises that green wedges must be soundly based and should only be employed where there is a demonstrable need to protect the urban form and alternative policy mechanisms, such as settlement boundaries, would not be sufficiently robust.” (GJP emphasis).
In respect to the detailed assessment of the case for designation of a / the Green Wedge between Llantwit Major and Llanmaes in the Vale of Glamorgan Green Wedge Assessment, in Stage B: Assessment of development pressure, the following is recorded / set out: “With the exception of the recent retail application detailed below, there is no significant general development pressure identified within the area proposed for a green wedge other than applications associated with agricultural practices, householder applications, flood defence and previous Defence Training Academy proposals”. This clearly records that “there is no significant general development pressure identified”.

Furthermore, the Green Wedges Background Paper (BP27) sets out in paragraph 2.3, “Green Wedges are local designations which serve as an urban containment mechanism intended to restrict the spread of built development beyond designated settlement boundaries and allocated development sites. Where designated, they comprise the open areas around, and between, parts of settlements and seek to maintain the distinction between the countryside and built-up areas and prevent urban coalescence. Their designation, although non-statutory, adds an additional layer of protection to those areas where it is considered that development pressure exists or will exist during the lifetime of a development plan”. Given the minimal development pressure identified above, it is therefore difficult to justify the need for an urban containment mechanism in this location.

Given this, it is questioned as to whether the designation is necessary as the B4265 provides an adequate and sufficient barrier to development north of the by-pass – which is designated as ‘countryside’ and does not adjoin a/the settlement boundary (to either Llantwit Major and / or Llanmaes), and is significantly protected in policy terms as a result.

It is clear and evident that Llanmaes, and by association the clients land is separated from Llantwit Major by not only the significant corridor of the ‘by-pass’, but also a significant and mature tree belt that follows the course of the watercourse running in an east-west direction, this is depicted by the following annotated aerial photograph:
Defensible Boundaries between Llantwit Major and Llanmaes

Paragraph 2.6 sets out the “Vale of Glamorgan has incorporated green wedge policy and designations in multiple development plans over many years to protect the openness or countryside and settings of urban areas” (GJP emphasis). Given our client’s land is directly adjoining the settlement boundary, and visually and functionally associated with the built form of the village, the land does not exhibit the characteristics of the open countryside. The site forms part of the curtilage of the West Croft property, and appears as a continuation of the village. In contrast, the land to the south of Llanmaes Brook displays a clear rural character and represents genuine open countryside. As such, the inclusion of the West Croft land is not warranted, as the intended function of the Green Wedge - to protect the countryside, can be achieved without its inclusion.

The Vale of Glamorgan Green Wedge Assessment assessed the Llantwit Major to Llanmaes wedge as having a “strong distinction from the urban area”. However, this characterisation does not apply to the specific context of the West Croft parcel of land. Given its direct relationship with the built form, both to the north and south, it cannot reasonably be concluded that this land provides a “strong” degree of separation between settlement and countryside.

For these reasons, the justification for including the West Croft land within the Green Wedge is not supported by guidance set out in PPW and the Green Wedge Background Paper. The designation of this parcel is therefore strongly questioned.
Furthermore, Step 18 of the Green Wedge Assessment seeks to ‘Determine whether outer boundary should be adjusted in order to use clear boundary features, or to simplify its form’. Paragraph 3.5. of the Green Wedges Background Paper (BP27) reiterates the PPW guidance for defining green wedges “boundaries should be chosen carefully using physical features and boundaries to include only that land which it is necessary to keep open in the longer term”. In respect to the

Llantwit Major and Llanmaes green wedge, it was considered in the assessment that the wedge should "Use Llanmaes Brook which forms the southern edge of the existing Conservation Area boundary as the northern boundary of most of the green wedge to the southeast". This suggested alignment is set out in a plan within the assessment – 'comparing and contrasting' the candidate site (suggested) Green Wedge boundary with the assessed and considered boundary, which has been extracted below for reference:
Compare and Contrast of Proposed Green Wedge and Candidate Site Green Wedge
It is important to note that this suggested alignment recommends the omission of the objectors (our client's) land from the designation:
A further comment is passed in the assessment, setting out that "It probably doesn't really matter if Conservation area and green wedge cover same area. Therefore may be more appropriate to include land to east of Llanmaes Road (both areas of blue line)." For context, the Llanmaes Conservation Area boundary is defined as follows:
Llanmaes Conservation Area

It is relevant and important to note from the assessment of the nearby proposed other Green Wedge designation – Land between the B4265 and Boverton – that the following position was taken in respect to the presence of a Conservation Area in the case "there are several constraints which are considered to prejudice future designation as a green wedge, not least, the inclusion of the land within the Boverton Conservation Area boundary".

In this case, the Conservation Area was clearly a key factor and contributor (alongside lack of development pressure, as is the case in the Llantwit Major to Llanmaes green wedge) that led to the case for designation of a Green Wedge in that instance and location being rejected, the overall conclusion in that case being that "the land does not warrant the additional protection provided by a green wedge designation and that the existing and emerging policy suite of the adopted Local Development Plan and the Replacement Local Development Plan could adequately prevent inappropriate development on the land." Given this, and in the interests of consistency, the boundary of the proposed Green Wedge in this case ought to be revised in order to omit the parcel that falls within the Conservation Area boundary – as assessed by the Green Wedge Background Paper.

Summary
The omission of our clients site 'West Croft' from the proposed Green Wedge is both evidence based and consistent with the guidance set out by PPW. As such, the revised boundary running adjacent to Llanmaes Brook and the associated vegetation, represents a more robust, defensible, and policy compliant Green Wedge designation.

The following plan depicts a considered more evident and policy compliant extent to any Green Wedge designation:
Proposed Alteration to the Green Wedge

Summary and Conclusion of these Deposit Representations / Objections

In summary, these representations to the Deposit Plan object to the green wedge designation between Llantwit Major and Llanmaes, specifically the inclusion of the West Croft site.

It is considered the assessment for this green wedge is not soundly based. As set out above, the decision to include the West Croft site is not justified given its clear relationship with the village and the absence of development pressure. A more appropriate, evidence-led boundary is therefore put forward, following clear defensible physical features by adjusting the northern edge of the Green Wedge to correspond with Llanmaes Brook.

Given the detailed nature of this representation our clients would be happy to discuss any aspect of this letter when your Authority comes to evaluate the content.

We look forward to hearing from you in due course. In the meantime, however, we hope and trust that all is in order with this submission. Please do not hesitate to contact us in the event that further information is required or considered beneficial.

Representations regarding (objections to) the proposed designation of a Green Wedge between Llantwit Major and Llanmaes

Please find enclosed, on behalf of and under instruction from our client, 'Representative Body of the Church in Wales (RBCW)'; 'Ms Rhian Reid' and 'Mr Anthony John Cowling', representations for consideration as part of Vale of Glamorgan's RLDP Deposit Plan.

Context to these Representations

This submission comments on the Deposit Plan, specifically the proposed designation of a Green Wedge between Llantwit Major and Llanmaes, this designation includes our client's site 'Glebelands at Llanmaes', which for clarity extends to the following:

Aerial image of our client's site (outlined in red)

The site is divided into three parcel's, each under separate client ownership. For context, the site ownership plan is provided below.

Aerial image of our client's site (outlined in red and yellow)

Parcel Owner
Parcel 1 Representative Body of the Church in Wales (RBCW)
Parcel 2 Ms Rhian Reid
Parcel 3 Mr Anthony John Cowling

The Green Wedge

As part of the Deposit Plan, updated Proposals and Constraints Maps have been published by the Council. The Deposit Plan Proposals Map sets out the Vale of Glamorgan's green wedge designations. For context, a number of Green Wedge designations (7 in total) are made by the existing adopted LDP (the Development Plan). The Deposit Plan Proposals Map sets out that the Vale of Glamorgan Council proposes a designated Green Wedge between Llantwit Major and Llanmaes, accordingly, one of 2 new / additional green wedges (responding to submissions made through the RLDP Candidate Site Process). For ease of reference, an extract of the relevant Proposals Map is provided overleaf:

Deposit Plan Proposals Map

Alongside the Proposals Map, the Deposit Plan RLDP Written Statement sets out and includes Policy DNP2 (Green Wedges) which states the following:

"Green wedges have been identified to prevent the coalescence of settlements and to retain the openness of land at the following locations:
1. Between Dinas Powys, Penarth and Llandough;
2. North West of Sully;
3. North of Wenvoe;
4. Between Barry and Rhoose;
5. South Penarth to Sully; and
6. Between Llantwit Major and Llanmaes.
Within these areas development which prejudices the open nature of the land will not be permitted."

The subtext to the policy also sets out the following:

"6.417. Therefore, within the areas defined by the green wedges there will be a presumption against inappropriate development19 which would contribute to urban coalescence, prejudice the open nature of the land, or have an adverse impact upon the setting of an urban area. In applying this protection, however, it is recognised that individual or small groups of dwellings exist within the designations and that activities such as agriculture, forestry and recreation, occur. Consequently, development associated with existing uses will be limited to minor structures which are strictly ancillary to existing uses. Details of each of the designations are contained within the Green Wedge Background Paper".

These Representations (Objections)

We appreciate the intention of the Llanmaes and Llantwit Major green wedge is to “prevent the coalescence of settlements and to retain the openness of land” – in this case and instance Llantwit Major and Llanmaes.

Whilst we do not raise objection to the designation of a Green Wedge per se (i.e. an outright objection to the principle and / or extent of some of the designation proposed) we do object to the particular extent of, and precise definition of, its extent. Accordingly, our clients’ representations seek to omit their land ‘Glebelands at Llanmaes’ from the proposed Green Wedge, for the reasons set out below, and evidenced as follows.

Again, and for clarity, our client’s ownership site plan is provided below:

Aerial image of our client’s site

Our clients land relative to the proposed green wedge designation is shown more precisely and closely by the following extract from the proposals map.

‘Zoomed in’ Deposit Plan Proposals Map (approx. site location outlined in red)

As Policy DNP2 (Green Wedges) of the Deposit Plan RLDP Written Statement sets out, the intention of a Green Wedge designation, as per PPW guidance, is to “prevent the coalescence of settlements”, which in this case is to prevent the coalescence between Llantwit Major and Llanmaes. Whilst we fully appreciate the Vale of Glamorgan’s intentions to prevent the urban coalescence of these two settlements, we question the necessity of including the Glebelands site within the proposed Green Wedge boundary.

Step 18 of the Green Wedge Assessment seeks to ‘Determine whether outer boundary should be adjusted in order to use clear boundary features, or to simplify its form’. Paragraph 3.5. of the Green Wedges Background Paper (BP27) reiterates the PPW guidance for defining green wedges “boundaries should be chosen carefully using physical features and boundaries to include only that land which it is necessary to keep open in the longer term”. In respect to the Llantwit Major and Llanmaes green wedge, the assessment itself acknowledges that the designation should “Use Llanmaes Brook which forms the southern edge of the existing Conservation Area boundary as the northern boundary of most of the green wedge to the southeast”.

Given this, it is questioned as to why the designation extends northwards beyond the Llanmaes Brook. There are already clear, distinguishable physical features – including the B4265 and the Llanmaes Brook (illustrated on the image below). These physical features are adequate and sufficient barriers to development north of the by-pass – which is designated as ‘countryside’ and does not adjoin a/the settlement boundary (to either Llantwit Major and / or Llanmaes) and is significantly protected in policy terms as a result.

Defensible Boundaries between Llantwit Major and Llanmaes

Key
Extensive strong woodland belt along and following watercourse
Extensive road corridor

In this context, the designation of the Glebelands site as part of the Green Wedge extends the boundary into an area where there is no demonstrable need for additional restriction, and where the stated purpose of preventing coalescence is already being met by existing physical features and policy context. We therefore propose the following Green Wedge between Llantwit Major and Llanmaes, which depicts a considered, more evidence-based extent to any Green Wedge designation:

Proposed Alteration to the Green Wedge

The above Green Wedge clearly maintains the intentions of the Green Wedge between Llantwit Major and Llanmaes to “prevent the coalescence of settlements” whilst “using physical features and boundaries to include only that land which it is necessary to keep open in the longer term”.

Accordingly, this refined extent would follow clear physical features whilst still fully achieving the intentions of the wedge, and avoiding the unjustified inclusion of the Glebelands site. For these reasons, we maintain that the Glebelands site should be excluded from the proposed Green Wedge designation.

Summary
The omission of our clients site ‘Glebelands at Llanmaes’ from the proposed Green Wedge is both evidence-based and consistent with the guidance set out by PPW. As such, the revised boundary running adjacent to Llanmaes Brook and the associated vegetation, represents a more robust, defensible, and policy compliant Green Wedge designation.

The following plan depicts a considered more evident and policy compliant extent to any Green Wedge designation:

Proposed Alteration to the Green Wedge

Summary and Conclusion of these Deposit Representations / Objections

In summary, these representations to the Deposit Plan object to the green wedge designation between Llantwit Major and Llanmaes, specifically the inclusion of the 'Glebelands at Llanmaes' site.

It is considered the assessment for this green wedge is not soundly based. As set out above, the decision to include the Glebelands site is not justified given that the intentions of the green wedge can be maintained with the omission of our clients site. A more appropriate, evidence-led boundary is therefore put forward, following clear defensible physical features by adjusting the northern edge of the Green Wedge to correspond with Llanmaes Brook.

Given the detailed nature of this representation our clients would be happy to discuss any aspect of this letter when your Authority comes to evaluate the content.

We look forward to hearing from you in due course. In the meantime, however, we hope and trust that all is in order with this submission. Please do not hesitate to contact us in the event that further information is required or considered beneficial.

6. Between Llantwit Major and Llanmaes.
Within these areas development which prejudices the open nature of the land will not be permitted."

The subtext to the policy also sets out the following:

"6.417. Therefore, within the areas defined by the green wedges there will be a presumption against inappropriate development19 which would contribute to urban coalescence, prejudice the open nature of the land, or have an adverse impact upon the setting of an urban area. In applying this protection, however, it is recognised that individual or small groups of dwellings exist within the designations and that activities such as agriculture, forestry and recreation, occur. Consequently, development associated with existing uses will be limited to minor structures which are strictly ancillary to existing uses. Details of each of the designations are contained within the Green Wedge Background Paper".

These Representations (Objections)

We appreciate the intention of the Llanmaes and Llantwit Major green wedge is to "prevent the coalescence of settlements and to retain the openness of land" – in this case and instance Llantwit Major and Llanmaes.

Whilst we do not raise objection to the designation of a Green Wedge per se (i.e. an outright objection to the principle and / or extent of some of the designation proposed) we do object to the particular extent of, and precise definition of, its extent. Accordingly, our clients' representations seek to omit their land 'Glebelands at Llanmaes' from the proposed Green Wedge, for the reasons set out below, and evidenced as follows.

Again, and for clarity, our client's ownership site plan is provided below:

Aerial image of our client's site

Our clients land relative to the proposed green wedge designation is shown more precisely and closely by the following extract from the proposals map.

'Zoomed in' Deposit Plan Proposals Map (approx. site location outlined in red)

As Policy DNP2 (Green Wedges) of the Deposit Plan RLDP Written Statement sets out, the intention of a Green Wedge designation, as per PPW guidance, is to "prevent the coalescence of settlements", which in this case is to prevent the coalescence between Llantwit Major and Llanmaes. Whilst we fully appreciate the Vale of Glamorgan's intentions to prevent the urban coalescence of these two settlements, we question the necessity of including the Glebelands site within the proposed Green Wedge boundary.

Step 18 of the Green Wedge Assessment seeks to 'Determine whether outer boundary should be adjusted in order to use clear boundary features, or to simplify its form'. Paragraph 3.5. of the Green Wedges Background Paper (BP27) reiterates the PPW guidance for defining green wedges "boundaries should be chosen carefully using physical features and boundaries to include only that land which it is necessary to keep open in the longer term". In respect to the Llantwit Major and Llanmaes green wedge, the assessment itself acknowledges that the designation should "Use Llanmaes Brook which forms the southern edge of the existing Conservation Area boundary as the northern boundary of most of the green wedge to the southeast".

Given this, it is questioned as to why the designation extends northwards beyond the Llanmaes Brook. There are already clear, distinguishable physical features – including the B4265 and the Llanmaes Brook (illustrated on the image below). These physical features are adequate and sufficient barriers to development north of the by-pass – which is designated as 'countryside' and does not adjoin a/the settlement boundary (to either Llantwit Major and / or Llanmaes) and is significantly protected in policy terms as a result.

Defensible Boundaries between Llantwit Major and Llanmaes

Key
Extensive strong woodland belt along and following watercourse
Extensive road corridor

In this context, the designation of the Glebelands site as part of the Green Wedge extends the boundary into an area where there is no demonstrable need for additional restriction, and where the stated purpose of preventing coalescence is already being met by existing physical features and policy context. We therefore propose the following Green Wedge between Llantwit Major and Llanmaes, which depicts a considered, more evidence-based extent to any Green Wedge designation:

Proposed Alteration to the Green Wedge

The above Green Wedge clearly maintains the intentions of the Green Wedge between Llantwit Major and Llanmaes to "prevent the coalescence of settlements" whilst "using physical features and boundaries to include only that land which it is necessary to keep open in the longer term".

