The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and

supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.
In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.
By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.
Policy HG1 (B) – Housing Allocations
HG1 (3) Barry - Land at Hayes Lane
Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
Unsustainable Location & Poor Connectivity
Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
Loss of Allocated Employment Land
Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for

local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby

aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.

Policy SP8 – Affordable Housing Requirements

Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.

On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Policy SP10 – Sustainable Transport

Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.

In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.

In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.

Policy TR1 – Transport Proposals

Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.

In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.

Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.

Policy SP13 – Community Infrastructure and Planning Obligations

Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.

Policy CI1 – Open Space Provision

Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.

The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.

Productive and Enterprising Places

Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.
The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.
Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.
Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.
Distinctive and Natural Places
Policy SP19 – Green Infrastructure
In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.
The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.
Policy SP20 – Biodiversity and Ecosystem Resilience
In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.
Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Policy DNP8 – Severn Estuary Recreational Pressure

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

The policy also provides no clear threshold or criteria for determining what level of activity would constitute “visitor pressure” or an “adverse impact” on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.

From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan’s ability to meet its housing requirements and risk finding the RLDP unsound.

Conclusion

Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes’ most pertinent comments on the consultation document are summarised below:

• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.

• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.

• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale’s position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan’s ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government’s Future Homes Standard (FHS), which is intended to ensure all new homes are “zero-carbon ready” through a consistent national Building Regulations framework.

• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.

• Persimmon are wholly supportive of Land North of Dinas Powys’ (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council’s proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location,

adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site's progression through the next stages of the plan-making process.

Document Element: POLICY SP8 - AFFORDABLE HOUSING REQUIREMENTS
Respondent: Barratt Redrow Homes [2669]
Agent: Boyer Planning

Summary:

Barratt Redrow development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Full text:

1. INTRODUCTION
1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.
1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:
• Section 3 – The Vale of Glamorgan Key Characteristics;
• Section 4 – RLDP Key Themes, Vision, and Objectives;
• Section 5 – Sustainable Growth Strategy; and
• Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.
1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is

particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY

Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus

corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is

predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.

5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.

5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.

5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).

5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).

5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This

accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan Key Characteristics section, as noted previously in Section 3.

5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.

5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.

5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.

Policy SP4 - Placemaking

5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.

5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 &

Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.
• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply

•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.

• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of

coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.
• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and

based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.
• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.

Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute "visitor pressure" or an "adverse impact" on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan's ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact

upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that

it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Document Element: POLICY SP8 - AFFORDABLE HOUSING REQUIREMENTS
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and

the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could

accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.
5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership

earlier in their housing career due to “boom” or “recession” factors impacting on affordability are nevertheless able to “catch-up” later on – 80% of the gap at the age of 30 is “caught-up” by the age of 40. This finding supports the resumption of long-term household formation trends.
In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP’s preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government’s latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or “business as usual” response for the Vale. It points the other way.
This sits uncomfortably with the Council’s own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council’s own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object

Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.
Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part
Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the

affordable housing mix being “informed” by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.

The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be “informed” by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council’s latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan’s blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.

The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led

sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object

Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.

There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.

A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.

Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.

In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.

Policy CI1 – Open Space Provision

Position: Support in principle / Object in part

Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.

The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.

There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.

Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.

Policy SP4 – Placemaking

Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the

settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.

As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

7106 Support

Document Element: POLICY SP8 - AFFORDABLE HOUSING REQUIREMENTS
Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

Recognition that the provision of affordable housing should be negotiated on a site-by-site basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.

Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.

For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy Cll requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as

part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

7192 Support

Document Element: POLICY SP8 - AFFORDABLE HOUSING REQUIREMENTS
Respondent: H Jones, L Sungur and P John [3741]
Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the
RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)

Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to

growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

We encourage to see reference to the provision of affordable housing to be negotiated on a site-by-site basis considering evidenced viability for the development.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement

• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the
RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.

• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to

biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green

Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations

• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the
RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.

Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."

The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.

These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to ensure effective delivery.

Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.

Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements

The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.

The Level of Growth - Homes and Jobs

The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).

Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.

BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.

Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.

The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.

We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.

The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.

The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.

In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of

homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters.
It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for

11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.

Renewable Energy

Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?

It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.

The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.

Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.

The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.

Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.

Minerals

The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.

BMV Agricultural Land

The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:

- Has sought to avoid BMV land wherever possible;
- Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
- Settlement hierarchy decisions; and
- Candidate site assessments.
-
- Directs strategic growth to areas with least BMV land
- Removes or avoids allocations where BMV impacts were significant or unjustified.
- Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
- Applies a sequential approach through: Preference for brownfield and non-BMV sites;
- Replacement of higher-BMV sites with lower-grade alternatives where possible.
-
- Requires site-specific ALC surveys to verify actual land quality before allocation.
- Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
- Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
- Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
-

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to

considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry:
“Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance.”
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

6026 Object

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES

Respondent: Barratt Redrow Homes [2669]

Agent: Lichfields

Summary:

The proposed 25-dwelling cap for Minor Rural Settlements is considered unjustified and should allow expansion where viable. Flexibility in dwelling numbers and market housing mix is necessary to meet local demand and ensure the financial viability of affordable housing delivery.

The Council needs to ensure that it does not undermine site viability by being overly prescriptive on market (and affordable) dwelling mix.

Full text:

The allocation of 'Land to the East of Colwinston' for residential development as a Rural Affordable Housing Led Site by Policy HG4(1) is supported by Barratt David Wilson Redrow (South Wales) Ltd. The site is free from any major constraints and is suitable for development, demonstrated by the successful Redrow development adjacent. The allocation assists in delivering the RLDP vision, in particular for the delivery of homes which caters for all, including affordable homes. As explained in our representations to Policy SP1 and SP2 above, the delivery of housing at the Primary and Minor Rural Settlements is essential to ensuring the housing needs of the individual HMAs (and also, the housing needs of VoG) are met during the RLDP period.

'Land to the East of Colwinston' has limited environmental constraints and as set out in our representations to Policy SP2 above, the site area is capable of being expanded to deliver greater dwelling numbers to support the delivery of the identified need for affordable housing in the Llandow HMA during the RLDP period.

The upper limit of 25 dwellings for Minor Rural Settlements allocations is unevidenced and does not align with the need identified in Colwinston. Given the identified need for housing and affordable housing as set out in our comments to Policy SP1, allocated Rural Affordable Housing-Led Sites that have limited constraints (e.g. Allocation HG4(1)) should be allowed to be expanded and accommodate further dwelling numbers should it be desirable and viable to do so.

Policy HG4 also states that "…In addition, the Council will require developers to provide a mix of market housing that will contribute to the specific housing market needs of the community. Applicants will need to demonstrate how both the market and affordable housing provides for the local housing needs of community in terms of tenure, type and size of dwellings so that a range of housing is delivered to meet the needs of different groups in the local community."

The RLDP seeks a high proportion of affordable homes as well as ambitious policies for net zero carbon operational homes. If these policies are going to be met it is essential that the mix of dwellings on the open market element is of a sufficient value to make the Council's policy aspirations deliverable.

Change suggested by respondent:

"The following sites are allocated as affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing to meet the affordable housing needs of the local community."

The removal of the arbitrary upper limit on maximum dwelling numbers for allocations in Minor Rural Settlements and the removal of policy restrictions on open market tenure, type and size will ensure that Policy HG4 meets the third test of soundness (Will the Plan deliver?) and will assist in the delivery of the site.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES

Respondent: Mr Ian Fairweather [1225]

Agent: Boyer Planning

Summary:

There is no objection in principle to Policy HG4, but there is an objection to the fact that there is no development in St Nicholas (despite it being sustainably located on the A48).

Full text:

The Spinney, St Nicholas (Site Ref: 460)
Boyer have prepared the following representation on behalf of Mr Fairweather in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021-2036 Deposit Plan Consultation.

A summary of our main representations is as follows:
• Significant concern is raised regarding the lack of residential allocations within the Minor Rural Settlements, in particular St Nicholas.
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance.
• Questions asked regarding the spatial distribution and the lack of other allocations to provide a range and choice of housing.
• Confirmation of the limited constraints for The Spinney, St Nicholas (Site Ref: 460).
• Review of the Candidate Site Assessment; and
• Need to review the Settlement Boundary of St Nicholas.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the main concern for Mr Fairweather is the proposed primary focus of housing growth within the Vale being within the Strategic Growth Area. Whilst it is understood and supported by Mr Fairweather that new housing developments would be concentrated in locations which are served by existing public transport routes and provide the opportunity to enhance sustainable transport connectivity, it is shortsighted to concentrate this growth specifically along the railway line. The justification

being that those settlements identified as being 'Outside of the Strategic Growth Area' – including St Nicholas, are equally as important as those within. St Nicholas is a sustainable location and located on an important public transport route (A48) and is well served by bus transport.

The principle of locating development at sustainable settlement is supported, however Mr Fairweather considered that limiting development at suitable settlements outside the Strategic Growth Area is not the correct approach and that greater flexibility is required to deliver the housing need. Currently under Policies HG1 and HG4, the only allocations in any Minor Rural Settlements amount to 122 dwellings in total (excluding any from St Nicholas). This also needs to be considered in the context of the 1,303 dwellings expected from large and small windfall developments. Clearly there is a requirement to provide further allocations in sustainable Minor Rural settlements identified as being 'Outside of the Strategic Growth Area' – namely St Nicholas.

In context of above, Mr Fairweather strongly recommends that appropriate consideration is given to the widening of the Strategic Growth Areas to include St Nicholas as a sustainable settlement which is capable of accommodating a new allocation at The Spinney (Site Ref: 460).

SP2: Settlement Hierarchy
Mr Fairweather previously supported the identification of St Nicholas as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Cardiff to the east and access to Bridgend to the West. The Deposit Plan retains St Nicholas within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.

Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as St Nicholas, should be subject to such constrained growth.

In this context, Mr Fairweather highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all buildings upon the identified importance of Minor Rural Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to St Nicholas under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of St Nicholas, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, The Spinney, St Nicholas (Site Ref: 460) is considered to naturally round-off the existing boundary, enclosing the envelope of development, without encroaching or sprawling beyond the existing line of built form, in a sustainable location which can accommodate an appropriate allocation.

SP6: Housing Requirement
As per Mr Fairweather's previous comments to the Preferred Strategy, the concerns regarding a need for a higher housing level and the need for development to be appropriate placed in sustainable allocations in a settlement in which people want to live is still relevant.

Currently Policy SP6 establishes the overall housing requirement and applies a 10% flexibility allowance. The Policy suggests that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes and this will be delivered by:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments

As per previous representations, Mr Fairweather considers that it's important to take account of recent guidance provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan. For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
More recently in Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery.
Applying the same approach to other current Local Development Plans, it is evident that a flexible housing allowance above the current 10% threshold will be required. Having reviewed the Council's evidence base Mr Fairweather considered that a minimum allowance of 15% would be reflective of the County's growth aspirations and would seek an additional circa 400 dwellings (equating to a housing requirement of 9,074 dwellings inclusive of the 15% flexibility).

To accommodate this increased in flexibility allowance and over all housing numbers, it should be outlined that smaller sites typically deliver more quickly, are less infrastructure-dependent, and increase build-out rates through diversification. The Spinney represents precisely the type of deliverable site that should form part of an enhanced flexibility allowance.

Policy SP6 should therefore be amended to increase the flexibility margin to up to 15%, with consequential allocation of additional small and medium-sized sites.
HG1: Housing Allocations Table 3 spatial distribution
Mr Fairweather does not comment on any of the proposed housing allocations, however, does highlight that the delivery in incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements. Only 161 units are proposed on smaller allocated sites, equating to approximately 7% of newly allocated supply.
In the context of the above, there remains significant concern that the spatial strategy continues to exclude allocations within Minor Rural Settlements, including St Nicholas.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.

There is therefore a clear disconnect between the identified role and function of settlements such as St Nicholas and the absence of any allocated sites (excluding the affordable led schemes under Policy HG4) capable of delivering an appropriate range and choice of dwellings. The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.

This approach is inconsistent with the settlement's accessibility and functional role. St Nicholas is:
• Well connected to the A48 strategic highway network.
• Served by bus routes within close proximity to the site.
• Within commuting distance of Cardiff and Cowbridge.
• A sustainable and established residential community.

Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.
Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at The Spinney would represent proportionate growth consistent with the scale and character of the settlement.
HG4 – Affordable Housing Allocations

It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, but in the context of them being affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing to meet the affordable housing needs of the local community. Mr Fairweather has no objection in principle to this but does object to the fact that there is no development in St Nicholas (despite it being sustainably located on the A48).

Furthermore, The Spinney, St Nicholas (Site Ref: 460) proposes a 40% affordable housing provision which accords with Policy SP8 of the Deposit Plan. Should the Authority consider that the site is suitable for allocation under Policy HG4 then the provision can be amended to 50% to accord with the policy.

Candidate Site Response: The Spinney, St Nicholas (Site Ref: 460)
From a review of the Background Paper (BP18 a) - Candidate Site Assessment at Preferred Strategy Stage, we are aware that the candidate site The Spinney, St Nicholas (Site Ref: 460) has not progressed beyond Stage 2: Detailed Site Assessment: Site Characteristics and Physical Constraints.

The justification provided states that 'The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area'. Whilst this is disputed and it is considered that the site should have progressed, it is important to highlight that of all the Candidate Sites within St Nicholas, The Spinney has the least issues raised.

Other sites within the assessment raised concerns regarding Best and Most Versatile Land, intrusion into the open countryside and the loss of a sites identified as providing important views. Ultimately, Site Ref: 460, is clearly the most appropriate site for any development within St Nicholas and with limited constraints raised.
Turning to the reasons for not taking the site forward, the following is reiterated in the context of the impact on the character and setting of the Conservation Area.

Conservation Area Impact
St Nicholas is described in the Conservation Area Appraisal and Management Plan as 'a low density, linear village located on the A48' and the candidate site is located towards the west of the village and lies partially within the current Conservation Area boundary. The Authority will be aware that the Conservation Area has been amended over the years to its current illogical designation regarding the Paddock area, similar to that of the Settlement Boundary.

The development of the Candidate Site is a clearly a logical and sensible infill development, which would have limited impact upon the Conservation Area. The majority of the site is already hidden from the A48 via mature vegetation and existing boundary features, and any proposed development would maintain this approach and minimise the visual appearance on the Conservation Area.
Listed buildings and other historic buildings of special interest are identified in the Conservation Area Appraisal as 'County Treasures'. These are situated at the heart of the Conservation Area. The buildings and their settings establish a scale and density for the historic area of the village to the south of St Nicholas' Church.

More modern development, away from the centre of the village at Ger-y-Llan to the northeast, Dyffryn Close to the southeast and Old Rectory Drive to the west are suburban in character with larger houses and generous gardens. These are all excluded from the Conservation Area and represent development at a lower density than the historic core of the village.

Whilst only a part of the Candidate Site is located within the Conservation Area, it has to be seen in the context of an appropriate infill site that links the southern part of the village with the more modern suburban type of development at Old Rectory Drive to the west. More significantly, the site provides an opportunity for a development to make a positive contribution to the character and appearance of the Conservation Area as well as respect or enhance the special architectural or historic interest.

This can be achieved by providing a new front boundary to the site and houses with gardens, of the type identified in the Conservation Area Appraisal and Management Plan that help define the character of the village. Whilst the Candidate Site extends to the A48, this is to allow the appropriate minimal access junction, whilst the majority of the generous grass verge will be retained, meaning that development will be clearly set back a considerable distance from the road and the opposite pavement.

Thus, the development will be totally screened when travelling along the A48 and is therefore not considered to affect the views to the north of the site. The development will complement and enhance the character of the rural and built environment surrounding the site.
In line with the objectives of the St Nicholas Conservation Appraisal and Management Plan, the boundary treatments proposed will be sympathetic and in keeping with the surrounding area, such that they do not detract from the historic assets and desired lines of view. Again, whilst detailed design has not yet been progressed, any boundary treatments proposed will avoid the use of stained close boarded timber fencing, over-elaborate modern metal railings and gates. It is reiterated that the building line for the front of the development will not encroach any further forward that the existing boundary and will be designed to be innkeeping and not detract from the existing character of the Conservation Area. Moreover, the layout of the site has been designed in such a way that the spaciousness and green infrastructure is retained and enhanced from a redundant Paddock.

Furthermore, the characteristics that give the Conservation Area its special interest, as identified in the Conservation Area Appraisal and Management Plan have been used as references for the design of the illustrative site layout.

The proposal is to use local materials and design details designed to preserve or enhance the special interest of the Conservation Area. Limestone laid as rubble external walling, slate roofs and roadside walls of varying sizes predominate. More modern houses in the area are rendered and painted white. This, according to the Conservation Area Appraisal gives 'some cohesiveness [to the area] despite their modern details'.

Elsewhere in the appraisal the village is described as having a 'rural character', a character that is reinforced by the existence of mature trees, singularly or in groups and simple pavements with narrow stone curves. The use of modern railings or timber fences are considered to be detrimental to the historic character of the conservation area.

Given the sites relationship with the Conservation Area, the proposal has been designed in to ensure that the development endeavours to protect, preserve and enhance the character of the area.

The site layout has been designed to avoid having the appearance of a suburban estate by providing a range of house types on plots that vary in size thereby maintaining the open structure of the conservation area as described. Furthermore, the existing boundaries to the east and west, which are subject to TPOs, will be retained and enhanced and not detract from the character of the Conservation Area.

The site marks a transition point between the western end of the linear historic core of the village and the lower density development at Old Rectory Drive.
The landscape proposals have been designed to include sustainable drainage, and the tree planting reflects the isolated trees or groups of trees referred to in the Conservation Area Appraisal as significant areas of character.

The illustrative site layout represents an appropriate scale of development and an efficient use of land and as such the proposed development will not have any detrimental impact upon the Conservation Area.
Deposit Plan Amendments
Settlement Boundary

Given the above and the further assessment below, the strong preference would be for the site to be allocated for residential development within St Nicholas. This would form a logical amendment to the Settlement Boundary to include the western parcel (former Paddock) of Candidate Site - The Spinney, St Nicholas (Site Ref: 460). The current Settlement Boundary is illogical as the site is surrounded by development on 3 boundaries and the simple rounding off along the southern boundary would allow for an appropriate windfall infill development.
Conservation Area

Given the above then it is considered that the Conservation Area boundary would need to be amended to reflect the allocation of the site.
These amendments would be required to the Deposit Proposals Map.

Site Assessment
The site was promoted through the Candidate Site process and assessed at Preferred Strategy stage. However, it is not allocated within the Deposit Plan and thus was not subject to updated reassessment as part of this stage of plan preparation.

For completeness, and in order to clearly demonstrate the limited and proportionate nature of the site's constraints, the previous site assessment summary table is reproduced below. This is included to highlight that the site performs favourably in sustainability and deliverability terms, and that the matters previously cited as constraints are capable of mitigation through design.

A table comparing an updated site assessment prepared by Boyer against the Council's assessment has been provided.

This representation, submitted on behalf of Mr Fairweather in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjoining The Spinney, St Nicholas (Site Ref: 460) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Significant concern remains regarding the absence of residential allocations within Minor Rural Settlements, particularly St Nicholas, and the continued reliance on a limited flexibility allowance under Policy HG1. An increased flexibility margin of up to 15% would necessitate the identification of additional sustainable and deliverable sites. Such growth should be directed, in part, toward appropriate locations within Minor Rural Settlements to ensure a genuine range and choice of housing and to support rural community sustainability.

It is further noted that the site performs favourably in the Council's Candidate Site Assessment, with limited constraints identified. The matters previously raised, including Conservation Area considerations, are capable of sensitive mitigation through design and have been subject to detailed review. There is no substantive evidence demonstrating that the site is

unsuitable for development.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan. The Deposit Plan should therefore be amended to allocate Land adjoining The Spinney, St Nicholas (Site Ref: 460), or alternatively identify it as a reserve or flexibility site, in order to ensure the Plan is justified, effective and deliverable.

6865 Comment

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES

Respondent: Mr Andrew Raymond [1170]

Agent: Boyer Planning

Summary:

It is recognised that Policy HG4 allocates development within some Minor Rural Settlements, and in particular within Colwinston. In the context of Policy HG4 they will be affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing. This is to meet the affordable housing needs of the local community. There is no objection in principle to this.

However, a balanced approach which allows both affordable housing led schemes and modest mixed-tenure developments would provide greater flexibility and assist in delivering a broader range of housing needs.

Full text:

Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409)
Boyer have prepared the following representation on behalf of Andrew Raymond regarding their land interests associated with Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021– 2036 consultation.

A summary of the main representations are as follows:
• Concern regarding the absence of proportionate residential growth opportunities within rural settlements such as Colwinston;
• Concern regarding the overall housing requirement and the need for an increased flexibility allowance within the housing trajectory;
• Questions regarding the spatial distribution of development and the limited range and choice of sites outside the Strategic Growth Area;
• Confirmation that Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a logical and sustainable opportunity for modest residential development;
• Review of the Candidate Site Assessment process and the current status of the site within the Candidate Site Register; and
• The need to consider appropriate settlement boundary adjustments to facilitate proportionate growth in sustainable rural settlements.

SP1: Sustainable Growth Strategy
Whilst Policy SP1 outlines the housing delivery requirement (addressed under the response to SP6), the principal concern in relation to the site promotion is the concentration of the majority of future housing growth within the defined Strategic Growth Area.
It is understood and supported that new housing development should be located in sustainable locations with access to public transport and services. However, the approach adopted within the RLDP places an overly narrow emphasis on growth within the Strategic Growth Area, primarily focused along rail corridors. This approach risks overlooking other sustainable rural settlements which also demonstrate appropriate connectivity and capacity to accommodate proportionate growth.

Settlements outside the Strategic Growth Area continue to perform an important role within the Vale's settlement hierarchy and rural economy. Villages such as Colwinston provide an established residential community and contribute to the vitality and sustainability of rural areas. Restricting opportunities for modest growth within such settlements risks undermining the long-term sustainability of rural communities.

The principle of directing development to sustainable settlements is supported. However, limiting development opportunities exclusively within the Strategic Growth Area is not considered to represent the most balanced or flexible spatial strategy. Greater flexibility should be introduced to allow appropriate small-scale allocations within sustainable rural settlements.

In this context, Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) represents a sustainable opportunity for a modest residential development that would align with the scale and character of the settlement. The site lies adjacent to existing built form and would represent a logical and contained extension to the village.
SP2: Settlement Hierarchy

Mr Raymond supports the identification of Colwinston as a Minor Rural Settlement and acknowledged its capacity to accommodate proportionate and sustainable growth, particularly given its accessibility and relationship with Bridgend to the west and Cowbridge, Barry and Cardiff to the east. The Deposit Plan retains Colwinston within the Minor Rural Settlement tier, however, does confirm that the settlement is outside the Strategic Growth Area.
Whilst the overarching principle of directing growth to the most sustainable settlements is supported, the Plan does not clearly demonstrate why settlements that are well connected and functionally related to larger centres, such as Colwinston, should be subject to such constrained growth.

In this context, Mr Raymond highlights Paragraph 3.10 which indicates that Minor Rural Settlements provide an 'important range of services and facilities that play a functional role in meeting some of the basic needs of residents within rural areas, reducing the need to travel'.
Building upon this, Policy SP2 does highlight that 'Minor Rural Settlements identified will be limited to the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments'.

Furthermore, the supporting text to Policy SP2 (Paragraph 6.17) confirms that 'those settlements that are considered to have sufficient population, services, and facilities to accommodate small scale growth without it having a detrimental impact on their existing character and local environment'.

This all building upon the identified importance of Minor Rual Settlements within the Preferred Strategy which outlined in Paragraph 6.50 that it is 'essential for the LDP to balance the growth in a way that supports the need of rural communities' and whilst it is evident that within these settlements 'general market housing will be limited to opportunities including infill' (Paragraph 6.51), the enabling of an element of 'open market housing will provide opportunities for the delivery of affordable housing reflecting the aspirations of rural communities to sustain their housing needs' (Paragraph 6.51). This importance of Minor Rural Settlements needs to be carried more strongly forward in the Deposit Plan.

Moreover, the evidence base does not sufficiently justify the degree of restriction now applied, nor does it explain why proportionate additional growth in appropriate Minor Rural Settlements would undermine the spatial strategy. As drafted, the policy risks limiting flexibility in the distribution of housing across the Vale. Accordingly, it is considered that the approach to Colwinston under Policy SP2 is not justified.

Clearly there continues to be a disconnect between the identified role and function of Colwinston, which is supported, and the actual ability to deliver the appropriate range and choice of dwellings in the rural settlements. For example, a modest allocation at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) would represent proportionate growth that reflects the scale and character of the settlement. The site sits adjacent to existing development and would consolidate the existing settlement pattern without resulting in sprawl into the open countryside.

The current approach within Policy SP2 risks constraining flexibility within the spatial strategy and limiting opportunities to support sustainable rural communities.

SP6: Housing Requirement
Concerns are raised regarding the overall housing requirement and the level of flexibility incorporated within the Plan.

Policy SP6 currently establishes a housing requirement of 7,890 dwellings over the Plan period and includes a flexibility allowance of 10%, resulting in an overall provision of 8,660 dwellings.
The proposed supply is anticipated to be delivered through:
• 3,837 dwellings from the existing land supply
• 3,520 dwellings on allocated sites
• 1,303 dwellings from large and small windfall developments
Whilst the inclusion of a flexibility allowance is supported, it is considered that a 10% allowance may not be sufficient to ensure resilience within the housing trajectory.
Recent experience from other Local Development Plans across Wales has demonstrated the importance of incorporating higher flexibility allowances to account for delivery uncertainty, infrastructure constraints and potential delays to larger strategic sites.

For example, other authorities have incorporated flexibility allowances in excess of the standard 10% to ensure the robustness of their housing supply and to provide a greater degree of adaptability should circumstances change during the Plan period.

In this context, it is considered that the Vale of Glamorgan RLDP should incorporate a flexibility allowance of at least 15%. This would provide additional resilience within the housing trajectory and reduce reliance on a limited number of larger strategic allocations.

Smaller sites such as Candidate Site 409 at Waterton Lodge, Colwinston are particularly valuable in this context. Smaller sites are typically:
• More deliverable in the short term
• Less dependent on major infrastructure investment
• Capable of contributing to early housing delivery
• Able to increase overall build-out rates
Such sites can therefore play an important role in supporting the delivery of the Plan's housing requirement and enhancing flexibility within the supply.

HG1: Housing Allocations
Mr Raymond does not comment on any of the proposed housing allocations, however, does highlight that the delivery is incumbent upon a number of larger strategic sites, and that to allow a greater range and choice then smaller allocations in the Minor Rural Settlements are required. Only 122 units are proposed on smaller allocated sites, equating to approximately 2.6% of newly allocated supply under (E) Rural Affordable Housing Led Sites – policy HG4.

In the context of the above, there remains significant concern that the spatial strategy continues to exclude the required number of allocations within Minor Rural Settlements, including Colwinston.

The Plan recognises that Minor Rural Settlements provide an important range of services and facilities and play a functional role in meeting the needs of residents within rural areas. It further acknowledges that it is essential for the LDP to balance growth in a way that supports rural communities. Whilst general market housing is described as being limited to infill opportunities, the Plan also recognises that enabling an element of open market housing provides opportunities for the delivery of affordable housing and helps sustain rural communities.
It is agreed that the inclusion of smaller allocations can:
• Improve overall housing delivery rates
• Provide greater choice within the housing market
• Reduce delivery risk by diversifying supply
• Support rural communities through proportionate growth

Whilst it is noted that there is a proposed allocation within Colwinston – HG4 (1) – Land to the East of Colwinston for 25 units, Mr Raymond maintains that there is still a clear disconnect between the identified role and function of settlements such as Colwinston and the absence of any further allocated sites capable of delivering an appropriate range and choice of dwellings.

The strategy effectively restricts development to windfall and infill, without positively identifying opportunities that would logically consolidate and strengthen the settlement.
This approach is inconsistent with the settlement's accessibility and functional role. Colwinston is:
• Well connected to the A48 strategic highway network;
• Served by bus routes within close proximity to the site;
• Within commuting distance of Bridgend, Cowbridge, Barry and Cardiff;
• A sustainable and established residential community.
Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a contained and sustainable opportunity that naturally rounds off the existing settlement boundary. The site encloses the envelope of development without encroaching into open countryside or extending beyond the established line of built form. It is well related to existing services and infrastructure and is capable of accommodating a modest allocation consistent with the scale and character of the village.

A proportionate allocation at this location would align with the stated objectives of supporting rural communities, enabling a mix of market and affordable housing, and providing genuine choice within Minor Rural Settlements. The continued absence of such allocations undermines the internal consistency of the spatial strategy.

Furthermore, the strategy places substantial emphasis on rail-based corridors. Whilst development near rail infrastructure is supported in principle, sustainable growth should not be exclusively rail-led. Strategic highway connectivity and bus accessibility also represent legitimate and sustainable locational advantages.

The complete absence of allocations in Minor Rural Settlements creates an imbalance in distribution and limits housing choice. A modest allocation at Waterton Lodge would represent proportionate growth consistent with the scale and character of the settlement.

HG4 – Affordable Housing Allocations
It is recognised that Policy HG4 does allocate development within some Minor Rural Settlements, and in particular within Colwinston HG4 (1) – Land to the East of Colwinston for 25 units. In the context of Policy HG4 they will be affordable housing led sites where there will be a requirement for the provision of a minimum 50% affordable housing. This is to meet the affordable housing needs of the local community. Mr Raymond has no objection in principle to this but does object to the fact that there is no other development opportunities recognised in Colwinston (despite it being sustainably located on the A48).

Furthermore, Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) could be reduced in size and could be

amended to offer 50% affordable housing to accord with the policy (or even 100% affordable if the Authority sought this).

A balanced approach which allows both affordable housing led schemes and modest mixed-tenure developments would provide greater flexibility and assist in delivering a broader range of housing needs.

A modest development at Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409) could provide an opportunity to deliver both market and affordable housing in accordance with Policy SP8. This would support local housing needs whilst maintaining the scale and character of the settlement.

Candidate Site Response: Land adjacent to Waterton Lodge, Colwinston (Candidate Site 409)
Candidate Site 409 (Land adjacent to Waterton Lodge, Colwinston) was submitted to the Vale of Glamorgan Council during the 2022 Call for Candidate Sites as part of the preparation of the Replacement Local Development Plan (RLDP) 2021–2036.

The site is currently included within the Candidate Site Register, which represents a list of sites submitted for consideration through the plan-making process. Inclusion within the register does not in itself indicate that a site will be allocated for development, as all sites are subject to a structured assessment process.

These stages consider a range of factors including sustainability, accessibility, environmental constraints and deliverability.

As part of the ongoing plan preparation process, the Council produced an updated Candidate Site Register following the initial submissions. Sites continue to be evaluated as part of the evidence base supporting the RLDP.

In this context, Land adjacent to Waterton Lodge, Colwinston represents a sustainable and deliverable opportunity for modest residential development which could contribute positively towards the Plan's housing supply.

The site is located adjacent to the existing settlement and is well related to the current built form. Development in this location would represent a logical and contained extension to the village, rather than an isolated incursion into open countryside.

Furthermore, the site has been promoted through the formal candidate site process and should therefore be considered fully within the Council's site assessment framework.

Deposit Plan Considerations
Settlement Boundary

Given the location of Candidate Site 409 adjacent to the existing settlement of Colwinston, consideration should be given to whether a modest adjustment to the settlement boundary would enable the site to be appropriately integrated within the settlement.

A logical rounding-off of the existing settlement edge would allow development to occur in a manner that respects the existing built form and maintains a clear and defensible settlement boundary.

Such an approach would represent a proportionate response to the need for modest housing growth within rural settlements.

Site Assessment
The site was formally submitted through the Candidate Site process and is currently listed within the Council's Candidate Site Register.

Given the role that smaller deliverable sites can play in supporting housing delivery, it is important that sites such as Land adjacent to Waterton Lodge, Colwinston are fully considered as part of the ongoing assessment process.
Smaller sites can provide valuable flexibility within the housing trajectory and contribute to early housing delivery within the Plan period.

Turning to the main reasons the site was not taken forward Mr Raymond provides the following response:
(a) Alleged intrusion into the open countryside
The Stage 2 Register cites "unacceptable intrusion into the open countryside". Mr Raymond submits that this conclusion fails to reflect the site's physical containment and relationship to the built form.
• The site directly adjoins existing dwellings at Waterton Lodge and mature boundary hedgerows; development here would constitute rounding-off rather than isolated sprawl.
• A strong landscape framework already exists, and additional planting could reinforce defensible boundaries.
Accordingly, the site's development would not materially extend the settlement into open countryside or harm landscape character, consistent with PPW paragraph 3.60.
(b) Highways and accessibility constraints
The Council refers to "major highways constraints" but no evidence highway assessment has been published by the Authority. Mr Raymond's preliminary review confirms that safe vehicular access can be achieved from the adjoining local

highway with modest engineering works and that the scale envisaged would generate limited traffic, well within local-road capacity.
Future submission of a Transport Statement can demonstrate compliance with PPW (Section 5: Active and Socially Just Places) and LDP Policy MD2 (criteria 6 and 8).
The site lies within walking distance of Colwinston's core facilities (village hall, public house, bus stops), enabling sustainable travel choices for residents.
(c) Scale of development
Development at a scale that represents proportionate growth for Colwinston can be provided and would be entirely consistent with the "limited expansion" envisaged for minor rural settlements under PPW and the RLDP.
This level of growth would strengthen local demographics, support the rural housing supply and modestly contribute to the Vale's overall housing requirement, without exceeding infrastructure capacity.
(d) Ecology, landscape and agricultural land classification
The land is semi-improved grassland with no statutory designations. Preliminary review indicates no SINC coverage or protected species constraints. Detailed ecological and agricultural-land surveys can be provided to confirm that any residual impacts are minor and capable of full mitigation.

Development can achieve net biodiversity gain through buffer planting, sustainable drainage and native-hedgerow reinforcement, fully consistent with PPW and RLDP environmental objectives.

5. Sustainability and deliverability
• Availability: Mr Raymond, as landowner/promoter, confirms the site is immediately available for development.
• Deliverability: The site is modest, unconstrained by flood risk or abnormal infrastructure requirements, and can deliver homes within the early part of the plan period.
The proposal supports rural-settlement vitality, contributes to local housing choice, and allows design to embody placemaking principles (PPW Ed. 12 Section 2).

Conclusion
This representation, submitted on behalf of Mr Raymond in response to the current Vale of Glamorgan Council Replacement Local Development Plan (RLDP) 2021–2036 Deposit Plan Consultation, maintains that Land adjacent to Waterton Lodge, Colwinston (Site Ref: 409) represents a logical, sustainable and deliverable parcel that should be allocated as a suitable and viable residential site within the RLDP.

Accordingly, the site is considered to represent a suitable, available and achievable allocation capable of contributing to the housing requirement, supporting affordable housing delivery, and reinforcing the spatial objectives of the Plan.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES
Respondent: Marion morgan [2413]
Agent: Geraint John Planning Ltd

Summary:

It is not considered that this policy goes far enough to address the target and level of affordable housing need. Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ystradowen area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:
VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ystradowen. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural

economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months
• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the

preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is

met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.
Extract of Housing Trajectory (annotated by GJP - red dotted line)

It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.
HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty

years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.
It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land at Ystradowen (Site ID: 430 / 4060) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) and Annex 2 for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 230 affordable homes in the Cowbridge housing market area / ward - which Ystradowen is located within. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation – see Annex 2.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ystradowen and the proposed site. As outlined within these representations, it is considered that the site (ID 430) represents a sustainable, deliverable and acceptable site. The site is located within 2.7 miles Cowbridge and 2.8 miles of Pontyclun. Due to the availability of frequent bus services, and active travel links, key services are readily

available to access for any residents within Ystradowen without the need to travel by car. The site is within a maximum 9- and 14-minute bus journey (respectively) of the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Accordingly, the settlement of Ystradowen represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ystradowen, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."
The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.
SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• Provision of circa 67 new-build residential dwellings (including 50% affordable housing provision);
• A mix of house-types and tenures across the site to cater for a variety of needs;
• Creation of a new primary access into the site;
• Connection to pedestrian links within the wider area;
• Public open space; and
• Green Infrastructure; and
SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

Land at Ystradowen (Site ID: 4060)

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site. The 'Candidate Sites Assessment Deposit Plan Stage v2' for 'Land at Ystradowen (Site ID: 4060)' sets out that the position of the site at the Deposit Stage is as follows:

"Amendment of proposed use from housing to affordable housing led. Previous site reference 430. The original assessment concluded that whilst the site was adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.
The LDP site in question has subsequently been granted planning permission for housing. This site will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location."

In terms of the first paragraph, the assessment/conclusion implies and suggests that 'Land at Ystradowen' (4060)' does not adjoin the existing LDP settlement boundary as the allocated site ('Land off Sandy Lane, Ystradowen') has not been built out – "by virtue of an existing adopted plan LDP allocation this is currently under review". Detailed representations have been made and submitted previously at the Housing Trajectory (see Appendix B& C) that outlines that this is fundamentally incorrect. This is not repeated in full here, with just the main points re-iterated.

First and foremost, 'Land at Ystradowen (4060)' directly adjoins the existing LDP settlement boundary. Secondly, there has been a significant change in the position and circumstances. The allocated site ('Land off Sandy Lane, Ystradowen') is currently being "built out", with work commencing on site (see photographic evidence in Appendix C)
- post the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024).
Accordingly, the site no longer adjoins "the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review". Given this, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.

With regards to the second paragraph, the assessment/conclusion outlines that "The LDP site … will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location". The arguments and case presented in Appendix B & C. There is a clear overreliance on 'rolled forward' sites / existing allocated sites. A total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%). We believe that a greater level of growth is achievable and should be considered. Not least as there is an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings). As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy. Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. The provision of housing should be adjusted to

rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply. The "future needs of residents in the area" will therefore not be met/served by just this site, and it is considered that additional land should be allocated in this location.

Furthermore, to reinforce, illustrate, and evidence the point in specific reference to the site the subject to this representation (located in Ystradowen), reference is made to application ref. 2013/00856/OUT – 'Land off Badgers Brook Rise, Ystradowen'. The Final Report of the application states that "Ystradowen is considered a sustainable settlement for further housing development" – i.e. "additional land should be allocated in this location".

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan (see Appendix B), a similar 'scoring' exercise has been undertaken as part evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage can be seen below for reference:
BP18 Candidate Ste Assessment at Preferred Strategy Stage
As demonstrated above, there has been a positive change to the scoring attributed to the site ('Land at Ystradowen'). The change is a positive change to the 'Infrastructure Availability' section changing from: 'Grey' (no score) to 'Amber'. Infrastructure Availability is outlined as: "Existing or proposed services would be suitable subject to local improvements without impacting on development viability and/or delivery timescales" (see below):
The explanation for the scoring provided by the Vale sets out that "Sites will be assessed against the availability of water connections to the site, in addition to the method of foul sewage disposal from the site. Consultation shall be undertaken with DCWW to determine whether there is sufficient capacity to the wastewater treatments works, and how it links into DCWW's Capital Investment Programme.
Where consultation indicates limited capacity, or the site is located away from a viable connection this may impact on the deliverability/viability of a site should this require significant connection costs or upgrades. Consequently, the Council shall require site proposers to undertake detailed site viability assessment to determine the impact that additional cost shall have on development cost and deliverability timescales."

