Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning

application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it "is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary".
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW's Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational
Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only

to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Change suggested by respondent:

We suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its current reference to the Historic Environment.

Email representation redacted - https://valeofglamorgan.oc2.uk/a/3pq

7081 Support

Document Element: SP4 - PLACEMAKING

Respondent: Barratt Redrow Homes [2669]

Agent: Highlight Planning

Summary:

Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.

Full text:

Introduction

These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.

Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.

Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.

That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.

The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.

The remainder of these representations address the specific policies of the Deposit Plan.

Deposit Plan Plan Period Position: Object

Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.

On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.

Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.

Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part

Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.

Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking

villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.

Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.

Policy SP6 – Housing Requirement Position: Object

Barratt Redrow objects to Policy SP6.

Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.

PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:

"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."

The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:

"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.

5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.

5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."

Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:

• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;

• Does not actively seek to address the area's ageing demographic;

• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;

• Does not seek to leverage any of the investment into the region through the CCR City Deal;

• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and

• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.

In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than

planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any

chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.
Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part
Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented

sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.
That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.
There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.
The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.
In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.
Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part
Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.
The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be “informed” by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council’s latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan’s blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.
8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part
Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan’s supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and

delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency

across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should

say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.

In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow

who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Document Element: SP4 - PLACEMAKING

Respondent: Barratt Redrow Homes [2669]

Agent: Highlight Planning

Summary:

The wording of the policy should better reflect the position already set out in the supporting text so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.

Full text:

Introduction

These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.

Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.

Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.

That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.

The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.

The remainder of these representations address the specific policies of the Deposit Plan.

Deposit Plan Plan Period Position: Object

Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.

On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.

Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.

Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part

Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.

Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.

This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.

St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.

Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:

"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)

Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:

St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by

the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.

PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:

"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."

The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:

"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.

5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.

5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."

Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:

• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;

• Does not actively seek to address the area's ageing demographic;

• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;

• Does not seek to leverage any of the investment into the region through the CCR City Deal;

• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and

• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.

In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.

That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.

The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.

This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies

affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing

and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.
Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part
Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.
That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.
There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix. The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.
In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the

overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.
Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part
Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.
The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.
8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part
Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3

years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green

infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains

that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and

deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.

• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Change suggested by respondent:

Amend wording of SP4.

Sound: Not specified

Document Element: SP4 - PLACEMAKING
Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

We support the recognition that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor

from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether

this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy Cll requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.

Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Summary:

The identification of high-level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
It should be made clear in the policy that the 'Placemaking Statement' is not expected to be a standalone statement but will form part of a Design and Access Statement.
Paragraph 6.33 should be amended to note that consultation will be 'encouraged' or similar.
There is a degree of crossover and repetition between Policy PGD1 and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable.

As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It

continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green

corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy CII requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Change suggested by respondent:

Amend Policy SP4.

Document Element: SP4 - PLACEMAKING

Respondent: Ms Lynne Squires [3520]

Summary:

I am concerned that the Plan, as currently drafted, does not ensure new growth will support strong, healthy, and inclusive communities.
Until the Council provides clear evidence and enforceable measures addressing community cohesion, housing mix, and health impacts, I cannot have confidence that the Plan is sustainable or fair.
I am concerned that the Plan does not explain how new housing and growth will integrate with existing communities.
There is a risk that rapid development could strain local services, schools, and community spaces, and make it harder for neighbours to get to know one another.
I would like to see evidence that social infrastructure will keep pace with population growth and that communities will remain inclusive and connected.
I am concerned that clusters of affordable housing in certain areas could lead to pockets of social exclusion or limit access to opportunities.
The Plan does not explain how it will ensure a good mix of housing types and tenures across the Vale.
I ask that the Council provide evidence that housing allocations will support socially balanced, inclusive communities.
I am concerned about increased traffic, air pollution, noise, and the loss of green spaces affecting health and wellbeing.
The Plan does not provide clear commitments to protect or improve accessible green spaces or safe walking and cycling routes.
I would like to see evidence that the Plan has assessed the health impacts of growth and will take steps to mitigate them.

Full text:

1. Air Quality and Traffic
The RLDP has not been supported by a sufficiently robust, transparent and locally specific
evidence base in relation to traffic capacity, mitigation, air quality and sustainable transport delivery in Dinas Powys.
The Plan relies on high-level assumptions rather than detailed assessments of known local constraints, and it does not provide adequate certainty that necessary mitigation and sustainable transport measures will be delivered, funded and implemented in a timely manner.
As a result, there is a significant risk that the cumulative impacts of development will lead to increased congestion, adverse effects on air quality and a deterioration in the quality of life for existing and future residents.
Until these evidence gaps are addressed and clear, enforceable measures are put in place, the RLDP cannot be considered fully justified, effective or consistent with national policy in its application to Dinas Powys.
Traffic Capacity
I am concerned that the RLDP has not demonstrated that the existing road network in Dinas Powys can cope with the scale of development proposed. Roads and junctions within the village already experience significant congestion both at peak times and throughout the day, particularly along Cardiff Road, St Andrew's Road and the A4055.
The Plan does not provide clear or accessible evidence, such as detailed junction capacity assessments or peak-hour traffic modelling, to show that additional development will not worsen these problems. Without this information, I cannot be confident that growth can be accommodated without unacceptable impacts on daily travel, safety and quality of life.
Questions: Can the Council confirm that the existing highway network in Dinas Powys can accommodate the growth proposed in the RLDP without causing unacceptable congestion?
Can the Council provide evidence including junction capacity assessments and peak hour traffic modelling?
Mitigation Measures
Where development in Dinas Powys is likely to increase traffic, I am concerned that the RLDP does not clearly explain how congestion will be mitigated.
Mitigation measures are described in general terms, but there is little clarity on what will actually be delivered, when it will happen, or who will pay for it. There is also no clear reassurance that mitigation will be in place before development takes place.
I am concerned that traffic conditions could deteriorate further if development proceeds without effective safeguards.
Questions: For any development allocations in Dinas Powys that may impact congestion, what measures are proposed to mitigate these effects?
Are these measures fully funded, deliverable, and enforceable?
Air Quality Impacts
Increased traffic has clear implications for local air quality, particularly in residential areas and near schools and community facilities. I am concerned that the RLDP has not clearly assessed how the proposed growth in Dinas Powys will affect air quality, especially when the cumulative impact of multiple developments is considered.
The Plan does not explain how compliance with statutory air quality standards will be monitored or maintained as traffic levels increase. This creates significant uncertainty about potential impacts on public health and the local environment.
Questions: Has the Council assessed the likely impact of the proposed growth on local air quality in Dinas Powys, including cumulative effects?
How will the Plan ensure compliance with statutory air quality standards?
Sustainable Transport
While the RLDP refers to encouraging walking, cycling and public transport, I am not convinced that realistic alternatives to car/motor use will be delivered in Dinas Powys.
There is limited detail on specific improvements, timescales or funding for sustainable transport. Without frequent, reliable public transport and safe, direct walking and cycling routes, it is unlikely that car use will reduce in practice.
As a result, traffic growth and air quality impacts may be greater than the Plan assumes.
Question: How does the Plan/Council intend to ensure that sustainable travel options (walking, cycling, public transport) will be delivered and used to reduce traffic and air quality impacts in Dinas Powys?
Evidence Gaps

Overall, I am concerned that key evidence relating to traffic and air quality in Dinas Powys is either missing or insufficiently detailed. Without clear, locally specific assessments, it is difficult to understand how the Council can be confident that the Plan is sound or that its impacts on the community are acceptable.
Question: There are limitations in the transport and air quality evidence for Dinas Powys, how does the Council justify that the RLDP remains sound in light of these uncertainties?
2. Flood risk
I am concerned about the Replacement Local Development Plan (RLDP) and its impact on Dinas Powys, in relation to flood risk.
Dinas Powys already experiences surface water flooding, overloaded drains and pressure on local watercourses. Any new development must be proven to be safe and must not make these problems worse. At present, the RLDP does not give me confidence that this has been properly addressed.
Flood Risk Has Not Been Properly Resolved
Welsh Government policy (TAN 15) says new development must be safe from flooding for its lifetime and that flood risk should be dealt with when the Plan is written, not later on.
The RLDP appears to allocate sites that are affected by flood risk without clearly showing how they can be made safe. Instead, it relies on the idea that solutions will be worked out later when planning applications are submitted. As a resident, this is worrying, as there is no guarantee that those solutions will ever work or be delivered.
Questions: Can the Council explain how allocations within [or affecting] TAN 15 flood risk areas comply with TAN 15's requirement that development be flood-safe for its lifetime, rather than relying on mitigation to be designed later?
Where the Plan relies on mitigation to address flood risk, what evidence demonstrates that such mitigation is deliverable, funded, and capable of implementation within the Plan period?
Is it the Council's position that compliance with TAN 15 can be deferred to the planning application stage, and if so, how does that align with the requirement for strategic flood risk to be resolved at plan-making stage?
Lack of Clear Evidence Behind Flood Assessments
The flood studies supporting the Plan are not easy for a lay person to understand and do not clearly show that the full impact of new development has been properly assessed.
In particular, it is unclear whether:
• The combined effect of multiple new developments has been considered
• The worst-case impacts of climate change and heavier rainfall have been tested
• Flood risk to existing homes and streets has been fully taken into account
Without this information, it is hard to see how the Council can be confident that new development will not increase flooding in Dinas Powys.
Questions: What level of modelling underpins the SFCA, and can the Council confirm whether it assesses downstream and off-site impacts arising from cumulative
development?
Does the SFCA test a 'worst-case' climate change scenario consistent with current Welsh Government guidance, and if not, why not?
How does the SFCA move beyond a desktop exercise to demonstrate that individual allocations are genuinely developable without increasing flood risk elsewhere?
Too Much Reliance on Future Drainage Solutions
The Plan relies heavily on Sustainable Drainage Systems (SuDS) to manage surface water, but there is little evidence showing that these systems can realistically work on all proposed sites.
I am concerned that:
• There may not be enough space on sites for effective drainage
• Water will still end up flowing into already stretched drains and streams
• Long-term maintenance of drainage systems is unclear
If these systems fail or are not properly maintained, flooding problems could become worse over time.
Questions: What evidence does the Plan rely on to show that SuDS can be accommodated on all relevant allocations without loss of developable area or displacement of flood risk?
Has the capacity of receiving watercourses and drainage networks been assessed at a strategic level, or is this assumed to be resolved site-by-site?
How does the Plan address the cumulative impact of multiple SuDS systems discharging into the same catchment?
What mechanisms are proposed to secure long-term maintenance of SuDS, and where is this evidenced in the Plan?
Doubts About Whether Sites Are Truly Deliverable
Some housing numbers in the Plan appear to depend on sites that may only work if major flood prevention measures are put in place, I believe that Dinas Powys is an example of this.
• It is not clear which sites depend on such measures
• There is no clear timetable or funding in place
• There is no backup plan if flood mitigation does not happen
I am concerned that the Plan may be relying on sites that cannot realistically be developed.
Question: Can the Council identify which allocations are dependent on flood mitigation infrastructure, and where the delivery, timing, and funding of that infrastructure are set out?
If mitigation fails to come forward, what contingency does the Plan provide to ensure housing delivery does not rely on undeliverable sites?
How does the Plan demonstrate that housing numbers are not inflated by sites whose flood risk constraints may ultimately prevent development?
Where NRW has expressed concerns or conditions relating to flood risk, how has the Council reflected those concerns in policy or allocations, rather than deferring them to later stages?

Has any NRW advice been departed from, and if so, what is the evidence base justifying that departure?
Climate Change and Long-Term Safety
Flooding is likely to become more frequent and severe due to climate change. The Plan does not clearly show that new development in or around Dinas Powys will remain safe for decades to come, not just during the Plan period.
Residents need reassurance that today's decisions will not create long-term flooding problems for future generations.
Question: How does the Plan ensure resilience to increased rainfall intensity and flood frequency over the full lifetime of development, not just the Plan period itself? Does the Plan assume future flood defences or upgrades, and if so, where are those projects committed and funded?
For these reasons, I believe the RLDP has not properly resolved flood risk issues affecting Dinas Powys, I ask that the Council be required to:
• Properly address flood risk at the plan-making stage, not later
• Remove or review sites where flood risk has not been clearly resolved
• Provide stronger evidence that new development will not increase flooding for existing residents.
Until this is done, the Plan cannot be considered sound.
3. Wastewater Treatment
This objection relates to the proposed level of housing growth in Dinas Powys and whether the existing wastewater and sewerage system can safely and realistically support it.
I am concerned that the RLDP does not provide clear, settlement-specific evidence to show that wastewater treatment works and the local sewer network have enough capacity to accommodate the planned development, either now or within the Plan period.
Without this evidence, the Plan risks placing unacceptable pressure on already constrained infrastructure, increasing the risk of flooding and environmental harm.
Wastewater Treatment Capacity
The RLDP does not clearly explain whether the wastewater treatment works serving Dinas Powys has sufficient spare capacity to deal with additional development.
In particular, the Plan does not set out:
• how much wastewater the treatment works is currently allowed to treat (its "consented capacity"),
• how much spare capacity is actually available,
• when this information was last assessed, or
• whether this assessment has been formally confirmed by Dŵr Cymru Welsh Water.
Without this basic information, I lack sufficient information to understand whether the existing system is already close to capacity or whether it genuinely has room to cope with new development.
The Plan also does not clearly state how much additional wastewater would be generated by the new housing proposed for Dinas Powys, or how this compares with any available
capacity. This makes it impossible to judge whether the level of growth proposed is realistic.
There is no clear evidence that a Dinas Powys–specific assessment has been carried out. If the Council is relying on broad, county-wide modelling instead, this does not reflect local conditions or known issues within the village.
Sewer Network Constraints & Flood Risk
Many residents are already aware of problems with drainage, surface water, and sewer performance in Dinas Powys, particularly during periods of heavy rainfall.
However, the RLDP does not provide clear evidence on:
• existing sewer surcharging or flooding incidents,
• past or current problems with overloaded sewers, storm overflow activity affecting the area.
There is also no clear explanation of how the combined impact of multiple new development sites in Dinas Powys has been assessed together, rather than individually. This is especially concerning given the increasing frequency of intense rainfall linked to climate change.
Dinas Powys has known surface water and flood risk sensitivities, yet the Plan does not convincingly demonstrate that increased wastewater flows will not make flooding worse or lead to pollution of local watercourses.
I am concerned that problems will only become apparent after development has already taken place.
Deliverability & Infrastructure Planning
The RLDP does not identify any specific wastewater or sewerage upgrades needed to support the proposed growth in Dinas Powys.
Where upgrades may be required, the Plan does not explain:
• what infrastructure improvements would be needed,
• how much they would cost,
• who would pay for them, or
• when they would be delivered.
This creates significant uncertainty. I am concerned that development could go ahead before infrastructure is in place, leaving existing communities to deal with the consequences of overloaded systems.
There is also no clear explanation of how infrastructure will be phased to ensure that wastewater capacity is available before new homes are occupied, rather than relying on solutions being found later.
Role of the Statutory Undertaker – Dŵr Cymru Welsh Water
The Plan appears to rely heavily on future discussions with Dŵr Cymru Welsh Water at the planning application stage to resolve wastewater issues.
I am concerned that this approach puts off important decisions that should be made now, during the Plan-making process. National planning policy requires development plans to be based on a clear understanding of infrastructure capacity, not assumptions that problems can be fixed later.
Without clear, written confirmation from Dŵr Cymru Welsh Water that the proposed level of growth in Dinas Powys can

be accommodated, I believe the Plan lacks the certainty needed to be considered sound.
Soundness & Policy Compliance
Because the RLDP does not clearly demonstrate that wastewater infrastructure:
• is available,
• can be upgraded in time, and
• has a realistic and funded delivery plan,
I do not believe the Plan is effective, which is a key test of soundness.
The Plan also appears to conflict with Planning Policy Wales, which states that development should be directed to locations where infrastructure is already in place or can be secured.
Deferring wastewater solutions to a later stage does not meet this requirement.
If wastewater capacity problems cannot be resolved within the Plan period, I question why the level of development proposed for Dinas Powys has not been reduced to reflect real infrastructure constraints.
4. Green Space & Green Infrastructure
For the reasons set out below I consider that the RLDP is unsound in relation to green space and green infrastructure in Dinas Powys because it:
• Fails to justify the loss of existing green space or show that mitigation will be delivered;
• Lacks clear evidence on the quantity, quality, and accessibility of green space;
• Does not safeguard the integrity of green infrastructure networks;
• Provides no mechanisms to ensure timely delivery of green space alongside new development;
• Does not demonstrate that alternatives were properly considered through the Sustainability Appraisal.
Until these issues are addressed, there is no clear basis to conclude that the proposed growth in Dinas Powys can be accommodated without unacceptable impacts on local green spaces and the wider environment.
I urge the Council to carefully consider these concerns and provide further evidence or modifications to ensure that the Plan is effective, sustainable, and compliant with national planning policy
Protection of Existing Green Space
The RLDP does not clearly explain why any existing green spaces in Dinas Powys might be lost, or whether the loss is unavoidable.
I am concerned that the Plan does not demonstrate:
• that all alternatives to protect existing green space have been considered, or
• that any replacement or mitigation will be provided within or near the village.
Without this evidence, there is no assurance that valued local green spaces, which are important for recreation, biodiversity, and the character of the settlement, will be preserved. This is a serious omission that makes the Plan unsound in this respect.
Question: How does the Plan justify the loss of any existing green spaces in Dinas Powys? Has an assessment been carried out demonstrating that loss is unavoidable, and that adequate replacement or mitigation will be provided within or near the settlement?
Quantity, Quality, and Accessibility of Green Space
The RLDP does not provide clear, settlement-specific information about the amount, quality, or accessibility of green space for Dinas Powys residents.
It is unclear whether the standards being applied:
• meet national policy requirements,
• reflect the needs of the local population, or
• will be sufficient to support an increased population from new housing.
Without clear evidence, I cannot be confident that new development will maintain adequate recreational and amenity space for all residents.
Question: What evidence supports the quantity, quality, and accessibility standards for green space in Dinas Powys? How do these standards compare with national policy and the needs of the local population?
Green Infrastructure Network Integrity
The Plan does not explain how green infrastructure networks—including wildlife corridors, footpaths, cycleways, and recreational routes—will remain coherent and functional as new development comes forward.
There is a real risk that the proposed growth could fragment these networks, reducing connectivity for wildlife and limiting access to recreational spaces. I am concerned that the Plan does not set out measures to prevent these negative impacts.
• Question: How does the Plan ensure that green infrastructure networks in Dinas Powys, including wildlife corridors, footpaths, and recreational routes, remain coherent and functional despite new development?
Delivery and Implementation
The RLDP does not make it clear how green space provision will be delivered at the same time as development, rather than being left to later planning agreements or discretionary decisions.
Without clear delivery mechanisms, there is no certainty that new or replacement green space will be provided when needed.
This creates risk that residents will face reduced access to recreation, wildlife habitats, and open space for years after new homes are built.
• Question: What mechanisms are in place to ensure that green space provision in Dinas Powys will be delivered alongside development, rather than deferred to later discretionary planning stages?
Consideration in the Sustainability Appraisal
It is not evident that the Plan's Sustainability Appraisal has fully assessed the impact of proposed development on green space and green infrastructure in Dinas Powys.
There is no clear explanation of whether alternative development options were considered that would reduce the loss or

fragmentation of green spaces, and if so, why these
alternatives were rejected.
I am concerned that the lack of settlement-specific analysis weakens the credibility of the Plan and its ability to safeguard local environmental assets.
Question: Has the Integrated Sustainability Appraisal fully considered the impacts of proposed development on green space and green infrastructure in Dinas Powys?
Were alternatives considered that would reduce loss or fragmentation, and if so, why were they rejected?
5. Health & Wellbeing
Alignment with RLDP Policy SP6
The RLDP does not clearly demonstrate how proposed allocations and policies affecting Dinas Powys will achieve the health and well-being objectives set out in Policy SP6.
In particular, the Plan does not provide evidence that new development will:
• maintain or enhance access to green spaces,
• support active travel (walking, cycling, public transport), or
• deliver inclusive and safe public environments for all residents.
Without clear mechanisms to ensure these outcomes, it is unclear how the Plan will contribute to the creation of healthy, inclusive communities in line with its own strategic policy.
Question: How does the Plan ensure that proposed allocations and policies affecting Dinas Powys will deliver the health and well-being objectives set out in Policy SP6, including access to green space, active travel, and inclusive public environments?
Alignment with the Vale of Glamorgan Well-Being Plan
The RLDP does not clearly show how its proposals for Dinas Powys are consistent with the objectives of the Vale of Glamorgan Public Services Board Well-Being Plan, particularly in relation to:
• physical and mental health,
• health equity, and
• equitable access to green and recreational spaces.
There is no settlement-specific evidence demonstrating that new housing or other
allocations will support these well-being objectives, leaving a gap in the Plan's justification and effectiveness.
Question: How does the RLDP demonstrate consistency with the Vale of Glamorgan Public Services Board Well-Being Plan, particularly the objectives relating to physical and mental health, health equity, and access to green spaces in Dinas Powys?
Evidence for Health and Well-Being Outcomes
The Plan does not provide sufficient evidence that its spatial strategy, site allocations, or policies will produce measurable improvements in health outcomes for residents of Dinas Powys, particularly in areas where health needs are identified.
Without this evidence, it is impossible to determine whether the proposed development will genuinely support improved physical or mental health, reduce health inequalities, or provide accessible, high-quality spaces for recreation and social interaction.
Question: What evidence demonstrates that the Plan's spatial strategy, allocations, and policies in Dinas Powys will produce measurable improvements in health outcomes for residents, especially in areas of identified need?
Integration with the Sustainability Appraisal
The RLDP's Integrated Sustainability Appraisal (ISA) does not clearly demonstrate how health and well-being impacts have been addressed specifically for Dinas Powys.
There is limited information on:
• mitigation or enhancement measures to support healthy communities,
• the contribution of proposed allocations to active travel networks, or
• ways in which new development will improve access to green infrastructure or inclusive public spaces.
Without settlement-specific consideration, the ISA does not provide sufficient assurance that health and well-being outcomes will be achieved, nor does it demonstrate compliance with national planning policy on creating healthy and sustainable places.
Question: How has the Integrated Sustainability Appraisal addressed health and well-being impacts specifically for Dinas Powys, and what mitigation or enhancement measures are proposed to ensure alignment with national planning policy on healthy places?
6. Education & Medical Services
I believe that the RLDP is unsound in relation to education and healthcare services in Dinas Powys
Education Provision
The RLDP does not provide clear, settlement-specific evidence regarding school capacity in Dinas Powys.
My key concerns include:
• There is no demonstration that local primary and secondary schools have enough places for the children who will arise from the proposed housing.
• It is unclear whether the Plan relies on borough-wide estimates, which may overlook local pressures and result in shortages at specific schools.
• The Plan does not identify any specific improvements to school infrastructure (such as new classrooms, extensions, or new schools), nor does it set out funding, timing, or delivery mechanisms.
Without these assurances, there is no certainty that school places will be available before families move in, which could lead to overcrowding and diminished educational standards.
I am concerned that, in the absence of firm evidence and infrastructure commitments, the proposed scale of housing growth in Dinas Powys may be unsustainable and undeliverable.

Healthcare / Medical Services
The RLDP does not demonstrate that local healthcare services—including GP practices, dental services, and community health facilities—can accommodate the increased population.
My specific concerns include:
• There is no settlement-specific assessment of current or future healthcare capacity in Dinas Powys.
• The Plan does not indicate whether additional or expanded healthcare facilities will be provided, nor how this would be funded, phased, or secured alongside new housing.
• Without clear planning, the proposed growth could reduce access to essential health services for both existing and new residents, impacting physical and
mental health outcomes.
I am particularly concerned that increased demand without confirmed provision could lead to longer waiting times, reduced appointments, and pressure on local medical staff,
undermining the well-being of the community.
These gaps mean the Plan is not effective, justified, or consistent with national planning policy, which requires growth to be planned where infrastructure is available or can be secured.
7. Affordable Housing Allocation
I support the principle of providing affordable homes for local residents, especially young families, first-time buyers, and key workers who cannot afford market rates.
Well-planned affordable housing can help maintain a mixed and vibrant community and retain younger residents.
Affordable homes in Dinas Powys could reduce commuting pressures by allowing residents to live and work locally.
However, the RLDP does not provide clear evidence for how many affordable homes are needed in Dinas Powys or what types of homes are required for different groups (families, older residents, low-income households).
There is insufficient information about how and when affordable homes will actually be delivered alongside market housing.
Without clear delivery plans or safeguards, affordable homes may not remain genuinely affordable in the long term.
Concentrated or poorly planned affordable housing may put pressure on local schools, healthcare, transport, and green spaces, which are already constrained in Dinas Powys.
The Plan does not explain how affordable housing will be integrated with market housing to create sustainable, mixed communities rather than segregation or social imbalance.
Because of the lack of clear evidence, delivery mechanisms, and mitigation for potential negative impacts, I do not consider the Plan sound in terms of affordable housing in Dinas Powys.

8. Community Cohesion & Social Integration
I am concerned that the Plan, as currently drafted, does not ensure new growth will support strong, healthy, and inclusive communities.
Until the Council provides clear evidence and enforceable measures addressing community cohesion, housing mix, and health impacts, I cannot have confidence that the Plan is sustainable or fair.
Impact on Community Cohesion and Social Integration
I am concerned that the Plan does not explain how new housing and growth will integrate with existing communities.
There is a risk that rapid development could strain local services, schools, and community spaces, and make it harder for neighbours to get to know one another.
I would like to see evidence that social infrastructure will keep pace with population growth and that communities will remain inclusive and connected.
Risk of Over-Concentration of Affordable Housing
I am concerned that clusters of affordable housing in certain areas could lead to pockets of social exclusion or limit access to opportunities.
The Plan does not explain how it will ensure a good mix of housing types and tenures across the Vale.
I ask that the Council provide evidence that housing allocations will support socially balanced, inclusive communities.
Impacts on Mental and Physical Wellbeing
I am concerned about increased traffic, air pollution, noise, and the loss of green spaces
affecting health and wellbeing. The Plan does not provide clear commitments to protect or improve accessible green spaces or safe walking and cycling routes.
I would like to see evidence that the Plan has assessed the health impacts of growth and will take steps to mitigate them.
9. Climate Change & Sustainability
I am concerned that, as drafted, the Plan does not provide enough evidence or practical measures to ensure new development is sustainable and climate resilient. The RLDP is not fully justified, effective, or consistent with national policy on climate change and sustainability.
Key gaps include alignment with carbon reduction targets, enforceable delivery of low-carbon travel, energy-efficient homes, sustainable drainage, and climate-resilient infrastructure.
Without clear policies and enforceable commitments on low-carbon travel, energy-efficient homes, sustainable drainage, and climate-resilient infrastructure, the Plan risks harming both the environment and the wellbeing of communities.
Alignment with Welsh Government's Carbon Reduction Targets
I am concerned that the Plan does not explain clearly how new homes, workplaces, and other development will help Wales meet its legally binding carbon reduction targets.
Without this, there is a risk that growth in the Vale could increase emissions rather than reduce them. I would like to see evidence showing how this (and each) new development contributes to lowering carbon emissions.
Promotion of Low-Carbon Travel, Energy-Efficient Homes, and Sustainable Drainage

I am worried that the Plan relies too much on people walking, cycling, or using public transport without clear plans to make this happen.
There is also little information on whether new homes will be energy-efficient or if systems to manage rainfall and reduce flooding (like sustainable drainage) will be properly installed and maintained.
I want to see clear, practical measures to make low-carbon travel, energy-efficient homes, and safe drainage a reality.
Resilience of Infrastructure to Extreme Weather Events
I am very concerned about the impacts of extreme weather, including flooding, heatwaves, and storms, on roads, utilities, and homes.
The Plan does not clearly show how new developments or existing infrastructure will be designed to cope with these risks.
I would like to have assurance that any buildings, roads, drainage, and community facilities will be climate-resilient and protect people's health and safety.
10. Plan-making Process & Evidence Base
In my view, the RLDP is not fully justified or effective in its current form with respect to plan-making and the evidence base. Key gaps include accessibility and transparency of evidence, consideration of resident and stakeholder feedback, and robust monitoring and review
arrangements.
Without clear and accessible evidence, demonstrated consideration of local feedback, and robust monitoring and review mechanisms, residents cannot be confident that the Plan will be fair, effective, or responsive to changing circumstances.
Clarity, Transparency, and Accessibility of Evidence
The RLDP is not always clear and is not easy to access.
Technical reports, data, and assumptions are often difficult to find or understand, making it hard for residents to see why particular sites or policies were chosen.
The Council should provide accessible summaries and clear explanations so that everyone can understand and comment on the evidence.
Local Consultation and Consideration of Resident Feedback
I am concerned that residents' views may not have been fully taken into account in shaping the Plan.
It is unclear how consultation responses have influenced allocation decisions or policy wording.
I seek assurance that feedback from local people and community groups has genuinely informed the Plan, and that future consultations will be inclusive and clearly reported.
Monitoring and Review Mechanisms
The Plan does not clearly explain how progress will be monitored or how changes will be made if things do not go as planned. For example, if housing delivery is slower than expected or infrastructure is delayed, there is little information on how allocations or policies would be adjusted.

Document Element: PGD1 - CREATING WELL DESIGNED AND INCLUSIVE PLACES

Respondent: Ms Lucie Taylor [2506]

Summary:

While Policy SP4 affirms development should follow Placemaking principles and Policy PGD1 promotes well-designed, inclusive spaces, SF&G believe these need strengthening. Specifically by, promoting active lifestyles requires more detailed guidance on creating safe, accessible environments. We need to see encouragement for outdoor socialising, growing, and eating. Smaller, community-owned green spaces, suitable for food growing and involving local businesses, can effectively promote health and social cohesion. Such multi-functional, resilient green spaces support biodiversity, flood mitigation, and climate adaptation, offering diverse opportunities for communities to interact rather than just through active travel and play.

Full text:

We are pleased to see Policy SP4 of the LDP states development will be required to follow Placemaking principles. This intention is followed through successfully in Policy PGD1 – Creating well designed and inclusive spaces. Yet we do not feel 'providing high quality multi-functional green open spaces which can provide a choice and range of activities..' goes far enough to promote the range of options available to promote well designed and inclusive spaces. We feel that the promotion of active and healthy lifestyles needs some reference at this juncture as to how this might be achieved. The need to create 'safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for active travel, and promote sustainable transport choice's' needs more robust wording to back it up. The reference in the explanatory text to walking cycling and safe play needs to be enhanced to discuss opportunities for incoming to communities to gather outdoors, to socialise, to grow, to eat and to plan their healthy lifestyles together. Maximising opportunities of walking, cycling and play to reduce the causes of ill health, and reducing health inequalities is something we as planners, have been trying to do for generations. We need to go further. More explanation of what a healthy environment looks like would be appreciated. We must design spaces with more dynamism, with a variety spaces and opportunities that communities can gain ownership of.
Where housing need is significant and indeed where viability of site delivery is a factor, smaller, more effective spaces, can be delivered at little cost and with the opportunity for community 'ownership' from the outset. Blank canvass, small areas for growing of food, commensurate to the size of development can achieve huge amounts in terms of promoting active and healthy lifestyles. Where there is a mix of uses, local businesses can become involved in the spaces through sponsorship, donations, gaining extra customers and receiving food to cook or sell. This type of place making can deliver true 'green infrastructure'. They are indeed - high quality multi-functional green spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.

Change suggested by respondent:

refer to the need for communities to interact and socialise outdoors and ways this may be achieved. A small shelter next to a communal growing area could provide this at little expense.

Document Element: PGD1 - CREATING WELL DESIGNED AND INCLUSIVE PLACES

Respondent: Mr David Barton [2683]

Summary:

Design Codes based on Traditional Vernacular Architecture should be utilised in preference to Design Guides.