Accordingly, this refined extent would follow clear physical features whilst still fully achieving the intentions of the wedge, and avoiding the unjustified inclusion of the Glebelands site. For these reasons, we maintain that the Glebelands site should be excluded from the proposed Green Wedge designation.

Summary
The omission of our clients site 'Glebelands at Llanmaes' from the proposed Green Wedge is both evidence-based and consistent with the guidance set out by PPW. As such, the revised boundary running adjacent to Llanmaes Brook and the associated vegetation, represents a more robust, defensible, and policy compliant Green Wedge designation.

The following plan depicts a considered more evident and policy compliant extent to any Green Wedge designation:

Proposed Alteration to the Green Wedge

Summary and Conclusion of these Deposit Representations / Objections

In summary, these representations to the Deposit Plan object to the green wedge designation between Llantwit Major and Llanmaes, specifically the inclusion of the 'Glebelands at Llanmaes' site.

It is considered the assessment for this green wedge is not soundly based. As set out above, the decision to include the Glebelands site is not justified given that the intentions of the green wedge can be maintained with the omission of our clients site. A more appropriate, evidence-led boundary is therefore put forward, following clear defensible physical features by adjusting the northern edge of the Green Wedge to correspond with Llanmaes Brook.

Document Element: DNP3 – GLAMORGAN HERITAGE COAST

Respondent: Mr James Osgood [1383]

Summary:

In its current form, I object to the Deposit RLDP insofar as it does not provide sufficient policy protection for the setting of the Glamorgan Heritage Coast, nor does it adequately address cumulative impacts and infrastructure fairness for villages such as Gileston and St Athan.

Full text:

Respondent: Resident of Gileston
Area of Interest: Gileston, St Athan and the Glamorgan Heritage Coast

1. Introduction and Context

I am a resident of Gileston and a regular user of the Glamorgan Heritage Coast, surrounding public rights of way, and the local road network between Gileston and St Athan. My comments relate to the implications of the Deposit Replacement Local Development Plan (RLDP) for the setting of the Glamorgan Heritage Coast, the villages of Gileston and St Athan, and the cumulative impacts of strategic development in this part of the Vale.

I recognise the need for the RLDP to support decarbonisation, renewable energy, and employment growth. However, the Plan must do so in a way that protects nationally important landscapes, avoids inappropriate development in sensitive locations, and ensures that communities hosting strategic development receive tangible infrastructure benefits.

2. Protection of the Glamorgan Heritage Coast and Its Setting

The Glamorgan Heritage Coast is one of the Vale's most valuable environmental and recreational assets and is fundamental to the character, identity and wellbeing of nearby communities, including Gileston. While the Deposit Plan recognises the importance of the Heritage Coast itself, there is insufficient clarity and strength in policy terms regarding the protection of its wider setting, particularly from large-scale or industrial forms of development on adjacent greenfield land.

The RLDP should be strengthened to ensure that development proposals within the setting of the Heritage Coast are subject to a robust presumption against development where landscape character, visual amenity, tranquillity, or public enjoyment would be harmed. Without this clarity, there is a real risk of incremental erosion of the coastal landscape through development that may be justified as "strategic" but is poorly located.

3. Gileston and St Athan – Cumulative and Place-Based Impacts

Gileston is a small rural village with limited services and infrastructure, located adjacent to open countryside and the coast. St Athan, while larger and more developed, already experiences pressure from major employment and infrastructure uses, including the former MOD site and proposed strategic employment and energy uses in the wider area.

The RLDP should do more to assess and respond to the cumulative impacts of development affecting this corridor of the Vale, rather than considering sites in isolation. This includes impacts on landscape, traffic, tranquillity, and the everyday experience of residents and visitors.

4. Strategic Energy Development and Site Selection

I support renewable and low-carbon energy development in principle. However, the RLDP should make clear that such development must be directed to appropriate locations, with a strong preference for previously developed or industrial land. In this part of the Vale, the former Aberthaw Power Station site represents a logical location for energy-related uses, given its industrial character and existing infrastructure.

The Plan should avoid creating policy ambiguity that could be interpreted as support for large-scale energy infrastructure on greenfield land in sensitive coastal or rural locations, particularly within the setting of the Heritage Coast.

5. Infrastructure and Fairness to Host Communities

A key concern for residents of Gileston and St Athan is that strategic development brings limited direct benefit to local communities while generating long-term impacts. The RLDP places significant emphasis on growth and strategic infrastructure, but there is insufficient certainty that villages hosting or neighbouring such development will see meaningful improvements in connectivity or services.

In particular, the Plan should take a more proactive approach to safeguarding and planning for enhanced public transport connectivity in the Barry–Rhoose–Llantwit Major corridor. While the delivery of a new rail station serving St Athan and potentially Gileston would be a long-term and multi-agency undertaking, the RLDP could play a critical role by

safeguarding land, identifying the corridor as a priority for future rail or rapid transit enhancement, and linking strategic development to long-term transport planning objectives.

Without such forward-looking infrastructure commitments, communities risk bearing the impacts of development without corresponding benefits.

6. Conclusion and Requested Changes

In its current form, I object to the Deposit RLDP insofar as it does not provide sufficient policy protection for the setting of the Glamorgan Heritage Coast, nor does it adequately address cumulative impacts and infrastructure fairness for villages such as Gileston and St Athan.

I would urge the Council to strengthen the Plan by:

Explicitly protecting the setting of the Glamorgan Heritage Coast from inappropriate development

Directing strategic and energy-related development to brownfield and industrial sites wherever possible

Embedding a clearer, place-based approach to cumulative impacts

Committing to long-term transport and infrastructure planning, including safeguarding opportunities for improved rail or high-quality public transport serving St Athan and surrounding communities

Subject to these changes, the RLDP would provide a more balanced and sustainable framework that supports growth while respecting the unique environmental and community assets of this part of the Vale.

Change suggested by respondent:

I would urge the Council to strengthen the Plan by:

Explicitly protecting the setting of the Glamorgan Heritage Coast from inappropriate development

6749 Object

Document Element: DNP3 – GLAMORGAN HERITAGE COAST

Respondent: Hallam Land Management [854]

Agent: Savills

Summary:

Hallam suggest that the preparation of the RLDP provides the opportunity to define the extent of the Glamorgan Heritage Coast to respond to both the landscape value of certain sites but also the wider aspirations of the RLDP. If it is not within the gift of VoG to redefine the boundaries of the Glamorgan Heritage Coast through the RLDP then Hallam suggest that an additional element could be added to this policy to confirm that it does not apply to land which is allocated for development.

Full text:

1.1. Savills is instructed by Hallam Land ('Hallam') to respond to the consultation on the Deposit version of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').
1.2. Hallam is the strategic land arm of Henry Boot PLC and is one of the UK's most well established and successful land promoters. Hallam operates throughout England, Scotland and Wales from 7 regional offices working with landowners, developers, local authorities, communities and other parties to bring forward development opportunities. Hallam has been in operation since 1990, specialising in obtaining planning permission and delivering development larger schemes including new communities and urban extensions.
Background to Representations
1.3. The Preferred Strategy was published in November 2023. The Preferred Strategy identified "Land West of St Athan" and "Land South of the B4265, St Athan" (Site IDs 456 and 457) as one of five Key Sites in the Preferred Strategy. Both of these sites are under the control of Hallam and were submitted as part of the Call for Sites. A site-specific illustrative masterplan and policy wording were provided under Policy SP4 KS5 (Land to the West of St Athan).
1.4. Hallam submitted representations on the consultation on the Preferred Strategy. These representations were very much supportive of the identification of "Land to the West of St Athan" as a Key Site and the approach that was taken more generally taken in the Preferred Strategy.
Approach to Responding to Consultation
1.5. The VoG has published the Deposit version of the RLDP. The Deposit is the first version of the RLDP to include emerging allocations, and detailed development management policies, as well as a Proposals Map. It is accompanied by a substantial evidence base which includes various supporting technical documentation submitted as part of the promotion of the allocated sites.
1.6. Building upon the Preferred Strategy, the Deposit RLDP proposes to allocate Land to the West of St Athan as a Key

Site. The site is identified under Policy HG1 KS5 (Land to the West of St Athan) as key mixed-use site with capacity for 600 new homes alongside new community and commercial facilities.
1.7. Hallam's representation to this consultation broadly splits into three separate sections:
• It offers general support for the housing requirement, growth strategy and settlement hierarchy. This is covered in Chapter 2 of this Statement;
• It wholly supports the approach of allocating Land to the West of St Athan as part of the Deposit RLDP whilst also providing detailed commentary on the specific wording of Policy HG1 KS5 (Land to the West of St Athan). This is covered in Chapter 3 of this Statement; and
• It provides commentary on a range of development management policies. This is covered in Chapters 4, 5, 6, and 7 of this Statement.
1.8. As well as this Statement, Savills has provided commentary on these specific policies under the VoG's consultation website.

Policy SP1 (Sustainable Growth Strategy), Policy SP2 (Settlement Hierarchy), and Policy SP6 (Housing Requirement)
2.1. Together, these policies have the effect of:
• Setting the housing requirement to be delivered over the RLDP plan period of 7,890 homes with a flexibility allowance applied on top so that provision is made for a total of 8,660 homes. This is the same housing requirement to that included in the Preferred Strategy which was found by Welsh Government to be in conformity with Future Wales (Policies SP1 and SP6);
• Identifying the extent of the Strategic Growth Area as the primary focus of new housing growth. Concentrations of new housing are focussed in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity. St Athan is a specifically named settlement within the Strategic Growth Area (Policy SP1); and
• Identifying St Athan as a Primary Settlement in the third tier of the settlement hierarchy. This is the same tier of the settlement hierarchy as St Athan is in the adopted LDP (Policy SP2).
2.2. Hallam are generally supportive of the aims of these three policies.
2.3. They recognise that the housing requirement has been subject to extensive scrutiny and been found to be appropriate by Welsh Government in response to the Preferred Strategy. In that sense, there is nothing further for Hallam Land to comment upon here other than to note that it should reasonably be seen as the minimum number of homes that the RLDP should be aiming to deliver, particularly following the publication of the 2022-based household projections between Welsh Government's comments on the Preferred strategy and the publication of the Preferred Strategy.
2.4. The strategy – of focussing new housing in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity – is wholly supported. St Athan is clearly already a sustainable location for growth and its sustainability and connectivity have clear potential to enhance alongside further development. The delivery of growth in St Athan is therefore considered to firmly align with the RLDP's strategy.
2.5. The continued positioning of St Athan as a Primary Settlement in the third tier of the settlement hierarchy is considered appropriate though clearly the delivery of two Key Sites within St Athan as part of the RLDP has the potential to further elevate its position in the future. This is reflected in Table 10 of Background Paper 5 Settlement Appraisal Review where St Athan is given one of the higher scores of the Primary settlements.

Policy HG1 KS5 (Land to the West of St Athan)
3.1. Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.
3.2. There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.
3.3. The relevant policy for Land to the West of St Athan is Policy HG1 KS5.
3.4. As a starting point, Hallam wholeheartedly support the allocation of Land to the West of St Athan as a Key Site within the RLDP. Hallam made a comprehensive submission as part of the Call for Sites stage and since then have worked proactively with the VoG and other stakeholders to demonstrate that the site is suitable, deliverable, and viable. It's identification as a Key Site in the Deposit RLDP represents extensive and thorough assessment – its proposed allocated is therefore considered to be sound and firmly evidence based.
3.5. So that the policy functions as effectively as possible, Hallam has a small number of comments and included at Appendix A is a re-worded version of Policy HG1 KS5 which incorporates those changes with text suggested to be removed crossed through and text to be added shown underlined.
3.6. These proposed adjustments are considered in turn below and are structured around the sub-headings that are contained within the policy wording itself.
Site Capacity and Housing Trajectory
3.7. Extensive environmental and technical work has been undertaken by Hallam to support the promotion of the site and the development of a masterplan (and site capacity) that responds to the site's constraints and opportunities.
3.8. That said, Hallam is not a housebuilder and once an outline planning application has progressed, Hallam will identify a development partner (which could be a single or multiple housebuilders / housing associations). Clearly different

housebuilders have different house types and differing approaches to density.
3.9. In addition, whilst a lot of technical and environmental work has been undertaken to date, clearly further technical work would be submitted at planning application stage which would further validate the site's capacity.
3.10. Legislative and guidance changes also have the potential to impact a site capacity. Whilst the masterplanning process has been prepared to be SAB compliant, the impact of the introduction of the requirement to secure SAB approval has had an impact on site capacity and it follows that a further, and as yet unknown, legislative or guidance change could have a similar impact.
3.11. This is not to suggest that there isn't a high degree of confidence that the site can deliver roughly 600 homes, rather that Hallam suggest that the word 'approximately' is added to the policy wording to reflect the potential for a degree of deviation (which could be upwards or downwards).
3.12. Background Paper 9A Housing Land Supply and Housing Trajectory sets out the anticipated annual delivery rates for housing over the RLDP. With regards to the ability of the site to deliver the number of homes it is allocated for in the RLDP plan period, the housing trajectory for the site reflects that the first completion date was pushed back from 2027/2028 to 2028/2029 since the consultation on the Preferred Strategy. This means that the whole site continues to be shown as being delivered within the RLDP plan period.
3.13. Hallam support and agree with the approach set out in the Draft Housing Trajectory and see it to be realistic and achievable based on their experience and subject to usual caveats around the condition of the market, RLDP progression, and swift determination of a planning application.
Affordable Housing
3.14. At present, Policy HG1 KS5 (like all of the standalone policies for the other four Key Sites), states that the site should provide a minimum of 210 affordable housing units. This figure is derived from 35% of the number of homes that the site is allocated for (600 homes).
3.15. Worded at present, a strict interpretation of this policy could be that 210 affordable units must be provided onsite regardless of the total number of homes that are proposed. For example, it could be interpreted as requiring a fixed number of affordable homes of 210 homes, even if the total number of homes that are proposed on the site is fewer than the 600 homes that the site is allocated for or, conversely, that only 210 homes should be delivered as affordable if more than 600 homes were to be delivered and the RLDP allocation exceeded.
3.16. Hallam recognise that this is not what the policy wording is seeking to achieve (and their viability work for the site is based on the site delivering 600 homes of which 35% are affordable) but suggest that its wording could be clarified by removing reference to a specific number of affordable homes for the site to deliver in favour of just the affordable housing percentage being noted in the policy.
3.17. Hallam also suggest that the requirement for affordable housing units to not be in clusters of more than 10 homes is removed and that the approach is for this to be considered on a site by site and case by case basis and with recognition that Policy HG5 (Affordable Housing Exception Sites) which can provide a framework for 100% affordable sites of more than 10 homes to be delivered. As an example, and in the case of Land to the West of St Athan, the "Land South of the B4265, St Athan" (Site ID 457) portion of the site is likely better suited to a mixed-use development alongside the future St Athan Railway Sation. This portion of the site is probably better suited to a flatted form of development (either above non-residential uses or as a block) which tend to be delivered as 100% affordable housing developments rather than comprising a mix of private and affordable housing.
Sustainable Transport and Highways
3.18. This part of the policy sets out expectations relating to sustainable transport and highways and there are a number of matters which Hallam wish to comment on.
3.19. As a starting point, Hallam support the delivery of St Athan Railway Station and therefore commits to its safeguarding. Likewise, Hallam recognise the potential suitability for the "Land Between the Railway Line and B4265, St Athan" (Site ID 458) site to accommodate a Welsh-Medium Secondary School and can also therefore commit to safeguarding land for the delivery of a pedestrian and cycle bridge over the railway line. Specific comments on Policy TR1 (Transport Proposals) and Policy CI3 (New Community Facilities) are made elsewhere in this Statement.
3.20. With regards to the Sustainable Transport and Highways section of Policy HG1 KS5, Hallam's overall position is that a careful balance needs to be reached between the policy wording being explicit as to what highway works must be delivered and reserving consideration of this until planning application stage where the exact site capacity is better understood and a full Transport Assessment submitted.
3.21. At present, Hallam's view is that the policy wording is overly explicit and suggest that it could be qualified through the addition of the following text before listing the offsite highways improvements:
'Subject to the Strategic Transport Assessment and site-specific Transport Assessment submitted at planning application stage'.
3.22. Turning to the specific offsite highways measures that are listed within the policy wording, Hallam have four comments.
3.23. Firstly, it is suggested that the delivery of an active travel link along the B4265 between the site entrance and the Gileston Road junction should be secured via a financial contribution that is pooled with KS4 Church Farm. This reflects that the delivery of this link not only links Hallam's site to other services in St Athan but also linking KS4 Church Farm to the services that are proposed and uses for which land is safeguarded within Hallam's site. Clearly this is also to the benefit of existing residents of St Athan. This would reflect the approach that is proposed to be taking for the pooling of Section 106 monies for the delivery of an active travel route between St Athan and Llantwit Major.
3.24. Secondly, Hallam flag the need for the RLDP to be sufficiently flexible with regards to the delivery of an active travel link between St Athan and Llantwit Major. Ultimately, the purpose of delivering this active travel route would be to provide a connection from St Athan to Llantwit Major Railway Station and the delivery of a Railway Station in St Athan would remove the necessity of delivering this active travel connection. Hallam's suggested amendments to the policy wording seeks to reflect this.