As set out above, this is a positive change. This is most likely derived from the allocated site ('Land off Sandy Lane, Ystradowen') currently being "built out", with work commencing on site that would facilitate and improve the 'Infrastructure Availability'. This re-iterates the point made previously re the incorrect assessment reached, and the ever changing position of this site – which will only improve given the neighbouring allocated site ('Land off Sandy Lane, Ystradowen') being "built out".

Land West of Maendy Road, Aberthin (Site ID: 2299)

There are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and the site the subject of these representations. It is therefore considered pertinent to assess and compare the suitability of 'Land West of Maendy Road, Aberthin'. Not least as 'Land at Ystradowen (Site ID: 4060)' is for a "small-scale affordable housing led development in a minor rural settlement", within "the ward of Cowbridge".

The site 'Land West of Maendy Road (Site ID: 2299)' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however from our review of the evidence base submitted as part of the Housing Trajectory consultation, there was no assessment and critique of this site at this stage. This raises questions regarding the "soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

The site ('Land West of Maendy Road') has since had a detailed assessment and critique published, however concerns still remain regarding the "soundness" of the site which forms part of the intended housing land supply. The 'Stage 2 Detailed Site Assessment' summary undertaken for 'Land West of Maendy Road' has been extracted below:

"The site is proposed for a small-scale affordable housing led development in a minor rural settlement, which would accord in principle with the strategy. Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent.
The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."

As mentioned previously, there are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)' (the subject of these representations). Firstly 'Land at Ystradowen (Site ID: 4060)' is also for a "small-scale affordable housing led development", that is "in a minor rural settlement" (Ystradowen). Accordingly, it should follow that as 'Land West of Maendy Road, Aberthin (Site ID: 2299)' "would accord in principle with the strategy", 'Land at Ystradowen (Site ID: 4060)' would also "accord in principle with the strategy".

Furthermore, there is no material difference between the following assessment of Aberthin and Ystradowen:

"Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent."

There is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms.

As set out in our representations to the Preferred Strategy, we reviewed the key services in proximity to the site. The following services were identified as part of that review:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green;

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin;

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn; and

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Given the above, "The settlement (Ystradowen) is also served by public transport".
Furthermore, Ystradowen is located only 2.7 miles from Cowbridge (9-minute bus journey). The "primary and secondary school provision with the wider range of services and facilities in Cowbridge" mentioned in relation to Aberthin are therefore also in close proximity to Ystradowen.

Given the above, any candidate site at 'Land at Ystradowen' (the subject of these representations – Site ID: 430 / 4060) is no less sustainable than the site at Aberthin (Site ID: 2299).

Not least as the following additional key services are located within Ystradowen and therefore in close proximity to the promoted site:

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'; and
• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Furthermore it is important to note that the above scoring criteria is very limiting, and does not take into account the important role and proximity of settlements in a wider context. For example, it does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant) – see Appendix B for full details.

In addition, as set out within the representations made in relation to the House Trajectory (Appendix C), the following extracts have been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view extract is outlined below to give spatial context:
As set out above, it is important to note that the Final Report of application ref. 2013/00856/OUT states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement". Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• "Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area"; and
• "Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above."

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally suitable to be an Affordable Housing Led Allocation.

The second section/paragraph of the assessment states:

"The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."
'Land at Ystradowen (Site ID: 4060)' is also located within "the ward of Cowbridge". As per the above and outlined by the Authority, there is "a need for 230 additional affordable units over the next 15 years". It is clear therefore that there is a

need for additional affordable units in this ward, and this site would therefore also help to alleviate this need.

This position is a direct contradiction of course of the assessment/conclusion for 'Land at Ystradowen (Site ID: 4060)' which stated "it is not considered that additional land should be allocated in this location". It is clear from the above however that "additional land should be allocated in this location" to satisfy this "need for 230 additional affordable units over the next 15 years" – which 'Land at Ystradowen (Site ID: 4060)' can do. This is not least the case given the detailed arguments, case and representations presented and evidenced previously above and in Appendix B & C.
To briefly reiterate there is a clear overreliance on 'rolled forward' sites / existing allocated sites which has resulted in the unmet need deriving from the existing LDP being still present. A greater level of provision for new allocations should therefore be applied in order to meet the housing requirement. The provision of housing should be adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply, so these can "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do.

As set out within the representations made in relation to the housing trajectory (see Appendix C), a further key consideration to note and one which does differentiate between the relative merits of the 'Land at Maendy Road, Aberthin' and 'Land at Ystradowen' is that the LDP Proposals Map demonstrates that 'Land West of Maendy Road' is within a Special Landscape Area - see below:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red
Under Policy MG17 'Special Landscape Areas' it is considered that development in SLA could pose an "unacceptable harm to the important landscape of the area". Accordingly, this development and proposed allocation could therefore cause "unacceptable harm to the important landscape of the area".

'Land at Ystradowen' by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any "unacceptable harm to the important landscape of the area".
Vale of Glamorgan Proposals Map (Land at Ystradowen in red)
It is noted that the detailed assessment scores the site 'amber' in respect to Special Landscape Area (refer to / see later section for full details), with the assessment methodology setting out that "the site is located within a Special Landscape Area/The Glamorgan Heritage Coast and the development may result in little or no change in character and little or no significant effect on landscape character and visual amenity."
A detailed assessment of the impact upon the SLA in respect to the development of 'Land West of Maendy Road, Aberthin' should therefore be, and will need to be, undertaken as part of any planning application. If it is found that the site causes "unacceptable harm to the important landscape of the area", this will lead to this proposed allocation being at risk of not being delivered. This will be as a result of its impacts and acceptability at the planning application stage that the landscape and visual impact of development of the site is unacceptable. As such, these proposed affordable units are at a potential considerable risk of being lost and not satisfying the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do as it is not located in an SLA.

In addition the draft housing trajectory set out that "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" is not provided for. This is clearly an issue. Given however 'Land at Ystradowen' does not sit within a SLA – and so not pose any potential concern or cause any "unacceptable harm to the important landscape of the area" – the allocation of this site would be more suitable and "safer" - as there would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for, and the need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" would be satisfied.

As mentioned previously, a detailed assessment and critique has now been undertaken of 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part evidence base for the Deposit Plan using the similar 'scoring' exercise. As such, it is again pertinent to consider and respond to the Council's 'scoring' exercise assessment of the site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part of these representations.

The 'Summary of Assessment of New Candidate Sites' table can be seen overleaf for reference:
BP18A Candidate Site Assessment at Deposit Plan Stage
A comparison between the site assessments undertaken for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' (on the left), and 'Land at Ystradowen (Site ID: 4060)' (on the right) has been undertaken, and can be seen below for reference:

Having undertaken a review of the scoring for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)', it is clear that 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)':

• 'Land at Ystradowen (Site ID: 4060)': 17/33 criteria are scored green = 52%

• 'Land West of Maendy Road, Aberthin (Site ID: 2299)': 12/34 criteria are scored green = 36%

It is clear therefore given the above that 'Land at Ystradowen (Site ID: 4060)' is a better site, and should be allocated accordingly.

One key example to note is how the criterion 'Access to Services and Facilities' has been scored. For 'Land at Ystradowen (Site ID: 4060)' this has been scored green, yet for 'Land West of Maendy Road, Aberthin (Site ID: 2299)', this has been scored red. Given this, this corroborates the position outlined previously above that, if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally as sustainable – in fact considered more suitable (given its higher scoring in this respect).

Furthermore, we question the "soundness" of the assessment of 'Land West of Maendy Road, Aberthin (Site ID: 2299)', given that 7/34 (21%) of the criteria do not appears to have not been assessed – i.e. 7/34 (21%) of the criteria are scored grey. This raises questions regarding the "soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

It is clear therefore that if 'Land West of Maendy Road, Aberthin (Site ID: 2299)' has been deemed acceptable for allocation, yet 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than this site, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and be allocated. Not least as the site is "proposed for a small-scale affordable housing led development in a minor rural settlement … would accord in principle with the strategy", and "could make an important contribution in meeting "a "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

Summary and Conclusion

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Deposit Plan published as part of the consultation.

In terms of SECTION 4, and a response to the Candidate Site Assessment at Deposit Plan Stage, the following key points have been made:

• The Council's 'Stage 2 Detailed Site Assessment' justification for 'Land at Ystradowen (Site ID: 4060)' is fundamentally incorrect;

• Given the material positive similarities between 'Land at Ystradowen (Site ID: 4060)' and 'Land West of Maendy Road, Aberthin (Site ID: 2299)', which has been deemed acceptable and allocated, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and allocated accordingly;

• 'Land at Ystradowen (Site ID: 4060)' would help to alleviate and satisfy "a need for 230 additional affordable units over the next 15 years" within "the ward of Cowbridge"; and
• 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)', and so should also be deemed acceptable and be allocated;

Ultimately, 'Land at Ystradowen (Site ID: 4060)' is "proposed for a small-scale affordable housing led development in a minor rural settlement", and as such "would accord in principle with the strategy". It would therefore "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

We would therefore object the Council's assessment that the site is not considered suitable for development.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;

3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Credentials of this site subject to this submission; and
10. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing-led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the east of Coliwinston, Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the

delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicted in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.
Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.
The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report

(September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward
The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.
Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate

sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision.
Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".
As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision, and as such, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations

Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
Candidate Site Stage 2 Assessment (Site Ref. 404)
The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:
"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clearly evident deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Despite the absence of site-specific assessment criteria, as the RLDP preferred strategy states a key objective guiding site selection is that the Plan will "provide for vital and vibrant rural communities whilst protecting the countryside through the delivery of growth in sustainable locations related to the settlement hierarchy alongside the provision of supporting infrastructure" (Objective 7 'Fostering Diverse Vibrant and Connected Communities'), it is reasonable to assume that the Council considers 'Land West of Maendy Road' to be a 'sustainable' location.

Given this, we have reviewed the key services in proximity to the site. The following services were identified:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green.

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn.

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Aberthin is in close proximity (1.2 miles/14-minute walk) to the key settlement of Cowbridge - which is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Considering this, there is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms. Given that Ystradowen is located only 2.7 miles from Cowbridge (9- minute bus journey), the candidate site at 'Land at Ystradowen' is no less sustainable than the site at Aberthin. The following key services are within Ystradowen and therefore in close proximity to the promoted site:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin.
• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen' is equally suitable to be an Affordable Housing Led Allocation.
Furthermore, to reinforce the above position and to illustrate and evidence the site's sustainability, the following has been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view extract is outlined below to give spatial context:
Reference is made in the Final Report of app ref. 2013/00856/OUT which states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement".

Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• “Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area.”
• “Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above.”

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

A further key consideration to note and one which does differentiate between the relative merits of the ‘Land at Maendy Road, Aberthin’ and ‘Land at Ystradowen’ is that the LDP Proposals Map demonstrates that ‘Land West of Maendy Road’ is within a Special Landscape Area - see overleaf:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red)
Under Policy MG17 ‘Special Landscape Areas’ it is considered that development in SLA could pose an “unacceptable harm to the important landscape of the area”. Accordingly, this development and proposed allocation could therefore cause “unacceptable harm to the important landscape of the area”.

‘Land at Ystradowen’ by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any “unacceptable harm to the important landscape of the area”.
Vale of Glamorgan Proposals Map (Land at Ystradowen in red)

This is a significant factor to consider. ‘Land West of Maendy Road, Aberthin’ causing “unacceptable harm to the important landscape of the area” will lead to this proposed allocation being at risk of not being delivered by virtue of detailed assessments of its impacts and acceptability at planning application stage holding that the landscape and visual impact of development of the site is unacceptable. As such 25 affordable units will be lost from the proposed affordable 122 units, and ultimately being lost from the overall housing land supply. As stated in the draft housing trajectory “there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities”. There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a “small scale affordable housing led development” which is needed to “respond to local affordable needs and help sustain services and facilities within these rural communities” is not provided for. This is clearly an issue. Given however ‘Land at Ystradowen’ does not sit within a SLA – and so not pose any potential concern or cause any “unacceptable harm to the important landscape of the area” – the allocation of this site would be more suitable and “safer” - as therefore would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where “there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities”, are provided for. As such the proposed housing trajectory would be maintained.
Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of ‘Land to north and west of Westwinds Business Park’:

Candidate Site Stage 2 Assessment (Site Ref. 398)
As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in ‘Sustainable Transport – Public Transport’, this shows the site is not served by public transport connections within 800m, as outlined in the key below:
Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states “New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes”. Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states “new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport.”

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:
In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Ystradowen', the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below. With reference to the above:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green.

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities.

Furthermore, the settlement of Ystradowen has been ranked highly in the VoG Sustainable Settlements Appraisal, scoring a total of 14 points according to the distance to key services and facilities available. This places Ystradowen 26th out of a total of 87 settlements. As a result, this would be deemed a suitable area to accommodate growth.

As stated above the key settlement of Cowbridge is located in close proximity being only 2.7 miles to the south and a 9-minute bus journey. Cowbridge is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Furthermore, it is important to note that the above criteria does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant). These areas comprise for example the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Given the above, 'Land at Ystradowen' does/should align with the aims and targets set out in the Preferred Strategy as it

meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered “sound” and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of ‘Land to north and west of Westwinds Business Park’ – the inclusion of which is “unsound”. ‘Land at Ystradowen’ would therefore ensure that affordable units, where “there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities”, are provided for. As such the proposed housing trajectory would be maintained.
Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike ‘Land at Heol Fain, Wick’ and ‘Land to north and west of Westwinds Business Park’ it was stated that this site “could not be considered as a suitable affordable housing led development site”. Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is “unsound”.

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref. 2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.
Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Credentials of this site subject to this submission

There has been a significant change in the position and circumstances since the promoted site herein was assessed at Candidate Site Stage and the Assessment undertaken. The Stage 2 Assessment of the site concluded the following: ‘Whilst adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.’ The assessment/conclusion implies that as this site (‘Land off Sandy Lane, Ystradowen’) has not been built out and is “currently under review”, it suggests that ‘Land at Ystradowen’ (430) does not adjoin the existing LDP settlement boundary. Given recent developments however associated with the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024) and the site being currently being “built out” and work commencing on site, the site no longer adjoins “the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review”. Accordingly, and given this, the ‘Land at Ystradowen’ site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.
The following specific photo evidences ‘Land off Sandy Lane, Ystradowen’ (Housing Allocation 48) is being built out the western boundary of the promoted Site ID 430. This therefore clearly highlights that the site’s boundary is representing the existing settlement limit in the existing development plan. Accordingly, the ‘Land at Ystradowen’ site boundary therefore directly adjoins/is adjoining the existing LDP settlement boundary.
Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it’s consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES

Respondent: Marion morgan [2413]
Agent: Geraint John Planning Ltd

Summary:
The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land at Ystradowen (Site ID: 430 / 4060) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development.

Full text:
ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ystradowen area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:
VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ystradowen. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

- Land at North West Barry – 376no. units;
- North of Dinas Powys – 250no. units;
- Land at Readers Way, Rhoose – 520no. units;
- Land at Church Farm, St Athan – 532no. units; and
- Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months
• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required

that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.
Extract of Housing Trajectory (annotated by GJP - red dotted line)

It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past

completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.
HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.
It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land at Ystradowen (Site ID: 430 / 4060) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) and Annex 2 for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 230 affordable homes in the Cowbridge housing market area / ward - which Ystradowen is located within. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation – see Annex 2.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ystradowen and the proposed site. As outlined within these representations, it is considered that the site (ID 430) represents a sustainable, deliverable and acceptable site. The site is located within 2.7 miles Cowbridge and 2.8 miles of Pontyclun. Due to the availability of frequent bus services, and active travel links, key services are readily available to access for any residents within Ystradowen without the need to travel by car. The site is within a maximum 9- and 14-minute bus journey (respectively) of the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Accordingly, the settlement of Ystradowen represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ystradowen, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."
The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.
SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• Provision of circa 67 new-build residential dwellings (including 50% affordable housing provision);
• A mix of house-types and tenures across the site to cater for a variety of needs;
• Creation of a new primary access into the site;
• Connection to pedestrian links within the wider area;
• Public open space; and
• Green Infrastructure; and
SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

Land at Ystradowen (Site ID: 4060)

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site. The 'Candidate Sites Assessment Deposit Plan Stage v2' for 'Land at Ystradowen (Site ID: 4060)' sets out that the position of the site at the Deposit Stage is as follows:

"Amendment of proposed use from housing to affordable housing led. Previous site reference 430. The original assessment concluded that whilst the site was adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.
The LDP site in question has subsequently been granted planning permission for housing. This site will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location."

In terms of the first paragraph, the assessment/conclusion implies and suggests that 'Land at Ystradowen' (4060)' does not adjoin the existing LDP settlement boundary as the allocated site ('Land off Sandy Lane, Ystradowen') has not been

built out – "by virtue of an existing adopted plan LDP allocation this is currently under review". Detailed representations have been made and submitted previously at the Housing Trajectory (see Appendix B& C) that outlines that this is fundamentally incorrect. This is not repeated in full here, with just the main points re-iterated.

First and foremost, 'Land at Ystradowen (4060)' directly adjoins the existing LDP settlement boundary. Secondly, there has been a significant change in the position and circumstances. The allocated site ('Land off Sandy Lane, Ystradowen') is currently being "built out", with work commencing on site (see photographic evidence in Appendix C)
- post the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024).
Accordingly, the site no longer adjoins "the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review". Given this, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.

With regards to the second paragraph, the assessment/conclusion outlines that "The LDP site … will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location". The arguments and case presented in Appendix B & C. There is a clear overreliance on 'rolled forward' sites / existing allocated sites. A total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%). We believe that a greater level of growth is achievable and should be considered. Not least as there is an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings). As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy. Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. The provision of housing should be adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply. The "future needs of residents in the area" will therefore not be met/served by just this site, and it is considered that additional land should be allocated in this location.

Furthermore, to reinforce, illustrate, and evidence the point in specific reference to the site the subject to this representation (located in Ystradowen), reference is made to application ref. 2013/00856/OUT – 'Land off Badgers Brook Rise, Ystradowen'. The Final Report of the application states that "Ystradowen is considered a sustainable settlement for further housing development" – i.e. "additional land should be allocated in this location".

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan (see Appendix B), a similar 'scoring' exercise has been undertaken as part evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage can be seen below for reference:
BP18 Candidate Ste Assessment at Preferred Strategy Stage
As demonstrated above, there has been a positive change to the scoring attributed to the site ('Land at Ystradowen').
The change is a positive change to the 'Infrastructure Availability' section changing from: 'Grey' (no score) to 'Amber'.
Infrastructure Availability is outlined as: "Existing or proposed services would be suitable subject to local improvements without impacting on development viability and/or delivery timescales" (see below):
The explanation for the scoring provided by the Vale sets out that "Sites will be assessed against the availability of water connections to the site, in addition to the method of foul sewage disposal from the site. Consultation shall be undertaken with DCWW to determine whether there is sufficient capacity to the wastewater treatments works, and how it links into DCWW's Capital Investment Programme.
Where consultation indicates limited capacity, or the site is located away from a viable connection this may impact on the deliverability/viability of a site should this require significant connection costs or upgrades. Consequently, the Council shall require site proposers to undertake detailed site viability assessment to determine the impact that additional cost shall have on development cost and deliverability timescales."

As set out above, this is a positive change. This is most likely derived from the allocated site ('Land off Sandy Lane, Ystradowen') currently being "built out", with work commencing on site that would facilitate and improve the 'Infrastructure Availability'. This re-iterates the point made previously re the incorrect assessment reached, and the ever changing position of this site – which will only improve given the neighbouring allocated site ('Land off Sandy Lane, Ystradowen') being "built out".

Land West of Maendy Road, Aberthin (Site ID: 2299)

There are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and the site the subject of these representations. It is therefore considered pertinent to assess and compare the suitability of 'Land West of Maendy Road, Aberthin'. Not least as 'Land at Ystradowen (Site ID: 4060)' is for a "small-scale affordable housing led development in a minor rural settlement", within "the ward of Cowbridge".

The site 'Land West of Maendy Road (Site ID: 2299)' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however from our review of the evidence base submitted as part of the Housing Trajectory consultation, there was no assessment and critique of this site at this stage. This raises questions regarding the

"soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

The site ('Land West of Maendy Road') has since had a detailed assessment and critique published, however concerns still remain regarding the "soundness" of the site which forms part of the intended housing land supply. The 'Stage 2 Detailed Site Assessment' summary undertaken for 'Land West of Maendy Road' has been extracted below:

"The site is proposed for a small-scale affordable housing led development in a minor rural settlement, which would accord in principle with the strategy. Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent.
The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."

As mentioned previously, there are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)' (the subject of these representations). Firstly 'Land at Ystradowen (Site ID: 4060)' is also for a "small-scale affordable housing led development", that is "in a minor rural settlement" (Ystradowen). Accordingly, it should follow that as 'Land West of Maendy Road, Aberthin (Site ID: 2299)' "would accord in principle with the strategy", 'Land at Ystradowen (Site ID: 4060)' would also "accord in principle with the strategy".

Furthermore, there is no material difference between the following assessment of Aberthin and Ystradowen:

"Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent."

There is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms.

As set out in our representations to the Preferred Strategy, we reviewed the key services in proximity to the site. The following services were identified as part of that review:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green;

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin;

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn; and

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Given the above, "The settlement (Ystradowen) is also served by public transport".
Furthermore, Ystradowen is located only 2.7 miles from Cowbridge (9-minute bus journey). The "primary and secondary school provision with the wider range of services and facilities in Cowbridge" mentioned in relation to Aberthin are therefore also in close proximity to Ystradowen.

Given the above, any candidate site at 'Land at Ystradowen' (the subject of these representations – Site ID: 430 / 4060) is no less sustainable than the site at Aberthin (Site ID: 2299).

Not least as the following additional key services are located within Ystradowen and therefore in close proximity to the promoted site:

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'; and
• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Furthermore it is important to note that the above scoring criteria is very limiting, and does not take into account the important role and proximity of settlements in a wider context. For example, it does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant) – see Appendix B for full details.

In addition, as set out within the representations made in relation to the House Trajectory (Appendix C), the following extracts have been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view

extract is outlined below to give spatial context:
As set out above, it is important to note that the Final Report of application ref. 2013/00856/OUT states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement". Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• "Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area"; and
• "Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above."

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally suitable to be an Affordable Housing Led Allocation.

The second section/paragraph of the assessment states:

"The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."
'Land at Ystradowen (Site ID: 4060)' is also located within "the ward of Cowbridge". As per the above and outlined by the Authority, there is "a need for 230 additional affordable units over the next 15 years". It is clear therefore that there is a need for additional affordable units in this ward, and this site would therefore also help to alleviate this need.

This position is a direct contradiction of course of the assessment/conclusion for 'Land at Ystradowen (Site ID: 4060)' which stated "it is not considered that additional land should be allocated in this location". It is clear from the above however that "additional land should be allocated in this location" to satisfy this "need for 230 additional affordable units over the next 15 years" – which 'Land at Ystradowen (Site ID: 4060)' can do. This is not least the case given the detailed arguments, case and representations presented and evidenced previously above and in Appendix B & C.
To briefly reiterate there is a clear overreliance on 'rolled forward' sites / existing allocated sites which has resulted in the unmet need deriving from the existing LDP being still present. A greater level of provision for new allocations should therefore be applied in order to meet the housing requirement. The provision of housing should be adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply, so these can "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do.

As set out within the representations made in relation to the housing trajectory (see Appendix C), a further key consideration to note and one which does differentiate between the relative merits of the 'Land at Maendy Road, Aberthin' and 'Land at Ystradowen' is that the LDP Proposals Map demonstrates that 'Land West of Maendy Road' is within a Special Landscape Area - see below:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red
Under Policy MG17 'Special Landscape Areas' it is considered that development in SLA could pose an "unacceptable harm to the important landscape of the area". Accordingly, this development and proposed allocation could therefore cause "unacceptable harm to the important landscape of the area".

'Land at Ystradowen' by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any "unacceptable harm to the important landscape of the area".
Vale of Glamorgan Proposals Map (Land at Ystradowen in red)
It is noted that the detailed assessment scores the site 'amber' in respect to Special Landscape Area (refer to / see later section for full details), with the assessment methodology setting out that "the site is located within a Special Landscape Area/The Glamorgan Heritage Coast and the development may result in little or no change in character and little or no significant effect on landscape character and visual amenity."
A detailed assessment of the impact upon the SLA in respect to the development of 'Land West of Maendy Road, Aberthin' should therefore be, and will need to be, undertaken as part of any planning application. If it is found that the site causes "unacceptable harm to the important landscape of the area", this will lead to this proposed allocation being at risk of not being delivered. This will be as a result of its impacts and acceptability at the planning application stage that the landscape and visual impact of development of the site is unacceptable. As such, these proposed affordable units are at a potential considerable risk of being lost and not satisfying the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do as it is not located in an SLA.

In addition the draft housing trajectory set out that "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" is not provided for. This is clearly an issue. Given

however 'Land at Ystradowen' does not sit within a SLA – and so not pose any potential concern or cause any "unacceptable harm to the important landscape of the area" – the allocation of this site would be more suitable and "safer" - as there would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for, and the need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" would be satisfied.

As mentioned previously, a detailed assessment and critique has now been undertaken of 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part evidence base for the Deposit Plan using the similar 'scoring' exercise. As such, it is again pertinent to consider and respond to the Council's 'scoring' exercise assessment of the site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part of these representations.

The 'Summary of Assessment of New Candidate Sites' table can be seen overleaf for reference:
BP18A Candidate Site Assessment at Deposit Plan Stage
A comparison between the site assessments undertaken for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' (on the left), and 'Land at Ystradowen (Site ID: 4060)' (on the right) has been undertaken, and can be seen below for reference:

Having undertaken a review of the scoring for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)', it is clear that 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)':

• 'Land at Ystradowen (Site ID: 4060)': 17/33 criteria are scored green = 52%

• 'Land West of Maendy Road, Aberthin (Site ID: 2299)': 12/34 criteria are scored green = 36%

It is clear therefore given the above that 'Land at Ystradowen (Site ID: 4060)' is a better site, and should be allocated accordingly.

One key example to note is how the criterion 'Access to Services and Facilities' has been scored. For 'Land at Ystradowen (Site ID: 4060)' this has been scored green, yet for 'Land West of Maendy Road, Aberthin (Site ID: 2299)', this has been scored red. Given this, this corroborates the position outlined previously above that, if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally as sustainable – in fact considered more suitable (given its higher scoring in this respect).

Furthermore, we question the "soundness" of the assessment of 'Land West of Maendy Road, Aberthin (Site ID: 2299)', given that 7/34 (21%) of the criteria do not appears to have not been assessed – i.e. 7/34 (21%) of the criteria are scored grey. This raises questions regarding the "soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

It is clear therefore that if 'Land West of Maendy Road, Aberthin (Site ID: 2299)' has been deemed acceptable for allocation, yet 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than this site, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and be allocated. Not least as the site is "proposed for a small-scale affordable housing led development in a minor rural settlement … would accord in principle with the strategy", and "could make an important contribution in meeting "a "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

Summary and Conclusion

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Deposit Plan published as part of the consultation.

In terms of SECTION 4, and a response to the Candidate Site Assessment at Deposit Plan Stage, the following key points have been made:

• The Council's 'Stage 2 Detailed Site Assessment' justification for 'Land at Ystradowen (Site ID: 4060)' is fundamentally incorrect;

• Given the material positive similarities between 'Land at Ystradowen (Site ID: 4060)' and 'Land West of Maendy Road, Aberthin (Site ID: 2299)', which has been deemed acceptable and allocated, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and allocated accordingly;

• 'Land at Ystradowen (Site ID: 4060)' would help to alleviate and satisfy "a need for 230 additional affordable units over the next 15 years" within "the ward of Cowbridge"; and
• 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)', and so should also be deemed acceptable and be allocated;

Ultimately, 'Land at Ystradowen (Site ID: 4060)' is "proposed for a small-scale affordable housing led development in a minor rural settlement", and as such "would accord in principle with the strategy". It would therefore "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

We would therefore object the Council's assessment that the site is not considered suitable for development.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Credentials of this site subject to this submission; and
10. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing-led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the east of Coliwinston, Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the

consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• “Time period of pre-application discussions/PAC consultation” = 4 months
• “Time between submission of planning application and determination” = 6 months
• “Time taken from planning consent to the discharge of relevant conditions to enable site construction” = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of “6 months” given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within “4 months” as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicted in the ‘Timing and Phasing of Sites’ table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.
Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large ‘spike’ (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has

been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.
The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.
Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision.
Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".
As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision, and as such, to add a further site for housing over and

above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations

Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
Candidate Site Stage 2 Assessment (Site Ref. 404)
The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:
"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clearly evident deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Despite the absence of site-specific assessment criteria, as the RLDP preferred strategy states a key objective guiding site selection is that the Plan will "provide for vital and vibrant rural communities whilst protecting the countryside through the delivery of growth in sustainable locations related to the settlement hierarchy alongside the provision of supporting infrastructure" (Objective 7 'Fostering Diverse Vibrant and Connected Communities'), it is reasonable to assume that the Council considers 'Land West of Maendy Road' to be a 'sustainable' location.

Given this, we have reviewed the key services in proximity to the site. The following services were identified:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green.

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn.

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Aberthin is in close proximity (1.2 miles/14-minute walk) to the key settlement of Cowbridge - which is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Considering this, there is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms. Given that Ystradowen is located only 2.7 miles from Cowbridge (9- minute bus journey), the candidate site at 'Land at Ystradowen' is no less sustainable than the site at Aberthin. The following key services are within Ystradowen and therefore in close proximity to the promoted site:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin.
• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen' is equally suitable to be an Affordable Housing Led Allocation.
Furthermore, to reinforce the above position and to illustrate and evidence the site's sustainability, the following has been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view extract is outlined below to give spatial context:
Reference is made in the Final Report of app ref. 2013/00856/OUT which states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement".

Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• "Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area."
• "Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above."

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

A further key consideration to note and one which does differentiate between the relative merits of the 'Land at Maendy Road, Aberthin' and 'Land at Ystradowen' is that the LDP Proposals Map demonstrates that 'Land West of Maendy Road' is within a Special Landscape Area - see overleaf:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red)
Under Policy MG17 'Special Landscape Areas' it is considered that development in SLA could pose an "unacceptable harm to the important landscape of the area". Accordingly, this development and proposed allocation could therefore cause "unacceptable harm to the important landscape of the area".

'Land at Ystradowen' by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any "unacceptable harm to the important landscape of the area".
Vale of Glamorgan Proposals Map (Land at Ystradowen in red)

This is a significant factor to consider. 'Land West of Maendy Road, Aberthin' causing "unacceptable harm to the important landscape of the area" will lead to this proposed allocation being at risk of not being delivered by virtue of detailed assessments of its impacts and acceptability at planning application stage holding that the landscape and visual impact of development of the site is unacceptable. As such 25 affordable units will be lost from the proposed affordable 122 units, and ultimately being lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" is not provided for. This is clearly an issue. Given however 'Land at Ystradowen' does not sit within a SLA – and so not pose any potential concern or cause any "unacceptable harm to the important landscape of the area" – the allocation of this site would be more suitable and "safer" - as therefore would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.
Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:
Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:
In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Ystradowen', the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below. With reference to the above:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green.

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities.

Furthermore, the settlement of Ystradowen has been ranked highly in the VoG Sustainable Settlements Appraisal, scoring a total of 14 points according to the distance to key services and facilities available. This places Ystradowen 26th out of a total of 87 settlements. As a result, this would be deemed a suitable area to accommodate growth.

As stated above the key settlement of Cowbridge is located in close proximity being only 2.7 miles to the south and a 9-minute bus journey. Cowbridge is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Furthermore, it is important to note that the above criteria does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant). These areas comprise for example the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Given the above, 'Land at Ystradowen' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Ystradowen' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.
Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref. 2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.
Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Credentials of this site subject to this submission

There has been a significant change in the position and circumstances since the promoted site herein was assessed at Candidate Site Stage and the Assessment undertaken. The Stage 2 Assessment of the site concluded the following: 'Whilst adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.' The assessment/conclusion implies that as this site ('Land off Sandy Lane, Ystradowen') has not been built out and is "currently under review", it suggests that 'Land at Ystradowen' (430) does not adjoin the existing LDP settlement boundary. Given recent developments however associated with the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024) and the site being currently being "built out" and work commencing on site, the site no longer adjoins "the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review". Accordingly, and given this, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.
The following specific photo evidences 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48) is being built out the western boundary of the promoted Site ID 430. This therefore clearly highlights that the site's boundary is representing the existing settlement limit in the existing development plan. Accordingly, the 'Land at Ystradowen' site boundary

therefore directly adjoins/is adjoining the existing LDP settlement boundary.
Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES
Respondent: Barratt Redrow Homes [2669]
Agent: Highlight Planning

Summary:

As drafted, the Plan expects a great deal from a very limited rural supply offer. In our view, the objectives of the plan are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
We raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions.
The omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors

including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in

Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.

The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.

In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.

Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.

Policy SP6 – Housing Requirement Position: Object

Barratt Redrow objects to Policy SP6.

Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.

PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:

"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."

The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:

"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.

5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.

5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."

Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:

• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;

• Does not actively seek to address the area's ageing demographic;

• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.

In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.

That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.

The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.

This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.

The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.

There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.

A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.

The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.

The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a

1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans

Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.

Policy SP6 – Flexibility, housing land supply and trajectory Position: Object

Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.

The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.

In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.

The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.

The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.

Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.

The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.

There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.

In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.

Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part

Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.

The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.

The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses

the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.

The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.

Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:

• the Plan is overly reliant on a small number of key sites;

• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;

• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and

• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.

The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.

Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.

The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:

• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.

• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.

• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.

All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.

In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.

Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part

Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.

However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.

Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.

The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.

We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid

that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is

necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better

placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate

setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other

parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES

Respondent: Barratt Redrow Homes [2669]

Agent: Highlight Planning

Summary:

Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited. The statements in policy HG4 and its supporting text show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and

that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a

Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.
5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the

resumption of long-term household formation trends.
In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.

The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.
Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part
Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate

that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.
That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.
There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.
The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.
In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.
Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part
Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.
The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be “informed” by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council’s latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan’s blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.
8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part
Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan’s supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about

unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding

consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy

Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan

recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open

spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES
Respondent: Peter Stone Properties Ltd [1182]
Agent: Geraint John Planning Ltd

Summary:

It is not considered that this policy goes far enough to address the target and level of affordable housing need. Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to meet the target.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £800,000 over the last 12 months, there is a clear and established need for new homes in the Bonvilston area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of

settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Bonvilston. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)

• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute

to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so

quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The

contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites – not least given that 3 of the 4 allocated affordable housing-led sites are located west of Cowbridge.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land South of A48, Bonvilston (Site ID: 435 / 3857) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area (which Bonvilston is located within), and a need for 242 affordable homes in the Wenvoe housing market area. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

Securing further delivery of Affordable Units

As set out above, it can be assumed that the affordable housing-led allocated sites only provide 61no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included

within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to meet the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Bonvilston and the proposed site. As outlined within these representations, it is considered that the site (ID 435 / 3857) represents a sustainable, deliverable and acceptable site. This proposed allocation is situated in proximity to Cowbridge, Culverhouse Cross and Cardiff, which comprise all key services. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

Accordingly, the settlement of Bonvilston represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Bonvilston, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy

and the criteria listed out in the policy is generally supported.

That said, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites

with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• In summary, the opportunity of the site seeks to deliver:
• Residential development comprising up to 25 dwellings, with at least 50% affordable housing in accordance with Policy SP2,
• Highways infrastructure within the site;
• Upgraded access to the site;
• Strong legible pedestrian and cycle connections throughout the site and with the existing settlement;
• Green Infrastructure; and
• Sustainable Drainage Systems (SuDS).

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land South of the A48, Bonvilston (Site ID: 3857) sets out that the position of the site at the Deposit Stage is as follows:

"Notwithstanding the amendment from a market led to an affordable housing led scheme (original CS 435), the other reasons why the site was previously discounted still remain.
The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area.
Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48.
The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable. There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing."
Conservation Area
In terms of the assertion that "The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area, this is strongly disputed.

Whilst it is acknowledged that the site lies within the Bonvilston Conservation Area, the conclusion that it would be adversely affected is not considered to be accurate. Firstly, the site as it currently stands, consists of an open field. This does not match the conservation area which is characterised primarily by residential dwellings of varying densities, and as such, it is considered that development of the site with sensitively designed buildings would enhance as opposed to harming its surroundings.

Secondly, the large residential development to the north of the site, 'Land at Sycamore Cross' ref. 2015/00960/FUL encroaches on the Bonvilston Conservation area but was deemed acceptable by the LPA. Although not all of the site is within the Conservation Area, it's encroachment and presence adjoining and surrounding a large proportion of the area is considerable and was deemed acceptable by Officers in 2017. Given this, a development at the Land South of the A48 should be deemed acceptable, as it follows the same principles albeit at a much smaller scale.

Highways
As for the statement that "Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48", this is also strongly disputed.

The site is located immediately adjacent to the adopted highway where it is proposed to upgrade and enhance the existing gated access point. Due to the existing access point, it is not considered that 'major' highway mitigation works would be needed, rather this would be enhanced and improved as part of the proposed development. Furthermore, given the nature of the road, with long views extending in both directions, it is anticipated that appropriate visibility

splays could be achieved to enable safe access and egress. As such, it is considered that the site would achieve appropriate highway access within the need for "major" highway mitigation works.

Agricultural Land Classification
The Detailed Site Assessment also sets out that "The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable." This is strongly disputed.

A review of the Agricultural Land Classification Predictive Map indicates that the site lies primarily within 'Grade 2: Very

good quality agricultural land' but no Grade 1 land is present. Further assessment and tests to establish the quality would therefore be undertaken in due course to confirm the quality of the land. However, it is not considered that it would be suitable to farm in any event given the location immediately adjoining existing residential development and the fact that it is within private ownership. Overall, given that the site is relatively small with a gross area of 0.88 hectares, it is not considered that its development would result in a detrimental or significant loss of agricultural land – not least given that site is not capable of beneficial agricultural production due to its limited size.

Housing / Housing Land
Further to the above, it is also set out that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing", however, this is not considered to be entirely accurate.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area and a need for 242 affordable homes in the Wenvoe housing market area. This need has not been met through the allocations of sites within the RLDP, nor has it been met through outstanding commitments.

As outlined in Annex 1, it can be assumed that the affordable housing-led allocated sites will only provide for 61no. affordable dwellings within the Rural Vale, comprising 4no. sites that are expected to deliver approximately 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. Therefore, more sites should be allocated in order to secure the delivery of a higher number of affordable housing units to meet the target.

As set out within Annex 1, it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, however, there is serious concern regarding the deliverability of these sites, which would result in a significant gap in the total affordable housing that is delivered. Therefore, allocating a greater number of affordable housing-led sites would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in the both the overall affordable housing need, and the need for the St Nicholas & Llancarfan housing market area, being unmet, with demand continuing to outstrip supply.