Full text:

Context:
This consultation feedback submission has been produced by Mr. David Richard Barton, also known as Community Campaigner David Barton who is promoting both the existing Built Historic Environment and Traditional Vernacular Architecture (TVA)/ Traditional Architecture (TA) as a key feature across UK and Ireland-wide Local Authorities and associated Planning Departments at all tiers of Local, Regional and Central Government.
This universal consultation therefore acts as an official Representation at all and any stage of official area UK Planning Consultations- Preliminary Scoping Documents, Named Stages of the Local Plan, Conservation Area Appraisals and Supplementary Planning Documents (SPDs), primarily regarding Design Codes.
Representations are being made by Mr. Barton as part of his ongoing work to champion the key stakeholders at various key areas old and new with a view to supporting their economic growth through the merits of High-Quality style Conservation with the hope of encouraging wider constructive and restorative support through positive and constructive working.
It is submitted that TVA should play a key part in any and all policy moving forwards on the grounds of conferring practical benefits be these periodic maintenance, their perceived support from the public, their invaluable contribution to achieving Climate Crisis Targets set local, nationally and internationally alongside their overall cost-effectiveness to key stakeholders alike in terms of Planning and sourcing of raw materials.
*One primary document that should be considered with significance especially alongside my own representation is a

written academic account of the actual practicalities associated with Traditional Architecture from a leading expert in their field.i.) Not only does this in-depth analysis provide an in-depth take on the widely assorted merits of this type of Architecture but it fully corroborates my case made across all sections typically found in one of the consultations highlighted above.
Furthermore, my representations to date and contained herein this document are duly supported by the Founder and Director of The Institute for Traditional Architectureii.) who has identified and recognised my own contribution(s) to communities up and down the Sefton Borough. This is an internationally acclaimed organisation which periodically works with other leading agencies and organisations to bring about effective positive change.
Outlined throughout Submission are responses to existing Consultations which set out why I consider amendments to existing Planning Policy documents are necessary to ensure the best possible outcomes.
References to supporting documents are contained in the indented blue numbering.
This Submission has been prepared for UK and Ireland-wide Local Authorities in the hope that it may serve as an umbrella representation by Mr. Barton. This does not prejudice his ability to also comment on live stages of any one Consultation, merely providing the ability to be put in touch directly with any one Local Authority in receipt of this Representation with the prospect of also taking part in any version(s) of Consultations begin ran by said Local Authorities. If there are future consultations, especially regarding Design Codes and SPDs relating to this across both designated and non-designated heritage assets then it is hoped that these are duly provided to Community Campaigner David Barton.
Mr. Barton has cited material references and sources from his previous Representation to the Bootle Area Action Plan Consultation (2021-2026) that align with his existing and ongoing points which he would like to raise in parallel with other Local Authorities. Where a more detailed discussion with leading sources, such as Architects and Academics may prove conducive with these Councils then Mr. Barton would be delighted to discuss this further.
Community Campaigner David Barton:
Community Campaigner David Barton is a Heritage Campaigner of over 11 years' experience who has championed and led a number of successful campaigns to promote TVA in modern-day life. His dual mandate is to provide effective (alternative) use of historical buildings encompassing a full restoration alongside achieving the mainstream construction of new classical architecture on numerous economic, environmental and ecological grounds that align with existing policy set out by Central Government covering the UK and increasingly elsewhere across the world.
Having worked with a wide array of residents, businesses and organisations in that time, which has included the full restoration of the Victorian Verandahs on Lord Street, Southport in tandem with the respective key stakeholders and other property owners to prevent demolition of Old Builds across Sefton, Mr. Barton is now hoping to make the process of utilising the built environment to its fullest potential a far simpler one that will enable Bootle to fully reach its maximum potential as a historic town.
SECTION 1: Design Codes:-
1. Design Codes based on TVA should be utilised in preference to Design Guides
2. LAs should establish recurring partnerships with key Consultation Bodies, such as Create Streets and The King's Foundation, etc who specialise in getting through to a huge swathe of grassroots members of the public with tried and tested previous experience in Local Plans, such as Lichfield, etc.
3. Non-demolition of historic buildings prior to the 1950s must be made policy or adhered to as part of LCC's commitment to combatting the Climate Crisis through sequestering carbon in its Old Builds.
4. LAs should adopt a Local List of Valued Buildings (Non-designated Heritage Assets), which have been a Government requirement since the policy introduction through the NPPF in 2012. Historic England produced a guide to help Councils in May 2012. Bristol produced an exemplar list in 2015, which is well worth reviewing.
5. Existing Action Plan if present for Designated and Non-designated Heritage Assets needs identifying and/ or establishing (I may support this if invited).
6. Option for people to provide feedback even if out of time for additional documents, such as SPDs or at the discretion of Councils where feedback may be particularly assistive or lead to additional academic and architect guidance. Option for public publishing of feedback should be encouraged with the consultee's consent to encourage wider consultation uptake moving forwards.
7. Era-style Buildings, especially rows of Georgian, Victorian and Edwardian architecture must be faithfully restored, retained and recreated to complement surrounding historic streets that may or may not be classed in official Conservation Areas preventing harsh contrast with newer built housing estates from the 1950s onwards.
8. Where demolition is proposed for 1950s style housing onwards- any new construction must be in the historic building style and local materials to ensure high carbon capacity, quality aesthetic and true blending of the interconnected conurbations of any one area, place or location.
9. Concerted efforts to identify and locate core suppliers for raw materials and specific heritage skills should encourage new uptake of these limited artisan craft skills by new contractors locally based to support the local economy, provide employment, and reduce the cost of product and service in the long-term.
10. Volunteer labouring assemblies should be fully encouraged and supported identifying key individual an group skillsets that can be utilised to protect historic buildings or areas at risk with a view to supporting the construction of new authentic style housing (as and where appropriate) and the reconstruction of demolished prized old buildings beloved by the community, such as community pubs, libraries and community centres.
11. Simplified streamlined Planning Process for key stakeholders either working to authentically restore buildings and/ or build new ones, such as observed with many civic buildings in Budapest Hungary and the Federal University Buildings in the US.
12. Where there have been evolving building styles over years, eg. Combination of one or more: Georgian, Edwardian and Victorian, the style that best promotes the area, ie. One that has the majority era structures left or capacity size requirements as examples should be utilised by house builders, especially where a streetscape may have been

annihilated during the World Wars.
SECTION 2: Designated & Non-Designated Heritage Assets:
1. Enhancement of Historic Areas to remove modern street furniture with the integration of classical style timepieces should be encouraged and pursued wherever possible with clear preferred guides set out for each part of the City.
2. Enhancement of Setting with funding grants and financial incentives from all tiers of Government for Private Investors especially those contributing actively towards achieving Net Zero through Embodied Energy/ Carbon Capacity rich measures, i.e. Retention of Old Builds.
3. Archive Pooling of invaluable source material, such as Historic Photographs, Oil Paintings, such as “Memory Lane” featured on InYourArea Magazine to enrich existing material archives.
4. New officialising of Non-Designated Heritage Assets must be actively supported even if informed by the (wider) community thereby providing some possibility of removing these from risk of demolition.
5. Incentives must be provided to those dependable sincere third party investors that take on, maintain and protect said sites against their annihilation from the streetscape with rescue-packages actively promoted and supported once again with a trusted Directory creating goodwill amongst the local community.
6. Opportunity to meet or correspond on Zoom Conference Call regarding key areas, buildings and places at risk where key stakeholders, such as property owners may be better placed to engage in positive and constructive discussion through third parties, such as myself and a trusted panel of experts in their fields and sectors who could enable these people and organisations to maximise their civic heritage, whilst proactively striving to protect more historic buildings from decline and/ or demolition where a strategy package for raising the revenue to do this could be arranged and facilitated.
7. Defining Character Areas- zoning symmetrical parallel construction recommended where distinctive individualised properties remain as checked against authentic archive blueprints. This will ensure high-quality housing for everyone reducing the societal divides between misperceived “good areas” where affluent people reside in historical style properties and less advantaged reside in contemporary ones.
8. Industry should be conserved at former industrial complexes, such as Economic Docks with equivalent sites offering modern-day uses, alongside traditional uses such as export and import of raw materials at places such as Docks and Port encompassing: ICT sector, Green Research & Development, etc.
9. Every effort must be made to reach out to Property Owners, especially Housebuilders that are pursuing demolition of long-beloved buildings, especially those with demonstrable evidence of Holy Worship.
10. Every effort must be made to reach out to Property Owners, especially Housebuilders that are pursuing demolition of landmark buildings, especially those with key links to an area’s founding or history locally.
11. All Powers to monitor, collaborate with existing and/ or new property owners to conserve these buildings should become mandatory with appointed Community Champions for Civic Heritage that area direct link between Local Authorities and said wider key stakeholders to prevent demolition of structures that may be at risk of destruction from vandalism, urban exploration and demolition.
12. Reconstruction Programme harnessing existing limited crafts people’s skillsets to be used as a fundraising vehicle to bring back buildings that may have been demolished to dissuade future demolition as a choice by property owners and by means of expanding these otherwise lost skillsets that are at live risk of becoming extinct from the UK.
13. Checklist of buildings at high risk must be expanded beyond the existing groups and organisations that are saturated with high caseloads, such as SAVE Britain’s Heritage, etc so that dialogue channels can be created and fostered between Community Champions for Civic Heritage.
14. Bespoke-tailored funding packages for Properties at Risk of decline or demolition should be integrated with Local, Regional and Central Government-funding as a means of regional economic output through the return on investment that may support other key grant funding capital infrastructure projects, such as transportation and drainage improvements.
SECTION 3: Conservation Areas:-
1. Alterations for Listed Building Consent must be simplified with additional streamlined testing methodologies, such as proof of legitimate third party support, such as correspondence chains between applicant and Groups, such as The Victorian Society that can assist LAs complete workload much sooner allowing more attention for challenging cases, such as Non-Designated Heritage Assets at live or upcoming risk of demolition by Housebuilders, etc.
2. Highways & Street Furniture should be duly supported across the whole of an area to enhance its historic appeal to the commercial community as much to its indigenous community; as this is supported greatly in equivalent Public Realm Strategy SPDs- where any and all guidance and support must and should be provided, with key at risk projects being an exceptional anecdote that may be cited in future documents or versions of this and other consultations to stimulate economic construction and restoration across other designated Conservation Areas, etc or otherwise.
3. Provide incentives for the return of lost adornments and decorative features, such as roof fixtures like Chimney Stacks once again with an approved contractor directory to make Old Builds practical to own, live and work in the 2020s onwards. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of decorative features must be provided by the Local Council.
4. Permissions for authentic replica and more durable materials, such as reproduction sash windows must be supported to prevent exorbitant high costs through procuring these, limited longevity and economic climates being unstable. This must be assessed on a case by case basis.
5. No more deliberate manipulation and selective misinterpretation of using contemporary modern designs using old-style fabric raw materials, such as stone cladding for new housing where the design and shape clearly undermine the concept of blending within or around a Conservation Area.
6. Compendium of approved and recognised TVA Architects based across the UK with a view to supporting the training in time of more Northern counterparts to reduce cost associated with travel expenses, etc. This will actively reduce the level of demolition applications countering the purpose of this SPD and other live Policy. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see

modern-day use of decorative features must be provided by the Local Council.
7. New Conservation Areas should be established covering areas of surviving built historic environment to positively reverse fascia changes to more modern ones.
8. Blue Plaques should be fully supported across as many different Conurbations, especially if Applicants reach out for endorsements.
9. Discretionary Rate Relief should be provided to those proactively support LAs with conserving their respective Conservation Areas through their own resources, skillsets and time as an incentive to others to work alongside the Council positively and constructively.
10. Where long-lost prized buildings are reconstructed whether based in a Conservation Area or not this should confer discretionary financial support, e.g. Rate Relief for the length of time taken to produce this outcome acknowledging the embodied carbon now contributing positively towards the LA's Climate Change Action Plan Targets.
11. Retention of historic street furniture, such as Lamp Posts adorning high streets or Promenade style streetscapes with collaborate fundraising models utilised from key stakeholders, such as property owners, undisclosed third party investors, Residents' Groups, etc.
12. Retention of historic street furniture, such as Lamp Posts adorning high streets or Promenade style streetscapes with authentic identical reproductions permitted where all options to secure finance have been fully exhausted and/or the existing streetscape is at imminent risk of receiving contemporary replacement street furniture on health and safety grounds, eg. Lap Posts.
SECTION 4: Climate Change:-
1. Pleased to note that LAs broadly acknowledge and grasp this concept therefore the aim should be to increase the net number of carbon-rich Old Builds long-term through support packages that will combat the Climate Crisis, provide economic benefit and improve Conservation in a pioneering fashion that may draw wider funding opportunities for the area.
2. Retrofit Ventilation is a key point that should warrant future new construction utilising higher ceilings through the reconstruction of Old Builds outfitted for the modern day with retrofitted energy supplies, etc that will also serve to break down societal dives regarding perceived good and bad areas where streetscapes are harmonious yet distinctly unique in beauty like any one Conservation Area.
3. Embodied energy and embodied carbon- must remain a central priority and so influence new construction to readopt TVA principles as this will be pivotal towards the area's future green credentials as outlined in many existing auxiliary planning documents approved presently with Carbon Studies taken of existing architecture, notably buildings saved from demolition.
4. A brick by brick case study of as many buildings as possible may warrant invitation of national and international academic institutions to undertake a regional or national Carbon Study further justifying the retention of prized Old Builds elsewhere across the area, region and the UK.
5. Sustainable Materials- an approved contractor directory that could readily advise and source the necessary raw materials with realistically reduced costs substantially again deterring potential demolition-driven applicants from consuming workload time of the Planning Department. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of sustainable materials must be provided by the Local Council.
6. Biodiversity- maximise greenery along all arterial roads ad commuter routes with dense tree planting and the introduction of hedgerows and wherever possible financial incentives to get more private property owners on side.
7. Flooding Defences- existing and prospective hotspot areas should be clearly identified for emergency grant funding whereby Local Authorities, especially across a region may agree with the respective Government Department to distribute emergency flooding to prevent costly consequential recurrent repairs.
8. Transportation using arterial roads and commuter routes (Motorways and Railways) should prioritise linking each end of a Local Government sphere with the surrounding Local Government spheres, such as Southport at the very northern tip of Merseyside where transportation links are much weaker with Lancashire in the north and east than with the rest of Merseyside to the south.
9. Coastlines should be reclassified as SSSIs, especially where the economic potential is not being fully realised, such as Coastal Towns with underused Beaches, such as Southport in Sefton as one example for other LAs.
10. Financial Incentives for the demolition of Carbon-poor Glass Towers and contemporary construction should be utilised to restore the skylines across any one area whilst providing better mathematical application of the space for residential and commercial use, such as larger tenement buildings or the original streetscape reinstated yet designated specifically for housing where there may be a deficit.
SECTION 5: Historic Buildings:-
1. Create a Designated AND a Non-Designated Heritage Asset List, such as AHV whereby existing buildings and those that may yet return can be logged and recorded to combat the Climate Crisis whilst making heritage work for LAs in modern day with attractive locations timeless for everyone to appreciate enhancing the investor appeal, all-round interest and acknowledging the industrial pioneering legacy of the City.
2. Clearance of vegetation along the Railway Lines alongside other equivalent parts of the Line to eradicate the perceived neglected aesthetic.
3. Exception Areas, such as those at risk or recently restored have the real potential for wider grant funding for ambitious projects out of the realm necessarily of undisclosed third party investors supporting Property Owners, therefore all and any support in reaching these person(s) will greatly contribute to all possible tangible success in the interim period.
4. Providing key guidance, such as agreed in-keeping historic street furniture, such as Cast Iron Lamp Posts, Bins, Planters approved upon inspection of historic photographs, agreed installation and where appropriate maintenance by the LA will ensure the iterative success of this transferring to other Conservation Areas, etc.
5. Scheme to rebuild and reconstruct long-lost buildings, prioritising vacant sites that could adapt some mixed use with

residential accommodation and commercial application thereby supporting Climate Action, creating employment and recordable success through placing of necessary economic drivers, such as offices for Technology Sector if original use cannot be sourced in sufficient time simultaneously meeting housing targets.
6. Archive Blueprints for historic conurbations that have suffered architecturally over time through building conversions, demolitions, etc should be provided to key stakeholders, if necessary with a printing charge available for official spiral hard copy version to view detailed historic plans covering layouts, etc.
7. Those people and organisations that have either/ both maintained their properties well over the years or may wish to provide additional support to others, such as restorative support, archive blueprint guidance, etc should be eligible for discretionary reductions by the Council across various property taxes where they may be suffering hardship or through personal circumstances.
8. “Newer” style housing with true authentic rhythm, such as Suburban style faux Tudor fascia frontages with red clay tile pitched roofs and terracotta design windows (tile hung walls) are a good compromise whereupon finance and scheduling may otherwise adversely impact on housing settlements.
9. Fascia Frontage details should be reinstated whether in a Conservation Area or not, especially where approval has been granted to rebuild an entire house using breeze block to produce a stereotypical black, white and grey dwelling out of place.
10. LAs should work closely with Foundries to procure raw materials and building services in the event of harnessing their own Contractor Firm(s) in-house that could work cross-authority to make net savings whilst ensuring particular new housing neighbourhoods conform to an appropriate style.
11. Modern “Carbuncle” extensions should not be permitted at any one area- instead an authentic style addition may be used to retain blending.
12. Discretionary financial support packages to assist House Builders choosing the traditional vernacular route should be considered and utilised where it can be proven that this third party will restore the historic streetscape yet making it applicable or modern day requirements- residential or commercial. This may be especially so where they are able to help others prevent the demolition of a prized Old Build built before the 1950s.
SECTION 6: Traditional Vernacular Architecture:-
1. Provide a directory of approved and trusted Conservation Specialist Contractors- this will be key for repairs and maintenance reducing costs for all parties, expediting the physical process of regeneration and smoothen planning work schedules so that finer detail may be considered on priority cases or those that may be at risk of consequential repair, such as Places of Worship and detached Buildings with flat roofs, etc at higher risk of damage than customary dwellings.
2. These same people should be readily contactable for new construction
3. Encourage smart building methods and use of TVA as meticulously explained in this SPD outlining “Breathing” Solid Wall Construction using older style materials thereby reducing maintenance cost which combined with the approved contractor directory will further drive down costs, time and effort for everyone.
4. Alterations- must introduce a simplified listed building consent form and application process that is streamlined encouraging better maintenance of Old Builds and reducing the rising propensity of builders to allow buildings to deteriorate, such as the Historic Pub that had to be rebuilt in Kilburn, London post 2015.
5. Provide specialist Heritage Arts & Craft Skills Programmes that anyone can learn and use so that these high cost tasks can eventually stabilise in price making them more affordable and available to those that don’t have the time to do this themselves or may be risk averse even.
6. Extensions- there must be a proactive emphasis on in-keeping structural fabric to prevent future errors, such as the Municipal Building depicted in the SPD being replicated again thereby harming the Conservation value.
7. New Housing Estates should adopt historical archival blueprints, ie. A Georgian, Victorian or Edwardian layout with the likeliest period architecture utilised where this area remained greenbelt until the 1950s.
8. Area Expansion of housing must revert to traditional timeless designs that confer many practical advantages over modern styles that are harder to maintain are timeless with regard to dating and ensure a more evenly distributed community atmosphere in the long-term future.
9. Infrastructure should be appropriately considered for existing and new areas so that no one area is at risk of becoming congested through traffic for a particular commodity, such as Schools, Doctor Practice, Dental Practice, etc.
10. Site Layouts should complement the historic layout with a view to Post 1950s contemporary Architecture out of place being one day demolished to reinstate Long-lost beloved buildings from before the World Wars that could blossom economically today.
11. Building Form shouldn’t permit for dated modern structures that delineate and essentially divide communities between the old and new parts of any one location.
12. Façade Design mustn’t be compromised for contemporary architecture, especially in view of coveted Heritage Status for any one area being at risk of being lost if said contemporary architecture is pursued.
SECTION 7: Making an application:-
1. Identify recurring applicants that are harming civic heritage, be this across Conservation Areas, Non-designated heritage assets or elsewhere with experience of demolition to date- this should be considered before granting permission to apply or acquire planning approval.
2. Enforcement Penalties for key stakeholders that purposely allow their properties to fall into decline and hoped eventual demolition through this tactic, which is more prevalent since 2020.
3. Create an Action Plan to deter persons or organisations from pursuing demolition, such as financial incentives, sincere investor network directory set by Central Government to offload for profit and enforced Design Codes that cannot be manipulated through semantics like Design Guides in isolation as has happened elsewhere. This must be kept for emergency instances where there is an expected threat of decline or demolition.
4. Agreed that temporary alteration of heritage sites, such as stairs or ramps for wheelchairs should be utilised to prevent

deleterious loss of historic surroundings and features alike.
5. Full Pre-Consultation publicised and utilised to ensure appropriate Design Codes for new housing alongside positioning and layout in case volunteer assemblies may assist property owners with restoration of historic buildings.
6. Brick by brick Analysis undertaken of projects set for Traditional reconstruction so that these statistics may provide both the Council with evidence for green grant funding support for other key infrastructure projects, such as Transportation and
Drainage Defences and property owners may incur a discretionary reduction in associated reconstruction costs of heritage buildings and vistas.
7. Ability to lock feedback in for Consultation automatically unless the council can alert interested consultees in taking part again whether they are locally, regionally or nationally based.
8. Special partnerships with Property Owners of historic buildings at risk of decline/ demolition to discreetly support them with the option to publicise this accordingly to reach out to others in the same position to secure alternative use for these structures as opposed to demolition.
9. Proactive effort to stop Breaking and Entering style of “Urban Explorers” who are coincidentally apparent whenever demolition is scheduled for buildings especially since 2020.
10. LAs to proactively work closely alongside Community Champions and other leading Heritage Groups, such as English Heritage giving these organisations a voice on the frontlines, especially where so many buildings are presently being overlooked for additional guidance and/ or support due to cost and time restraints facing these same groups and organisations (including the LA).
SECTION 8: MISCELLAENOUS:-
1. Provide all possible support for the reconstruction of Old Builds as is happening elsewhere across Europe, especially Budapest, Hungary, North America, etc to significantly increase Embodied Energy/ Carbon storage.
2. Establish a Plan to adopt Unadopted Roads or supply key services, such as carriageway resurfacing as disabled access and entry/ exit of Emergency Vehicles is presently a cause for concern.
3. Provide Pre-Approval and agreement of specialist Conservation Area style Historic Street Furniture, such as Cast Iron Lamp Posts, Bins and Planters for this prime Conservation Area including installation, maintenance costs (where appropriate).
4. Provide full access to the Archive Resources (at no/minimal cost) as an invaluable incentive for existing and parallel undisclosed third Party Investors. Discretionary waivers may be appropriate for those third parties proactively working to prevent decline and demolition of historic buildings.
5. Car Parking on and off street should be supported to ensure freedom of choice for everyone, accessibility and connectedness.
6. Car Parking abodes should be tastefully designed like modern-day stables for vehicles that are in-keeping with the built historic environment.
7. Provide publicly published names of consultees willing to work alongside the Local authority and other key stakeholders, such as property owners and undisclosed third party investors, etc.
8. Provide select tours for prospective investors and housebuilders of existing traditional architecture where Design Codes of this identical style would complement both old and new architecture bending the area better more cohesively, eg. the form and layout of Oxford City Centre which has changed minimally structurally since the 1800s.
9. Provide a focused effort on utilising people’s skillsets on a meritocratic basis, ie. Procure specialists and volunteers that could work together on key emergency projects, such as Historic buildings at risk without layered bureaucracy on achieving positive outcomes, such as Community Assets where deadlines can be thwarted by separate third parties.
10. Create a Top Ten Historic Buildings at Risk Register where appropriate conditions, such as security against Urban Exploration, etc can be utilised safeguarding these structures, providing the respective property owners peace of mind whilst actual scope for revitalising these for solid economic gain.
11. Infrastructure assessments should be fully outlined, such as Air Quality risk from new construction at presently congested areas, hence the case for Traditional Architecture that will confer longevity benefits in the long-term with as much free car parking as possible.
12. Free Car Parking may be monitored through expected proof of purchase when visiting, eg. minimal £1.00 at a shop encouraging partnerships between private businesses and LAs.

Document Element: PGD1 - CREATING WELL DESIGNED AND INCLUSIVE PLACES

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces should not immediately abut residential buildings.

South Wales Police ask that all new developments are built to Secured by Design standards and that they work with The Vale of Glamorgan planning Department at the pre planning stage to ensure safe spaces.
Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document).
It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial) Guide.
South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the

opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:

Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy

2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out

Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning

stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out

crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public

transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Email representation redacted - https://valeofglamorgan.oc2.uk/a/3k5

6774 Object

Document Element: PGD1 - CREATING WELL DESIGNED AND INCLUSIVE PLACES

Respondent: Persimmon Homes (East Wales) [1068]

Agent: Boyer Planning

Summary:

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a

more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and

incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.

Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.

Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.

Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.

In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.

From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.

Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.

As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.

Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.

Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.

Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.

Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)

3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.

The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.

Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.

In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes

cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to

2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.

Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement

From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in

reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of

PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.

Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Policy SP5 – Creating Healthy & Inclusive Places and Spaces

Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.

The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.

The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the

RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future

residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.

Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements
Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.
Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most

notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
Policy CI1 – Open Space Provision
Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.
The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.
Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.
The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.
Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.
Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.
Distinctive and Natural Places
Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.
The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.
Policy SP20 – Biodiversity and Ecosystem Resilience
In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.
Policy DNP1 – Special Landscape Areas
Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.
Policy DNP2 – Green Wedges
Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.
Policy DNP8 – Severn Estuary Recreational Pressure
Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained

physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Change suggested by respondent:

If the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Document Element: PGD1 - CREATING WELL DESIGNED AND INCLUSIVE PLACES
Respondent: Barratt Redrow Homes [2669]
Agent: Boyer Planning

Summary:

Barratt Redrow question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

Full text:

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.

1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary

settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy

SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.

5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.

5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.

5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.

5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.
5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.
5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.
5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.
5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.
5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this

location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.
5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.
5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.
5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.
5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.
5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.
Policy SP4 - Placemaking
5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate

understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility

through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision

'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and

whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's

methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a

similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.

• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION

• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Change suggested by respondent:

If the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Document Element: PGD1 - CREATING WELL DESIGNED AND INCLUSIVE PLACES

Respondent: Barratt Redrow Homes [2669]

Agent: Turley

Summary:

There is a degree of crossover and repetition between Policy PGD1 and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local

circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable.
As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is

important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).

Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision

The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy Cll requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact

on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Change suggested by respondent:

Amend to be only one policy.

Document Element: PGD2 – RESIDENTIAL DEVELOPMENT DENSITIES

Respondent: Emma Reed [2653]

Summary:

Further explanation is required to explain the role of settlements such as Rhoose and the density acceptable there. It is considered that the village exhibits spacious standards with bungalows and houses being the predominant housing type. A maximum of 30 dwelling per hectare after deductions is therefore considered a maximum for this area. In Barry Penarth etc 35 is appropriate due to its better facilities and infrastructure.

6013 Support

Document Element: PGD2 – RESIDENTIAL DEVELOPMENT DENSITIES
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:

The approach to residential development densities in Policy PGD2 is consistent with paragraph 3.51 of PPW. The Land to the East of Colwinston allocation measures approximately 0.84ha and is therefore able to provide the minimum density of 30 dwellings per net hectare set out in Policy PGD2. It is noted that the Candidate Site Submission for Land to the East of Colwinston (Site ID: 453) was for a gross site area of 5.24ha and therefore if the allocation were to be expanded, up to 157 dwellings could be delivered at the site during the RLDP period.

Full text:

The Land to the East of Colwinston allocation measures approximately 0.84ha and is therefore able to provide the minimum density of 30 dwellings per net hectare set out in Policy PGD2. It is noted that the Candidate Site Submission for Land to the East of Colwinston (Site ID: 453) was for a gross site area of 5.24ha and therefore if the allocation were to be expanded, up to 157 dwellings could be delivered at the site during the RLDP period.

The approach to residential development densities in Policy PGD2 is consistent with paragraph 3.51 of PPW which states that "Higher densities should be encouraged in urban centres and near major public transport nodes or interchanges, to generate a critical mass of people to support services such as public transport, local shops and schools."

As such, as drafted Policy PGD2 meets the three tests of soundness.

6775 Comment

Document Element: PGD2 – RESIDENTIAL DEVELOPMENT DENSITIES
Respondent: Persimmon Homes (East Wales) [1068]
Agent: Boyer Planning

Summary:

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.

Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.

Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking

As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.

Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.

Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)

3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.

The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.

Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.

In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.

Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.

By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.

Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.

In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.

Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.

Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan

Section 6: Policy Framework

This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.

Strategic and Spatial Choices (Placemaking)

Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in

the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority. Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence

base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.

Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement

From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy
In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.
Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.
Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.
Policy SSC1 – Development within Settlement Boundaries
Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.
Policy SP4 – Placemaking
In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.
In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car.
Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.
The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.
Policy PGD1 – Creating Well Designed and Inclusive Places
Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.
On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.
A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary

Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Policy SP5 – Creating Healthy & Inclusive Places and Spaces

Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.

The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.

The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Table 4. Extract of Proposed Criteria for HIA Assessments

The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.

Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places

Policy SP6 – Housing Requirements

Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy HG1 – Housing Allocations

HG1 KS2 – Land to the North of Dinas Powys

Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.

The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.

Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within

landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements
Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.
Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure

sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
Policy CI1 – Open Space Provision
Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.
The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.
Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.
The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst

reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.

Policy SP20 – Biodiversity and Ecosystem Resilience

In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Policy DNP8 – Severn Estuary Recreational Pressure

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what

level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Change suggested by respondent:

Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Sound: Not specified

6908 Comment

Document Element: PGD2 – RESIDENTIAL DEVELOPMENT DENSITIES

Respondent: Barratt Redrow Homes [2669]
Agent: Boyer Planning

Summary:

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.

Full text:

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES

3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the

adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.

4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.

4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.

4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.

4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.

4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.

4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.

4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.

3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.

4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.

4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.

4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.

4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.

4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.

4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.

4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes

which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part

of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.
5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have

identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.
5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.
5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.
5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.
5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.
5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.
5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.
5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.
5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.
5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.
Policy SP4 - Placemaking
5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.

5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations

Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application,

and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its

redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all

potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has

been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.

• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established ‘defensible’ limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be ‘largely shielded from view by woodland blocks/strips’.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for ‘infilling’ the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text

suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would

maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Change suggested by respondent:

Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Sound: Not specified

Email Representation - Redacted - https://valeofglamorgan.oc2.uk/a/3ch

7101 Comment

Document Element: PGD2 – RESIDENTIAL DEVELOPMENT DENSITIES

Respondent: Barratt Redrow Homes [2669]

Agent: Turley

Summary:

It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations. This is relevant to Church Farm, St Athan.
The inclusion of caveats recognising that lower densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm

development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved

through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy CII - Open Space Provision
The wording of Policy CII, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy CII should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy CII requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

7189 Support

Document Element: PGD2 – RESIDENTIAL DEVELOPMENT DENSITIES
Respondent: H Jones, L Sungur and P John [3741]
Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

The policy is considered to meet the 3 tests of soundness.
The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4).

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis.
Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to

widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and

supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Representation Form - Redacted - https://valeofglamorgan.oc2.uk/a/3m6

5925 Object

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES

Respondent: HBF (Mr Mark Harris) [538]

Summary:

The HBF objects to the requirement to carry out a screening assessment relating to health impacts, as the plan has already considered the impact of the proposed developments on the health and well-being of communities through the strategic HRA and HIA and set out policies to address any concerns. Consequently, where a development is in line with policies in the local plan, a HIA should not be necessary for individual sites. Only where there is a departure from the plan should the Council consider requiring an HIA.

Further, if the developer complies with the other wording of the policy, then the development will have taken into account its impact on health, so why then carry out a screening assessment? The policy tests can be achieved without carrying out a screening assessment.

In terms of the requirement to complete a Healthy Placemaking Checklist, the policy refers to guidance in an SPG, which currently does not exist; this could lead to delays in the delivery of housing schemes. It also leads to uncertainty for developers who do not currently know what will be required. Placemaking is also required by other policies in the plan, and the health impacts of the plan have also been considered through the HIA process, so what additional information could such a document provide?

Change suggested by respondent:

Remove the requirement to carry out a screening assessment.

If the screening requirement is retained, the threshold should be set higher, as this would be an overly onerous requirement for smaller sites below 100 units.

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:

For major residential developments, Policy SP5 requires that a “Healthy Placemaking Checklist” be undertaken and for significant residential developments, a rapid HIA is required. The need to ensure that development proposals are designed to facilitate accessible healthy environments is recognised. However, there is a need to be cautious in applying additional policy burdens like HIAs to sites proposed for allocation in the RLDP that could go beyond what has been tested in the Viability Assessments submitted during RLDP preparation, especially for smaller sites. Policy SP5 as drafted therefore risks not achieving the third test of soundness (Will the Plan deliver?)

Full text:

Policy SP5 states that “developers are required to undertake a screening assessment of their proposals at the pre-application stage to identify the potential health impacts of their development..”. For major residential developments between 10 and 99 dwellings, Policy SP5 requires that a “Healthy Placemaking Checklist” be undertaken and for significant residential developments of 100 dwellings or greater, the policy requires a rapid HIA be undertaken. The need to ensure that development proposals are designed to facilitate accessible healthy environments is recognised. However, there is a need to be cautious in applying additional policy burdens like HIAs to sites proposed for allocation in the RLDP that could go beyond what has been tested in the Viability Assessments submitted as part of the RLDP preparation, especially for smaller sites. Policy SP5 as drafted therefore risks not achieving the third test of soundness (Will the Plan deliver?)

Change suggested by respondent:

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES

Respondent: Ms Lucie Taylor [2506]

Summary:

We note that Policy SP5 mentions 'enabling access to a healthy food environment', which is positive. We suggest the explanatory text should clarify what this entails, referencing the SPG on healthy placemaking and outlining potential characteristics of such spaces. It should also discuss less capital-intensive ways to promote health and wellbeing, including food growing spaces, which could help address health inequalities. Additionally, incorporating affordable housing within allocated sites offers further opportunities to support a healthy, inclusive environment and mitigate health disparities.

Full text:

Social Farms & Gardens are pleased to see Policy SP5 creating healthy and inclusive places and spaces mentions 'enabling opportunities for access to a healthy food environment'. It is certainly a step in the right direction. Perhaps the explanatory text could refer to what is meant by this. Certainly reference needs to be made to the SPG on healthy place making. With the lack of clarity, a developer may move onto to considering other 'methods' of creating 'a healthy and inclusive place'. The explanatory text needs to make further reference to the possibilities such a space could look like and what it might entail. There is much discussion in the text about health and wellbeing services but there are also much less, capital intensive, things that can be provided. How could to a healthy food environment contribute to the wider determinants of health? These should be suggested and discussed at pre application stage. Reference to health inequalities is welcomed – perhaps more emphasis on the potential of food growing spaces could be brought in here. The need for affordable housing as part of 'allocated' sites presents a further opportunity to achieve this.