3.25. Thirdly, Hallam have been consistent in highlighting that, whilst there is an aspiration to deliver an improved pedestrian link along Llantwit Road, a combination of the road width and the extent of third party ownerships make delivering a continuous link very challenging with a pragmatic approach instead needing to take place that recognises the ability to deliver betterments but acknowledges that delivering a continuous link is unlikely to be possible. Hallam has suggested additional wording to clarify this.
3.26. Fourthly, Hallam highlight that the designing of a loop road within the site to facilitate access by a bus may be superfluous and represent an over-engineered solution given the potential for the St Athan Transport Interchange that land is safeguarded for under Policy TR1 (Transport Proposals) is envisaged to accommodate infrastructure to accommodate a bus connection. On that basis, it is suggested that the following clause is added to the policy wording to reflect that bus connectivity to the site may be delivered not via an internal bus loop:
'Subject to progress on the St Athan Transport Interchange as land is safeguarded for under Policy TR1 (Transport Proposals)'
Community Infrastructure
3.27. There are three points which Hallam wish to make in connection to this element of Policy HG1 KS5.
3.28. Firstly, Hallam suggest that the wording of the part of the policy relating to financial contributions to fund the delivery of additional school places needs to be adjusted. At present this part of the policy is worded as if there is an automatic requirement to provide Section 106 monies for school places where Circular 13/97 is clear that a contribution should only be sought where the schools do not have current projected capacity to accommodate the new children from the development. Hallam's proposed adjustments seek to ensure that this part of the policy reflects this though note that Background Paper 43 Education forecasts a need for a financial contribution to be made for additional school places at all English and Welsh primary and secondary schools that the site is within the catchment of.
3.29. Secondly, Hallam note that Table 10 of Background Paper 34 Community Facilities identifies an existing over-provision of community space within the St Athan Ward of 778sqm and a surplus of 531sqm of community floorspace at 2036 when the level of housing to be allocated in the Deposit RLDP is delivered. It is understood that this is on the basis of no community floorspace being delivered as part of Hallam's proposals or as part of the KS4 Church Farm site. Hallam suggest that the wording of this element of the policy needs to reflect that community floorspace should only be required to be provided in the case of a local shortage in provision. Aligned to this, Hallam also suggest that the reference to specifically providing a 'community building' is adjusted to instead make reference to 'community space'. This reflects that the community space element of scheme, if indeed it is actually required, could be a part of a larger mixed-use building (probably in the Mixed-Use / Community area) rather than as a standalone building.
3.30. Thirdly, Hallam note the error in the wording of the sixth bullet point under the 'Sustainable Transport and Highways' heading where reference is made to the safeguarding of land on the southern side of the railway line as being identified in Policy CI3(2) where-as it should be Policy CI3(6). This is a minor amendment that should be made to ensure consistency.
Green Infrastructure, Recreation Spaces, and Biodiversity
3.31. The masterplan prepared by PAD Design and submitted by Hallam shows the site delivering a mix of public open space and green infrastructure including the provision of allotments, a Neighbourhood Equipped Area of Play, a Local Equipped Area of Play, and a sports pitch. This is welcomed in Background Paper 32A Green Infrastructure Assessment of Key Sites which, at Paragraph 5.55 recognises that a 'ground up' approach has been taken in the masterplanning approach.
3.32. This is shown indicatively to illustrate the composition of public open space and green infrastructure that the site could provide alongside the other elements of built development that the site is allocated and the masterplan makes provision for.
3.33. Whilst, Hallam recognise the need to provide public open space, the starting point for this should be the Fields In Trust Standards and Hallam therefore suggest an approach where the policy wording is not specific about what forms this should take.

Policy TR1 (Transport Proposals)
4.1. This policy identifies three active travel routes and two public transport schemes that the Deposit RLDP safeguards land for, as well as three highway improvement schemes that are identified as being required to mitigate the impact of development. Two of these are in St Athan – one being the St Athan Transport Interchange for which land is safeguarded for and the second being the Gileston Road Junction which is identified as a required highway improvement. Both are considered in turn below.
St Athan Transport Interchange
4.2. Hallam support the safeguarding of land for the St Athan Transport Interchange and see that its delivery would be to the benefit of the Key Site itself but also more broadly to St Athan and western parts of the VoG.
4.3. It is clear from discussions with Transport for Wales that there is a strong business case for the delivery of a railway station and that the creation of "critical mass" through residential development around it has a key role in driving its delivery, as does the nationally significant economic role that the Bro Tathan Enterprise Zone has and the Aberthaw Green Energy Park will have. The proximity of St Athan to both of these hubs clearly contributes to its fundamental sustainability and suitability for growth whilst the further development of a critical mass of housing and employment generating uses will further support linkages between them and strengthen the business case for a new railway station at St Athan. This is reflected in TFW's 'Today, Tomorrow, Together: A Vision for Rail Across Wales and the Borders' which confirms that the delivery of St Athan Railway Station remains in TFW's pipeline which has been endorsed by the Westminster Government.
4.4. The location that is identified on the Proposals Map is Transport for Wales' preferred location within the site and has been incorporated into the masterplanning approach which seeks to create a node around it by incorporating a bus interchange and a mix of uses.

4.5. At present, the Proposals Map identifies the location of the Railway Station using a red star which is positioned on the railway line itself but without the required land take not spatially being defined.
4.6. Whilst Hallam recognise that the exact land take required will need to be refined further through discussion with TFW, it may be the case that the mixed-use element on this portion of the site comes forward before the Railway Station.
4.7. The early delivery of these elements should be welcomed as clearly the mixed-use element both enhances the range of services and facilities in St Athan but also would mean that the Railway Station is integrated upon delivery.
4.8. On that basis, it is imperative that the safeguarding of land for the Transport Interchange is limited only to that land required to deliver the Transport Interchange and is done in such a way such the safeguarding does not sterilise non-transport related development from this portion of the site until the Railway Station has been delivered.
Gileston Road Junction, St Athan
4.9. Paragraphs 6.199 and 6.200 relate to the expectation that vehicle trips as a result of RLDP allocations in St Athan are anticipated to trigger the need to upgrade the Gileston Road Junction to a signal-controlled arrangement. This is informed by the conclusions of Table 3 of the Strategic Transport Assessment which forecasts that the junction will be operating above capacity during both the weekday AM and PM peak by the RLDP's end point.
4.10. Hallam note that Technical Note 08 of the Strategic Transport Assessment identifies that the improvements to the Gileston Road Junction are to be delivered by VoG and funded through financial contributions from seven sites that the RLDP proposes to allocate.
4.11. Improvements to this junction are to be funded by a number of sites; however it is unclear whether (and if so, when) forward funding will be secured by the Council and clearly there cannot be a situation where none of the sites can deliver homes until strategic highways works are funded / completed. We therefore seek further clarification over the phasing of these works and note that early delivery of homes ahead of strategic highway improvements is likely to be important for deliverability of each strategic site.
4.12. To respond to Hallam's above comments, one approach could be for references to highway improvement works to be entirely removed from this policy or, if they are to remain, that qualifying text is added to note that the need for and format of any improvements will be subject to detailed consideration at planning application stage and that such contributions must be justified in planning terms, particularly where (in the case of Pen Y Turnpike Road and Waycock Cross for Land to the West of St Athan), the distance from a site and the junction to be improved is significant and therefore thee number of vehicle trips that would be generated modest.
4.13. This aligns with Hallam's suggested approach to the specific wording of Policy HG1 KS5.

Policy CI1 (Open Space Provision)
5.1. This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.
5.2. Hallam note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.
5.3. Hallam is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter.

Policy CI3 (New Community Facilities)
6.1. As well as allocating land for five new or improved education developments, this policy safeguards 'Land South of the Railway Line, St Athan' for the delivery of a Welsh-medium secondary school.
6.2. This policy is clearly of interest to Hallam because Paragraph 6.250 places a requirement for the safeguarding of land on the northern side of the railway line on their Land to the West of St Athan Key Site for a footbridge to land on.
6.3. With the policy wording being intentionally light-touch, Paragraph 6.250 of the Deposit RLDP provides greater detail about the safeguarding of this land (and other paragraphs in the Deposit RLDP relate to other community facilities that Policy CI3 covers). It effectively does two things.
6.4. Firstly, it notes that the delivery of this school will require active travel improvements including the safeguarding of land for a pedestrian and cyclist footbridge over the railway line.
6.5. Secondly, it is clear that the safeguarding of this land is in response to a forecast increase in demand for Welsh-medium secondary school places across the whole of the VoG as a result of expanded capacity at Welsh-medium primary schools across the VoG. On this basis, it follows that this location has been selected as a preferred location because of its ability to serve the wider sub-region.
6.6. Hallam recognise that this site could be a suitable location for a Welsh Medium Secondary School and, as a principle, is agreeable to the safeguarding of land for the footbridge landing on the northern side of the railway line.
6.7. Paragraph 6.250 of the Deposit RLDP is clear that the delivery of a Welsh-Medium secondary school is in response to a regional / sub-regional demand rather than a local need as a result generated either by the development of Land West of St Athan or other emerging allocations within St Athan and it cannot be the case that Hallam are expected to make disproportionate contributions to either the delivery of the school or required active travel improvements just because they have control of the site or that it is next to the Key Site.

Policy CC1 (Residential Operational Net Zero Carbon Development)
7.1. The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) before the policy wording sets out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable

electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.
7.2. As a starting point, Hallam share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) can present challenges. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this will result in an uneven framework for housebuilders, significantly adding cost and reducing certainty.
7.3. The justification for using planning policy to set requirements exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.
7.4. There are two points to be made by Hallam here:
7.5. Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage that such an approach would not be sound. This Written Ministerial Statement was subject to an unsuccessful judicial review.
7.6. Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations. Where there are existing Local Plans in England that take this approach, they do not align with the Westminster Government's position and there will be no Local Plans emerging including such policies.
7.7. Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs (Bridgend and Merthyr Tydfil) do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound at Examination stage.
7.8. Secondly, Hallam have concerns with the approach that has been taken with regards to viability.
7.9. From Hallam's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.
7.10. As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated. This is important as it demonstrates that, whilst Hallam do not believe such a policy approach should be taken, the development of the site at the time of the completion of the Development Viability Model for the site is viable whilst meeting the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development).
7.11. Hallam's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. This concern is particularly exacerbated by the fact that, as recognised at Paragraph 6.47 of Background Paper 42 Viability Assessment, takes the lowest estimate for the works required to achieve these policy expectations, Savills' experience – both that of their development land team based in Wales and their environmental sustainability team based across England - is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.
7.12. Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy DNP3 (Glamorgan Heritage Coast)
8.1. This policy relates to the Glamorgan Heritage Coast, identifying a series of land uses that are permissible within the policy area before setting three tests that must be satisfied for development within the Glamorgan Heritage Coast to be permissible where there is an adverse environmental impact.
8.2. Hallam note that the 'Land South of the B4265, St Athan' portion of the land that they control is both proposed to be retained as part of the Glamorgan Heritage Coast (a continuation of the position taken in the adopted LDP) whilst also forming part of the Land to the West of St Athan Key Site where the masterplan at Figure 17 shows it as accommodating the potential new railway station and a mixed-use area (including car parking).
8.3. The relevant extract of the Proposals Map is replicated below:
8.4. The exact composition of the buildings proposed on this portion will require further refinement and will need to be driven by occupier requirements, but the masterplanning work undertaken by pad Design envisages that they could provide a mix of retail and food and drink uses most likely across some or all of the ground floor, alongside workshop, co-working or office incubator space at upper floor levels and perhaps at ground floor level. There could also be the potential for additional homes, likely in the form of apartments at upper floors, as part of a mix of uses. It is realistic therefore to anticipate that this portion of the site will accommodate buildings of up to three or four storeys with a high plot ratio to reflect the uses and supporting infrastructure that it is to accommodate.
8.5. Hallam's position is that the continued inclusion of this parcel of land as part of the wider Glamorgan Heritage Coast is inappropriate for two reasons.
8.6. Firstly, and its most basic level, the approach of allocating the site for development whilst retaining a designation that inherently seeks to restrict the type, form, and quantum of development, is wholly contradictory.

8.7. Designation of this portion of the site as part of the Glamorgan Heritage Coast will mean, given that the uses that Figure 17 envisages as being delivered on the site are not those that the first part of Policy DNP3 (Glamorgan Heritage Coast) allows for, any application for development will need to demonstrate that there is a compelling need for the development, that the benefits outweigh the harm, and that appropriate mitigation measures are in place. This the potential to prejudice its development or, at very least, greatly impact how it is developed whilst requiring.
8.8. Secondly, it is difficult to see how this land warrants ongoing inclusion within the designated Glamorgan Heritage Coast. This is something that is considered in more detail in the Review of Landscape Character and Visual Amenity (December 2022) prepared by FPCR and submitted as part of the Call for Sites (and also available as part of the consultation on the Deposit RLDP as a piece of Key Site Supporting Information). Paragraph 5.13 of the FPCR document concludes on this piece of land that:
'Through the fieldwork it is considered that the Site does not display any "special environmental qualities" identified by the Policy and plays no intrinsic role in the Policy designation, as it is effectively forms a rather ordinary grazing field. It is influenced by the urbanising elements of the adjacent B4265, the Railway Line, the Tarmac Cement works, and to some degree the built edge of St Athan. Furthermore, it is bound and contained by trees and woodland beside the railway line, which prevents wider intervisibility with the coastline.'
8.9. Taking the above together, Hallam suggest that the preparation of the RLDP provides the opportunity to define the extent of the Glamorgan Heritage Coast to respond to both the landscape value of certain sites but also the wider aspirations of the RLDP. If it is not within the gift of VoG to redefine the boundaries of the Glamorgan Heritage Coast through the RLDP then Hallam suggest that an additional element could be added to this policy to confirm that it does not apply to land which is allocated for development.

Appendix A - rewording of Policy HG1 KS5

Agent: Geraint John Planning Ltd

Summary:

We would offer general support for this policy and consider this to provide flexibility which allows for certain forms of development.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ogmore By Sea area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will

continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either Key Settlement, Service Centre settlement or Primary Settlements, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ogmore By Sea. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The

greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process

(which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of

housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that the should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 124 affordable homes in the St Brides Major local housing market area (which Ogmore is located within). As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

It is questionable whether Wick has the capacity to accommodate 50 new dwellings, given the sustainability and rural nature of the area. As a result, it is suggested that the number of homes allocated in Wick is reduced and that a further allocation in St Brides Major is secured, in order to facilitate supporting the delivery of affordable housing through the housing market area, rather than in one minor rural settlement. The sustainability of Ogmore has been assessed, both by the Council through the Sustainability Appraisal and again, through our assessment of the site.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a

target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4 % of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.

Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ogmore and the proposed site. As outlined within these representations, it is considered that the site (ID xxx) represents a sustainable, deliverable and acceptable site. The site is within a maximum of a 22- minute bus journey to a every key service listed, due to the proximity of the site to settlements such as Bridgend. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Ogmore By Sea without the need to travel by car. The site is located within 5 miles of Bridgend, and within a maximum 22-minute bus journey of the following services:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre for various Retail Services

Moreover, Ogmore has benefitted from the recent development of the Ogmore By Sea Village Hall, which provides space for community activities and events to take place. The hall also includes a coffee shop (Welsh Coffee Company), which only adds further to the daily services provision available within the settlement. Access to the hall and coffee shop is directly provided for pedestrians from the Main Road, which allows for direct access from the site.

Accordingly, the settlement of Ogmore represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

It is acknowledged that the site also lies within the Glamorgan Heritage Coast and this point is addressed further below.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ogmore By Sea, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a ‘cap’ limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 “For the purposes of this policy, ‘small-scale’ will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area.”

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

Policy DNP3 – Glamorgan Heritage Coast

Given that the site is located in the Glamorgan Heritage Coast, it is noted that the following policy is of relevance to any future development on the site. Criteria 4 of Policy DNP3 states:

“The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:

4. Other appropriate and sustainable development that accords with National Policy."
It is also noted that supporting Para 6.422 "In seeking to protect the Glamorgan Heritage Coast, the Council acknowledges that there are some built up areas within the boundary, including the Minor Rural Settlement of Ogmore. In addition, the Vale of Glamorgan rail line crosses part of the Heritage Coast designation in the location where a new station at St Athan is proposed. Whilst being mindful of the need to protect the special qualities of the Glamorgan Heritage Coast, the Council accepts that development within these areas is appropriate, subject to relevant policies of the Plan"(GJP emphasis).

We would offer general support for this policy, and consider this to provide flexibility which allows for certain forms of development. However, we would suggest that the policy wording should be amended to reflect that 'housing' should be supported in the Glamorgan Heritage Coast, providing that the policy exceptions are met. Therefore, the following amendment is proposed as part of the policy should be changed to include "small scale housing" or something similar. The proposed amendments to Policy DNP3 are outlined below in red:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development, including small-scale housing proposals that accords with National Policy."