The LHMA 2023 sets out the existing stock and planned supply of affordable housing over the next 5 years (up until 2028). This assessment found that the housing market area of St Nicholas & Llancarfan has a committed supply of 4no. one beds, 11no. two beds, and 3no. three beds, with 2 no. three beds as expected re-lets. The assessment also identifies a committed supply of 39no. units for intermediate housing.

The LHMA also sets out the existing stock and planned supply for Wenvoe, identifying the committed supply of social rent homes to be 12no. one beds, 11no. two beds, and 5no. three beds, with 7no. one beds and 8no. two beds as expected re-lets. There is no committed supply for intermediate housing in Wenvoe.

It should be noted that the development of 'Land East of Nicholas' (Campbell Court and Cae Newydd), has now been completed, and as such, can not form part of the housing land available. The latest Pre-Application Response for the site subject to these representations (Land South of the A48, Bonvilston) accounted for the development of the site in

St Nicholas, stating that "even after the developments at St Nicholas and Culverhouse Cross, there was the need in the Wenvoe ward for 1 Bed 71, 2 Bed 49, 3 Bed 29, 4 Bed 7, 5 Bed 5, Total 161".

It should also be noted that there are existing commitments within the Bonvilston area ('Land to the east of Bonvilston'), however, the deliverability of the existing commitment is seriously questioned. Application Ref. 2015/00960/FUL was approved in July 2017, with the Housing Land Supply and Housing Trajectory Report (December 2025) confirming that of the total 120 units permitted, only 40 had completed by 1st April 2025, with the remaining 80 units not started by this same date. Of the 80 units not started, 25 units are affordable homes.

It is well known that phase 1 of the development at 'Land to the east of Bonvilston' has faced difficulties which has led to the development remaining incomplete. This does of course put into question the overall deliverability of the site, and raises concerns about the units that were, and still are, required within the Bonvilston area.

The allocation of the site promoted herein would not only help in the short term in meeting the overall affordable housing target for the Plan, but would also assist in meeting the unmet needs of affordable housing within Bonvilston – not least given the serious concern regarding the deliverability of the committed supply of housing within the St Nicholas & Llancarfan housing market area.

For the reasons set out above, and in light of the information provided within the LHMA 2023 and the Housing Land Supply and Housing Trajectory Report (December 2025), it is evident that there is considerable need for affordable housing within Bonvilston, and accordingly, the housing market areas of St Nicholas & Llancarfan, and Wenvoe. There have not been any sites allocated to assist within meeting the local need, and more sites should be allocated in order to secure delivery of a higher number of affordable housing units to meet the overall target of the Plan.

The contention that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing" is therefore strongly disputed – not least given that there is a clear and evident need to

allocate more affordable housing-led sites in order to meet the target set out in the Plan.

Interim Summary

In summary, it is considered that the site subject to these representations would not have an adverse impact on the character and setting of the Bonvilston Conservation Area, nor would major highway mitigation works be required to enable safe vehicular access on to the A48. Moreover, it is considered that the site's classification as BMV Agricultural Land does not pose a fundamental constraint to development – as the site represents a relatively small parcel with a gross area of 0.88 hectares, which is not capable of beneficial agricultural production due to its limited size.

There is also a considerable need for the affordable housing in Bonvilston and the housing market area of St Nicholas & Llancarfan. The site promoted herein would assist in meeting these local needs and should be allocated accordingly.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage

As demonstrated above, there has only been one change to the scoring attributed to the site, this being a change from 'red' to 'amber' for 'Developer Interest'. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with these representations accordingly (see Appendix B).

Whilst detailed submissions were made on the previous assessment, it is considered pertinent for the scoring of the key criteria's to be addressed as part of these representations. As such, these have also been discussed below.
Developer Interest

As set out above, the Detailed Site Assessment for 'Developer Interest' has changed from 'red' to 'amber'. The assessment methodology for this section of the assessment has been extracted below for reference.

As set out above, 'amber' refers to there being no development interest identified at this stage, however, there is evidence to indicate that the site is being actively promoted by the owners.

The representations made to the Preferred Strategy (Appendix B) sets out that whilst the site does not yet have an agreement with a developer to take on the land, it is considered that this would be achieved should the site be allocated, and planning permission granted. Newydd Housing association have been engaged previously and had agreed to take the site forward as a 100% affordable scheme, albeit is also considered that they could take on the affordable units as part of a mixed tenure scheme.

In addition to Newydd, the site promoter has also received an offer from a private social housing provider who would be prepared to support the site as a mixed tenure scheme.

This position has not changed since the Preferred Strategy stage, and is considered that there is continued developer interest for the site. This is not considered to change at any point – not least given the discussions held between the owners of the site in questions and developers of interest.

Environmental and Physical Constraints

As set out at the Pre-Application Stage. the site underwent a Preliminary Ecological Appraisal in September 2022 which identified that whilst some precautionary measures were recommended in terms of protecting priority habitats and reptiles, the site is not fundamentally constrained from development on ecological terms. Given this, it is considered that further ecological surveys would be undertaken at the planning stage to inform any development proposals and ensure the safeguarding of the natural environment.

Access to Key Services (Retail, Primary Schools, and Health Services) and to Services and Facilities

As set out within the representations made to the Preferred Strategy, the site is located within a maximum of a 20-minute bus journey to a version of every key service listed, due to the proximity of the site to settlements such as Cowbridge, Culverhouse Cross and St Nicholas. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Bonvilston without the need to travel by car.

To reiterate, the site 'Land South of the A48, Bonvilston' is situated in proximity to Cowbridge, Culverhouse Cross and

Cardiff, which comprise all key services. Concluding this allocation as 'unsustainable' in regard to 'availability of local facilities in and around settlements' is not accurate. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

It should also be noted that Bonvilston contains a number of facilities within a short and level walking distance of the site, including the village shop and Café, as well as the Red Lion Public House.

Given the accessibility of the site to other settlements, and the fact that these are made accessible by bus and active travel routes, it is considered that the site should be concluded as sustainable in regard to access to key services.

Summary and Conclusion

As evidenced above, and within the representations made to the Preferred Strategy (Appendix B), there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location, and site, are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed

for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above the site was not considered suitable for further consideration with the site scoring negatively (red) in a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site has been outlined as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Land South of A48, Bonvilston.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES
Respondent: Peter Stone Properties Ltd [1182]
Agent: Geraint John Planning Ltd

Summary:

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land South of A48, Bonvilston (Site ID: 435 / 3857) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £800,000 over the last 12 months, there is a clear and established need for new homes in the Bonvilston area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Bonvilston. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a

new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between

Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was

25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites – not least given that 3 of the 4 allocated affordable housing-led sites are located west of Cowbridge.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land South of A48, Bonvilston (Site ID: 435 / 3857) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area (which Bonvilston is located within), and a need for 242 affordable homes in the Wenvoe housing market area. As such, there is an identified need for affordable housing in this area, something which the site could address through an

allocation.

Securing further delivery of Affordable Units

As set out above, it can be assumed that the affordable housing-led allocated sites only provide 61no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included

within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to meet the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Bonvilston and the proposed site. As outlined within these representations, it is considered that the site (ID 435 / 3857) represents a sustainable, deliverable and acceptable site. This proposed allocation is situated in proximity to Cowbridge, Culverhouse Cross and Cardiff, which comprise all key services. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

Accordingly, the settlement of Bonvilston represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Bonvilston, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a ‘cap’ limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 “For the purposes of this policy, ‘small-scale’ will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites

with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area.”

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater

flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• In summary, the opportunity of the site seeks to deliver:
• Residential development comprising up to 25 dwellings, with at least 50% affordable housing in accordance with Policy SP2,
• Highways infrastructure within the site;
• Upgraded access to the site;
• Strong legible pedestrian and cycle connections throughout the site and with the existing settlement;
• Green Infrastructure; and
• Sustainable Drainage Systems (SuDS).

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land South of the A48, Bonvilston (Site ID: 3857) sets out that the position of the site at the Deposit Stage is as follows:

"Notwithstanding the amendment from a market led to an affordable housing led scheme (original CS 435), the other reasons why the site was previously discounted still remain.
The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area.
Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48.
The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable. There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing."
Conservation Area
In terms of the assertion that "The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area, this is strongly disputed.

Whilst it is acknowledged that the site lies within the Bonvilston Conservation Area, the conclusion that it would be adversely affected is not considered to be accurate. Firstly, the site as it currently stands, consists of an open field. This does not match the conservation area which is characterised primarily by residential dwellings of varying densities, and as such, it is considered that development of the site with sensitively designed buildings would enhance as opposed to harming its surroundings.

Secondly, the large residential development to the north of the site, 'Land at Sycamore Cross' ref. 2015/00960/FUL encroaches on the Bonvilston Conservation area but was deemed acceptable by the LPA. Although not all of the site is within the Conservation Area, it's encroachment and presence adjoining and surrounding a large proportion of the area is considerable and was deemed acceptable by Officers in 2017. Given this, a development at the Land South of the A48 should be deemed acceptable, as it follows the same principles albeit at a much smaller scale.

Highways
As for the statement that "Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48", this is also strongly disputed.

The site is located immediately adjacent to the adopted highway where it is proposed to upgrade and enhance the existing gated access point. Due to the existing access point, it is not considered that 'major' highway mitigation works would be needed, rather this would be enhanced and improved as part of the proposed development. Furthermore, given the nature of the road, with long views extending in both directions, it is anticipated that appropriate visibility

splays could be achieved to enable safe access and egress. As such, it is considered that the site would achieve appropriate highway access within the need for "major" highway mitigation works.

Agricultural Land Classification
The Detailed Site Assessment also sets out that "The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable." This is strongly disputed.

A review of the Agricultural Land Classification Predictive Map indicates that the site lies primarily within 'Grade 2: Very good quality agricultural land' but no Grade 1 land is present. Further assessment and tests to establish the quality would therefore be undertaken in due course to confirm the quality of the land. However, it is not considered that it would be suitable to farm in any event given the location immediately adjoining existing residential development and the fact that it is within private ownership. Overall, given that the site is relatively small with a gross area of 0.88 hectares, it is not considered that its development would result in a detrimental or significant loss of agricultural land – not least given that site is not capable of beneficial agricultural production due to its limited size.

Housing / Housing Land
Further to the above, it is also set out that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing", however, this is not considered to be entirely accurate.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area and a need for 242 affordable homes in the Wenvoe housing market area. This need has not been met through the allocations of sites within the RLDP, nor has it been met through outstanding commitments.

As outlined in Annex 1, it can be assumed that the affordable housing-led allocated sites will only provide for 61no. affordable dwellings within the Rural Vale, comprising 4no. sites that are expected to deliver approximately 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. Therefore, more sites should be allocated in order to secure the delivery of a higher number of affordable housing units to meet the target.

As set out within Annex 1, it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, however, there is serious concern regarding the deliverability of these sites, which would result in a significant gap in the total affordable housing that is delivered. Therefore, allocating a greater number of affordable housing-led sites would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in the both the overall affordable housing need, and the need for the St Nicholas & Llancarfan housing market area, being unmet, with demand continuing to outstrip supply.

The LHMA 2023 sets out the existing stock and planned supply of affordable housing over the next 5 years (up until 2028). This assessment found that the housing market area of St Nicholas & Llancarfan has a committed supply of 4no. one beds, 11no. two beds, and 3no. three beds, with 2 no. three beds as expected re-lets. The assessment also identifies a committed supply of 39no. units for intermediate housing.

The LHMA also sets out the existing stock and planned supply for Wenvoe, identifying the committed supply of social rent homes to be 12no. one beds, 11no. two beds, and 5no. three beds, with 7no. one beds and 8no. two beds as expected re-lets. There is no committed supply for intermediate housing in Wenvoe.

It should be noted that the development of 'Land East of Nicholas' (Campbell Court and Cae Newydd), has now been completed, and as such, can not form part of the housing land available. The latest Pre-Application Response for the site subject to these representations (Land South of the A48, Bonvilston) accounted for the development of the site in

St Nicholas, stating that "even after the developments at St Nicholas and Culverhouse Cross, there was the need in the Wenvoe ward for 1 Bed 71, 2 Bed 49, 3 Bed 29, 4 Bed 7, 5 Bed 5, Total 161".

It should also be noted that there are existing commitments within the Bonvilston area ('Land to the east of Bonvilston'), however, the deliverability of the existing commitment is seriously questioned. Application Ref. 2015/00960/FUL was approved in July 2017, with the Housing Land Supply and Housing Trajectory Report (December 2025) confirming that of the total 120 units permitted, only 40 had completed by 1st April 2025, with the remaining 80 units not started by this same date. Of the 80 units not started, 25 units are affordable homes.

It is well known that phase 1 of the development at 'Land to the east of Bonvilston' has faced difficulties which has led to the development remaining incomplete. This does of course put into question the overall deliverability of the site, and raises concerns about the units that were, and still are, required within the Bonvilston area.

The allocation of the site promoted herein would not only help in the short term in meeting the overall affordable housing target for the Plan, but would also assist in meeting the unmet needs of affordable housing within Bonvilston – not least given the serious concern regarding the deliverability of the committed supply of housing within the St Nicholas & Llancarfan housing market area.

For the reasons set out above, and in light of the information provided within the LHMA 2023 and the Housing Land Supply and Housing Trajectory Report (December 2025), it is evident that there is considerable need for affordable housing within Bonvilston, and accordingly, the housing market areas of St Nicholas & Llancarfan, and Wenvoe. There have not been any sites allocated to assist within meeting the local need, and more sites should be allocated in order to secure delivery of a higher number of affordable housing units to meet the overall target of the Plan.

The contention that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing" is therefore strongly disputed – not least given that there is a clear and evident need to allocate more affordable housing-led sites in order to meet the target set out in the Plan.

Interim Summary

In summary, it is considered that the site subject to these representations would not have an adverse impact on the character and setting of the Bonvilston Conservation Area, nor would major highway mitigation works be required to enable safe vehicular access on to the A48. Moreover, it is considered that the site's classification as BMV Agricultural Land does not pose a fundamental constraint to development – as the site represents a relatively small parcel with a gross area of 0.88 hectares, which is not capable of beneficial agricultural production due to its limited size.

There is also a considerable need for the affordable housing in Bonvilston and the housing market area of St Nicholas & Llancarfan. The site promoted herein would assist in meeting these local needs and should be allocated accordingly.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage

As demonstrated above, there has only been one change to the scoring attributed to the site, this being a change from 'red' to 'amber' for 'Developer Interest'. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with these representations accordingly (see Appendix B).

Whilst detailed submissions were made on the previous assessment, it is considered pertinent for the scoring of the key criteria's to be addressed as part of these representations. As such, these have also been discussed below.
Developer Interest

As set out above, the Detailed Site Assessment for 'Developer Interest' has changed from 'red' to 'amber'. The assessment methodology for this section of the assessment has been extracted below for reference.

As set out above, 'amber' refers to there being no development interest identified at this stage, however, there is evidence to indicate that the site is being actively promoted by the owners.

The representations made to the Preferred Strategy (Appendix B) sets out that whilst the site does not yet have an agreement with a developer to take on the land, it is considered that this would be achieved should the site be allocated, and planning permission granted. Newydd Housing association have been engaged previously and had agreed to take the site forward as a 100% affordable scheme, albeit is also considered that they could take on the affordable units as part of a mixed tenure scheme.

In addition to Newydd, the site promoter has also received an offer from a private social housing provider who would be prepared to support the site as a mixed tenure scheme.

This position has not changed since the Preferred Strategy stage, and is considered that there is continued developer interest for the site. This is not considered to change at any point – not least given the discussions held between the owners of the site in questions and developers of interest.

Environmental and Physical Constraints

As set out at the Pre-Application Stage. the site underwent a Preliminary Ecological Appraisal in September 2022 which identified that whilst some precautionary measures were recommended in terms of protecting priority habitats and reptiles, the site is not fundamentally constrained from development on ecological terms. Given this, it is considered that further ecological surveys would be undertaken at the planning stage to inform any development proposals and ensure the safeguarding of the natural environment.

Access to Key Services (Retail, Primary Schools, and Health Services) and to Services and Facilities

As set out within the representations made to the Preferred Strategy, the site is located within a maximum of a 20-minute bus journey to a version of every key service listed, due to the proximity of the site to settlements such as Cowbridge, Culverhouse Cross and St Nicholas. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Bonvilston without the need to travel by car.

To reiterate, the site 'Land South of the A48, Bonvilston' is situated in proximity to Cowbridge, Culverhouse Cross and Cardiff, which comprise all key services. Concluding this allocation as 'unsustainable' in regard to 'availability of local facilities in and around settlements' is not accurate. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

It should also be noted that Bonvilston contains a number of facilities within a short and level walking distance of the site, including the village shop and Café, as well as the Red Lion Public House.

Given the accessibility of the site to other settlements, and the fact that these are made accessible by bus and active travel routes, it is considered that the site should be concluded as sustainable in regard to access to key services.

Summary and Conclusion

As evidenced above, and within the representations made to the Preferred Strategy (Appendix B), there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location, and site, are inherently suitable and deliverable, and will make a significant

contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 –

2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document "New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these

changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

“A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth.”

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the ‘Rectory Field, St Brides Road’ site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

‘Land West of Maendy Road’ has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the ‘Candidate Assessment at Preferred Strategy Stage’ (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the “soundness” of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is “sound” (i.e. its allocation is considered to be “unsound”).

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of ‘Land to north and west of Westwinds Business Park’:

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above the site was not considered suitable for further consideration with the site scoring negatively (red) in a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;

• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site has been outlined as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is

a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Land South of A48, Bonvilston.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES
Respondent: Wig Fach Property Company Ltd [2373]
Agent: Geraint John Planning Ltd

Summary:

It is not considered that this policy goes far enough to address the target and level of affordable housing need. Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to meet the target.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ogmore By Sea area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county,

and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either Key Settlement, Service Centre settlement or Primary Settlements, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ogmore By Sea. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the

north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to

deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan

within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that the should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 124 affordable homes in the St Brides Major local housing market area (which Ogmore is located within). As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

It is questionable whether Wick has the capacity to accommodate 50 new dwellings, given the sustainability and rural nature of the area. As a result, it is suggested that the number of homes allocated in Wick is reduced and that a further allocation in St Brides Major is secured, in order to facilitate supporting the delivery of affordable housing through the housing market area, rather than in one minor rural settlement. The sustainability of Ogmore has been assessed, both by the Council through the Sustainability Appraisal and again, through our assessment of the site.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a

target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4 % of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.

Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the

Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ogmore and the proposed site. As outlined within these representations, it is considered that the site (ID xxx) represents a sustainable, deliverable and acceptable site. The site is within a maximum of a 22- minute bus journey to a every key service listed, due to the proximity of the site to settlements such as Bridgend. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Ogmore By Sea without the need to travel by car. The site is located within 5 miles of Bridgend, and within a maximum 22-minute bus journey of the following services:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre for various Retail Services

Moreover, Ogmore has benefitted from the recent development of the Ogmore By Sea Village Hall, which provides space for community activities and events to take place. The hall also includes a coffee shop (Welsh Coffee Company), which only adds further to the daily services provision available within the settlement. Access to the hall and coffee shop is directly provided for pedestrians from the Main Road, which allows for direct access from the site.

Accordingly, the settlement of Ogmore represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

It is acknowledged that the site also lies within the Glamorgan Heritage Coast and this point is addressed further below.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ogmore By Sea, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a ‘cap’ limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 “For the purposes of this policy, ‘small-scale’ will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area.”

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

Policy DNP3 – Glamorgan Heritage Coast

Given that the site is located in the Glamorgan Heritage Coast, it is noted that the following policy is of relevance to any future development on the site. Criteria 4 of Policy DNP3 states:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development that accords with National Policy."
It is also noted that supporting Para 6.422 "In seeking to protect the Glamorgan Heritage Coast, the Council acknowledges that there are some built up areas within the boundary, including the Minor Rural Settlement of Ogmore. In addition, the Vale of Glamorgan rail line crosses part of the Heritage Coast designation in the location where a new station at St Athan is proposed. Whilst being mindful of the need to protect the special qualities of the Glamorgan Heritage Coast, the Council accepts that development within these areas is appropriate, subject to relevant policies of the Plan"(GJP emphasis).

We would offer general support for this policy, and consider this to provide flexibility which allows for certain forms of development. However, we would suggest that the policy wording should be amended to reflect that 'housing' should be supported in the Glamorgan Heritage Coast, providing that the policy exceptions are met. Therefore, the following amendment is proposed as part of the policy should be changed to include "small scale housing" or something similar. The proposed amendments to Policy DNP3 are outlined below in red:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development, including small-scale housing proposals that accords with National Policy."

Again, this would ensure that suitable housing developments can be delivered in the Plan period, to meet the housing needs of the Vale of Glamorgan – particularly in respect of affordable housing.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to Policy DNP3 – Glamorgan Heritage Coast, given the lack of recognition for the potential for small-scale housing proposals;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site

Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land at Hazelwood, Ogmore By Sea (Site ID: 3855) sets out that the position of the site at the Deposit Stage is as follows:

"The original site as ruled out as the development would represent unacceptable intrusion in to the open countryside. Whilst the site has now been identified for an affordable housing led development, the original reason for ruling it out still remains."
In terms of the assertion that "the development would represent an unacceptable intrusion into to the open countryside", this is strongly disputed, in that the development of the site would represent a natural rounding off of the existing settlement boundary. An extract of the site relative to the settlement boundary is provided below, which clearly shows that the development of the site would not extend beyond the existing settlement pattern that exists in Ogmore.

Site Outlined in Red and Settlement Shaded in Blue
As clearly demonstrated in the above mapping, the site would extend no further eastwards than the existing housing area to the south of the site. Equally, the site would not be extending any further north than the existing settlement pattern in Ogmore. This position is further supported by the wider aerial view of the site provided overleaf:

Wider Aerial View of Site Outlined in Red and Settlement Shaded in Blue

In summary, it is considered that the proposed allocation of the site represents a logical rounding off of the existing settlement, as depicted in the mapping provided above – where the site follows the existing envelope of the settlement. The site does not extend any further eastwards than the established built form located immediately to the south; indeed, it sits comfortably within the same development line.

As such, it cannot be considered that the site represents an 'intrusion' into the countryside, as the site would be visually and functionally related to the settlement. It therefore follows that the site would be read as part of the settlement, and not the wider rural landscape.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage
As demonstrated above, there are no changes to the scoring attributed to the site. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with this submission (see Appendix A).

Sustainability

Notwithstanding the above, it is considered that the site represents a more sustainable location than what was previously assessed at Preferred Strategy stage, in light of the Ogmore by Sea Hall development. The Hall acts as a community facility, whereby the space is available for hire by local community groups such as birthday parties, weddings, group meetings, and other such similar uses. Moreover, a café (Welsh Coffee Co) is located within the premises which sells both food and drink.

The hall and café are within walking distance to and from the site, where new access facilities have been implemented from Main Road directly to the building, to allow access for pedestrians and cyclists. This is illustrated in the image below:

Walking and Cycling Facilities

The Tusker Rock pub and post office are also located along Main Road, all of which are within walking distance to the site.

Accordingly, the site is well served by new amenities (i.e. community hall) that comprehensively improves the sustainability of the site / settlement, and in turn, improves the sustainability credentials of the site promotion. It therefore follows that the site represents an acceptable location for residential development, and the site should be looked upon favourably accordingly.

It is also the case, as set out in previous representations, that the site is within a maximum 22-minuted bus journey of the following services and facilities:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre.

As such, key services and facilities can be access by sustainable travel over and above the existing level of provision available in Ogmore By Sea (as discussed above).

Accordingly, the relevant 'red' scorings in the Council's assessment should be updated to reflect the site's suitability and sustainability to accommodate the proposed residential development of the site.

Glamorgan Heritage Coast

Insofar as to the position regarding the site's location within the Glamorgan Heritage Coast, detailed submissions are made not only in the Preferred Strategy representations, but also in Annex 1 of this submission. In short, given the pressing need for such development (particularly affordable housing) to come forward in the Plan period to meet ever-increasing needs, development of this nature should be considered more favourably – not least that, as outlined in this Annex, the site would not extend any further that the existing settlement boundary.

Accordingly, the site would be perceived to form part of the settlement of Ogmore By Sea, and not the wider landscape, and therefore, would not have any detrimental impact on the Heritage Coast in any respect. The scoring should be amended accordingly to reflect this position.

Climate Change

As outlined in previous representations, the development will incorporate climate change measures, such as EV charging points, PV panels, as well as adopting sustainable materials for construction whilst maximising the potential for the dwellings to be energy efficient. Accordingly, the development will be built to high sustainable standards, and therefore, the scoring of the site should be amended as a result.

Summary and Conclusion

It has been evidenced above that there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;

6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston;

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document "New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report

(September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be

applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable

transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and

• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Hazelwood, Ogmore By Sea, the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below.

With reference to the above:

• In terms of public transport, there are two bus stops located approximately 200m (3-minute walk) from the site ('Ogmore By Sea Post Office'), with the '303' providing services between Llantwit Major and Bridgend.

• The site is located 200m (3-minute walk) from the 'Ogmore By Sea Post Office' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

• The site is also located 50m (1-minute walk) from a children's park.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities. This

Furthermore, the settlement of Ogmore By Sea has been ranked higher than Llangan (which the site 'Land to north and west of Westwinds Business Park' is located within) in the VoG Sustainable Settlements Appraisal, and therefore, is considered to constitute a more sustainable location to accommodate residential growth. Most notably, Ogmore By Sea scores '13' in respect to 'Daily Facilities' whereas Llangan only scores '3', evidencing that residents in Ogmore have much better access to services within the locality as compared to Llangan.

Given the above, 'Land at Hazelwood, Ogmore' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Hazelwood, Ogmore' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help

sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES
Respondent: Wig Fach Property Company Ltd [2373]
Agent: Geraint John Planning Ltd

Summary:

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land at Ogmore By Sea (Site ID: 386 & 3855) also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. It is questionable whether Wick has the capacity to accommodate 50 new dwellings, given the sustainability and rural nature of the area. As a result, it is suggested that the number of homes allocated in Wick is reduced and that a further allocation in St Brides Major is secured, in order to facilitate supporting the delivery of affordable housing through the housing market area, rather than in one minor rural settlement.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ogmore By Sea area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to

these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either Key Settlement, Service Centre settlement or Primary Settlements, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ogmore By Sea. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such

applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land

at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which

represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that the should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 124 affordable homes in the St Brides Major local housing market area (which Ogmore is located within). As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

It is questionable whether Wick has the capacity to accommodate 50 new dwellings, given the sustainability and rural nature of the area. As a result, it is suggested that the number of homes allocated in Wick is reduced and that a further allocation in St Brides Major is secured, in order to facilitate supporting the delivery of affordable housing through the

housing market area, rather than in one minor rural settlement. The sustainability of Ogmore has been assessed, both by the Council through the Sustainability Appraisal and again, through our assessment of the site.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a

target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4 % of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.

Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ogmore and the proposed site. As outlined within these representations, it is considered that the site (ID xxx) represents a sustainable, deliverable and acceptable site. The site is within a maximum of a 22- minute bus journey to a every key service listed, due to the proximity of the site to settlements such as Bridgend. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Ogmore By Sea without the need to travel by car. The site is located within 5 miles of Bridgend, and within a maximum 22-minute bus journey of the following services:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre for various Retail Services

Moreover, Ogmore has benefitted from the recent development of the Ogmore By Sea Village Hall, which provides space for community activities and events to take place. The hall also includes a coffee shop (Welsh Coffee Company), which only adds further to the daily services provision available within the settlement. Access to the hall and coffee shop is directly provided for pedestrians from the Main Road, which allows for direct access from the site.

Accordingly, the settlement of Ogmore represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

It is acknowledged that the site also lies within the Glamorgan Heritage Coast and this point is addressed further below.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ogmore By Sea, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a ‘cap’ limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 “For the purposes of this policy, ‘small-scale’ will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area.”

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

Policy DNP3 – Glamorgan Heritage Coast

Given that the site is located in the Glamorgan Heritage Coast, it is noted that the following policy is of relevance to any future development on the site. Criteria 4 of Policy DNP3 states:

“The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development that accords with National Policy.”
It is also noted that supporting Para 6.422 “In seeking to protect the Glamorgan Heritage Coast, the Council acknowledges that there are some built up areas within the boundary, including the Minor Rural Settlement of Ogmore. In addition, the Vale of Glamorgan rail line crosses part of the Heritage Coast designation in the location where a new station at St Athan is proposed. Whilst being mindful of the need to protect the special qualities of the Glamorgan Heritage Coast, the Council accepts that development within these areas is appropriate, subject to relevant policies of the Plan”(GJP emphasis).

We would offer general support for this policy, and consider this to provide flexibility which allows for certain forms of development. However, we would suggest that the policy wording should be amended to reflect that ‘housing’ should be supported in the Glamorgan Heritage Coast, providing that the policy exceptions are met. Therefore, the following amendment is proposed as part of the policy should be changed to include “small scale housing” or something similar. The proposed amendments to Policy DNP3 are outlined below in red:

“The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development, including small-scale housing proposals that accords with National Policy.”

Again, this would ensure that suitable housing developments can be delivered in the Plan period, to meet the housing needs of the Vale of Glamorgan – particularly in respect of affordable housing.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in ‘Annex 2’ of our representations, the site has overcome the ‘constraints’ set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the “soundness” of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan’s housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;

• Object to Policy DNP3 – Glamorgan Heritage Coast, given the lack of recognition for the potential for small-scale housing proposals;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land at Hazelwood, Ogmore By Sea (Site ID: 3855) sets out that the position of the site at the Deposit Stage is as follows:

"The original site as ruled out as the development would represent unacceptable intrusion in to the open countryside. Whilst the site has now been identified for an affordable housing led development, the original reason for ruling it out still remains."
In terms of the assertion that "the development would represent an unacceptable intrusion into to the open countryside", this is strongly disputed, in that the development of the site would represent a natural rounding off of the existing settlement boundary. An extract of the site relative to the settlement boundary is provided below, which clearly shows that the development of the site would not extend beyond the existing settlement pattern that exists in Ogmore.

Site Outlined in Red and Settlement Shaded in Blue
As clearly demonstrated in the above mapping, the site would extend no further eastwards than the existing housing area to the south of the site. Equally, the site would not be extending any further north than the existing settlement pattern in Ogmore. This position is further supported by the wider aerial view of the site provided overleaf:

Wider Aerial View of Site Outlined in Red and Settlement Shaded in Blue

In summary, it is considered that the proposed allocation of the site represents a logical rounding off of the existing settlement, as depicted in the mapping provided above – where the site follows the existing envelope of the settlement. The site does not extend any further eastwards than the established built form located immediately to the south; indeed, it sits comfortably within the same development line.

As such, it cannot be considered that the site represents an 'intrusion' into the countryside, as the site would be visually and functionally related to the settlement. It therefore follows that the site would be read as part of the settlement, and not the wider rural landscape.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage
As demonstrated above, there are no changes to the scoring attributed to the site. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in

conjunction with this submission (see Appendix A).

Sustainability

Notwithstanding the above, it is considered that the site represents a more sustainable location than what was previously assessed at Preferred Strategy stage, in light of the Ogmore by Sea Hall development. The Hall acts as a community facility, whereby the space is available for hire by local community groups such as birthday parties, weddings, group meetings, and other such similar uses. Moreover, a café (Welsh Coffee Co) is located within the premises which sells both food and drink.

The hall and café are within walking distance to and from the site, where new access facilities have been implemented from Main Road directly to the building, to allow access for pedestrians and cyclists. This is illustrated in the image below:

Walking and Cycling Facilities

The Tusker Rock pub and post office are also located along Main Road, all of which are within walking distance to the site.

Accordingly, the site is well served by new amenities (i.e. community hall) that comprehensively improves the sustainability of the site / settlement, and in turn, improves the sustainability credentials of the site promotion. It therefore follows that the site represents an acceptable location for residential development, and the site should be looked upon favourably accordingly.

It is also the case, as set out in previous representations, that the site is within a maximum 22-minuted bus journey of the following services and facilities:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre.

As such, key services and facilities can be access by sustainable travel over and above the existing level of provision available in Ogmore By Sea (as discussed above).

Accordingly, the relevant 'red' scorings in the Council's assessment should be updated to reflect the site's suitability and sustainability to accommodate the proposed residential development of the site.

Glamorgan Heritage Coast

Insofar as to the position regarding the site's location within the Glamorgan Heritage Coast, detailed submissions are made not only in the Preferred Strategy representations, but also in Annex 1 of this submission. In short, given the pressing need for such development (particularly affordable housing) to come forward in the Plan period to meet ever-increasing needs, development of this nature should be considered more favourably – not least that, as outlined in this Annex, the site would not extend any further that the existing settlement boundary.

Accordingly, the site would be perceived to form part of the settlement of Ogmore By Sea, and not the wider landscape, and therefore, would not have any detrimental impact on the Heritage Coast in any respect. The scoring should be amended accordingly to reflect this position.

Climate Change

As outlined in previous representations, the development will incorporate climate change measures, such as EV charging points, PV panels, as well as adopting sustainable materials for construction whilst maximising the potential for the dwellings to be energy efficient. Accordingly, the development will be built to high sustainable standards, and therefore, the scoring of the site should be amended as a result.

Summary and Conclusion

It has been evidenced above that there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston;

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period.

The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan

period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very

unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

“A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth.”

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the ‘Rectory Field, St Brides Road’ site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

‘Land West of Maendy Road’ has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the ‘Candidate Assessment at Preferred Strategy Stage’ (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the “soundness” of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is “sound” (i.e. its allocation is considered to be “unsound”).

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of ‘Land to north and west of Westwinds Business Park’:

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and

• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Hazelwood, Ogmore By Sea, the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below.

With reference to the above:

• In terms of public transport, there are two bus stops located approximately 200m (3-minute walk) from the site ('Ogmore By Sea Post Office'), with the '303' providing services between Llantwit Major and Bridgend.

• The site is located 200m (3-minute walk) from the 'Ogmore By Sea Post Office' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

• The site is also located 50m (1-minute walk) from a children's park.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities. This

Furthermore, the settlement of Ogmore By Sea has been ranked higher than Llangan (which the site 'Land to north and west of Westwinds Business Park' is located within) in the VoG Sustainable Settlements Appraisal, and therefore, is considered to constitute a more sustainable location to accommodate residential growth. Most notably, Ogmore By Sea

scores '13' in respect to 'Daily Facilities' whereas Llangan only scores '3', evidencing that residents in Ogmore have much better access to services within the locality as compared to Llangan.

Given the above, 'Land at Hazelwood, Ogmore' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Hazelwood, Ogmore' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help

sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Document Element: HG4 - RURAL AFFORDABLE HOUSING LED SITES
Respondent: H Jones, L Sungur and P John [3741]
Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: HG5 - AFFORDABLE HOUSING EXCEPTION SITES
Respondent: Mr Iestyn Jones [1624]

Summary:

100% affordable housing is government funded where site abnormal costs can be accommodated and fall outside of the normal development appraisal. As such, affordable housing schemes are more than private housing on more difficult and costly to develop brown field and contaminated sites / land. The authority's approach to allocation within private housing developments should also ensure the need is met and therefore negate the requirement to need to develop outside of settlement at all, thus preserving the natural environment and ecology.

Full text:

100% affordable housing is government funded where site abnormal costs can be accommodated and fall outside of the normal development appraisal. As such, affordable housing schemes are more than private housing on more difficult and costly to develop brown field and contaminated sites / land. The authority's approach to allocation within private housing developments should also ensure the need is met and therefore negate the requirement to need to develop outside of settlement at all, thus preserving the natural environment and ecology,

Change suggested by respondent:

As above, ensure affordable housing is delivered as part of the wider private and rented social housing allocations, preserve green open countryside, ecology and space between towns to prevent urban sprawl.

4800 Comment

Document Element: HG5 - AFFORDABLE HOUSING EXCEPTION SITES
Respondent: Cwmpas [1874]
Agent: Cwmpas

Summary:

Paragraph 6.141 – positive comment and response within the context of Exceptions Policy HG5.

it is considered that the direct reference to community led affordable housing in the Deposit Plan document addresses and removes some of the potential barriers and challenges faced in the delivery of such forms of housing in terms of the availability of sites, enhancing evidence bases of housing need through genuine community level assessment and survey to supplement wider LHMAs and, standards within community led housing schemes around design, density, energy and sustainable transport most closely reflect placemaking principles. In addition, explicit reference to community led housing bridges the knowledge gap around models and management of such housing when compared to other more traditional forms of private and social housing development and thereby recognises the significant role and contribution community led affordable housing makes in addressing pressing and urgent housing needs.

Full text:

Cwmpas is positive in its response to the Deposit RLDP statements and welcomes the reference to community led housing as noted in:

Paragraph 6.121 – positive response though observation and request would be made to minor amendment to wording that after the words 'co-operative housing' the words 'and other forms of community led affordable housing' are inserted as this would accord with the context of PPW Edition 12 as noted.

Paragraph 6.141 – positive comment and response within the context of Exceptions Policy HG5. However, a request would be made that as well as reference to community land trusts that wording is supplemented with suggested words of 'and other forms and models of community led affordable housing.'

Furthermore, it is considered that the direct reference to community led affordable housing in the Deposit Plan document addresses and removes some of the potential barriers and challenges faced in the delivery of such forms of housing.

It is now clearly the case that PPW supports community-led housing as a form of affordable housing and that, in the view of Cwmpas, this is material to the considerations of Local Development Plan preparation and from which the Vale of Glamorgan Deposit Plan would benefit.

Going forward, however, Cwmpas, would consider that detailed planning policy development within the Deposit RLDP could make an overt and explicit community led affordable housing development reference and with specific community led housing policies in addition to those subsumed within more generic and general housing policies.

Firstly, the addition of a specific reference to community led housing within Policies HG1, HG2, HG3 akin to that within HG5 would enable to the benefits and reach of community led housing to be expanded into mainstream housing policies and allocations and not only Exceptions Policy.

Secondly, it would be considered as beneficial that the Deposit RLDP policies on community led housing development could include a clear definition of this type of affordable housing.

In summary, it is considered that the direct reference to community led housing in the Deposit Plan document as noted in Paragraphs 6.121 and 6.141 represent very positive inclusion and that it addresses and removes some of the potential barriers and challenges faced in the delivery of such forms of housing by drafting specific community led housing policies at the RLDP Deposit Plan stage. However, as outlined, our comments and observations are such as to suggest that references could be further extended within the Housing policies and still be in accordance with the framework of PPW Edition 12, key to the evolution of these policies.

Change suggested by respondent:

A request would be made that as well as reference to community land trusts that wording is supplemented with suggested words of 'and other forms and models of community led affordable housing.'

5126 Support

Document Element: HG5 - AFFORDABLE HOUSING EXCEPTION SITES

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter

5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro

Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.
The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).
Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.
BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.
Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.
The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is

balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.
We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.
The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.
The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.
In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling

182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).

Delivery and Implementation

PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.

The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.

The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.

The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters. It will be for the Council to justify deliverability supported by robust financial viability.

Gypsy and Travellers

The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.

Renewable Energy

Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?

It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.

The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.

Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.

The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.

Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.