Change suggested by respondent:

reference to the different types of food growing spaces that can be provided to help create a healthy environment. less capital intensive ideas could be referred to our by referring the reader to the SPG on healthy placemaking.

6625 Comment

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.

Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of

enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.

South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where “qualifying activities” take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: “Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach” (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states ‘The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.’
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council’s standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes

for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.

• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and

integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from

within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment

Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their
proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative
impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning
guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are
involved in the development of some of these. The content and application of the SPG's will be fundamental to the

effectiveness of several of the policies identified in the
deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community
amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient communities. The vision and strategic objectives currently contain no mention of ‘food’ or ‘farming’.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: “The Local Development Plan will support resilient and sustainable
local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part
of sustainable growth.”

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local
diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

“Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other
opportunities for local food production as part of multifunctional green infrastructure.”

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their
proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative
impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid
HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to
ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the

community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background

evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Change suggested by respondent:

We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of
community, health and social care and wellbeing services within the community..'.

Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological

farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations."

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare
services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: "Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion."
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales' push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

"Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains." This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: "Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing."

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: "Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives."

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: "The Local Development Plan will support resilient and sustainable local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part of sustainable growth."

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

"Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other opportunities for local food production as part of multifunctional green infrastructure."

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative

impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid
HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to
ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare
services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation

objectives."

6776 Object

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES
Respondent: Persimmon Homes (East Wales) [1068]
Agent: Boyer Planning

Summary:

Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data.

Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.

The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.

The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-

day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys

(HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations

across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority. Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.

However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.

For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.

Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process

(i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement

From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development

in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.

The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.

Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.

Policy SP5 – Creating Healthy & Inclusive Places and Spaces

Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.

The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will

establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations

HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to

ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.

Policy HG3 – Housing Led Redevelopment Opportunity

Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.

Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.

Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.

This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.

Policy SP7 – Affordable Housing Provision

In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.

As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.

National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.

To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.

Policy SP8 – Affordable Housing Requirements

Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.

On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Policy SP10 – Sustainable Transport

Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.

In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.

In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to

proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.

Policy TR1 – Transport Proposals

Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.

In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.

Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.

Policy SP13 – Community Infrastructure and Planning Obligations

Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

Policy CI1 – Open Space Provision

Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.

The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.

Productive and Enterprising Places

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.

Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.

Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the

Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.

Policy SP20 – Biodiversity and Ecosystem Resilience

In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Policy DNP8 – Severn Estuary Recreational Pressure

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.

From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.

Conclusion

Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:

• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail

and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

6909 Object

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES
Respondent: Barratt Redrow Homes [2669]
Agent: Boyer Planning

Summary:

Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data.

Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.

The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.

The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

1. INTRODUCTION

1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.

1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:

- Section 3 – The Vale of Glamorgan Key Characteristics;
- Section 4 – RLDP Key Themes, Vision, and Objectives;
- Section 5 – Sustainable Growth Strategy; and
- Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.

1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):

- Test 1 – Does the Plan Fit?
- Test 2 – Is the Plan Appropriate?
- Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS

Settlement Pattern

2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.

2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".

2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.

Housing Need

2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.

2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is

particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY

Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus

corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is

predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This

accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.

5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.

5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.

5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.

Policy SP4 - Placemaking

5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.

5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 &

Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply

•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.

• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of

coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and

based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.

Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact

upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that

it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:

Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part

Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.

Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.

This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.

St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.

Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:

"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)

Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:

St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.

Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.

Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.

There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.

For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.

Policy SP2 – Settlement Hierarchy Position: Object

Barratt Redrow objects to Policy SP2 in its current form.

The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.

That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.

However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.

The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements

such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.

In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.

Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.

Policy SP6 – Housing Requirement Position: Object

Barratt Redrow objects to Policy SP6.

Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.

PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:

"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."

The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:

"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.

5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.

5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."

Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:

• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;

• Does not actively seek to address the area's ageing demographic;

• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;

• Does not seek to leverage any of the investment into the region through the CCR City Deal;

• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and

• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence

to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to “boom” or “recession” factors impacting on affordability are nevertheless able to “catch-up” later on – 80% of the gap at the age of 30 is “caught-up” by the age of 40. This finding supports the resumption of long-term household formation trends.

In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.

That concern is reinforced by the updated Welsh Government evidence published after the RLDP’s preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.

The updated 2022-based household projections point in the same direction. Welsh Government’s latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or “business as usual” response for the Vale. It points the other way.

This sits uncomfortably with the Council’s own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.

The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.

There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.

A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.

The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.

The Council’s own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a

1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable

settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.
Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part
Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of

affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being “informed” by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.

The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be “informed” by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council’s latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan’s blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.

The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before

the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a

standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission

Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need

for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Document Element: SP5 - CREATING HEALTHY AND INCLUSIVE PLACES AND SPACES
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:

Amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable

transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited

rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.

Policy SP6 – Housing Requirement Position: Object

Barratt Redrow objects to Policy SP6.

Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.

PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:

"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."

The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:

"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.

5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.

5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."

Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:

• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;

• Does not actively seek to address the area's ageing demographic;

• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;

• Does not seek to leverage any of the investment into the region through the CCR City Deal;

• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and

• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.

In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.

That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are

national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on

affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.
Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part
Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.
That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA

also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.
There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix. The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.
In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.
Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part
Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.
The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be “informed” by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council’s latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan’s blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.
8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part
Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan’s supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan’s effective provision.
The Deposit Plan’s own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted

strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed,

the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.

A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.

Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.

In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.

Policy CI1 – Open Space Provision

Position: Support in principle / Object in part

Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.

The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.

There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.

Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.

Policy SP4 – Placemaking

Position: Support in principle / Comment

Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.

That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.

Suggested wording amendment:

"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking

principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;

• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.

The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.

For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.

Candidate Site Register - Site ID 486

Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.

Stage 2 Candidate Site Assessment

The Council's Stage 2 Candidate Site Assessment states:

"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."

The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:

Impact upon Character and Setting of the St Nicholas Conservation Area

Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.

The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:

• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.

Countryside Impacts

The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.

The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.

Agricultural Land Quality

Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.

As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.

Appendix 2 – Summary of Assessment

We comment on the Council's Summary of Assessment as follows:

• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The

Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Change suggested by respondent:

Amend wording of SP5.

4802 Comment

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Cwmpas [1874]
Agent: Cwmpas

Summary:

The addition of a specific reference to community led housing within Policies HG1, HG2, HG3 akin to that within HG5 would enable to the benefits and reach of community led housing to be expanded into mainstream housing policies and allocations and not only Exceptions Policy.

Our comments and observations are such as to suggest that references could be further extended within the Housing policies and still be in accordance with the framework of PPW Edition 12, key to the evolution of these policies.

Full text:

Cwmpas is positive in its response to the Deposit RLDP statements and welcomes the reference to community led housing as noted in:

Paragraph 6.121 – positive response though observation and request would be made to minor amendment to wording that after the words 'co-operative housing' the words 'and other forms of community led affordable housing' are inserted as this would accord with the context of PPW Edition 12 as noted.

Paragraph 6.141 – positive comment and response within the context of Exceptions Policy HG5. However, a request would be made that as well as reference to community land trusts that wording is supplemented with suggested words of 'and other forms and models of community led affordable housing.'

Furthermore, it is considered that the direct reference to community led affordable housing in the Deposit Plan document addresses and removes some of the potential barriers and challenges faced in the delivery of such forms of housing.

It is now clearly the case that PPW supports community-led housing as a form of affordable housing and that, in the view of Cwmpas, this is material to the considerations of Local Development Plan preparation and from which the Vale of Glamorgan Deposit Plan would benefit.

Going forward, however, Cwmpas, would consider that detailed planning policy development within the Deposit RLDP could make an overt and explicit community led affordable housing development reference and with specific community led housing policies in addition to those subsumed within more generic and general housing policies.

Firstly, the addition of a specific reference to community led housing within Policies HG1, HG2, HG3 akin to that within HG5 would enable to the benefits and reach of community led housing to be expanded into mainstream housing policies and allocations and not only Exceptions Policy.

Secondly, it would be considered as beneficial that the Deposit RLDP policies on community led housing development could include a clear definition of this type of affordable housing.

In summary, it is considered that the direct reference to community led housing in the Deposit Plan document as noted in Paragraphs 6.121 and 6.141 represent very positive inclusion and that it addresses and removes some of the potential barriers and challenges faced in the delivery of such forms of housing by drafting specific community led housing policies at the RLDP Deposit Plan stage. However, as outlined, our comments and observations are such as to suggest that references could be further extended within the Housing policies and still be in accordance with the framework of PPW Edition 12, key to the evolution of these policies.

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: Emma Reed [2653]

Summary:

Rhoose a small settlement without major infrastructure is taking some 10 percent of the housing requirement with permissions outstanding at Rhoose Point and the new proposed development at Readers Way. This is a village which should not be taking such a high percentage of development when places like Llantwit Major Cowbridge and Penarth are taking virtually nothing in comparison.

Full text:

Rhoose a small settlement without major infrastructure is taking some 10 percent of the housing requirement with permissions outstanding at Rhoose Point and the new proposed development at Readers Way. This is a village which should not be taking such a high percentage of development when places like Llantwit Major Cowbridge and Penarth are taking virtually nothing in comparison.

Change suggested by respondent:

Reduction in the number of housing units in Rhoose until better infrastructure is provided. This would as a minimum include 2 trains per hour, 2 buses per hour, a comprehensive school, better retails and health facilities as well as improved road surface access. Until this happens Rhoose should be taking a maximum of 5percent of additional dwellings.

Why are smaller communities taking the brunt of this housing drive. 1000's of houses in Rhoose, St Athan etc. Destroys community cohesion and identity and turns small communities in the Vale into identikit commuter deserts. Creating large high density (previously greenfield) estates to satisfy developers and the Authority's wish for higher planning gain should not take preference over brownfield sites in larger towns where more high rise could be considered to maximise numbers (like Cardiff & Cardiff Bay.

Change suggested by respondent:

Larger towns should take a larger share of developments/ Where are the sites in Barry, Penarth, Cowbridge, Llantwit Major? Larger towns will have a larger amount of brownfield development land - eg Barry Docks, Llandow. There is ample space for smaller better integrated developments in the rural vale that could be done without massive community upheaval and environmental damage.

5117 Comment

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).

Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.

BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.

Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.

The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.

We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.

After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.
The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).
Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.
BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.
Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.
The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.
We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The

past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.
The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.
The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.
In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the

over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters.
It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.
Renewable Energy
Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?
It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.
The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.
Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.
The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.
Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.
Minerals
The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.
BMV Agricultural Land
The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:
• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and
• Candidate site assessments.
•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry:
"Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

5118 Support

Document Element: SP6 - HOUSING REQUIREMENT, Table 2: Housing Supply

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1.

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and

investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.
The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).
Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.
BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in

internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.
Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.
The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.
We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.
The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.
The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.
In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:

"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters.
It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.
Renewable Energy
Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?
It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.
The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large

expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.
Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.
The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.
Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.
Minerals
The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.
BMV Agricultural Land
The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:
• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and
• Candidate site assessments.
•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry: "Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The

site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

The housing requirement stated by the plan seems unsustainable and unrealistic. If only two if the key sites were to fall through the the amount of houses supposedly required cannot be reached. The figures around required housing for a start are questionable. Migration from outside the Vale taking up housing stock needs to be addressed. Priority should be given to the well being and daily lives of existing residents first and foremost and housing for people born within the Vale.

Change suggested by respondent:

The amount housing required needs to be more realistically recalculated and priority given to housing for people born and already living within the Vale. The issue of migration from outside the area placing additional stress on the limited housing stock needs to be addressed first and foremost. The employment land goals should also be greater and be aligned with solid infrastructure improvements to actually encourage real long term sustainable business to move to the area.

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: Mrs Karine Dubois-Jones [3322]

Summary:

Where do those figures come from? Aren't they over estimated for the Vale?
Many houses have been built in the last few years but the infrastructure has NOT been improved, especially the transport system and the medical centre under much pressure as it is. Driving around the Vale and into Cardiff is becoming a nightmare and causing much stress to workers (not everyone works from home!!) and families.

5940 Object

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: HBF (Mr Mark Harris) [538]

Summary:

The housing requirement and the number of homes delivered through new allocations should be increased to make the plan more ambitious and align with Future Wales and the Vales' identified role as a national growth area.

The flexibility allowance should be increased to 15%. The Development Plan Manual 3 suggests 10% should be the starting point. A higher figure is considered appropriate due to the low level of new allocations and the limited number of key sites allocated in the plan. This means the plan has a heavy reliance on a small number of sites, which would suggest the need for greater flexibility provided through a range of additional smaller sites.

Full text:

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:

Even with this 9.8% flexibility allowance in place, 8,660 is still 10.0% lower than the predicted household increase of 9,623 in the Vale of Glamorgan based on Welsh Government's 2022-based household projections for VoG over the RLDP period.

BDWR endorses the incorporation of a flexibility allowance, as is required by paragraph 5.59 of the Development Plans Manual (2020). However, it is considered that the flexibility allowance needs to be increased to a minimum of 15-20% (like Monmouthshire and Swansea respectively) to ensure that the ambitious anticipated annual build rate of between 885-906 dpa from 2027/28 to 2030/31 can be achieved.

Full text:

The 8,660 provision equates to a flexibility allowance of 9.8% against the targeted delivery of 7,890 set out in Policy SP1. Even with this flexibility allowance in place, this is still 10.0% lower than the predicted household increase of 9,623 in the Vale of Glamorgan based on Welsh Government's 2022-based household projections for VoG over the RLDP period.

BDWR endorses the incorporation of a flexibility allowance, as is required by paragraph 5.59 of the Development Plans Manual (2020). However, it is considered that the flexibility allowance needs to be increased to a minimum of 15-20% to ensure that the ambitious anticipated annual build rate of between 885-906 dpa from 2027/28 to 2030/31 can be achieved. Whilst we note that the Development Management Manual references a starting point of 10% we note that other local authorities have utilised a higher percentage in draft plans. This includes Swansea (20%) and Monmouthshire (15%).

Change suggested by respondent:

In order for Policy SP6 to meet the third test of soundness (Will the plan deliver?), it is evident that additional sites will need to be allocated and existing allocated sites will need to be expanded to accommodate further dwelling numbers. Allocation HG4(1) is potentially capable of delivering greater than the 25 dwellings currently allocated.

6054 Object

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:

The RLDP's proposed housing target of 526 dwellings per year over ten years is unambitious, as recent delivery exceeded this figure outside pandemic years. The target is based on past averages, which include periods of low delivery, and ignores demographic trends and unmet needs. Given the Vale of Glamorgan's role within the National Growth Area in Future Wales, maintaining historic delivery rates does not reflect its strategic importance or the national policy emphasis on growth, making the current target insufficient and not aligned with its designated growth role.

Full text:

Element 1 of the RLDP Sustainable Growth Strategy commits to "Delivering a sustainable level of housing and employment growth to accord with the Vale's position within the Cardiff Capital Region." The supporting text sets out that the RLDP will make provision for 7,890 dwellings over the RLDP period (526dpa), plus a flexibility allowance.

Supporting paragraph 5.8 states that: "The level of growth proposed is based on average completions over the first ten years of the adopted plan period (526 dwellings per annum). This reflects an appropriate timeframe, encompassing a period of low housing completions following the economic recession and the more recent boom years following the adoption of the LDP and delivery of allocated sites. This level of growth has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area. It also addresses the acute need for affordable housing, whilst being achievable within the limitations of the natural and built environment."

It is considered that basing the future level of growth on the average completions over the last decade is far from ambitious enough to the level of housing that is actually required in VoG in the RLDP period. The last 10 years includes periods of unprecedentedly low housing delivery, for example during the Covid pandemic where, according to the Consultation Evidence Base (Housing Land Supply and Housing Trajectory December 2025), only 431 and 354 additional dwellings were delivered in 2021-22 and 2022-23 respectively. Basing housing growth on past trends in average completions takes no account of emerging demographic trends or any backlog of unmet need and does not comply with the approach set out in the Development Plans Manual. It is observed that delivery in the remaining six out of the last 10 years exceeded 526 dwellings per annum. This demonstrates that delivery within the VoG has operated above the proposed housing requirement for the RLDP period in recent times (with the exception of covid years) which provides a high level of confidence that a higher housing target could realistically be achieved.

The level of housing growth for the RLDP is therefore unambitious, particularly given that the Vale of Glamorgan sits within a National Growth Area ('NGA') in Policy 1 (Where Wales will grow) of Future Wales. Policy 33 (NGA – Cardiff, Newport and the Valleys) states that: "Local Development Plans should recognise the National Growth Area as the focus for strategic economic and housing growth; essential services and facilities; advanced manufacturing; transport and digital infrastructure." As such, pursuing an approach to future delivery which seeks to maintain historic delivery rates is not reflective of Vale of Glamorgan's role within a NGA and lacks the level of ambition for the area set out in national planning policy. The previous LDP was adopted at a period of time before Future Wales was published. Therefore pursuing an approach that seeks to maintain historic delivery rates is not considered to reflect the enhanced role that the Vale of Glamorgan has as a result of its designation as part of a national growth area within Future Wales. It is illogical that the annual requirement has gone down from the figure in the adopted LDP when the local area has been categorised as part of a national growth area in Future Wales.

Change suggested by respondent:

As set out in our representations to RLDP Policy SP1 and SP6, the level of housing growth in the VoG should be far more aspirational than currently set out in the RLDP.

Sound: No

6057 Object

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:

Policy SP1's target of 7,890 dwellings, including 3,070 affordable homes, is insufficient to meet current and projected housing needs in VoG, which are estimated to require over 10,000 dwellings to address demographic growth and backlog unmet needs. The proposed flexibility allowance of 9.8% should be increased to 15-20% (like in Monmouthshire and Swansea) to achieve the ambitious build rate set out in the Housing Trajectory. Policy SP1 does not adequately account for the actual demand, particularly for affordable housing, which is significantly under-provided relative to identified needs.

Full text:

Policy SP1 sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP6 states that: "to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036. This will be delivered by:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments"

The 8,660 provision equates to a flexibility allowance of 9.8% against the targeted delivery of 7,890 set out in Policy SP1. BDWR endorses the incorporation of a flexibility allowance, as is required by paragraph 5.59 of the Development Plans Manual (2020). However, it is considered that the flexibility allowance needs to be increased to a minimum of 15-20% to ensure that the ambitious anticipated annual build rate of between 885-906 dpa from 2027/28 to 2030/31 can be achieved. Whilst we note that the Development Management Manual references a starting point of 10% we note that other local authorities have utilised a higher percentage in draft plans. This includes Swansea (20%) and Monmouthshire (15%).

The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections (published in November 2025), the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets for in Policy SP1.

However, the Development Plan Manual (para 5.37) also requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more that the RLDP seeks to deliver in Policy SP1.

It is therefore evident that the housing requirement figure proposed in Policy SP1 is insufficient to meet the newly arising needs of VoG for the RLDP period. Neither does the proposed housing requirement make sufficient allowance for meeting the backlog of unmet affordable housing need.

A fundamental review of the housing requirement figure is required to reflect the most up to date demographic information (i.e. the 2022 household projections) as set out in the Development Plan Manual. The housing requirement figure should also be further adjusted upwards to ensure that existing backlogs of unmet housing need can be addressed and reflect the plans aspirations for economic growth and social inclusion.

Paragraph 5.34 of the Development Plans Manual (2020) states that:

"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base."

Paragraph 5.35 states:

"…All LPAs should use these projections and the resultant household numbers when considering the level of housing provision for a plan period"

Whilst we understand that the latest household projections were not available at the time of drafting the deposit LDP it is clear that these will need to be revisited. We note that the Inspector examining the Cardiff, Monmouthshire and Carmarthenshire LDPs have asked the authorities to review the implications of the data.

As such, it is evident that the housing requirement and the sites identified for development is insufficient to meet the actual housing needs of VoG during the RLDP period.

It is important to note that the above calculations are purely to meet newly arising need and does not make any allowance for existing unmet affordable housing needs. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SP1 seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. Taking account of the existing unmet need will push the housing requirement even higher.

The number of affordable homes identified in Policy SP1 and Policy SP6 therefore falls drastically short of the actual need for affordable homes in VoG for the RLDP period.

Change suggested by respondent:

In order for Policy SP1 and SP6, to achieve Test 2 (Is the Plan appropriate?) and Test 3 (Will the Plan deliver?), Policy SP1 and SP6 must be updated to accommodate a greater level of housing delivery based on the most up-to-date evidence.

Policy SP1 also states that: "The primary focus of housing growth within the Vale shall be within the Strategic Growth Area as identified on the Key Diagram. New housing developments will be concentrated in the following locations, which are served by existing public transport routes and provide the opportunity to enhance sustainable transport connectivity:
• Barry
• Penarth
• Llantwit Major
• Cowbridge
• Dinas Powys
• Rhoose
• St Athan
• Llandough
• Sully
Outside of the Strategic Growth Area, the allocation of new sites will be limited to small-scale affordable housing led sites in appropriate primary and Minor Rural Settlements."

In order to accommodate the additional level of housing growth the VoG needs, both the Strategic Growth Area settlements, and the Primary and Minor Rural Settlements will need to be allocated additional housing sites. Land at Primrose Hill, Cowbridge (Site ID: 455) can assist greatly in accommodating this additional housing need in a sustainable location. The site is adjacent to the higher order Strategic Growth Area settlement of Cowbridge, has limited physical and environmental constraints and is capable of providing up to 220 dwellings at a density of 35 dwellings per hectare.

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: Barratt Redrow Homes [2669]

Agent: Lichfields

Summary:

Policy SP6 plans for 8,660 homes comprising a 9.8% flexibility allowance on a target of 7,890. This should be increased to 15-20% (like in Monmouthshire and Swansea) to meet the ambitious build rate set out in the Housing Trajectory. Household projections indicate a 22% increase from 57,676 to 67,299 by 2036, requiring approximately 10,008 dwellings, which exceeds the current target in the RLDP. Policy SP1 and SP6 do not sufficiently address unmet affordable housing needs as the 2023 LHMA identifies a need for 1,075 affordable dpa over the next 5-years based on principal projections or 1,114 based on RLDP projections.

Full text:

Policy SP6 states that: "to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036. This will be delivered by:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments"

The 8,660 provision equates to a flexibility allowance of 9.8% against the targeted delivery of 7,890 set out in Policy SP1. BDWR endorses the incorporation of a flexibility allowance, as is required by paragraph 5.59 of the Development Plans Manual (2020). However, it is considered that the flexibility allowance needs to be increased to a minimum of 15-20% to ensure that the ambitious anticipated annual build rate of between 885-906 dpa from 2027/28 to 2030/31 can be achieved. Whilst we note that the Development Management Manual references a starting point of 10% we note that other local authorities have utilised a higher percentage in draft plans. This includes Swansea (20%) and Monmouthshire (15%).

The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections (published in November 2025), the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets for in Policy SP1.

However, the Development Plan Manual (para 5.37) also requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more that the RLDP seeks to deliver in Policy SP1.

It is therefore evident that the housing requirement figure proposed in Policy SP1 is insufficient to meet the newly arising needs of VoG for the RLDP period. Neither does the proposed housing requirement make sufficient allowance for meeting the backlog of unmet affordable housing need.

A fundamental review of the housing requirement figure is required to reflect the most up to date demographic information (i.e. the 2022 household projections) as set out in the Development Plan Manual. The housing requirement figure should also be further adjusted upwards to ensure that existing backlogs of unmet housing need can be addressed and reflect the plans aspirations for economic growth and social inclusion.

Paragraph 5.34 of the Development Plans Manual (2020) states that:

"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base."

Paragraph 5.35 states:

"…All LPAs should use these projections and the resultant household numbers when considering the level of housing provision for a plan period"

Whilst we understand that the latest household projections were not available at the time of drafting the deposit LDP it is clear that these will need to be revisited. We note that the Inspector examining the Cardiff, Monmouthshire and Carmarthenshire LDPs have asked the authorities to review the implications of the data.

As such, it is evident that the housing requirement and the sites identified for development is insufficient to meet the actual housing needs of VoG during the RLDP period.

It is important to note that the above calculations are purely to meet newly arising need and does not make any allowance for existing unmet affordable housing needs. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SP1 seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. Taking account of the existing unmet need will push the housing requirement even higher.

The number of affordable homes identified in Policy SP1 and Policy SP6 therefore falls drastically short of the actual need for affordable homes in VoG for the RLDP period.

Change suggested by respondent:

In order for Policy SP1 and SP6, to achieve Test 2 (Is the Plan appropriate?) and Test 3 (Will the Plan deliver?), Policy SP1 and SP6 must be updated to accommodate a greater level of housing delivery based on the most up-to-date evidence.

In order to accommodate the additional level of housing growth the VoG needs, both the Strategic Growth Area settlements, and the Primary and Minor Rural Settlements will need to be allocated additional housing sites. Land at Primrose Hill, Cowbridge (Site ID: 455) can assist greatly in accommodating this additional housing need in a sustainable location. The site is adjacent to the higher order Strategic Growth Area settlement of Cowbridge, has limited physical and environmental constraints and is capable of providing up to 220 dwellings at a density of 35 dwellings per hectare.

Document Element: SP6 - HOUSING REQUIREMENT, Table 3: Spatial

Respondent: Barratt Redrow Homes [2669]

Agent: Lichfields

Summary:

Cowbridge comprises a sustainable self-contained settlement with regards to access to services such as primary and secondary schools, shops including supermarkets, medical services at the medical practice and pharmacy, sports activities including a leisure centre, a library and places of worship. Cowbridge has excellent connections to the A48 with regular bus services that provide access to Cardiff, Porthcawl and Llantwit Major. In order for the RLDP to achieve the second test of soundness (Is the Plan appropriate?), more housing growth should be located at Cowbridge owing to its sustainable location as a Service Centre Settlement.

Full text:

Policy SP10 seeks to encourage a modal shift towards sustainable forms of transport through “siting new developments in sustainable and accessible locations where a range of services and facilities are within walking and cycling distance.”

Cowbridge comprises a sustainable self-contained settlement with regards to access to services such as primary and secondary schools, shops including supermarkets, medical services at the medical practice and pharmacy, sports activities including a leisure centre, a library and places of worship. Cowbridge has excellent connections to the A48 with regular bus services that provide access to Cardiff, Porthcawl and Llantwit Major. 6619 Comment

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.

All Welsh Government funded homes MUST meet secured by Design Gold or in the case of a refurbishment Silver.
Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the

adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:

Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible

and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at: https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.

• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.

• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.

• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a

new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

6686 Comment

Document Element: SP6 - HOUSING REQUIREMENT, Table 3: Spatial

Respondent: Powells (Mr Stuart Leaver, Head of Planning & Land Promotion) [887]

Summary:

The Deposit RLDP identifies Culverhouse Cross as a Primary Settlement outside the Strategic Growth Area within the settlement hierarchy. However, despite this designation, the RLDP allocates no housing growth whatsoever within Culverhouse Cross.

This creates a clear inconsistency between the settlement hierarchy and the spatial distribution of development. If a settlement is identified within the hierarchy as capable of supporting development, the development plan should logically identify opportunities through which that growth can occur. The absence of any allocations, windfall capacity or clearly defined delivery mechanisms means that the designation has no practical effect within the spatial strategy.

The failure to allocate development in Culverhouse Cross has several important consequences for the effectiveness of the Plan.
• Unmet Local Housing Need – Local affordable housing needs within the Wenvoe ward are not addressed within the spatial distribution of development. The RLDP therefore fails to demonstrate how identified housing need within this part of the authority will be met.
• Ineffective Settlement Hierarchy – The settlement hierarchy fails to operate as a meaningful spatial planning tool. If Primary Settlements are not expected to accommodate any development, the distinction between settlement tiers becomes blurred and the hierarchy ceases to function as a mechanism for directing growth.
• Displacement of Development Pressure – Housing demand associated with the eastern Vale is displaced to other settlements rather than being distributed across the settlement network in accordance with the hierarchy. This results in an imbalanced spatial strategy.
•Loss of Sustainable Small-Scale Opportunities – Opportunities for small-scale affordable housing delivery in locations close to employment, services and public transport are lost. This is particularly relevant in the case of Culverhouse Cross which functions as a significant employment and retail centre.
• Policy Mechanisms That Cannot Operate – The Plan relies on affordable housing exception mechanisms to deliver housing within settlements such as Culverhouse Cross. However, the extent of Green Wedge designation means that these mechanisms cannot realistically function without explicit clarification within the Plan.

Taken together these issues demonstrate that the current spatial strategy does not fully respond to the functional role of Culverhouse Cross within the settlement hierarchy and results in a distribution of development that is neither balanced nor responsive to local housing needs.

Full text:

1. Introduction
This representation is submitted on behalf of Powells as land promoters of Candidate Site CS387 at Culverhouse Cross. The representation seeks to set out our comments on the RLDP draft deposit as well as set forward the case for the allocation of the site within the Vale of Glamorgan Replacement Local Development Plan (RLDP) for residential development of up to 50 dwellings, including a minimum of 50% affordable housing.

The site presents a deliverable, sustainable and policy-aligned opportunity to address significant affordable housing need within the Wenvoe housing market area. Despite Culverhouse Cross being identified as a Primary Settlement within the RLDP settlement hierarchy, the Deposit Plan does not allocate any residential development within the settlement. This approach results in a number of fundamental inconsistencies within the Plan including:
• A settlement hierarchy that identifies Culverhouse Cross as a Primary Settlement but provides no growth.
• Evidence of significant affordable housing need within the Wenvoe ward that is not spatially addressed.
• Policy mechanisms intended to support affordable housing delivery (HG4 and HG5) that cannot realistically operate due to Green Wedge constraints.
• A spatial strategy that places disproportionate emphasis on rail-based settlements despite national policy promoting a wider placemaking-led approach to sustainability.
The representation therefore demonstrates that the RLDP is unsound in respect of Culverhouse Cross and that Candidate Site CS387 represents a sustainable and deliverable allocation capable of addressing identified housing need.