Again, this would ensure that suitable housing developments can be delivered in the Plan period, to meet the housing needs of the Vale of Glamorgan – particularly in respect of affordable housing.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to Policy DNP3 – Glamorgan Heritage Coast, given the lack of recognition for the potential for small-scale housing proposals;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land at Hazelwood, Ogmore By Sea (Site ID: 3855) sets out that the position of the site at the Deposit Stage is as follows:

"The original site as ruled out as the development would represent unacceptable intrusion in to the open countryside. Whilst the site has now been identified for an affordable housing led development, the original reason for ruling it out still remains."
In terms of the assertion that "the development would represent an unacceptable intrusion into to the open countryside", this is strongly disputed, in that the development of the site would represent a natural rounding off of the existing settlement boundary. An extract of the site relative to the settlement boundary is provided below, which clearly shows that the development of the site would not extend beyond the existing settlement pattern that exists in Ogmore.

Site Outlined in Red and Settlement Shaded in Blue
As clearly demonstrated in the above mapping, the site would extend no further eastwards than the existing housing area to the south of the site. Equally, the site would not be extending any further north than the existing settlement pattern in Ogmore. This position is further supported by the wider aerial view of the site provided overleaf:

Wider Aerial View of Site Outlined in Red and Settlement Shaded in Blue

In summary, it is considered that the proposed allocation of the site represents a logical rounding off of the existing settlement, as depicted in the mapping provided above – where the site follows the existing envelope of the settlement. The site does not extend any further eastwards than the established built form located immediately to the south; indeed, it sits comfortably within the same development line.

As such, it cannot be considered that the site represents an 'intrusion' into the countryside, as the site would be visually and functionally related to the settlement. It therefore follows that the site would be read as part of the settlement, and not the wider rural landscape.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage
As demonstrated above, there are no changes to the scoring attributed to the site. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with this submission (see Appendix A).

Sustainability

Notwithstanding the above, it is considered that the site represents a more sustainable location than what was previously assessed at Preferred Strategy stage, in light of the Ogmore by Sea Hall development. The Hall acts as a community facility, whereby the space is available for hire by local community groups such as birthday parties, weddings, group meetings, and other such similar uses. Moreover, a café (Welsh Coffee Co) is located within the premises which sells both food and drink.

The hall and café are within walking distance to and from the site, where new access facilities have been implemented from Main Road directly to the building, to allow access for pedestrians and cyclists. This is illustrated in the image below:

Walking and Cycling Facilities

The Tusker Rock pub and post office are also located along Main Road, all of which are within walking distance to the site.

Accordingly, the site is well served by new amenities (i.e. community hall) that comprehensively improves the

sustainability of the site / settlement, and in turn, improves the sustainability credentials of the site promotion. It therefore follows that the site represents an acceptable location for residential development, and the site should be looked upon favourably accordingly.

It is also the case, as set out in previous representations, that the site is within a maximum 22-minuted bus journey of the following services and facilities:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre.

As such, key services and facilities can be access by sustainable travel over and above the existing level of provision available in Ogmore By Sea (as discussed above).

Accordingly, the relevant 'red' scorings in the Council's assessment should be updated to reflect the site's suitability and sustainability to accommodate the proposed residential development of the site.

Glamorgan Heritage Coast

Insofar as to the position regarding the site's location within the Glamorgan Heritage Coast, detailed submissions are made not only in the Preferred Strategy representations, but also in Annex 1 of this submission. In short, given the pressing need for such development (particularly affordable housing) to come forward in the Plan period to meet ever-increasing needs, development of this nature should be considered more favourably – not least that, as outlined in this Annex, the site would not extend any further that the existing settlement boundary.

Accordingly, the site would be perceived to form part of the settlement of Ogmore By Sea, and not the wider landscape, and therefore, would not have any detrimental impact on the Heritage Coast in any respect. The scoring should be amended accordingly to reflect this position.

Climate Change

As outlined in previous representations, the development will incorporate climate change measures, such as EV charging points, PV panels, as well as adopting sustainable materials for construction whilst maximising the potential for the dwellings to be energy efficient. Accordingly, the development will be built to high sustainable standards, and therefore, the scoring of the site should be amended as a result.

Summary and Conclusion

It has been evidenced above that there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;

8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters
Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:
Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston;

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of

the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales

saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-

apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound,

given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable

housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and

• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Hazelwood, Ogmore By Sea, the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below.

With reference to the above:

• In terms of public transport, there are two bus stops located approximately 200m (3-minute walk) from the site ('Ogmore By Sea Post Office'), with the '303' providing services between Llantwit Major and Bridgend.

• The site is located 200m (3-minute walk) from the 'Ogmore By Sea Post Office' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

• The site is also located 50m (1-minute walk) from a children's park.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities. This

Furthermore, the settlement of Ogmore By Sea has been ranked higher than Llangan (which the site 'Land to north and west of Westwinds Business Park' is located within) in the VoG Sustainable Settlements Appraisal, and therefore, is considered to constitute a more sustainable location to accommodate residential growth. Most notably, Ogmore By Sea scores '13' in respect to 'Daily Facilities' whereas Llangan only scores '3', evidencing that residents in Ogmore have much better access to services within the locality as compared to Llangan.

Given the above, 'Land at Hazelwood, Ogmore' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Hazelwood, Ogmore' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help

sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be

considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: DNP3 – GLAMORGAN HERITAGE COAST
Respondent: Wig Fach Property Company Ltd [2373]
Agent: Geraint John Planning Ltd

Summary:

We would suggest that the policy wording should be amended to reflect that 'housing' should be supported in the Glamorgan Heritage Coast, providing that the policy exceptions are met. Amendments are proposed as part of the policy to include "small scale housing" or something similar. This would ensure that suitable housing developments can be delivered in the Plan period, to meet the housing needs of the Vale of Glamorgan – particularly in respect of affordable housing.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ogmore By Sea area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either Key Settlement, Service Centre settlement or Primary Settlements, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ogmore By Sea. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural

economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing

formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in

Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that the should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 124 affordable homes in the St Brides Major local housing market area (which Ogmore is located within). As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

It is questionable whether Wick has the capacity to accommodate 50 new dwellings, given the sustainability and rural nature of the area. As a result, it is suggested that the number of homes allocated in Wick is reduced and that a further allocation in St Brides Major is secured, in order to facilitate supporting the delivery of affordable housing through the housing market area, rather than in one minor rural settlement. The sustainability of Ogmore has been assessed, both by the Council through the Sustainability Appraisal and again, through our assessment of the site.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a

target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4 % of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.

Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ogmore and the proposed site. As outlined within these representations, it is considered that the site (ID xxx) represents a sustainable, deliverable and acceptable site. The site is within a maximum of a 22- minute bus journey to a every key service listed, due to the proximity of the site to settlements such as Bridgend. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Ogmore By Sea without the need to travel by car. The site is located within 5 miles of Bridgend, and within a maximum 22-minute bus journey of the following services:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre for various Retail Services

Moreover, Ogmore has benefitted from the recent development of the Ogmore By Sea Village Hall, which provides space for community activities and events to take place. The hall also includes a coffee shop (Welsh Coffee Company), which only adds further to the daily services provision available within the settlement. Access to the hall and coffee shop is directly provided for pedestrians from the Main Road, which allows for direct access from the site.

Accordingly, the settlement of Ogmore represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

It is acknowledged that the site also lies within the Glamorgan Heritage Coast and this point is addressed further below.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ogmore By Sea, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a ‘cap’ limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 “For the purposes of this policy, ‘small-scale’ will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing

planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

Policy DNP3 – Glamorgan Heritage Coast

Given that the site is located in the Glamorgan Heritage Coast, it is noted that the following policy is of relevance to any future development on the site. Criteria 4 of Policy DNP3 states:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development that accords with National Policy."
It is also noted that supporting Para 6.422 "In seeking to protect the Glamorgan Heritage Coast, the Council acknowledges that there are some built up areas within the boundary, including the Minor Rural Settlement of Ogmore. In addition, the Vale of Glamorgan rail line crosses part of the Heritage Coast designation in the location where a new station at St Athan is proposed. Whilst being mindful of the need to protect the special qualities of the Glamorgan Heritage Coast, the Council accepts that development within these areas is appropriate, subject to relevant policies of the Plan"(GJP emphasis).

We would offer general support for this policy, and consider this to provide flexibility which allows for certain forms of development. However, we would suggest that the policy wording should be amended to reflect that 'housing' should be supported in the Glamorgan Heritage Coast, providing that the policy exceptions are met. Therefore, the following amendment is proposed as part of the policy should be changed to include "small scale housing" or something similar. The proposed amendments to Policy DNP3 are outlined below in red:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development, including small-scale housing proposals that accords with National Policy."

Again, this would ensure that suitable housing developments can be delivered in the Plan period, to meet the housing needs of the Vale of Glamorgan – particularly in respect of affordable housing.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to Policy DNP3 – Glamorgan Heritage Coast, given the lack of recognition for the potential for small-scale housing proposals;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land at Hazelwood, Ogmore By Sea (Site ID: 3855) sets out that the position of the site at the Deposit Stage is as follows:

"The original site as ruled out as the development would represent unacceptable intrusion in to the open countryside. Whilst the site has now been identified for an affordable housing led development, the original reason for ruling it out still remains."
In terms of the assertion that "the development would represent an unacceptable intrusion into to the open countryside", this is strongly disputed, in that the development of the site would represent a natural rounding off of the existing settlement boundary. An extract of the site relative to the settlement boundary is provided below, which clearly shows that the development of the site would not extend beyond the existing settlement pattern that exists in Ogmore.

Site Outlined in Red and Settlement Shaded in Blue
As clearly demonstrated in the above mapping, the site would extend no further eastwards than the existing housing area to the south of the site. Equally, the site would not be extending any further north than the existing settlement pattern in Ogmore. This position is further supported by the wider aerial view of the site provided overleaf:

Wider Aerial View of Site Outlined in Red and Settlement Shaded in Blue

In summary, it is considered that the proposed allocation of the site represents a logical rounding off of the existing settlement, as depicted in the mapping provided above – where the site follows the existing envelope of the settlement. The site does not extend any further eastwards than the established built form located immediately to the south; indeed, it sits comfortably within the same development line.

As such, it cannot be considered that the site represents an 'intrusion' into the countryside, as the site would be visually and functionally related to the settlement. It therefore follows that the site would be read as part of the settlement, and not the wider rural landscape.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage
As demonstrated above, there are no changes to the scoring attributed to the site. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with this submission (see Appendix A).

Sustainability

Notwithstanding the above, it is considered that the site represents a more sustainable location than what was

previously assessed at Preferred Strategy stage, in light of the Ogmore by Sea Hall development. The Hall acts as a community facility, whereby the space is available for hire by local community groups such as birthday parties, weddings, group meetings, and other such similar uses. Moreover, a café (Welsh Coffee Co) is located within the premises which sells both food and drink.

The hall and café are within walking distance to and from the site, where new access facilities have been implemented from Main Road directly to the building, to allow access for pedestrians and cyclists. This is illustrated in the image below:

Walking and Cycling Facilities

The Tusker Rock pub and post office are also located along Main Road, all of which are within walking distance to the site.

Accordingly, the site is well served by new amenities (i.e. community hall) that comprehensively improves the sustainability of the site / settlement, and in turn, improves the sustainability credentials of the site promotion. It therefore follows that the site represents an acceptable location for residential development, and the site should be looked upon favourably accordingly.

It is also the case, as set out in previous representations, that the site is within a maximum 22-minuted bus journey of the following services and facilities:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre.

As such, key services and facilities can be access by sustainable travel over and above the existing level of provision available in Ogmore By Sea (as discussed above).

Accordingly, the relevant 'red' scorings in the Council's assessment should be updated to reflect the site's suitability and sustainability to accommodate the proposed residential development of the site.

Glamorgan Heritage Coast

Insofar as to the position regarding the site's location within the Glamorgan Heritage Coast, detailed submissions are made not only in the Preferred Strategy representations, but also in Annex 1 of this submission. In short, given the pressing need for such development (particuarly affordable housing) to come forward in the Plan period to meet ever-increasing needs, development of this nature should be considered more favourably – not least that, as outlined in this Annex, the site would not extend any further that the existing settlement boundary.

Accordingly, the site would be perceived to form part of the settlement of Ogmore By Sea, and not the wider landscape, and therefore, would not have any detrimental impact on the Heritage Coast in any respect. The scoring should be amended accordingly to reflect this position.

Climate Change

As outlined in previous representations, the development will incorporate climate change measures, such as EV charging points, PV panels, as well as adopting sustainable materials for construction whilst maximising the potential for the dwellings to be energy efficient. Accordingly, the development will be built to high sustainable standards, and therefore, the scoring of the site should be amended as a result.

Summary and Conclusion

It has been evidenced above that there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the

soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston;

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• “Time period of pre-application discussions/PAC consultation” = 4 months
• “Time between submission of planning application and determination” = 6 months
• “Time taken from planning consent to the discharge of relevant conditions to enable site construction” = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of “6 months” given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within “4 months” as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the ‘Timing and Phasing of Sites’ table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large ‘spike’ (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren’t spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed,

in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two

key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and

above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and

• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development

must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Hazelwood, Ogmore By Sea, the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below.

With reference to the above:

• In terms of public transport, there are two bus stops located approximately 200m (3-minute walk) from the site ('Ogmore By Sea Post Office'), with the '303' providing services between Llantwit Major and Bridgend.

• The site is located 200m (3-minute walk) from the 'Ogmore By Sea Post Office' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

• The site is also located 50m (1-minute walk) from a children's park.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities. This

Furthermore, the settlement of Ogmore By Sea has been ranked higher than Llangan (which the site 'Land to north and west of Westwinds Business Park' is located within) in the VoG Sustainable Settlements Appraisal, and therefore, is considered to constitute a more sustainable location to accommodate residential growth. Most notably, Ogmore By Sea scores '13' in respect to 'Daily Facilities' whereas Llangan only scores '3', evidencing that residents in Ogmore have much better access to services within the locality as compared to Llangan.

Given the above, 'Land at Hazelwood, Ogmore' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be

considered “sound” and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of ‘Land to north and west of Westwinds Business Park’ – the inclusion of which is “unsound”. ‘Land at Hazelwood, Ogmore’ would therefore ensure that affordable units, where “there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help

sustain services and facilities within these rural communities”, are provided for. As such the proposed housing trajectory would be maintained.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike ‘Land at Heol Fain, Wick’ and ‘Land to north and west of Westwinds Business Park’ it was stated that this site “could not be considered as a suitable affordable housing led development site”. Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is “unsound”.

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it’s consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: DNP4 - HISTORIC ENVIRONMENT
Respondent: Mr David Barton [2683]

Summary:

LAs should adopt a Local List of Valued Buildings (Non-designated Heritage Assets).

Existing Action Plan if present for Designated and Non-designated Heritage Assets needs identifying and/ or establishing.

Era-style Buildings, especially rows of Georgian, Victorian and Edwardian architecture must be faithfully restored, retained and recreated to complement surrounding historic streets that may or may not be classed in official Conservation Areas preventing harsh contrast with newer built housing estates from the 1950s onwards.

Concerted efforts to identify and locate core suppliers for raw materials and specific heritage skills should encourage new uptake of these limited artisan craft skills by new contractors locally based to support the local economy, provide employment, and reduce the cost of product and service in the long-term.

Volunteer labouring assemblies should be fully encouraged and supported identifying key individual an group skillsets that can be utilised to protect historic buildings or areas at risk.

Simplified streamlined Planning Process for key stakeholders either working to authentically restore buildings and/ or build new ones.

Where there have been evolving building styles over years, eg. Combination of one or more: Georgian, Edwardian and Victorian, the style that best promotes the area, ie. One that has the majority era structures left or capacity size requirements as examples should be utilised by house builders.

Full text:

Context:
This consultation feedback submission has been produced by Mr. David Richard Barton, also known as Community Campaigner David Barton who is promoting both the existing Built Historic Environment and Traditional Vernacular Architecture (TVA)/ Traditional Architecture (TA) as a key feature across UK and Ireland-wide Local Authorities and associated Planning Departments at all tiers of Local, Regional and Central Government.
This universal consultation therefore acts as an official Representation at all and any stage of official area UK Planning Consultations- Preliminary Scoping Documents, Named Stages of the Local Plan, Conservation Area Appraisals and Supplementary Planning Documents (SPDs), primarily regarding Design Codes.
Representations are being made by Mr. Barton as part of his ongoing work to champion the key stakeholders at various key areas old and new with a view to supporting their economic growth through the merits of High-Quality style Conservation with the hope of encouraging wider constructive and restorative support through positive and constructive working.
It is submitted that TVA should play a key part in any and all policy moving forwards on the grounds of conferring practical benefits be these periodic maintenance, their perceived support from the public, their invaluable contribution to achieving Climate Crisis Targets set local, nationally and internationally alongside their overall cost-effectiveness to key stakeholders alike in terms of Planning and sourcing of raw materials.
*One primary document that should be considered with significance especially alongside my own representation is a written academic account of the actual practicalities associated with Traditional Architecture from a leading expert in their field.i.) Not only does this in-depth analysis provide an in-depth take on the widely assorted merits of this type of Architecture but it fully corroborates my case made across all sections typically found in one of the consultations highlighted above.