Minerals

The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a

Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.
BMV Agricultural Land
The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:
• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and
• Candidate site assessments.
•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry:
"Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

6330 Object

Document Element: HG5 - AFFORDABLE HOUSING EXCEPTION SITES

Respondent: Penllyn Community Council (Clerk) [243]

Summary:

Provide additional or amended Planning policies [either free standing or within SP3 or HG5] to allow for single unit/micro development, by companies or individuals, of
appropriate, affordable housing units within all communities including 'Hamlets and Smaller Rural Settlements' [in the Countryside] where this is supported by the local community and meets the requirements of SSC1.
These new/amended policy statements [alongside the existing requirements of SSC1 and HG5] could then be applied across all existing settlements and communities currently classified as undefined 'Hamlets and Smaller Rural Settlements' and hence 'Countryside' to allow for controlled appropriate development of affordable homes to meet the aspirations of Para 5.24. and the local Community.

Document Element: HG5 - AFFORDABLE HOUSING EXCEPTION SITES

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
"There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value".

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.

We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of “areas of high ecological value” will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of ‘High Ecological Value’ (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording

Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure

Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public

open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road

Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will

therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it "is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary".
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW's Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational
Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and

proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Change suggested by respondent:

Criterion 6 should be amended to:
"There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value".

Sound: Not specified

Attachments:

Email representation redacted - https://valeofglamorgan.oc2.uk/a/3pq

7050 Object

Document Element: HG5 - AFFORDABLE HOUSING EXCEPTION SITES

Respondent: Marion morgan [2413]

Agent: Geraint John Planning Ltd

Summary:

The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported. However, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ystradowen area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:
VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it

is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: “There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery.”
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: “Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement.” (Page 66)
Para 5.25 states “Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An ‘affordable housing led’ scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord”.

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

“Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided.”

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision’s clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ystradowen. The Vale is characteristically ‘rural’, and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the “soundness” of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states “The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities”. The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas

access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months
• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would

be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.
Extract of Housing Trajectory (annotated by GJP - red dotted line)

It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in

general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.
HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.
It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise

affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land at Ystradowen (Site ID: 430 / 4060) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) and Annex 2 for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 230 affordable homes in the Cowbridge housing market area / ward - which Ystradowen is located within. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation – see Annex 2.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Ystradowen and the proposed site. As outlined within these representations, it is considered that the site (ID 430) represents a sustainable, deliverable and acceptable site. The site is located within 2.7 miles Cowbridge and 2.8 miles of Pontyclun. Due to the availability of frequent bus services, and active travel links, key services are readily available to access for any residents within Ystradowen without the need to travel by car. The site is within a maximum 9- and 14-minute bus journey (respectively) of the following key services:

• Cowbridge and ‘Y Pant’ Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Accordingly, the settlement of Ystradowen represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ystradowen, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be

amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 "For the purposes of this policy, 'small-scale' will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area."
The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.
SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• Provision of circa 67 new-build residential dwellings (including 50% affordable housing provision);
• A mix of house-types and tenures across the site to cater for a variety of needs;
• Creation of a new primary access into the site;
• Connection to pedestrian links within the wider area;
• Public open space; and
• Green Infrastructure; and
SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

Land at Ystradowen (Site ID: 4060)

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site. The 'Candidate Sites Assessment Deposit Plan Stage v2' for 'Land at Ystradowen (Site ID: 4060)' sets out that the position of the site at the Deposit Stage is as follows:

"Amendment of proposed use from housing to affordable housing led. Previous site reference 430. The original assessment concluded that whilst the site was adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.
The LDP site in question has subsequently been granted planning permission for housing. This site will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location."

In terms of the first paragraph, the assessment/conclusion implies and suggests that 'Land at Ystradowen' (4060)' does not adjoin the existing LDP settlement boundary as the allocated site ('Land off Sandy Lane, Ystradowen') has not been built out – "by virtue of an existing adopted plan LDP allocation this is currently under review". Detailed representations have been made and submitted previously at the Housing Trajectory (see Appendix B& C) that outlines that this is fundamentally incorrect. This is not repeated in full here, with just the main points re-iterated.

First and foremost, 'Land at Ystradowen (4060)' directly adjoins the existing LDP settlement boundary. Secondly, there has been a significant change in the position and circumstances. The allocated site ('Land off Sandy Lane, Ystradowen') is currently being "built out", with work commencing on site (see photographic evidence in Appendix C)
- post the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024).
Accordingly, the site no longer adjoins "the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review". Given this, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.

With regards to the second paragraph, the assessment/conclusion outlines that "The LDP site … will serve the future needs of residents in the area and it is not considered that additional land should be allocated in this location". The arguments and case presented in Appendix B & C. There is a clear overreliance on 'rolled forward' sites / existing allocated sites. A total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%). We believe that a greater level of growth is achievable and should be considered. Not least as there is an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings). As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy. Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. The provision of housing should be adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply. The "future needs of residents in the area" will therefore not be met/served by just this site, and it is considered that additional land should be allocated in this location.

Furthermore, to reinforce, illustrate, and evidence the point in specific reference to the site the subject to this representation (located in Ystradowen), reference is made to application ref. 2013/00856/OUT – 'Land off Badgers Brook Rise, Ystradowen'. The Final Report of the application states that "Ystradowen is considered a sustainable settlement for further housing development" – i.e. "additional land should be allocated in this location".

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan (see Appendix B), a similar 'scoring' exercise has been undertaken as part evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage can be seen below for reference:
BP18 Candidate Ste Assessment at Preferred Strategy Stage
As demonstrated above, there has been a positive change to the scoring attributed to the site ('Land at Ystradowen').
The change is a positive change to the 'Infrastructure Availability' section changing from: 'Grey' (no score) to 'Amber'.
Infrastructure Availability is outlined as: "Existing or proposed services would be suitable subject to local improvements without impacting on development viability and/or delivery timescales" (see below):
The explanation for the scoring provided by the Vale sets out that "Sites will be assessed against the availability of water connections to the site, in addition to the method of foul sewage disposal from the site. Consultation shall be undertaken with DCWW to determine whether there is sufficient capacity to the wastewater treatments works, and how it links into DCWW's Capital Investment Programme.
Where consultation indicates limited capacity, or the site is located away from a viable connection this may impact on the deliverability/viability of a site should this require significant connection costs or upgrades. Consequently, the

Council shall require site proposers to undertake detailed site viability assessment to determine the impact that additional cost shall have on development cost and deliverability timescales."

As set out above, this is a positive change. This is most likely derived from the allocated site ('Land off Sandy Lane, Ystradowen') currently being "built out", with work commencing on site that would facilitate and improve the 'Infrastructure Availability'. This re-iterates the point made previously re the incorrect assessment reached, and the ever changing position of this site – which will only improve given the neighbouring allocated site ('Land off Sandy Lane, Ystradowen') being "built out".

Land West of Maendy Road, Aberthin (Site ID: 2299)

There are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and the site the subject of these representations. It is therefore considered pertinent to assess and compare the suitability of 'Land West of Maendy Road, Aberthin'. Not least as 'Land at Ystradowen (Site ID: 4060)' is for a "small-scale affordable housing led development in a minor rural settlement", within "the ward of Cowbridge".

The site 'Land West of Maendy Road (Site ID: 2299)' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however from our review of the evidence base submitted as part of the Housing Trajectory consultation, there was no assessment and critique of this site at this stage. This raises questions regarding the "soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

The site ('Land West of Maendy Road') has since had a detailed assessment and critique published, however concerns still remain regarding the "soundness" of the site which forms part of the intended housing land supply. The 'Stage 2 Detailed Site Assessment' summary undertaken for 'Land West of Maendy Road' has been extracted below:

"The site is proposed for a small-scale affordable housing led development in a minor rural settlement, which would accord in principle with the strategy. Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent.
The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."

As mentioned previously, there are material similarities between 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)' (the subject of these representations). Firstly 'Land at Ystradowen (Site ID: 4060)' is also for a "small-scale affordable housing led development", that is "in a minor rural settlement" (Ystradowen). Accordingly, it should follow that as 'Land West of Maendy Road, Aberthin (Site ID: 2299)' "would accord in principle with the strategy", 'Land at Ystradowen (Site ID: 4060)' would also "accord in principle with the strategy".

Furthermore, there is no material difference between the following assessment of Aberthin and Ystradowen:

"Aberthin itself has limited services and facilities, but is within reasonable walking distance of primary and secondary school provision with the wider range of services and facilities in Cowbridge just over 2000m away. The settlement is also served by public transport, although this is relatively infrequent."

There is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms.

As set out in our representations to the Preferred Strategy, we reviewed the key services in proximity to the site. The following services were identified as part of that review:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green;

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin;

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn; and

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Given the above, "The settlement (Ystradowen) is also served by public transport".
Furthermore, Ystradowen is located only 2.7 miles from Cowbridge (9-minute bus journey). The "primary and secondary school provision with the wider range of services and facilities in Cowbridge" mentioned in relation to Aberthin are therefore also in close proximity to Ystradowen.

Given the above, any candidate site at 'Land at Ystradowen' (the subject of these representations – Site ID: 430 / 4060) is no less sustainable than the site at Aberthin (Site ID: 2299).

Not least as the following additional key services are located within Ystradowen and therefore in close proximity to the promoted site:

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'; and
• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Furthermore it is important to note that the above scoring criteria is very limiting, and does not take into account the important role and proximity of settlements in a wider context. For example, it does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant) – see Appendix B for full details.

In addition, as set out within the representations made in relation to the House Trajectory (Appendix C), the following extracts have been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view extract is outlined below to give spatial context:
As set out above, it is important to note that the Final Report of application ref. 2013/00856/OUT states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement". Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• "Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area"; and
• "Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above."

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally suitable to be an Affordable Housing Led Allocation.

The second section/paragraph of the assessment states:

"The 2023 LHMA indicated that the ward of Cowbridge has a need for 230 additional affordable units over the next 15 years and this site could make an important contribution in meeting that."
'Land at Ystradowen (Site ID: 4060)' is also located within "the ward of Cowbridge". As per the above and outlined by the Authority, there is "a need for 230 additional affordable units over the next 15 years". It is clear therefore that there is a need for additional affordable units in this ward, and this site would therefore also help to alleviate this need.

This position is a direct contradiction of course of the assessment/conclusion for 'Land at Ystradowen (Site ID: 4060)' which stated "it is not considered that additional land should be allocated in this location". It is clear from the above however that "additional land should be allocated in this location" to satisfy this "need for 230 additional affordable units over the next 15 years" – which 'Land at Ystradowen (Site ID: 4060)' can do. This is not least the case given the detailed arguments, case and representations presented and evidenced previously above and in Appendix B & C.
To briefly reiterate there is a clear overreliance on 'rolled forward' sites / existing allocated sites which has resulted in the unmet need deriving from the existing LDP being still present. A greater level of provision for new allocations should therefore be applied in order to meet the housing requirement. The provision of housing should be adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply, so these can "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do.

As set out within the representations made in relation to the housing trajectory (see Appendix C), a further key consideration to note and one which does differentiate between the relative merits of the 'Land at Maendy Road, Aberthin' and 'Land at Ystradowen' is that the LDP Proposals Map demonstrates that 'Land West of Maendy Road' is within a Special Landscape Area - see below:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red
Under Policy MG17 'Special Landscape Areas' it is considered that development in SLA could pose an "unacceptable harm to the important landscape of the area". Accordingly, this development and proposed allocation could therefore cause "unacceptable harm to the important landscape of the area".

'Land at Ystradowen' by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any "unacceptable harm to the important landscape of the area".

Vale of Glamorgan Proposals Map (Land at Ystradowen in red)
It is noted that the detailed assessment scores the site 'amber' in respect to Special Landscape Area (refer to / see later section for full details), with the assessment methodology setting out that "the site is located within a Special Landscape Area/The Glamorgan Heritage Coast and the development may result in little or no change in character and little or no significant effect on landscape character and visual amenity."
A detailed assessment of the impact upon the SLA in respect to the development of 'Land West of Maendy Road, Aberthin' should therefore be, and will need to be, undertaken as part of any planning application. If it is found that the site causes "unacceptable harm to the important landscape of the area", this will lead to this proposed allocation being at risk of not being delivered. This will be as a result of its impacts and acceptability at the planning application stage that the landscape and visual impact of development of the site is unacceptable. As such, these proposed affordable units are at a potential considerable risk of being lost and not satisfying the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" – which 'Land at Ystradowen (Site ID: 4060)' can do as it is not located in an SLA.

In addition the draft housing trajectory set out that "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" is not provided for. This is clearly an issue. Given however 'Land at Ystradowen' does not sit within a SLA – and so not pose any potential concern or cause any "unacceptable harm to the important landscape of the area" – the allocation of this site would be more suitable and "safer" - as there would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for, and the need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge" would be satisfied.

As mentioned previously, a detailed assessment and critique has now been undertaken of 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part evidence base for the Deposit Plan using the similar 'scoring' exercise. As such, it is again pertinent to consider and respond to the Council's 'scoring' exercise assessment of the site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' as part of these representations.

The 'Summary of Assessment of New Candidate Sites' table can be seen overleaf for reference:
BP18A Candidate Site Assessment at Deposit Plan Stage
A comparison between the site assessments undertaken for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' (on the left), and 'Land at Ystradowen (Site ID: 4060)' (on the right) has been undertaken, and can be seen below for reference:

Having undertaken a review of the scoring for both 'Land West of Maendy Road, Aberthin (Site ID: 2299)' and 'Land at Ystradowen (Site ID: 4060)', it is clear that 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)':

• 'Land at Ystradowen (Site ID: 4060)': 17/33 criteria are scored green = 52%

• 'Land West of Maendy Road, Aberthin (Site ID: 2299)': 12/34 criteria are scored green = 36%

It is clear therefore given the above that 'Land at Ystradowen (Site ID: 4060)' is a better site, and should be allocated accordingly.

One key example to note is how the criterion 'Access to Services and Facilities' has been scored. For 'Land at Ystradowen (Site ID: 4060)' this has been scored green, yet for 'Land West of Maendy Road, Aberthin (Site ID: 2299)', this has been scored red. Given this, this corroborates the position outlined previously above that, if the proposed allocated site 'Land West of Maendy Road, Aberthin (Site ID: 2299)' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen (Site ID: 430 / 4060)' is equally as sustainable – in fact considered more suitable (given its higher scoring in this respect).

Furthermore, we question the "soundness" of the assessment of 'Land West of Maendy Road, Aberthin (Site ID: 2299)', given that 7/34 (21%) of the criteria do not appears to have not been assessed – i.e. 7/34 (21%) of the criteria are scored grey. This raises questions regarding the "soundness" of this site, given it appears this sites acceptability and inclusion was pre-determined.

It is clear therefore that if 'Land West of Maendy Road, Aberthin (Site ID: 2299)' has been deemed acceptable for allocation, yet 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than this site, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and be allocated. Not least as the site is "proposed for a small-scale affordable housing led development in a minor rural settlement … would accord in principle with the strategy", and "could make an important contribution in meeting "a "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

Summary and Conclusion

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Deposit Plan published as part of the consultation.

In terms of SECTION 4, and a response to the Candidate Site Assessment at Deposit Plan Stage, the following key points have been made:

• The Council's 'Stage 2 Detailed Site Assessment' justification for 'Land at Ystradowen (Site ID: 4060)' is fundamentally incorrect;

• Given the material positive similarities between 'Land at Ystradowen (Site ID: 4060)' and 'Land West of Maendy Road, Aberthin (Site ID: 2299)', which has been deemed acceptable and allocated, 'Land at Ystradowen (Site ID: 4060)' should also be deemed acceptable and allocated accordingly;

• 'Land at Ystradowen (Site ID: 4060)' would help to alleviate and satisfy "a need for 230 additional affordable units over the next 15 years" within "the ward of Cowbridge"; and
• 'Land at Ystradowen (Site ID: 4060)' scores higher/more positively (i.e. green) than 'Land West of Maendy Road, Aberthin (Site ID: 2299)', and so should also be deemed acceptable and be allocated;

Ultimately, 'Land at Ystradowen (Site ID: 4060)' is "proposed for a small-scale affordable housing led development in a minor rural settlement", and as such "would accord in principle with the strategy". It would therefore "make an important contribution in meeting" the "need for 230 additional affordable units over the next 15 years" in "the ward of Cowbridge".

We would therefore object the Council's assessment that the site is not considered suitable for development.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Credentials of this site subject to this submission; and
10. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing-led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;

• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the east of Coliwinston, Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicted in the 'Timing and Phasing of Sites' table, given that the delivery

start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.
Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.
The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.
Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.
Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:
Table 6: Existing LDP allocations to be carried forward
The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.
Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision.
Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".
As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision, and as such, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations

Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:
Candidate Site Stage 2 Assessment (Site Ref. 404)
The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:
"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clearly evident deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Despite the absence of site-specific assessment criteria, as the RLDP preferred strategy states a key objective guiding site selection is that the Plan will "provide for vital and vibrant rural communities whilst protecting the countryside through the delivery of growth in sustainable locations related to the settlement hierarchy alongside the provision of supporting infrastructure" (Objective 7 'Fostering Diverse Vibrant and Connected Communities'), it is reasonable to assume that the Council considers 'Land West of Maendy Road' to be a 'sustainable' location.

Given this, we have reviewed the key services in proximity to the site. The following services were identified:

• In terms of public transport, there are two bus stops located approximately 0.2 miles (4-minute walk) from the site ('Land West of Maendy Road'), with the 321 providing services between Llantwit Major and Talbot Green.

• The site is also located 0.2 miles (4-minute walk) from The Farmers Arms Pub and 0.2 miles (4-minute walk) from The Hare and Hounds Inn.

• The site is located 0.2 miles (5-minute walk) from Aberthin Village Hall.

Aberthin is in close proximity (1.2 miles/14-minute walk) to the key settlement of Cowbridge - which is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Considering this, there is no material difference between 'Land West of Maendy Road' and 'Land at Ystradowen' in sustainability terms. Given that Ystradowen is located only 2.7 miles from Cowbridge (9- minute bus journey), the candidate site at 'Land at Ystradowen' is no less sustainable than the site at Aberthin. The following key services are within Ystradowen and therefore in close proximity to the promoted site:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green. The 321 service is the same bus service that serves 'Land West of Maendy Road' / Aberthin.
• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

Accordingly, it can be considered therefore that if the proposed allocated site 'Land West of Maendy Road, Aberthin' is considered sustainable and by association suitable to be an Affordable Housing Led Allocation, 'Land at Ystradowen' is equally suitable to be an Affordable Housing Led Allocation.
Furthermore, to reinforce the above position and to illustrate and evidence the site's sustainability, the following has been taken from the Officer's Reports associated with the applications for the site that directly adjoins the western boundary of the promoted site 430 - 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48). An aerial view extract is outlined below to give spatial context:
Reference is made in the Final Report of app ref. 2013/00856/OUT which states that "Ystradowen is considered a sustainable settlement for further housing development", due to "the sustainable nature of the settlement".

Furthermore, the Final Report of app ref. 2023/00948/FUL states:

• "Notwithstanding this, the site is located in close proximity to local services and there is a bus stop located nearby. Whilst the comments relating to the reliance and frequency of the bus services have been considered, there still remains a bus service in the area."
• "Firstly, as aforementioned, many neighbouring comments refer to the site as unsustainable and have commented on the suitability of public transport and cycle routes etc. This has been addressed above."

The above clearly evidences that the location has previously been endorsed as, and is currently still found to be, sustainable.

A further key consideration to note and one which does differentiate between the relative merits of the 'Land at Maendy Road, Aberthin' and 'Land at Ystradowen' is that the LDP Proposals Map demonstrates that 'Land West of Maendy Road' is within a Special Landscape Area - see overleaf:
Vale of Glamorgan Proposals Map (Land West of Maendy Road outlined in red)
Under Policy MG17 'Special Landscape Areas' it is considered that development in SLA could pose an "unacceptable harm to the important landscape of the area". Accordingly, this development and proposed allocation could therefore cause "unacceptable harm to the important landscape of the area".

'Land at Ystradowen' by contrast does not sit within a SLA (see below). This site would therefore not pose any potential concern in this respect as it would ultimately not cause any "unacceptable harm to the important landscape of the area".
Vale of Glamorgan Proposals Map (Land at Ystradowen in red)

This is a significant factor to consider. 'Land West of Maendy Road, Aberthin' causing "unacceptable harm to the important landscape of the area" will lead to this proposed allocation being at risk of not being delivered by virtue of

detailed assessments of its impacts and acceptability at planning application stage holding that the landscape and visual impact of development of the site is unacceptable. As such 25 affordable units will be lost from the proposed affordable 122 units, and ultimately being lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is not delivered (as it is located in a SLA), and so a "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" is not provided for. This is clearly an issue. Given however 'Land at Ystradowen' does not sit within a SLA – and so not pose any potential concern or cause any "unacceptable harm to the important landscape of the area" – the allocation of this site would be more suitable and "safer" - as therefore would be no concerns over this proposed allocation being removed and/or not being delivered in this respect (as it is not located in a SLA). This would ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.
Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)
As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:
Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:
In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Ystradowen', the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below. With reference to the above:

• In terms of public transport, there are two bus stops located approximately 400m (7-minute walk) from the site ('Ty Mawr Close'), with the '321 Nat Group Service' providing services between Llantwit Major and Talbot Green.

• The site is also located 300m (3-minute walk) and 600m (10-minute walk) from Sports Pitches/Playing Fields such as 'Ystradowen Children's Park', and the 3/4G Sports Pitch at 'Ystradowen Petanque Club'.

• Furthermore, the site is located 480m (7-minute walk) from the 'Murco – Tudor Garage' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities.

Furthermore, the settlement of Ystradowen has been ranked highly in the VoG Sustainable Settlements Appraisal, scoring a total of 14 points according to the distance to key services and facilities available. This places Ystradowen 26th out of a total of 87 settlements. As a result, this would be deemed a suitable area to accommodate growth.

As stated above the key settlement of Cowbridge is located in close proximity being only 2.7 miles to the south and a 9-minute bus journey. Cowbridge is identified as a sustainable location, and is ranked 4th place for services and facilities within the Vale of Glamorgan. The following key services are found in Cowbridge, and are therefore in close proximity to 'Land West of Maendy Road':

• Cowbridge Comprehensive Schools;
• Cowbridge Health Centre; and
• Cowbridge Town Centre for various Retail Services.

Furthermore, it is important to note that the above criteria does not take into account the important role and proximity of the Principal Settlement and Strategic Growth Area (as defined in the RCTCBC LDP) of Talbot Green / Pontyclun / Llantrisant which is 2.8 miles to the north (14-minute bus journey). Ystradowen would also naturally align, and function, in association with this Principal Settlement and Strategic Growth Area (of Talbot Green / Pontyclun / Llantrisant). These areas comprise for example the following key services:

• Cowbridge and 'Y Pant' Comprehensive Schools;
• Cowbridge Health Centre and Old School Surgery; and
• Cowbridge Town Centre, and Talbot Green / Pontyclun / Llantrisant (Strategic Growth Area), for various Retail Services.

Given the above, 'Land at Ystradowen' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Ystradowen' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.
Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref. 2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.
Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these

submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ystradowen.
Credentials of this site subject to this submission

There has been a significant change in the position and circumstances since the promoted site herein was assessed at Candidate Site Stage and the Assessment undertaken. The Stage 2 Assessment of the site concluded the following: 'Whilst adjoining the existing LDP settlement boundary this is by virtue of an existing adopted plan LDP allocation this is currently under review. Notwithstanding this the site would represent unacceptable intrusion in to the open countryside.' The assessment/conclusion implies that as this site ('Land off Sandy Lane, Ystradowen') has not been built out and is "currently under review", it suggests that 'Land at Ystradowen' (430) does not adjoin the existing LDP settlement boundary. Given recent developments however associated with the implementation of the planning permission ref. 2023/00948/FUL (post approval on 9th December 2024) and the site being currently being "built out" and work commencing on site, the site no longer adjoins "the existing LDP settlement boundary … by virtue of an existing adopted plan LDP allocation … currently under review". Accordingly, and given this, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the LDP settlement boundary and the site promoted herein.
The following specific photo evidences 'Land off Sandy Lane, Ystradowen' (Housing Allocation 48) is being built out the western boundary of the promoted Site ID 430. This therefore clearly highlights that the site's boundary is representing the existing settlement limit in the existing development plan. Accordingly, the 'Land at Ystradowen' site boundary therefore directly adjoins/is adjoining the existing LDP settlement boundary.
Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Change suggested by respondent:

Replace 'no more than 10 dwellings' with 'around 10 dwellings'

Sound: Not specified

Document Element: HG5 - AFFORDABLE HOUSING EXCEPTION SITES
Respondent: Peter Stone Properties Ltd [1182]
Agent: Geraint John Planning Ltd

Summary:

The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported. However, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and

3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £800,000 over the last 12 months, there is a clear and established need for new homes in the Bonvilston area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either a Key Settlement, Service Centre Settlement or Primary Settlement, all of which are already

sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Bonvilston. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and promote the use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated

with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been

attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites – not least given that 3 of the 4 allocated affordable housing-led sites are located west of Cowbridge.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that Land South of A48, Bonvilston (Site ID: 435 / 3857) should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area (which Bonvilston is located within), and a need for 242 affordable homes in the Wenvoe housing market area. As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

Securing further delivery of Affordable Units

As set out above, it can be assumed that the affordable housing-led allocated sites only provide 61no. affordable

dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included

within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to meet the target.
Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability scoring of Bonvilston and the proposed site. As outlined within these representations, it is considered that the site (ID 435 / 3857) represents a sustainable, deliverable and acceptable site. This proposed allocation is situated in proximity to Cowbridge, Culverhouse Cross and Cardiff, which comprise all key services. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

Accordingly, the settlement of Bonvilston represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Bonvilston, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a ‘cap’ limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 “For the purposes of this policy, ‘small-scale’ will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites

with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area.”

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

Deliverability of the Site

In summary, the site seeks to deliver the following key elements:

• In summary, the opportunity of the site seeks to deliver:
• Residential development comprising up to 25 dwellings, with at least 50% affordable housing in accordance with Policy SP2,
• Highways infrastructure within the site;
• Upgraded access to the site;
• Strong legible pedestrian and cycle connections throughout the site and with the existing settlement;
• Green Infrastructure; and
• Sustainable Drainage Systems (SuDS).

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land South of the A48, Bonvilston (Site ID: 3857) sets out that the position of the site at the Deposit Stage is as follows:

"Notwithstanding the amendment from a market led to an affordable housing led scheme (original CS 435), the other reasons why the site was previously discounted still remain.

The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area. Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48. The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable. There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing."
Conservation Area
In terms of the assertion that "The development would have an adverse impact on the character and setting of the Bonvilston Conservation Area, this is strongly disputed.

Whilst it is acknowledged that the site lies within the Bonvilston Conservation Area, the conclusion that it would be adversely affected is not considered to be accurate. Firstly, the site as it currently stands, consists of an open field. This does not match the conservation area which is characterised primarily by residential dwellings of varying densities, and as such, it is considered that development of the site with sensitively designed buildings would enhance as opposed to harming its surroundings.

Secondly, the large residential development to the north of the site, 'Land at Sycamore Cross' ref. 2015/00960/FUL encroaches on the Bonvilston Conservation area but was deemed acceptable by the LPA. Although not all of the site is within the Conservation Area, it's encroachment and presence adjoining and surrounding a large proportion of the area is considerable and was deemed acceptable by Officers in 2017. Given this, a development at the Land South of the A48 should be deemed acceptable, as it follows the same principles albeit at a much smaller scale.

Highways
As for the statement that "Development of the site would require major highway mitigation works to enable safe vehicular access on to the A48", this is also strongly disputed.

The site is located immediately adjacent to the adopted highway where it is proposed to upgrade and enhance the existing gated access point. Due to the existing access point, it is not considered that 'major' highway mitigation works would be needed, rather this would be enhanced and improved as part of the proposed development. Furthermore, given the nature of the road, with long views extending in both directions, it is anticipated that appropriate visibility

splays could be achieved to enable safe access and egress. As such, it is considered that the site would achieve appropriate highway access within the need for "major" highway mitigation works.

Agricultural Land Classification
The Detailed Site Assessment also sets out that "The Predictive ALC Maps indicates that site is Grade 2 Best and Most Versatile Land. Development of the site would lead to the loss of BMV land. BMV land should only be developed if there is an overriding need for the development and either previously developed land or land is lower agricultural grades is unavailable." This is strongly disputed.

A review of the Agricultural Land Classification Predictive Map indicates that the site lies primarily within 'Grade 2: Very good quality agricultural land' but no Grade 1 land is present. Further assessment and tests to establish the quality would therefore be undertaken in due course to confirm the quality of the land. However, it is not considered that it would be suitable to farm in any event given the location immediately adjoining existing residential development and the fact that it is within private ownership. Overall, given that the site is relatively small with a gross area of 0.88 hectares, it is not considered that its development would result in a detrimental or significant loss of agricultural land – not least given that site is not capable of beneficial agricultural production due to its limited size.

Housing / Housing Land
Further to the above, it is also set out that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing", however, this is not considered to be entirely accurate.

The LHMA 2023 shows that there is a need for 77 affordable homes in the St Nicholas & Llancarfan housing market area and a need for 242 affordable homes in the Wenvoe housing market area. This need has not been met through the allocations of sites within the RLDP, nor has it been met through outstanding commitments.

As outlined in Annex 1, it can be assumed that the affordable housing-led allocated sites will only provide for 61no. affordable dwellings within the Rural Vale, comprising 4no. sites that are expected to deliver approximately 20 – 50 dwellings (including both affordable and market housing). However, the RLDP sets a target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4% of the target provision and will only make provision for 2% of the targeted number. Therefore, more sites should be allocated in order to secure the delivery of a higher number of affordable housing units to meet the target.

As set out within Annex 1, it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, however, there is serious concern regarding the deliverability of these sites, which would result in a significant gap in the total affordable housing that is delivered. Therefore, allocating a greater number of affordable housing-led sites would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in the both the overall affordable housing need, and the need for

the St Nicholas & Llancarfan housing market area, being unmet, with demand continuing to outstrip supply.

The LHMA 2023 sets out the existing stock and planned supply of affordable housing over the next 5 years (up until 2028). This assessment found that the housing market area of St Nicholas & Llancarfan has a committed supply of 4no. one beds, 11no. two beds, and 3no. three beds, with 2 no. three beds as expected re-lets. The assessment also identifies a committed supply of 39no. units for intermediate housing.

The LHMA also sets out the existing stock and planned supply for Wenvoe, identifying the committed supply of social rent homes to be 12no. one beds, 11no. two beds, and 5no. three beds, with 7no. one beds and 8no. two beds as expected re-lets. There is no committed supply for intermediate housing in Wenvoe.

It should be noted that the development of 'Land East of Nicholas' (Campbell Court and Cae Newydd), has now been completed, and as such, can not form part of the housing land available. The latest Pre-Application Response for the site subject to these representations (Land South of the A48, Bonvilston) accounted for the development of the site in

St Nicholas, stating that "even after the developments at St Nicholas and Culverhouse Cross, there was the need in the Wenvoe ward for 1 Bed 71, 2 Bed 49, 3 Bed 29, 4 Bed 7, 5 Bed 5, Total 161".

It should also be noted that there are existing commitments within the Bonvilston area ('Land to the east of Bonvilston'), however, the deliverability of the existing commitment is seriously questioned. Application Ref. 2015/00960/FUL was approved in July 2017, with the Housing Land Supply and Housing Trajectory Report (December 2025) confirming that of the total 120 units permitted, only 40 had completed by 1st April 2025, with the remaining 80 units not started by this same date. Of the 80 units not started, 25 units are affordable homes.

It is well known that phase 1 of the development at 'Land to the east of Bonvilston' has faced difficulties which has led to the development remaining incomplete. This does of course put into question the overall deliverability of the site, and raises concerns about the units that were, and still are, required within the Bonvilston area.

The allocation of the site promoted herein would not only help in the short term in meeting the overall affordable housing target for the Plan, but would also assist in meeting the unmet needs of affordable housing within Bonvilston – not least given the serious concern regarding the deliverability of the committed supply of housing within the St Nicholas & Llancarfan housing market area.

For the reasons set out above, and in light of the information provided within the LHMA 2023 and the Housing Land Supply and Housing Trajectory Report (December 2025), it is evident that there is considerable need for affordable housing within Bonvilston, and accordingly, the housing market areas of St Nicholas & Llancarfan, and Wenvoe. There have not been any sites allocated to assist within meeting the local need, and more sites should be allocated in order to secure delivery of a higher number of affordable housing units to meet the overall target of the Plan.

The contention that "There is housing land available within the ward of St Nicholas and Llancarfan that can support the delivery of affordable housing" is therefore strongly disputed – not least given that there is a clear and evident need to allocate more affordable housing-led sites in order to meet the target set out in the Plan.

Interim Summary

In summary, it is considered that the site subject to these representations would not have an adverse impact on the character and setting of the Bonvilston Conservation Area, nor would major highway mitigation works be required to enable safe vehicular access on to the A48. Moreover, it is considered that the site's classification as BMV Agricultural Land does not pose a fundamental constraint to development – as the site represents a relatively small parcel with a gross area of 0.88 hectares, which is not capable of beneficial agricultural production due to its limited size.

There is also a considerable need for the affordable housing in Bonvilston and the housing market area of St Nicholas & Llancarfan. The site promoted herein would assist in meeting these local needs and should be allocated accordingly.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage

As demonstrated above, there has only been one change to the scoring attributed to the site, this being a change from 'red' to 'amber' for 'Developer Interest'. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with these representations accordingly (see Appendix B).

Whilst detailed submissions were made on the previous assessment, it is considered pertinent for the scoring of the key criteria's to be addressed as part of these representations. As such, these have also been discussed below.
Developer Interest

As set out above, the Detailed Site Assessment for 'Developer Interest' has changed from 'red' to 'amber'. The assessment methodology for this section of the assessment has been extracted below for reference.

As set out above, 'amber' refers to there being no development interest identified at this stage, however, there is evidence to indicate that the site is being actively promoted by the owners.

The representations made to the Preferred Strategy (Appendix B) sets out that whilst the site does not yet have an agreement with a developer to take on the land, it is considered that this would be achieved should the site be allocated, and planning permission granted. Newydd Housing association have been engaged previously and had agreed to take the site forward as a 100% affordable scheme, albeit is also considered that they could take on the affordable units as part of a mixed tenure scheme.

In addition to Newydd, the site promoter has also received an offer from a private social housing provider who would be prepared to support the site as a mixed tenure scheme.

This position has not changed since the Preferred Strategy stage, and is considered that there is continued developer interest for the site. This is not considered to change at any point – not least given the discussions held between the owners of the site in questions and developers of interest.

Environmental and Physical Constraints

As set out at the Pre-Application Stage. the site underwent a Preliminary Ecological Appraisal in September 2022 which identified that whilst some precautionary measures were recommended in terms of protecting priority habitats and reptiles, the site is not fundamentally constrained from development on ecological terms. Given this, it is considered that further ecological surveys would be undertaken at the planning stage to inform any development proposals and ensure the safeguarding of the natural environment.

Access to Key Services (Retail, Primary Schools, and Health Services) and to Services and Facilities

As set out within the representations made to the Preferred Strategy, the site is located within a maximum of a 20-minute bus journey to a version of every key service listed, due to the proximity of the site to settlements such as Cowbridge, Culverhouse Cross and St Nicholas. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Bonvilston without the need to travel by car.

To reiterate, the site 'Land South of the A48, Bonvilston' is situated in proximity to Cowbridge, Culverhouse Cross and Cardiff, which comprise all key services. Concluding this allocation as 'unsustainable' in regard to 'availability of local facilities in and around settlements' is not accurate. Given that the site is located within 4 miles of both Cowbridge and St Nicholas, the site is within a maximum 20-minute bus journey of the following key services:

• Cowbridge Comprehensive School;
• St Nicholas Primary School;
• Cowbridge Health Centre; and
• Cowbridge town centre for various Retail Services.

It should also be noted that Bonvilston contains a number of facilities within a short and level walking distance of the site, including the village shop and Café, as well as the Red Lion Public House.

Given the accessibility of the site to other settlements, and the fact that these are made accessible by bus and active travel routes, it is considered that the site should be concluded as sustainable in regard to access to key services.

Summary and Conclusion

As evidenced above, and within the representations made to the Preferred Strategy (Appendix B), there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location, and site, are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory

published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:

Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston.

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in

processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why

completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan

period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very

unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

“A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth.”

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the ‘Rectory Field, St Brides Road’ site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

‘Land West of Maendy Road’ has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the ‘Candidate Assessment at Preferred Strategy Stage’ (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the “soundness” of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is “sound” (i.e. its allocation is considered to be “unsound”).

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of ‘Land to north and west of Westwinds Business Park’:

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above the site was not considered suitable for further consideration with the site scoring negatively (red) in a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and
• Health and Wellbeing.

Given the fact the site scores red in ‘Sustainable Transport – Public Transport’, this shows the site is not served by public

transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states “New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes”. Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states “new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport.”

It is well known residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need “To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy”. To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to “Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure”. In addition, Promoting Active and Sustainable Travel Choices outlines to “Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel”.

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory “there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities”. There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A “small scale

affordable housing led development” which is needed to “respond to local affordable needs and help sustain services and facilities within these rural communities” will therefore not be provided for. This is clearly an issue.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above the site was rejected and considered not suitable for further consideration. In fact, and unlike ‘Land at Heol Fain, Wick’ and ‘Land to north and west of Westwinds Business Park’ it was stated that this site “could not be considered as a suitable affordable housing led development site”. Despite this, this site has been outlined as an Affordable Housing Led Allocation. As such, the inclusion of this site is “unsound”.

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Land South of A48, Bonvilston.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Change suggested by respondent:

Replace 'no more than 10 dwellings' with 'around 10 dwellings'

Sound: Not specified

Respondent: Wig Fach Property Company Ltd [2373]
Agent: Geraint John Planning Ltd

Summary:

The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported. However, it is noted that a 'cap' of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a 'cap' limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.
As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands.

Full text:

ANNEX 1
Preface

This Annex sets out the detailed case in support of these representations, and by association the case for allocation of the site.

The representations are structured into the following sections:

1. Response to the Deposit Plan;
2. Comments on specific policies; and
3. A summary of the suitability of the site for development.

SECTION 1. Response to the Deposit Plan

Distribution of Growth

We object to the distribution of growth within the Deposit Plan. Specifically, we object to the strategy that underpins the Deposit Plan, which seeks to introduce the proposed 'Strategic Growth Area' which is expected to contain the majority of housing growth in the Vale over the Plan period, or rather the over-reliance on this defined area, and the associated absence of growth in other parts of the Plan area.

As outlined in our previous representations, the allocation of housing and the location of strategic growth neglects the Rural Vale, and in our view, overprovides in the Strategic Growth Area. For example, with limited housing stock and average house sales at over £500,000 over the last 12 months, there is a clear and established need for new homes in the Ogmore By Sea area, particularly at an affordable level. This is reinforced by the Local Housing Market Assessment that identified a need for over 1,114 new affordable homes per annum over the next five years throughout the county, and 196 units per annum thereafter (average of 502 units per annum over 15 years). Further to this, it is widely known that the rural Vale comprises the majority of the county's ageing population, which, as a demographic, has and will continue to grow rapidly over the Plan period. This is evident in the 'Population Change' chart below – which is taken from the Deposit Plan:

VofG Deposit Plan: Figure 4 Population Change 2011 to 2021

It is clearly the case that younger populations are migrating to other Authorities, where access to housing is typically cheaper and more affordable, whilst more older populations are significantly migrating into the Authority. This trend will result in an extremely unbalanced demographic, given that the working-age population have sought housing elsewhere.