2. Settlement Hierarchy and Spatial Strategy
2.1 Primary Settlement Status
The Deposit RLDP identifies Culverhouse Cross as a Primary Settlement outside the Strategic Growth Area within the settlement hierarchy. Under Policy SP2, Primary Settlements represent the highest tier of settlement outside the strategic growth corridor and are identified as locations capable of accommodating limited but proportionate levels of development, reflecting their relative accessibility, services, employment opportunities and role within the wider settlement network.
In spatial planning terms, the identification of a settlement as a Primary Settlement carries clear strategic implications. It indicates that the settlement performs an important functional role within the authority and that it represents one of the most sustainable locations for accommodating development outside the Strategic Growth Area. The hierarchy therefore provides the principal framework through which the Plan distributes housing growth across the authority.
However, despite this designation, the RLDP allocates no housing growth whatsoever within Culverhouse Cross.
This creates a clear inconsistency between the settlement hierarchy and the spatial distribution of development. If a settlement is identified within the hierarchy as capable of supporting development, the development plan should logically identify opportunities through which that growth can occur. The absence of any allocations, windfall capacity or clearly defined delivery mechanisms means that the designation has no practical effect within the spatial strategy.
In technical planning terms this weakens the internal coherence of the Plan. The Development Plans Manual requires that the spatial strategy and settlement hierarchy operate as a clear and consistent framework guiding the distribution of development. Where a hierarchy identifies settlements as sustainable locations for growth but the Plan subsequently provides no mechanism for that growth to occur, the hierarchy risks becoming descriptive rather than operational.
In the case of Culverhouse Cross, the RLDP acknowledges the settlement's role within the hierarchy but does not translate that role into spatial planning outcomes. The settlement was identified as a Primary Settlement largely due to its functional role as a significant retail, employment and transport hub, together with the recent residential redevelopment of the former ITV studios which has increased its residential function. Whilst the Council appears to treat this redevelopment as a one-off brownfield opportunity that does not justify further greenfield growth, the reality is that the decision to redevelop the site for housing rather than employment has established the principle that residential development is appropriate in this location. When considered alongside the settlement’s designation as a Primary Settlement, this demonstrates that the Council itself has already accepted the sustainability of residential growth at Culverhouse Cross. Despite these characteristics, the allocation strategy effectively treats Culverhouse Cross as if it were a settlement where growth is not supported, thereby failing to reflect the very factors that justified its elevation within the settlement hierarchy.
The complete absence of housing allocations at Culverhouse Cross therefore undermines the credibility of the hierarchy and creates an incoherent spatial strategy, particularly where other settlements within the same tier of the hierarchy are expected to accommodate growth. Applying unequal weight to settlements within the same settlement category introduces inconsistency into the spatial strategy and raises concerns regarding the overall soundness of the Plan.
2.2 Consequences of the Current Approach
The failure to allocate development in Culverhouse Cross has several important consequences for the effectiveness of the Plan.
• Unmet Local Housing Need – Local affordable housing needs within the Wenvoe ward are not addressed within the spatial distribution of development. The RLDP therefore fails to demonstrate how identified housing need within this part of the authority will be met.
• Ineffective Settlement Hierarchy – The settlement hierarchy fails to operate as a meaningful spatial planning tool. If Primary Settlements are not expected to accommodate any development, the distinction between settlement tiers becomes blurred and the hierarchy ceases to function as a mechanism for directing growth.
• Displacement of Development Pressure – Housing demand associated with the eastern Vale is displaced to other settlements rather than being distributed across the settlement network in accordance with the hierarchy. This results in an imbalanced spatial strategy.
• Loss of Sustainable Small-Scale Opportunities – Opportunities for small-scale affordable housing delivery in locations close to employment, services and public transport are lost. This is particularly relevant in the case of Culverhouse Cross which functions as a significant employment and retail centre.
• Policy Mechanisms That Cannot Operate – The Plan relies on affordable housing exception mechanisms to deliver housing within settlements such as Culverhouse Cross. However, the extent of Green Wedge designation means that these mechanisms cannot realistically function without explicit clarification within the Plan.
Taken together these issues demonstrate that the current spatial strategy does not fully respond to the functional role of Culverhouse Cross within the settlement hierarchy and results in a distribution of development that is neither balanced

nor responsive to local housing needs.
3. Affordable Housing Need and Delivery
3.1 Evidence of Need
The Council's own housing evidence demonstrates a substantial requirement for affordable housing across the Vale of Glamorgan, including within rural settlements and the Wenvoe housing market area. The Local Housing Market Assessment identifies a significant backlog of need together with an ongoing annual requirement for additional affordable homes throughout the plan period. Whilst Welsh Government has queried the justification for elevating Culverhouse Cross to Primary Settlement status during the plan preparation process, the available evidence demonstrates that the settlement performs a clear functional role within the eastern Vale. In particular, the settlement benefits from strong bus connectivity to Cardiff and Barry together with established cycle and active travel links, and it sits within a ward where unmet affordable housing need has been clearly identified. When these factors are considered together, they reinforce the rationale for recognising Culverhouse Cross as a sustainable location capable of accommodating proportionate residential growth. This evidence confirms that the need for affordable housing is not confined to the authority's largest settlements but exists across the wider settlement network, including rural wards.
Affordable housing need is particularly acute for smaller one to three bedroom homes, reflecting the changing composition of households and the prevalence of single person and smaller family households. Waiting list data demonstrates significant unmet demand across the authority, particularly for social rented and intermediate homes that are accessible to lower and middle income households.
Within the Wenvoe ward specifically, housing register data identifies a clear need for affordable housing that cannot currently be met through existing supply. This indicates that households with a local connection to the area are unable to access suitable housing within their own community and must either remain in unsuitable accommodation or relocate to other settlements.
Despite this evidence, the RLDP does not allocate any sites capable of delivering affordable housing within Culverhouse Cross or Wenvoe. The absence of allocations means that the Plan does not clearly demonstrate how identified affordable housing needs arising within this part of the authority will be addressed. In spatial planning terms this raises concerns regarding the effectiveness of the Plan, as development plans are expected to respond directly to evidenced housing need and ensure that opportunities for affordable housing delivery are distributed across the settlement hierarchy rather than concentrated solely within a limited number of locations.
3.2 Role of Affordable Housing in the RLDP
The RLDP identifies a requirement to deliver a significant number of affordable homes during the plan period in order to respond to the substantial backlog of need identified within the Local Housing Market Assessment. In practice the Plan relies upon several delivery mechanisms to achieve this target, including:
• Affordable housing contributions secured through Section 106 agreements on market housing sites • Affordable housing-led allocations delivering a minimum proportion of affordable homes • Affordable housing exception sites outside settlement boundaries • Windfall development opportunities that may arise during the plan period
For the overall strategy to be effective, these mechanisms must operate across the settlement hierarchy so that affordable housing delivery is not overly concentrated in a small number of locations. However, in the case of Culverhouse Cross none of these mechanisms realistically provide delivery opportunities. There are no allocated housing sites within the settlement capable of generating affordable housing contributions, no affordable housing-led allocations within the settlement boundary, and the extensive Green Wedge designation surrounding the settlement significantly constrains the realistic operation of the affordable housing exception site policy. In practical terms this means that, despite clear evidence of unmet affordable housing need within the Wenvoe ward, the RLDP does not identify any credible mechanism through which that need could be addressed locally. This further reinforces the conclusion that the spatial strategy fails to respond effectively to evidenced housing need in this part of the authority.
4. Policy HG4 and HG5 – Practical Deliverability
4.1 Affordable Housing Led Sites (HG4)
Policy HG4 identifies affordable housing-led allocations delivering a minimum of 50% affordable housing.
However these sites are located within settlement boundaries.
At Culverhouse Cross there are no available sites within the settlement boundary capable of delivering such schemes.
As a result HG4 cannot operate as an effective delivery mechanism in this settlement.
4.2 Affordable Housing Exception Sites (HG5)
Policy HG5 allows small-scale affordable housing exception sites outside settlement boundaries where a clear local need is demonstrated.
Culverhouse Cross is specifically identified as a settlement where exception sites may be appropriate.
However the majority of land surrounding the settlement is designated as Green Wedge.
The RLDP does not clearly explain how Policy HG5 should operate where land is also designated as Green Wedge.
This creates a policy ambiguity.
If Green Wedge policy prevents the operation of HG5 entirely, then the policy mechanism identified by the Council for delivering affordable housing in these settlements cannot realistically function.
If HG5 is intended to operate within Green Wedges where the strategic function of the designation is not harmed, then the Plan should make this clear.
Without this clarification the Plan risks creating theoretical delivery mechanisms that cannot be implemented in practice.
5. Green Wedge Considerations
5.1 Purpose of Green Wedges
Green Wedge designations are local planning policy tools used to manage the form of settlements and prevent inappropriate expansion of built development into open countryside. Planning Policy Wales explains that Green Wedges perform a similar function to Green Belts at a local level and are primarily intended to protect the spatial separation between settlements and maintain the distinction between urban areas and the countryside.

Green Wedges are typically designated where there is demonstrable development pressure and where reliance solely on settlement boundaries would not be sufficient to maintain the desired urban form. Their purpose is therefore strategic rather than absolute: they are intended to guide the form and direction of development rather than impose a blanket prohibition on all development.
National policy identifies five principal purposes for Green Wedges:
• Preventing the coalescence of large towns or cities with neighbouring settlements. • Managing urban form through controlled expansion of urban areas. • Assisting in safeguarding the countryside from encroachment. • Protecting the setting of urban areas. • Assisting urban regeneration by encouraging the recycling of urban land.
Planning Policy Wales also makes clear that Green Wedges should be reviewed as part of the development plan process and should only be retained where there is a demonstrable need for their continued designation.
5.2 Evidence from the Green Wedge Assessment
The Council's own Green Wedge Background Paper (BP27) assesses the land surrounding Culverhouse Cross as part of Green Wedge MG18 (3) – North of Wenvoe. The study divides the designation into a number of parcels (NW1, NW2 and NW3) and assesses their contribution against the five Green Wedge purposes.
Importantly, the assessment demonstrates that land immediately adjoining the urban edge of Culverhouse Cross does not perform a uniformly strong Green Wedge function.
For example, Parcel NW1 – which lies adjacent to the commercial and highway infrastructure associated with Culverhouse Cross – is identified as making only a weak contribution to the purpose of preventing settlement coalescence and a weak contribution to protecting the setting of the urban area, with an overall contribution rating of Moderate.
Similarly, Parcel NW2 – which also lies adjacent to the settlement edge – is assessed as making only a moderate contribution to preventing settlement coalescence and managing urban form, while again making only a weak contribution to protecting the setting of the settlement.
The study explicitly notes that some parcels around Culverhouse Cross do not lie within a gap where coalescence between settlements would occur, and therefore make only a limited contribution to that purpose.
These findings are important because they demonstrate that the Green Wedge designation in this location performs a varied and nuanced role rather than representing land of uniformly high strategic importance.
5.3 Relationship of the Site to the Green Wedge
Candidate Site CS387 occupies a contained position immediately adjacent to the existing urban edge of Culverhouse Cross. In spatial terms the site sits within an area where the Green Wedge assessment identifies only a moderate contribution to the strategic purposes of the designation.
The Green Wedge study also recognises that the retail park, major highway infrastructure and recent residential development at the former ITV studios site exert an urbanising influence on the surrounding land.
Against this context, the development of a small and contained residential scheme adjacent to the settlement boundary would represent a logical rounding-off of the urban edge rather than a significant extension of built form into the wider countryside.
The proposal has been carefully designed to retain areas of open land and maintain visual openness across the wider Green Wedge. Landscape buffers and retained open areas would ensure that the remaining Green Wedge continues to fulfil its strategic function.
Importantly, the Green Wedge assessment itself acknowledges that the area around Culverhouse Cross experiences development pressure due to its relatively sustainable location on the western edge of Cardiff and its strong highway accessibility.
In this context, it is necessary for the development plan to strike a balance between protecting the strategic purposes of the Green Wedge and responding to identified housing needs. The limited and carefully contained development proposed at Candidate Site CS387 would achieve this balance by delivering much needed affordable housing while maintaining the wider strategic function of the Green Wedge.
5.4 Implications for the Spatial Strategy
Candidate Site CS387 occupies a contained position adjacent to the existing urban edge of Culverhouse Cross. Green Wedge in this location has been defined as performing a low function in terms of preventing coalescence which is set out within the Councils' own Green Wedge study.
Development of the site would represent a logical rounding-off of the settlement rather than an incursion into open countryside.
The proposal has been carefully designed to retain areas of open land and maintain visual openness across the wider Green Wedge.
The development would therefore not undermine the strategic objective of preventing coalescence between Culverhouse Cross and Cardiff.
6. Sustainability of Culverhouse Cross
6.1 Functional Sustainability
Culverhouse Cross functions as a significant employment, retail and service centre within the eastern Vale of Glamorgan and forms one of the principal commercial hubs on the western edge of Cardiff. Although the settlement has historically been characterised primarily by commercial uses, recent residential development has strengthened its role as a mixed-use location where people can live, work and access services within close proximity.
The settlement benefits from a number of key sustainability characteristics which support its role within the settlement hierarchy, including:
• Major retail and employment areas including the Valegate and Culverhouse Cross retail parks which provide a substantial range of jobs and services. • Frequent bus services linking the settlement with Cardiff, Barry and surrounding communities. • Access to established active travel routes connecting the settlement with nearby residential areas and employment locations. • Immediate proximity to strategic highway infrastructure including the A48 and A4232, providing

direct connectivity to Cardiff and the wider regional road network.
Taken together, these characteristics mean that Culverhouse Cross operates as a highly accessible location where residents are able to access employment, retail and service opportunities within walking distance or via short public transport journeys. The presence of significant employment uses within the settlement further reduces the need for long-distance commuting and supports the creation of a more self-contained and sustainable community.
Importantly, sustainability within national planning policy is not defined solely by the presence of rail infrastructure but rather by the ability of residents to access services, employment and facilities through a range of transport modes. In this respect Culverhouse Cross performs strongly due to the combination of employment opportunities, public transport connectivity and proximity to Cardiff.
6.2 Alignment with National Policy
National planning policy promotes development in locations where people are able to access jobs, services and community facilities without the need for excessive travel. Planning Policy Wales in particular emphasises the importance of locating new housing in places that support sustainable placemaking outcomes and reduce reliance on private car travel.
Culverhouse Cross clearly meets these criteria. The settlement provides immediate access to employment, retail, healthcare and service facilities together with strong public transport connections into Cardiff and other nearby settlements. This level of accessibility is entirely consistent with the principles of sustainable development promoted through national planning policy.
The absence of a rail station does not in itself render a location unsustainable. Many settlements across Wales function successfully as sustainable communities without direct rail connectivity where other transport options and local services are available.
An approach to spatial planning which places disproportionate emphasis on rail-based settlements risks overlooking locations such as Culverhouse Cross which already function as important employment and service centres within the wider settlement network. A transport strategy focused solely on rail connectivity fails to recognise the role of bus services, active travel and proximity to employment in supporting sustainable communities.
7. Site Suitability and Deliverability
7.1 Deliverability
The site is available, viable and capable of being delivered within the early years of the Plan period. Importantly, the site does not rely on complex land assembly, strategic infrastructure investment or long lead-in times that often delay the delivery of larger strategic allocations.
Key deliverability characteristics include:
• Single land ownership – The site is controlled by a single, motivated landowner working in partnership with an experienced land promoter. This removes the risk of fragmented ownership which can frequently delay the delivery of allocated sites.
• No abnormal infrastructure requirements – The site does not require strategic highway works, major utility diversions or significant ground remediation. Development can therefore proceed without the need for substantial upfront infrastructure investment.
• Existing access arrangements – The site benefits from an established access point which currently serves the lawful dog-walking business operating on the land. This demonstrates that the site already functions as an accessible and serviced parcel of land and reduces the complexity of future development.
• Demonstrated viability – Preliminary development appraisal work indicates that the site can support a scheme delivering approximately 50 dwellings including a minimum of 50% affordable housing while remaining financially viable. This reflects realistic build costs and values within the local housing market.
Taken together, these factors demonstrate that the site represents a deliverable short-term opportunity capable of contributing to the Council's housing supply early in the plan period. This is particularly important given the well-recognised need for development plans to allocate sites that can deliver housing quickly rather than relying solely on longer-term strategic sites.
7.2 Development Capacity
The proposed site could deliver approximately 50 dwellings, including a minimum of 50% affordable housing, in accordance with the objectives of Policy HG4 and the wider affordable housing strategy within the RLDP.
This scale of development has been carefully considered to ensure that it reflects the role of Culverhouse Cross within the settlement hierarchy while remaining proportionate to the size and character of the settlement. As a Primary Settlement outside the Strategic Growth Area, Culverhouse Cross is identified as a location capable of accommodating limited but meaningful levels of growth that support local housing needs.
A scheme of around 50 homes represents an appropriate and sustainable level of development which would:
• Provide a meaningful contribution towards meeting local affordable housing need within the Wenvoe ward. • Integrate effectively with the existing built form at the edge of Culverhouse Cross. • Avoid the need for large-scale urban expansion or major infrastructure investment. • Maintain the wider strategic function of the surrounding Green Wedge through a contained and well-designed development footprint.
Importantly, the proposed capacity reflects a small-scale extension to the existing settlement, rather than a strategic urban expansion. This approach aligns with the spatial strategy for Primary Settlements outside the Strategic Growth Area, where proportionate growth is expected to occur through modest and deliverable sites capable of meeting local needs.
The proposed allocation would therefore represent a logical and sustainable opportunity for residential development that complements the role of Culverhouse Cross within the settlement hierarchy while supporting the delivery of much-needed affordable housing.
8. Soundness of the RLDP
For a development plan to be considered sound it must satisfy the key tests set out within the Development Plans

Manual and national planning policy. In summary, a sound plan must be:
• Justified – founded on a robust and credible evidence base and representing the most appropriate strategy when considered against reasonable alternatives. • Effective – deliverable over the plan period with clear and realistic mechanisms for implementation. • Consistent with national policy – aligned with the principles and objectives of Planning Policy Wales and the wider framework for sustainable placemaking.
The current RLDP approach to Culverhouse Cross raises significant concerns in relation to each of these tests.
Justified
The Plan identifies Culverhouse Cross as a Primary Settlement outside the Strategic Growth Area, recognising its accessibility, employment function and role within the wider settlement network. However, despite this designation, the RLDP allocates no housing growth whatsoever within the settlement.
This creates a clear disconnect between the evidence underpinning the settlement hierarchy and the spatial strategy that flows from it. If the evidence base demonstrates that Culverhouse Cross is sufficiently sustainable to be classified as a Primary Settlement, it logically follows that the Plan should provide opportunities for proportionate residential growth within or adjoining the settlement.
The absence of any allocations therefore raises questions as to whether the spatial strategy represents the most appropriate approach when considered against reasonable alternatives. In particular, the Plan does not adequately explain why modest growth opportunities adjacent to the settlement boundary – such as the proposed allocation of Candidate Site CS387 – have been discounted despite their potential to deliver significant levels of affordable housing.
Effective
A development plan must demonstrate that its strategy can be realistically delivered over the plan period. In this case the RLDP relies heavily on a number of policy mechanisms to deliver affordable housing, including market-led allocations, affordable housing-led sites and rural exception sites.
However, these mechanisms are not capable of operating effectively within Culverhouse Cross. There are no allocated sites within the settlement capable of generating affordable housing contributions, no affordable housing-led allocations within the settlement boundary, and the extensive Green Wedge designation surrounding the settlement severely restricts the realistic operation of affordable housing exception sites.
As a result, although the Plan identifies a clear need for affordable housing within the Wenvoe ward, it fails to identify any credible delivery mechanism through which that need could be addressed locally. This creates a clear risk that the Plan will not deliver the spatial distribution of affordable housing that its evidence base identifies as necessary.
Consistent with National Policy
Planning Policy Wales places strong emphasis on sustainable placemaking and the creation of communities where people are able to access employment, services and facilities without the need for excessive travel. National policy also promotes the efficient use of land and encourages development in locations that already benefit from strong transport connections and established infrastructure.
Culverhouse Cross performs strongly against these principles. The settlement functions as a major retail and employment hub on the western edge of Cardiff and benefits from frequent bus services, active travel links and immediate access to strategic road infrastructure.
The spatial strategy set out in the RLDP does not fully reflect these placemaking principles. By directing growth away from Culverhouse Cross despite its accessibility and service base, the Plan risks overlooking opportunities to deliver sustainable residential development in locations where people can live close to employment and services.
Taken together, these issues demonstrate that the current strategy for Culverhouse Cross is not fully justified by the evidence, cannot be shown to operate effectively in practice, and does not fully reflect the wider objectives of national planning policy. The allocation of Candidate Site CS387 would provide a practical and proportionate means of addressing these shortcomings while supporting the delivery of affordable housing within a sustainable settlement location.
9. Proposed Modification
To address the issues identified throughout this representation it is recommended that the RLDP be modified to allocate Candidate Site CS387, Land at Culverhouse Cross, for residential development. The allocation would represent a modest and proportionate extension to the existing settlement boundary and would provide a practical mechanism through which the Plan could respond to clearly identified affordable housing needs within the Wenvoe ward.
The modification would ensure that the spatial strategy properly reflects the role of Culverhouse Cross within the settlement hierarchy while maintaining the strategic purposes of the surrounding Green Wedge designation.
The allocation should provide for:
• Up to 50 dwellings delivered as a carefully planned settlement edge scheme which integrates with the existing built form at Culverhouse Cross.
• A minimum of 50% affordable housing, ensuring that the development makes a meaningful contribution towards meeting the substantial backlog of affordable housing need identified within the Local Housing Market Assessment and the housing register for the Wenvoe ward.
• Landscape buffers and retained open space, designed to maintain visual openness and ensure that the remaining Green Wedge continues to fulfil its strategic function in preventing the coalescence of settlements.
Incorporating this allocation within the RLDP would enable the Plan to:
• Address locally evidenced housing need by providing an opportunity to deliver affordable homes within the community where demand has been identified.
• Support the role of Culverhouse Cross as a Primary Settlement by allowing proportionate residential growth that reflects the settlement's accessibility, employment base and transport connectivity.
• Deliver affordable housing in a sustainable location, close to employment areas, retail services and public transport routes.
• Provide a deliverable short-term housing site capable of contributing to housing supply early in the plan period.

• Maintain the strategic function of the Green Wedge by focusing development on a contained parcel of land adjacent to the urban edge while retaining substantial areas of open land.
• Improve the effectiveness and soundness of the RLDP by ensuring that the spatial strategy properly aligns with the settlement hierarchy and that credible delivery mechanisms exist for affordable housing within this part of the authority.
Alternative Policy Approach
In the event that the Council is not minded to allocate Candidate Site CS387, an alternative and equally effective modification would be to introduce a policy mechanism that allows affordable housing-led windfall sites within Primary Settlements located in Green Wedge designations, where it can be clearly demonstrated that development would not undermine the strategic purpose of the Green Wedge.
Such a policy could allow modest residential schemes where:
• the development is affordable housing-led, providing a significant proportion of affordable homes; • the site is adjacent to the existing settlement boundary and represents a logical rounding-off of the urban edge; • it can be demonstrated that the development would not result in unacceptable coalescence between settlements; • the scheme retains sufficient open land and landscape buffers to maintain the wider openness of the Green Wedge.
Introducing such a mechanism would provide a practical means of ensuring that affordable housing needs in settlements such as Culverhouse Cross can be addressed without undermining the strategic purpose of the Green Wedge designation. It would also resolve the current policy ambiguity whereby the Plan identifies settlements such as Culverhouse Cross as suitable locations for affordable housing exception sites but does not clearly explain how such sites can come forward where surrounding land lies within the Green Wedge.
This approach would therefore improve the effectiveness, flexibility and soundness of the RLDP by ensuring that affordable housing delivery mechanisms can operate in practice across the full settlement hierarchy.
10. Conclusion
Culverhouse Cross represents a sustainable and appropriate location for small-scale residential growth when considered against the evidence base underpinning the RLDP and the wider objectives of national planning policy. The settlement functions as an established employment, retail and service hub on the western edge of Cardiff and benefits from strong public transport connections, active travel links and direct access to strategic highway infrastructure. These characteristics have already been recognised through the Council's decision to designate Culverhouse Cross as a Primary Settlement within the settlement hierarchy.
Despite this designation, the RLDP does not allocate any housing within the settlement and does not identify any credible mechanism through which locally arising housing needs can be addressed. This creates a clear inconsistency within the spatial strategy. A settlement which is recognised as sustainable and capable of accommodating proportionate levels of development cannot logically be treated as a location where no growth is expected to occur.
The absence of allocations also prevents the delivery of much-needed affordable housing within the Wenvoe ward, where the Council's own evidence identifies a clear and persistent backlog of need. Without opportunities for development within or adjoining Culverhouse Cross, households with a local connection to the area are likely to be displaced to other settlements, undermining the objective of creating balanced and inclusive communities across the Vale of Glamorgan.
Candidate Site CS387 provides a deliverable and policy-compliant opportunity to address this issue. The site represents a modest and contained extension to the existing settlement boundary and is capable of delivering approximately 50 dwellings including a minimum of 50% affordable housing. The proposal has been carefully designed to integrate with the existing built form, maintain the wider function of the surrounding Green Wedge and provide a meaningful contribution towards meeting local housing needs.
Allocating the site would therefore provide a practical and proportionate means of improving the effectiveness of the RLDP. It would ensure that the spatial strategy properly reflects the role of Culverhouse Cross within the settlement hierarchy, provide a credible mechanism for delivering affordable housing within this part of the authority and support sustainable placemaking in accordance with national planning policy.
For these reasons it is considered that Candidate Site CS387 should be allocated within the RLDP. Doing so would help ensure that the Plan provides a coherent, deliverable and policy-compliant framework for guiding development across the Vale of Glamorgan over the plan period.

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Persimmon Homes (East Wales) [1068]
Agent: Asbri Planning

Summary:

Overall Growth Levels (Policy SP6)

It is acknowledged that the preferred growth option (dwelling-led 10 Year scenario), upon which the RLDP housing requirement figure is based, reflects what has been delivered in the Authority in recent years, and is considered by the Authority to be realistic and suitably ambitious given the Vale's position within the National Growth Area. However, as a general comment, it is considered that targeting a higher/more ambitious growth rate would be appropriate.

In reviewing the most recent LDP Annual Monitoring Report (Vale of Glamorgan LDP 2011-2026, 7th Annual Monitoring Report, 1st April 202431st March 2025) (published October 2025), it is clear that there is a shortfall in housing delivery in the Vale of Glamorgan. It is stated that: "Between 1st April 2011 and 1st April 2025, a total of 6,999 dwellings were completed within the Vale of Glamorgan of which 4,641 units were general market dwellings against the 2025 AMR target of 6,387 that should have been developed at this point in the plan period, in accordance with the target. The number of additional general market dwellings delivered is 27.3% below the monitoring target". In light of the fact that there is a significant shortfall in housing delivery (i.e.
currently 27.3% lower than the LDP target), it is considered that a higher growth level for the Replacement Plan period would assist in rectifying under-delivery, allowing for housing completions to be better aligned with evidence of need (rather than repeating past shortfalls).

On February 12th 2026, the Welsh Government published updated estimates of additional housing need in Wales. The figures replace the 2019-based estimates and draw on the latest available data, including the 2022-based household projections published in late 2025. In summary, Welsh Government identify that there is a current estimated existing unmet need of 9,400 housing units. Estimates of existing unmet need have increased by 64% since the 2019-based estimates, due to a rise in homeless households in temporary accommodation.

In terms of future housing need, on average, between 7,800 and 9,300 additional housing units are estimated to be needed annually over the five-year period from July 2025 to June 2030, with a central estimate of 8,700 from newly arising need. The estimated newly arising need for July 2025 to June 2030 is higher than in the 2019-based estimates. This increase reflects higher projected household growth in the 2022-based household projections compared with the 2018-based projections used previously.

The Authority will need to give detailed consideration to the implications of the updated estimates of housing need. As the most up to date projections, the Replacement LDP must properly account for the new dataset to ensure soundness of the plan. In this regard, it is stated at Paragraph 5.34 of the Development Plans Manual that "In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government population and Household Projections are a fundamental
part of the evidence base." Accordingly, Paragraph 5.35 goes on to state that "All LPAs should use these projections and the resultant household numbers when considering the level of housing provision for a plan period".

In light of the February 2026 publication of updated estimates of housing need in Wales (which indicate
a substantial increase in both existing unmet housing need and newly arising need), and in the context of the existing under-delivery of units evidenced within the most recent LDP AMR (i.e. which identifies a shortfall in housing delivery of 27.3% on the adopted LDP target), it is considered essential that the overall growth levels for the Replacement Plan are revisited (and increased accordingly).

Full text:

We write specifically with regard to the Key Site at 'North West Barry' (Policy SP4: KS1). As the Authority
are aware, a significant amount of supporting information has been prepared in relation to the Key Site over the course of the preparation of the Replacement LDP to date – this detailed evidence has clearly demonstrated that the inclusion of 'North West Barry' as a Key Site with the Replacement Plan fully accords with the Replacement LDP strategy. Furthermore, the detailed submissions have evidenced that the site is entirely deliverable and viable.

In summary, this representation sets out support for the inclusion of Land at North West Barry as a Key Site within the Replacement LDP. Our Client (Persimmon Homes) is fully committed to the delivery of the allocation, in accordance with the policies of the Replacement Plan (both site-specific and plan-wide policies inclusive).

We would highlight that although the representation provides overarching support for the Deposit Plan
(and the inclusion of North West Barry as a Key Site), a number of detailed objections are submitted in relation to specific elements of the proposed wording of the Key Site policy (HG1: KS1). In addition, the wider policies of the Deposit Plan have been reviewed in detail and comments are submitted accordingly.

Background
By way of background context, as the Authority are aware, a Candidate Site representation was submitted on behalf of Persimmon Homes in relation to Land at Weycock Cross, Barry, at the Stage 1 Call for Sites in September 2022 (Site Ref. 449). The land (circa 7 hectares) was put forward for inclusion in the Replacement LDP for a housing allocation (for circa 180 units). Within the Replacement LDP Preferred Strategy (published November 2023), the Candidate Site at Weycock Cross was not identified as a Key Site, in light of the preferred allocation of 1,500 units at land at North East Barry. Further to issues arising in relation to the deliverability of the North East Barry Key Site, the Authority subsequently

consulted on alternative options for the provision of sufficient housing land within Barry, with the Candidate Site at Weycock Cross ('North West Barry') identified as capable of delivering 376 units (as taken forward within the Deposit Plan). A significant degree of supporting survey and assessment work has been prepared in relation to the North West Barry Key Site which serves to demonstrate that the site (at a capacity of 376 units) presents a sustainable, deliverable and viable allocation, capable of accordance with national sustainable placemaking outcomes.

Sustainable Growth Strategy (Policy SP1)
The Deposit Plan's overarching strategy in relation to sustainable growth is supported. The primary focus of concentrating housing growth within the 'Strategic Growth Area' (i.e. where the main centres of population are accommodated, and which are served by a range of facilities and services, and are accessible by a range of transport modes) as outlined by Policy SP1 is considered appropriate and will allow for the delivery of sustainable and resilient communities. As per previous representations
submitted by Asbri Planning on behalf of Persimmon Homes in relation to the RLDP Preferred Strategy,
the prior identification of the strategic-scale (1,500 unit) Key Site at North East Barry was considered to represent an over-reliance on one site to meet the housing demand of the Authority's Key Settlement (with associated constraints in relation to the delivery of units on a strategic-scale site within the earlymid part of the plan period). It is considered that the inclusion of North West Barry as a Key Site, supplemented by a number of smaller housing allocations as identified in Policy HG1, will ensure that the housing requirement for the Barry can be met in a robust and deliverable manner.

Overall Growth Levels (Policy SP6)
It is acknowledged that the preferred growth option (dwelling-led 10 Year scenario), upon which the
RLDP housing requirement figure is based, reflects what has been delivered in the Authority in recent years, and is considered by the Authority to be realistic and suitably ambitious given the Vale's position within the National Growth Area. However, as a general comment, it is considered that targeting a higher/more ambitious growth rate would be appropriate. In reviewing the most recent LDP Annual Monitoring Report (Vale of Glamorgan LDP 2011-2026, 7th Annual Monitoring Report, 1st April 2024
31st March 2025) (published October 2025), it is clear that there is a shortfall in housing delivery in the Vale of Glamorgan. It is stated that: "Between 1st April 2011 and 1st April 2025, a total of 6,999 dwellings were completed within the Vale of Glamorgan of which 4,641 units were general market dwellings against the 2025 AMR target of 6,387 that should have been developed at this point in the plan period, in accordance with the target. The number of additional general market dwellings delivered is 27.3% below the monitoring target".

In light of the fact that there is a significant shortfall in housing delivery (i.e. currently 27.3% lower than the LDP target), it is considered that a higher growth level for the
Replacement Plan period would assist in rectifying under-delivery, allowing for housing completions to be better aligned with evidence of need (rather than repeating past shortfalls).

On February 12th 2026, the Welsh Government published updated estimates of additional housing need in Wales. The figures replace the 2019-based estimates and draw on the latest available data, including the 2022-based household projections published in late 2025. In summary, Welsh Government identify that there is a current estimated existing unmet need of 9,400 housing units. Estimates of existing unmet need have increased by 64% since the 2019-based estimates, due to a rise in homeless households in temporary accommodation.

In terms of future housing need, on average, between 7,800 and 9,300 additional housing units are estimated to be needed annually over the five-year period from July 2025 to June 2030, with a central estimate of 8,700 from newly arising need. The estimated newly arising need for July 2025 to June 2030 is higher than in the 2019-based estimates. This increase reflects higher projected household growth in the 2022-based household projections compared with the 2018-based projections used previously. The Authority will need to give detailed consideration to the implications of the updated estimates of housing need. As the most up to date projections, the Replacement LDP must properly account for the
new dataset to ensure soundness of the plan. In this regard, it is stated at Paragraph 5.34 of the Development Plans Manual that "In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base."

Accordingly, Paragraph 5.35 goes on to state that "All LPAs should use these projections and the resultant household numbers when considering the level of housing provision for a plan period".

In light of the February 2026 publication of updated estimates of housing need in Wales (which indicate
a substantial increase in both existing unmet housing need and newly arising need), and in the context of the existing under-delivery of units evidenced within the most recent LDP AMR (i.e. which identifies a shortfall in housing delivery of 27.3% on the adopted LDP target), it is considered essential that the overall growth levels for the Replacement Plan are revisited (and increased accordingly).

Policy HG1 KS1 – Land at North West Barry
Overall Support for Allocation

The detailed supporting information prepared on behalf of Persimmon Homes in relation to the Land at North West Barry site to date, including the masterplanning work undertaken in liaison with the Local Authority and their statutory

consultees, has demonstrated that a sustainable, high-quality residential development which responds sensitively to both local character and landscape setting can be delivered on the site. It is considered that the allocation of Land at North West Barry (KS1) represents an entirely suitable housing allocation, which has been evidenced as being both viable and deliverable. The
inclusion of KS1 as a housing allocation in the Deposit Plan is therefore welcomed and supported.

Policy HG1 KS1 - Detailed Wording - Objections As stated, although the representations provide overarching support for the Deposit Plan and the inclusion of Land at North West Barry as an allocation, a number of detailed matters are objected to in relation to specific elements of the proposed KS1 policy wording.

It is acknowledged that the Key Site will need to be delivered in accordance with placemaking principles
(as set out in Policy SP4 Placemaking and Policy PGD1 Creating Well Designed Places), and masterplanning work to date has demonstrated that the site is fully capable for compliance with both Policy SP4 and PGD1.

Comments are provided on the additional requirements which the site is anticipated to comply with as set out at Policy HG1 KS1. Revised wording where required is identified in red.

• The provision of a minimum of 113 affordable housing units (30%) with a unit mix reflecting the requirements of the latest Local Housing Market Assessment and the Council's waiting list data.

In order to deliver a greater social mix, the affordable units should be dispersed across the site in clusters of no more than 10 units, The positioning of the affordable units will be informed by the experience and best-practice of the Registered Social Landlord responsible for the delivery and ongoing management of the units, with their delivery being phased across the development trajectory.

The policy as currently worded is considered to be overly prescriptive with regards to the positioning of affordable units on the site. It is the case the Registered Social Landlord who is responsible for the delivery and ongoing operation/management of the affordable units is best-placed to advise upon the positioning of the affordable units within the site layout. As such, it is requested that the prescriptive nature of the above bullet point is mended to allow for the RSL to advise on best practice.