Furthermore, my representations to date and contained herein this document are duly supported by the Founder and Director of The Institute for Traditional Architectureii.) who has identified and recognised my own contribution(s) to communities up and down the Sefton Borough. This is an internationally acclaimed organisation which periodically works with other leading agencies and organisations to bring about effective positive change.
Outlined throughout Submission are responses to existing Consultations which set out why I consider amendments to existing Planning Policy documents are necessary to ensure the best possible outcomes.
References to supporting documents are contained in the indented blue numbering.
This Submission has been prepared for UK and Ireland-wide Local Authorities in the hope that it may serve as an umbrella representation by Mr. Barton. This does not prejudice his ability to also comment on live stages of any one Consultation, merely providing the ability to be put in touch directly with any one Local Authority in receipt of this Representation with the prospect of also taking part in any version(s) of Consultations begin ran by said Local Authorities. If there are future consultations, especially regarding Design Codes and SPDs relating to this across both designated and non-designated heritage assets then it is hoped that these are duly provided to Community Campaigner David Barton.
Mr. Barton has cited material references and sources from his previous Representation to the Bootle Area Action Plan Consultation (2021-2026) that align with his existing and ongoing points which he would like to raise in parallel with other Local Authorities. Where a more detailed discussion with leading sources, such as Architects and Academics may prove conducive with these Councils then Mr. Barton would be delighted to discuss this further.
Community Campaigner David Barton:
Community Campaigner David Barton is a Heritage Campaigner of over 11 years' experience who has championed and led a number of successful campaigns to promote TVA in modern-day life. His dual mandate is to provide effective (alternative) use of historical buildings encompassing a full restoration alongside achieving the mainstream construction of new classical architecture on numerous economic, environmental and ecological grounds that align with existing policy set out by Central Government covering the UK and increasingly elsewhere across the world.
Having worked with a wide array of residents, businesses and organisations in that time, which has included the full restoration of the Victorian Verandahs on Lord Street, Southport in tandem with the respective key stakeholders and other property owners to prevent demolition of Old Builds across Sefton, Mr. Barton is now hoping to make the process of utilising the built environment to its fullest potential a far simpler one that will enable Bootle to fully reach its maximum potential as a historic town.
SECTION 1: Design Codes:-
1. Design Codes based on TVA should be utilised in preference to Design Guides
2. LAs should establish recurring partnerships with key Consultation Bodies, such as Create Streets and The King's Foundation, etc who specialise in getting through to a huge swathe of grassroots members of the public with tried and tested previous experience in Local Plans, such as Lichfield, etc.
3. Non-demolition of historic buildings prior to the 1950s must be made policy or adhered to as part of LCC's commitment to combatting the Climate Crisis through sequestering carbon in its Old Builds.
4. LAs should adopt a Local List of Valued Buildings (Non-designated Heritage Assets), which have been a Government requirement since the policy introduction through the NPPF in 2012. Historic England produced a guide to help Councils in May 2012. Bristol produced an exemplar list in 2015, which is well worth reviewing.
5. Existing Action Plan if present for Designated and Non-designated Heritage Assets needs identifying and/ or establishing (I may support this if invited).
6. Option for people to provide feedback even if out of time for additional documents, such as SPDs or at the discretion of Councils where feedback may be particularly assistive or lead to additional academic and architect guidance. Option for public publishing of feedback should be encouraged with the consultee's consent to encourage wider consultation uptake moving forwards.
7. Era-style Buildings, especially rows of Georgian, Victorian and Edwardian architecture must be faithfully restored, retained and recreated to complement surrounding historic streets that may or may not be classed in official Conservation Areas preventing harsh contrast with newer built housing estates from the 1950s onwards.
8. Where demolition is proposed for 1950s style housing onwards- any new construction must be in the historic building style and local materials to ensure high carbon capacity, quality aesthetic and true blending of the interconnected conurbations of any one area, place or location.
9. Concerted efforts to identify and locate core suppliers for raw materials and specific heritage skills should encourage new uptake of these limited artisan craft skills by new contractors locally based to support the local economy, provide employment, and reduce the cost of product and service in the long-term.
10. Volunteer labouring assemblies should be fully encouraged and supported identifying key individual an group skillsets that can be utilised to protect historic buildings or areas at risk with a view to supporting the construction of new authentic style housing (as and where appropriate) and the reconstruction of demolished prized old buildings beloved by the community, such as community pubs, libraries and community centres.
11. Simplified streamlined Planning Process for key stakeholders either working to authentically restore buildings and/ or build new ones, such as observed with many civic buildings in Budapest Hungary and the Federal University Buildings in the US.
12. Where there have been evolving building styles over years, eg. Combination of one or more: Georgian, Edwardian and Victorian, the style that best promotes the area, ie. One that has the majority era structures left or capacity size requirements as examples should be utilised by house builders, especially where a streetscape may have been annihilated during the World Wars.
SECTION 2: Designated & Non-Designated Heritage Assets:
1. Enhancement of Historic Areas to remove modern street furniture with the integration of classical style timepieces should be encouraged and pursued wherever possible with clear preferred guides set out for each part of the City.

2. Enhancement of Setting with funding grants and financial incentives from all tiers of Government for Private Investors especially those contributing actively towards achieving Net Zero through Embodied Energy/ Carbon Capacity rich measures, i.e. Retention of Old Builds.
3. Archive Pooling of invaluable source material, such as Historic Photographs, Oil Paintings, such as “Memory Lane” featured on InYourArea Magazine to enrich existing material archives.
4. New officialising of Non-Designated Heritage Assets must be actively supported even if informed by the (wider) community thereby providing some possibility of removing these from risk of demolition.
5. Incentives must be provided to those dependable sincere third party investors that take on, maintain and protect said sites against their annihilation from the streetscape with rescue-packages actively promoted and supported once again with a trusted Directory creating goodwill amongst the local community.
6. Opportunity to meet or correspond on Zoom Conference Call regarding key areas, buildings and places at risk where key stakeholders, such as property owners may be better placed to engage in positive and constructive discussion through third parties, such as myself and a trusted panel of experts in their fields and sectors who could enable these people and organisations to maximise their civic heritage, whilst proactively striving to protect more historic buildings from decline and/ or demolition where a strategy package for raising the revenue to do this could be arranged and facilitated.
7. Defining Character Areas- zoning symmetrical parallel construction recommended where distinctive individualised properties remain as checked against authentic archive blueprints. This will ensure high-quality housing for everyone reducing the societal divides between misperceived “good areas” where affluent people reside in historical style properties and less advantaged reside in contemporary ones.
8. Industry should be conserved at former industrial complexes, such as Economic Docks with equivalent sites offering modern-day uses, alongside traditional uses such as export and import of raw materials at places such as Docks and Port encompassing: ICT sector, Green Research & Development, etc.
9. Every effort must be made to reach out to Property Owners, especially Housebuilders that are pursuing demolition of long-beloved buildings, especially those with demonstrable evidence of Holy Worship.
10. Every effort must be made to reach out to Property Owners, especially Housebuilders that are pursuing demolition of landmark buildings, especially those with key links to an area’s founding or history locally.
11. All Powers to monitor, collaborate with existing and/ or new property owners to conserve these buildings should become mandatory with appointed Community Champions for Civic Heritage that area direct link between Local Authorities and said wider key stakeholders to prevent demolition of structures that may be at risk of destruction from vandalism, urban exploration and demolition.
12. Reconstruction Programme harnessing existing limited crafts people’s skillsets to be used as a fundraising vehicle to bring back buildings that may have been demolished to dissuade future demolition as a choice by property owners and by means of expanding these otherwise lost skillsets that are at live risk of becoming extinct from the UK.
13. Checklist of buildings at high risk must be expanded beyond the existing groups and organisations that are saturated with high caseloads, such as SAVE Britain’s Heritage, etc so that dialogue channels can be created and fostered between Community Champions for Civic Heritage.
14. Bespoke-tailored funding packages for Properties at Risk of decline or demolition should be integrated with Local, Regional and Central Government-funding as a means of regional economic output through the return on investment that may support other key grant funding capital infrastructure projects, such as transportation and drainage improvements.
SECTION 3: Conservation Areas:-
1. Alterations for Listed Building Consent must be simplified with additional streamlined testing methodologies, such as proof of legitimate third party support, such as correspondence chains between applicant and Groups, such as The Victorian Society that can assist LAs complete workload much sooner allowing more attention for challenging cases, such as Non-Designated Heritage Assets at live or upcoming risk of demolition by Housebuilders, etc.
2. Highways & Street Furniture should be duly supported across the whole of an area to enhance its historic appeal to the commercial community as much to its indigenous community; as this is supported greatly in equivalent Public Realm Strategy SPDs- where any and all guidance and support must and should be provided, with key at risk projects being an exceptional anecdote that may be cited in future documents or versions of this and other consultations to stimulate economic construction and restoration across other designated Conservation Areas, etc or otherwise.
3. Provide incentives for the return of lost adornments and decorative features, such as roof fixtures like Chimney Stacks once again with an approved contractor directory to make Old Builds practical to own, live and work in the 2020s onwards. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of decorative features must be provided by the Local Council.
4. Permissions for authentic replica and more durable materials, such as reproduction sash windows must be supported to prevent exorbitant high costs through procuring these, limited longevity and economic climates being unstable. This must be assessed on a case by case basis.
5. No more deliberate manipulation and selective misinterpretation of using contemporary modern designs using old-style fabric raw materials, such as stone cladding for new housing where the design and shape clearly undermine the concept of blending within or around a Conservation Area.
6. Compendium of approved and recognised TVA Architects based across the UK with a view to supporting the training in time of more Northern counterparts to reduce cost associated with travel expenses, etc. This will actively reduce the level of demolition applications countering the purpose of this SPD and other live Policy. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of decorative features must be provided by the Local Council.
7. New Conservation Areas should be established covering areas of surviving built historic environment to positively reverse fascia changes to more modern ones.
8. Blue Plaques should be fully supported across as many different Conurbations, especially if Applicants reach out for

endorsements.
9. Discretionary Rate Relief should be provided to those proactively support LAs with conserving their respective Conservation Areas through their own resources, skillsets and time as an incentive to others to work alongside the Council positively and constructively.
10. Where long-lost prized buildings are reconstructed whether based in a Conservation Area or not this should confer discretionary financial support, e.g. Rate Relief for the length of time taken to produce this outcome acknowledging the embodied carbon now contributing positively towards the LA's Climate Change Action Plan Targets.
11. Retention of historic street furniture, such as Lamp Posts adorning high streets or Promenade style streetscapes with collaborate fundraising models utilised from key stakeholders, such as property owners, undisclosed third party investors, Residents' Groups, etc.
12. Retention of historic street furniture, such as Lamp Posts adorning high streets or Promenade style streetscapes with authentic identical reproductions permitted where all options to secure finance have been fully exhausted and/or the existing streetscape is at imminent risk of receiving contemporary replacement street furniture on health and safety grounds, eg. Lap Posts.
SECTION 4: Climate Change:-
1. Pleased to note that LAs broadly acknowledge and grasp this concept therefore the aim should be to increase the net number of carbon-rich Old Builds long-term through support packages that will combat the Climate Crisis, provide economic benefit and improve Conservation in a pioneering fashion that may draw wider funding opportunities for the area.
2. Retrofit Ventilation is a key point that should warrant future new construction utilising higher ceilings through the reconstruction of Old Builds outfitted for the modern day with retrofitted energy supplies, etc that will also serve to break down societal dives regarding perceived good and bad areas where streetscapes are harmonious yet distinctly unique in beauty like any one Conservation Area.
3. Embodied energy and embodied carbon- must remain a central priority and so influence new construction to readopt TVA principles as this will be pivotal towards the area's future green credentials as outlined in many existing auxiliary planning documents approved presently with Carbon Studies taken of existing architecture, notably buildings saved from demolition.
4. A brick by brick case study of as many buildings as possible may warrant invitation of national and international academic institutions to undertake a regional or national Carbon Study further justifying the retention of prized Old Builds elsewhere across the area, region and the UK.
5. Sustainable Materials- an approved contractor directory that could readily advise and source the necessary raw materials with realistically reduced costs substantially again deterring potential demolition-driven applicants from consuming workload time of the Planning Department. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of sustainable materials must be provided by the Local Council.
6. Biodiversity- maximise greenery along all arterial roads ad commuter routes with dense tree planting and the introduction of hedgerows and wherever possible financial incentives to get more private property owners on side.
7. Flooding Defences- existing and prospective hotspot areas should be clearly identified for emergency grant funding whereby Local Authorities, especially across a region may agree with the respective Government Department to distribute emergency flooding to prevent costly consequential recurrent repairs.
8. Transportation using arterial roads and commuter routes (Motorways and Railways) should prioritise linking each end of a Local Government sphere with the surrounding Local Government spheres, such as Southport at the very northern tip of Merseyside where transportation links are much weaker with Lancashire in the north and east than with the rest of Merseyside to the south.
9. Coastlines should be reclassified as SSSIs, especially where the economic potential is not being fully realised, such as Coastal Towns with underused Beaches, such as Southport in Sefton as one example for other LAs.
10. Financial Incentives for the demolition of Carbon-poor Glass Towers and contemporary construction should be utilised to restore the skylines across any one area whilst providing better mathematical application of the space for residential and commercial use, such as larger tenement buildings or the original streetscape reinstated yet designated specifically for housing where there may be a deficit.
SECTION 5: Historic Buildings:-
1. Create a Designated AND a Non-Designated Heritage Asset List, such as AHV whereby existing buildings and those that may yet return can be logged and recorded to combat the Climate Crisis whilst making heritage work for LAs in modern day with attractive locations timeless for everyone to appreciate enhancing the investor appeal, all-round interest and acknowledging the industrial pioneering legacy of the City.
2. Clearance of vegetation along the Railway Lines alongside other equivalent parts of the Line to eradicate the perceived neglected aesthetic.
3. Exception Areas, such as those at risk or recently restored have the real potential for wider grant funding for ambitious projects out of the realm necessarily of undisclosed third party investors supporting Property Owners, therefore all and any support in reaching these person(s) will greatly contribute to all possible tangible success in the interim period.
4. Providing key guidance, such as agreed in-keeping historic street furniture, such as Cast Iron Lamp Posts, Bins, Planters approved upon inspection of historic photographs, agreed installation and where appropriate maintenance by the LA will ensure the iterative success of this transferring to other Conservation Areas, etc.
5. Scheme to rebuild and reconstruct long-lost buildings, prioritising vacant sites that could adapt some mixed use with residential accommodation and commercial application thereby supporting Climate Action, creating employment and recordable success through placing of necessary economic drivers, such as offices for Technology Sector if original use cannot be sourced in sufficient time simultaneously meeting housing targets.
6. Archive Blueprints for historic conurbations that have suffered architecturally over time through building conversions,

demolitions, etc should be provided to key stakeholders, if necessary with a printing charge available for official spiral hard copy version to view detailed historic plans covering layouts, etc.
7. Those people and organisations that have either/ both maintained their properties well over the years or may wish to provide additional support to others, such as restorative support, archive blueprint guidance, etc should be eligible for discretionary reductions by the Council across various property taxes where they may be suffering hardship or through personal circumstances.
8. “Newer” style housing with true authentic rhythm, such as Suburban style faux Tudor fascia frontages with red clay tile pitched roofs and terracotta design windows (tile hung walls) are a good compromise whereupon finance and scheduling may otherwise adversely impact on housing settlements.
9. Fascia Frontage details should be reinstated whether in a Conservation Area or not, especially where approval has been granted to rebuild an entire house using breeze block to produce a stereotypical black, white and grey dwelling out of place.
10. LAs should work closely with Foundries to procure raw materials and building services in the event of harnessing their own Contractor Firm(s) in-house that could work cross-authority to make net savings whilst ensuring particular new housing neighbourhoods conform to an appropriate style.
11. Modern “Carbuncle” extensions should not be permitted at any one area- instead an authentic style addition may be used to retain blending.
12. Discretionary financial support packages to assist House Builders choosing the traditional vernacular route should be considered and utilised where it can be proven that this third party will restore the historic streetscape yet making it applicable or modern day requirements- residential or commercial. This may be especially so where they are able to help others prevent the demolition of a prized Old Build built before the 1950s.
SECTION 6: Traditional Vernacular Architecture:-
1. Provide a directory of approved and trusted Conservation Specialist Contractors- this will be key for repairs and maintenance reducing costs for all parties, expediting the physical process of regeneration and smoothen planning work schedules so that finer detail may be considered on priority cases or those that may be at risk of consequential repair, such as Places of Worship and detached Buildings with flat roofs, etc at higher risk of damage than customary dwellings.
2. These same people should be readily contactable for new construction
3. Encourage smart building methods and use of TVA as meticulously explained in this SPD outlining “Breathing” Solid Wall Construction using older style materials thereby reducing maintenance cost which combined with the approved contractor directory will further drive down costs, time and effort for everyone.
4. Alterations- must introduce a simplified listed building consent form and application process that is streamlined encouraging better maintenance of Old Builds and reducing the rising propensity of builders to allow buildings to deteriorate, such as the Historic Pub that had to be rebuilt in Kilburn, London post 2015.
5. Provide specialist Heritage Arts & Craft Skills Programmes that anyone can learn and use so that these high cost tasks can eventually stabilise in price making them more affordable and available to those that don’t have the time to do this themselves or may be risk averse even.
6. Extensions- there must be a proactive emphasis on in-keeping structural fabric to prevent future errors, such as the Municipal Building depicted in the SPD being replicated again thereby harming the Conservation value.
7. New Housing Estates should adopt historical archival blueprints, ie. A Georgian, Victorian or Edwardian layout with the likeliest period architecture utilised where this area remained greenbelt until the 1950s.
8. Area Expansion of housing must revert to traditional timeless designs that confer many practical advantages over modern styles that are harder to maintain are timeless with regard to dating and ensure a more evenly distributed community atmosphere in the long-term future.
9. Infrastructure should be appropriately considered for existing and new areas so that no one area is at risk of becoming congested through traffic for a particular commodity, such as Schools, Doctor Practice, Dental Practice, etc.
10. Site Layouts should complement the historic layout with a view to Post 1950s contemporary Architecture out of place being one day demolished to reinstate Long-lost beloved buildings from before the World Wars that could blossom economically today.
11. Building Form shouldn’t permit for dated modern structures that delineate and essentially divide communities between the old and new parts of any one location.
12. Façade Design mustn’t be compromised for contemporary architecture, especially in view of coveted Heritage Status for any one area being at risk of being lost if said contemporary architecture is pursued.
SECTION 7: Making an application:-
1. Identify recurring applicants that are harming civic heritage, be this across Conservation Areas, Non-designated heritage assets or elsewhere with experience of demolition to date- this should be considered before granting permission to apply or acquire planning approval.
2. Enforcement Penalties for key stakeholders that purposely allow their properties to fall into decline and hoped eventual demolition through this tactic, which is more prevalent since 2020.
3. Create an Action Plan to deter persons or organisations from pursuing demolition, such as financial incentives, sincere investor network directory set by Central Government to offload for profit and enforced Design Codes that cannot be manipulated through semantics like Design Guides in isolation as has happened elsewhere. This must be kept for emergency instances where there is an expected threat of decline or demolition.
4. Agreed that temporary alteration of heritage sites, such as stairs or ramps for wheelchairs should be utilised to prevent deleterious loss of historic surroundings and features alike.
5. Full Pre-Consultation publicised and utilised to ensure appropriate Design Codes for new housing alongside positioning and layout in case volunteer assemblies may assist property owners with restoration of historic buildings.
6. Brick by brick Analysis undertaken of projects set for Traditional reconstruction so that these statistics may provide