Without a suitable supply of affordable housing delivered over the Plan period, this trend will only worsen. Accordingly, it is not considered that the RLDP takes into account the lack of supply of affordable homes within the rural Vale, as well as increased housing to support the growing ageing population within these areas.

Para 3.19 of the Deposit Plan clearly outlines that affordable housing is required in the short term, in order to meet pressing needs. Specifically, it outlines the following: "There is significant pressure on temporary accommodation in the Vale, for a variety of reasons including increased homelessness presentations… The need for sufficient permanent affordable housing to assist in moving people out of temporary accommodation is critical and the planning system has a vital role in assisting in new affordable housing delivery."
Accordingly, the distribution of growth within the Authority must be proportionate, to ensure that populations / areas are not left behind where they must seek access to housing elsewhere.

The RLDP Sustainable Growth Strategy sets out 6 objectives. Objective 4 states: "Allowing for small scale affordable housing led development in settlements outside the Strategic Growth Area at a scale proportionate to the size of settlement." (Page 66)
Para 5.25 states "Therefore, a key part of the strategy is to allow for affordable housing led developments within sustainable primary and minor rural settlements outside of the Strategic Growth Area, at a scale that is appropriate to the size of the community it is serving. An 'affordable housing led' scheme is one where a minimum of 50% of the dwellings would need to be affordable, although this could increase to a maximum of 100% if the site is brought forward by a social landlord".

In terms of the definition / explanation of what the affordable housing-led development sites are seeking to achieve, paragraph 6.132 of the Deposit Plan outlines the following:

"Accordingly, to ensure that new developments respond to the high demand for smaller properties, as identified in the LHMA, priority will be given to affordable homes that are small to medium-sized, typically comprising one to three bedrooms. Representations received from the local community through the RLDP process also highlighted a desire for new housing developments to offer opportunities for accessing smaller market homes. This is particularly relevant in the rural Vale, where housing choices are more limited. Providing smaller, more affordable market homes may assist first-time buyers and enable older residents to downsize to more manageable properties within their local area. Affordable housing-led sites will therefore need to demonstrate that an appropriate range of both affordable and market dwellings has been provided."

Despite the acknowledgement within this strategic objective, we do not consider that the RLDP goes far enough to meet this objective, nor are its provisions and allocations adequate.

It is considered that this objective is undermined by the allocations set out by the RLDP (not least the absence of allocations in the rural Vale). Notwithstanding the Vision's clear acknowledgement of the benefit of the growth of the rural Vale, these areas have not been supported through the plan due to the lack of growth which has been attributed to these areas in terms of further housing, employment and sustainable transport. All growth options have been selected on the basis of being in either Key Settlement, Service Centre settlement or Primary Settlements, all of which are already sustainable areas served by rail. As a result, it is not clear how this objective can be achieved, without the allocation of further sites within the Minor Rural Settlements, such as Ogmore By Sea. The Vale is characteristically 'rural', and as such, there needs to be a stronger emphasis on supporting and delivering new development in order to bolster the rural economy. This includes enabling opportunities to provide employment and business premises within / near to rural settlements, as well as focusing housing growth in these areas to reduce travel time, and use of sustainable transport.

It is considered that the current Strategy does not provide adequately for all residents across the Vale, only those within the Strategic Growth Area. The underlying Vision and Objectives set out in the emerging Plan are accordingly wholly un-provided for by the detail of the Plan. This brings into question the "soundness" of the Plan.

The Strategic Growth Area does not take into account the important role and proximity of Bridgend to the West and/or the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north (as defined in the RCTCBC LDP). The Minor Rural Settlements to the west are more likely to be supported by job opportunities and employment in Bridgend than further east in Barry or Cardiff. Similarly, those in the north align with, and function in association with, the Principal Settlement and Strategic Growth Area of Talbot Green / Pontyclun / Llantrisant to the north. These settlements are served by existing bus services that provide sustainable modes of travel to key employment locations in and around Bridgend. This is acknowledged in Paragraph 3.3 of the Strategy which states "The greatest number of residents who travel outside of the Vale for work purposes travel to Cardiff followed by Bridgend and Rhondda Cynon Taf, whilst a smaller proportion commute into the Vale from these neighbouring authorities". The

Demographic Evidence (Feb 2023) estimates the Vale as being a net importer of workers from RCT and Caerphilly (Para 3.6) - as shown in Figure 10 in the Preferred Strategy.

The current Strategy does not support any improvement of sustainable travel or further investment in settlements linked more closely to these areas - given that Growth has been apportioned in only the Key Service Centre and Primary Settlements. It is considered that this will fail to support and facilitate the current (and any future) employment coming into the Vale, nor will it support any employment which is located outside of the Vale to the West and North. The Growth Option is too heavily reliant on access to railway stations as the key and sole sustainable transport method, whereas access to bus services should also be appropriately assessed and focused on in terms of promoting sustainable development. It is unreasonable to devise a strategy that hinges on directing growth to areas that are accessible to railway facilities, where it is recognised in the Plan that the Vale is inherently rural. The delivery and soundness of the Plan is therefore questioned and we continue to object to the spatial growth strategy as set out in the Deposit Plan.

Housing Supply

RLDP Allocations - Key Sites

As set out in representations made throughout the Plan preparation process, we consider that the Plan is too reliant on the delivery of 'key sites' to meet the housing need over the Plan period. Specifically, the Plan makes provision for 2,278 units in these Key Sites, which equates to circa 65% of RLDP allocations in the housing supply. The 5 key sites that are allocated in the Deposit Plan are as follows:

• Land at North West Barry – 376no. units;
• North of Dinas Powys – 250no. units;
• Land at Readers Way, Rhoose – 520no. units;
• Land at Church Farm, St Athan – 532no. units; and
• Land to the West of St Athan – 600no. units.

We object to the current housing supply to allocate 2,278no. (65%) of units across strategic sites, as this makes for a risky and unrobust strategy for delivering housing, and in turn, meeting the identified housing need over the Plan period.

As stated in previous representations, there is concern that the proposed timing and phasing of the proposed Key Sites is unrealistic and unrobust, and in turn, undermines the soundness of the Plan, given the heavy reliance on Key Sites delivering new homes across the Plan period. Whilst it is not disputed that the sites would have gone through rigorous assessment to inform their proposed allocation, the timescales for securing planning permission (with all associated conditions discharged) is considered to be unachievable. This is particularly the case for the following timescales that are set out in the Housing Trajectory that underpin the Plan:

• "Time period of pre-application discussions/PAC consultation" – 4 months

• "Time between submission of planning application and determination" – 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" – 4 months

It is considered that the above timescales are fundamentally unrobust, and result in a distorted position of housing sites over the RLDP Plan period. It is not considered that these reflect or are informed by the timescales that are currently being incurred for planning applications submitted for major housing sites across Wales. It is rather the case that such applications would typically be determined 1-2 years following submission, given that there are a wide range of stakeholders involved in the determination of major planning applications – which often adds to the delays associated with the determination of such applications.

It is equally the case that the assumptions in the trajectory are solely based on expected timescales for processing formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission.

It is assumed that these timescales have not considered that such major developments can be subject to the need to undertaking and submitting an Environmental Impact Assessment (EIA), which adds another layer to the determination of any planning application – given the additional considerations that form part of this process. As such, any site subject to EIA would very likely result in further delays extending beyond the timescales set out in the trajectory. Equally, as set out above, the preparation of an application subject to an EIA requires even more detail and assessment, which only further adds to the preparation stage (which has not been factored into as part of the trajectory). Accordingly, it is not considered that the trajectory contains any contingency if any site is required to undertake EIA as part of their application.

For the reasons stated above, it is unlikely that the sites will yield in full, particularly those sites which are expected to deliver housing right up to the final year of the Plan period ('Land at Readers Way' and 'Land to the West of St Athan'). These sites do not allow for any 'slippage' should any delays arise through the development management process (which for the reasons set out above, will very likely be the case), and as such, a gap in housing delivery will be brought about as a result of these sites not yielding in full.

Given the proposed ambitious timescales set out for the delivery of the Key Sites, it is considered the housing trajectory is unrobust, and in turn, undermines the soundness of the Plan as a result. A change in strategy should be pursued whereby a greater proportion of small to medium sites are allocated for housing in the Plan period, which are more likely to fully yield given that such sites are subject to less assessment and consideration compared to strategic sites. This would make for a more robust strategy, where a greater number of small to medium sites can deliver housing in the short and medium term of the Plan period, whereas the strategic sites represent a more longer-term strategy to deliver housing – which would then spill into the next Plan period.

Accordingly, we object to the Deposit Plan in its current form, where there is an overreliance on housing need to be met through the delivery of the Key Sites, which we consider to be unrobust, and undermine the integrity and soundness of the Plan. The current strategy of the Plan is at significant risk of not delivering the level of housing expected based on the sites allocated, as least as swifty as identified in the housing trajectory. Should no change be made to the Plan to address the above issues, then it is extremely likely that the Plan would 'fail' in meeting the identified housing need.

Windfall Sites

It is noted that the RLDP is made up of the following:

• Existing land supply (3,838 units)
• Windfall sites (1,303 units)
• Allocated sites (3,521 units)

Para 6.69 states that "Analysis of historical delivery of housing indicates that on average small windfall sites (sites of less than 10 dwellings) have provided some 53 dwelling completions per year, and large windfall sites (10 dwellings or greater) contributed on average 80 dwellings per year. Overall, it is projected that windfall sites could contribute a further 1,303 dwellings over the remainder of the plan".

As set out in our previous representations to the Housing Trajectory, we would object to the expected numbers of completions expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan – which is discussed in greater detail later in this submission. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated – including any windfall sites.

St Athan Train Station

The RLDP Sustainable Growth Strategy comprises six key elements, of which the following is set out in respect to the allocation of new housing growth in the Authority:

"3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links."

The strategy outlines that a feasibility study for a station in St Athan had been undertaken in 2022, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' and 80no. units attributed to 'Former Stadium Site, adjacent to Burley Place' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,263no. homes to be delivered in St Athan over the Plan period.

It is now the case, however, that the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales – as confirmed in the 'Today, Tomorrow, Together: A vision for rail across Wales and Borders' (February 2026) recently published by Transport For Wales. This paper acknowledges that a new railway station at St Athan would represent a longer term opportunity, and therefore, will not be delivered in the short term / within the Plan period of the emerging Plan. Equally the Council have not provided any evidence to contradict this, and therefore, it is very unlikely that any new train station will be delivered in St Athan over the Plan period. This brings about significant questions regarding the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that the sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,263no. homes (36% of the Plan's new housing allocations) are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add further sites for housing in this

location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

In terms of the expected delivery of the Key Sites in St Athan, it is noted that the trajectory identifies that for the majority of the Plan period, both sites will be delivering 80no. dwellings per annum on each site (equating to 160no units in total). Whilst these are two separate sites, we seriously question the realistic prospects of the significant number of

homes being built simultaneously on two sites in proximity to one another – given the considerable logistical issues that would be brought about.

Accordingly, it remains that there are serious questions regarding the suitability and acceptability of the proposed allocations at St Athan, which do not accord with the strategy adopted for the RLDP – to focus housing growth on settlements that are supported by railway stations. Moreover, the scale of development proposed at St Athan is also not considered to be proportionate, with a significant number of homes delivered in a location not served by a railway station.

Rolled forward LDP Sites

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current Plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application

submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan period. This raises issues of 'soundness', and risks rendering the Plan unrobust.

Housing Delivery Rate Assumptions

As set out in our previous representations to the Housing Trajectory consultation, we have considerable concerns in relation to the proposed delivery of the sites identified in the trajectory – which we do not consider are robust or reasonable.

Appendix 1 of the Deposit Plan sets out the development trajectory bar chart – which illustrates the proposed delivery of housing, on a per annum basis, over the Plan period.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)
It is our view that the trajectory makes for an unrealistic and unrobust delivery rate of housing, which does not reflect the pattern of housing completions in the Vale of Glamorgan. We therefore have concerns regarding the soundness of the trajectory, not least that there remain significant uncertainties as to the delivery of the Key Sites (as discussed earlier in these representations).

Firstly, the graph / trajectory illustrates a large 'spike' in terms of housing delivery in the year 2027-28, which is considered to be a marked and pronounced step change in the rate of delivery. This envisages / relies on a significantly higher rate of delivery than previous years in the Vale of Glamorgan (2021 through 2021 – as depicted by the green columns). It is considered that this level of delivery is unlikely to materialise, not least given prevailing market

circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions from 2021 - 2025 has been approx. 400 - 500 units, however, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100% relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

It is also the case that the anticipated delivery of housing fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2025.

Accordingly, we consider that the housing trajectory, as proposed, is entirely manufactured and unreflective of the past completion rates, as well as the recent published completion rates provided by Welsh Government recently in August 2025. As set out in our previous representations, it has been evidenced that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1: 'New House Building: April 2024 to March 2025'
As identified in the graph above, in 2024-25, 4,631 new dwellings were completed, which represents 3% fewer than the previous year. This figure represented the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed) The New Housing Pipeline Report Quarter 3, 2025 Report (December 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 7% during the third quarter of 2025, extending the decline seen during the first half of the year. At 45,075, the number of units approved was 34% down on the third quarter of 2024 and the lowest quarterly total since 2012 Q2. At 146,798, the overall number of units approved during the first nine months of 2025 was 25% lower than a year ago.

HBF Graph Illustrating Residential Approvals (2006-2025)

The above graph clearly shows a pronounced downward trend in the number of residential planning approvals over the period, particularly with a sharp decrease seen since 2020. Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

More recently, the Welsh Government has released its new estimates of housing need (Estimates of Additional Hosing Need: 2025-based – February 2026). The estimates show how many new homes need to be built over the next twenty years to address existing unmet need as well as newly arising need. The figures set out that around 8,700no. new homes a year are needed over the next Senedd term up to 2030 to meet new housing need. Additionally, there is an unmet need for 9,400 affordable homes.

Overall, this represents more than double 2024/25 levels of supply, where just 4,638 new homes were built.

HBF: Estimates of Housing Need

HBF: Actual Delivery vs Estimates of Need

The above graphs unequivocally evidence that historical rates of delivery of housing in Wales has remained low, and moreover, significant numbers of housing need to be allocated in order to meet the estimate of need. It is not

considered that the housing trajectory, in its current form, is robust to meet the housing need over the Plan period, given the uncertainties of the Key Sites, and the level of housing delivery that has been identified for the Plan.

Affordable Housing-Led Sites

HG4 - Rural Affordable Housing Led Sites

Policy HG4 of the Deposit Plan identifies four sites to be allocated as affordable housing-led sites, totalling approximately 122 dwellings within the plan period. Given the target levels of achieving 3,070 affordable dwellings over the course of the Plan period (up to 2036), it is not considered that this policy goes far enough to address the target and level of affordable housing need.

It is noted that the number of units identified for each site relate to the 'total' number of units delivered, as opposed to the affordable housing provision. Accordingly, it can be assumed that circa 50% of each allocation will comprise affordable units (given each site is affordable-led), which would equate to a total provision of circa 61no. units. The contribution from the affordable housing-led sites would only equate to 2% of the total need (3,070no. units). Even when coupled with the affordable housing provision from open market sites and 100% exception sites, the total delivery of affordable housing will still be nowhere near enough to meet the overall affordable housing need over the Plan period. Accordingly, it is considered that inadequate provision has been made for such sites.

Insofar as to the sites chosen and allocated are concerned, it is clear from reviewing the Stage 1 and Stage 2 Candidate Site Assessment that the allocated sites HG4(1) – (4) were not considered acceptable due to being outside the strategic growth areas, and were considered to be unacceptable intrusions into the open countryside. After being resubmitted as affordable housing-led sites, the sites were allocated, some with a smaller area in order to accommodate less dwellings in total.

The sustainable credentials of the sites allocated is not disputed, and it is acknowledged that these minor rural settlements have the ability to accommodate further growth, in the form of affordable-led housing allocations. However, it is considered that the should also form an allocation as part of this policy, given its high sustainability credentials and its appropriate location to accommodate a suitable level of development. Please refer to the previous representations made to the Housing Trajectory Consultation (dated 17th October) for further, more detailed comments regarding the above sites.

The LHMA 2023 shows that there is a need for 124 affordable homes in the St Brides Major local housing market area (which Ogmore is located within). As such, there is an identified need for affordable housing in this area, something which the site could address through an allocation.

It is questionable whether Wick has the capacity to accommodate 50 new dwellings, given the sustainability and rural nature of the area. As a result, it is suggested that the number of homes allocated in Wick is reduced and that a further allocation in St Brides Major is secured, in order to facilitate supporting the delivery of affordable housing through the housing market area, rather than in one minor rural settlement. The sustainability of Ogmore has been assessed, both by the Council through the Sustainability Appraisal and again, through our assessment of the site.

Securing further delivery of Affordable Units

As set out above, the affordable housing-led allocated sites only provide 122no. affordable dwellings, which comprise 4no. allocated sites that are expected to deliver approximately between 20 – 50 dwellings. However, the RLDP sets a

target of 3,070 affordable homes to be delivered in the Plan period. This means that affordable housing-led allocations make up less than 4 % of the target provision and will only make provision for 2% of the targeted number. We would therefore object to the sites included within Policy HG4 and would suggest that more sites should be allocated as part of the policy in order to secure delivery of a higher number of affordable housing units to mere the target.

Whilst it is acknowledged that the Key Sites will provide for a significant proportion of affordable housing, as set out above in these representations, there is serious concern regarding the deliverability of these sites, which would result in a significant gap of affordable housing delivered.

A greater number of affordable housing-led sites allocated would ensure there is sufficient contingency built into the Plan, to ensure that the overall affordable housing need is met over the Plan period. Failure to do so would result in affordable housing need being unmet, with demand continuing to outstrip supply.

Previous representations to the Preferred Strategy (dated 14th February 2024) provided comment on the sustainability

scoring of Ogmore and the proposed site. As outlined within these representations, it is considered that the site (ID xxx) represents a sustainable, deliverable and acceptable site. The site is within a maximum of a 22- minute bus journey to a every key service listed, due to the proximity of the site to settlements such as Bridgend. Due to the availability of frequent bus services, and active travel links, these key services are readily available to access for any residents within Ogmore By Sea without the need to travel by car. The site is located within 5 miles of Bridgend, and within a maximum 22-minute bus journey of the following services:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre for various Retail Services

Moreover, Ogmore has benefitted from the recent development of the Ogmore By Sea Village Hall, which provides space for community activities and events to take place. The hall also includes a coffee shop (Welsh Coffee Company), which only adds further to the daily services provision available within the settlement. Access to the hall and coffee shop is directly provided for pedestrians from the Main Road, which allows for direct access from the site.

Accordingly, the settlement of Ogmore represents an acceptable location to allocate an affordable housing-led site, given the access to existing services and facilities that would serve future residents of the site.

It is acknowledged that the site also lies within the Glamorgan Heritage Coast and this point is addressed further below.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of Ogmore By Sea, support the surrounding settlements, and the Plan area as a whole. As such, the site should be considered further.

Comments on Specific Policies

HG5 - Affordable Housing Exception Sites

Given the unmet need and extant backlog of affordable housing, as identified within the LHMA (2023), it is noted that an Affordable Housing Exception Sites policy has been adopted in order to assist in the delivery of affordable housing. Policy HG5 sets out the specific criteria where proposals for 100% small scale affordable housing developments will be permitted outside settlement boundaries. The current policy wording for the Affordable Housing Site Exception Policy and the criteria listed out in the policy is generally supported.

That said, it is noted that a ‘cap’ of 10 dwellings (as referenced within supporting text Para 6.140) is set. This should be amended due to such a ‘cap’ limiting the flexibility of the policy, in particularly for sites coming forward as part of this policy in Minor Rural Settlements.

As such, we would suggest that supporting Para 6.140 should be amended in order to allow for further flexibility for sites in Minor Rural Settlements to come forward and to deliver affordable housing, given that the criteria set out in the policy would already protect and restrict the extent of any development as it stands. Therefore, the proposed amendments to Para 6.140 are outlined below in red:

6.140 “For the purposes of this policy, ‘small-scale’ will generally mean no more than around 10 dwellings on sites adjoining Minor Rural Settlements. In Primary Settlements outside the Strategic Growth Area, proposals for more than 10 dwellings may be acceptable where required to meet a specific need and where the number of dwellings is proportionate to the size of the settlement. In assessing the scale and extent of any proposed local needs housing, consideration should also be given to affordable housing already planned in the ward or nearby area, including sites with existing planning permissions and those allocated in the RLDP. The size and type of affordable housing proposed should reflect the identified local need in the area.”

The above suggested wording would achieve a more flexible policy, which would allow for a variety of scaled applications to secure planning permission for solely 100% affordable housing across the Authority area. This greater flexibility would enable the policy to make a significant contribution towards meeting the affordable housing need – which, as set out earlier is in considerable need.

Policy DNP3 – Glamorgan Heritage Coast

Given that the site is located in the Glamorgan Heritage Coast, it is noted that the following policy is of relevance to any future development on the site. Criteria 4 of Policy DNP3 states:

“The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development that accords with National Policy.”
It is also noted that supporting Para 6.422 “In seeking to protect the Glamorgan Heritage Coast, the Council

acknowledges that there are some built up areas within the boundary, including the Minor Rural Settlement of Ogmore. In addition, the Vale of Glamorgan rail line crosses part of the Heritage Coast designation in the location where a new station at St Athan is proposed. Whilst being mindful of the need to protect the special qualities of the Glamorgan Heritage Coast, the Council accepts that development within these areas is appropriate, subject to relevant policies of the Plan"(GJP emphasis).

We would offer general support for this policy, and consider this to provide flexibility which allows for certain forms of development. However, we would suggest that the policy wording should be amended to reflect that 'housing' should be supported in the Glamorgan Heritage Coast, providing that the policy exceptions are met. Therefore, the following amendment is proposed as part of the policy should be changed to include "small scale housing" or something similar. The proposed amendments to Policy DNP3 are outlined below in red:

"The special environmental qualities of the Glamorgan Heritage Coast will be conserved and enhanced. New development will be restricted to:
4. Other appropriate and sustainable development, including small-scale housing proposals that accords with National Policy."

Again, this would ensure that suitable housing developments can be delivered in the Plan period, to meet the housing needs of the Vale of Glamorgan – particularly in respect of affordable housing.

SECTION 3. Suitability of the site for development

The site promoter objects to the overall assessment of the site, in that it is not considered suitable for further development in the Plan. The promoted site has undergone extensive scrutiny and appraisal at a high level to ascertain the qualities of the site, in light of all identified material considerations which relate to the proposals.

The delivery of the site will yield much needed housing (including Affordable housing) and contribute to the overall supply in the new Plan period, whilst making effective use of a suitably located site for residential development.

Moreover, as set out in 'Annex 2' of our representations, the site has overcome the 'constraints' set out in the Candidate Site Assessment undertaken for the site, which demonstrates that the proposal is both acceptable and deliverable.

SUMMARY AND CONCLUSIONS

In summary, the site promoters:

• Object to the distribution of growth proposed for the Plan area, with a more balanced and equitable distribution of housing sites required in order to meet the identified housing need;
• Object to the level of growth identified for the Plan period;
• Object to the housing trajectory that underpins the delivery of housing within the Plan period – which is considered to be unrealistic and unrobust, leading to serious uncertainty regarding the "soundness" of the Plan;
• Object to the over-reliance on Key Sites and Rolled Forward Sites in making up the Plan's housing land supply;
• Object to the scale and timing of delivery of sites in / around St Athan – all of which are predicated on railway station provision which will not be realised in the Plan period;
• Object to the under-provision of sites under Policy HG4 – Rural Affordable Housing-Led sites, not least given their extremely limited contribution to the targeted need for affordable housing;
• Object to Policy DNP3 – Glamorgan Heritage Coast, given the lack of recognition for the potential for small-scale housing proposals;
• Object to the current wording of the HG5 Policy 'Affordable Housing Exception Sites' which requires greater flexibility to play an important role in delivery much-needed affordable homes across the Authority; and
• Object the Council's assessment that the site is not considered suitable for development.

The site and proposals are consistent with the RLDP strategy, other Vale of Glamorgan strategies, and the requirements of Planning Policy Wales and Future Wales. It will make a significant contribution to the Vale's identified housing requirement in the RLDP period and will provide for a wide range of uses that will support the wider community whilst embodying principles relating to placemaking and the well-being of future generations.

The site has no fundamental constraints and has the ability to deliver significant economic, social and environmental benefits for the benefit of future residents and the existing local community. The site is demonstrated to be viable, being able to deliver policy-compliant levels of affordable housing and given its location within a strong market area, will benefit from high delivery rates.

ANNEX 2
SECTION 4. A summary of the suitability of the site for development including a Response to the Candidate Site Assessment

This section of the overall representations to the Deposit Plan is to respond to, and address, the Council's assessment of the site.

While the issues the Council have raised in their assessment of the site have been addressed and discussed within the representations made at the Preferred Strategy stage of the Plan, a similar 'scoring' exercise has been undertaken as part of the evidence base for the Deposit Plan. As such, it is still pertinent to consider and respond to the Council's assessment of the site as part of these representations

The Detailed Site Assessment for Land at Hazelwood, Ogmore By Sea (Site ID: 3855) sets out that the position of the site at the Deposit Stage is as follows:

"The original site as ruled out as the development would represent unacceptable intrusion in to the open countryside. Whilst the site has now been identified for an affordable housing led development, the original reason for ruling it out still remains."
In terms of the assertion that "the development would represent an unacceptable intrusion into to the open countryside", this is strongly disputed, in that the development of the site would represent a natural rounding off of the existing settlement boundary. An extract of the site relative to the settlement boundary is provided below, which clearly shows that the development of the site would not extend beyond the existing settlement pattern that exists in Ogmore.

Site Outlined in Red and Settlement Shaded in Blue
As clearly demonstrated in the above mapping, the site would extend no further eastwards than the existing housing area to the south of the site. Equally, the site would not be extending any further north than the existing settlement pattern in Ogmore. This position is further supported by the wider aerial view of the site provided overleaf:

Wider Aerial View of Site Outlined in Red and Settlement Shaded in Blue

In summary, it is considered that the proposed allocation of the site represents a logical rounding off of the existing settlement, as depicted in the mapping provided above – where the site follows the existing envelope of the settlement. The site does not extend any further eastwards than the established built form located immediately to the south; indeed, it sits comfortably within the same development line.

As such, it cannot be considered that the site represents an 'intrusion' into the countryside, as the site would be visually and functionally related to the settlement. It therefore follows that the site would be read as part of the settlement, and not the wider rural landscape.

Candidate Site Assessment

The Detailed Site Assessment undertaken by the LPA includes a summary and assessment of the 'scoring' system used at the Preferred Strategy stage. A comparison between the site assessments undertaken at both the Preferred Strategy stage and Deposit Plan stage is provided overleaf for reference.

Site Assessment at Preferred Strategy Stage Site Assessment at Deposit Plan Stage
As demonstrated above, there are no changes to the scoring attributed to the site. Detailed submissions were made on the previous assessment undertaken by the Council at Preferred Strategy stage, and as such, should be read in conjunction with this submission (see Appendix A).

Sustainability

Notwithstanding the above, it is considered that the site represents a more sustainable location than what was previously assessed at Preferred Strategy stage, in light of the Ogmore by Sea Hall development. The Hall acts as a community facility, whereby the space is available for hire by local community groups such as birthday parties, weddings, group meetings, and other such similar uses. Moreover, a café (Welsh Coffee Co) is located within the premises which sells both food and drink.

The hall and café are within walking distance to and from the site, where new access facilities have been implemented from Main Road directly to the building, to allow access for pedestrians and cyclists. This is illustrated in the image below:

Walking and Cycling Facilities

The Tusker Rock pub and post office are also located along Main Road, all of which are within walking distance to the site.

Accordingly, the site is well served by new amenities (i.e. community hall) that comprehensively improves the sustainability of the site / settlement, and in turn, improves the sustainability credentials of the site promotion. It therefore follows that the site represents an acceptable location for residential development, and the site should be

looked upon favourably accordingly.

It is also the case, as set out in previous representations, that the site is within a maximum 22-minuted bus journey of the following services and facilities:

• St Brides Primary School;
• Brynteg Comprehensive School;
• Bridgend College;
• Riversdale Surgery; and
• Bridgend town centre.

As such, key services and facilities can be access by sustainable travel over and above the existing level of provision available in Ogmore By Sea (as discussed above).

Accordingly, the relevant 'red' scorings in the Council's assessment should be updated to reflect the site's suitability and sustainability to accommodate the proposed residential development of the site.

Glamorgan Heritage Coast

Insofar as to the position regarding the site's location within the Glamorgan Heritage Coast, detailed submissions are made not only in the Preferred Strategy representations, but also in Annex 1 of this submission. In short, given the pressing need for such development (particularly affordable housing) to come forward in the Plan period to meet ever-increasing needs, development of this nature should be considered more favourably – not least that, as outlined in this Annex, the site would not extend any further that the existing settlement boundary.

Accordingly, the site would be perceived to form part of the settlement of Ogmore By Sea, and not the wider landscape, and therefore, would not have any detrimental impact on the Heritage Coast in any respect. The scoring should be amended accordingly to reflect this position.

Climate Change

As outlined in previous representations, the development will incorporate climate change measures, such as EV charging points, PV panels, as well as adopting sustainable materials for construction whilst maximising the potential for the dwellings to be energy efficient. Accordingly, the development will be built to high sustainable standards, and therefore, the scoring of the site should be amended as a result.

Summary and Conclusion

It has been evidenced above that there are no fundamental constraints at, or associated with the site, that would preclude the site coming forward for development in the RLDP period.

To conclude, the settlement, location and site are inherently suitable and deliverable, and will make a significant contribution to achieving and realising the housing and economic development needs of the Vale of Glamorgan.

Summary of These Representations

In short, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised below in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Preface

This Submission sets out the detailed case in support of these representations. The representations are structured as follows:

1. Procedural Consultation Matters;
2. Timing Assumptions underpinning the Trajectory;
3. Housing Delivery Rate Assumptions;;
4. Status & Standing of Sites included in the Trajectory;
5. Key Sites;
6. St Athan Train Station;
7. Geographic distribution of the 'new' sites / provision;
8. Detailed comments in respect to 'new' sites;
9. Conclusions Procedural Consultation Matters

Firstly, we do not consider that the consultation on the Housing Trajectory information has been procedurally undertaken appropriately or suitably.

Only 14 days have been afforded to parties to make representations on the information provided. This is despite new sites being introduced (at this late stage) i.e. Land South of Clive Road (identified in Table 4), as well as a number of affordable housing led housing sites being introduced (i.e. those outlined in Table 5). This does not provide an adequate process or timescale for objectors to scrutinise the published content, and to make comments on sites which have been presented for the first time at a late stage in the process.

As part of these representations, we will be making brief comment on the sites which have not been previously consulted upon, namely:
Other Housing Allocations
• Land south of Clive Road, St Athan;

Affordable Housing Led Sites
• Land at Heol Fain, Wick;
• Land west of Maendy Road, Aberthin;
• Land Noth of West Winds Business Park, Fferm Goch; and
• Land to the East of Colwinston;

It is considered necessary to comment on these sites, given that they form an important and critical part of the housing trajectory, and by association in the Council and Plan reaching their targets. Moreover, these sites have not been consulted on previously. Accordingly we consider it necessary to pass comment on these in order to ensure that the consultation is fair and robust.

As well as limited time given to comment on the information contained within the Housing Trajectory, the LPA have failed to set up a Housing Stakeholder group to agree and discuss the trajectory information and data – with the cover email to the consultation (dated 3rd October 2025) stating "it is considered that it would be the best use of stakeholder time to conduct this engagement via email, particularly as many of the forecasts have been developed in consultation with site promoters including developers and their agents".

We submit that the stakeholder consultation has not been a transparent nor robust consultation process, given that the Development Plans Manual states at Para 5.66 "A housing trajectory must be prepared to support the Deposit Plan. In order to generate a housing trajectory and associated phasing tables it will be necessary for LPAs to engage with stakeholders through a Housing Stakeholder Group. This will ensure that the timing and phasing of sites is robust and based on up to date information". Given that this has not taken place, we would raise fundamental concerns that the consultation of the trajectory has not adequately taken place as per the relevant guidance. Afterall, the guidance stresses that a Group should be formed as a necessity. Accordingly, there has not been an adequate process and opportunity to review and comment on the information published, including in respect to the other sites have been introduced at this late stage.

Timing Assumptions underpinning the Trajectory

The assumed and factored in timescales of the various stages of bringing forward sites i.e. the pre-application stage, the planning application process, and the discharge of condition process outlined in the trajectory are considered to be fundamentally inaccurate, and result in a distorted position of the delivery of housing sites over the RLDP Plan period. The assumptions are far too ambitious, and without evidence / are not comparable with the timescales being incurred in processing such stages at the Development Management stage(s).

Specifically, we raise objection to the following timescales which are considered to be extremely ambitious and unrealistic:

• "Time period of pre-application discussions/PAC consultation" = 4 months
• "Time between submission of planning application and determination" = 6 months
• "Time taken from planning consent to the discharge of relevant conditions to enable site construction" = 4 months

In our experience, having submitted a significant number of major and other applications for housing and other forms of development in the last 1-2 years to the Council (and elsewhere in Wales and England), it is extremely unlikely that major applications can be submitted, and planning permissions granted, within the timeframes assumed by the trajectory. A wide range of stakeholders are also involved in the determination of major planning applications, which often adds to the delays associated with the determination of such applications. We would therefore consider that a time period of "6 months" given to all major applications in the housing trajectory is not feasible, and distorts the trajectory timescales for the remaining Plan period.

The assumptions in the trajectory are also solely based on expected timescales for the processing of formal submissions made to the Council, and do not factor in the timescales associated with, and needed for, the preparation of the material for submission (i.e. pre-application enquiry submissions / planning application / discharge of condition details etc). When factored in these will elongate the timescales for bringing forward schemes considerably.

Moreover, it is common practice for larger housing sites and major applications to have a range of pre-commencement conditions attached to a permission once granted. Again, we would raise concerns with the timescales indicated in the trajectory related to this part of the planning process. It is highly unusual and questionable that any technical work required by these conditions (usually relating to drainage and highways matters) would be instructed, completed and submitted within 2 months, and for these to then be signed off / approved in a further 2 months. There are also other technical matters and necessary approvals falling outside of, and over and above, the planning system, such as SAB, s.106, s.38 and s.278 agreements, timescales for which have not been accounted for – and all of which are rarely completed within "4 months" as indicated.

It is therefore highly doubtful that the timescales legislated for in the trajectory for the various stages pre-construction are achievable – with no information about these proposed timescales outlined within the supporting text of the Housing Trajectory. We would therefore raise considerable concerns and objections to these as they stand without full evidence to fully show how these have been calculated, and without there being considerable (and necessary) adjustment to the timescales indicated and factored in.

We would therefore object to the timescales indicated in the 'Timing and Phasing of Sites' table, given that the delivery start dates will be pushed back further into the Plan period. Accordingly, and as a result, the Plan is at risk of not delivering the level of housing expected based on the sites allocated, at least as swiftly as is set out in the trajectory.

Housing Delivery Rate Assumptions

We would also raise considerable doubt over the proposed delivery of the sites identified in the Housing Trajectory - which we do not consider are robust or reasonable.

The development trajectory bar chart set out in the consultation material (extracted below) anticipates and legislates for a number of critical events and circumstances – all of which are considered to be unrobust and unsound.

Extract of Housing Trajectory Graph (annotated by GJP – red dotted line)

Firstly, a large 'spike' (material increase) in housing delivery is factored in to take place in 2027 – 2028. This is a marked and pronounced step change in the rate of delivery, and envisages / relies on a significantly higher rate of delivery than previous years in The Vale of Glamorgan (2021 through 2025 - as depicted by the green columns). This is considered extremely unlikely to materialise, not least given prevailing market circumstances, past rates of delivery on the ground, and also in light of levels achieved across Wales and the UK in general.

The published trajectory shows that the average level of completions in The Vale of Glamorgan from 2021 - 2025 has been approx. 400 - 500 units. However, the chart shows that from 2027 – 2028, completions are expected to rise to approx. 1,000 units per year. The expected delivery levels in the trajectory therefore show and assume a doubling in delivery rates and unit numbers (an increase of approx. 100%relative to past rates). There is no clear evidence as to how this level of completions can be achieved let alone guaranteed. This is the case in particular given that the forthcoming years (2025-2027) are expected to see performance (yield) drop significantly (delivery rates in 2025 – 2026 and 2026 – 2027). The chart shows only approx. 200 units being delivered over these years. It is therefore unclear how completion rates are expected to rise so quickly (from 200 in 2025-26 to 1000 in 2027-28), and by such a significant amount. The assumptions in the trajectory are wholly unrobust in our view.

The anticipated delivery of housing also fails to be consistent within and across the Plan period. It is unclear as to why completions rates aren't spread out more evenly throughout the Plan period - to ensure a robust and most realistic housing trajectory until 2036. By comparison to the marked increase in the rate of delivery between and over the

period 2027 to 2031, there is then a marked fall-off or drop in delivery towards and by the end of the Plan period. Indeed, in the final year, the level of completions are expected to be lower than the period 2021-2015.

To summarise, we consider the defined position to be wholly manufactured and unreflective of the past completion rates, as well as the recently published completion rates provided by Welsh Government recently in August 2025. In the Welsh Government Statistics Document ''New House Building: April 2024 to March 2025', information on the number of new dwellings started is provided, where building has commenced and those completed for April 2024 to March 2025. Figure 1 provides a graph showing starts in the last 10 years, and it is clear that there has been a general decline in the number of new dwellings started and completed.

Description of Figure 1:.'New House Building: April 2024 to March 2025'
In 2024-25, 4,631 new dwellings were completed, 3% fewer than in the previous year. This was the second lowest number on record, with the lowest number recorded in 2021-22, a year heavily affected by the coronavirus (COVID-19) pandemic (in 2021-22, 4,616 new dwellings were completed). The New Housing Pipeline Report Quarter 2, 2025 Report (September, 2025) published by the HBF evidenced that the number of residential units approved in the UK fell by 6% during the second quarter of 2025, continuing the decline of approval during the first three months of the year. Wales saw one of the largest declines in the UK in approvals with a decline of 29%.

Further, the HBF document 'Increasing Housing Supply in Wales' (4th September 2025) clearly shows that The Vale of Glamorgan has not met the housing delivery requirements in recent years in 2023 – 2024 – along with every other authority in Wales (except Newport). Accordingly, this further adds to the argument that historically The Vale (and most other authorities) have underprovided. This adds considerable uncertainty on the assumed transformation in yield and delivery as built into the trajectory.