• Provision of land across the site frontage to allow for the widening of the A4226 Port Road West and the delivery of an Active Travel route across the frontage of the site as part of the Weycock Cross to Cardiff Airport Active Travel route, as identified in Policy TR1 (relating specifically to the delivery of the section of the Active Travel route adjoining the northern boundary of the Key Site only).

• Creation of a new signalised junction on to the A4226 Port Road West, which will need to accommodate controlled pedestrian/cycle crossing facilities.

With regards to the first two bullet points set out under the 'Sustainable Transport and Highways' section of the Policy HG1 KS1 (copied above), to confirm, as part of the development of the Key Site, it is proposed (as detailed within the submitted Transport Assessment) to construct a new junction from Port Road to the west of the Weycock Cross roundabout at the location of the existing field gated access in the form of a signal-controlled junction, which would allow for the safe and timely exit of traffic from
the development onto the local highway network. Such an access would also provide enhanced Active Travel infrastructure in conjunction with the proposed Active Travel route between the Weycock Cross junction and Cardiff Airport. Traffic signals at the proposed site access would provide for dedicated demand dependent green time for pedestrians and cyclists along this section of the A4226 Port Road.

Significant work has been undertaken to date in demonstrating that the above is deliverable. However,
it is requested that further clarification is included within the policy text to confirm that the Key Site is not responsible for the delivery of any further/additional sections of the Weycock Cross to Cardiff Airport Active Travel route, over and above the section of the route which adjoins the Key Site.

Suggested additional text is outlined in red above.
• A proportionate contribution towards off-site improvements to the capacity and flow of Weycock Cross roundabout and other junctions on the strategic highways network where necessary (in the context of the impact of wider committed developments on the strategic highway network).

As set out within the Transport Assessment (May 2025) prepared in support of the Key Site, the traffic movements associated with the North West Barry allocation could be accommodated on the highway network with a marginal and inconsequential impact on the conditions already experienced on the local highway network. An appraisal of the impact of committed development (as agreed with the Highways Authority) has been undertaken as part of the Transport Assessment, which identifies that committed
development within the vicinity of the Weycock Cross junction would have a greater impact upon the local highway network than the North West Barry Key Site. The North West Barry development is smaller in comparison to the other committed development assessed, and would have a marginal and inconsequential impact upon the operation of the Weycock Cross junction. It is therefore considered that the policy wording should be amended to reflect the

'proportionate' nature of contributions required.

Suggested additional text is outlined in red above.
• A contribution towards off-site sustainable transport measures in the area (as necessary and related to the Key Site).

Further clarification is required in regards to the above bullet point. It will be important to ensure that any off-site measures are directly related to the proposed development, and are necessary to ensure the acceptability of the proposed development. The requirement for a contribution towards off-site measures 'in the area' is not specific enough, and it is requested that the wording is amended as per the suggested text outlined in red above.

• The provision of a key area of open space (minimum 2.3 ha) to the south of the site adjoining Porthkerry Country Park which will serve as a buffer to the adjoining SINC at Mill Wood and offer opportunities for significant iodiversity enhancements. The ownership of this area should be
transferred to the Vale of Glamorgan Council, together with an appropriate financial contribution, for management as part of Porthkerry Country Park.

It is considered that the inclusion of a specified figure for the area of open space to be provided within the southern section of the site is unnecessary within the policy text.

The Indicative Plan for the Key Site included at Figure 13 of the Deposit Plan illustrates the indicative extent of 'Significant Open Space' to be provided adjoining Porthkerry Country Park, which will be subject to further detailed masterplanning work as the Planning Application is prepared in due course. A figure for the exact area
of open space to be provided within this section of the site cannot therefore be robustly specified until the further stages of masterplanning work are completed. As such, it is requested that the figure is removed from the policy text, with the identification of 'Significant Open Space' on Indicative Plan being considered satisfactory.

Furthermore, it is not considered appropriate that the policy wording should refer specifically to the financial contribution towards the management of this land, in addition to its transfer, as such contributions will be subject to detailed viability appraisal work at the Planning Application stage.

Deposit Plan Appendix 1 - Housing Trajectory
The identified delivery timescales and quantum of units for the site as set out at Appendix 1 of the Deposit Plan (as copied below) are agreed with and considered to be suitable/deliverable:

2028-2029: 30 units
2029-2030: 60 units
2030-2031: 60 units
2031-2032: 60 units
2032-2033: 60 units
2033-2034: 60 units
2034-2035: 46 units

Persimmon Homes are committed to the delivery of the allocation, in accordance with the phasing trajectory outlined in the Deposit Plan. Further to the detailed submissions previously made, including extensive viability evidence which has been discussed in detail with the Local Authority and their viability consultant, it is confirmed that the site is viable and deliverable in accordance with the identified delivery timescales. It should be noted that there is a possibility that the number of units to be delivered within the first year (2028-2029) could be increased slightly, however, it is considered that the above presents a realistic trajectory for the site.

Deposit Plan Appendix 2 – Infrastructure Delivery Plan
A number of amendments to the text are requested in regard to the infrastructure requirements for KS1 North West Barry as set out within the Infrastructure Delivery Plan at Appendix 2 of the Deposit LDP.

Within the 'Key site issues and constraints' section of the Infrastructure Requirements table, the following amendments to the text are considered necessary:

• Proportionate access and junction arrangements on to the A4226 and a financial contribution towards strategic highway network enhancements (in the context of the impact of wider committed developments on the strategic highway network).

As set out above, it is important that the required financial contribution towards strategic highway network enhancements is proportionate to the scale of the North West Barry development, and that additional committed developments, which would have a greater impact on the strategic highway network, are considered in the round.

• Previous desk-based assessment and site visits dentified that development would have a major impact on five features (?), including important hedgerows which form historic boundaries. Archaeological features were also identified.

The above bullet point requires clarification as to the 'five features' which the development would have a 'major impact'

upon. It should be noted that masterplanning work to date has been informed by extensive survey and assessment work which ensures that the proposed development is capable of addressing all constraints.

Within the section of the table where 'broad costs' of key infrastructure requirements are outlined, it is considered that the following amendments to the text are necessary:

• Education – Estimated Cost Circa £3,730,000 (£TBC)
It is considered that an estimated cost for education contributions cannot be specified at this stage, as the contribution will be directly related to current school capacity figures at the time of the Planning Application, with school capacities being fluid and subject to change. As such, the 'circa' figure should be removed from the text and replaced with 'TBC' at this point.

• A proportionate contribution towards on-site improvements to the capacity and flow of Weycock
Cross roundabout and other junctions on the strategic highways network where necessary (in the context of the impact of wider committed developments on the strategic highway network).

• VOGC to deliver improvements to junctions on the Strategic Highways Network using s106 contributions (from the North West Barry Key Site and other relevant commitments) . As set out above, it is important that the required financial contribution towards strategic highway
network enhancements is proportionate to the scale of the North West Barry development.

• Contribution towards off-site sustainable transport measures in the area as necessary and related
to the Key Site.

As per the wording contained within the policy text of HG1 KS1, the requirement for a contribution towards off-site measures 'in the area' is not specific enough to provide certainty for the developer, and it will be important to ensure that any off-site measures are necessary and directly related to the North West Barry development.

• Community Facilities – Estimated Cost Circa £665,000 (£TBC) It is considered that an estimated cost for community facility contributions cannot be specified at this
stage – no background calculations are provided to evidence that this estimate is robust. As such, the 'circa' figure should be removed from the text and replaced with 'TBC' at this point.

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes has significant concerns regarding Policy CC1 and objects to it on the basis that it replicates requirements already being progressed at a national level through Welsh Government's Future Homes Standard (FHS). The FHS is intended to deliver "zero carbon ready" homes via a unified Building Regulations framework, making additional local policy unnecessary. At present, Building Regulations Part L1A sets out the standards for energy efficiency in new dwellings, and Persimmon
already designs its homes to go beyond these minimum thresholds. This includes enhanced insulation and improved building fabric performance, with reduced U values for elements such as walls, roofs, floors and windows to minimise heat loss. As a result, our homes typically achieve strong Energy Performance Certificate (EPC) ratings, generally in the A–B categories. Introducing further operational net zero requirements at a local planning level risks adding cost, complexity and uncertainty, potentially affecting the viability and deliverability of housing sites. The Development Plans Manual for Wales is clear that local plans should not repeat national policy or seek to regulate matters already addressed through other statutory regimes.

On that basis, Policy CC1 is not considered to be justified and is inconsistent with the second test of soundness. The proposed shift in standards from April 2030 represents a substantial and abrupt escalation in expectations. Although the policy refers to schemes such as Tai ar y Cyd and AECB CarbonLite, these examples largely relate to grant funded affordable housing projects. There is no robust evidence that equivalent standards can be met on mainstream housing sites without undermining overall viability. The Development Plans Manual requires policies to be based on strong evidence and to be realistically deliverable across the plan period. Without this, there is a risk that the proposed policy could impede
housing delivery and compromise the RLDP's ability to meet identified needs.

Policy CC1 could also lead to inconsistent energy performance requirements across Local Planning
Authorities in Wales, contradicting the advantages of a unified regulatory system via Building Regulations. For volume housebuilders working across several authority areas, this would introduce unnecessary variation and complication. The DPM highlights the importance of policies that support housing delivery and avoid avoidable burdens. By introducing bespoke modelling thresholds and
operational monitoring requirements, CC1 risks blurring the line between planning and Building Control, raising questions about the policy's justification and practical application.

It is Persimmon's view that Policy CC1 is premature and that it is more appropriate for such matters to be addressed through building control rather than planning policy. In its current form, the policy risks impacting housing supply, affordable housing delivery and overall implementation across the plan period. For these reasons, we consider that

Policy CC1 fails to satisfy the relevant tests of soundness and should be removed from the emerging RLDP.

Summary

As summarised above, and set out in full detail within the supporting survey/assessment work that has been provided to the Local Authority in relation to the site, the inclusion of Land at North West Barry as a Key Site (Policy HG1: KS1) with the Replacement Plan fully accords with the RLDP strategy. Furthermore, it is considered that (with the inclusion of the site), the Deposit Plan complies with the tests of soundness. Further to ongoing discussions with the Authority, we would reiterate the Site Promoter's commitment to delivering the allocation which has been evidenced as being entirely deliverable and viable
As set out within this representation, overall support is provided for the Deposit Plan (and the inclusion of North West Barry as a Key Site), however, as detailed, bjections are submitted in relation to the specific elements of the proposed wording of the Key Site policy (SP4: KS1).

We look forward to the RLDP progressing towards examination, and would welcome the opportunity to take part in the relevant Hearing Sessions (in relation to Policy HG1: KS1, and wider strategic policies as required). Please do not hesitate to contact me should you require any further detail or wish to discuss any aspect of the representations.

Change suggested by respondent:

That the overall growth levels for the Replacement Plan are revisited (and increased accordingly).

Sound: Not specified

6738 Support

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: Hallam Land Management [854]

Agent: Savills

Summary:

Hallam are generally supportive of the aims of this policy. The housing requirement should reasonably be seen as the minimum number of homes that the RLDP should be aiming to deliver.

Full text:

1.1. Savills is instructed by Hallam Land ('Hallam') to respond to the consultation on the Deposit version of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').
1.2. Hallam is the strategic land arm of Henry Boot PLC and is one of the UK's most well established and successful land promoters. Hallam operates throughout England, Scotland and Wales from 7 regional offices working with landowners, developers, local authorities, communities and other parties to bring forward development opportunities. Hallam has been in operation since 1990, specialising in obtaining planning permission and delivering development larger schemes including new communities and urban extensions.
Background to Representations
1.3. The Preferred Strategy was published in November 2023. The Preferred Strategy identified "Land West of St Athan" and "Land South of the B4265, St Athan" (Site IDs 456 and 457) as one of five Key Sites in the Preferred Strategy. Both of these sites are under the control of Hallam and were submitted as part of the Call for Sites. A site-specific illustrative masterplan and policy wording were provided under Policy SP4 KS5 (Land to the West of St Athan).
1.4. Hallam submitted representations on the consultation on the Preferred Strategy. These representations were very much supportive of the identification of "Land to the West of St Athan" as a Key Site and the approach that was taken more generally taken in the Preferred Strategy.
Approach to Responding to Consultation
1.5. The VoG has published the Deposit version of the RLDP. The Deposit is the first version of the RLDP to include emerging allocations, and detailed development management policies, as well as a Proposals Map. It is accompanied by a substantial evidence base which includes various supporting technical documentation submitted as part of the promotion of the allocated sites.
1.6. Building upon the Preferred Strategy, the Deposit RLDP proposes to allocate Land to the West of St Athan as a Key Site. The site is identified under Policy HG1 KS5 (Land to the West of St Athan) as key mixed-use site with capacity for 600 new homes alongside new community and commercial facilities.
1.7. Hallam's representation to this consultation broadly splits into three separate sections:
• It offers general support for the housing requirement, growth strategy and settlement hierarchy. This is covered in Chapter 2 of this Statement;
• It wholly supports the approach of allocating Land to the West of St Athan as part of the Deposit RLDP whilst also providing detailed commentary on the specific wording of Policy HG1 KS5 (Land to the West of St Athan). This is covered in Chapter 3 of this Statement; and
• It provides commentary on a range of development management policies. This is covered in Chapters 4, 5, 6, and 7 of this Statement.
1.8. As well as this Statement, Savills has provided commentary on these specific policies under the VoG's consultation

website.

Policy SP1 (Sustainable Growth Strategy), Policy SP2 (Settlement Hierarchy), and Policy SP6 (Housing Requirement)
2.1. Together, these policies have the effect of:
• Setting the housing requirement to be delivered over the RLDP plan period of 7,890 homes with a flexibility allowance applied on top so that provision is made for a total of 8,660 homes. This is the same housing requirement to that included in the Preferred Strategy which was found by Welsh Government to be in conformity with Future Wales (Policies SP1 and SP6);
• Identifying the extent of the Strategic Growth Area as the primary focus of new housing growth. Concentrations of new housing are focussed in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity. St Athan is a specifically named settlement within the Strategic Growth Area (Policy SP1); and
• Identifying St Athan as a Primary Settlement in the third tier of the settlement hierarchy. This is the same tier of the settlement hierarchy as St Athan is in the adopted LDP (Policy SP2).
2.2. Hallam are generally supportive of the aims of these three policies.
2.3. They recognise that the housing requirement has been subject to extensive scrutiny and been found to be appropriate by Welsh Government in response to the Preferred Strategy. In that sense, there is nothing further for Hallam Land to comment upon here other than to note that it should reasonably be seen as the minimum number of homes that the RLDP should be aiming to deliver, particularly following the publication of the 2022-based household projections between Welsh Government's comments on the Preferred strategy and the publication of the Preferred Strategy.
2.4. The strategy – of focussing new housing in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity – is wholly supported. St Athan is clearly already a sustainable location for growth and its sustainability and connectivity have clear potential to enhance alongside further development. The delivery of growth in St Athan is therefore considered to firmly align with the RLDP's strategy.
2.5. The continued positioning of St Athan as a Primary Settlement in the third tier of the settlement hierarchy is considered appropriate though clearly the delivery of two Key Sites within St Athan as part of the RLDP has the potential to further elevate its position in the future. This is reflected in Table 10 of Background Paper 5 Settlement Appraisal Review where St Athan is given one of the higher scores of the Primary settlements.

Policy HG1 KS5 (Land to the West of St Athan)
3.1. Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.
3.2. There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.
3.3. The relevant policy for Land to the West of St Athan is Policy HG1 KS5.
3.4. As a starting point, Hallam wholeheartedly support the allocation of Land to the West of St Athan as a Key Site within the RLDP. Hallam made a comprehensive submission as part of the Call for Sites stage and since then have worked proactively with the VoG and other stakeholders to demonstrate that the site is suitable, deliverable, and viable. It's identification as a Key Site in the Deposit RLDP represents extensive and thorough assessment – its proposed allocated is therefore considered to be sound and firmly evidence based.
3.5. So that the policy functions as effectively as possible, Hallam has a small number of comments and included at Appendix A is a re-worded version of Policy HG1 KS5 which incorporates those changes with text suggested to be removed crossed through and text to be added shown underlined.
3.6. These proposed adjustments are considered in turn below and are structured around the sub-headings that are contained within the policy wording itself.
Site Capacity and Housing Trajectory
3.7. Extensive environmental and technical work has been undertaken by Hallam to support the promotion of the site and the development of a masterplan (and site capacity) that responds to the site's constraints and opportunities.
3.8. That said, Hallam is not a housebuilder and once an outline planning application has progressed, Hallam will identify a development partner (which could be a single or multiple housebuilders / housing associations). Clearly different housebuilders have different house types and differing approaches to density.
3.9. In addition, whilst a lot of technical and environmental work has been undertaken to date, clearly further technical work would be submitted at planning application stage which would further validate the site's capacity.
3.10. Legislative and guidance changes also have the potential to impact a site capacity. Whilst the masterplanning process has been prepared to be SAB compliant, the impact of the introduction of the requirement to secure SAB approval has had an impact on site capacity and it follows that a further, and as yet unknown, legislative or guidance change could have a similar impact.
3.11. This is not to suggest that there isn't a high degree of confidence that the site can deliver roughly 600 homes, rather that Hallam suggest that the word 'approximately' is added to the policy wording to reflect the potential for a degree of deviation (which could be upwards or downwards).
3.12. Background Paper 9A Housing Land Supply and Housing Trajectory sets out the anticipated annual delivery rates

for housing over the RLDP. With regards to the ability of the site to deliver the number of homes it is allocated for in the RLDP plan period, the housing trajectory for the site reflects that the first completion date was pushed back from 2027/2028 to 2028/2029 since the consultation on the Preferred Strategy. This means that the whole site continues to be shown as being delivered within the RLDP plan period.
3.13. Hallam support and agree with the approach set out in the Draft Housing Trajectory and see it to be realistic and achievable based on their experience and subject to usual caveats around the condition of the market, RLDP progression, and swift determination of a planning application.
Affordable Housing
3.14. At present, Policy HG1 KS5 (like all of the standalone policies for the other four Key Sites), states that the site should provide a minimum of 210 affordable housing units. This figure is derived from 35% of the number of homes that the site is allocated for (600 homes).
3.15. Worded at present, a strict interpretation of this policy could be that 210 affordable units must be provided onsite regardless of the total number of homes that are proposed. For example, it could be interpreted as requiring a fixed number of affordable homes of 210 homes, even if the total number of homes that are proposed on the site is fewer than the 600 homes that the site is allocated for or, conversely, that only 210 homes should be delivered as affordable if more than 600 homes were to be delivered and the RLDP allocation exceeded.
3.16. Hallam recognise that this is not what the policy wording is seeking to achieve (and their viability work for the site is based on the site delivering 600 homes of which 35% are affordable) but suggest that its wording could be clarified by removing reference to a specific number of affordable homes for the site to deliver in favour of just the affordable housing percentage being noted in the policy.
3.17. Hallam also suggest that the requirement for affordable housing units to not be in clusters of more than 10 homes is removed and that the approach is for this to be considered on a site by site and case by case basis and with recognition that Policy HG5 (Affordable Housing Exception Sites) which can provide a framework for 100% affordable sites of more than 10 homes to be delivered. As an example, and in the case of Land to the West of St Athan, the “Land South of the B4265, St Athan” (Site ID 457) portion of the site is likely better suited to a mixed-use development alongside the future St Athan Railway Sation. This portion of the site is probably better suited to a flatted form of development (either above non-residential uses or as a block) which tend to be delivered as 100% affordable housing developments rather than comprising a mix of private and affordable housing.
Sustainable Transport and Highways
3.18. This part of the policy sets out expectations relating to sustainable transport and highways and there are a number of matters which Hallam wish to comment on.
3.19. As a starting point, Hallam support the delivery of St Athan Railway Station and therefore commits to its safeguarding. Likewise, Hallam recognise the potential suitability for the “Land Between the Railway Line and B4265, St Athan” (Site ID 458) site to accommodate a Welsh-Medium Secondary School and can also therefore commit to safeguarding land for the delivery of a pedestrian and cycle bridge over the railway line. Specific comments on Policy TR1 (Transport Proposals) and Policy CI3 (New Community Facilities) are made elsewhere in this Statement.
3.20. With regards to the Sustainable Transport and Highways section of Policy HG1 KS5, Hallam’s overall position is that a careful balance needs to be reached between the policy wording being explicit as to what highway works must be delivered and reserving consideration of this until planning application stage where the exact site capacity is better understood and a full Transport Assessment submitted.
3.21. At present, Hallam’s view is that the policy wording is overly explicit and suggest that it could be qualified through the addition of the following text before listing the offsite highways improvements:
‘Subject to the Strategic Transport Assessment and site-specific Transport Assessment submitted at planning application stage’.
3.22. Turning to the specific offsite highways measures that are listed within the policy wording, Hallam have four comments.
3.23. Firstly, it is suggested that the delivery of an active travel link along the B4265 between the site entrance and the Gileston Road junction should be secured via a financial contribution that is pooled with KS4 Church Farm. This reflects that the delivery of this link not only links Hallam’s site to other services in St Athan but also linking KS4 Church Farm to the services that are proposed and uses for which land is safeguarded within Hallam’s site. Clearly this is also to the benefit of existing residents of St Athan. This would reflect the approach that is proposed to be taking for the pooling of Section 106 monies for the delivery of an active travel route between St Athan and Llantwit Major.
3.24. Secondly, Hallam flag the need for the RLDP to be sufficiently flexible with regards to the delivery of an active travel link between St Athan and Llantwit Major. Ultimately, the purpose of delivering this active travel route would be to provide a connection from St Athan to Llantwit Major Railway Station and the delivery of a Railway Station in St Athan would remove the necessity of delivering this active travel connection. Hallam’s suggested amendments to the policy wording seeks to reflect this.
3.25. Thirdly, Hallam have been consistent in highlighting that, whilst there is an aspiration to deliver an improved pedestrian link along Llantwit Road, a combination of the road width and the extent of third party ownerships make delivering a continuous link very challenging with a pragmatic approach instead needing to take place that recognises the ability to deliver betterments but acknowledges that delivering a continuous link is unlikely to be possible. Hallam has suggested additional wording to clarify this.
3.26. Fourthly, Hallam highlight that the designing of a loop road within the site to facilitate access by a bus may be superfluous and represent an over-engineered solution given the potential for the St Athan Transport Interchange that land is safeguarded for under Policy TR1 (Transport Proposals) is envisaged to accommodate infrastructure to accommodate a bus connection. On that basis, it is suggested that the following clause is added to the policy wording to reflect that bus connectivity to the site may be delivered not via an internal bus loop:
‘Subject to progress on the St Athan Transport Interchange as land is safeguarded for under Policy TR1 (Transport

Proposals)'
Community Infrastructure
3.27. There are three points which Hallam wish to make in connection to this element of Policy HG1 KS5.
3.28. Firstly, Hallam suggest that the wording of the part of the policy relating to financial contributions to fund the delivery of additional school places needs to be adjusted. At present this part of the policy is worded as if there is an automatic requirement to provide Section 106 monies for school places where Circular 13/97 is clear that a contribution should only be sought where the schools do not have current projected capacity to accommodate the new children from the development. Hallam's proposed adjustments seek to ensure that this part of the policy reflects this though note that Background Paper 43 Education forecasts a need for a financial contribution to be made for additional school places at all English and Welsh primary and secondary schools that the site is within the catchment of.
3.29. Secondly, Hallam note that Table 10 of Background Paper 34 Community Facilities identifies an existing over-provision of community space within the St Athan Ward of 778sqm and a surplus of 531sqm of community floorspace at 2036 when the level of housing to be allocated in the Deposit RLDP is delivered. It is understood that this is on the basis of no community floorspace being delivered as part of Hallam's proposals or as part of the KS4 Church Farm site. Hallam suggest that the wording of this element of the policy needs to reflect that community floorspace should only be required to be provided in the case of a local shortage in provision. Aligned to this, Hallam also suggest that the reference to specifically providing a 'community building' is adjusted to instead make reference to 'community space'. This reflects that the community space element of scheme, if indeed it is actually required, could be a part of a larger mixed-use building (probably in the Mixed-Use / Community area) rather than as a standalone building.
3.30. Thirdly, Hallam note the error in the wording of the sixth bullet point under the 'Sustainable Transport and Highways' heading where reference is made to the safeguarding of land on the southern side of the railway line as being identified in Policy CI3(2) where-as it should be Policy CI3(6). This is a minor amendment that should be made to ensure consistency.
Green Infrastructure, Recreation Spaces, and Biodiversity
3.31. The masterplan prepared by PAD Design and submitted by Hallam shows the site delivering a mix of public open space and green infrastructure including the provision of allotments, a Neighbourhood Equipped Area of Play, a Local Equipped Area of Play, and a sports pitch. This is welcomed in Background Paper 32A Green Infrastructure Assessment of Key Sites which, at Paragraph 5.55 recognises that a 'ground up' approach has been taken in the masterplanning approach.
3.32. This is shown indicatively to illustrate the composition of public open space and green infrastructure that the site could provide alongside the other elements of built development that the site is allocated and the masterplan makes provision for.
3.33. Whilst, Hallam recognise the need to provide public open space, the starting point for this should be the Fields In Trust Standards and Hallam therefore suggest an approach where the policy wording is not specific about what forms this should take.

Policy TR1 (Transport Proposals)
4.1. This policy identifies three active travel routes and two public transport schemes that the Deposit RLDP safeguards land for, as well as three highway improvement schemes that are identified as being required to mitigate the impact of development. Two of these are in St Athan – one being the St Athan Transport Interchange for which land is safeguarded for and the second being the Gileston Road Junction which is identified as a required highway improvement. Both are considered in turn below.
St Athan Transport Interchange
4.2. Hallam support the safeguarding of land for the St Athan Transport Interchange and see that its delivery would be to the benefit of the Key Site itself but also more broadly to St Athan and western parts of the VoG.
4.3. It is clear from discussions with Transport for Wales that there is a strong business case for the delivery of a railway station and that the creation of "critical mass" through residential development around it has a key role in driving its delivery, as does the nationally significant economic role that the Bro Tathan Enterprise Zone has and the Aberthaw Green Energy Park will have. The proximity of St Athan to both of these hubs clearly contributes to its fundamental sustainability and suitability for growth whilst the further development of a critical mass of housing and employment generating uses will further support linkages between them and strengthen the business case for a new railway station at St Athan. This is reflected in TFW's 'Today, Tomorrow, Together: A Vision for Rail Across Wales and the Borders' which confirms that the delivery of St Athan Railway Station remains in TFW's pipeline which has been endorsed by the Westminster Government.
4.4. The location that is identified on the Proposals Map is Transport for Wales' preferred location within the site and has been incorporated into the masterplanning approach which seeks to create a node around it by incorporating a bus interchange and a mix of uses.
4.5. At present, the Proposals Map identifies the location of the Railway Station using a red star which is positioned on the railway line itself but without the required land take not spatially being defined.
4.6. Whilst Hallam recognise that the exact land take required will need to be refined further through discussion with TFW, it may be the case that the mixed-use element on this portion of the site comes forward before the Railway Station.
4.7. The early delivery of these elements should be welcomed as clearly the mixed-use element both enhances the range of services and facilities in St Athan but also would mean that the Railway Station is integrated upon delivery.
4.8. On that basis, it is imperative that the safeguarding of land for the Transport Interchange is limited only to that land required to deliver the Transport Interchange and is done in such a way such the safeguarding does not sterilise non-transport related development from this portion of the site until the Railway Station has been delivered.
Gileston Road Junction, St Athan
4.9. Paragraphs 6.199 and 6.200 relate to the expectation that vehicle trips as a result of RLDP allocations in St Athan

are anticipated to trigger the need to upgrade the Gileston Road Junction to a signal-controlled arrangement. This is informed by the conclusions of Table 3 of the Strategic Transport Assessment which forecasts that the junction will be operating above capacity during both the weekday AM and PM peak by the RLDP's end point.
4.10. Hallam note that Technical Note 08 of the Strategic Transport Assessment identifies that the improvements to the Gileston Road Junction are to be delivered by VoG and funded through financial contributions from seven sites that the RLDP proposes to allocate.
4.11. Improvements to this junction are to be funded by a number of sites; however it is unclear whether (and if so, when) forward funding will be secured by the Council and clearly there cannot be a situation where none of the sites can deliver homes until strategic highways works are funded / completed. We therefore seek further clarification over the phasing of these works and note that early delivery of homes ahead of strategic highway improvements is likely to be important for deliverability of each strategic site.
4.12. To respond to Hallam's above comments, one approach could be for references to highway improvement works to be entirely removed from this policy or, if they are to remain, that qualifying text is added to note that the need for and format of any improvements will be subject to detailed consideration at planning application stage and that such contributions must be justified in planning terms, particularly where (in the case of Pen Y Turnpike Road and Waycock Cross for Land to the West of St Athan), the distance from a site and the junction to be improved is significant and therefore thee number of vehicle trips that would be generated modest.
4.13. This aligns with Hallam's suggested approach to the specific wording of Policy HG1 KS5.

Policy CI1 (Open Space Provision)
5.1. This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.
5.2. Hallam note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.
5.3. Hallam is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter.

Policy CI3 (New Community Facilities)
6.1. As well as allocating land for five new or improved education developments, this policy safeguards 'Land South of the Railway Line, St Athan' for the delivery of a Welsh-medium secondary school.
6.2. This policy is clearly of interest to Hallam because Paragraph 6.250 places a requirement for the safeguarding of land on the northern side of the railway line on their Land to the West of St Athan Key Site for a footbridge to land on.
6.3. With the policy wording being intentionally light-touch, Paragraph 6.250 of the Deposit RLDP provides greater detail about the safeguarding of this land (and other paragraphs in the Deposit RLDP relate to other community facilities that Policy CI3 covers). It effectively does two things.
6.4. Firstly, it notes that the delivery of this school will require active travel improvements including the safeguarding of land for a pedestrian and cyclist footbridge over the railway line.
6.5. Secondly, it is clear that the safeguarding of this land is in response to a forecast increase in demand for Welsh-medium secondary school places across the whole of the VoG as a result of expanded capacity at Welsh-medium primary schools across the VoG. On this basis, it follows that this location has been selected as a preferred location because of its ability to serve the wider sub-region.
6.6. Hallam recognise that this site could be a suitable location for a Welsh Medium Secondary School and, as a principle, is agreeable to the safeguarding of land for the footbridge landing on the northern side of the railway line.
6.7. Paragraph 6.250 of the Deposit RLDP is clear that the delivery of a Welsh-Medium secondary school is in response to a regional / sub-regional demand rather than a local need as a result generated either by the development of Land West of St Athan or other emerging allocations within St Athan and it cannot be the case that Hallam are expected to make disproportionate contributions to either the delivery of the school or required active travel improvements just because they have control of the site or that it is next to the Key Site.

Policy CC1 (Residential Operational Net Zero Carbon Development)
7.1. The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) before the policy wording sets out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.
7.2. As a starting point, Hallam share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) can present challenges. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this will result in an uneven framework for housebuilders, significantly adding cost and reducing certainty.
7.3. The justification for using planning policy to set requirements exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging

policies.
7.4. There are two points to be made by Hallam here:
7.5. Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage that such an approach would not be sound. This Written Ministerial Statement was subject to an unsuccessful judicial review.
7.6. Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations. Where there are existing Local Plans in England that take this approach, they do not align with the Westminster Government's position and there will be no Local Plans emerging including such policies.
7.7. Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs (Bridgend and Merthyr Tydfil) do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound at Examination stage.
7.8. Secondly, Hallam have concerns with the approach that has been taken with regards to viability.
7.9. From Hallam's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.
7.10. As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated. This is important as it demonstrates that, whilst Hallam do not believe such a policy approach should be taken, the development of the site at the time of the completion of the Development Viability Model for the site is viable whilst meeting the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development).
7.11. Hallam's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. This concern is particularly exacerbated by the fact that, as recognised at Paragraph 6.47 of Background Paper 42 Viability Assessment, takes the lowest estimate for the works required to achieve these policy expectations, Savills' experience – both that of their development land team based in Wales and their environmental sustainability team based across England - is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.
7.12. Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy DNP3 (Glamorgan Heritage Coast)
8.1. This policy relates to the Glamorgan Heritage Coast, identifying a series of land uses that are permissible within the policy area before setting three tests that must be satisfied for development within the Glamorgan Heritage Coast to be permissible where there is an adverse environmental impact.
8.2. Hallam note that the 'Land South of the B4265, St Athan' portion of the land that they control is both proposed to be retained as part of the Glamorgan Heritage Coast (a continuation of the position taken in the adopted LDP) whilst also forming part of the Land to the West of St Athan Key Site where the masterplan at Figure 17 shows it as accommodating the potential new railway station and a mixed-use area (including car parking).
8.3. The relevant extract of the Proposals Map is replicated below:
8.4. The exact composition of the buildings proposed on this portion will require further refinement and will need to be driven by occupier requirements, but the masterplanning work undertaken by pad Design envisages that they could provide a mix of retail and food and drink uses most likely across some or all of the ground floor, alongside workshop, co-working or office incubator space at upper floor levels and perhaps at ground floor level. There could also be the potential for additional homes, likely in the form of apartments at upper floors, as part of a mix of uses. It is realistic therefore to anticipate that this portion of the site will accommodate buildings of up to three or four storeys with a high plot ratio to reflect the uses and supporting infrastructure that it is to accommodate.
8.5. Hallam's position is that the continued inclusion of this parcel of land as part of the wider Glamorgan Heritage Coast is inappropriate for two reasons.
8.6. Firstly, and its most basic level, the approach of allocating the site for development whilst retaining a designation that inherently seeks to restrict the type, form, and quantum of development, is wholly contradictory.
8.7. Designation of this portion of the site as part of the Glamorgan Heritage Coast will mean, given that the uses that Figure 17 envisages as being delivered on the site are not those that the first part of Policy DNP3 (Glamorgan Heritage Coast) allows for, any application for development will need to demonstrate that there is a compelling need for the development, that the benefits outweigh the harm, and that appropriate mitigation measures are in place. This the potential to prejudice its development or, at very least, greatly impact how it is developed whilst requiring.
8.8. Secondly, it is difficult to see how this land warrants ongoing inclusion within the designated Glamorgan Heritage Coast. This is something that is considered in more detail in the Review of Landscape Character and Visual Amenity (December 2022) prepared by FPCR and submitted as part of the Call for Sites (and also available as part of the consultation on the Deposit RLDP as a piece of Key Site Supporting Information). Paragraph 5.13 of the FPCR document concludes on this piece of land that:
'Through the fieldwork it is considered that the Site does not display any "special environmental qualities" identified by

the Policy and plays no intrinsic role in the Policy designation, as it is effectively forms a rather ordinary grazing field. It is influenced by the urbanising elements of the adjacent B4265, the Railway Line, the Tarmac Cement works, and to some degree the built edge of St Athan. Furthermore, it is bound and contained by trees and woodland beside the railway line, which prevents wider intervisibility with the coastline.'
8.9. Taking the above together, Hallam suggest that the preparation of the RLDP provides the opportunity to define the extent of the Glamorgan Heritage Coast to respond to both the landscape value of certain sites but also the wider aspirations of the RLDP. If it is not within the gift of VoG to redefine the boundaries of the Glamorgan Heritage Coast through the RLDP then Hallam suggest that an additional element could be added to this policy to confirm that it does not apply to land which is allocated for development.