both the Council with evidence for green grant funding support for other key infrastructure projects, such as Transportation and
Drainage Defences and property owners may incur a discretionary reduction in associated reconstruction costs of heritage buildings and vistas.
7. Ability to lock feedback in for Consultation automatically unless the council can alert interested consultees in taking part again whether they are locally, regionally or nationally based.
8. Special partnerships with Property Owners of historic buildings at risk of decline/ demolition to discreetly support them with the option to publicise this accordingly to reach out to others in the same position to secure alternative use for these structures as opposed to demolition.
9. Proactive effort to stop Breaking and Entering style of “Urban Explorers” who are coincidentally apparent whenever demolition is scheduled for buildings especially since 2020.
10. LAs to proactively work closely alongside Community Champions and other leading Heritage Groups, such as English Heritage giving these organisations a voice on the frontlines, especially where so many buildings are presently being overlooked for additional guidance and/ or support due to cost and time restraints facing these same groups and organisations (including the LA).
SECTION 8: MISCELLAENOUS:-
1. Provide all possible support for the reconstruction of Old Builds as is happening elsewhere across Europe, especially Budapest, Hungary, North America, etc to significantly increase Embodied Energy/ Carbon storage.
2. Establish a Plan to adopt Unadopted Roads or supply key services, such as carriageway resurfacing as disabled access and entry/ exit of Emergency Vehicles is presently a cause for concern.
3. Provide Pre-Approval and agreement of specialist Conservation Area style Historic Street Furniture, such as Cast Iron Lamp Posts, Bins and Planters for this prime Conservation Area including installation, maintenance costs (where appropriate).
4. Provide full access to the Archive Resources (at no/minimal cost) as an invaluable incentive for existing and parallel undisclosed third Party Investors. Discretionary waivers may be appropriate for those third parties proactively working to prevent decline and demolition of historic buildings.
5. Car Parking on and off street should be supported to ensure freedom of choice for everyone, accessibility and connectedness.
6. Car Parking abodes should be tastefully designed like modern-day stables for vehicles that are in-keeping with the built historic environment.
7. Provide publicly published names of consultees willing to work alongside the Local authority and other key stakeholders, such as property owners and undisclosed third party investors, etc.
8. Provide select tours for prospective investors and housebuilders of existing traditional architecture where Design Codes of this identical style would complement both old and new architecture bending the area better more cohesively, eg. the form and layout of Oxford City Centre which has changed minimally structurally since the 1800s.
9. Provide a focused effort on utilising people’s skillsets on a meritocratic basis, ie. Procure specialists and volunteers that could work together on key emergency projects, such as Historic buildings at risk without layered bureaucracy on achieving positive outcomes, such as Community Assets where deadlines can be thwarted by separate third parties.
10. Create a Top Ten Historic Buildings at Risk Register where appropriate conditions, such as security against Urban Exploration, etc can be utilised safeguarding these structures, providing the respective property owners peace of mind whilst actual scope for revitalising these for solid economic gain.
11. Infrastructure assessments should be fully outlined, such as Air Quality risk from new construction at presently congested areas, hence the case for Traditional Architecture that will confer longevity benefits in the long-term with as much free car parking as possible.
12. Free Car Parking may be monitored through expected proof of purchase when visiting, eg. minimal £1.00 at a shop encouraging partnerships between private businesses and LAs.

Respondent: Mrs Jacky Williams [3343]

Summary:

In Rhoose, the current infrastructure is insufficient for the current population. Any increase in housing provision must include a complete overhaul and upgrading of the sewage system before additional housing. In this day and age it is unacceptable to have sewage leaking into the ground drainage – as I understand happened recently when the road under the bridge at Fontygary flooded.
As I identified elsewhere, the additional housing at Readers Way, Rhoose would increase the risk of more instances of flooding where run off from the land already causes problems.

Respondent: Mr Hayden Pocock [3561]

Summary:

Flood Alleviation

A flood alleviation scheme for Llanmaes has been in place and, indeed, ground works were started but then abandoned following the Covid19 pandemic. The village drainage system combines sewage and rain water run off and is overwhelmed every winter after a period of wet weather. This year a number of homes suffered sewage overflows and raw sewage flooding on the Llanmaes recreation field is an annual event. In the case of the latter, the only place for the sewage to drain is into the brook and be carried via Boverton until it reaches Llantwit beach. Welsh Water have carried out various works over the last few years, including the deployment of pumps for weeks at a time, but the underlying problem is not really addressed.
Llanmaes needs the flood alleviation scheme to be re-instated.

Respondent: Mrs Jaqueline Hughes [3563]

Summary:

Flood Alleviation
Llanmaes residents should still not have to rely on floodgates as their only means of defence in the face of heavy rainfall. The much discussed but never fully implemented Flood Alleviation Scheme, should be included in the RLDP. In addition, if the ill conceived retail development at Bridge Farm is rejected, this land, plus the Green Wedge, could be used for ecologically sustainable tree planting.

Document Element: DNP5 – ENVIRONMENTAL PROTECTION
Respondent: Taylor Wimpey [386]
Agent: Savills

Summary:

Taylor Wimpey consider the inclusion of 'the loss of the best and most versatile agricultural land' to be at odds with the other elements listed, where unlike the others mentioned, the loss of agricultural land would have limited, if any, impact on people, residential amenity and property.

It is acknowledged that the loss of BMV agricultural land may impact the VoG's overall amount of high quality agricultural land, however this should be assessed against the existing high level of BMV agricultural land within the County. The extent to which its loss is considered "unacceptable" should be subject to the planning balance against the overriding need for affordable housing and local housing need. Consideration towards the farming business case and economic viability are also required within the planning balance. In the case of Land West of Swanbridge Road, the loss of BMV agricultural land remains the only constraint that cannot be overcome, as noted in the Candidate Site Assessment. Whilst the loss of high quality agricultural land should be avoided, Taylor Wimpey consider that where the merits of the Site are overwhelmingly in favour for sustainable residential development in a suitable and logical location, Policy DNP5 should not stand in the way of housing delivery.

Whilst Taylor Wimpey support the clause within the draft policy: "Where impacts are identified the Council will require applicants to demonstrate that appropriate measures can be taken to minimise the impact identified to an acceptable level. Planning conditions may be imposed, or legal obligation entered into, to secure any necessary mitigation and monitoring processes." However, in the context of BMV agricultural land, it is not clear how the mitigating measures, in the form of planning conditions or legal obligations, can be applied. This reinforces the earlier view that the inclusion of 'the loss of the best and most versatile agricultural land', as currently worded within the draft policy, is at odds with the other elements listed where mitigation strategies for pollution can be suitably conditioned.

Full text:

1. Introduction

1.1.1 Savills is instructed by Taylor Wimpey PLC ('Taylor Wimpey') to respond to the consultation on the Deposit Plan as part of the preparation of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').

1.1.2 The submission is made in the context of Taylor Wimpey's position as the promoter of Site ID 376 (Land West of Swanbridge Road, Phase 3). The site is being promoted for a residential development comprising of 260 homes.

1.1.3 Taylor Wimpey is one of the UK's leading national housebuilders, with extensive experience in delivering high-quality residential developments across a wide range of local authority areas. The company has an established presence within the VoG area. Taylor Wimpey is in the process of delivering Phase 1 of the site with development of Phase 2 close to commencing to dovetail with the completion of Phase 1. Phase 3 would act as a logical extension to the site, effectively rounding off development in this part of Sully and dovetailing with Phase 2 which is anticipated to be completed in 2029.

1.1.4 The site was originally submitted as a candidate site as part of the Call for Candidate Sites stage in September 2022 by Taylor Wimpey. This was a comprehensive site submission demonstrating that the site was viable, deliverable and sustainable – the three tests for Candidate Sites to satisfy as set out in Paragraph 3.36 of the Development Plans Manual. The Candidate Site submission consisted of the following information:

• Archaeological Desk-based Assessment (prepared by RPS);
• Design Vision (prepared by Pegasus Group);
• Drainage Strategy & Flood Risk Assessment (prepared by Pheonix Design);
• Landscape Appraisal (prepared by Pegasus Group);
• Preliminary Ecological Appraisal (prepared by Soltys Brewster);
• High Level Viability Statement (prepared by Savills);
• Transport Technical Note (prepared by Vectos); and
• Supporting Statement (prepared by Savills).

1.1.5 Since then, and on behalf of Taylor Wimpey , Savills have also responded to the consultation on the Preferred Strategy in February 2024 as well as the Housing Growth in Barry consultation in July 2025 and the Housing Trajectory in October 2025.

1.1.6 This supporting statement is structured to initially comment on the approach taken by the VoG in assessing the Land West of Swanbridge Road, Phase 3 site before commenting on specific policies that are contained within the Deposit RLDP.

1.1.7 In general, Taylor Wimpey's position is that, at present, the Deposit RLDP is not sound but that it could be made sound through the amendments as suggested throughout this Statement.

2. Candidate Site Assessment Process and Integrated Sustainability Assessment
Introduction

2.1.1 Candidate sites are in essence assessed through two means – the Candidate Site Assessment Background Papers and the Integrated Sustainability Appraisal.

2.1.2 Taylor Wimpey's position is that both of these documents do not provide an adequate assessment of the Land West of Swanbridge Road, Phase 3 site.

2.1.3 Each is considered in turn below.

Candidate Site Assessment Process

2.1.4 All candidate sites have been assessed at Preferred Strategy stage (reported as Background Paper 18) and Deposit stage (reported as Background Paper 18a).

2.1.5 The reason for the Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site not being carried forward as part of these assessments was presented in Background Paper 18 at the time of publication of the Preferred Strategy with Backgropund Paper 18a providing no further site analysis. The reason for the site not progressing this stage of the Candidate Site assessment process is as follows:

"Development of the site would lead to a loss of the Best and Most Versatile Grade 3a agricultural land contrary to national policy."

2.1.6 Whilst parts of the site do constitute Best and Most Versatile (BMV) land, Taylor Wimpey's position is that there are compelling reasons relating to the site's context and how it is utilised that mean a more nuanced position needs to be taken. Without such nuance, the RLDP risks not allocating a site that, whilst perhaps containing BMV, is otherwise suitable for development and more suitable for development then sites that the Deposit RLDP proposes to instead allocate.

2.1.7 Included at Appendix A, and included as part of Taylor Wimpey's representations on the Preferred Strategy and the Housing Growth in Barry consultations, is an Agricultural Assessment prepared by The Andersons Centre.

2.1.8 The key conclusions from this Assessment are that:

• The site is farmed by a tenant farmer whose main base is approximately 12km away which presents logistical and practical challenges. These challenges are exacerbated by the lack of farm buildings and the fact that there is no mains electricity;

• The site forms part of a wider 230 acre farm and so the cessation of agricultural practices on this parcel will not, by virtue of its size, prejudice the continued farming of the wider land parcel;

• The tenant farmer farms approximately 3,000 acres of land and so the loss of the ability to farm this parcel will have a negligible impact on the continuation of their agricultural operations;

• The site is bound on two sides by existing or permitted housing, on a third boundary by a railway line, and on its eastern boundary by a road; and

• Farming of the land does not support a high level of employment and if the land was lost for development, 0.15 of a full time labour unit's equivalent work would be lost.

2.1.9 Taking the above together, the conclusion needs to be reached that the site's size and context presents challenges for farming and that the development of Phase 2 by Taylor Wimpey has the potential to exacerbate these challenges. Aligned to this, the level of employment that the farming of the site supports is negligible and the cessation of farming of this particular parcel of land will not materially impact either the continued farming operations of the wider farm that the land sits apart of or the tenant farmer that farms the land.

Integrated Sustainability Appraisal

2.1.10 The Initial Integrated Sustainability Appraisal undertaken at Preferred Strategy stage provides a GIS based appraisal of all sites against 17 objectives. Inherently the Initial Integrated Sustainability Appraisal can be a bit of a blunt tool but Taylor Wimpey's position is that the site performs better against a substantial number of the 17 objectives than the current assessment.

2.1.11 Included at Appendix B is an assessment undertaken by Taylor Wimpey which provides commentary against certain objectives and suggests why the site performs considerably better than forecast in the Initial Integrated Sustainability Appraisal.

2.1.12 A summary of this is presented below:
Table 1 Summary of ISA and Suggested Taylor Wimpey Approach

2.1.13 Taylor Wimpey's position here is clear – the inadequacy of the Integrated Sustainability Appraisal as a tool for assessing candidate sites can only be appropriate where the Integrated Sustainability Appraisal is done correctly and

considers the mitigation measures that a candidate site submission proposed to put in place. Without this, the Integrated Sustainability Appraisal risks a situation – as Taylor Wimpey suggest has been the case in Policy HG1 KS1 – where a Key Site is selected in favour of alternative sites that are better performing.

3. Deposit Plan

3.1 Introduction

3.1.1 The following section of this Statement comments on the relevant Key Themes, Strategic Objectives and draft Policy Framework forming part of the Deposit Plan Consultation.

3.1.2 The Policy Framework has been reviewed with comments provided on only those policies considered to be of most relevance to Land West of Swanbridge Road (Phase 3), Sully. The position on individual policies contained within the Deposit RLDP are summarised in the table below:

Table 2 Taylor Wimpey Policy Position

Relevant Policy Support or Object
SP1 Sustainable Growth Strategy - Object
SP2 Settlement Hierarchy - Support
SP 6 Housing Requirement - Object
HG1 Housing Allocations: HG1 KS1 – Land at North West Barry - Object
TR1 Transport Proposals: TR1(2) Active Travel Route Sully to Cosmeston - Support
TR1 Transport Proposals: TR1(6) Highway Improvement Works Weycock Cross Roundabout - Object
CC1 Residential Operational Net Zero Carbon Development - Object
CI1 Open Space Provision - Clarity required
DNP5 Environmental Protection - Object as currently worded

3.2 Key Themes and Strategic Objectives

Homes For All

3.2.1 As noted in paragraphs 3.17 and 3.18 of the Deposit Plan the VoG has the highest affordability ratio in Wales with average house prices 9.7 times the average workplace earnings compared to the Welsh average, giving rise to a significant need for affordable homes which is under significant pressure. This highlights the ever increasing need for sufficient high quality housing, which Taylor Wimpey are committed to provide and supply the mix, type and tenure of housing needed within the local authority's growing population.

Placemaking

3.2.2 Taylor Wimpey embed strong placemaking standards across their developments as detailed within their Placemaking Charter. Taylor Wimpey consider Land West of Swanbridge Road (Phase 3) to present an opportunity to provide a comprehensive residential development that is accessible and well-connected with the existing settlement of Sully and compliments the earlier phases of development. As demonstrated in the earlier phases of development, the Site offers a sustainable location for future growth with easy access to a range of services and facilities in Sully.

Protecting and Enhancing the Natural Environment

3.2.3 Taylor Wimpey support the VoG's commitment to protect and enhance the natural environment through the integration of green/blue infrastructure network and the sustainable management of resources within the VoG. However where Objective 5 seeks to safeguard land from inappropriate development, proposals must be subject to the relevant planning balance giving weight to the surrounding land use and appropriateness of safeguarding agricultural land that would otherwise be unconstrained and considered suitable for development given the outstanding need for housing.