Graph: Housing Delivery as a proportion of annual housing requirement in Wales per Authority

The Home Building Sector Skills Plan (Aug 2025) published by the HBF also identified the following issues with the workforce to bring forward built development in Wales:

• "A shortfall in numbers entering roles from the education system;
• An ageing workforce: 25% of the home building workforce is aged over 50, meaning the sector is facing an impending retirement cliff edge;
• Challenges attracting a wider talent pipeline into the sector;
• A lack of understanding of critical future skills needed, and direction from the Future Homes Standard; and
• Output within the sector fluctuating with demand and economic pressures, leading to additional pressures in recruitment and training".

It is not considered that in the next 1-2 years that any of these issues can or will be substantially corrected – at least sufficiently so to allow for, and enable, the planned delivery rates of new housing completions to be as high as < > 1,000 homes in one year (and for four consecutive years at that).

We would therefore object to the proposed numbers of completion expected during the Plan period, given that there are a number of issues with delivering housing in Wales and given past completions rates for The Vale of Glamorgan. Again, this results in the Plan being at risk of not delivering the level of housing expected based on the sites allocated.

Status & Standing of Sites included in the Trajectory

The proposed land supply within the housing trajectory includes provision for 'rolled forward' LDP sites, which contribute to the total of 'Proposed Additional Housing Allocations' forming part of the housing supply. Specifically, a total of 1,242no. units have been identified as additional housing allocations, of which 959no. are expected to be delivered on the rolled forward LDP sites. As such, these sites are to provide for a significant proportion of additional housing in the Plan period (specifically circa 77%).

The Development Plans Manual (DPM) sets out that allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan. The DPM outlines that "there will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered." The below table included in the consultation document provides a breakdown of the rolled forward LDP sites, and in particular, sets out the status of each site:

The above table evidences that the current LDP has under delivered in regard to its targeted unit number of the Plan period, given that these sites did not yield any housing over the current plan period. This is further exacerbated by the Land Bank sites that have also not delivered any housing across the existing LDP period, amounting to 1,860no units. Accordingly, when considering the non-delivery of both rolled forward LDP sites and Land Bank sites, this amounts to an approximate shortfall of 2,189 homes being delivered, or 33% of the total housing supply identified for the current LDP (8,525no. dwellings).

It is therefore considered that, as a minimum, the units carried over from the LDP (without planning permission) should be a surplus to the housing supply proposed for the RLDP, as opposed to being relied on to deliver the housing need over the Plan period. This is particularly the case for the two sites (Land to the west of Pencoedtre Lane, and Land between Northern Access Road and Eglwys Brewis Road) which do not currently have any active planning application submitted for their development. These sites total an amount of 370no. units to be delivered in the Plan period, which represents more than a third of the additional housing allocations to make up the housing supply.

As such, it is considered that the unmet need deriving from the existing LDP is still present – indeed it has grown, and will continue to do so, not least when considered in conjunction with the projected population growth over the coming years to 2036, and the aspirations for growth in the Plan's strategy.

Accordingly, in order to secure the targeted level of housing, a greater level of provision for new allocations should be applied in order to meet the housing requirement. This would bring about better certainty that the housing requirement is met by the housing supply over the Plan period, not least given that the current Plan failed in this respect. Without a re-apportioning of the housing supply, it is considered that the Plan would heavily rely on the contingency (i.e. rolled forward LDP sites) coming forward in the Plan period, yet there is uncertainty that these will yield in full over the new Plan

period. This raises issues of ''soundness'', and risks rendering the Plan unrobust.

On this basis, we would object to the Plan if the provision of housing is not adjusted to rebalance the provision to include new allocations in lieu of rolled forward LDP sites in the housing supply.

Key Sites

As set out in previous representations at Preferred Strategy stage, it is considered that the housing supply relies heavily on the delivery of the 'key sites' to deliver housing (and meet need) over the Plan period. The total number of housing units attributed to key sites amounts to 2,278, which equates to over 25% of the total provision in the Plan period.

As detailed above, we consider there to be concerns regarding the proposed 'Timing and Phasing of Sites' table included in the Housing Trajectory which we consider are not reflective or accurate and will therefore have the effect of delivery start dates being much later into the Plan period than anticipated. The result of this will be that the Plan will be at risk of not delivery the level of housing expected and needed. Moreover, the Housing Trajectory Graph presents an overly ambitious level of housing completions over the Plan period - which the Council consider will be markedly higher than the average levels experienced in the last five years. Again, for the reasons set out above, we consider that these rates of expected completions to have no evidence supporting them, and to be unachievable and unsound.

Insofar as to the removal of the previously proposed site 'Land at North East Barry', this site was expected to deliver 900no. units in the Plan period. Following its omission from the housing supply, other sites have been identified, which comprises the inclusion of a new key site (Land at North West Barry), 3no. non-strategic sites, and also affordable housing-led allocations. In terms of the quantum of development attributed to these new sites, this amounts to 659no. dwellings. This is some 250 units less than the 900no. homes that was previously attributed to 'Land at North East Barry'. Whilst it is appreciated that the number of homes forming part of the existing supply (completions, units with planning permission etc.) have increased since Preferred Strategy stage, there will be a net loss in market housing provision and delivery.

This position is made worse and compounded as a result of accounting for the affordable-led sites in making up the housing supply.

As set out within the Preferred Strategy, these sites are expected to deliver at least 51% affordable housing. These units are not open market units, and will not / cannot contribute to the supply of such housing. These units will contribute to the provision of affordable housing, and will go some way to meeting the acute need for such housing (albeit will not eradicate / address in full the well known and accepted considerable requirement). Accordingly it is considered that these sites should be in addition to the housing supply, as opposed to forming part of the provision. In turn, there would need to be an increase in allocations for non-strategic sites, to ensure that there is sufficient market housing delivery over the Plan period.

Were such changes to be made and introduced, this would achieve and assist realise a more robust and sound housing supply, which will ensure that the identified housing need is met / addressed over the Plan period. Without these changes it is considered that the housing supply is not sufficient, and inevitably, housing need will not be met within the Plan.

St Athan Train Station

As set out in the Preferred Strategy (para A3.29), the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. Accordingly, in line with the spatial strategy adopted for the RLDP (i.e. focus development around sustainable transport nodes), St Athan was identified as a 'Strategic Opportunity Area' to accommodate strategic growth – through the proposed allocation of two key sites : 'Land at Church Farm' and 'Land West of St Athan'. These sites have been identified to deliver 532no. and 600no. units respectively in the Plan period. These are separate to, and are in addition to, the 51no. units that have now been attributed to the site 'Land South of Clive Road' in St Athan. Accordingly, in total, the Housing Trajectory makes a provision for a total of 1,183no. homes to be delivered in St Athan over the Plan period.

It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales. The focus in the first phase of such improvements across the region is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly,

it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

The strategy to allocate new housing growth is predicated on focusing residential development around sustainable transport nodes, and given that St Athan will be without any railway station in the Plan period, it is not considered that these sites align with the strategy of the RLDP. Accordingly, the wider Housing Trajectory is considered to be unsound, given that a total of 1,183no. homes are expected to be delivered in St Athan within the Plan period.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing in this location over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites - given their incompatibility with the core strategy of the RLDP.

We therefore consider the Trajectory to be both unrobust and unsound, and therefore, we object to the Trajectory in its current form accordingly.

Geographic distribution of the 'new' sites / provision

As a general and overarching comment in respect to the additional sites now included within the Plan, and forming part of the trajectory, (and a matter expanded upon when critiquing each of these sites in the next section to this submission), it is clear and evident that these additional sites have been positioned to settlements that have already, and recently, been attributed significant growth in the preceding Plan and plan period.

Significant allocations (which have also contributed to significant levels of affordable housing) have been realised and built out in locations (such as Wick and Colwinston). Notwithstanding this, two of the additional sites are now proposed for these recently expanded settlements. Given that the purpose of the affordable housing led allocations is to meet unmet affordable housing need, it is questioned why such new allocations are attributed to settlements that have already seen open market and affordable housing provision, as compared to other comparable settlements that have not received any growth whatsoever over a considerable period of time.

It is considered accordingly that the geographic positioning of these allocations is at odds with their underlying purpose - to meet unmet affordable housing need in communities that have seen no provision

Detailed Comments in respect to 'new' sites

Other Housing Allocations

Land south of Clive Road, St Athan

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

As set out at the outset of these representations, and whilst we note the findings of the Candidate Sites Assessment at Preferred Strategy Stage (i.e. Suitable for further consideration), we do not consider that the consultation on this site has been undertaken procedurally appropriately or suitably. We therefore consider the consultation on this site is "unrobust" and "unsound".

As set out previously, the strategy seeks to focus development around key sustainable transport nodes. The strategy outlined that a feasibility study for a station in St Athan had been undertaken, which identifies that a new station could be located in St Athan, subject to further investigation work. It is now the case that, subsequent to the publication of the Preferred Strategy, the proposed railway station at St Athan is not in the first phase of delivery for new stations in South Wales, where the focus is towards improving connectivity in east Cardiff, Newport, and Magor. Accordingly, it is very unlikely that any new train station will be delivered in St Athan over the Plan period, which significantly questions the suitability and acceptability of the proposed allocations set out above.

It is considered that there has been an overprovision for housing growth in St Athan generally, and this issue is now further exacerbated by the lack of any forthcoming rail provision. Given this, to add a further site for housing over and above the original provision is considered to be unsound. As set out above, the justification to allocate sites at St Athan has relied heavily on the railway station being delivered in the Plan period, and as such, there are serious questions marks associated with the acceptability of the proposed allocated sites – given their incompatibility with the core strategy of the RLDP.

Affordable Housing Led Allocations Land at Heol Fain, Wick
A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below for ease:

Candidate Site Stage 2 Assessment (Site Ref. 404)

The findings of the Candidate Site Assessment for this site are noted. We are assuming the reason this site is proposed to be allocated is a product of the site promoters/developers heading the findings stated below, and changing the form of development to be in accord with this:

"A market housing led scheme would not be acceptable, but the site could be reconsidered as a small scale affordable housing led development subject to need and viability at a maximum of 50 dwellings. In accordance with the Settlement Appraisal Review, it is considered that Wick could potentially accommodate limited affordable housing led growth."

Whilst no clear deficiency exists in respect to the site, it is known that Wick has been subject to significant growth and expansion in recent years – not least by virtue of significant housing allocations in the settlement as part of previous plans.

To evidence this, 35% of the 124 units approved on the 'Rectory Field, St Brides Road' site (i.e. circa 43 units as per site allocation ref. MG(47) and PP ref. 2014/01424/FUL) were approved as Affordable Housing units. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Wick, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Land West of Maendy Road, Aberthin

'Land West of Maendy Road' has been registered as an Affordable Housing Led Allocation candidate site for the RLDP, however as far as we know from our review, there is no assessment and critique of this site. This site has not been included in the 'Candidate Assessment at Preferred Strategy Stage' (October 2023). As such, with an absence of publicly available information, it is not clear how the Council has judged this site against the criteria. This raises questions accordingly in respect to the "soundness" of a site which forms part of the intended housing land supply, and by association the trajectory. Without this, and without being consulted on (as others have been prior to this) we question whether this allocation is "sound" (i.e. its allocation is considered to be "unsound").

Land North of West Winds Business Park, Fferm Goch

The below sets out the candidate site stage two assessment of 'Land to north and west of Westwinds Business Park':

Candidate Site Stage 2 Assessment (Site Ref. 398)

As can be seen above, the site was not considered suitable for further consideration, with the site scoring negatively (red) in respect to a number of key factors. These include the following:

• Access to Retail;
• Access to Health Services;
• Sustainable Transport- Public Transport;
• Access/ Proximity to services and facilities conclusion;
• Climate Change; and

• Health and Wellbeing.

Given the fact the site scores red in 'Sustainable Transport – Public Transport', this shows the site is not served by public transport connections within 800m, as outlined in the key below:

Additionally, Policy SP7 (Sustainable Transport) of the Vale of Glamorgan Preferred Strategy states "New development must support an enhanced transport network that increases the proportion of journeys being undertaken by sustainable travel modes". Additionally Objective 8 (Promoting Active and Sustainable Travel Choices) states "new development is directed to locations that are or can be accessible by a choice of modes of transport, including walking, cycling, and public transport."

It is well known that residents of affordable housing are statistically less likely to own private vehicles, making access to reliable and frequent public transport essential for ensuring equitable mobility. The provision of public transport infrastructure in close proximity to such developments is therefore a critical component in supporting access to employment, education, healthcare, and other key services, while also promoting sustainable travel patterns and social inclusion.

The site also scores red in respect to Access/Proximity to services, showing the site is greater than 1200m away from key services, as seen in the key below:

In respect of the above, Preferred Strategy 6.40 states the need "To ensure that new development takes place in locations that have the best access to a wide range of services, facilities, and employment opportunities, whilst

minimising the need to travel, the distribution of growth is guided by the following settlement hierarchy". To further highlight the importance of both sustainable transport and proximity to services, the preferred strategy also states the need to "Facilitate the development of adaptable, accessible, well-connected communities that have a strong sense of identity, offer a sustainable range of services and facilities and are equipped with adequate infrastructure". In addition, Promoting Active and Sustainable Travel Choices outlines to "Promote and encourage the use of sustainable methods of travel, particularly active modes of transport, whilst simultaneously reducing the need to travel".

In light of the above, this site does not align with the aims and targets set out in the Preferred Strategy, as it fails to meet several key development goals set out. It should therefore not be considered suitable to be allocated for future developments. Its inclusion is therefore unsound.

Should this view be concurred with, 22 affordable units will be lost from the proposed affordable 122 units, and ultimately will be lost from the overall housing land supply. As stated in the draft housing trajectory "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help sustain services and facilities within these rural communities". There is a clear possibility therefore that this proposed allocation is removed and/or not delivered as its inclusion is unsound as it does not align with the aims and targets set out in the Preferred Strategy - as it fails to meet several key development goals set out. A "small scale

affordable housing led development" which is needed to "respond to local affordable needs and help sustain services and facilities within these rural communities" will therefore not be provided for. This is clearly an issue.

When comparing this with 'Land at Hazelwood, Ogmore By Sea, the following is set out:

Access to Services and Facilities

This criterion has been assessed firstly on the location of the site proposal in terms of whether it is located within, adjacent to, or outside a settlement, and secondly the ease of pedestrian and cycle access to key services listed below.

With reference to the above:

• In terms of public transport, there are two bus stops located approximately 200m (3-minute walk) from the site ('Ogmore By Sea Post Office'), with the '303' providing services between Llantwit Major and Bridgend.

• The site is located 200m (3-minute walk) from the 'Ogmore By Sea Post Office' which can provide basic goods to meet day-today needs such as bread, butter, milk etc.

• The site is also located 50m (1-minute walk) from a children's park.

These services and facilities are therefore well within the best category (i.e. categorised/scored as 'green') - within 800m of site (10-minute walk). Accordingly, the site therefore has good access to services and facilities. This

Furthermore, the settlement of Ogmore By Sea has been ranked higher than Llangan (which the site 'Land to north and west of Westwinds Business Park' is located within) in the VoG Sustainable Settlements Appraisal, and therefore, is considered to constitute a more sustainable location to accommodate residential growth. Most notably, Ogmore By Sea scores '13' in respect to 'Daily Facilities' whereas Llangan only scores '3', evidencing that residents in Ogmore have much better access to services within the locality as compared to Llangan.

Given the above, 'Land at Hazelwood, Ogmore' does/should align with the aims and targets set out in the Preferred Strategy as it meets several of the key development goals set out. Its inclusion should therefore, in our view, be considered "sound" and therefore suitable to be allocated for future developments. The site should properly and appropriately be allocated in lieu of 'Land to north and west of Westwinds Business Park' – the inclusion of which is "unsound". 'Land at Hazelwood, Ogmore' would therefore ensure that affordable units, where "there is a need for small scale affordable housing led development (minimum 50% affordable) to respond to local affordable needs and help

sustain services and facilities within these rural communities", are provided for. As such the proposed housing trajectory would be maintained.

Land to the East of Colwinston, Colwinston

A summary of the Candidate Sites Assessment at Preferred Strategy Stage has been extracted below:

As outlined above, the site was rejected and considered not suitable for further consideration. In fact, and unlike 'Land at Heol Fain, Wick' and 'Land to north and west of Westwinds Business Park' it was stated that this site "could not be considered as a suitable affordable housing led development site". Despite this, this site is identified to be allocated as an Affordable Housing Led Allocation. As such, the inclusion of this site is "unsound".

It is known that Colwinston has been subject to significant housing allocations in the settlement as part of previous plans. To evidence this, 25% of the 64 units (i.e. 16 units) were approved on the site allocation ref. MG2(41) and PP ref.

2014/00242/FUL. This makes a substantial provision of such Affordable Housing units (and housing generally) in the settlement in recent years.

Other similarly sized and comparable settlements and locations have not by contrast been subject to any growth for some considerable time, and accordingly would warrant and benefit from provision as part of this new replacement plan.

Notwithstanding the location of such provision, and as set out in detail at the outset of these representations, National Planning Policy advocates the high and acute need for affordable housing, whilst recent analysis evidences that there is a housing emergency. These circumstances - coupled with the shortcomings identified and set out earlier in these submissions in respect to the adequacy of provision within the plan (rolled forward sites / inadequate provision etc) – means that notwithstanding any potential allocation at Colwinston, further provision ought to be made in comparable (previously unprovided for) locations, such as Ogmore By Sea.

Summary of These Representations

To re-iterate, and to summarise the case made and set out, these representations seek to object to the Housing Trajectory published as part of the consultation on the Draft Housing Trajectory For Housing Stakeholder Group (October 2025) which underpins the Plan and the delivery / realisation of its underlying strategy.

Detailed submissions and objections are raised above in respect to the trajectory information published regarding the soundness and robustness of this information (and it's consultation), which we do not consider are adequate, robust, or sound to deliver the Plans aims and objectives.

Change suggested by respondent:

Replace 'no more than 10 dwellings' with 'around 10 dwellings'

Sound: Not specified

Document Element: HG6 – PROVISION OF SPECIALIST ACCOMMODATION

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the

exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.

Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery.
Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)

identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with

Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against

Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated,

resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com

South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Document Element: HG7 - HOUSES IN MULTIPLE OCCUPATION (HMOs)

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.

We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.

We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.

The replacement development plan outlines its Vision and objectives of the RLDP as follows:

'By 2036':

The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.

Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.

The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.

Objectives:

1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment

Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:

Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.

Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.

Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.

TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.

TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'

Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.

Violence against women and Girls:

Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.

In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.

Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and

socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at: https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design

solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:

The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at: https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).

• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).

• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.

(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to

reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mrs Joanne Jenkins [2780]

Summary:

In relation to the existing Traveller site, my understanding is that following a court case approximately five years ago, it was agreed that the family currently occupying this site would relocate further up the road to join the rest of their family. At that time, it was also agreed that the original site would be returned to the village of Llangan for use as allotments. This resolution followed considerable effort, distress, and financial contribution from local residents to resolve the matter.

I fully recognise and respect the need for Traveller families to have appropriate and secure places to live. However, I believe that Llangan has been more than accommodating to the existing families over many years, and I am concerned about the cumulative impact of further development on a small rural village with already limited infrastructure.

Full text:

Thank you for your email.

It has since become apparent that the village WhatsApp group was incorrectly informed in suggesting that the land adjacent to Twchwyn Garth was being proposed as a traveller site. I understand that this site has instead been identified for affordable housing. While I appreciate the need for such provision, I would like to raise concerns, as our village already accommodates a significant amount of affordable housing in close proximity, including developments at Timbers Green, Fferm Goch, and Canna (adjacent to the school). I therefore feel that Llangan has already made a substantial contribution in this regard.

In relation to the existing Traveller site (Site 403), my understanding is that following a court case approximately five years ago, it was agreed that the family currently occupying this site would relocate further up the road to join the rest of their family. At that time, it was also agreed that the original site would be returned to the village of Llangan for use as allotments. This resolution followed considerable effort, distress, and financial contribution from local residents to resolve the matter.

I fully recognise and respect the need for Traveller families to have appropriate and secure places to live. However, I believe that Llangan has been more than accommodating to the existing families over many years, and I am concerned about the cumulative impact of further development on a small rural village with already limited infrastructure.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy

• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.

With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.
The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).
Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.
BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.
Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.
The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.
We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.
The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.
The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.
In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East

Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters. It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.
Renewable Energy
Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?
It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.
The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.
Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.
The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.
Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.
Minerals
The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.
BMV Agricultural Land
The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:
• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and
• Candidate site assessments.
•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.

• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry:
"Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

5188 Object

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mr David Reed [3156]

Summary:

I regard this site as unsuitable for this proposed use on the following grounds.
A Judicial Review found the original process to be illegal and directed the then South Glamorgan Authority to return it to its previous use (Agricultural land)
It was subsequently (2017) agreed with the VoG that it should be transferred to Llangan Community Council for use as a village amenity site i.e. allotments, exercise area, community orchard etc. This position was reaffirmed in 2022 directly with Marcus Goldsworthy and the Planning Department.
The area has no public transport
Access to the site is via single track lanes with infrequent passing places used frequently by agricultural vehicles. Movement of trailers, Caravans etc is particularly difficult and hazardous and for that reason no hauliers visit the village with articulated vehicles.
The existing cesspit system is faulty and insufficient at present and maintained at considerable expense by VoG. The village pumping station cannot cope with the site being tied into the mains sewage system and would require upgrading.
There are no play areas for local children or outside community space.
There are no health facilities
There are very limited spaces in Llangan School and no safe pedestrian access to the nearest bus stop (1 mile)

Objections to SP9 - GYPSY AND TRAVELLER SITE PROVISION / SP9 - DARPARIAETH SAFLEOEDD SIPSIWN A THEITHWYR

I regard this site as unsuitable for this proposed use on the following grounds.
A Judicial Review found the original process to be illegal and directed the then South Glamorgan Authority to return it to its previous use (Agricultural land)
It was subsequently (2017) agreed with the VoG that it should be transferred to Llangan Community Council for use as a village amenity site i.e. allotments, exercise area, community orchard etc. This position was reaffirmed in 2022 directly with Marcus Goldsworthy and the Planning Department.
The area has no public transport
Access to the site is via single track lanes with infrequent passing places used frequently by agricultural vehicles. Movement of trailers, Caravans etc is particularly difficult and hazardous and for that reason no hauliers visit the village with articulated vehicles.
The existing cesspit system is faulty and insufficient at present and maintained at considerable expense by VoG. The village pumping station cannot cope with the site being tied into the mains sewage system and would require upgrading.
There are no play areas for local children or outside community space.
There are no health facilities
There are very limited spaces in Llangan School and no safe pedestrian access to the nearest bus stop (1 mile)

Change suggested by respondent:

The VoG will make good on its commitment to return this land to the Llangan Community Council for use as a village green and to be used as allotmeents, green space etc.etc as decided by the local community. It will be protected by codicils from disposal by the LCC for any development.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION
Respondent: Mrs Sarah Towler [3223]

Summary:

Llangan Gypsy and Traveller Site.
Site in village is unauthorised. Judicial Review found local authority acted illegally in creating this site which should have been returned to its previous agricultural state and subsequently in 2017 Vale of Glamorgan reached an agreement with Llangan Action Group to return the site to the Community Council.
Any granting of planning permission would have to be considered ultra vires.

Full text:

Llangan Gypsy and Traveller Site.
Site in village is unauthorised. Judicial Review found local authority acted illegally in creating this site which should have been returned to its previous agricultural state and subsequently in 2017 Vale of Glamorgan reached an agreement with Llangan Action Group to return the site to the Community Council.
Any granting of planning permission would have to be considered ultra vires.

Change suggested by respondent:

The site is in an unsustainable location.
The site is in open countryside.
The site has restricted access and is unsafe.
There are no public services and the local school is at capacity.
The site does not promote sustainable access to employment, shopping, education, health, community, leisure and sports facilities.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION
Respondent: Mr Peter Harries [3232]

Summary:

I note that the site's previous planning permission was quashed and a binding undertaking requires the land to return to its agricultural state after the family vacates. The proposed expansion conflicts with this undertaking. An agreement with the community to vacate the site was broken without explanation. The site does not meet current criteria due to poor access, drainage, safety concerns, lack of local facilities, and its location outside sustainable transport options. The inspector's report only deemed two pitches appropriate, and the proposed increase risks damaging the local landscape and community relations.

Full text:

The site should not be used for the proposed purpose or for any other purpose by the VOG as a consequence of the following:
The Council (under its previous iteration) previously granted planning permission to itself for use of the site as a gypsy site on 20 December 1994. That decision was subsequently quashed by the High Court in R v South Glamorgan County Council ex parte Harding (1997). Following those proceedings, the Council through its Chief Executive, Mr Foster, entered into a formal undertaking dated 1 May 1996 requiring that once the existing family vacated the site, the Council would restore the land to its original agricultural condition. That undertaking remains binding and has not been discharged. The proposed allocation and expansion of the site appears inconsistent with that undertaking and raises questions as to whether the Council can lawfully promote the site for further development.

July 2017 meeting with the VOG. Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. Had the VOG done so, it would have discharged the obligations it had bound itself to under the undertaking. The VOG have, however, without any explanation, gone back on that agreement without any further discussions with the Community.

In any event, the site does not meet the criteria set in the VOG's own current Gypsy and Traveller Accommodation Assessment ("GTAA") and with reference to Policy MD18 (Gypsy and Traveler Accommodation), including because:

Access to the site is poor. The access lanes is too narrow (2.5m min) and can't be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m
The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge.
Extending the proposal to 7 pitches on the site would further restrict the ability of emergency vehicles to manoeuvre around the site.
The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local

Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the site was poor. The Report stated, "It is clear that access and drainage works would need to be improved for the site to meet Welsh Goverment guidance."1 These constraints remain relevant when considering the proposed significant expansion of the site.
Site access is "unsafe" having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.
The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.
The size of the site and number of pitches proposed is not appropriate to its location and accommodation needs.

The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.

The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.

Notwithstanding the above, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.

Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA)

emphasizes culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than dictating the forced mixing of specific family groups on sites. The guidance was updated in March 2025.

The assessment makes no reference that the site is in a Special Landscape Area. The Replacement Local Development Plan 2021 – 2036: Special Landscape Area – Background Paper – BP-28, November 2025, provides at para 1.6:

"The designation of the SLA was not intended to prevent development, but to ensure that where development was acceptable, careful consideration was given to the design elements of the proposal such as the siting, orientation, layout and landscaping, to ensure that the special qualities and characteristics for which the SLAs have been designated are protected."

In addition to being in a designated Special Landscape Area and the site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and important views from the conservation area.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.
The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18

New site grants are available and cost should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION
Respondent: Mr Edward Hunt [2995]

Summary:

I understand that the site's previous planning permission was quashed, and a binding undertaking to restore it to agricultural use remains in force. The VOG's proposal to expand the site to seven pitches conflicts with this undertaking and is inconsistent with the site's poor access, drainage issues, and lack of local facilities and public transport. The expansion would harm the rural character, landscape, and community. The site's designation as a Special Landscape Area and proximity to a conservation area further restrict development. The site was supposed to be allotments and even the 2 current pitches prevent that happening.

Full text:

The site should not be used for the proposed purpose or for any other purpose by the VOG as a consequence of the following:
The Council (under its previous iteration) previously granted planning permission to itself for use of the site as a gypsy site on 20 December 1994. That decision was subsequently quashed by the High Court in R v South Glamorgan County Council ex parte Harding (1997). Following those proceedings, the Council through its Chief Executive, Mr Foster, entered into a formal undertaking dated 1 May 1996 requiring that once the existing family vacated the site, the Council would restore the land to its
original agricultural condition. That undertaking remains binding and has not been discharged. The proposed allocation and expansion of the site appears inconsistent with that undertaking and raises questions as to whether the Council can lawfully promote the site for further development.
July 2017 meeting with the VOG.
Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. Had the VOG done so, it would have discharged the obligations it had bound itself to under the undertaking. The VOG have, however, without any explanation, gone back on that agreement without any further discussions with the Community.

In any event, the site does not meet the criteria set in the VOG's own current Gypsy and Traveller Accommodation Assessment ("GTAA") and with reference to Policy MD18 (Gypsy and Traveler Accommodation), including because:
Access to the site is poor. The access lanes is too narrow (2.5m min) and can't be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m
The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge.
Extending the proposal to 7 pitches on the site would further restrict the ability of emergency vehicles to manoeuvre around the site.
The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the site was poor. The Report stated, "It is clear that access and drainage works would need to be improved for the site to meet Welsh Goverment guidance."1 These constraints remain relevant when considering the proposed significant expansion of the site.
Site access is "unsafe" having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.
The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.
The size of the site and number of pitches proposed is not appropriate to its location and accommodation needs.
The Cardiff and Vale of Glamorgan Survey and Assessment of Gypsy and Traveller Accommodation – Final Report – August 2008, prepared by the Fordham Research Group Limited made a finding that there was a preference for members of the Gypsy / Traveller community for smaller, family sized sites. The expansion of the site to 7 pitches is wholly contrary to the findings of the report commissioned for the benefit and assistance of the VOG.
The Replacement Local Development Plan 2021 – 2036: Issues, Vision and Objectives June 2023 (Background Paper – BP2) states, at 4.1. that:
"Our Vision for the Vale of Glamorgan is a place:
That is safe, clean, and attractive, where individuals and communities have sustainable opportunities to improve their health, learning and skills, prosperity, and wellbeing; and
Where there is a strong sense of community in which local groups and individuals have the capacity and incentive to make an effective contribution to the future sustainability of the area."
The RLDP objectives are set out at paragraph 5 as follows:
"To sustain and further the development of sustainable communities within the VOG, providing opportunities for living, learning, working and socialising for all."
The location of the site does not support this objective.
""To ensure that development within the VOG makes a positive contribution towards reducing the impact of and mitigating the adverse effects of Climate Change. In respect of mitigating climate change, it is stated this means:
"Encourage development that reduces the need to travel by car and encourage people to participate in active travel and use sustainable transport to reduce emissions and improve air quality.
Ensure that all new development and infrastructure is reliant to future impacts arising from Climate Change, Direct development away from areas prone to flood risk and incorporate water management, biodiversity enhancement and adaptation measures." ""
Development of the site will not contribute towards this objective. In particular, as stated above, the lack of public transport will no doubt result in multiple vehicles being used to transport to and from the site. Such a need could be avoided if the allocation requirement was situated in an area with better public transport / an area close to facilities such as healthcare etc.
Alternatively, the agreement previously reached with the VOG to return the site to the Community Council for use as allotments would have a positive impact in respect of climate change, not least due to the fact that produce would be grown locally. The success of allotments in Treoes has demonstrated the viability of such a programme and the VOG

had previously indicated its support for returning the site to the Community Council for such a purpose.
"To reduce the need to VOG residents to travel to meet their daily needs and enabling them greater access to sustainable forms of transport."
As above, the site does not meet this objective due to its distance from facilities such as healthcare, shops etc. and the lack of public transport.
"To protect and enhance the VOG's historic, built, and natural environment."
The proposal would adversely impact the undeveloped rural character of the area.
"To maintain, enhance and promote community facilities and services in the VOG."
The VOG's previous agreement to return the site to the community for use as an allotment is a key illustration of achieving this objective. The proposed extension of the site for 7 pitches does not promote this objective, but wholly detracts from it. Llangan does not any other land to enhance and promote community facilities and services. Further, as the VOG is aware, the Community Council is not seeking funding from the VOG for the maintenance of the site which the VOG agreed to transfer management of to the Community Council.
"To provide the opportunity for people in the VOG to meet their housing needs."
It is accepted the VOG has a lawful duty under section 101(1) of the Housing (Wales) Act 2014 to carry out an assessment of the accommodation needs of Gypsies and Travellers residing in its area. That is not disputed. That fact that the VOG has a legal requirement to meet this legal obligation does not, however, mean that the selection of an unsuitable site is acceptable to 'tick a box' to meet that obligation is acceptable.
The fact that the VOG own the site is not a reason on its own for extending the site from 2 to 7 pitches. Further, the fact that the VOG were, through its predecessors in time, party to a lawful undertaking to clear the site and return it to its previous agricultural status, coupled with the VOG's agreement to transfer the management of the site to the Community Council is evidence of a competing obligation in law for the use of the site.
"To ensure that development within the VOG uses land effectively and efficiently and to promote the sustainable use and management of natural resources."
As above, this objective would not be met by extending the site to accommodate 7 pitches. Further, this is agricultural land in a Special Landscaped Area.
Further:
The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
Notwithstanding the above, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.
Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA)
emphasizes culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than dictating the forced mixing of specific family groups on sites. The guidance was updated in March 2025.
The assessment makes no reference that the site is in a Special Landscape Area. The Replacement Local Development Plan 2021 – 2036: Special Landscape Area – Background Paper – BP-28, November 2025, provides at para 1.6:
"The designation of the SLA was not intended to prevent development, but to ensure that where development was acceptable, careful consideration was given to the design elements of the proposal such as the siting, orientation, layout and landscaping, to ensure that the special qualities and characteristics for which the SLAs have been designated are protected."
In addition to being in a designated Special Landscape Area and the site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and important views from the conservation area.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.

The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18

New site grants are available and cost should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mrs Annie Price [3238]

Summary:

There is an existing formal agreement in place that states the land will be returned to its original agricultural condition once vacated by the current occupiers. Why is this agreement not being honoured?

Access to the site is poor (from all directions) and does meet the requirements for emergency vehicles. There is no public footpath or street lighting. There is no public transport and no facilities within walking distance, so any expansion will lead to more traffic on the already limited lanes. A previous report found that the area was only suitable for two pitches.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mrs Janet Reed OBE [3269]

Summary:

In 2017, an agreement was made for the site's vacation and transfer to LCC for community use, but this was breached. The site remains unsuitable, failing to meet VoG's criteria and policies due to inadequate access, being on a floodplain, lacking footpaths, street lighting, public transport, and amenities, with no wastewater infrastructure.(VOG pays for cesspit emptying) It is located in a Special Landscape Area near the Llangan Conservation Area. The size and number of pitches do not comply with social housing standards for gypsy/traveller sites.

Full text:

In 2017 Llangan Action ,Community Council and the site occupier reached an agreement for vacation of the site and transfer to LCC for Community use. The inclusion is a breach of this agreement. Also of the original Judicial review.The site remains unsuitable , does not meet the VoG's own criteria and is counter to much of the policies because - access is inadequate(lane 2.5m wide in places, emergency vehicles require 3.7m): land is on a flood plane:no footpath,no street lighting;no public transport;limited school places, no amenities. No infrastucture to dispose of waste water. VOG pay for cesspit emptying.Site is in a Special Landscape Area and close to Llangan Conservation Area.
Size and number of pitches is inappropriate - doesn't meet social housing standards which apply to gypsy/traveller sites.

Change suggested by respondent:

For the reasons sety out above the allocation of the site at Llangan for Gypsy/Traveller site is not justified and is inconsistent with the councils own policies and renages on the existing agreement made between the Council,Llangan Action and the current site occupier.
It ignores the instructions set out by the judge in the judicial review.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mr John Melville [3289]

Summary:

I believe the site should not be used for the proposed gypsy and traveller pitches because it conflicts with previous legal undertakings, planning policies, and assessments. The site’s access is inadequate, unsafe, and poorly connected to facilities and public transport, contradicting sustainability objectives. Expansion to seven pitches would harm the rural character, natural environment, and landscape designated areas. A prior agreement to return the site to community use as allotments should be honoured. Therefore, I recommend removing the site from the plan and identifying alternative locations that better meet the relevant criteria.

Full text:

The site should not be used for the proposed purpose or for any other purpose by the VOG as a consequence of the following:

• The Council (under its previous iteration) previously granted planning permission to itself for use of the site as a gypsy site on 20 December 1994. That decision was subsequently quashed by the High Court in R v South Glamorgan County Council ex parte Harding (1997). Following those proceedings, the Council through its Chief Executive, Mr Foster, entered into a formal undertaking dated 1 May 1996 requiring that once the existing family vacated the site, the Council would restore the land to its
original agricultural condition. That undertaking remains binding and has not been discharged. The proposed allocation and expansion of the site appears inconsistent with that undertaking and raises questions as to whether the Council can lawfully promote the site for further development.

July 2017 meeting with the VOG.

Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. Had the VOG done so, it would have discharged the obligations it had bound itself to under the undertaking. The VOG have, however, without any explanation, gone back on that agreement without any further discussions with the Community.

In any event, the site does not meet the criteria set in the VOG’s own current Gypsy and Traveller Accommodation Assessment (“GTAA”) and with reference to Policy MD18 (Gypsy and Traveler Accommodation), including because:

• Access to the site is poor. The access lanes is too narrow (2.5m min) and can’t be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m

• The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge.

• Extending the proposal to 7 pitches on the site would further restrict the ability of emergency vehicles to manoeuvre around the site.

• The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the site was poor. The Report stated, “It is clear that access and drainage works would need to be improved for the site to meet Welsh Goverment guidance.”1 These

constraints remain relevant when considering the proposed significant expansion of the site.
• Site access is “unsafe” having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.
• The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.
• The size of the site and number of pitches proposed is not appropriate to its location and accommodation needs.
• The Cardiff and Vale of Glamorgan Survey and Assessment of Gypsy and Traveller Accommodation – Final Report – August 2008, prepared by the Fordham Research Group Limited made a finding that there was a preference for members of the Gypsy / Traveller community for smaller, family sized sites. The expansion of the site to 7 pitches is wholly contrary to the findings of the report commissioned for the benefit and assistance of the VOG.
• The Replacement Local Development Plan 2021 – 2036: Issues, Vision and Objectives June 2023 (Background Paper – BP2) states, at 4.1. that:
• “Our Vision for the Vale of Glamorgan is a place:
o That is safe, clean, and attractive, where individuals and communities have sustainable opportunities to improve their health, learning and skills, prosperity, and wellbeing; and
o Where there is a strong sense of community in which local groups and individuals have the capacity and incentive to make an effective contribution to the future sustainability of the area.”
• The RLDP objectives are set out at paragraph 5 as follows:
RDLP objective Comment
To sustain and further the development of sustainable communities within the VOG, providing opportunities for living, learning, working and socialising for all.
The location of the site does not support this objective.
To ensure that development within the VOG makes a positive contribution towards reducing the impact of and mitigating the adverse effects of Climate Change. In respect of mitigating climate change, it is stated this means: “Encourage development that reduces the need to travel by car and encourage people to participate in active travel and use sustainable transport to reduce emissions and improve air quality.
Ensure that all new development and infrastructure is reliant to future impacts arising from Climate Change, Direct development away from areas prone to flood risk and incorporate water management, biodiversity enhancement and adaptation measures.”
Development of the site will not contribute towards this objective. In particular, as stated above, the lack of public transport will no doubt result in multiple vehicles being used to transport to and from the site. Such a need could be avoided if the allocation requirement was situated in an area with better public transport / an area close to facilities such as healthcare etc.
Alternatively, the agreement previously reached with the VOG to return the site to the Community Council for use as allotments would have a positive impact in respect of climate change, not least due to the fact that produce would be grown locally. The success of allotments in Treoes has demonstrated the viability of such a programme and the VOG had previously indicated its support for returning the site to the Community Council for such a purpose.
To reduce the need to VOG residents to travel to meet their daily needs and enabling them greater access to sustainable forms of transport.
As above, the site does not meet this objective due to its distance from facilities such as healthcare, shops etc. and the lack of public transport.
To protect and enhance the VOG’s historic, built, and natural environment.
The proposal would adversely impact the undeveloped rural character of the area.
To maintain, enhance and promote community facilities and services in the VOG.
The VOG’s previous agreement to return the site to the community for use as an allotment is a key illustration of achieving this objective. The proposed extension of the site for 7 pitches does not promote this objective, but wholly detracts from it. Llangan does not any other land to enhance and promote community facilities and services. Further, as the VOG is aware, the Community Council is not seeking funding from the VOG for the maintenance of the site which the VOG agreed to transfer management of to the Community Council.
To provide the opportunity for people in the VOG to meet their housing needs.
It is accepted the VOG has a lawful duty under section 101(1) of the Housing (Wales) Act 2014 to carry out an assessment of the accommodation needs of Gypsies and Travellers residing in its area. That is not disputed. That fact that the VOG has a legal requirement to meet this legal obligation does not, however, mean that the selection of an unsuitable site is acceptable to ‘tick a box’ to meet that obligation is acceptable.
The fact that the VOG own the site is not a reason on its own for extending the site from 2 to 7 pitches. Further, the fact that the VOG were, through its predecessors in time, party to a lawful undertaking to clear the site and return it to its previous agricultural status, coupled with the VOG’s agreement to transfer the management of the site to the Community Council is evidence of a competing obligation in law for the use of the site.
To ensure that development within the VOG uses land effectively and efficiently and to promote the sustainable use and management of natural resources.
As above, this objective would not be met by extending the site to accommodate 7 pitches. Further, this is agricultural land in a Special Landscaped Area.
Further:
• The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy

and Traveller community.
• The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
• Notwithstanding the above, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.
• Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA)
emphasizes culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than dictating the forced mixing of specific family groups on sites. The guidance was updated in March 2025.