6766 Comment

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Persimmon Homes (East Wales) [1068]
Agent: Boyer Planning

Summary:

Persimmon supports the overall principle of a medium growth strategy. However, given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

The housing requirement is based on average completion rates over the first ten years of the adopted Local Development Plan. However, a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved. A five-year average build rate of 780 units per annum was acheived between 2016 and 2021.

The ten-year average delivery rate fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation.

The current adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.

Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP.

The DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. The 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026) have been published. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%and the Vale has the largest percentage increases (up 11.7%).

It remains unclear whether existing unmet need has been fully factored into the overall housing requirement. This is particularly important in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need. There is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.

For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.

Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out

in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority. Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes

annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.

Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement

From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified "has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area." It also notes that this level of growth has been chosen so that it is "complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).".

Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates

which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure

requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.
Policy SP5 – Creating Healthy & Inclusive Places and Spaces
Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the

Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.

In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.

By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.

Policy HG1 (B) – Housing Allocations

HG1 (3) Barry - Land at Hayes Lane

Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:

Unsustainable Location & Poor Connectivity

Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.

Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.

As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

Loss of Allocated Employment Land

Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.

Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability

to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements
Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
Policy CI1 – Open Space Provision
Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.
The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.
Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing

additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.

Policy SP20 – Biodiversity and Ecosystem Resilience

In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Policy DNP8 – Severn Estuary Recreational Pressure

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that

key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes' most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Change suggested by respondent:

Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

6771 Comment

Document Element: SP6 - HOUSING REQUIREMENT, Table 2: Housing Supply
Respondent: Persimmon Homes (East Wales) [1068]
Agent: Boyer Planning

Summary:

Existing land supply - The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Windfall - The Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. We do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036, but it is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year. periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.
For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives

Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced

significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage

Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to

incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.
Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual
As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement
From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a

more consistent supply of homes to be achieved over the plan period as a whole.
Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.
Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.
In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.
Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.
Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.
Policy SSC1 – Development within Settlement Boundaries
Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.
Policy SP4 – Placemaking
In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.
In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.
The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality

architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.
Policy PGD1 – Creating Well Designed and Inclusive Places
Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.
On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.
A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.
Policy SP5 – Creating Healthy & Inclusive Places and Spaces
Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into

the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris

Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would

prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements
Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.
Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives.
Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks.

Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

Policy CI1 – Open Space Provision

Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.

The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.

Productive and Enterprising Places

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.

Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.

Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside

supplementary planting to naturally integrate the site into the wider landscape framework.
Policy SP20 – Biodiversity and Ecosystem Resilience
In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.
Policy DNP1 – Special Landscape Areas
Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.
Policy DNP2 – Green Wedges
Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.
Policy DNP8 – Severn Estuary Recreational Pressure
Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute “visitor pressure” or an “adverse impact” on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan’s ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes’ most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale’s position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan’s ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that

it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys' (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council's proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Change suggested by respondent:

The RLDP should incorporate a greater flexibility allowance to provide certainty that any shortfalls/fallow periods are offset and enable a more consistent supply of homes to be achieved over the plan period as a whole.

6820 Object

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: Mr Ian Fairweather [1225]

Agent: Boyer Planning

Summary:

There are concerns regarding a need for a higher housing level and the need for development to be appropriate placed in sustainable allocations in a settlement in which people want to live is still relevant.

Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

To accommodate this increased in flexibility allowance and over all housing numbers, it should be outlined that smaller sites typically deliver more quickly, are less infrastructure-dependent, and increase build-out rates through diversification.

Full text:

The Spinney, St Nicholas (Site Ref: 460)
Boyer have prepared the following representation on behalf of Mr Fairweather in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021-2036 Deposit Plan Consultation.

A summary of our main representations is as follows:
• Significant concern is raised regarding the lack of residential allocations within the Minor Rural Settlements, in particular St Nicholas.
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance.
• Questions asked regarding the spatial distribution and the lack of other allocations to provide a range and choice of housing.
• Confirmation of the limited constraints for The Spinney, St Nicholas (Site Ref: 460).
• Review of the Candidate Site Assessment; and
• Need to review the Settlement Boundary of St Nicholas.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the main concern for Mr Fairweather is the proposed primary focus of housing growth within the Vale being within the Strategic Growth Area. Whilst it is understood and supported by Mr Fairweather that new housing developments would be concentrated in locations which are served by existing public transport routes and provide the opportunity to enhance sustainable transport connectivity, it is shortsighted to concentrate this growth specifically along the railway line. The justification being that those settlements identified as being 'Outside of the Strategic Growth Area' – including St Nicholas, are equally as important as those within. St Nicholas is a sustainable location and located on an important public transport route (A48) and is well served by bus transport.

The principle of locating development at sustainable settlement is supported, however Mr Fairweather considered that limiting development at suitable settlements outside the Strategic Growth Area is not the correct approach and that greater flexibility is required to deliver the housing need. Currently under Policies HG1 and HG4, the only allocations in any Minor Rural Settlements amount to 122 dwellings in total (excluding any from St Nicholas). This also needs to be considered in the context of the 1,303 dwellings expected from large and small windfall developments. Clearly there is a requirement to provide further allocations in sustainable Minor Rural settlements identified as being 'Outside of the Strategic Growth Area' – namely St Nicholas.

In context of above, Mr Fairweather strongly recommends that appropriate consideration is given to the widening of the Strategic Growth Areas to include St Nicholas as a sustainable settlement which is capable of accommodating a new allocation at The Spinney (Site Ref: 460).

SP2: Settlement Hierarchy
Mr Fairweather previously supported the identification of St Nicholas as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Cardiff to the east and access to Bridgend to the West. The Deposit Plan retains St Nicholas within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.

Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as St Nicholas, should be subject to such constrained growth.

In this context, Mr Fairweather highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all buildings upon the identified importance of Minor Rural Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to St Nicholas under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of St Nicholas, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, The Spinney, St Nicholas (Site Ref: 460) is considered to naturally round-off the existing boundary, enclosing the envelope of development, without encroaching or sprawling beyond the existing line of built form, in a sustainable location which can accommodate an appropriate allocation.

SP6: Housing Requirement
As per Mr Fairweather's previous comments to the Preferred Strategy, the concerns regarding a need for a higher housing level and the need for development to be appropriate placed in sustainable allocations in a settlement in which people want to live is still relevant.

Currently Policy SP6 establishes the overall housing requirement and applies a 10% flexibility allowance. The Policy suggests that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes and this will be delivered by:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments

As per previous representations, Mr Fairweather considers that it's important to take account of recent guidance provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan. For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to

an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
More recently in Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery.
Applying the same approach to other current Local Development Plans, it is evident that a flexible housing allowance above the current 10% threshold will be required. Having reviewed the Council's evidence base Mr Fairweather considered that a minimum allowance of 15% would be reflective of the County's growth aspirations and would seek an additional circa 400 dwellings (equating to a housing requirement of 9,074 dwellings inclusive of the 15% flexibility).

To accommodate this increased in flexibility allowance and over all housing numbers, it should be outlined that smaller sites typically deliver more quickly, are less infrastructure-dependent, and increase build-out rates through diversification. The Spinney represents precisely the type of deliverable site that should form part of an enhanced flexibility allowance.

Policy SP6 should therefore be amended to increase the flexibility margin to up to 15%, with consequential allocation of additional small and medium-sized sites.
HG1: Housing Allocations Table 3 spatial distribution
Mr Fairweather does not comment on any of the proposed housing allocations, however, does highlight that the delivery in incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements. Only 161 units are proposed on smaller allocated sites, equating to approximately 7% of newly allocated supply.
In the context of the above, there remains significant concern that the spatial strategy continues to exclude allocations within Minor Rural Settlements, including St Nicholas.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.

There is therefore a clear disconnect between the identified role and function of settlements such as St Nicholas and the absence of any allocated sites (excluding the affordable led schemes under Policy HG4) capable of delivering an appropriate range and choice of dwellings. The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.

This approach is inconsistent with the settlement's accessibility and functional role. St Nicholas is:
• Well connected to the A48 strategic highway network.
• Served by bus routes within close proximity to the site.
• Within commuting distance of Cardiff and Cowbridge.
• A sustainable and established residential community.

Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.
Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at The Spinney would represent proportionate growth consistent with the scale and character of the settlement.
HG4 – Affordable Housing Allocations

It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, but in the context of them being affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing to meet the affordable housing needs of the local community. Mr Fairweather has no objection in principle to

this but does object to the fact that there is no development in St Nicholas (despite it being sustainably located on the A48).

Furthermore, The Spinney, St Nicholas (Site Ref: 460) proposes a 40% affordable housing provision which accords with Policy SP8 of the Deposit Plan. Should the Authority consider that the site is suitable for allocation under Policy HG4 then the provision can be amended to 50% to accord with the policy.

Candidate Site Response: The Spinney, St Nicholas (Site Ref: 460)
From a review of the Background Paper (BP18 a) - Candidate Site Assessment at Preferred Strategy Stage, we are aware that the candidate site The Spinney, St Nicholas (Site Ref: 460) has not progressed beyond Stage 2: Detailed Site Assessment: Site Characteristics and Physical Constraints.

The justification provided states that 'The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area'. Whilst this is disputed and it is considered that the site should have progressed, it is important to highlight that of all the Candidate Sites within St Nicholas, The Spinney has the least issues raised.

Other sites within the assessment raised concerns regarding Best and Most Versatile Land, intrusion into the open countryside and the loss of a sites identified as providing important views. Ultimately, Site Ref: 460, is clearly the most appropriate site for any development within St Nicholas and with limited constraints raised.
Turning to the reasons for not taking the site forward, the following is reiterated in the context of the impact on the character and setting of the Conservation Area.

Conservation Area Impact
St Nicholas is described in the Conservation Area Appraisal and Management Plan as 'a low density, linear village located on the A48' and the candidate site is located towards the west of the village and lies partially within the current Conservation Area boundary. The Authority will be aware that the Conservation Area has been amended over the years to its current illogical designation regarding the Paddock area, similar to that of the Settlement Boundary.

The development of the Candidate Site is a clearly a logical and sensible infill development, which would have limited impact upon the Conservation Area. The majority of the site is already hidden from the A48 via mature vegetation and existing boundary features, and any proposed development would maintain this approach and minimise the visual appearance on the Conservation Area.
Listed buildings and other historic buildings of special interest are identified in the Conservation Area Appraisal as 'County Treasures'. These are situated at the heart of the Conservation Area. The buildings and their settings establish a scale and density for the historic area of the village to the south of St Nicholas' Church.

More modern development, away from the centre of the village at Ger-y-Llan to the northeast, Dyffryn Close to the southeast and Old Rectory Drive to the west are suburban in character with larger houses and generous gardens. These are all excluded from the Conservation Area and represent development at a lower density than the historic core of the village.

Whilst only a part of the Candidate Site is located within the Conservation Area, it has to be seen in the context of an appropriate infill site that links the southern part of the village with the more modern suburban type of development at Old Rectory Drive to the west. More significantly, the site provides an opportunity for a development to make a positive contribution to the character and appearance of the Conservation Area as well as respect or enhance the special architectural or historic interest.

This can be achieved by providing a new front boundary to the site and houses with gardens, of the type identified in the Conservation Area Appraisal and Management Plan that help define the character of the village. Whilst the Candidate Site extends to the A48, this is to allow the appropriate minimal access junction, whilst the majority of the generous grass verge will be retained, meaning that development will be clearly set back a considerable distance from the road and the opposite pavement.

Thus, the development will be totally screened when travelling along the A48 and is therefore not considered to affect the views to the north of the site. The development will complement and enhance the character of the rural and built environment surrounding the site.
In line with the objectives of the St Nicholas Conservation Appraisal and Management Plan, the boundary treatments proposed will be sympathetic and in keeping with the surrounding area, such that they do not detract from the historic assets and desired lines of view. Again, whilst detailed design has not yet been progressed, any boundary treatments proposed will avoid the use of stained close boarded timber fencing, over-elaborate modern metal railings and gates. It is reiterated that the building line for the front of the development will not encroach any further forward that the existing boundary and will be designed to be innkeeping and not detract from the existing character of the Conservation Area. Moreover, the layout of the site has been designed in such a way that the spaciousness and green infrastructure is retained and enhanced from a redundant Paddock.

Furthermore, the characteristics that give the Conservation Area its special interest, as identified in the Conservation Area Appraisal and Management Plan have been used as references for the design of the illustrative site layout.

The proposal is to use local materials and design details designed to preserve or enhance the special interest of the Conservation Area. Limestone laid as rubble external walling, slate roofs and roadside walls of varying sizes predominate. More modern houses in the area are rendered and painted white. This, according to the Conservation Area Appraisal gives 'some cohesiveness [to the area] despite their modern details'.

Elsewhere in the appraisal the village is described as having a 'rural character', a character that is reinforced by the existence of mature trees, singularly or in groups and simple pavements with narrow stone curves. The use of modern railings or timber fences are considered to be detrimental to the historic character of the conservation area.

Given the sites relationship with the Conservation Area, the proposal has been designed in to ensure that the development endeavours to protect, preserve and enhance the character of the area.

The site layout has been designed to avoid having the appearance of a suburban estate by providing a range of house types on plots that vary in size thereby maintaining the open structure of the conservation area as described. Furthermore, the existing boundaries to the east and west, which are subject to TPOs, will be retained and enhanced and not detract from the character of the Conservation Area.

The site marks a transition point between the western end of the linear historic core of the village and the lower density development at Old Rectory Drive.
The landscape proposals have been designed to include sustainable drainage, and the tree planting reflects the isolated trees or groups of trees referred to in the Conservation Area Appraisal as significant areas of character.

The illustrative site layout represents an appropriate scale of development and an efficient use of land and as such the proposed development will not have any detrimental impact upon the Conservation Area.
Deposit Plan Amendments
Settlement Boundary

Given the above and the further assessment below, the strong preference would be for the site to be allocated for residential development within St Nicholas. This would form a logical amendment to the Settlement Boundary to include the western parcel (former Paddock) of Candidate Site - The Spinney, St Nicholas (Site Ref: 460). The current Settlement Boundary is illogical as the site is surrounded by development on 3 boundaries and the simple rounding off along the southern boundary would allow for an appropriate windfall infill development.
Conservation Area

Given the above then it is considered that the Conservation Area boundary would need to be amended to reflect the allocation of the site.
These amendments would be required to the Deposit Proposals Map.

Site Assessment
The site was promoted through the Candidate Site process and assessed at Preferred Strategy stage. However, it is not allocated within the Deposit Plan and thus was not subject to updated reassessment as part of this stage of plan preparation.

For completeness, and in order to clearly demonstrate the limited and proportionate nature of the site's constraints, the previous site assessment summary table is reproduced below. This is included to highlight that the site performs favourably in sustainability and deliverability terms, and that the matters previously cited as constraints are capable of mitigation through design.

A table comparing an updated site assessment prepared by Boyer against the Council's assessment has been provided.

This representation, submitted on behalf of Mr Fairweather in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Significant concern remains regarding the absence of residential allocations within Minor Rural Settlements, particularly St Nicholas, and the continued reliance on a limited flexibility allowance under Policy HG1. An increased flexibility margin of up to 15% would necessitate the identification of additional sustainable and deliverable sites. Such growth should be directed, in part, toward appropriate locations within Minor Rural Settlements to ensure a genuine range and choice of housing and to support rural community sustainability.

It is further noted that the site performs favourably in the Council's Candidate Site Assessment, with limited constraints identified. The matters previously raised, including Conservation Area considerations, are capable of sensitive mitigation through design and have been subject to detailed review. There is no substantive evidence demonstrating that the site is unsuitable for development.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.

The Deposit Plan should therefore be amended to allocate Land adjoining The Spinney, St Nicholas (Site Ref: 460), or alternatively identify it as a reserve or flexibility site, in order to ensure the Plan is justified, effective and deliverable.

Change suggested by respondent:

Policy SP6 should therefore be amended to increase the flexibility margin to up to 15%, with consequential allocation of additional small and medium-sized sites.

6821 Object

Document Element: SP6 - HOUSING REQUIREMENT, Table 3: Spatial

Respondent: Mr Ian Fairweather [1225]

Agent: Boyer Planning

Summary:

The delivery of housing allocations is incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements. Only 161 units are proposed on smaller allocated sites, equating to approximately 7% of newly allocated supply. In the context of the above, there remains significant concern that the spatial strategy continues to exclude allocations within Minor Rural Settlements, including St Nicholas.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.
There is therefore a clear disconnect between the identified role and function of settlements such as St Nicholas and the absence of any allocated sites (excluding the affordable led schemes under Policy HG4) capable of delivering an appropriate range and choice of dwellings. The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.
This approach is inconsistent with the settlement's accessibility and functional role.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice.

Full text:

The Spinney, St Nicholas (Site Ref: 460)
Boyer have prepared the following representation on behalf of Mr Fairweather in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021-2036 Deposit Plan Consultation.

A summary of our main representations is as follows:
• Significant concern is raised regarding the lack of residential allocations within the Minor Rural Settlements, in particular St Nicholas.
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance.
• Questions asked regarding the spatial distribution and the lack of other allocations to provide a range and choice of housing.
• Confirmation of the limited constraints for The Spinney, St Nicholas (Site Ref: 460).
• Review of the Candidate Site Assessment; and
• Need to review the Settlement Boundary of St Nicholas.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the main concern for Mr Fairweather is the proposed primary focus of housing growth within the Vale being within the Strategic Growth Area. Whilst it is understood and supported by Mr Fairweather that new housing developments would be concentrated in locations which are served by existing public transport routes and provide the opportunity to enhance sustainable transport connectivity, it is shortsighted to concentrate this growth specifically along the railway line. The justification being that those settlements identified as being 'Outside of the Strategic Growth Area' – including St Nicholas, are equally as important as those within. St Nicholas is a sustainable location and located on an important public transport route (A48) and is well served by bus transport.

The principle of locating development at sustainable settlement is supported, however Mr Fairweather considered that limiting development at suitable settlements outside the Strategic Growth Area is not the correct approach and that greater flexibility is required to deliver the housing need. Currently under Policies HG1 and HG4, the only allocations in any Minor Rural Settlements amount to 122 dwellings in total (excluding any from St Nicholas). This also needs to be considered in the context of the 1,303 dwellings expected from large and small windfall developments. Clearly there is a requirement to provide further allocations in sustainable Minor Rural settlements identified as being 'Outside of the

Strategic Growth Area' – namely St Nicholas.

In context of above, Mr Fairweather strongly recommends that appropriate consideration is given to the widening of the Strategic Growth Areas to include St Nicholas as a sustainable settlement which is capable of accommodating a new allocation at The Spinney (Site Ref: 460).

SP2: Settlement Hierarchy
Mr Fairweather previously supported the identification of St Nicholas as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Cardiff to the east and access to Bridgend to the West. The Deposit Plan retains St Nicholas within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.

Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as St Nicholas, should be subject to such constrained growth.

In this context, Mr Fairweather highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all buildings upon the identified importance of Minor Rural Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to St Nicholas under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of St Nicholas, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, The Spinney, St Nicholas (Site Ref: 460) is considered to naturally round-off the existing boundary, enclosing the envelope of development, without encroaching or sprawling beyond the existing line of built form, in a sustainable location which can accommodate an appropriate allocation.

SP6: Housing Requirement
As per Mr Fairweather's previous comments to the Preferred Strategy, the concerns regarding a need for a higher housing level and the need for development to be appropriate placed in sustainable allocations in a settlement in which people want to live is still relevant.

Currently Policy SP6 establishes the overall housing requirement and applies a 10% flexibility allowance. The Policy suggests that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes and this will be delivered by:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments

As per previous representations, Mr Fairweather considers that it's important to take account of recent guidance provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan. For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.

More recently in Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery.
Applying the same approach to other current Local Development Plans, it is evident that a flexible housing allowance above the current 10% threshold will be required. Having reviewed the Council's evidence base Mr Fairweather considered that a minimum allowance of 15% would be reflective of the County's growth aspirations and would seek an additional circa 400 dwellings (equating to a housing requirement of 9,074 dwellings inclusive of the 15% flexibility).

To accommodate this increased in flexibility allowance and over all housing numbers, it should be outlined that smaller sites typically deliver more quickly, are less infrastructure-dependent, and increase build-out rates through diversification. The Spinney represents precisely the type of deliverable site that should form part of an enhanced flexibility allowance.

Policy SP6 should therefore be amended to increase the flexibility margin to up to 15%, with consequential allocation of additional small and medium-sized sites.
HG1: Housing Allocations Table 3 spatial distribution
Mr Fairweather does not comment on any of the proposed housing allocations, however, does highlight that the delivery in incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements. Only 161 units are proposed on smaller allocated sites, equating to approximately 7% of newly allocated supply.
In the context of the above, there remains significant concern that the spatial strategy continues to exclude allocations within Minor Rural Settlements, including St Nicholas.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.

There is therefore a clear disconnect between the identified role and function of settlements such as St Nicholas and the absence of any allocated sites (excluding the affordable led schemes under Policy HG4) capable of delivering an appropriate range and choice of dwellings. The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.

This approach is inconsistent with the settlement's accessibility and functional role. St Nicholas is:
• Well connected to the A48 strategic highway network.
• Served by bus routes within close proximity to the site.
• Within commuting distance of Cardiff and Cowbridge.
• A sustainable and established residential community.

Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.
Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at The Spinney would represent proportionate growth consistent with the scale and character of the settlement.
HG4 – Affordable Housing Allocations

It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, but in the context of them being affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing to meet the affordable housing needs of the local community. Mr Fairweather has no objection in principle to this but does object to the fact that there is no development in St Nicholas (despite it being sustainably located on the A48).

Furthermore, The Spinney, St Nicholas (Site Ref: 460) proposes a 40% affordable housing provision which accords with Policy SP8 of the Deposit Plan. Should the Authority consider that the site is suitable for allocation under Policy HG4 then the provision can be amended to 50% to accord with the policy.

Candidate Site Response: The Spinney, St Nicholas (Site Ref: 460)
From a review of the Background Paper (BP18 a) - Candidate Site Assessment at Preferred Strategy Stage, we are aware that the candidate site The Spinney, St Nicholas (Site Ref: 460) has not progressed beyond Stage 2: Detailed Site Assessment: Site Characteristics and Physical Constraints.

The justification provided states that 'The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area'. Whilst this is disputed and it is considered that the site should have progressed, it is important to highlight that of all the Candidate Sites within St Nicholas, The Spinney has the least issues raised.

Other sites within the assessment raised concerns regarding Best and Most Versatile Land, intrusion into the open countryside and the loss of a sites identified as providing important views. Ultimately, Site Ref: 460, is clearly the most appropriate site for any development within St Nicholas and with limited constraints raised.
Turning to the reasons for not taking the site forward, the following is reiterated in the context of the impact on the character and setting of the Conservation Area.

Conservation Area Impact
St Nicholas is described in the Conservation Area Appraisal and Management Plan as 'a low density, linear village located on the A48' and the candidate site is located towards the west of the village and lies partially within the current Conservation Area boundary. The Authority will be aware that the Conservation Area has been amended over the years to its current illogical designation regarding the Paddock area, similar to that of the Settlement Boundary.

The development of the Candidate Site is a clearly a logical and sensible infill development, which would have limited impact upon the Conservation Area. The majority of the site is already hidden from the A48 via mature vegetation and existing boundary features, and any proposed development would maintain this approach and minimise the visual appearance on the Conservation Area.
Listed buildings and other historic buildings of special interest are identified in the Conservation Area Appraisal as 'County Treasures'. These are situated at the heart of the Conservation Area. The buildings and their settings establish a scale and density for the historic area of the village to the south of St Nicholas' Church.

More modern development, away from the centre of the village at Ger-y-Llan to the northeast, Dyffryn Close to the southeast and Old Rectory Drive to the west are suburban in character with larger houses and generous gardens. These are all excluded from the Conservation Area and represent development at a lower density than the historic core of the village.

Whilst only a part of the Candidate Site is located within the Conservation Area, it has to be seen in the context of an appropriate infill site that links the southern part of the village with the more modern suburban type of development at Old Rectory Drive to the west. More significantly, the site provides an opportunity for a development to make a positive contribution to the character and appearance of the Conservation Area as well as respect or enhance the special architectural or historic interest.

This can be achieved by providing a new front boundary to the site and houses with gardens, of the type identified in the Conservation Area Appraisal and Management Plan that help define the character of the village. Whilst the Candidate Site extends to the A48, this is to allow the appropriate minimal access junction, whilst the majority of the generous grass verge will be retained, meaning that development will be clearly set back a considerable distance from the road and the opposite pavement.

Thus, the development will be totally screened when travelling along the A48 and is therefore not considered to affect the views to the north of the site. The development will complement and enhance the character of the rural and built environment surrounding the site.
In line with the objectives of the St Nicholas Conservation Appraisal and Management Plan, the boundary treatments proposed will be sympathetic and in keeping with the surrounding area, such that they do not detract from the historic assets and desired lines of view. Again, whilst detailed design has not yet been progressed, any boundary treatments proposed will avoid the use of stained close boarded timber fencing, over-elaborate modern metal railings and gates. It is reiterated that the building line for the front of the development will not encroach any further forward that the existing boundary and will be designed to be innkeeping and not detract from the existing character of the Conservation Area. Moreover, the layout of the site has been designed in such a way that the spaciousness and green infrastructure is retained and enhanced from a redundant Paddock.

Furthermore, the characteristics that give the Conservation Area its special interest, as identified in the Conservation Area Appraisal and Management Plan have been used as references for the design of the illustrative site layout.

The proposal is to use local materials and design details designed to preserve or enhance the special interest of the Conservation Area. Limestone laid as rubble external walling, slate roofs and roadside walls of varying sizes predominate. More modern houses in the area are rendered and painted white. This, according to the Conservation Area Appraisal gives 'some cohesiveness [to the area] despite their modern details'.

Elsewhere in the appraisal the village is described as having a 'rural character', a character that is reinforced by the

existence of mature trees, singularly or in groups and simple pavements with narrow stone curves. The use of modern railings or timber fences are considered to be detrimental to the historic character of the conservation area.

Given the sites relationship with the Conservation Area, the proposal has been designed in to ensure that the development endeavours to protect, preserve and enhance the character of the area.

The site layout has been designed to avoid having the appearance of a suburban estate by providing a range of house types on plots that vary in size thereby maintaining the open structure of the conservation area as described. Furthermore, the existing boundaries to the east and west, which are subject to TPOs, will be retained and enhanced and not detract from the character of the Conservation Area.

The site marks a transition point between the western end of the linear historic core of the village and the lower density development at Old Rectory Drive.
The landscape proposals have been designed to include sustainable drainage, and the tree planting reflects the isolated trees or groups of trees referred to in the Conservation Area Appraisal as significant areas of character.

The illustrative site layout represents an appropriate scale of development and an efficient use of land and as such the proposed development will not have any detrimental impact upon the Conservation Area.
Deposit Plan Amendments
Settlement Boundary

Given the above and the further assessment below, the strong preference would be for the site to be allocated for residential development within St Nicholas. This would form a logical amendment to the Settlement Boundary to include the western parcel (former Paddock) of Candidate Site - The Spinney, St Nicholas (Site Ref: 460). The current Settlement Boundary is illogical as the site is surrounded by development on 3 boundaries and the simple rounding off along the southern boundary would allow for an appropriate windfall infill development.
Conservation Area

Given the above then it is considered that the Conservation Area boundary would need to be amended to reflect the allocation of the site.
These amendments would be required to the Deposit Proposals Map.

Site Assessment
The site was promoted through the Candidate Site process and assessed at Preferred Strategy stage. However, it is not allocated within the Deposit Plan and thus was not subject to updated reassessment as part of this stage of plan preparation.

For completeness, and in order to clearly demonstrate the limited and proportionate nature of the site's constraints, the previous site assessment summary table is reproduced below. This is included to highlight that the site performs favourably in sustainability and deliverability terms, and that the matters previously cited as constraints are capable of mitigation through design.

A table comparing an updated site assessment prepared by Boyer against the Council's assessment has been provided.

This representation, submitted on behalf of Mr Fairweather in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Significant concern remains regarding the absence of residential allocations within Minor Rural Settlements, particularly St Nicholas, and the continued reliance on a limited flexibility allowance under Policy HG1. An increased flexibility margin of up to 15% would necessitate the identification of additional sustainable and deliverable sites. Such growth should be directed, in part, toward appropriate locations within Minor Rural Settlements to ensure a genuine range and choice of housing and to support rural community sustainability.

It is further noted that the site performs favourably in the Council's Candidate Site Assessment, with limited constraints identified. The matters previously raised, including Conservation Area considerations, are capable of sensitive mitigation through design and have been subject to detailed review. There is no substantive evidence demonstrating that the site is unsuitable for development.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.
The Deposit Plan should therefore be amended to allocate Land adjoining The Spinney, St Nicholas (Site Ref: 460), or alternatively identify it as a reserve or flexibility site, in order to ensure the Plan is justified, effective and deliverable.

Change suggested by respondent:

A modest allocation at St Nicholas would represent proportionate growth consistent with the scale and character of the settlement.

6853 Object

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Taylor Wimpey [386]
Agent: Savills

Summary:
Taylor Wimpey maintains that the current housing requirement in the Deposit Revised Local Development Plan (RLDP) is fundamentally undervalued. By relying on a ten-year dwelling-led scenario, the methodology incorporates a period of suppressed supply caused by the delayed adoption of the previous plan. Taylor Wimpey argues that the council must instead align with Planning Policy Wales (PPW) by utilising the latest 2022-based household projections. This shift would increase the housing requirement from the proposed 7,587 units to 9,623 units to accurately reflect demographic evidence.

Regarding the flexibility allowance, Taylor Wimpey asserts that the proposed 10% buffer is insufficient. Evidence from the Annual Monitoring Report 2024-2025 reveals a 20.7% shortfall in completions against previous targets. Consequently, the firm recommends increasing the flexibility allowance to 20%, mirroring recent adjustments made by neighboring authorities like Bridgend, to ensure the housing requirement is actually met despite potential site non-delivery.

Taylor Wimpey also raises significant concerns regarding the reliability of the current land bank and windfall allowances. They suggest a 20% non-delivery discount should be applied to sites with planning permission to account for viability, site constraints, and landowner intentions. Similarly, the firm argues that windfall projections are overly optimistic; following the precedent set by Cardiff Council, they recommend reducing the windfall allowance to 75% of the ten-year average as easily developable sites become increasingly scarce.

Furthermore, Taylor Wimpey disputes the inclusion of certain "rolled forward" sites from the previous plan, specifically land at Pencoedtre Lane and Eglwys Brewis Road. These sites, totaling 370 homes, have failed to deliver despite long-standing policy support due to viability and technical constraints. Taylor Wimpey recommends their removal from the supply tables to maintain a realistic outlook on deliverability.

In conclusion, Taylor Wimpey suggests that the combination of a higher housing requirement, an increased flexibility buffer, and more cautious supply assumptions creates a significant deficit. They calculate that the RLDP must identify new allocations for an additional 3,872 homes to ensure a robust and sound development strategy for the region.

Full text:
1. Introduction

1.1.1 Savills is instructed by Taylor Wimpey PLC ('Taylor Wimpey') to respond to the consultation on the Deposit Plan as part of the preparation of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').

1.1.2 The submission is made in the context of Taylor Wimpey's position as the promoter of Site ID 376 (Land West of Swanbridge Road, Phase 3). The site is being promoted for a residential development comprising of 260 homes.