Promoting Active and Sustainable Travel Choices

3.2.4 Taylor Wimpey support the promotion of sustainable travel and active modes of transport, including the provision of designated active travel routes that improve the connectivity between primary and key settlements, such as the Sully to Cosmeston active travel route.

3.2.5 As demonstrated in the earlier phases of Land West of Swanbridge Road, Taylor Wimpey support the promotion of active travel within new developments and provide opportunities for residents to easily engage with active travel.

3.3 Policy Framework

Policy SP1 Sustainable Growth Strategy

3.3.1 Taylor Wimpey's comments on this policy relate to the sustainable growth strategy in so much as it relates to the

spatial strategy rather than the housing requirement that the RLDP adopts with further comments on the housing requirement provided in connection to Policy SP6 (Housing Requirement).

3.3.2 Taylor Wimpey appreciate the need to balance the ten strategic objectives against the need for growth and protection of the VoG's natural and built environment, and strongly support the strategic objective to provide homes for all. Taylor Wimpey maintain their position on the proposed growth strategy that has been established within earlier consultation responses submitted throughout the RLDP process, including the most recent consultation on 'Growth Options in Barry'.

3.3.3 Taylor Wimpey consider that to date the growth strategy has placed disproportionate emphasis on identifying an alternative site within Barry, rather than giving due consideration to potential sites in nearby high-performing settlements such as Sully. Taylor Wimpey therefore strongly encourage the VoG to widen the search for additional allocations beyond the administrative boundary of Barry Town Council and to consider locations that represent a logical and sustainable extension to neighbouring primary settlements that are located within the Strategic Growth Area, including Sully.

3.3.4 The six key elements of the Sustainable Growth Strategy are noted and Taylor Wimpey support a spatial strategy that locates major new development for the delivery of sustainable housing growth in appropriate locations, such as Sully, that are supported by the relevant infrastructure, services and facilities. Providing new homes within Phase 3 aligns with the Strategic Growth Area identified within the RLDP Strategy which forms the primary focus for housing growth.

3.3.5 Policy SPG1 continues to identify Sully as a location where new housing development will be concentrated, therefore establishing a principle of development for Phase 3 and help to further align the provision of new housing with the existing facilities of Sully, reducing the need to travel. Sully represents an inherently sustainable location for future growth and aligns well with the Sustainable Transport Oriented Growth Option. As identified in the Deposit RLDP, Sully is classified as a Primary Settlement and performs a complementary role to Barry as a key centre. Its position within the Strategic Growth Area further indicates that an appropriate level of development at Sully would be acceptable, with both existing housing delivery and the current allocation at Swanbridge Road supporting its established role.
3.3.6 With existing development ongoing to the north of the Site, at Phases 1 and 2 of Land West of Swanbridge Road, Phase 3 is considered to provide an appropriate level of growth in a sustainable location that would form a logical extension to existing allocations. The sustainability and suitability of Sully to accommodate residential development is reinforced by the allocation of 500 dwellings under Policy MG2(37) ('Land West of Swanbridge Road, Sully') on land directly north of the site promoted by Taylor Wimpey. The progression of this location into a phase 3 development would continue to strengthen Sully's function as a primary settlement and would constitute a logical and coherent extension to the existing built form.

Figure 1 Extract of Growth Strategy

3.3.7 Taylor Wimpey appreciate the aspirations of the Council to deliver housing to meet the identified future housing needs of the VoG and wider growth aspirations of the South East Wales Region at a strategic level. Taylor Wimpey support the revised strategy moving away from North East Barry, however maintain the position that this level of growth should be re-allocated to those locations that are most suitable for growth, including sustainable settlements outside of Barry. Growth should not be focuses solely on Barry.

Policy SP2 Settlement Hierarchy

3.3.8 Taylor Wimpey support the conclusions of the Settlement Appraisal Review Background Paper which identifies Sully as a Primary Settlement, reflecting its important role in providing a level of housing growth, in addition to key local services and facilities. Within this Background Paper, Sully is recognised for its vital role as a sustainable community, scoring highly across all key principles in demonstrating its sustainability by providing for the day-to-day needs of its residents. Taylor Wimpey concur with the supporting evidence which reinforces Sully's importance within the settlement hierarchy.

3.3.9 Whilst Draft Policy SP2 presents a 'broad distribution of development within the Strategic Growth Area..', serious concerns continue to be raised around the level of growth around Barry and the emphasis placed on it as the focus for future development. Taylor Wimpey do not dispute the identification of Barry as a Key Settlement, given its position as the largest town within the VoG, however believe Barry should not remain the sole focus for growth where there are opportunities available around primary settlements located within the Strategic Growth Area.

3.3.10 Put another way, it seems perverse for the Deposit RLDP to direct no new growth to a Primary Settlement within the identified Strategic Growth Area.

Policy SP 6 Housing Requirement

3.3.11 The purpose of this policy is to set the housing requirement and then identify the components of supply that are anticipated to meet this housing requirement. A number of Background Papers (nos. BP7, BP8, BP8A, ad BP9A) underpin the approach that is taken. Taylor Wimpey have a number of comments to make on the approach taken in this policy.

Housing Requirement

3.3.12 The approach taken in the Deposit RLDP, as with the Preferred Strategy beforehand, is for the housing requirement to make use of a 10 year dwelling-led scenario, an approach that reflects past completions and looks to extrapolate this forward over the lifetime of the RLDP.

3.3.13 Taylor Wimpey provided detailed commentary on the proposed housing requirement in their comments on the Preferred Strategy but note that Welsh Government have subsequently provided their comments on the Preferred Strategy raising no objection with the housing requirement proposed to be taken.

3.3.14 Taylor Wimpey's position though remains – if a dwelling-led scenario is to be used to determine the housing requirement then it needs to have a far shorter scenario length then 10 years as the first three years of the 10 year period selected were when supply was suppressed as a result of the current LDP not having been adopted.

3.3.15 That said, there is a clear contextual change since the Preferred Strategy was adopted, this being the publication of the 2022-based household projections have been published. Table 5 of Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections provides a comparison of the 2022-based projections with the 2018-based projections and the Deposit RLDP's housing requirement. A simplified version of this table is shown overleaf:

Table 3 RLDP Housing Requirement
Scenario Housing Requirement
RLDP 7,587
2018-based projections 6,214
2022-based projections 9,623

3.3.16 This is important as Paragraph 4.2.6 of PWW states that:

'The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans.'

3.3.17 The proposed approach of continuing to use the 10 year dwelling-led scenario, as a methodology, clearly does not do this.

3.3.18 The approach of using the 2022-based household projections would comply with the aspirations of PPW. Taylor Wimpey's position is that the commentary provided in the Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections for not using 2022-based projections is wholly inadequate and that these projections should be used.

Flexibility Allowance

3.3.19 Paragraph 5.58 of Edition 3 the Development Plans Manual (March 2020) makes it clear that there is a requirement for a flexibility allowance to be added on top of the housing requirement to derive the number of homes the RLDP should plan for. This is in the interest of ensuring that sufficient housing is delivered in the event of some allocated sites either not delivering in their entirety or delivering less homes than anticipated. Paragraph 5.59 of the Manual clarifies that the extent of the flexibility allowance should be informed by local issues with 10% as a starting point (i.e. as the minimum).

3.3.20 The Adopted Local Development Plan (ALDP) applies a 10% flexibility allowance on top of the housing requirement for 9,460 homes so that provision is made for 10,408 homes.

3.3.21 Paragraph 1.2.34 of the Annual Monitoring Report 2024-2025 provides a comparison of the number of homes that have been completed and the level of completions that the ALDP anticipates. This shows that 6,999 homes have been delivered up to 1st April 2025 against a cumulative dwelling target of 8,829 homes, representing a shortfall of 20.7%.

3.3.22 Taylor Wimpey's point here is that the ALDP's flexibility allowance of 10% is insufficient to ensure that the ALDP's housing requirement is actually being delivered. This is clear evidence that a higher flexibility allowance should be used for the RLDP. Although for different reasons, but following a direction from the Welsh Government Planning Inspector, Bridgend County Borough Council has increased its flexibility allowance to 20% and, it is considered that such a buffer is appropriate for the VoG's RLDP.

Non-Delivery Allowance on Land Bank

3.3.23 Line C of Table 2 of the Preferred Strategy relates to those sites that either benefit from planning permission or are subject to a resolution to grant planning permission subject to planning permission. Combined, these sites are identified as having capacity for 1,860 homes.

3.3.24 The current approach, which assumes that all other sites which are under construction or sites where there is

either a planning permission in place or sites where there is a resolution to grant planning permission subject to the signing of a Section 106 agreement will be completed in full, causes concern for Taylor Wimpey.

3.3.25 There are multiple reasons why homes that benefit from either planning permission or a resolution to grant planning may not be delivered. These relate to viability, but also to specific site constraints and landowner intentions.

3.3.26 A point that is separate, but inherently linked, to the above is that often the capacity of a site for which reserved matters approval is sought is less than that permitted at outline stage. Requirements for SAB approval and the demonstration of a biodiversity net benefit, for example, reduce the capacity of a site at detailed design stage but are often not factored in at outline stage, particularly where the outline application is not progressed by a housebuilder.

3.3.27 Research undertaken by the Local Government Association for England (no such data is available for Wales) suggests that, between 2010/2011 and 2019/2020 a total of 2,782,300 dwelling were granted planning permission whilst there were only 1,627,730 completions. This means that during this period just 58.5% of those homes which were granted planning permission were completed.

3.3.28 Taylor Wimpey is not suggesting that applying a discount of 41.5% is necessarily correct and the above is both from England and a few years out of date but the need for a discount that relates specifically to Line C is very clear.

3.3.29 It's difficult to know what this figure should be but Taylor Wimpey suggest that a 20% figure is used to reflect the flexibility allowance.

Windfall Allowances

3.3.30 The approach taken in the Deposit RLDP is to assume that 1,303 homes will be delivered across Windfall Sites. This has been calculated on the basis of previous completion delivered as windfalls.

3.3.31 Taylor Wimpey's concern is that the delivery of homes on Windfall Sites inherently becomes more challenging over time as the easier to develop sites have been delivered and the buildings and land that hasn't been developed is subject to increasing levels of policy protection. The approach taken by Cardiff Council in their Deposit RLDP is to assume that 75% of the 10 year average Windfall Sites will be delivered and such an approach seems entirely appropriate in this case.

3.3.32 An Urban Capacity Study (October 2023) prepared by the VoG, seeks to corroborate this by identifying 2,627 homes that could be delivered across the VoG. Whilst the windfall allowances would be less than the suggested urban capacity, this shouldn't be seen as problematic or as a conflict as the purpose of the Urban Capacity Study is, as the name suggests, just to identify sites which may have capacity. It doesn't account for land ownership (and whether the land owners have aspirations to dispose of the site) or development viability. In addition, the approach taken to site capacity to is to assume a density based on site type but it does this without an appreciation of site constraints and is based on the gross rather than net area.

Rolled Forward Sites

3.3.33 Taylor Wimpey have concerns with the approach that is taken in Table 2 of the Deposit RLDP which identifies allocations for 959 homes that are to be rolled over from the ALDP to the RLDP.

3.3.34 Concerns are raised around two sites in particular - Land to the west of Pencoedtre Lane, Barry and Land between new Northern Access Road and Eglwys Brewis Road, These sites are allocated in the ALDP but have failed to be delivered. Given the longstanding period during which there has been clear policy support for development but no completions, it follows that there are serious concerns around the deliverability of these two sites which, together, are allocated for 370 homes.

3.3.35 The failure to deliver these dwellings is due to a number of factors which are detailed in Taylor Wimpey's Preferred Strategy consultation response, which questions whether these sites will deliver at all or at a significantly reduced capacity due to the following reasons:

- Viability constraints;
- Site specific constraints;
- Landowner intentions;
- Requirements for SAB approval; and
- Biodiversity net benefit;

3.3.36 Whilst it is recognised that there may be policy support for the delivery of these two sites, there deliverability is clearly uncertain and they should be removed from Table 2.

Conclusion

3.3.37 The following table summarises the approach previously proposed in the Deposit RLDP and compares it to the

amendments suggested by Taylor Wimpey in the preceding sections of this Statement.

Table 4 Deposit RLDP Housing Supply and Taylor Wimpey's Suggested Approach
Housing Supply - Deposit Plan (December 2025) - Taylor Wimpey Suggested Approach (March 2026)
Housing Requirement - 7,890 - 9,623
Flexibility Allowance - 10% - 20%
Flexibility Allowance – 770 - 1,925
Housing Requirement + Flexibility Allowance - 8,660 - 11,548
A – Completions - 1,747 - 1,747
B – Units Under Construction - 313 - 313
C and D- Units with Planning Permission Minus Non-Delivery Allowance - 1,777 1,488
Existing Supply - 3,827 - 3,548
E – Large Windfall Sites - 720 - 540
F – Small Windfall Sites - 583 - 438
E+ F Total Windfall Allowance - 1,303 - 978
RLDP Allocations - 3,520 - 3,150

3.3.38 The conclusion reached in Taylor Wimpey's analysis is that, as a result of both the suggested housing requirement and flexibility allowance combined with Taylor Wimpey's comments on the components of supply, the Deposit RLDP needs to find allocations to deliver a further 3,872 homes.

Policy HG1 KS1 – Land at North West Barry
3.3.39 Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. Taylor Wimpey has provided comments on the housing requirement that is set in the RLDP and the components of supply that are anticipated to meet it in the proceeding sections of this Statement.

3.3.40 As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.

3.3.41 There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.

3.3.42 Policy HG1 KS1 proposes to allocate the site known as 'Land at North West Barry'.

3.3.43 The proposed allocation of this site follows a consultation – entitled 'Housing Growth in Barry' - undertaken by the VoG in July 2025 which proposed to allocate three sites in Barry as an alternative to the North East Barry site that was identified as a Key Site in the Preferred Strategy but was considered to no longer be deliverable.

3.3.44 Taylor Wimpey responded as part of the 'Housing Growth in Barry' consultation, supporting the removal of North East Barry as a Key Site but raising serious concerns with the proposed allocation of 'Land at North West Barry' as an alternative.
3.3.45 These concerns remain and Taylor Wimpey strongly consider there need to be other alternative sites – such as Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) - within nearby settlements that perform better than the Land at North West Barry site and should be allocated for housing.
3.3.46 To support this conclusion, Taylor Wimpey has undertaken a review of the Integrated Sustainability Appraisal (ISA) which provides a scoring of different candidate sites against the 17 objectives as well as considering and comparing the sustainability and accessibility of the two sites.

Integrated Sustainability Appraisal

3.3.47 The below table provides a comparison of how the Integrated Sustainability Appraisal scores Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) compared to the Land at North West Barry site. Two different comparisons are provided – one which compares the actual scoring in the ISA and a second which compares the two sites following Taylor Wimpey's suggested scoring which is included as Appendix A.

3.3.48 These tables clearly highlight where the subject site out performs North West Barry across numerous objectives.

Table 5 Comparison of Phase 3 Land West of Swanbridge Road (Site ID 376) and North West Barry (Site ID 490) ISA performance

3.3.49 From an initial review, the Integrated Sustainability Appraisal shows that Land West of Swanbridge significantly outperforms North West Barry in terms of the number of significantly positive scores '++' and the number of '—' scores.

To this end the subject site provides clear advantages above and beyond North West Barry in terms of homes, health, and transport. As such Land West of Swanbridge is considered to have the capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge; The site is within 800m of a health service and an active travel route; and, The site is within close proximity (≤800m) to a railway station or bus stop, town/ retail centre and an active travel route. Taylor Wimpey consider this assessment should go further to recognise the associated benefits to the leisure than be provided by the site's development.

3.3.50 Following Taylor Wimpey's re-assessment of the site against the Integrated Sustainability Appraisal ISA objectives it is also considered to obtain notably more positive '+' scores than North West Barry. It is also worth noting that North West Barry has more unknown impacts than Land West of Swanbridge which introduces a level of uncertainty around its potential for further negative impacts. Moreover, North West Barry scores a significant number of negative impacts across the ISA, with the extension site obtaining double the amount than Land West of Swanbridge Road.

3.3.51 Taylor Wimpey's position is that it would be unsound to allocate a site that performs considerably poorer in the Integrated Sustainability Appraisal than a site that is not proposed to be allocated.

Accessibility and Sustainability

3.3.52 SLR Consulting have prepared an updated document demonstrating the Site's sustainability credentials and providing a detailed overview of existing and future active travel and public transport infrastructure. This is included as Appendix C.

3.3.53 As a starting point, it considers those services within Sully. In terms of local amenities, the population size of Sully, naturally benefits from a good range of local amenities and services, and therefore it is anticipated that a high proportion of future residents' day-to-day journeys would be contained within the village and undertaken via walking or cycling. The Walking Catchment Map prepared by SLR demonstrates this and illustrates services within walking distance from the Site.

3.3.54 The proposed development benefits from local existing and future / planned infrastructure which will help support travel by sustainable modes such as walking, cycling and public transport. The Site falls within the less than 15 minutes Public Transport Catchment for bus and rail services. The Site is supported by the existing bus network, connecting Sully with Barry, Penarth and Cardiff – the nearest bus stop approximately 400m from the centre of the site; Moreover the Site is within proximity to Cadoxton and Penarth railway stations which have regular services in each direction in addition to the existing walking and cycling infrastructure in and around Sully.