The assessment makes no reference that the site is in a Special Landscape Area. The Replacement Local Development Plan 2021 – 2036: Special Landscape Area – Background Paper – BP-28, November 2025, provides at para 1.6:
"The designation of the SLA was not intended to prevent development, but to ensure that where development was acceptable, careful consideration was given to the design elements of the proposal such as the siting, orientation, layout and landscaping, to ensure that the special qualities and characteristics for which the SLAs have been designated are protected."
In addition to being in a designated Special Landscape Area and the site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and important views from the conservation area.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.

The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18

New site grants are available and cost should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION
Respondent: Mr David Hammond [1410]

Summary:

I state that the site should not be used for the proposed or any other purpose by VOG due to breaches of agreements made in 2017, previous planning permission issues, and a binding undertaking to restore the land. The site does not meet VOG's own criteria, being poorly accessible, unsafe, and lacking local facilities. It conflicts with policy objectives on sustainability, community, and environment. Expanding the site to seven pitches contradicts legal, planning, and community considerations, especially given its designation within a Special Landscape Area and proximity to conservation areas.

Full text:

The site should not be used for the proposed purpose or for any other purpose by the VOG due to the following reasons:
Breach of contract of the agreement made in the July 2017 meeting between the local community, traveller family and VOG. Llangan Action, Llangan Community Council and the traveller family occupying the site, reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community.
2/ The Council (under its previous iteration) previously granted planning permission to itself for use of the site as a gypsy site on 20 December 1994. That decision was subsequently quashed by the High Court in R v South Glamorgan County Council ex parte Harding (1997). Following those proceedings, the Council through its Chief Executive, Mr Foster, entered into a formal undertaking dated 1 May 1996 requiring that once the existing family vacated the site, the Council would restore the land to its original agricultural condition. That undertaking remains binding and has not been discharged. The proposed allocation and expansion of the site appears inconsistent with that undertaking and raises questions as to whether the Council can lawfully promote the site for further development.

In any event, the site does not meet the criteria set in the VOG's own current Gypsy and Traveller Accommodation Assessment ("GTAA") and with reference to Policy MD18 (Gypsy and Traveler Accommodation), including because:

Access to the site is poor. The access lanes is too narrow (2.5m min) and can't be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m. The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge. Extending the proposal to 7 pitches on the site would further restrict the ability of

emergency vehicles to manoeuvre around the site.

The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the site was poor. The Report stated, "It is clear that access and drainage works would need to be improved for the site to meet Welsh Goverment guidance."1 These constraints remain relevant when considering the proposed significant expansion of the site.

Site access is "unsafe" having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.

The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.

The size of the site and number of pitches proposed is not appropriate to its location and accommodation needs.

The Cardiff and Vale of Glamorgan Survey and Assessment of Gypsy and Traveller Accommodation – Final Report – August 2008, prepared by the Fordham Research Group Limited made a finding that there was a preference for members of the Gypsy / Traveller community for smaller, family sized sites. The expansion of the site to 7 pitches is wholly contrary to the findings of the report commissioned for the benefit and assistance of the VOG.

The Replacement Local Development Plan 2021 – 2036: Issues, Vision and Objectives June 2023 (Background Paper – BP2) states, at 4.1. that:

"Our Vision for the Vale of Glamorgan is a place:
That is safe, clean, and attractive, where individuals and communities have sustainable opportunities to improve their health, learning and skills, prosperity, and wellbeing; and
Where there is a strong sense of community in which local groups and individuals have the capacity and incentive to make an effective contribution to the future sustainability of the area."
The RLDP objectives are set out at paragraph 5 as follows:
To sustain and further the development of sustainable communities within the VOG, providing opportunities for living, learning, working and socialising for all. The location of the site does not support this objective.
To ensure that development within the VOG makes a positive contribution towards reducing the impact of and mitigating the adverse effects of Climate Change. In respect of mitigating climate change, it is stated this means: Development of the site will not contribute towards this objective. In particular, as stated above, the lack of public transport will no doubt result in multiple vehicles being used to transport to and from the site. Such a need could be avoided if the allocation requirement was situated in an area with better public transport / an area close to facilities such as healthcare etc.

Alternatively, the agreement previously reached with the VOG to return the site to the Community Council for use as allotments would have a positive impact in respect of climate change, not least due to the fact that produce would be grown locally. The success of allotments in Treoes has demonstrated the viability of such a programme and the VOG had previously indicated its support for returning the site to the Community Council for such a purpose.

To reduce the need to VOG residents to travel to meet their daily needs and enabling them greater access to sustainable forms of transport.
As above, the site does not meet this objective due to its distance from facilities such as healthcare, shops etc. and the lack of public transport.

To protect and enhance the VOG's historic, built, and natural environment.
The proposal would adversely impact the undeveloped rural character of the area.

To maintain, enhance and promote community facilities and services in the VOG.
The VOG's previous agreement to return the site to the community for use as an allotment is a key illustration of achieving this objective. The proposed extension of the site for 7 pitches does not promote this objective, but wholly detracts from it. Llangan does not any other land to enhance and promote community facilities and services. Further, as the VOG is aware, the Community Council is not seeking funding from the VOG for the maintenance of the site which the VOG agreed to transfer management of to the Community Council.

To provide the opportunity for people in the VOG to meet their housing needs.
It is accepted the VOG has a lawful duty under section 101(1) of the Housing (Wales) Act 2014 to carry out an assessment of the accommodation needs of Gypsies and Travellers residing in its area. That is not disputed. That fact that the VOG has a legal requirement to meet this legal obligation does not, however, mean that the selection of an unsuitable site is acceptable to 'tick a box' to meet that obligation is acceptable.

The fact that the VOG own the site is not a reason on its own for extending the site from 2 to 7 pitches. Further, the fact that the VOG were, through its predecessors in time, party to a lawful undertaking to clear the site and return it to its previous agricultural status, coupled with the VOG's agreement to transfer the management of the site to the Community Council is evidence of a competing obligation in law for the use of the site.

To ensure that development within the VOG uses land effectively and efficiently and to promote the sustainable use and management of natural resources.
As above, this objective would not be met by extending the site to accommodate 7 pitches. Further, this is agricultural land in a Special Landscaped Area.

Also:
The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.

The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.

Notwithstanding the above, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.

Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA) emphasizes culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than dictating the forced mixing of specific family groups on sites. The guidance was updated in March 2025.

The assessment makes no reference that the site is in a Special Landscape Area. The Replacement Local Development Plan 2021 – 2036: Special Landscape Area – Background Paper – BP-28, November 2025, provides at para 1.6:

"The designation of the SLA was not intended to prevent development, but to ensure that where development was acceptable, careful consideration was given to the design elements of the proposal such as the siting, orientation, layout and landscaping, to ensure that the special qualities and characteristics for which the SLAs have been designated are protected."

In addition to being in a designated Special Landscape Area and the site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and important views from the conservation area.

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land. The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18

Change suggested by respondent:

5566 Object

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION
Respondent: Mr michael davey [3300]

Summary:

I understand that the site cannot be used for the proposed Gypsy and Traveller pitches due to legal undertakings, poor access, and drainage issues, as well as its location being unsuitable for sustainable living. The site's expansion from two to seven pitches conflicts with planning policies, community agreements, and environmental protections, including its status within a Special Landscape Area. The previous agreement to return the site to community use as allotments remains valid, and the proposed development risks harming local character, increasing tension, and failing to meet the community's needs or sustainable development objectives.

Full text:

The site should not be used for the proposed purpose or for any other purpose by the VOG as a consequence of the following:

The Council (under its previous iteration) previously granted planning permission to itself for use of the site as a gypsy site on 20 December 1994. That decision was subsequently quashed by the High Court in R v South Glamorgan County Council ex parte Harding (1997). Following those proceedings, the Council through its Chief Executive, Mr Foster, entered into a formal undertaking dated 1 May 1996 requiring that once the existing family vacated the site, the Council would restore the land to its
original agricultural condition. That undertaking remains binding and has not been discharged. The proposed allocation and expansion of the site appears inconsistent with that undertaking and raises questions as to whether the Council can lawfully promote the site for further development.

July 2017 meeting with the VOG.
Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. Had the VOG done so, it would have discharged the obligations it had bound itself to under the undertaking. The VOG have, however, without any explanation, gone back on that agreement without any further discussions with the Community.

In any event, the site does not meet the criteria set in the VOG's own current Gypsy and Traveller Accommodation Assessment ("GTAA") and with reference to Policy MD18 (Gypsy and Traveler Accommodation), including because:

Access to the site is poor. The access lanes is too narrow (2.5m min) and can't be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m

The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge.

Extending the proposal to 7 pitches on the site would further restrict the ability of emergency vehicles to manoeuvre around the site.

The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the site was poor. The Report stated, "It is clear that access and drainage works would need to be improved for the site to meet Welsh Goverment guidance."1 These constraints remain relevant when considering the proposed significant expansion of the site.

Site access is "unsafe" having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.

The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.

The size of the site and number of pitches proposed is not appropriate to its location and accommodation needs.

The Cardiff and Vale of Glamorgan Survey and Assessment of Gypsy and Traveller Accommodation – Final Report – August 2008, prepared by the Fordham Research Group Limited made a finding that there was a preference for members of the Gypsy / Traveller community for smaller, family sized sites. The expansion of the site to 7 pitches is wholly contrary to the findings of the report commissioned for the benefit and assistance of the VOG.

The Replacement Local Development Plan 2021 – 2036: Issues, Vision and Objectives June 2023 (Background Paper – BP2) states, at 4.1. that:

"Our Vision for the Vale of Glamorgan is a place:

That is safe, clean, and attractive, where individuals and communities have sustainable opportunities to improve their health, learning and skills, prosperity, and wellbeing; and

Where there is a strong sense of community in which local groups and individuals have the capacity and incentive to make an effective contribution to the future sustainability of the area."

The RLDP objectives are set out at paragraph 5 as follows:

RDLP objective

Comment

To sustain and further the development of sustainable communities within the VOG, providing opportunities for living, learning, working and socialising for all.

The location of the site does not support this objective.

To ensure that development within the VOG makes a positive contribution towards reducing the impact of and mitigating the adverse effects of Climate Change. In respect of mitigating climate change, it is stated this means:

“Encourage development that reduces the need to travel by car and encourage people to participate in active travel and use sustainable transport to reduce emissions and improve air quality.

Ensure that all new development and infrastructure is reliant to future impacts arising from Climate Change, Direct development away from areas prone to flood risk and incorporate water management, biodiversity enhancement and adaptation measures.”

Development of the site will not contribute towards this objective. In particular, as stated above, the lack of public transport will no doubt result in multiple vehicles being used to transport to and from the site. Such a need could be avoided if the allocation requirement was situated in an area with better public transport / an area close to facilities such as healthcare etc.

Alternatively, the agreement previously reached with the VOG to return the site to the Community Council for use as allotments would have a positive impact in respect of climate change, not least due to the fact that produce would be grown locally. The success of allotments in Treoes has demonstrated the viability of such a programme and the VOG had previously indicated its support for returning the site to the Community Council for such a purpose.

To reduce the need to VOG residents to travel to meet their daily needs and enabling them greater access to sustainable forms of transport.

As above, the site does not meet this objective due to its distance from facilities such as healthcare, shops etc. and the lack of public transport.

To protect and enhance the VOG’s historic, built, and natural environment.

The proposal would adversely impact the undeveloped rural character of the area.

To maintain, enhance and promote community facilities and services in the VOG.

The VOG’s previous agreement to return the site to the community for use as an allotment is a key illustration of achieving this objective. The proposed extension of the site for 7 pitches does not promote this objective, but wholly detracts from it. Llangan does not any other land to enhance and promote community facilities and services. Further, as the VOG is aware, the Community Council is not seeking funding from the VOG for the maintenance of the site which the VOG agreed to transfer management of to the Community Council.

To provide the opportunity for people in the VOG to meet their housing needs.

It is accepted the VOG has a lawful duty under section 101(1) of the Housing (Wales) Act 2014 to carry out an assessment of the accommodation needs of Gypsies and Travellers residing in its area. That is not disputed. That fact that the VOG has a legal requirement to meet this legal obligation does not, however, mean that the selection of an unsuitable site is acceptable to ‘tick a box’ to meet that obligation is acceptable.

The fact that the VOG own the site is not a reason on its own for extending the site from 2 to 7 pitches. Further, the fact that the VOG were, through its predecessors in time, party to a lawful undertaking to clear the site and return it to its previous agricultural status, coupled with the VOG’s agreement to transfer the management of the site to the Community Council is evidence of a competing obligation in law for the use of the site.

To ensure that development within the VOG uses land effectively and efficiently and to promote the sustainable use and management of natural resources.

As above, this objective would not be met by extending the site to accommodate 7 pitches. Further, this is agricultural land in a Special Landscaped Area.

Further:

The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.

The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.

Notwithstanding the above, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.

Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA) emphasizes culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than dictating the forced mixing of specific family groups on sites. The guidance was updated in March 2025.

The assessment makes no reference that the site is in a Special Landscape Area. The Replacement Local Development Plan 2021 – 2036: Special Landscape Area – Background Paper – BP-28, November 2025, provides at para 1.6:

"The designation of the SLA was not intended to prevent development, but to ensure that where development was acceptable, careful consideration was given to the design elements of the proposal such as the siting, orientation, layout and landscaping, to ensure that the special qualities and characteristics for which the SLAs have been designated are protected."

In addition to being in a designated Special Landscape Area and the site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and important views from the conservation area.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.

The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18

New site grants are available and cost should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mr Mathew Daniels [3302]

Summary:

I object because there is a legally binding agreement from 2017 involving the VOG council, Llangan Community Council, and the 'ONE' traveller family, although it is unenforced. The site does not meet VOG guidelines due to poor access, flood risk, inadequate drainage, lack of public footpaths, street lighting, and public transport, making it dangerous. It is located in a special landscape area near a conservation site and contradicts VOG's sustainability objectives by increasing vehicular traffic on poorly maintained rural lanes which hampers access to local facilities and emergency services.

Full text:

I object because there is a legally binding agreement from 2017 involving the VOG council, Llangan Community Council, and the 'ONE' traveller family, although it is unenforced. The site does not meet VOG guidelines due to poor access, flood risk, inadequate drainage, lack of public footpaths, street lighting, and public transport, making it dangerous. It is located in a special landscape area near a conservation site and contradicts VOG's sustainability objectives by increasing vehicular traffic on poorly maintained rural lanes which hampers access to local facilities and emergency services.

Change suggested by respondent:

I don't think this plan is appropriate at all.
This plan should be cancelled and a more appropriate site found elsewhere that is more suitable.
For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.
The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Dr Ross Chidgey [3291]

Summary:

In June 2017, an agreement was made for the site to be transferred to the Community Council for community use, but the RLDP proposal contradicts this. The site is unsuitable for the proposed gypsy and traveller pitches due to poor access, drainage, lack of public facilities, and its location. It also fails to meet social housing standards and risks community tension. The site's location in a Special Landscape Area and proximity to a conservation area make expansion undesirable. Transferring the site to the Community Council aligns better with VOG's environmental and community objectives.

Full text:

In around June 2017, Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The proposal in the RLDP for the site is wholly contrary to what was agreed.

The site is not suitable for the proposed use and does not meet the VOG's own criteria for a gypsy and traveller site, including because:
o Access is poor, with the lane being only 2.5m wide, which is less than the recommended access requirements for emergency vehicles of 3.7m. Extending the pitches would also restrict the ability of emergency vehicles to turn around on the site.
o The site is situated in low-lying land and has poor drainage.
o There is no public footpath near the site and no street lighting.
o There is no public transport and the site is not reasonably accessible to day-to-day services, such as medical facilities, shops and community facilities. Cowbridge is around 7.5km from the site.
o The size of the site and number of pitches is not appropriate to its location and accommodation needs.
Further:
o The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
o The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
o The site is in a Special Landscape Area and adjacent to the Llangan Conservation Area. The RDLP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion is contrary to that view.
o The agreement reached with the VOG to transfer the site to the Community Council for use as allotments (following the success of a similar project in the neighbouring village of Treoes) would better meet the VOG's vision to in its RLDP objectives to mitigate the adverse effects of climate change and to enhance and promote community facilities and services in the VOG.
o The proposed expansion of the site goes against the VOG's objective to reduce the need for travel for VOG residents to meet their daily needs.
o The proposed development would also be contrary to the VOG's object to protect and enhance the VOG's historic, built and natural environment.
o The fact that the VOG owns the site does not in and of itself make it suitable for the proposed expansion.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.

· The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.

· New site grants are available and cost should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Dr Beverley Evans [3306]

Summary:

I note that an agreement was reached with the VOG for the site's vacating and transfer to the Community Council for community use, but the RLDP proposal contradicts this. The site is unsuitable for the proposed gypsy and traveller use due to poor access, drainage, lack of public transport or amenities, and inappropriate size. It also fails to meet social housing standards and risks community tension. Situated in a protected landscape area, expansion conflicts with environmental, landscape, and local objectives, and the site's ownership does not justify its proposed development.

Full text:

Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The proposal in the RLDP for the site is wholly contrary to what was agreed.

· The site is not suitable for the proposed use and does not meet the VOG's own criteria for a gypsy and traveller site, including because:

o Access is poor, with the lane being only 2.5m wide, which is less than the recommended access requirements for emergency vehicles of 3.7m. Extending the pitches would also restrict the ability of emergency vehicles to turn around on the site.

o The site is situated in low-lying land and has poor drainage.

o There is no public footpath near the site and no street lighting.

o There is no public transport and the site is not reasonably accessible to day-to-day services, such as medical facilities, shops and community facilities. Cowbridge is around 7.5km from the site.

o The size of the site and number of pitches is not appropriate to its location and accommodation needs.

· Further:

o The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.

o The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.

o The site is in a Special Landscape Area and adjacent to the Llangan Conservation Area. The RDLP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion is contrary to that view.

o The agreement reached with the VOG to transfer the site to the Community Council for use as allotments (following the success of a similar project in the neighbouring village of Treoes) would better meet the VOG's vision to in its RLDP objectives to mitigate the adverse effects of climate change and to enhance and promote community facilities and services in the VOG.

o The proposed expansion of the site goes against the VOG's objective to reduce the need for travel for VOG residents to meet their daily needs.

o The proposed development would also be contrary to the VOG's object to protect and enhance the VOG's historic, built and natural environment.

o The fact that the VOG owns the site does not in and of itself make it suitable for the proposed expansion.

5605 Object

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mr Mathew Daniels [3302]

Summary:

I believe this proposal, like SP9, is poorly considered and contradicts a lawful agreement made in 2017 between the VOG council, Llangan community council, and the 'ONE' traveller family to transfer the site for community use. Points 1-7 in the proposal are inaccurate. The site's only access is via rural lanes, increasing traffic and risking safety. It does not meet social housing standards, risks community tension, is in a flood risk area with inadequate amenities, and is in a protected landscape area, making the expansion inappropriate.

Full text:

Similarly this proposal, like SP9, is ill thought out and contrary to a previous LAWFULL agreement between the VOG council, LLangan community council and the 'ONE' traveller family to transfer the site in 2017 to the community council for community use.
Points 1-7 outlined in the proposal are not correct.
1,2 & 5. The site only has vehicular access leading to increased traffic on poorly maintained, unlit rural lanes with no public pathways, hampering safe access to local facilities and emergency services. No public transport within a safe walking distance.
3. The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
4. The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
6. Situated in a Flood risk area with on site services/amenities not being adequate without serious work - who will pay for this work?
7. The site is in a Special Landscape Area and adjacent to the Llangan Conservation Area. The RDLP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion is contrary to that view.
Furthermore the nearest settlement with appropriate facilities and services is Cowbridge 7.5 km away.

Change suggested by respondent:

There are no changes that, in my mind would support any such proposal. There are no provisions to restrict the use of this site in the future should this inappropriate proposal be passed; furthermore the VOG Council has shown that they can agree to certain lawful proposals only to renege on them in future years. Therefore this proposal should be removed from the development plan.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Ms An Silk [3259]

Summary:

Access to local amenities from the site is poor. There is no public transport or safe (walking) route to Cowbridge / Pencoed, therefore journeys will need to be by car. The road is narrow and access for emergency services would be difficult.
The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
Furthermore, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence.

5816 Object

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Ms Frances Thornton [3356]

Summary:

I note that the proposed allocation of the Penllyn Glebe site conflicts with the 2017 agreement and a 1996 undertaking to vacate the site for agricultural use. The site is unsuitable for development due to access issues, flood risk, poor drainage, and safety concerns, especially as it does not meet the Council’s criteria for a gypsy and traveller site. Its location within a protected landscape area and lack of amenities further undermine its suitability. The proposal contradicts policies aimed at reducing travel, promoting sustainability, and protecting the environment.

Full text:

The proposed allocation of the Penllyn Glebe site disregards the agreement reached in 2017 between Llangan Action Group, Llangan Community Council and the traveller family occupying the site, for vacation of the site and subsequent lease to Llangan Community Council for community use.
Further, the Council is bound by an undertaking given in 1996, pursuant to Judicial Review proceedings, to use its best endeavours to achieve vacant possession and return the site to agricultural use. The residents have a legitimate expectation that this undertaking be complied with and the aforementioned agreement which took place in 2017 gave the residents the long-awaited assurance that the undertaking would be discharged.
Notwithstanding the above, a host of reasons exist which render the site unsuitable for the proposed use, added to which the proposal does not meet the criteria of the Vale of Glamorgan Council ("the Council") for a gypsy and travellers site.
Set out below are the reasons why the site fails to meet the Council's own criteria, t/w further issues which demonstrate the inadequacy of the site for the proposed use:
Access to the site is via a single file traffic lane of 2.5m width. The recommended access width for emergency vehicles is 3.7m Increased capacity would further frustrate the manoeuvrability of such vehicles which raises safety concerns that would be compounded by increased capacity.
The topography of the land in question renders it unsuitable for residential use. The site is situate on low-lying land which gives rise to a multiplicity of issues. There is a propensity for flooding which is exacerbated by the poor drainage, as reflected in the name of lane - historically known as "Waterston" or "Watery Lane". As a consequence, the site is damp and blanketed in a dense mist which gives rise to health issues that have been previously communicated to the Council.
As such, the proposal is contrary to the RLDP objective to:

"Ensure that all new development and infrastructure is resilient to future impacts arising from Climate Change. Direct development away from areas prone to flood risk …"

There is no public transport serving Llangan. The nearest bus service is 1.7 miles away on the A48 and the nearest railway stations are in Bridgend, approx 4.5 miles, and Llantwit Major, being 5 miles away.
This is compounded by unsafe pedestrian access. Llangan is known as an isolated rural village with narrow, unlit lanes which would not accommodate pavements. The lane adjacent the lane accessing the site is particularly dangerous in that children cannot walk or cycle to school; the only transport option being via car. Recent representations by National Grid to the Council concerning street lighting in the village met with the response that the deliverability of such would only be considered if petitioned by residents. Development in such an area is contrary to the Council's Active Travel policies and could not comply with, inter alia, the WG's transport and sustainability policies which actively encourage the use of public transport.
The proposals for the site go against the Council's own objective to reduce the need for travel for Vale of Glamorgan residents to meet their day-to-day needs as set out below.
The site is not reasonably accessible to public facilities, such as shops and community services and would not meet, eg day-to-day medical requirements, which are accessible in Cowbridge, some 7.5km from the site.
The site has no mains drainage and is served by a cesspit, the emptying costs of which are disproportionately high and would, arguably, be unaffordable. Connection to mains drainage is frequently not an option considered by WW, in rural locations, given costs/benefits.
The standards required for social housing are equally applicable to accommodation for the Gypsy and Traveller community and the site does not meet these standards.
The proposed site, given its location within a Special Landscape Area and adjacent Llangan Conservation Area, is contrary to the RLDP background paper, which acknowledges the importance of protecting views and landscape character within these areas.
Inclusion of the site in the RLDP is not in accordance with the Council's objective to protect and enhance the Council's historic, built and natural environment.
The RLDP objectives to mitigate the adverse affect of climate change and to promote community facilities would have been served, had the Council followed the assurance given to lease the land to Llangan Community Council, noting that the Council was aware of the Community Council's intention to use the land for allotment purposes, in line with the successful allotment scheme in place in the neighbouring village of Treoes.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework, previous legal commitments given in relation to the land, Welsh Government guidance and national planning policy.

The site should therefore be removed from the RLDP and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.

New site grants are available and costs of facilitating an alternative site should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mr James Farrant [3402]

Summary:

In June 2017, an agreement was reached with the VOG to transfer the site to the Community Council for community use, but the RLDP proposal contradicts this. The site is unsuitable for the proposed gypsy and traveller pitches due to poor access, drainage, lack of public transport, and inappropriate size. It also does not meet social housing standards and risks community tension. Located in a sensitive landscape and conservation area, the expansion conflicts with environmental protection objectives and VOG's goals to reduce travel and promote community facilities. Ownership alone does not justify the expansion.

Full text:

In around June 2017, Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The proposal in the RLDP for the site is wholly contrary to what was agreed.

· The site is not suitable for the proposed use and does not meet the VOG's own criteria for a gypsy and traveller site, including because:

o Access is poor, with the lane being only 2.5m wide, which is less than the recommended access requirements for emergency vehicles of 3.7m. Extending the pitches would also restrict the ability of emergency vehicles to turn around on the site.

o The site is situated in low-lying land and has poor drainage.

o There is no public footpath near the site and no street lighting.

o There is no public transport and the site is not reasonably accessible to day-to-day services, such as medical facilities, shops and community facilities. Cowbridge is around 7.5km from the site.

o The size of the site and number of pitches is not appropriate to its location and accommodation needs.

· Further:

o The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.

o The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.

o The site is in a Special Landscape Area and adjacent to the Llangan Conservation Area. The RDLP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion is contrary to that view.

o The agreement reached with the VOG to transfer the site to the Community Council for use as allotments (following the success of a similar project in the neighbouring village of Treoes) would better meet the VOG's vision to in its RLDP objectives to mitigate the adverse effects of climate change and to enhance and promote community facilities and services in the VOG.

o The proposed expansion of the site goes against the VOG's objective to reduce the need for travel for VOG residents to meet their daily needs.

o The proposed development would also be contrary to the VOG's object to protect and enhance the VOG's historic, built and natural environment.

o The fact that the VOG owns the site does not in and of itself make it suitable for the proposed expansion.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.

· The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.

· The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.
· New site grants are available and cost should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Llangan Community Council (Clerk) [239]

Summary:

Llangan Community Council object to expanding the Traveller site at Llangan. An agreement in 2017 mandated the site's transfer to the Community Council after most families moved to a new private site. The VOG has breached this agreement, and the site does not meet the VOG's own Gypsy and Traveller Accommodation Assessment criteria. Access is poor and unsafe, drainage is inadequate, and the location is unsuitable for increased pitches due to lack of services, transport, and community facilities. The proposed expansion conflicts with local policies, landscape protections, and previous commitments, and should be removed from the plan.

Full text:

Llangan Community Council (CC) would like to object to the proposed expansion of the Traveller site at Llangan.
In July 2017 there was a meeting between Llangan Community Council, Llangan Action and the traveller family occupying the site and an agreement was reached with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The current family was granted planning permission for their own private site and have mostly moved to the new location, just leaving a few family members on the original site to protect the land as requested by the VOG at the meeting. Our understanding was that the action taken by all parties fulfilled the requirements of the meeting and the land could now be transfer to the Community Council as agreed. The VOG have breached this agreement with no further discussion with the Community over the last 9 years.
Also in the opinion of the CC the site does not meet the criteria set in the VOG's own current Gypsy and Traveller Accommodation Assessment ("GTAA") and with reference to Policy MD18 (Gypsy and Traveler Accommodation).
The access lanes is too narrow (2.5m min) and can't be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m. The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge. Extending the proposal to 7 pitches on the site would further restrict the ability of emergency vehicles to manoeuvre around the site.
The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the site was poor. The Report stated, "It is clear that access and drainage works would need to be improved for the site to meet Welsh Goverment guidance."1 These constraints remain relevant when considering the proposed significant expansion of the site.
Site access is "unsafe" having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.
The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.
The size of the site and number of pitches proposed is not appropriate to its location and accommodation needs. It does not meet the criteria for a safe, clean, and attractive area , where individuals and communities have sustainable opportunities to improve their health, learning and skills, prosperity, and wellbeing. Where there is a strong sense of community in which local groups and individuals have the capacity and incentive to make an effective contribution to the future sustainability of the area."
The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
Notwithstanding the above, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.
Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA) emphasizes culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than dictating the forced mixing of specific family groups on sites. The guidance was updated in March 2025.
In addition to being in a designated Special Landscape Area and the site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and important views from the conservation area of Llangan.
The VOG's previous agreement in 2017 to return the site to the community for use as an allotment is a key illustration of achieving this objective. The proposed extension of the site for 7 pitches does not promote this objective, but wholly detracts from it. Llangan does not any other land to enhance and promote community facilities and services. Further, as the VOG is aware, the Community Council is not seeking funding from the VOG for the maintenance of the site which the VOG agreed to transfer management of to the Community Council.
The fact that the VOG own the site is not a reason on its own for extending the site from 2 to 7 pitches. Further, the fact that the VOG were, through its predecessors in time, party to a lawful undertaking to clear the site and return it to its previous agricultural status, coupled with the VOG's agreement to transfer the management of the site to the Community Council is evidence of a competing obligation in law for the use of the site.
For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments and community agreements made in 2017 relating to the land. The site should therefore be removed from the Replacement Local Development Plan and transferred to the Community Council to be used as a community space and allotments

Change suggested by respondent:

The agreement from 2017 should be upheld and the land transferred to the community.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Llangan Action Group [3438]

Agent: Hugh James

Summary:

The proposed Llangan allocation is unsound in law and planning terms. It conflicts with the Council's 1996 undertaking, reinforced by later discussions, that the site would be vacated and restored, creating a legitimate expectation. It also conflicts with national policy and the Council's own policies requiring sustainable locations, safe access and appropriate scale. Llangan is a rural hamlet with poor services, limited public transport and unsuitable highway and drainage infrastructure. The proposal expands the site from two to seven pitches without adequate justification, harms the Special Landscape Area/conservation setting, and is not clearly deliverable or the most suitable site.

Full text:

1. Introduction

1.1 We act for the Llangan Action Group ("LAG") and are instructed by them to submit this letter of representation objecting to the proposed allocation and expansion of the Gypsy and Traveller site at Llangan (the "Site") within the Vale of Glamorgan Replacement Local Development Plan ("RLDP"). LAG respectfully submits that the proposed allocation should be removed from the RLDP. The proposal raises serious legal and planning concerns which go to the heart of whether the RLDP can properly be considered sound.

1.2 In particular, the proposed allocation is inconsistent with the Council's previous Undertaking (defined below) concerning the Site, conflicts with the Council's own planning policy framework and evidence base and fails to satisfy the recognised tests of soundness required for inclusion within the RLDP.

1.3 This representation therefore addresses both the legal issues arising from the Council's previous Undertaking and the planning merits of the proposed allocation. LAG recognises that the Council has statutory duties in relation to the accommodation needs of Gypsies and Travellers. However, the existence of such duties does not remove the requirement for site allocations within the development plan to be appropriate, sustainable, and supported by robust evidence.

2. Background and Planning History

2.1 The Site has a long and complex planning history which is directly relevant to the Council's current proposal to allocate and expand the Site within the RLDP. In December 1994, the former South Glamorgan County Council granted planning permission to itself for the use of the Site as a Gypsy site. That decision was subsequently challenged by local residents and ultimately quashed following judicial review proceedings in R v South Glamorgan County Council ex parte Harding (1997).

2.2 The High Court therefore confirmed that the planning permission granted by the Council was unlawful. The judicial review proceedings were significant not only because they resulted in the planning permission being quashed but also because they led to the Council giving a formal Undertaking concerning the future use of the land.

3. The Council's Undertaking

3.1 On 1 May 1996, during the course of the judicial review proceedings, the Chief Executive of the Council gave a formal Undertaking on behalf of the Council ("Undertaking"). The Undertaking was expressed to bind the Council and all successors in office and contained two key elements.

3.1.1 First, the Council undertook to use its best endeavours to remove the occupiers from the Site, including Mr William Carroll and any other persons occupying the Site.

3.1.2 Secondly, the Council undertook that once the Site became vacant it would remove all structures and services installed on the Site and restore the land to its original agricultural condition.

3.2 The clear intention of the Undertaking was therefore that the land should ultimately revert to its former use once the occupation had ceased. However, the RLDP now proposes to retain and expand the use of the land as a permanent Gypsy and Traveller site. This proposal is inconsistent with the Undertaking previously given by the Council.

3.3 In addition to the Undertaking given on 1 May 1996, the Council subsequently engaged in discussions with representatives of the LAG, the Community Council, and the occupiers of the Site with a view to resolving the long-standing issues relating to the Site. Minutes of a meeting held on 12 June 2017 between representatives of the Vale of Glamorgan Council, members of LAG and the occupier of the Site record that the Council acknowledged that, if the occupier and his family were to relocate or if the Site were otherwise vacated, the Site would effectively fall away from the Local Development Plan and could be returned to community use, including as allotments through the Community Council. The minutes further record that the Council indicated that the Site could be removed from the development plan at a future review stage once the occupation issue had been resolved.

3.4 This discussion is most significant because it demonstrates that the Council itself previously contemplated a resolution which was consistent with the Undertaking given in 1996 and with the expectation that the Site would ultimately revert to community or agricultural use rather than being expanded or retained as a permanent traveller site. The current proposal within the RLDP to allocate the Site for seven pitches therefore is inconsistent not only with the original Undertaking but also with the subsequent position discussed and agreed in principle between the Council and the members of LAG in 2017.

4. Legitimate Expectation

4.1 The Undertaking (together the with consensus reached at the meeting on 12 June 2017) given by the Council created

a clear legitimate expectation among local residents that the Site would ultimately be cleared and restored. The doctrine of legitimate expectation is well established in public law and arises where a public authority makes a clear representation or promise which it would be unfair or an abuse of power to depart from without compelling justification.
4.2 The leading authority is R v North and East Devon Health Authority ex parte Coughlan [2001] QB 213. In that case the Court of Appeal held that where a public authority makes a clear and unequivocal representation to a particular group of individuals, and those individuals reasonably rely upon that representation, the authority may be required to honour that promise unless it can demonstrate an overriding public interest which justifies departing from it. The Court recognised that in appropriate circumstances such representations may give rise to a substantive legitimate expectation, meaning that the authority is not merely required to consult before changing its position, but may be legally constrained from departing from the promise at all.
4.3 In the present case, the Undertaking given by the Council on 1 May 1996 was made in the context of judicial review proceedings and was relied upon by local residents when those proceedings were resolved. The Undertaking clearly indicated that the Council would use its best endeavours to remove the occupiers from the Site and would restore the land to its original condition once the occupation had ceased. Residents were therefore entitled to expect that the Council would act in accordance with that Undertaking and also the subsequent consensus reached at the June 2017 meeting.
4.4 Against that background, the Council's decision to promote the Site within the RLDP as a permanent Gypsy and Traveller allocation is inconsistent with the Undertaking previously given and may therefore amount to an unlawful frustration of the legitimate expectation created by that promise. In the absence of a compelling public interest justification, it would be difficult to reconcile the Council's current position with the principles established in Coughlan.

5. National Planning Policy
5.1 National planning policy contained within Planning Policy Wales ("PPW") emphasises that development should be directed to sustainable locations and that new development should minimise reliance on private car travel. PPW also emphasises the importance of ensuring that development contributes to the creation of sustainable communities.
5.2 Welsh Government guidance relating to Gypsy and Traveller sites similarly emphasises that such sites should normally be located close to services and facilities. The Site does not meet these criteria on any analysis. The Site is located in a small rural settlement with extremely limited services and facilities.

6. Conflict with Local Development Plan Policy
6.1 The proposed allocation also conflicts with the Council's own development plan policies. In particular, Policy MD18 (Gypsy and Traveller Accommodation) sets out the criteria against which proposals for Gypsy and Traveller sites must be assessed. The policy requires that such sites must be located in sustainable locations, must have safe and appropriate access, must be of a scale appropriate to their surroundings and must be capable of being adequately serviced.
6.2 These criteria are intended to ensure that Gypsy and Traveller sites are located in places where residents can reasonably access services and facilities and where development can take place without causing unacceptable impacts on the surrounding area.
6.3 The Site does not meet these requirements on any analysis. The Site is located within a small rural settlement which has extremely limited services and facilities. Essential services such as shops, healthcare facilities and other community services are not available within the village itself and are located in larger settlements some distance away.
6.4 In addition, access to the Site is via a narrow rural lane which is constrained in width and is unsuitable for the level of activity that would arise from an expanded site accommodating multiple pitches. These access constraints were previously identified during the examination of the Vale of Glamorgan Local Development Plan.
6.5 The scale of development proposed also raises significant concerns. The Planning Inspector previously concluded that the Site was suitable only for two pitches. The proposal to expand the Site to seven pitches therefore represents a substantial increase in scale which has not been adequately justified.
6.6 For these reasons, the proposed allocation fails to satisfy the criteria contained within Policy MD18 and is therefore inconsistent with the Council's own development plan policy framework.

7. Policy SP9 – Gypsy and Traveller Site Provision
7.1 Policy SP9 proposes to allocate land at Llangan for the provision of seven Gypsy and Traveller pitches. The supporting text states that the Site has capacity to accommodate seven pitches and that the principle of the Site's use as a Gypsy and Traveller site is well established.
7.2 However, the planning history demonstrates that the Site has been the subject of legal challenge and that the Council itself gave an undertaking requiring the land to be restored once the occupation ended.
7.3 In those circumstances, the assertion that the principle of the Site's use is well established is difficult to reconcile with both the legal history and the Undertaking previously given by the Council.