1.1.3 Taylor Wimpey is one of the UK's leading national housebuilders, with extensive experience in delivering high-quality residential developments across a wide range of local authority areas. The company has an established presence within the VoG area. Taylor Wimpey is in the process of delivering Phase 1 of the site with development of Phase 2 close to commencing to dovetail with the completion of Phase 1. Phase 3 would act as a logical extension to the site, effectively rounding off development in this part of Sully and dovetailing with Phase 2 which is anticipated to be completed in 2029.

1.1.4 The site was originally submitted as a candidate site as part of the Call for Candidate Sites stage in September 2022 by Taylor Wimpey. This was a comprehensive site submission demonstrating that the site was viable, deliverable and sustainable – the three tests for Candidate Sites to satisfy as set out in Paragraph 3.36 of the Development Plans Manual. The Candidate Site submission consisted of the following information:

• Archaeological Desk-based Assessment (prepared by RPS);
• Design Vision (prepared by Pegasus Group);
• Drainage Strategy & Flood Risk Assessment (prepared by Pheonix Design);
• Landscape Appraisal (prepared by Pegasus Group);
• Preliminary Ecological Appraisal (prepared by Soltys Brewster);
• High Level Viability Statement (prepared by Savills);
• Transport Technical Note (prepared by Vectos); and
• Supporting Statement (prepared by Savills).

1.1.5 Since then, and on behalf of Taylor Wimpey , Savills have also responded to the consultation on the Preferred Strategy in February 2024 as well as the Housing Growth in Barry consultation in July 2025 and the Housing Trajectory in October 2025.

1.1.6 This supporting statement is structured to initially comment on the approach taken by the VoG in assessing the Land West of Swanbridge Road, Phase 3 site before commenting on specific policies that are contained within the Deposit RLDP.

1.1.7 In general, Taylor Wimpey's position is that, at present, the Deposit RLDP is not sound but that it could be made sound through the amendments as suggested throughout this Statement.

2. Candidate Site Assessment Process and Integrated Sustainability Assessment
Introduction

2.1.1 Candidate sites are in essence assessed through two means – the Candidate Site Assessment Background Papers and the Integrated Sustainability Appraisal.

2.1.2 Taylor Wimpey's position is that both of these documents do not provide an adequate assessment of the Land West of Swanbridge Road, Phase 3 site.

2.1.3 Each is considered in turn below.

Candidate Site Assessment Process

2.1.4 All candidate sites have been assessed at Preferred Strategy stage (reported as Background Paper 18) and Deposit stage (reported as Background Paper 18a).

2.1.5 The reason for the Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site not being carried forward as part of these assessments was presented in Background Paper 18 at the time of publication of the Preferred Strategy with Backgropund Paper 18a providing no further site analysis. The reason for the site not progressing this stage of the Candidate Site assessment process is as follows:

"Development of the site would lead to a loss of the Best and Most Versatile Grade 3a agricultural land contrary to national policy."

2.1.6 Whilst parts of the site do constitute Best and Most Versatile (BMV) land, Taylor Wimpey's position is that there are compelling reasons relating to the site's context and how it is utilised that mean a more nuanced position needs to be taken. Without such nuance, the RLDP risks not allocating a site that, whilst perhaps containing BMV, is otherwise suitable for development and more suitable for development then sites that the Deposit RLDP proposes to instead allocate.

2.1.7 Included at Appendix A, and included as part of Taylor Wimpey's representations on the Preferred Strategy and the Housing Growth in Barry consultations, is an Agricultural Assessment prepared by The Andersons Centre.

2.1.8 The key conclusions from this Assessment are that:

• The site is farmed by a tenant farmer whose main base is approximately 12km away which presents logistical and practical challenges. These challenges are exacerbated by the lack of farm buildings and the fact that there is no mains electricity;

• The site forms part of a wider 230 acre farm and so the cessation of agricultural practices on this parcel will not, by virtue of its size, prejudice the continued farming of the wider land parcel;

• The tenant farmer farms approximately 3,000 acres of land and so the loss of the ability to farm this parcel will have a negligible impact on the continuation of their agricultural operations;

• The site is bound on two sides by existing or permitted housing, on a third boundary by a railway line, and on its eastern boundary by a road; and

• Farming of the land does not support a high level of employment and if the land was lost for development, 0.15 of a full time labour unit's equivalent work would be lost.

2.1.9 Taking the above together, the conclusion needs to be reached that the site's size and context presents challenges for farming and that the development of Phase 2 by Taylor Wimpey has the potential to exacerbate these challenges. Aligned to this, the level of employment that the farming of the site supports is negligible and the cessation of farming of this particular parcel of land will not materially impact either the continued farming operations of the wider farm that the land sits apart of or the tenant farmer that farms the land.

Integrated Sustainability Appraisal

2.1.10 The Initial Integrated Sustainability Appraisal undertaken at Preferred Strategy stage provides a GIS based appraisal of all sites against 17 objectives. Inherently the Initial Integrated Sustainability Appraisal can be a bit of a blunt tool but Taylor Wimpey's position is that the site performs better against a substantial number of the 17 objectives than the current assessment.

2.1.11 Included at Appendix B is an assessment undertaken by Taylor Wimpey which provides commentary against certain objectives and suggests why the site performs considerably better than forecast in the Initial Integrated Sustainability Appraisal.

2.1.12 A summary of this is presented below:
Table 1 Summary of ISA and Suggested Taylor Wimpey Approach

2.1.13 Taylor Wimpey's position here is clear – the inadequacy of the Integrated Sustainability Appraisal as a tool for assessing candidate sites can only be appropriate where the Integrated Sustainability Appraisal is done correctly and considers the mitigation measures that a candidate site submission proposed to put in place. Without this, the Integrated Sustainability Appraisal risks a situation – as Taylor Wimpey suggest has been the case in Policy HG1 KS1 – where a Key Site is selected in favour of alternative sites that are better performing.

3. Deposit Plan

3.1 Introduction

3.1.1 The following section of this Statement comments on the relevant Key Themes, Strategic Objectives and draft Policy Framework forming part of the Deposit Plan Consultation.

3.1.2 The Policy Framework has been reviewed with comments provided on only those policies considered to be of most relevance to Land West of Swanbridge Road (Phase 3), Sully. The position on individual policies contained within the Deposit RLDP are summarised in the table below:

Table 2 Taylor Wimpey Policy Position

Relevant Policy Support or Object
SP1 Sustainable Growth Strategy - Object
SP2 Settlement Hierarchy - Support
SP 6 Housing Requirement - Object
HG1 Housing Allocations: HG1 KS1 – Land at North West Barry - Object
TR1 Transport Proposals: TR1(2) Active Travel Route Sully to Cosmeston - Support
TR1 Transport Proposals: TR1(6) Highway Improvement Works Weycock Cross Roundabout - Object
CC1 Residential Operational Net Zero Carbon Development - Object
CI1 Open Space Provision - Clarity required
DNP5 Environmental Protection - Object as currently worded

3.2 Key Themes and Strategic Objectives

Homes For All

3.2.1 As noted in paragraphs 3.17 and 3.18 of the Deposit Plan the VoG has the highest affordability ratio in Wales with average house prices 9.7 times the average workplace earnings compared to the Welsh average, giving rise to a significant need for affordable homes which is under significant pressure. This highlights the ever increasing need for sufficient high quality housing, which Taylor Wimpey are committed to provide and supply the mix, type and tenure of housing needed within the local authority's growing population.

Placemaking

3.2.2 Taylor Wimpey embed strong placemaking standards across their developments as detailed within their Placemaking Charter. Taylor Wimpey consider Land West of Swanbridge Road (Phase 3) to present an opportunity to provide a comprehensive residential development that is accessible and well-connected with the existing settlement of Sully and compliments the earlier phases of development. As demonstrated in the earlier phases of development, the Site offers a sustainable location for future growth with easy access to a range of services and facilities in Sully.

Protecting and Enhancing the Natural Environment

3.2.3 Taylor Wimpey support the VoG's commitment to protect and enhance the natural environment through the integration of green/blue infrastructure network and the sustainable management of resources within the VoG. However where Objective 5 seeks to safeguard land from inappropriate development, proposals must be subject to the relevant planning balance giving weight to the surrounding land use and appropriateness of safeguarding agricultural land that

would otherwise be unconstrained and considered suitable for development given the outstanding need for housing.

Promoting Active and Sustainable Travel Choices

3.2.4 Taylor Wimpey support the promotion of sustainable travel and active modes of transport, including the provision of designated active travel routes that improve the connectivity between primary and key settlements, such as the Sully to Cosmeston active travel route.

3.2.5 As demonstrated in the earlier phases of Land West of Swanbridge Road, Taylor Wimpey support the promotion of active travel within new developments and provide opportunities for residents to easily engage with active travel.

3.3 Policy Framework

Policy SP1 Sustainable Growth Strategy

3.3.1 Taylor Wimpey's comments on this policy relate to the sustainable growth strategy in so much as it relates to the spatial strategy rather than the housing requirement that the RLDP adopts with further comments on the housing requirement provided in connection to Policy SP6 (Housing Requirement).

3.3.2 Taylor Wimpey appreciate the need to balance the ten strategic objectives against the need for growth and protection of the VoG's natural and built environment, and strongly support the strategic objective to provide homes for all. Taylor Wimpey maintain their position on the proposed growth strategy that has been established within earlier consultation responses submitted throughout the RLDP process, including the most recent consultation on 'Growth Options in Barry'.

3.3.3 Taylor Wimpey consider that to date the growth strategy has placed disproportionate emphasis on identifying an alternative site within Barry, rather than giving due consideration to potential sites in nearby high-performing settlements such as Sully. Taylor Wimpey therefore strongly encourage the VoG to widen the search for additional allocations beyond the administrative boundary of Barry Town Council and to consider locations that represent a logical and sustainable extension to neighbouring primary settlements that are located within the Strategic Growth Area, including Sully.

3.3.4 The six key elements of the Sustainable Growth Strategy are noted and Taylor Wimpey support a spatial strategy that locates major new development for the delivery of sustainable housing growth in appropriate locations, such as Sully, that are supported by the relevant infrastructure, services and facilities. Providing new homes within Phase 3 aligns with the Strategic Growth Area identified within the RLDP Strategy which forms the primary focus for housing growth.

3.3.5 Policy SPG1 continues to identify Sully as a location where new housing development will be concentrated, therefore establishing a principle of development for Phase 3 and help to further align the provision of new housing with the existing facilities of Sully, reducing the need to travel. Sully represents an inherently sustainable location for future growth and aligns well with the Sustainable Transport Oriented Growth Option. As identified in the Deposit RLDP, Sully is classified as a Primary Settlement and performs a complementary role to Barry as a key centre. Its position within the Strategic Growth Area further indicates that an appropriate level of development at Sully would be acceptable, with both existing housing delivery and the current allocation at Swanbridge Road supporting its established role.
3.3.6 With existing development ongoing to the north of the Site, at Phases 1 and 2 of Land West of Swanbridge Road, Phase 3 is considered to provide an appropriate level of growth in a sustainable location that would form a logical extension to existing allocations. The sustainability and suitability of Sully to accommodate residential development is reinforced by the allocation of 500 dwellings under Policy MG2(37) ('Land West of Swanbridge Road, Sully') on land directly north of the site promoted by Taylor Wimpey. The progression of this location into a phase 3 development would continue to strengthen Sully's function as a primary settlement and would constitute a logical and coherent extension to the existing built form.

Figure 1 Extract of Growth Strategy

3.3.7 Taylor Wimpey appreciate the aspirations of the Council to deliver housing to meet the identified future housing needs of the VoG and wider growth aspirations of the South East Wales Region at a strategic level. Taylor Wimpey support the revised strategy moving away from North East Barry, however maintain the position that this level of growth should be re-allocated to those locations that are most suitable for growth, including sustainable settlements outside of Barry. Growth should not be focuses solely on Barry.

Policy SP2 Settlement Hierarchy

3.3.8 Taylor Wimpey support the conclusions of the Settlement Appraisal Review Background Paper which identifies Sully as a Primary Settlement, reflecting its important role in providing a level of housing growth, in addition to key local services and facilities. Within this Background Paper, Sully is recognised for its vital role as a sustainable community, scoring highly across all key principles in demonstrating its sustainability by providing for the day-to-day needs of its residents. Taylor Wimpey concur with the supporting evidence which reinforces Sully's importance within the settlement hierarchy.

3.3.9 Whilst Draft Policy SP2 presents a 'broad distribution of development within the Strategic Growth Area..', serious concerns continue to be raised around the level of growth around Barry and the emphasis placed on it as the focus for future development. Taylor Wimpey do not dispute the identification of Barry as a Key Settlement, given its position as the largest town within the VoG, however believe Barry should not remain the sole focus for growth where there are opportunities available around primary settlements located within the Strategic Growth Area.

3.3.10 Put another way, it seems perverse for the Deposit RLDP to direct no new growth to a Primary Settlement within the identified Strategic Growth Area.

Policy SP 6 Housing Requirement

3.3.11 The purpose of this policy is to set the housing requirement and then identify the components of supply that are anticipated to meet this housing requirement. A number of Background Papers (nos. BP7, BP8, BP8A, ad BP9A) underpin the approach that is taken. Taylor Wimpey have a number of comments to make on the approach taken in this policy.

Housing Requirement

3.3.12 The approach taken in the Deposit RLDP, as with the Preferred Strategy beforehand, is for the housing requirement to make use of a 10 year dwelling-led scenario, an approach that reflects past completions and looks to extrapolate this forward over the lifetime of the RLDP.

3.3.13 Taylor Wimpey provided detailed commentary on the proposed housing requirement in their comments on the Preferred Strategy but note that Welsh Government have subsequently provided their comments on the Preferred Strategy raising no objection with the housing requirement proposed to be taken.

3.3.14 Taylor Wimpey's position though remains – if a dwelling-led scenario is to be used to determine the housing requirement then it needs to have a far shorter scenario length then 10 years as the first three years of the 10 year period selected were when supply was suppressed as a result of the current LDP not having been adopted.

3.3.15 That said, there is a clear contextual change since the Preferred Strategy was adopted, this being the publication of the 2022-based household projections have been published. Table 5 of Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections provides a comparison of the 2022-based projections with the 2018-based projections and the Deposit RLDP's housing requirement. A simplified version of this table is shown overleaf:

Table 3 RLDP Housing Requirement
Scenario Housing Requirement
RLDP 7,587
2018-based projections 6,214
2022-based projections 9,623

3.3.16 This is important as Paragraph 4.2.6 of PWW states that:

'The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans.'

3.3.17 The proposed approach of continuing to use the 10 year dwelling-led scenario, as a methodology, clearly does not do this.

3.3.18 The approach of using the 2022-based household projections would comply with the aspirations of PPW. Taylor Wimpey's position is that the commentary provided in the Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections for not using 2022-based projections is wholly inadequate and that these projections should be used.

Flexibility Allowance

3.3.19 Paragraph 5.58 of Edition 3 the Development Plans Manual (March 2020) makes it clear that there is a requirement for a flexibility allowance to be added on top of the housing requirement to derive the number of homes the RLDP should plan for. This is in the interest of ensuring that sufficient housing is delivered in the event of some allocated sites either not delivering in their entirety or delivering less homes than anticipated. Paragraph 5.59 of the Manual clarifies that the extent of the flexibility allowance should be informed by local issues with 10% as a starting point (i.e. as the minimum).

3.3.20 The Adopted Local Development Plan (ALDP) applies a 10% flexibility allowance on top of the housing requirement for 9,460 homes so that provision is made for 10,408 homes.

3.3.21 Paragraph 1.2.34 of the Annual Monitoring Report 2024-2025 provides a comparison of the number of homes that

have been completed and the level of completions that the ALDP anticipates. This shows that 6,999 homes have been delivered up to 1st April 2025 against a cumulative dwelling target of 8,829 homes, representing a shortfall of 20.7%.

3.3.22 Taylor Wimpey's point here is that the ALDP's flexibility allowance of 10% is insufficient to ensure that the ALDP's housing requirement is actually being delivered. This is clear evidence that a higher flexibility allowance should be used for the RLDP. Although for different reasons, but following a direction from the Welsh Government Planning Inspector, Bridgend County Borough Council has increased its flexibility allowance to 20% and, it is considered that such a buffer is appropriate for the VoG's RLDP.

Non-Delivery Allowance on Land Bank

3.3.23 Line C of Table 2 of the Preferred Strategy relates to those sites that either benefit from planning permission or are subject to a resolution to grant planning permission subject to planning permission. Combined, these sites are identified as having capacity for 1,860 homes.

3.3.24 The current approach, which assumes that all other sites which are under construction or sites where there is either a planning permission in place or sites where there is a resolution to grant planning permission subject to the signing of a Section 106 agreement will be completed in full, causes concern for Taylor Wimpey.

3.3.25 There are multiple reasons why homes that benefit from either planning permission or a resolution to grant planning may not be delivered. These relate to viability, but also to specific site constraints and landowner intentions.

3.3.26 A point that is separate, but inherently linked, to the above is that often the capacity of a site for which reserved matters approval is sought is less than that permitted at outline stage. Requirements for SAB approval and the demonstration of a biodiversity net benefit, for example, reduce the capacity of a site at detailed design stage but are often not factored in at outline stage, particularly where the outline application is not progressed by a housebuilder.

3.3.27 Research undertaken by the Local Government Association for England (no such data is available for Wales) suggests that, between 2010/2011 and 2019/2020 a total of 2,782,300 dwelling were granted planning permission whilst there were only 1,627,730 completions. This means that during this period just 58.5% of those homes which were granted planning permission were completed.

3.3.28 Taylor Wimpey is not suggesting that applying a discount of 41.5% is necessarily correct and the above is both from England and a few years out of date but the need for a discount that relates specifically to Line C is very clear.

3.3.29 It's difficult to know what this figure should be but Taylor Wimpey suggest that a 20% figure is used to reflect the flexibility allowance.

Windfall Allowances

3.3.30 The approach taken in the Deposit RLDP is to assume that 1,303 homes will be delivered across Windfall Sites. This has been calculated on the basis of previous completion delivered as windfalls.

3.3.31 Taylor Wimpey's concern is that the delivery of homes on Windfall Sites inherently becomes more challenging over time as the easier to develop sites have been delivered and the buildings and land that hasn't been developed is subject to increasing levels of policy protection. The approach taken by Cardiff Council in their Deposit RLDP is to assume that 75% of the 10 year average Windfall Sites will be delivered and such an approach seems entirely appropriate in this case.

3.3.32 An Urban Capacity Study (October 2023) prepared by the VoG, seeks to corroborate this by identifying 2,627 homes that could be delivered across the VoG. Whilst the windfall allowances would be less than the suggested urban capacity, this shouldn't be seen as problematic or as a conflict as the purpose of the Urban Capacity Study is, as the name suggests, just to identify sites which may have capacity. It doesn't account for land ownership (and whether the land owners have aspirations to dispose of the site) or development viability. In addition, the approach taken to site capacity to is to assume a density based on site type but it does this without an appreciation of site constraints and is based on the gross rather than net area.

Rolled Forward Sites

3.3.33 Taylor Wimpey have concerns with the approach that is taken in Table 2 of the Deposit RLDP which identifies allocations for 959 homes that are to be rolled over from the ALDP to the RLDP.

3.3.34 Concerns are raised around two sites in particular - Land to the west of Pencoedtre Lane, Barry and Land between new Northern Access Road and Eglwys Brewis Road, These sites are allocated in the ALDP but have failed to be delivered. Given the longstanding period during which there has been clear policy support for development but no completions, it follows that there are serious concerns around the deliverability of these two sites which, together, are allocated for 370 homes.

3.3.35 The failure to deliver these dwellings is due to a number of factors which are detailed in Taylor Wimpey's Preferred Strategy consultation response, which questions whether these sites will deliver at all or at a significantly reduced capacity due to the following reasons:

■ Viability constraints;
■ Site specific constraints;
■ Landowner intentions;
■ Requirements for SAB approval; and
■ Biodiversity net benefit;

3.3.36 Whilst it is recognised that there may be policy support for the delivery of these two sites, there deliverability is clearly uncertain and they should be removed from Table 2.

Conclusion

3.3.37 The following table summarises the approach previously proposed in the Deposit RLDP and compares it to the amendments suggested by Taylor Wimpey in the preceding sections of this Statement.

Table 4 Deposit RLDP Housing Supply and Taylor Wimpey's Suggested Approach
Housing Supply - Deposit Plan (December 2025) - Taylor Wimpey Suggested Approach (March 2026)
Housing Requirement - 7,890 - 9,623
Flexibility Allowance - 10% - 20%
Flexibility Allowance – 770 - 1,925
Housing Requirement + Flexibility Allowance - 8,660 - 11,548
A – Completions - 1,747 - 1,747
B – Units Under Construction - 313 - 313
C and D- Units with Planning Permission Minus Non-Delivery Allowance - 1,777 1,488
Existing Supply - 3,827 - 3,548
E – Large Windfall Sites - 720 - 540
F – Small Windfall Sites - 583 - 438
E+ F Total Windfall Allowance - 1,303 - 978
RLDP Allocations - 3,520 - 3,150

3.3.38 The conclusion reached in Taylor Wimpey's analysis is that, as a result of both the suggested housing requirement and flexibility allowance combined with Taylor Wimpey's comments on the components of supply, the Deposit RLDP needs to find allocations to deliver a further 3,872 homes.

Policy HG1 KS1 – Land at North West Barry
3.3.39 Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. Taylor Wimpey has provided comments on the housing requirement that is set in the RLDP and the components of supply that are anticipated to meet it in the proceeding sections of this Statement.

3.3.40 As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.

3.3.41 There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.

3.3.42 Policy HG1 KS1 proposes to allocate the site known as 'Land at North West Barry'.

3.3.43 The proposed allocation of this site follows a consultation – entitled 'Housing Growth in Barry' - undertaken by the VoG in July 2025 which proposed to allocate three sites in Barry as an alternative to the North East Barry site that was identified as a Key Site in the Preferred Strategy but was considered to no longer be deliverable.

3.3.44 Taylor Wimpey responded as part of the 'Housing Growth in Barry' consultation, supporting the removal of North East Barry as a Key Site but raising serious concerns with the proposed allocation of 'Land at North West Barry' as an alternative.
3.3.45 These concerns remain and Taylor Wimpey strongly consider there need to be other alternative sites – such as Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) - within nearby settlements that perform better than the Land at North West Barry site and should be allocated for housing.
3.3.46 To support this conclusion, Taylor Wimpey has undertaken a review of the Integrated Sustainability Appraisal (ISA) which provides a scoring of different candidate sites against the 17 objectives as well as considering and

comparing the sustainability and accessibility of the two sites.

Integrated Sustainability Appraisal

3.3.47 The below table provides a comparison of how the Integrated Sustainability Appraisal scores Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) compared to the Land at North West Barry site. Two different comparisons are provided – one which compares the actual scoring in the ISA and a second which compares the two sites following Taylor Wimpey's suggested scoring which is included as Appendix A.

3.3.48 These tables clearly highlight where the subject site out performs North West Barry across numerous objectives.

Table 5 Comparison of Phase 3 Land West of Swanbridge Road (Site ID 376) and North West Barry (Site ID 490) ISA performance

3.3.49 From an initial review, the Integrated Sustainability Appraisal shows that Land West of Swanbridge significantly outperforms North West Barry in terms of the number of significantly positive scores '++' and the number of '—' scores. To this end the subject site provides clear advantages above and beyond North West Barry in terms of homes, health, and transport. As such Land West of Swanbridge is considered to have the capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge; The site is within 800m of a health service and an active travel route; and, The site is within close proximity (≤800m) to a railway station or bus stop, town/ retail centre and an active travel route. Taylor Wimpey consider this assessment should go further to recognise the associated benefits to the leisure than be provided by the site's development.

3.3.50 Following Taylor Wimpey's re-assessment of the site against the Integrated Sustainability Appraisal ISA objectives it is also considered to obtain notably more positive '+' scores than North West Barry. It is also worth noting that North West Barry has more unknown impacts than Land West of Swanbridge which introduces a level of uncertainty around its potential for further negative impacts. Moreover, North West Barry scores a significant number of negative impacts across the ISA, with the extension site obtaining double the amount than Land West of Swanbridge Road.

3.3.51 Taylor Wimpey's position is that it would be unsound to allocate a site that performs considerably poorer in the Integrated Sustainability Appraisal than a site that is not proposed to be allocated.

Accessibility and Sustainability

3.3.52 SLR Consulting have prepared an updated document demonstrating the Site's sustainability credentials and providing a detailed overview of existing and future active travel and public transport infrastructure. This is included as Appendix C.

3.3.53 As a starting point, it considers those services within Sully. In terms of local amenities, the population size of Sully, naturally benefits from a good range of local amenities and services, and therefore it is anticipated that a high proportion of future residents' day-to-day journeys would be contained within the village and undertaken via walking or cycling. The Walking Catchment Map prepared by SLR demonstrates this and illustrates services within walking distance from the Site.

3.3.54 The proposed development benefits from local existing and future / planned infrastructure which will help support travel by sustainable modes such as walking, cycling and public transport. The Site falls within the less than 15 minutes Public Transport Catchment for bus and rail services. The Site is supported by the existing bus network, connecting Sully with Barry, Penarth and Cardiff – the nearest bus stop approximately 400m from the centre of the site; Moreover the Site is within proximity to Cadoxton and Penarth railway stations which have regular services in each direction in addition to the existing walking and cycling infrastructure in and around Sully.

3.3.55 The future accessibility of the Site will be further enhanced through the ongoing and planned South Wales Metro improvements, future active travel routes and the proposed Sully to Penarth mixed use link. The below figure shows several newly proposed active travel routes running close to the site including a new walking / cycling route along Swanbridge Road. Planning applications are now being submitted to support the delivery of these new active travel links. In March 2025 a planning application was submitted proposing a new route between Palmerstown and Dinas Powys.

3.4 SLR have undertaken further assessment work comparing the sustainability credentials of Land West of Swanbridge Road to Land North West of Barry. Land North West of Barry, is separated from the existing built-up area by the B4266 Pontypridd Road where the eastern and southern boundaries abut residential properties. As such, the proposed access for all modes would be taken from the A4226 Port Road West. The A4226 and B4266 can be a barrier to the promotion of active travel in that they facilitate vehicular travel and do not provide an attractive environment for pedestrians.

3.5 Furthermore, Land North West of Barry is on the fringes of Barry and had few if any facilities within a 10 minute walk, other than bus stops. In comparison, Land West of Swanbridge Road in Sully benefits from its proximity to the High Street in Sully and the services there.

3.6 The below table demonstrates differences in accessibility to amenities between the two sites, where Land West of

Swanbridge Road presents a more favourable location for future development.

Table 6 Comparison of Local Facilities Between Land North West of Barry (Site ID 449) and Land West of Swanbridge Road (Phase 3) (Site ID 376)

3.7 Whilst the walking distance shown from Land North West of Barry to the nearest bus stop is slightly less than the Swanbridge Road Site, it should be noted that the bus services that can be accessed from Sully are more frequent and more direct than those which can be accessed from Land North West of Barry.

Conclusion

3.8 Taking the above together, the conclusion Taylor Wimepy reach is that their Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site performs more strongly than the Land North West of Barry site.

Policy TR1 Transport Proposals

3.9 The draft transport proposals contained within the Deposit RLDP have been reviewed with the following proposals considered to be pertinent to the Site and draft residential allocations.

TR 1 (2) Active Travel Route: Sully to Cosmeston

3.10 Taylor Wimpey support the designation of an active travel route connection the eastern side of Sully with Cosmeston in the north-east. Most notably the proposed route will pass Swanbridge Road which provides direct access to Land West of Swanbridge Road Site, with Phase 3 in close proximity to the travel route. The proposal would further enhance the accessibility and sustainability of the Site as a logical extension for residential development in Sully.

Figure 4 Extract of Deposit RLDP Proposals Map with Land West of Swanbridge Road (Phase 3) Identified

TR1 (6) Highway Improvement works: Weycock Cross Roundabout, Barry

3.11 Taylor Wimpey raise concerns around the proposed works at the Wyecock Cross Roundabout, compared to the other improvement works proposed. As noted in the Deposit RLDP, this roundabout forms a key connection within the wider strategic highway network and therefore of high importance for the local area and surrounding communities. The proposed options presented within the Deposit RLDP provide little certainty of the scope of works required with no preferred option identified. This raises concerns around the impacts of the highway improvements on the deliverability of the adjacent draft allocation of North West Barry. The same concerns arise when considering the roundabout improvement works in combination with the proposed access strategy contained within North West Barry's supporting information package. The proposed road widening measures (c.11m increase) required to make the draft allocation accessible would have a significant impact on the wider transport network at this strategic junction.

Policy CC1 (Residential Operational Net Zero Carbon Development)

3.12 The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) then setting out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.

3.13 As a starting point, Taylor Wimpey share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) is not appropriate. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this results to an uneven framework for housebuilders, significantly adding cost and reducing certainty.

3.14 The justification for exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.

3.15 There are two points to be made here:

3.16 Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage. This Written Ministerial Statement was subject to a judicial review which was dismissed with the position taken in it found to be legally sound.

3.17 Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it

is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations.

3.18 Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound.

3.19 Secondly, Taylor Wimpey have concerns with the approach that has been taken with regards to viability.

3.20 From Taylor Wimpey's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.

3.21 As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated.

3.22 Taylor Wimpey's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. Savills' experience is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.

3.23 Taylor Wimpey's other concern with this approach is that the figure assumed as being required to achieve the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is driven from a Cost Assessment report published in January 2024. With the Background Paper 9A Housing Land Supply and Housing Trajectory not forecasting first completion onsite until 2028/2029, there is likely to be a period of approximately five years from the establishment of the figure for delivering the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) and when the first units would be delivered onsite.

3.24 Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy CI1 (Open Space Provision)

3.25 This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.

3.26 Taylor Wimpey note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.

3.27 Taylor Wimpey is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter, Policy DNP5 Environmental Protection

3.28 Taylor Wimpey consider the inclusion of 'the loss of the best and most versatile agricultural land' to be at odds with the other elements listed, where unlike the others mentioned, the loss of agricultural land would have limited, if any, impact on people, residential amenity and property.

3.29 It is acknowledged that the loss of BMV agricultural land may impact the VoG's overall amount of high quality agricultural land, however this should be assessed against the existing high level of BMV agricultural land within the County. The extent to which its loss is considered "unacceptable" should be subject to the planning balance against the overriding need for affordable housing and local housing need. Consideration towards the farming business case and economic viability are also required within the planning balance. In the case of Land West of Swanbridge Road, the loss of BMV agricultural land remains the only constraint that cannot be overcome, as noted in the Candidate Site Assessment. Whilst the loss of high quality agricultural land should be avoided, Taylor Wimpey consider that where the merits of the Site are overwhelmingly in favour for sustainable residential development in a suitable and logical location, Policy DNP5 should not stand in the way of housing delivery.

3.30 Whilst Taylor Wimpey support the clause within the draft policy: "Where impacts are identified the Council will require applicants to demonstrate that appropriate measures can be taken to minimise the impact identified to an acceptable level. Planning conditions may be imposed, or legal obligation entered into, to secure any necessary

mitigation and monitoring processes." However, in the context of BMV agricultural land, it is not clear how the mitigating measures, in the form of planning conditions or legal obligations, can be applied. This reinforces the earlier view that the inclusion of 'the loss of the best and most versatile agricultural land', as currently worded within the draft policy, is at odds with the other elements listed where mitigation strategies for pollution can be suitably conditioned.

Change suggested by respondent:

The 2022-based Welsh Government Projections should be used to determine the housing requirement, not the 2018-based projections.

The 10% flexibility allowance is insufficient and should be increased to 20%.

A 20% non-delivery allowance on land bank sites should be included.

Housing numbers from Windfall Sites should be reduced by 25%, following Cardiff Council's approach.

The deliverability of the rolled forward sites is clearly uncertain and should be removed from the Plan.

Taylor Wimpey have provided a suggested Housing Supply table.

Sound: No

6860 Object

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Mr Andrew Raymond [1170]
Agent: Boyer Planning

Summary:

Concerns are raised regarding the overall housing requirement and the level of flexibility incorporated within the Plan. Policy SP6 currently establishes a housing requirement of 7,890 dwellings over the Plan period and includes a flexibility allowance of 10%, resulting in an overall provision of 8,660 dwellings. Whilst the inclusion of a flexibility allowance is supported, it is considered that a 10% allowance may not be sufficient to ensure resilience within the housing trajectory. Recent experience from other Local Development Plans across Wales has demonstrated the importance of incorporating higher flexibility allowances to account for delivery uncertainty, infrastructure constraints and potential delays to larger strategic sites.
For example, other authorities have incorporated flexibility allowances in excess of the standard 10% to ensure the robustness of their housing supply and to provide a greater degree of adaptability should circumstances change during the Plan period.

Full text:

Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409)
Boyer have prepared the following representation on behalf of Andrew Raymond regarding their land interests associated with Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021– 2036 consultation.

A summary of the main representations are as follows:
• Concern regarding the absence of proportionate residential growth opportunities within rural settlements such as Colwinston;
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance within the housing trajectory;
• Questions regarding the spatial distribution of development and the limited range and choice of sites outside the Strategic Growth Area;
• Confirmation that Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a logical and sustainable opportunity for modest residential development;
• Review of the Candidate Site Assessment process and the current status of the site within the Candidate Site Register; and
• The need to consider appropriate settlement boundary adjustments to facilitate proportionate growth in sustainable rural settlements.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the principal concern in relation to the site promotion is the concentration of the majority of future housing growth within the defined Strategic Growth Area.