3.3.55 The future accessibility of the Site will be further enhanced through the ongoing and planned South Wales Metro improvements, future active travel routes and the proposed Sully to Penarth mixed use link. The below figure shows several newly proposed active travel routes running close to the site including a new walking / cycling route along Swanbridge Road. Planning applications are now being submitted to support the delivery of these new active travel links. In March 2025 a planning application was submitted proposing a new route between Palmerstown and Dinas Powys.

3.4 SLR have undertaken further assessment work comparing the sustainability credentials of Land West of Swanbridge Road to Land North West of Barry. Land North West of Barry, is separated from the existing built-up area by the B4266 Pontypridd Road where the eastern and southern boundaries abut residential properties. As such, the proposed access for all modes would be taken from the A4226 Port Road West. The A4226 and B4266 can be a barrier to the promotion of active travel in that they facilitate vehicular travel and do not provide an attractive environment for pedestrians.

3.5 Furthermore, Land North West of Barry is on the fringes of Barry and had few if any facilities within a 10 minute walk, other than bus stops. In comparison, Land West of Swanbridge Road in Sully benefits from its proximity to the High Street in Sully and the services there.

3.6 The below table demonstrates differences in accessibility to amenities between the two sites, where Land West of Swanbridge Road presents a more favourable location for future development.

Table 6 Comparison of Local Facilities Between Land North West of Barry (Site ID 449) and Land West of Swanbridge Road (Phase 3) (Site ID 376)

3.7 Whilst the walking distance shown from Land North West of Barry to the nearest bus stop is slightly less than the Swanbridge Road Site, it should be noted that the bus services that can be accessed from Sully are more frequent and more direct than those which can be accessed from Land North West of Barry.

Conclusion

3.8 Taking the above together, the conclusion Taylor Wimepy reach is that their Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site performs more strongly than the Land North West of Barry site.

Policy TR1 Transport Proposals

3.9 The draft transport proposals contained within the Deposit RLDP have been reviewed with the following proposals considered to be pertinent to the Site and draft residential allocations.

TR 1 (2) Active Travel Route: Sully to Cosmeston

3.10 Taylor Wimpey support the designation of an active travel route connection the eastern side of Sully with Cosmeston in the north-east. Most notably the proposed route will pass Swanbridge Road which provides direct access to Land West of Swanbridge Road Site, with Phase 3 in close proximity to the travel route. The proposal would further enhance the accessibility and sustainability of the Site as a logical extension for residential development in Sully.

Figure 4 Extract of Deposit RLDP Proposals Map with Land West of Swanbridge Road (Phase 3) Identified

TR1 (6) Highway Improvement works: Weycock Cross Roundabout, Barry

3.11 Taylor Wimpey raise concerns around the proposed works at the Wyecock Cross Roundabout, compared to the other improvement works proposed. As noted in the Deposit RLDP, this roundabout forms a key connection within the wider strategic highway network and therefore of high importance for the local area and surrounding communities. The proposed options presented within the Deposit RLDP provide little certainty of the scope of works required with no preferred option identified. This raises concerns around the impacts of the highway improvements on the deliverability of the adjacent draft allocation of North West Barry. The same concerns arise when considering the roundabout improvement works in combination with the proposed access strategy contained within North West Barry's supporting information package. The proposed road widening measures (c.11m increase) required to make the draft allocation accessible would have a significant impact on the wider transport network at this strategic junction.

Policy CC1 (Residential Operational Net Zero Carbon Development)

3.12 The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) then setting out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.

3.13 As a starting point, Taylor Wimpey share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) is not appropriate. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this results to an uneven framework for housebuilders, significantly adding cost and reducing certainty.

3.14 The justification for exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.

3.15 There are two points to be made here:

3.16 Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage. This Written Ministerial Statement was subject to a judicial review which was dismissed with the position taken in it found to be legally sound.

3.17 Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations.

3.18 Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound.

3.19 Secondly, Taylor Wimpey have concerns with the approach that has been taken with regards to viability.

3.20 From Taylor Wimpey's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.

3.21 As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated.

3.22 Taylor Wimpey's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. Savills' experience is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.

3.23 Taylor Wimpey's other concern with this approach is that the figure assumed as being required to achieve the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is driven from a Cost Assessment report published in January 2024. With the Background Paper 9A Housing Land Supply and Housing Trajectory not forecasting first completion onsite until 2028/2029, there is likely to be a period of approximately five years from the establishment of the figure for delivering the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) and when the first units would be delivered onsite.

3.24 Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy CI1 (Open Space Provision)

3.25 This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.

3.26 Taylor Wimpey note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.

3.27 Taylor Wimpey is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter, Policy DNP5 Environmental Protection

3.28 Taylor Wimpey consider the inclusion of 'the loss of the best and most versatile agricultural land' to be at odds with the other elements listed, where unlike the others mentioned, the loss of agricultural land would have limited, if any, impact on people, residential amenity and property.

3.29 It is acknowledged that the loss of BMV agricultural land may impact the VoG's overall amount of high quality agricultural land, however this should be assessed against the existing high level of BMV agricultural land within the County. The extent to which its loss is considered "unacceptable" should be subject to the planning balance against the overriding need for affordable housing and local housing need. Consideration towards the farming business case and economic viability are also required within the planning balance. In the case of Land West of Swanbridge Road, the loss of BMV agricultural land remains the only constraint that cannot be overcome, as noted in the Candidate Site Assessment. Whilst the loss of high quality agricultural land should be avoided, Taylor Wimpey consider that where the merits of the Site are overwhelmingly in favour for sustainable residential development in a suitable and logical location, Policy DNP5 should not stand in the way of housing delivery.

3.30 Whilst Taylor Wimpey support the clause within the draft policy: "Where impacts are identified the Council will require applicants to demonstrate that appropriate measures can be taken to minimise the impact identified to an acceptable level. Planning conditions may be imposed, or legal obligation entered into, to secure any necessary mitigation and monitoring processes." However, in the context of BMV agricultural land, it is not clear how the mitigating measures, in the form of planning conditions or legal obligations, can be applied. This reinforces the earlier view that the inclusion of 'the loss of the best and most versatile agricultural land', as currently worded within the draft policy, is at odds with the other elements listed where mitigation strategies for pollution can be suitably conditioned.

Change suggested by respondent:

Taylor Wimpey consider the inclusion of 'the loss of the best and most versatile agricultural land' to be at odds with the other elements listed, where unlike the others mentioned, the loss of agricultural land would have limited, if any, impact on people, residential amenity and property.

The extent to which its loss is considered "unacceptable" should be subject to the planning balance against the overriding need for affordable housing and local housing need. Whilst the loss of high quality agricultural land should be avoided, Taylor Wimpey consider that where the merits of the Site are overwhelmingly in favour for sustainable residential development in a suitable and logical location, Policy DNP5 should not stand in the way of housing delivery.

It is not clear how the mitigating measures, in the form of planning conditions or legal obligations, can be applied to loss of BMV land.

6971 Support

Document Element: DNP5 – ENVIRONMENTAL PROTECTION

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund

investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to

reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: DNP6 – QUIET AREAS

Respondent: Penarth Town Council (Mr Pete Newton, Principal Policy, Innovation and Development Officer) [1125]

Summary:

Members noted that the Quiet Area provision under DNP6 only applies to Penarth and wished to know why this was the case.

Full text:

Penarth Town Council Deposit RLDP Consultation Response

Comments collated at a meeting of the Council's Consultation Task and Finish Group on 9th February 2026

Some Members attended the RLDP consultation drop-in session in Penarth and in general found it to be very informative.

Members support the general development strategy but did note the lack of information concerning discussions with adjacent and other nearby Principal Councils in the CJC Region. In view of the forthcoming Strategic Development Plan, encompassing the ten authorities, members felt that some further commentary regarding this is warranted.1

It is clear that the approach taken in the Cardiff paper is still that ideally, each Council is self-contained and "consumes its own smoke," which does not show any wider strategic thinking between the ten authorities in preparation for a regional Strategic Development Plan.

Members agreed with the view that infrastructure to support new housing developments was required in order to create successful developments, although they acknowledged that logistically it was difficult to pre-empt demand for some services such as travel and health services. Members also noted that predicting developmental needs and opportunities within wider context surrounding the UK's economic, political, and social landscapes.

Members noted that there was not much focus on Penarth or identified potential future development for Penarth beyond that already underway at the location near to Cosmeston but welcomed flexibility in its approach. Members expected to be more closely involved in the decisions and planning of this, and other such developments, and provide opportunity for wider consultation where appropriate, such as pre-application consultations, as well as would expect to be included in consultations concerning sites adjacent to Llandough, Dinas Powys, and Sully given their impact upon the town.

Penarth as a town is currently developed to its boundaries, save for the development at Cosmeston. It is, therefore, more dependent than other Service Centres on windfalls of land or buildings which may arise during the currency of the Plan. In 2023, an extensive assessment of the potential of the town concluded the following:

"There is marginally less capacity in Penarth [and Llandough] than the projected figures. However, this does not mean that the projections are incorrect or unjustifiable. The reported figures have not included a significant amount of capacity on open space land, and the projected figures for conversion of existing buildings and intensifications will be surpassed if the extant consents that exist this early in the Plan period are implemented."

The degree of flexibility, however, is substantially depending on one large site. P009, Headland School, is identified as both a potentially disused building and as a site with a capacity of 111-120 units. This special school is full to capacity and used by many Council in both Wales and England.

Members did note the inclusion of Cogan Transport Interchange under section 6.196 but would have liked to see more information about its future developments as they see it as key to increasing public transport use to Barry and further to

West Wales in general.

Members wished to advise that issues with both the bridge and the platforms at Cogan have been long term, with accessibility being central to these issues. Members felt that improvements to accessibility should be a priority at this site, with planting and landscaping considered secondary to this.

Members felt it was key to consider the additional stress on Penarth from increased anticipated demand of public transport needs and emphasised the need for this to be aptly considered by bus route providers as part of development work.

Members wanted to see a strategy that actively protects the town's heritage and culture whilst still being able to provide for current and future generations.

Members welcomed the inclusion of specific climate change mitigation and adaptation measures under SP16 and section CC1-CC6, noting the considerable attention given to Net Zero transition proposal relating to public buildings and energy. Whilst the evidence presented does not include the UK Climate Change Committee Report2, Members were pleased to see that CC1-CC6 largely reflect the Committee's finds and are tailored to a transition which reflects what is presently feasible. This is providing that the necessary skills to understand and undertake carbon assessments within a policy implementation and regulation context are readily available.

Under CC2, it was noted that the presumption against demolition3 in favour of retrofit and reuse may constrain maximum transition to net zero as, whilst there is grant aid available for public buildings and social housing, the retrofit monies available for private stock is limited.

Additional considerations will also need to be made as part of the Third Carbon Budget (2026-2030), Local Area Energy Plans and the climate change ISA theme.

Members also felt similar about the inclusion and consideration of sustainable development through the specific strategy outlined in section 5 of the document and felt this linked in well with ongoing Placemaking work and its strategic approach as detailed in SP4.

Members were pleased to see mention of the diversification of high streets, although noted that Penarth was above average in terms of occupancy. They hoped that the RLDP would be able to support the town centre and support other ways it could be improved, such as a fishmonger or identifying a site for a new Cemetery.

With Penarth classified as a Service Centre, they are identified as having a defined role. However, the decline of in-person retailing means that defining role is not that evident, and Members felt there is potentially a need to move away from the traditional retail role of Town Centres in favour of "repurposing, creating multifunctional, commercial, and service centres that meet the needs of the communities they serve" in line with Future Wales Town Centre First Policy. The term 'repurposing' suggests a stronger role for the public sector in enabling these new purposes, and Members felt that Placemaking Plans could be one potential framework for this.

Members felt that potential functional support that could be provided could include:
• The appointment of a Town Centre Manager
• Using supporting interventions such as an extension or reshaping of normal services such as Neighbourhood Services.
• Using existing or emerging new powers, such as compulsory purchases.

Members wished for the RLDP to facilitate the safeguarding of essential public services, including health, policing, fire and rescue in the town, which would help to develop the defining role of a Service Centre, and felt that specific reference to these would be beneficial.

Members supported the avoidance of coalescence with adjacent settlements through the reconfirmation of Green Wedges as it allows for relevant extensions to those settlements whilst allowing them to retain their identity.

Members noted that the Quiet Area provision under DNP6 only applies to Penarth and wished to know why this was the case.

Members advised that they welcomed further opportunity for consultation, particularly in relation to developments in the neighbouring Cardiff Bay area whilst acknowledging that this is not necessarily an RLDP concern.

Footnotes

1 There is an evidence paper concerning relations with Cardiff and a Statement of Common Ground with Bridgend. However, there is only a reference in the RLDP text to discussions with other regional Councils and not the paper itself. We would be grateful if you could provide the paper as it does impact on the soundness of this Plan.

2The UK Climate Change Committee's 'Progress Report: Reducing Emissions in Wales' highlighted the following aspects of import: Skills, Vehicle Charging Networks, Improving Recycling, Energy Plans, Decarbonising Public Buildings and

Social Housing, and reducing Road transport Demand (Car-Kilometres).

3The UK Environmental Audit Committee (2022) noted that “the evidence we received consistently recommended that retrofit and reuse be prioritised over new build.”

Document Element: DNP7 – DARK SKIES

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which

regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports

grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.

• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of

specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the

developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed

for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note

1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

6646 Support

Document Element: DNP7 – DARK SKIES

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special

Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.

We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.

By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.

We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.

With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.

Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.

It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of “areas of high ecological value” will also go some way towards resolving the points we raise.

Master Planning

We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.

Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.

Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.

Strategic Opportunity at Bro Tathan

In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.

This will ensure that development in the area:

• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.

Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.

Areas of High Ecological Value

As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of ‘High Ecological Value’ (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.

2. Integrated Sustainability Assessment (ISA)

With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.

The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.

We agree with these recommendations and would go further in advising that all allocations and their associated policies

should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered. We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note

also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry

Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it "is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary".
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW's Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational
Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Email representation redacted - https://valeofglamorgan.oc2.uk/a/3pq

6793 Object

Document Element: DNP8 – SEVERN ESTUARY RECREATIONAL PRESSURE

Respondent: Persimmon Homes (East Wales) [1068]
Agent: Boyer Planning

Summary:

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.

From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):

- Test 1 – Does the Plan Fit?
- Test 2 – Is the Plan Appropriate?
- Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is

particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.

Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.

Section 4: Key Themes, Vision & Objectives

Key Themes

Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.

In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.

Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.

Vision

In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.

The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.

In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.

Strategic Objectives

Objective 3 – Home for All

Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.

Objective 4 – Placemaking

As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.

Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.

Objective 8 – Promoting Active and Sustainable Travel Choices

Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.

Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.

Section 5: Sustainable Growth Strategy

RLDP Sustainable Growth Strategy comprises six key elements as follows:

1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).

In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.

Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual

completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future

residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and

potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.

Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement

From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies

with the Welsh Government's aspirations set out within Future Wales.
As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.
Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.
In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.
Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.
Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.
Policy SSC1 – Development within Settlement Boundaries
Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.
Policy SP4 – Placemaking
In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed

makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.
In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car.
Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.
The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.
Policy PGD1 – Creating Well Designed and Inclusive Places
Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.
On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.
A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.
Policy SP5 – Creating Healthy & Inclusive Places and Spaces
Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its

adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by

Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.

As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

Loss of Allocated Employment Land

Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.

Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.

By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)

Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.

According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.

On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.

Policy HG3 – Housing Led Redevelopment Opportunity

Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.

Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.

Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.

This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.

Policy SP7 – Affordable Housing Provision

In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.

As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.

National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.

To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.

Policy SP8 – Affordable Housing Requirements

Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.

On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Policy SP10 – Sustainable Transport

Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.

In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.

In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.

Policy TR1 – Transport Proposals

Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.

In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and

access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
Policy CI1 – Open Space Provision
Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.
The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.
Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.
The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.
Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.
Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.
Distinctive and Natural Places
Policy SP19 – Green Infrastructure
In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future

development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.
The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.
Policy SP20 – Biodiversity and Ecosystem Resilience
In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.
Policy DNP1 – Special Landscape Areas
Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.
Policy DNP2 – Green Wedges
Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.
Policy DNP8 – Severn Estuary Recreational Pressure
Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic

under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Change suggested by respondent:

The scale and mechanism of any contributions must be clearly established as part of the plan-making process.

Document Element: DNP8 – SEVERN ESTUARY RECREATIONAL PRESSURE

Respondent: Barratt Redrow Homes [2669]

Agent: Boyer Planning

Summary:

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.

From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.

Full text:

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these

representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.

3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of

Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places

5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which

demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.

5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.

5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.

5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.

Policy SP4 - Placemaking

5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.

5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:

5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.

5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.

5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.

5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

Policy PGD1 – Creating Well Designed and Inclusive Places

5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site

adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly

undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.

•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful

flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all

users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for

planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object

to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the

Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Change suggested by respondent:

The scale and mechanism of any contributions must be clearly established as part of the plan-making process.