It is understood and supported that new housing development should be located in sustainable locations with access to public transport and services. However, the approach adopted within the RLDP places an overly narrow emphasis on growth within the Strategic Growth Area, primarily focused along rail corridors. This approach risks overlooking other sustainable rural settlements which also demonstrate appropriate connectivity and capacity to accommodate proportionate growth.

Settlements outside the Strategic Growth Area continue to perform an important role within the Vale's settlement hierarchy and rural economy. Villages such as Colwinston provide an established residential community and contribute to the vitality and sustainability of rural areas. Restricting opportunities for modest growth within such settlements risks undermining the long-term sustainability of rural communities.

The principle of directing development to sustainable settlements is supported. However, limiting development opportunities exclusively within the Strategic Growth Area is not considered to represent the most balanced or flexible spatial strategy. Greater flexibility should be introduced to allow appropriate small-scale allocations within sustainable rural settlements.

In this context, Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a sustainable opportunity for a modest residential development that would align with the scale and character of the settlement. The site lies adjacent to existing built form and would represent a logical and contained extension to the village.
SP2: Settlement Hierarchy

Mr Raymond supports the identification of Colwinston as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Bridgend to the west and Cowbridge, Barry and Cardiff to the east. The Deposit Plan retains Colwinston within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.
Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as Colwinston, should be subject to such constrained growth.

In this context, Mr Raymond highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all building upon the identified importance of Minor Rual Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to Colwinston under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of Colwinston, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, a modest allocation at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) would represent proportionate growth that reflects the scale and character of the settlement. The site sits adjacent to existing development and would consolidate the existing settlement pattern without resulting in sprawl into the open countryside.

The current approach within Policy SP2 risks constraining flexibility within the spatial strategy and limiting opportunities to support sustainable rural communities.

SP6: Housing Requirement
Concerns are raised regarding the overall housing requirement and the level of flexibility incorporated within the Plan.

Policy SP6 currently establishes a housing requirement of 7,890 dwellings over the Plan period and includes a flexibility allowance of 10%, resulting in an overall provision of 8,660 dwellings.
The proposed supply is anticipated to be delivered through:

• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments
Whilst the inclusion of a flexibility allowance is supported, it is considered that a 10% allowance may not be sufficient to ensure resilience within the housing trajectory.
Recent experience from other Local Development Plans across Wales has demonstrated the importance of incorporating higher flexibility allowances to account for delivery uncertainty, infrastructure constraints and potential delays to larger strategic sites.

For example, other authorities have incorporated flexibility allowances in excess of the standard 10% to ensure the robustness of their housing supply and to provide a greater degree of adaptability should circumstances change during the Plan period.

In this context, it is considered that the Vale of Glamorgan RLDP should incorporate a flexibility allowance of at least 15%. This would provide additional resilience within the housing trajectory and reduce reliance on a limited number of larger strategic allocations.
Smaller sites such as Candidate Site 409 at Waterton Lodge, Colwinston are particularly valuable in this context. Smaller sites are typically:
• More deliverable in the short term
• Less dependent on major infrastructure investment
• Capable of contributing to early housing delivery
• Able to increase overall build-out rates
Such sites can therefore play an important role in supporting the delivery of the Plan's housing requirement and enhancing flexibility within the supply.

HG1: Housing Allocations
Mr Raymond does not comment on any of the proposed housing allocations, however, does highlight that the delivery is incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements are required. Only 122 units are proposed on smaller allocated sites, equating to approximately 2.6% of newly allocated supply under (E) Rural Affordable Housing Led Sites – policy HG4.

In the context of the above, there remains significant concern that the spatial strategy continues to exclude the required number of allocations within Minor Rural Settlements, including Colwinston.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.
It is agreed that the inclusion of smaller allocations can:
• Improve overall housing delivery rates
• Provide greater choice within the housing market
• Reduce delivery risk by diversifying supply
• Support rural communities through proportionate growth

Whilst it is noted that there is a proposed allocation within Colwinston – HG4 (1) – Land to the East of Colwinston for 25 units, Mr Raymond maintains that there is still a clear disconnect between the identified role and function of settlements such as Colwinston and the absence of any further allocated sites capable of delivering an appropriate range and choice of dwellings.

The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.
This approach is inconsistent with the settlement's accessibility and functional role. Colwinston is:
• Well connected to the A48 strategic highway network;
• Served by bus routes within close proximity to the site;
• Within commuting distance of Bridgend, Cowbridge, Barry and Cardiff;
• A sustainable and established residential community.
Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.

Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail

infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at Waterton Lodge would represent proportionate growth consistent with the scale and character of the settlement.

HG4 – Affordable Housing Allocations
It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, and in particular within Colwinston HG4 (1) – Land to the East of Colwinston for 25 units. In the context of Policy HG4 they will be affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing. This is to meet the affordable housing needs of the local community. Mr Raymond has no objection in principle to this but does object to the fact that there is no other development opportunities recognised in Colwinston (despite it being sustainably located on the A48).

Furthermore, Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) could be reduced in size and could be amended to offer 50% affordable housing to accord with the policy (or even 100% affordable if the Authority sought this).

A balanced approach which allows both affordable housing led schemes and modest mixed-tenure developments would provide greater flexibility and assist in delivering a broader range of housing needs.

A modest development at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) could provide an opportunity to deliver both market and affordable housing in accordance with Policy SP8. This would support local housing needs whilst maintaining the scale and character of the settlement.

Candidate Site Response: Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409)
Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) was submitted to the Vale of Glamorgan Council during the 2022 Call for Candidate Sites as part of the preparation of the Replacement Local Development Plan (RLDP) 2021–2036.

The site is currently included within the Candidate Site Register, which represents a list of sites submitted for consideration through the plan-making process. Inclusion within the register does not in itself indicate that a site will be allocated for development, as all sites are subject to a structured assessment process.

These stages consider a range of factors including sustainability, accessibility, environmental constraints and deliverability.

As part of the ongoing plan preparation process, the Council produced an updated Candidate Site Register following the initial submissions. Sites continue to be evaluated as part of the evidence base supporting the RLDP.

In this context, Land adjacent to Waterton Lodge, Colwinston represents a sustainable and deliverable opportunity for modest residential development which could contribute positively towards the Plan's housing supply.

The site is located adjacent to the existing settlement and is well related to the current built form. Development in this location would represent a logical and contained extension to the village, rather than an isolated incursion into open countryside.

Furthermore, the site has been promoted through the formal candidate site process and should therefore be considered fully within the Council's site assessment framework.

Deposit Plan Considerations
Settlement Boundary

Given the location of Candidate Site 409 adjacent to the existing settlement of Colwinston, consideration should be given to whether a modest adjustment to the settlement boundary would enable the site to be appropriately integrated within the settlement.

A logical rounding-off of the existing settlement edge would allow development to occur in a manner that respects the existing built form and maintains a clear and defensible settlement boundary.

Such an approach would represent a proportionate response to the need for modest housing growth within rural settlements.

Site Assessment
The site was formally submitted through the Candidate Site process and is currently listed within the Council's Candidate Site Register.

Given the role that smaller deliverable sites can play in supporting housing delivery, it is important that sites such as

Land adjacent to Waterton Lodge, Colwinston are fully considered as part of the ongoing assessment process. Smaller sites can provide valuable flexibility within the housing trajectory and contribute to early housing delivery within the Plan period.

Turning to the main reasons the site was not taken forward Mr Raymond provides the following response:
(a) Alleged intrusion into the open countryside
The Stage 2 Register cites "unacceptable intrusion into the open countryside". Mr Raymond submits that this conclusion fails to reflect the site's physical containment and relationship to the built form.
• The site directly adjoins existing dwellings at Waterton Lodge and mature boundary hedgerows; development here would constitute rounding-off rather than isolated sprawl.
• A strong landscape framework already exists, and additional planting could reinforce defensible boundaries.
Accordingly, the site's development would not materially extend the settlement into open countryside or harm landscape character, consistent with PPW paragraph 3.60.
(b) Highways and accessibility constraints
The Council refers to "major highways constraints" but no evidence highway assessment has been published by the Authority. Mr Raymond's preliminary review confirms that safe vehicular access can be achieved from the adjoining local highway with modest engineering works and that the scale envisaged would generate limited traffic, well within local-road capacity.
Future submission of a Transport Statement can demonstrate compliance with PPW (Section 5: Active and Socially Just Places) and LDP Policy MD2 (criteria 6 and 8).
The site lies within walking distance of Colwinston's core facilities (village hall, public house, bus stops), enabling sustainable travel choices for residents.
(c) Scale of development
Development at a scale that represents proportionate growth for Colwinston can be provided and would be entirely consistent with the "limited expansion" envisaged for minor rural settlements under PPW and the RLDP.
This level of growth would strengthen local demographics, support the rural housing supply and modestly contribute to the Vale's overall housing requirement, without exceeding infrastructure capacity.
(d) Ecology, landscape and agricultural land classification
The land is semi-improved grassland with no statutory designations. Preliminary review indicates no SINC coverage or protected species constraints. Detailed ecological and agricultural-land surveys can be provided to confirm that any residual impacts are minor and capable of full mitigation.

Development can achieve net biodiversity gain through buffer planting, sustainable drainage and native-hedgerow reinforcement, fully consistent with PPW and RLDP environmental objectives.

5. Sustainability and deliverability
• Availability: Mr Raymond, as landowner/promoter, confirms the site is immediately available for development.
• Deliverability: The site is modest, unconstrained by flood risk or abnormal infrastructure requirements, and can deliver homes within the early part of the plan period.
The proposal supports rural-settlement vitality, contributes to local housing choice, and allows design to embody placemaking principles (PPW Ed. 12 Section 2).

Conclusion
This representation, submitted on behalf of Mr Raymond in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.

Change suggested by respondent:

It is considered that the Vale of Glamorgan RLDP should incorporate a flexibility allowance of at least 15%. This would provide additional resilience within the housing trajectory and reduce reliance on a limited number of larger strategic allocations.

6862 Object

Document Element: SP6 - HOUSING REQUIREMENT, Table 3: Spatial

Respondent: Mr Andrew Raymond [1170]

Agent: Boyer Planning

Summary:

Delivery is incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements are required. Only 122 units are proposed on smaller allocated sites, equating to approximately 2.6% of newly allocated supply under (E) Rural Affordable Housing Led Sites – policy HG4. In the context of the above, there remains significant concern that the spatial strategy continues to exclude the required number of allocations within Minor Rural Settlements, including Colwinston.

It is agreed that the inclusion of smaller allocations can:
• Improve overall housing delivery rates
• Provide greater choice within the housing market
• Reduce delivery risk by diversifying supply
• Support rural communities through proportionate growth

Whilst it is noted that there is a proposed allocation within Colwinston – HG4 (1) – Land to the East of Colwinston for 25 units, there is still a clear disconnect between the identified role and function of settlements such as Colwinston and the absence of any further allocated sites capable of delivering an appropriate range and choice of dwellings. The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement. This approach is inconsistent with the settlement's accessibility and functional role.

Full text:

Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409)
Boyer have prepared the following representation on behalf of Andrew Raymond regarding their land interests associated with Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021– 2036 consultation.

A summary of the main representations are as follows:
• Concern regarding the absence of proportionate residential growth opportunities within rural settlements such as Colwinston;
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance within the housing trajectory;
• Questions regarding the spatial distribution of development and the limited range and choice of sites outside the Strategic Growth Area;
• Confirmation that Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a logical and sustainable opportunity for modest residential development;
• Review of the Candidate Site Assessment process and the current status of the site within the Candidate Site Register; and
• The need to consider appropriate settlement boundary adjustments to facilitate proportionate growth in sustainable rural settlements.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the principal concern in relation to the site promotion is the concentration of the majority of future housing growth within the defined Strategic Growth Area.
It is understood and supported that new housing development should be located in sustainable locations with access to public transport and services. However, the approach adopted within the RLDP places an overly narrow emphasis on growth within the Strategic Growth Area, primarily focused along rail corridors. This approach risks overlooking other sustainable rural settlements which also demonstrate appropriate connectivity and capacity to accommodate proportionate growth.

Settlements outside the Strategic Growth Area continue to perform an important role within the Vale's settlement hierarchy and rural economy. Villages such as Colwinston provide an established residential community and contribute to the vitality and sustainability of rural areas. Restricting opportunities for modest growth within such settlements risks undermining the long-term sustainability of rural communities.

The principle of directing development to sustainable settlements is supported. However, limiting development opportunities exclusively within the Strategic Growth Area is not considered to represent the most balanced or flexible spatial strategy. Greater flexibility should be introduced to allow appropriate small-scale allocations within sustainable rural settlements.

In this context, Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a sustainable opportunity for a modest residential development that would align with the scale and character of the settlement. The site lies adjacent to existing built form and would represent a logical and contained extension to the village.
SP2: Settlement Hierarchy

Mr Raymond supports the identification of Colwinston as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Bridgend to the west and Cowbridge, Barry and Cardiff to the east. The Deposit Plan retains Colwinston within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.

Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as Colwinston, should be subject to such constrained growth.

In this context, Mr Raymond highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all building upon the identified importance of Minor Rual Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to Colwinston under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of Colwinston, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, a modest allocation at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) would represent proportionate growth that reflects the scale and character of the settlement. The site sits adjacent to existing development and would consolidate the existing settlement pattern without resulting in sprawl into the open countryside.

The current approach within Policy SP2 risks constraining flexibility within the spatial strategy and limiting opportunities to support sustainable rural communities.

SP6: Housing Requirement
Concerns are raised regarding the overall housing requirement and the level of flexibility incorporated within the Plan.

Policy SP6 currently establishes a housing requirement of 7,890 dwellings over the Plan period and includes a flexibility allowance of 10%, resulting in an overall provision of 8,660 dwellings.
The proposed supply is anticipated to be delivered through:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments
Whilst the inclusion of a flexibility allowance is supported, it is considered that a 10% allowance may not be sufficient to ensure resilience within the housing trajectory.
Recent experience from other Local Development Plans across Wales has demonstrated the importance of incorporating higher flexibility allowances to account for delivery uncertainty, infrastructure constraints and potential delays to larger strategic sites.

For example, other authorities have incorporated flexibility allowances in excess of the standard 10% to ensure the robustness of their housing supply and to provide a greater degree of adaptability should circumstances change during the Plan period.

In this context, it is considered that the Vale of Glamorgan RLDP should incorporate a flexibility allowance of at least 15%. This would provide additional resilience within the housing trajectory and reduce reliance on a limited number of larger strategic allocations.
Smaller sites such as Candidate Site 409 at Waterton Lodge, Colwinston are particularly valuable in this context. Smaller sites are typically:
• More deliverable in the short term
• Less dependent on major infrastructure investment
• Capable of contributing to early housing delivery
• Able to increase overall build-out rates
Such sites can therefore play an important role in supporting the delivery of the Plan's housing requirement and enhancing flexibility within the supply.

HG1: Housing Allocations
Mr Raymond does not comment on any of the proposed housing allocations, however, does highlight that the delivery is incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements are required. Only 122 units are proposed on smaller allocated sites, equating to approximately 2.6% of newly allocated supply under (E) Rural Affordable Housing Led Sites – policy HG4.

In the context of the above, there remains significant concern that the spatial strategy continues to exclude the required number of allocations within Minor Rural Settlements, including Colwinston.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.
It is agreed that the inclusion of smaller allocations can:
• Improve overall housing delivery rates
• Provide greater choice within the housing market
• Reduce delivery risk by diversifying supply
• Support rural communities through proportionate growth

Whilst it is noted that there is a proposed allocation within Colwinston – HG4 (1) – Land to the East of Colwinston for 25 units, Mr Raymond maintains that there is still a clear disconnect between the identified role and function of settlements such as Colwinston and the absence of any further allocated sites capable of delivering an appropriate range and choice of dwellings.

The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.
This approach is inconsistent with the settlement's accessibility and functional role. Colwinston is:
• Well connected to the A48 strategic highway network;
• Served by bus routes within close proximity to the site;
• Within commuting distance of Bridgend, Cowbridge, Barry and Cardiff;
• A sustainable and established residential community.
Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.

Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at Waterton Lodge would represent proportionate growth consistent with the scale and character of the settlement.

HG4 – Affordable Housing Allocations
It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, and in particular within Colwinston HG4 (1) – Land to the East of Colwinston for 25 units. In the context of Policy HG4 they will be affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing. This is to meet the affordable housing needs of the local community. Mr Raymond has no objection in principle to this but does object to the fact that there is no other development opportunities recognised in Colwinston (despite it being sustainably located on the A48).

Furthermore, Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) could be reduced in size and could be amended to offer 50% affordable housing to accord with the policy (or even 100% affordable if the Authority sought this).

A balanced approach which allows both affordable housing led schemes and modest mixed-tenure developments would provide greater flexibility and assist in delivering a broader range of housing needs.

A modest development at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) could provide an opportunity to deliver both market and affordable housing in accordance with Policy SP8. This would support local housing needs whilst maintaining the scale and character of the settlement.

Candidate Site Response: Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409)
Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) was submitted to the Vale of Glamorgan Council during the 2022 Call for Candidate Sites as part of the preparation of the Replacement Local Development Plan (RLDP) 2021–2036.

The site is currently included within the Candidate Site Register, which represents a list of sites submitted for consideration through the plan-making process. Inclusion within the register does not in itself indicate that a site will be allocated for development, as all sites are subject to a structured assessment process.

These stages consider a range of factors including sustainability, accessibility, environmental constraints and deliverability.

As part of the ongoing plan preparation process, the Council produced an updated Candidate Site Register following the initial submissions. Sites continue to be evaluated as part of the evidence base supporting the RLDP.

In this context, Land adjacent to Waterton Lodge, Colwinston represents a sustainable and deliverable opportunity for modest residential development which could contribute positively towards the Plan's housing supply.

The site is located adjacent to the existing settlement and is well related to the current built form. Development in this location would represent a logical and contained extension to the village, rather than an isolated incursion into open countryside.

Furthermore, the site has been promoted through the formal candidate site process and should therefore be considered fully within the Council's site assessment framework.

Deposit Plan Considerations
Settlement Boundary

Given the location of Candidate Site 409 adjacent to the existing settlement of Colwinston, consideration should be given to whether a modest adjustment to the settlement boundary would enable the site to be appropriately integrated within the settlement.

A logical rounding-off of the existing settlement edge would allow development to occur in a manner that respects the existing built form and maintains a clear and defensible settlement boundary.

Such an approach would represent a proportionate response to the need for modest housing growth within rural settlements.

Site Assessment
The site was formally submitted through the Candidate Site process and is currently listed within the Council's Candidate Site Register.

Given the role that smaller deliverable sites can play in supporting housing delivery, it is important that sites such as Land adjacent to Waterton Lodge, Colwinston are fully considered as part of the ongoing assessment process.
Smaller sites can provide valuable flexibility within the housing trajectory and contribute to early housing delivery within the Plan period.

Turning to the main reasons the site was not taken forward Mr Raymond provides the following response:
(a) Alleged intrusion into the open countryside
The Stage 2 Register cites "unacceptable intrusion into the open countryside". Mr Raymond submits that this conclusion fails to reflect the site's physical containment and relationship to the built form.
• The site directly adjoins existing dwellings at Waterton Lodge and mature boundary hedgerows; development here would constitute rounding-off rather than isolated sprawl.
• A strong landscape framework already exists, and additional planting could reinforce defensible boundaries.
Accordingly, the site's development would not materially extend the settlement into open countryside or harm landscape character, consistent with PPW paragraph 3.60.
(b) Highways and accessibility constraints
The Council refers to "major highways constraints" but no evidence highway assessment has been published by the Authority. Mr Raymond's preliminary review confirms that safe vehicular access can be achieved from the adjoining local highway with modest engineering works and that the scale envisaged would generate limited traffic, well within local-road capacity.
Future submission of a Transport Statement can demonstrate compliance with PPW (Section 5: Active and Socially Just Places) and LDP Policy MD2 (criteria 6 and 8).
The site lies within walking distance of Colwinston's core facilities (village hall, public house, bus stops), enabling sustainable travel choices for residents.
(c) Scale of development
Development at a scale that represents proportionate growth for Colwinston can be provided and would be entirely consistent with the "limited expansion" envisaged for minor rural settlements under PPW and the RLDP.

This level of growth would strengthen local demographics, support the rural housing supply and modestly contribute to the Vale's overall housing requirement, without exceeding infrastructure capacity.
(d) Ecology, landscape and agricultural land classification
The land is semi-improved grassland with no statutory designations. Preliminary review indicates no SINC coverage or protected species constraints. Detailed ecological and agricultural-land surveys can be provided to confirm that any residual impacts are minor and capable of full mitigation.

Development can achieve net biodiversity gain through buffer planting, sustainable drainage and native-hedgerow reinforcement, fully consistent with PPW and RLDP environmental objectives.

5. Sustainability and deliverability
• Availability: Mr Raymond, as landowner/promoter, confirms the site is immediately available for development.
• Deliverability: The site is modest, unconstrained by flood risk or abnormal infrastructure requirements, and can deliver homes within the early part of the plan period.
The proposal supports rural-settlement vitality, contributes to local housing choice, and allows design to embody placemaking principles (PPW Ed. 12 Section 2).

Conclusion
This representation, submitted on behalf of Mr Raymond in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.

Change suggested by respondent:

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A further allocation in Colwinston would represent proportionate growth consistent with the scale and character of the settlement.

6896 Object

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Catesby Estates [3713]
Agent: Turley

Summary:

Catesby argues that the proposed housing figures remain insufficient. They contend that the growth level is too low when measured against the aspirations of Future Wales and the most recent population and household projections. Catesby suggests that a more robust and ambitious growth strategy is necessary to meet the actual housing needs of the Vale, advocating for an upward revision of the total requirement.

Noting Llandow's accessible location and proximity to existing and emerging strategic employment opportunities, Catesby broadly SUPPORTS the Sustainable Growth Strategy insofar as seeking to achieve the housing requirement through a range of housing opportunities. This includes the co-locating of housing and employment growth, with a focus on established business parks and industrial estates.

Full text:

VALE OF GLAMORGAN DEPOSIT REPLACEMENT LOCAL DEVELOPMENT PLAN - REPRESENTATION ON BEHALF OF CATESBY ESTATES

This response to the consultation on the Vale of Glamorgan Council ('VoGC') Deposit Replacement Local Development Plan ('RLDP') is submitted by Turley on behalf of Catesby Estates ('Catesby'). It sets out Catesby's comments on the Vale of Glamorgan Deposit Replacement LDP published for consultation on 28th January 2026.

Catesby control a significant amount of land at, and surrounding Llandow Airfield, and sought promotion (previously promoted by L&Q Estates prior to its acquisition by Catesby) of the site during the call for Candidate Sites (Site ID Ref: 448). The Stage 2 Candidate Site Register confirms that the site was not considered suitable for further consideration by VoGC. This was primarily due to its location outside of existing settlement boundaries and the scale of dwellings/services proposed. It was concluded that the scale of development proposed could be considered a new settlement, which should only be proposed as part of a joint LDP, an SDP or Future Wales.

Catesby acknowledges that promotion of a site of this scale falls outside the scope of the RDLP. The site will be promoted through the emerging South East Wales Strategic Development Plan in due course. Catesby maintains that the

site is capable of accommodating major development and that its promotion for strategic scale regeneration is entirely appropriate given its sustainable credentials and the contribution that it can make to the Vale of Glamorgan and wider Cardiff Capital Region. Catesby remains keen to working collaboratively with VoGC to bring forward development at Llandow in the medium to long term and looks forward to continuing the largely positive discussions that have taken place to date.

VISION AND STRATEGIC OBJECTIVES

The vision for the Deposit RLDP maintains that, by 2036, VoGC will provide housing growth which responds to the authority's growing population and caters for all. This should be shaped through successful placemaking, delivering diverse communities and ensuring that the Vale is a healthy and inclusive place for everyone.

VoGC identifies key themes and strategic objectives to deliver the vision of the Deposit RLDP. This includes "ensuring that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population", to address the accommodation needs of all the Vale's communities (Objective 3 - Homes for All). Objective 4 – Placemaking also seeks for new development to be appropriately located, contribute towards creating active, safe and accessible places, and protect and enhance the character of existing communities.

The provision of a mix of new homes is also crucial in fostering diverse, vibrant and connected communities in line with Objective 7. Consequently, physical, economic and social regeneration are facilitated, reflecting the needs and aspirations of local communities. Vital and vibrant rural communities are also provided through the delivery of growth in sustainable locations and supporting infrastructure.

Catesby broadly SUPPORTS the vision and strategic objectives of the Deposit RLDP to deliver a mix of high-quality new housing which responds to the authority's growing population, caters for all, and has placemaking at its heart. This new housing should be facilitated across the Vale in a variety of sustainable locations to best serve as many communities as possible.

SUSTAINABLE GROWTH STRATEGY

A key part of the Sustainable Growth Strategy for the Deposit RLDP is to deliver a sustainable level of housing growth which accords with the Vale's position within the Cardiff Capital Region (CCR). Specifically, the Deposit RLDP makes provision for a housing requirement of 7,980 dwellings over the Plan period (526 dwellings per annum). The Deposit RLDP makes clear that this is both deliverable and ambitious, reflecting the Vale's position in the Future Wales national growth area. Crucially, the housing requirement will be achieved through a range of housing opportunities, to encourage existing residents to live and work in the Vale and encourage inward migration of new residents, at a level commensurate with the CCR.

However, Catesby would suggest that this level of growth is still too low, taking into account the aspirations of Future Wales for the area and the latest population and household projections, which suggest a higher level of need is required for the Vale.
The Sustainable Growth Strategy also seeks for new and existing housing, employment, services and facilities to be co-located to reduce the need to travel. New housing development shall be specifically located in places that are already well served by existing and/or proposed services, facilities and employment opportunities. This includes, where appropriate, those offered by the business parks and industrial estates already established in the Vale. The Strategy also allows for regeneration opportunities on previously developed and under-utilised land.

The Key Diagram (Figure 1) identifies the proposed Strategic Growth Area (SGA), connectivity routes, key locations for future development, the Plan's hierarchy of settlements and interrelationships with adjoining local authorities.

Figure 1: Key Diagram

Catesby considers that the Minor Rural Settlements dispersed within the 'Connectivity' corridor, such as Llandow, should play a supporting role in accommodating housing growth, given their important range of services and facilities that reduce the need to travel. The Sustainable Growth Strategy also allows for small scale affordable housing led developments in Minor Rural Settlements, where appropriate.

Noting Llandow's accessible location and proximity to existing and emerging strategic employment opportunities, Catesby broadly SUPPORTS the Sustainable Growth Strategy insofar as seeking to achieve the housing requirement through a range of housing opportunities. This includes the co-locating of housing and employment growth, with a focus on established business parks and industrial estates.

Paragraph 5.14 notes that "where appropriate, the broad principle is that the spatial strategy should look to ensure that new housing is in places where employment opportunities already exist or are proposed." Catesby supports this principle, noting that the Llandow Airfield site offers the potential to deliver co-located residential and employment opportunities at scale, as identified within the promotion document submitted in support of its response to the call for Candidate Sites. This will remain a key aspiration of the site's future promotion via the emerging SDP.

However, Catesby reiterates that the housing requirement for the Vale should be higher, accounting for the aspirations of Future Wales for the area and the latest population and household projections. A more ambitious Growth Strategy is needed to accommodate this increased housing requirement.

POLICY FRAMEWORK

Policy SP1 - Sustainable Growth Strategy reiterates that the Plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that, outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.

In order to ensure that the minimum target figure is met, it is important that the Plan identifies a sufficient number of sites / housing allocations to meet both the short and longer term development needs. As previously stated, Catesby SUPPORTS the overall growth strategy across the Vale of Glamorgan contained in the Deposit RLDP. However, it is questioned whether or not there is sufficient land allocated to deliver the growth required.

Of the overall housing target of 7,890 dwellings, approximately half of these are to be delivered via rolled forward allocations and extant consents. Whilst some such sites can be expected to come forward, Catesby would caution against the over-reliance on delivery of historically allocated sites.

Catesby suggests that VoGC considers the inclusion of additional sites to deliver the predicted growth strategy identified in the RLDP. This will strengthen the land supply position ensuring a robust RLDP can be adopted which has the ability to ensure the delivery of the necessary growth. Catesby supports growth along the 'Connectivity' corridor, particularly in Minor Rural Settlements such as Llandow to assist with this.

Policy SP2 – Settlement Hierarchy broadly distributes development in line with the hierarchy of settlements, reflecting the role and function of places and directing growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision. Llandow is identified as a Minor Rural Settlement, new development associated with which should be mainly limited to infill opportunities and small-scale affordable housing led schemes (sites of up to 25 dwellings with a minimum of 50% affordable provision).

Catesby would suggest that specific sites in and around all settlement types may be suitable for a greater level of development than that suggested by the settlement hierarchy, and these should be explored accordingly. As part of this, Catesby SUPPORTS the recognition in the Policy Framework that the existing services and facilities in and around the Minor Rural Settlements should be safeguarded, supported and enhanced, and that in order to do this, growth should still be balanced in a way which supports these rural communities (Paras 6.16 and 6.17).

Policy SP3 – Development in the Countryside is clear that development will only be permitted in the countryside where it falls within one of the specified uses. This only includes Affordable Housing Exception Sites in respect of housing development. Catesby suggests that further development sites are required across the Vale in order to meet the Council's housing requirement, which should consider locations within the countryside where appropriate.

Catesby reiterates that the co-location of housing with existing infrastructure and facilities will be crucial to achieving the overall Growth Strategy of the RLDP. Development in and adjacent to Minor Rural Settlements is also key to this, especially those located in proximity to the 'Connectivity' corridor on the Key Diagram.

Catesby SUPPORTS development within these locations, particularly at Llandow. This is key in order for the Vale of Glamorgan to achieve part of its overarching vision, which states that "growth within rural settlements has provided for the needs of residents and supports balanced multi-generational communities that contribute to the vibrancy of the rural area".

SUMMARY

We trust that the above representations can be considered duly made and look forward to receiving confirmation accordingly. Catesby welcomes the opportunity to comment further as the RLDP progresses through to adoption. Catesby looks forward to engaging with the Council over the months ahead to continue a dialogue regarding the future delivery of development at Llandow. If you require any further information, please do not hesitate to contact me on the details below.

Change suggested by respondent:

Catesby suggest that the level of growth is too low, taking into account the aspirations of Future Wales for the area and the latest population and household projections, which suggest a higher level of need is required for the Vale.

Document Element: SP6 - HOUSING REQUIREMENT
Respondent: Barratt Redrow Homes [2669]
Agent: Boyer Planning

Summary:
Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic underdelivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

Full text:
1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.

Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well

above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of

public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.
5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.
5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.
5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.
5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.
5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.
5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.
5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
Policy SP2 – Settlement Hierarchy
5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.
5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.
5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.
5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.
5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.
5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.
5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.
Policy SP4 - Placemaking
5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality

sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:

• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live

application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to

accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning

permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.

• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it

difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the

wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Change suggested by respondent:

Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

6904 Comment

Document Element: SP6 - HOUSING REQUIREMENT, Table 2: Housing Supply

Respondent: Barratt Redrow Homes [2669]

Agent: Boyer Planning

Summary:

Existing land supply - The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Windfall - The Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. We do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036, but it is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year. periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites.

Full text:

1. INTRODUCTION

1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.

1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:

- Section 3 – The Vale of Glamorgan Key Characteristics;
- Section 4 – RLDP Key Themes, Vision, and Objectives;
- Section 5 – Sustainable Growth Strategy; and
- Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.

1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):

- Test 1 – Does the Plan Fit?
- Test 2 – Is the Plan Appropriate?
- Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS

Settlement Pattern

2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.

2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".

2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.

Housing Need

2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.

2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is

particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY

Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus

corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is

predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This

accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.

5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.

5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.

5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.

Policy SP4 - Placemaking

5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.

5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 &

Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply

•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.

• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of

coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and

based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.

Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact

upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that

it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Change suggested by respondent:

The RLDP should incorporate a greater flexibility allowance to provide certainty that any shortfalls/fallow periods are offset and enable a more consistent supply of homes to be achieved over the plan period as a whole.

Document Element: SP6 - HOUSING REQUIREMENT

Respondent: Marion morgan [2413]

Agent: Geraint John Planning Ltd

Summary:

We would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.
It considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period.

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ystradowen area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ystradowen. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para

3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months
• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory

is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious

questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.
Extract of Housing Trajectory (annotated by GJP - red dotted line)

It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in

these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.
HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.
It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land at Ystradowen (Site ID: 430 / 4060) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) and Annex 2 for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 230 affordable homes in the Cowbridge housing market area / ward - which Ystradowen is located within. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation – see Annex 2.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ystradowen and the proposed site. As outlined within these representations, it is considered that the site (ID 430) represents a sustainable, deliverable and acceptable site. The site is located within 2.7 miles Cowbridge and 2.8 miles of Pontyclun. Due to the availability of frequent bus services, and active travel links, key services are readily available to access for any residents within Ystradowen without the need to travel by car. The site is within a maximum 9- and 14-minute bus journey (respectively) of the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Accordingly, the settlement of Ystradowen represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ystradowen, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."
The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.
SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• Provision of circa 67 new-build residential dwellings (including 50% affordable housing provision);
• A mix of house-types and tenures across the site to cater for a variety of needs;
• Creation of a new primary access into the site;
• Connection to pedestrian links within the wider area;