8. Policy GT1 – Gypsy and Traveller Accommodation
8.1 Policy GT1 sets out the criteria against which proposals for new Gypsy and Traveller sites, or extensions to existing sites, are to be assessed. The purpose of the policy is to ensure that any such sites are located in appropriate and sustainable locations and that development does not give rise to unacceptable impacts on surrounding communities or the environment.
8.2 The policy requires, amongst other matters, that sites must be reasonably accessible to essential services and facilities such as healthcare, education, employment opportunities and public transport. The intention behind this requirement is to ensure that residents of Gypsy and Traveller sites are able to access everyday services and participate fully in community life without being heavily dependent on private car travel.

8.3 The Site does not satisfy this requirement. Llangan is a small rural settlement with extremely limited services and facilities. The nearest town providing a wider range of services is Cowbridge, which lies approximately 7.5 kilometres from the Site. Public transport provision serving the area is limited and there are few local facilities within walking distance of the Site. As a result, residents would inevitably be heavily dependent on private vehicles in order to access essential services such as healthcare, education and employment.
8.4 Policy GT1 also requires that safe and appropriate vehicular access can be provided from the highway network and that the Site layout allows for adequate provision for parking, turning, servicing and emergency vehicles. These requirements reflect the need to ensure that Gypsy and Traveller sites can operate safely and effectively without creating highway safety concerns.
8.5 In the case of the Site, access is obtained via a narrow rural lane which is constrained in width and alignment. These access constraints were previously identified during the examination of the Vale of Glamorgan Local Development Plan. In that examination the Inspector concluded that access and drainage works would need to be improved for the Site to meet Welsh Government guidance. Those concerns remain relevant and it is not clear from the RLDP evidence base how they have been addressed.
8.6 Policy GT1 further requires that development should not have unacceptable impacts on the character and appearance of the landscape and should be sensitively designed to mitigate any impact on its surroundings. The Site lies within a designated Special Landscape Area and is located adjacent to the Llangan Conservation Area. These designations reflect the importance of protecting the landscape character and historic setting of the area.
8.7 The proposed expansion of the Site therefore raises significant concerns in relation to the potential impact on the surrounding landscape and the setting of the conservation area. The scale of the proposed development is likely to intensify activity at the Site and may therefore give rise to impacts which are inconsistent with the objectives of Policy GT1.
8.8 For these reasons, the proposed allocation of the Site fails to satisfy several of the key criteria contained within Policy GT1 and is therefore inconsistent with the policy framework set out in the RLDP.

9. Previous Inspector's Findings
9.1 The Inspector who examined the Vale of Glamorgan Local Development Plan previously considered the suitability of the Site in the context of the Council's earlier development plan process. The Inspector's report, which forms part of the evidence base for the adopted Local Development Plan, identified a number of concerns regarding the physical constraints affecting the Site.
9.2 In particular, the Inspector concluded that:
"It is clear that access and drainage works would need to be improved for the site to meet Welsh Government guidance."
9.3 The Inspector's conclusion is significant because it recognises that the Site is affected by fundamental infrastructure constraints which must be addressed before the Site could reasonably be considered suitable for development. Those concerns related in particular to the adequacy of the highway access serving the Site and the drainage arrangements necessary to support residential occupation.
9.4 These issues remain unresolved. The RLDP documentation does not clearly explain how the access and drainage concerns identified by the Inspector have now been addressed or how the necessary improvements would be delivered in practice. In circumstances where the Inspector previously identified these constraints as matters requiring improvement, it is incumbent upon the Council to demonstrate clearly that those issues have been satisfactorily resolved before relying upon the Site as a deliverable allocation within the RLDP.
9.5 In the absence of such evidence, the concerns previously identified by the Inspector remain relevant and cast doubt on the suitability and deliverability of the proposed allocation.

10. Sustainability and Location
10.1 Llangan is a small rural settlement with extremely limited services and facilities. The village does not contain the range of services that would normally be expected to support new residential development of the scale proposed within the RLDP.
10.2 The nearest settlement providing a wider range of services and facilities is Cowbridge, which lies approximately 7.5 kilometres from the Site. Essential services such as healthcare facilities, shops and employment opportunities are therefore located some distance away from the Site.
10.3 Public transport provision serving the area is extremely limited and there are no regular or convenient public transport connections serving the village of Llangan itself or linking the Site to Cowbridge or other nearby settlements. The nearest bus service operates along the A48, approximately 1.7 miles from the village. The nearest rail connections are located at Pencoed, approximately 4 miles (6.3km), Bridgend railway station, approximately 4.5 miles (7.3km) away, and Llantwit Major railway station, approximately 8 - 9 miles (13 – 15km) away. Distances are by road from the Site.
10.4 In practical terms, this means that residents of the proposed development would be required to travel some distance in order to access even basic public transport services. Access to those services is further constrained by the nature of the local road network. Pedestrian routes connecting the village to the wider transport network are limited and, in places, involve walking along rural roads which lack pavements and street lighting. These characteristics are typical of rural and relatively isolated locations and have been identified in various studies and reports examining accessibility issues affecting rural communities.
10.5 The absence of accessible public transport, together with the lack of safe and convenient pedestrian routes, means that residents of the proposed development would be heavily dependent on private vehicles in order to access employment, education, healthcare and other essential services. This raises concerns regarding the sustainability of the location when assessed against the relevant planning policy requirements.
10.6 As a result, residents of the proposed development would inevitably be heavily dependent on private vehicles in order to access everyday services and facilities. This level of reliance on private car travel is inconsistent with the RLDP's

stated objectives of promoting sustainable communities and reducing reliance on private vehicles.
10.7 The lack of accessible services is also directly relevant to Policy GT1, which requires Gypsy and Traveller sites to be reasonably accessible to essential services and facilities such as healthcare, education, employment and public transport. In circumstances where such services are not readily available, it is most difficult to conclude that the Site satisfies this requirement.
10.8 Access to the Site is provided by a narrow, single-lane track known as Waterston Lane. The lane is constrained in width and operates effectively as a single-file access route to the Site. The surrounding land is also known to be prone to flooding and waterlogging, which contributes to persistently damp conditions in the immediate area. These environmental conditions are relevant when considering the suitability of the Site for residential occupation.
10.9 During discussions held in 2017, the current occupier of the Site indicated that the damp conditions associated with the Site had resulted in respiratory health problems affecting members of his family. This observation highlights the potential implications of the Site's environmental conditions for the health and wellbeing of those living there.
10.10 In circumstances where the Site is known to experience damp and waterlogged conditions, careful consideration should be given to whether the Site provides an appropriate and sustainable environment for residential use, particularly if the scale of occupation is increased as proposed within the RLDP.

11. Scale of Development
11.1 The Planning Inspector examining the Vale of Glamorgan Local Development Plan previously concluded, after considering the available evidence, that the Site was suitable only for two pitches.
11.2 The proposal within the RLDP to expand the Site to seven pitches therefore represents a substantial increase in scale when compared with the level of development previously considered appropriate for the Site.
11.3 This represents a significant intensification of development which has not been supported by clear evidence demonstrating why such an increase is now considered acceptable.
11.4 The scale of the proposed development must also be considered in light of Policy GT1, which requires that the scale of a Gypsy and Traveller site should be proportionate to both the evidenced needs of the occupiers and the surrounding area.
11.5 In addition, earlier research undertaken for the Council, including the Fordham Research Group study on Gypsy and Traveller accommodation, indicated a preference among members of the Gypsy and Traveller community for smaller family-sized sites. The proposal to expand the Site significantly beyond its previously accepted capacity is therefore inconsistent with those findings.

12. Landscape and Environmental Impact
12.1 The Site lies within a designated Special Landscape Area and is located adjacent to the Llangan Conservation Area. These designations reflect the importance of protecting the landscape character and historic setting of the area.
12.2 Policy GT1 requires that development should not have unacceptable impacts on the character and appearance of the landscape and should be sensitively designed to mitigate any impacts on its surroundings. The expansion of the Site therefore raises concerns regarding the potential impact on the surrounding landscape and the setting of the conservation area.
12.3 In particular, the intensification of activity associated with a larger traveller site has the potential to introduce development which is out of keeping with the established rural character of the area.

13. Settlement Hierarchy
13.1 Evidence prepared by the Council as part of the Sustainable Settlements Appraisal identifies Llangan as a "Hamlet / Rural Area" within the settlement hierarchy. Settlements within this category are characterised by a limited range of services and infrastructure and are therefore not generally considered suitable locations for significant new development.
13.2 The settlement hierarchy forms an important part of the spatial strategy underpinning the development plan and is intended to ensure that development is directed to the most sustainable locations. Allocating and expanding a traveller site within a settlement identified as a rural hamlet is therefore inconsistent with the Council's own spatial strategy.

14. Deliverability
14.1 Site allocations within the RLDP must be realistic and capable of being delivered within the plan period. In the case of the Site, significant highway improvements would be required in order to make it suitable for development.
14.2 The evidence base supporting the RLDP does not clearly demonstrate that these improvements could be delivered within a reasonable timeframe. The Council's reliance on the fact that the Site is in its ownership does not in itself demonstrate that the Site is deliverable. The key issue is whether the necessary infrastructure improvements and environmental mitigation measures can be implemented in practice.
14.3 In circumstances where the deliverability of an allocation is uncertain, the allocation cannot reasonably be relied upon as a means of meeting identified accommodation needs.
14.4 The issue of drainage infrastructure at the Site also raises significant practical and financial concerns. The Site is not connected to the mains sewer network and is instead served by a cesspit. It is understood that the cost of emptying this cesspit has historically been approximately £200 per week. During earlier discussions it appears that the Council may have assumed that these costs were borne by the Site occupants. However, the occupier of the Site has clarified that the cost of emptying the cesspit has in fact been borne by the Council.
14.5 Even on the basis of the historic figure referred to during discussions in 2017, the ongoing maintenance cost associated with the cesspit is substantial. It is reasonable to assume that this cost will have increased significantly in the years since those discussions took place. Moreover, if the Site were expanded to accommodate multiple pitches as proposed under the RLDP, the frequency and cost of cesspit emptying would inevitably increase.

14.6 It is also understood that Welsh Water has previously indicated that connection to the main sewer network would not be feasible in rural locations such as Llangan. If that position remains unchanged, the Site will therefore continue to rely on cesspit infrastructure for the foreseeable future.
14.7 In those circumstances, the financial implications of the proposed allocation require careful consideration. If the costs associated with maintaining the drainage arrangements continue to fall on the Council, the expansion of the Site could result in a significant and ongoing financial burden on the local authority and, ultimately, on local taxpayers. The Council must therefore have regard to its duty to act in the best interests of its residents and to ensure the responsible use of public funds when assessing the appropriateness of this allocation.
14.8 Given these considerations, it would be appropriate for the Council to provide clarity regarding the current costs associated with maintaining the Site, including the ongoing cost of cesspit emptying and the extent to which those costs are borne by the Council.

15. Alternative Sites
15.1 Evidence previously produced in connection with the Local Development Plan indicates that a number of alternative sites exist which perform better when assessed against sustainability criteria. Those sites are considered to offer more sustainable locations with better access to services and infrastructure.
15.2 The RLDP supporting information does not adequately explain why these alternative sites have been rejected in favour of the Site. In the absence of such explanation, it is difficult to conclude that the site selection process has identified the most appropriate location for the proposed development.

16. Tests of Soundness
16.1 For a Local Development Plan to be adopted it must be considered sound.
16.2 In the context of the RLDP, this requires the plan to be justified, effective and consistent with national planning policy. The proposed allocation of the Site fails these tests of soundness.
16.3 In particular, the allocation is not justified by robust evidence, there is considerable doubt as to whether it is deliverable within the plan period, and it conflicts with national planning policy which seeks to direct development to sustainable locations.

17. Summary and Conclusion
17.1 In summary, the proposed allocation of the Site within the RLDP raises a number of serious legal and planning concerns which cast significant doubt on whether the allocation can properly be regarded as sound.
17.2 First, the allocation is inconsistent with the Council's previous Undertaking given on 1 May 1996 in the context of the judicial review proceedings in R v South Glamorgan County Council ex parte Harding, and the later consensus reached on 17 June 2017. Under that Undertaking the Council agreed to use its best endeavours to remove the occupiers from the Site and, once the Site became vacant, to remove the structures and restore the land to its original agricultural condition. The proposal within the RLDP to retain and expand the Site is therefore inconsistent with the Council's earlier Undertaking and gives rise to issues of legitimate expectation and potential public law unlawfulness.
17.3 Secondly, the proposed allocation conflicts with both national planning policy and the Council's own development plan policies. Planning Policy Wales emphasises that development should be directed to sustainable locations and that new development should minimise reliance on private car travel. Policy MD18 of the adopted Local Development Plan and Policy GT1 of the RLDP similarly require Gypsy and Traveller sites to be located in sustainable locations with safe and appropriate access and to be of a scale appropriate to their surroundings. The Site does not meet these criteria.
17.4 Thirdly, the Site is located in a small rural settlement with extremely limited services and facilities. Essential services such as shops, healthcare and employment opportunities are located in Cowbridge, approximately 7.5 kilometres away, and public transport provision serving the Site is extremely limited. Residents would therefore be heavily dependent on private vehicles in order to access basic services, which is inconsistent with the objectives of sustainable development.
17.5 Fourthly, the Planning Inspector examining the Vale of Glamorgan Local Development Plan previously identified concerns regarding the suitability of the Site, concluding that access and drainage works would need to be improved in order for the Site to meet Welsh Government guidance. Those concerns remain unresolved and it is not clear from the RLDP evidence base how they have now been addressed.
17.6 Fifthly, the proposed expansion represents a significant intensification of development at the Site. The Planning Inspector previously concluded that the Site was suitable only for two pitches, yet the RLDP now proposes to expand the Site to seven pitches. No clear evidence has been provided to justify this substantial increase.
17.7 The Site also lies within a Special Landscape Area and adjacent to the Llangan Conservation Area, raising concerns regarding the impact of the proposed development on the character and appearance of the surrounding landscape.
17.8 In addition, the Council's own evidence base identifies Llangan as a "Hamlet / Rural Area" within the settlement hierarchy. Settlements within this category are not intended to accommodate significant new development and allocating a larger traveller site in this location is therefore inconsistent with the Council's spatial strategy.
17.9 Finally, there are serious concerns regarding the deliverability and justification of the allocation. Significant highway improvements would be required to make the Site suitable for development, and it is unclear how these improvements would be delivered within the plan period. Evidence previously produced also indicates that alternative sites exist which perform better when assessed against sustainability criteria.
17.10 In these circumstances the proposed allocation cannot properly be regarded as justified, effective or consistent with national planning policy and therefore fails the recognised tests of soundness required for adoption of the RLDP.
17.11 For all of these reasons, the allocation of land at Llangan for the provision of Gypsy and Traveller pitches should be removed from the RLDP on any view.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Llangan Community Council (Clerk) [239]

Summary:

I object on behalf of Mr William Carroll, who lacks website access but verbally conveyed his concerns. He is very angry about the VOG's plan to expand the site to seven pitches and offer them to strangers with no family ties. He recalls a 2017 agreement where the site was to be vacated and transferred to the Community Council, which has not been honoured. He believes the area cannot support more pitches, citing lack of local services, public transport, and inadequate drainage, making the expansion unfair and unsuitable.

Full text:

Llangan Community Council make the following objection on behalf of Mr William Carroll as he does not have access to the website, however he has verbally communicated the following with Llangan Community Councillors.
Mr Carroll's current position is that he is very angry about the VOG proposing to expand the site again and offer the 7 pitches to people he doesn't know and has no family connections with.
In July 2017 there was a meeting between Llangan Community Council, Llangan Action and the traveller family occupying the site and an agreement was reached with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The current family was granted planning permission for there own private site and have mostly moved to the new location, just leaving a few family members on the original site to protect the land as requested by the VOG at the meeting. Our understanding was that the action taken by all parties fulfilled the requirements of the meeting and the land could now be transfer to the Community Council as agreed. The VOG have breached this agreement with no further discussion with the Community over the last 9 years.
I hear from the Community Council that the VOG are new proposing to expand the Llangan site to 7 pitches. I am concerned and angry about proposal to expand the site again and to offer the 7 pitches to people I don't know and have no connection with. This is very unfair on the community and my family.
The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to services, facilities, employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. There is no public transport serving the site. No mains drainage on only a cesspit and this could not support any additional people.

Change suggested by respondent:

The site should be removed from the plan and the asset transferred to the community as agreed in 2017.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mrs Elizabeth Davey [3476]

Summary:

In June 2017, an agreement was made for the site to be transferred to the Community Council for community use, but the RLDP proposal contradicts this. The site is unsuitable for the proposed use due to poor access, drainage, lack of public transport, and its location in a conservation area. It does not meet standards for social housing or community needs, risking community tension. The expansion conflicts with environmental, landscape, and climate objectives, and owning the site does not automatically justify its development.

Full text:

· In around June 2017, Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The proposal in the RLDP for the site is wholly contrary to what was agreed.
· The site is not suitable for the proposed use and does not meet the VOG's own criteria for a gypsy and traveller site, including because:
o Access is poor, with the lane being only 2.5m wide, which is less than the recommended access requirements for emergency vehicles of 3.7m. Extending the pitches would also restrict the ability of emergency vehicles to turn around on the site.
o The site is situated in low-lying land and has poor drainage.
o There is no public footpath near the site and no street lighting.
o There is no public transport and the site is not reasonably accessible to day-to-day services, such as medical facilities, shops and community facilities. Cowbridge is around 7.5km from the site.
o The size of the site and number of pitches is not appropriate to its location and accommodation needs.
· Further:
o The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
o The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
o The site is in a Special Landscape Area and adjacent to the Llangan Conservation Area. The RDLP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion is contrary to that view.
o The agreement reached with the VOG to transfer the site to the Community Council for use as allotments (following the success of a similar project in the neighbouring village of Treoes) would better meet the VOG's vision to in its RLDP objectives to mitigate the adverse effects of climate change and to enhance and promote community facilities and services in the VOG.
o The proposed expansion of the site goes against the VOG's objective to reduce the need for travel for VOG residents to meet their daily needs.
o The proposed development would also be contrary to the VOG's object to protect and enhance the VOG's historic, built and natural environment.
o The fact that the VOG owns the site does not in and of itself make it suitable for the proposed expansion.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.
· The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.
· New site grants are available and cost should not be a material planning consideration.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mrs Elizabeth Davey [3476]

Summary:

In 2017, Llangan Action, the Community Council, and a traveller family agreed to transfer the site to serve the community, but the RLDP proposal contradicts this. The site is unsuitable due to poor access, drainage, lack of public transport, and inappropriateness for social housing. Its location in a conservation area and landscape zone further opposes expansion. The proposed increase in pitches could cause community tension and conflicts with environmental and development objectives, despite the VOG's ownership. The site's transfer for community use as allotments aligns better with the VOG's goals.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mrs Helen Hammond [3490]

Summary:

The proposal is not in line with the VOG own criteria. It is not inline with the agreement made by VOG with the community in 2017 or the undertaking made in 1996. The community should be able to trust VOG to keep to its own agreements and support the community to provide facilities for all to use. The expansion to 7 pitches is way beyond what the inspector previously found to be acceptable at this location. It does not provide for a sustainable future community for Llangan for all residents including the current occupants of the site.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mr Richard Brian Antuch [3065]

Summary:

I oppose the extension of the Gypsy and Traveller site at Llangan, citing legal and community concerns. The site's previous planning permission was quashed, and the Council has not fulfilled its obligation to remove structures or revert the land to agriculture, despite a 2017 agreement and a legal undertaking. The site is unsuitable due to poor access, drainage, lack of nearby facilities, and its location within a Special Landscape Area. Expanding to seven pitches conflicts with local policies, community objectives, and the site's environmental and historical significance. I recommend removing it from the development plan and identifying better alternatives

Full text:

Response to SP9 (Gypsy and Traveller Site Provision) & GT1 (Gypsy Traveller Accommodation)
Location – Land at Llangan (the "Site")
Primary objection
The Site was the subject of judicial review proceedings.
The former South Glamorgan County Council granted itself planning permission to use the Site as a gypsy site on 20 December 1994. The High Court quashed the planning permission, such that it had no standing in law (R v South Glamorgan County Council ex parte Harding (1997).
In connection with the judicial review proceedings, the Council, through its the Chief Executive,
Mr Foster, entered into a formal undertaking dated 1 May 1996 (the "Undertaking"). The Undertaking was made for the benefit of the wider Llangan community and required the Council to use its best endeavours to remove the occupiers from the Site and, once the Site became va
cant, to remove all structures and services and restore the Site to its original agricultural position.
Notwithstanding that the Undertaking was given some time ago, the Council remain bound by
the same, as they have not yet complied with its terms.
Further, in around June 2017, Llangan Action Group, Llangan Community Council and the traveller family occupying the Site reached an agreement with key members of the Council for the Site to be vacated, and for the Site to be transferred to the Community Council for use by the community.
The discussions and agreement reached in around June 2017 were the result of much time and
effort by all parties and the result would have allowed the Council to discharge the Undertaking it had agreed to be bound by.
For reasons that I believe were not explained, the Council reneged on the agreement without notice or explanation, such that the terms of the legally binding Undertaking are yet to be dis charged.
The proposal to extend the Site to accommodate 7 pitches was received as a surprise in light of the above, as to increase the number of pitches goes completely against what was agreed and goes against the doctrine of legitimate expectation.
Whilst it is appreciated that the Council has an obligation under the Housing (Wales) Act 2014
to make provision for the gypsy and traveller community, it is not clear on what basis the Council has identified a single site to fulfil its obligation in respect of which it is bound by an under taking to return to agricultural land.

Secondary abjection – Suitability of the Site
Notwithstanding the above, the Site is not suitable in any event. It is again surprising how the Council has identified this as the only single suitable site without providing justification to why other alternative sites were not put forward. A list of reasons is set out below. These are not intended to be exhaustive, but illustrative of why the Site is considered unsuitable:
The Site does not meet the criteria set in the VOG's own current Gypsy and Traveller Accommodation Assessment ("GTAA") and with reference to Policy MD18 (Gypsy and Traveler Accommodation), including because:
Access to the Site is poor. The lane is narrow (circa 2.5m). As such, it does not meet the recommended access requirements for emergency vehicles of is 3.7m.
The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge.
Extending the proposal to 7 pitches on the Site would further restrict the ability of emergency vehicles to manoeuvre around the Site.
The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the Site was poor. The Report stated, "It is clear that access and drainage works would need to be improved for the site to meet Welsh Government guidance.". These constraints remain relevant when considering the proposed significant expansion of the Site. The issue with drainage near the Site can be seen from the photograph below. No changes have been made since 2017, such that the same issues remain.
Site access is "unsafe" having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.
The local area cannot support an increase from 2 to 7 pitches. The Site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport in Llangan. The nearest train station is in
Pencoed, which is over 6km away by road. Cowbridge, the nearest town, is circa 7.5km from the Site which is the nearest settlement providing a range of services. As there is no public transport serving the Site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need
to travel and promoting sustainable transport.
The size of the Site and number of pitches proposed is not appropriate to its location and accommodation needs.
The Cardiff and Vale of Glamorgan Survey and Assessment of Gypsy and Traveller Accommodation – Final Report – August 2008, prepared by the Fordham Research Group Limited made a finding that there was a preference for members of the Gypsy / Traveller community for smaller, family-sized sites. The expansion of the Site to 7 pitches is wholly contrary to the findings of the report commissioned for the benefit and assistance of the VOG.
9.3 The Replacement Local Development Plan 2021 – 2036: Issues, Vision and Objectives June 2023 (Background Paper – BP2) states, at 4.1. that: "Our Vision for the Vale of Glamorgan is a place:
• That is safe, clean, and attractive, where individuals and communities have sustainable opportunities to improve their health, learning and skills, prosperity, and wellbeing; and
• Where there is a strong sense of community in which local groups and individuals have the capacity and incentive to

make an effective contribution to the future sustainability of the area."

The RLDP objectives are set out at paragraph 5 as follows:

To sustain and further the development of sustainable communities within the VOG, providing opportunities for living, learning, working and socialising for all.

The location of the Site does not support this objective.

To ensure that development within the VOG makes a positive contribution towards reducing the impact of and mitigating the adverse effects of Climate Change. In respect of mitigating climate change,it is stated this means:

"Encourage development that reduces the need to travel by car and encourage people to participate in active travel and use sustainable transport to reduce emissions and improve air quality.

Ensure that all new development and infrastructure is reliant to future impacts arising from Climate Change, Direct development away from areas prone to flood risk and incorporate water management, biodiversity enhancement and adaptation measures."

Development of the Site will not contribute towards this objective. In particular, as stated above, the lack of public transport will no doubt result in multiple vehicles being used to transport to and from the Site. Such a need could be avoided if the allocation requirement was situated in an area with better public transport / an area close to facilities such as healthcare etc.

Alternatively, the agreement previously reached with the VOG to return the Site to the Community Council for use as allotments would have a positive impact in respect of climate change, not least due to the fact that produce would be grown locally. The success of allotments in Treoes has demonstrated the viability of such a programme and the VOG had previously indicated its support for returning the Site to the Community Council for such a purpose.

To reduce the need to VOG residents to travel to meet their daily needs and enabling them greater access to sustainable forms of transport.

As above, the Site does not meet this objective due to its distance from facilities such as healthcare, shops etc. and the lack of public transport.

To protect and enhance the VOG's historic, built, and natural environment.

The proposal would adversely impact the undeveloped rural character of the area.

To maintain, enhance and promote community facilities and services in the VOG.

The VOG's previous agreement to return the Site to the community for use as an allotment is a key illustration of achieving this objective. The proposed extension of the Site for 7 pitches does not promote this objective, but wholly detracts from it. Llangan does not any other land to enhance and promote community facilities and services. Further, as the VOG is aware, the Community Council is not seeking funding from the VOG for the maintenance of the Site which the VOG agreed to transfer management of to the Community Council.

To provide the opportunity for people in the VOG to meet their housing needs.

It is accepted the VOG has a lawful duty under section 101(1) of the Housing (Wales) Act 2014 to carry out an assessment of the accommodation needs of Gypsies and Travellers residing in its area. That is not disputed. The fact that the VOG has a legal requirement to meet this legal obligation does not, however, mean that the selection of an unsuitable Site is acceptable to 'tick a box' to meet that obligation is acceptable.
The fact that the VOG own the Site is not a reason on its own for extending the Site from 2 to 7 pitches. Further, the fact that the VOG were, through its predecessors in time, party to a lawful undertaking to clear the Site and return it to its previous agricultural status, coupled with the VOG's agreement to transfer the management of the Site to the Community Council is evidence of a competing obligation in law for the use of the Site.

To ensure that development within the VOG uses land effectively and efficiently and to promote the sustainable use and management of natural resources.

As above, this objective would not be met by extending the Site to accommodate 7 pitches. Further, this is agricultural land in a Special Landscaped Area.

Further:
The Site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.

The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.

Notwithstanding the above, the independent inspector's report concluded the Site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what
has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.

Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA) emphasizes
culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than dictating the forced mixing of specific family groups on sites. The
guidance was updated in March 2025.

The assessment makes no reference that the Site is in a Special Landscape Area.

The Replacement Local Development Plan 2021 – 2036: Special Landscape Area – Background Paper – BP-28, November 2025, provides at para 1.6: "The designation of the SLA was not intended to prevent development, but to ensure that where development was acceptable, careful consideration was given to the design elements of the proposal such as the siting, orientation, layout and landscaping, to ensure that the special qualities and characteristics for which the SLAs have been designated are protected."

In addition to being in a designated Special Landscape Area, the Site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and
important views from the conservation area.
Conclusion
For the reasons set out above, the allocation of the Site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land. It is also highly questionable whether it would
be deliverable within the plan period given the substantial and costly work that would be required at the Site, such as dealing with the drainage issue.

The Site should therefore be removed forthwith from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.
New site grants are available and cost should not be a material planning consideration.

Change suggested by respondent:

Site should therefore be removed forthwith from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Mr & Mrs Annie and John Williams [3325]

Summary:

Objection to the local development plan's consideration of the unauthorised travellers site east of Llangan, specifically its continuation and enlargement from two to seven pitches. The site has a long history of legal issues, including judicial reviews and directives to revert to agricultural use. In 2017, it was agreed that the land should be transferred to Llangan Community Council for village use, but it remains unsuitable due to lack of transport, difficult access, inadequate sewage, and absence of community facilities.

Full text:

We are writing to object to part of the local development plan, specifically the consideration that the unauthorised travellers site located to the east of Llangan village should
1. Be continued (by inference from point 2
2. Be enlarged from a 2 to a 7 pitch site
I hope you are aware of the long history of the site which has been a subject of concern since the early 1990s and has been the subject of judicial and local reviews and legal action on numerous times, which directed the then S Glam Authority to return the disputed land to its previous agricultural use.
Subsequently in 2017 it was agreed with the VoG that the land should be transferred to Llangan Community Council for use as a village community site , a position confirmed with Marcus Goldsworthy and the planning department in 2022.
Additional land for village use is needed as at present we have no play areas or outside community space for the children and families who live in the village
Other reasons the site is unsuitable for multiple occupation
The village and surrounding land has no public transport
Access to the site is difficult and unsuitable for large
Inadequate sewage system
We await your response with interest

Document Element: SP9 - GYPSY AND TRAVELLER SITE PROVISION

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Water Supply - The nearest watermain is approximately 100 metres from the site.
Wastewater - The nearest sewer is approximately 350 metres from the site.
Wastewater Treatment Works - Penybont Merthyr Mawr is the nearest WwTW catchment to the site.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.

Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the ‘domestic’ supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.

Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION
Respondent: Mrs Annie Price [3238]

Summary:
The proposed expansion does not meet the criteria set out below. The site is not reasonably accessible to essential services and facilities. Access is poor and there is limited space for emergency vehicles. There are no public transport links. Previous independent reports have identified problems with access and drainage. The proposed site is in a designated special landscape area and adjacent to the Llangan Conservation area.

5489 Object

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION
Respondent: Mrs Janet Reed OBE [3269]

Summary:
The site is totally unsuitable- there is no public transport and no accessible healthcare within 4miles.There are no amentities. Access is too narrow in parts to comply with emergency service requirements. Doesn't meet standards for social housing. It's on a flood plane, increasing to 7 pitches makes the scale disproportionate. There is no drainage, waste water provision is via cesspit. Costs of upgrading site would not meet value for money criteria. Site is close to Llangan Conservation Area and is a Special Landscape Area.

Costs of upgrading site would not meet value for money criteria. Site is close to Llangan Conservation Area and is a Special Landscape Area.

Change suggested by respondent:
The site should be removed from the plan. It is inconsistent with the councils policy framework and doesn't meet the criteria set out in the Gypsy and traveller accomodation Assessment and Policy MD18.
It breaches exisitng legal commitments relating to the site - the judicail review and 2017 agreement made between VOG, LCC and the site occupier.

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION

Respondent: Mr John Melville [3289]

Summary:

I believe the site should not be used for the proposed purpose because it conflicts with legal undertakings, current planning policies, and its suitability. The site's poor access, lack of facilities, and location in a Special Landscape Area make it inappropriate for expansion to seven pitches. It contradicts the Council's objectives for sustainable communities, environmental protection, and efficient land use. Additionally, an earlier agreement to convert the site into allotments was revoked by the VOG without discussion. The site should be removed from the plan, and alternative locations better aligned with policy criteria should be identified.

Full text:

The site should not be used for the proposed purpose or for any other purpose by the VOG as a consequence of the following:

• The Council (under its previous iteration) previously granted planning permission to itself for use of the site as a gypsy site on 20 December 1994. That decision was subsequently quashed by the High Court in R v South Glamorgan County Council ex parte Harding (1997). Following those proceedings, the Council through its Chief Executive, Mr Foster, entered into a formal undertaking dated 1 May 1996 requiring that once the existing family vacated the site, the Council would restore the land to its
original agricultural condition. That undertaking remains binding and has not been discharged. The proposed allocation and expansion of the site appears inconsistent with that undertaking and raises questions as to whether the Council can lawfully promote the site for further development.

July 2017 meeting with the VOG.
Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. Had the VOG done so, it would have discharged the obligations it had bound itself to under the undertaking. The VOG have, however, without any explanation, gone back on that agreement without any further discussions with the Community.

In any event, the site does not meet the criteria set in the VOG's own current Gypsy and Traveller Accommodation Assessment ("GTAA") and with reference to Policy MD18 (Gypsy and Traveler Accommodation), including because:

• Access to the site is poor. The access lanes is too narrow (2.5m min) and can't be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m

• The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge.

• Extending the proposal to 7 pitches on the site would further restrict the ability of emergency vehicles to manoeuvre around the site.

• The fact that access is poor was recognised in the Report on the examination into the Vale of Glamorgan Local Development Plan 2011 – 2016, prepared by Richard E. Jenkins BA(Hons) MSc MRTPI, as Inspector appointed by the Welsh Ministers, dated 25 May 2017, which also found that drainage at the site was poor. The Report stated, "It is clear that access and drainage works would need to be improved for the site to meet Welsh Goverment guidance."1 These constraints remain relevant when considering the proposed significant expansion of the site.

• Site access is "unsafe" having extended walks (in excess of 800m) along unlit land with no public footpath or street lighting.

• The local area cannot support an increase from 2 to 7 pitches. The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. Cowbridge, the nearest town, is circa 7.5km from the site which is the nearest settlement providing a range of services. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.

• The size of the site and number of pitches proposed is not appropriate to its location and accommodation needs.

• The Cardiff and Vale of Glamorgan Survey and Assessment of Gypsy and Traveller Accommodation – Final Report – August 2008, prepared by the Fordham Research Group Limited made a finding that there was a preference for members of the Gypsy / Traveller community for smaller, family sized sites. The expansion of the site to 7 pitches is wholly contrary to the findings of the report commissioned for the benefit and assistance of the VOG.

• The Replacement Local Development Plan 2021 – 2036: Issues, Vision and Objectives June 2023 (Background Paper – BP2) states, at 4.1. that:

• "Our Vision for the Vale of Glamorgan is a place:
o That is safe, clean, and attractive, where individuals and communities have sustainable opportunities to improve their

health, learning and skills, prosperity, and wellbeing; and
o Where there is a strong sense of community in which local groups and individuals have the capacity and incentive to make an effective contribution to the future sustainability of the area."

• The RLDP objectives are set out at paragraph 5 as follows:

RDLP objective Comment
To sustain and further the development of sustainable communities within the VOG, providing opportunities for living, learning, working and socialising for all.
The location of the site does not support this objective.
To ensure that development within the VOG makes a positive contribution towards reducing the impact of and mitigating the adverse effects of Climate Change. In respect of mitigating climate change, it is stated this means: "Encourage development that reduces the need to travel by car and encourage people to participate in active travel and use sustainable transport to reduce emissions and improve air quality.
Ensure that all new development and infrastructure is reliant to future impacts arising from Climate Change, Direct development away from areas prone to flood risk and incorporate water management, biodiversity enhancement and adaptation measures."
Development of the site will not contribute towards this objective. In particular, as stated above, the lack of public transport will no doubt result in multiple vehicles being used to transport to and from the site. Such a need could be avoided if the allocation requirement was situated in an area with better public transport / an area close to facilities such as healthcare etc.

Alternatively, the agreement previously reached with the VOG to return the site to the Community Council for use as allotments would have a positive impact in respect of climate change, not least due to the fact that produce would be grown locally. The success of allotments in Treoes has demonstrated the viability of such a programme and the VOG had previously indicated its support for returning the site to the Community Council for such a purpose.
To reduce the need to VOG residents to travel to meet their daily needs and enabling them greater access to sustainable forms of transport.
As above, the site does not meet this objective due to its distance from facilities such as healthcare, shops etc. and the lack of public transport.
To protect and enhance the VOG's historic, built, and natural environment.
The proposal would adversely impact the undeveloped rural character of the area.
To maintain, enhance and promote community facilities and services in the VOG.
The VOG's previous agreement to return the site to the community for use as an allotment is a key illustration of achieving this objective. The proposed extension of the site for 7 pitches does not promote this objective, but wholly detracts from it. Llangan does not any other land to enhance and promote community facilities and services. Further, as the VOG is aware, the Community Council is not seeking funding from the VOG for the maintenance of the site which the VOG agreed to transfer management of to the Community Council.

To provide the opportunity for people in the VOG to meet their housing needs.
It is accepted the VOG has a lawful duty under section 101(1) of the Housing (Wales) Act 2014 to carry out an assessment of the accommodation needs of Gypsies and Travellers residing in its area. That is not disputed. That fact that the VOG has a legal requirement to meet this legal obligation does not, however, mean that the selection of an unsuitable site is acceptable to 'tick a box' to meet that obligation is acceptable.

The fact that the VOG own the site is not a reason on its own for extending the site from 2 to 7 pitches. Further, the fact that the VOG were, through its predecessors in time, party to a lawful undertaking to clear the site and return it to its previous agricultural status, coupled with the VOG's agreement to transfer the management of the site to the Community Council is evidence of a competing obligation in law for the use of the site.

To ensure that development within the VOG uses land effectively and efficiently and to promote the sustainable use and management of natural resources.
As above, this objective would not be met by extending the site to accommodate 7 pitches. Further, this is agricultural land in a Special Landscaped Area.

Further:

• The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
• The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
• Notwithstanding the above, the independent inspector's report concluded the site was only suitable for 2 pitches after reviewing all the evidence. It is not clear what has changed for the VOG to conclude that a 350% increase in the number of pitches is suitable.
• Mixing families from the Gypsy and Traveller community. The Welsh Government's approach to Gypsy and Traveller Accommodation Assessments (GTAA)
emphasizes culturally appropriate, safe, and secure accommodation that meets the needs of families, rather than

dictating the forced mixing of specific family groups on sites. The guidance was updated in March 2025.

The assessment makes no reference that the site is in a Special Landscape Area. The Replacement Local Development Plan 2021 – 2036: Special Landscape Area – Background Paper – BP-28, November 2025, provides at para 1.6:
"The designation of the SLA was not intended to prevent development, but to ensure that where development was acceptable, careful consideration was given to the design elements of the proposal such as the siting, orientation, layout and landscaping, to ensure that the special qualities and characteristics for which the SLAs have been designated are protected."

In addition to being in a designated Special Landscape Area and the site is adjacent to the Llangan Conservation Area. The RLDP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion to seven pitches risks materially affecting the rural character and important views from the conservation area.

Change suggested by respondent:

For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.

The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18

New site grants are available and cost should not be a material planning consideration.

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION

Respondent: Mrs Gaye Bacon [3428]

Summary:

In June 2017, Llangan Action, the Community Council, and a traveller family agreed on vacating and transferring the site for community use, but the RLDP proposal contradicts this. The site is unsuitable for the proposed gypsy and traveller pitches due to poor access, drainage issues, lack of public transport, and inappropriate size. It also fails to meet social housing standards, risks community tension, and threatens local landscape and conservation areas. Transferring the site to the Community Council for allotments would better align with VOG's objectives to promote community facilities, reduce travel needs, and

Full text:

· In around June 2017, Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The proposal in the RLDP for the site is wholly contrary to what was agreed.
· The site is not suitable for the proposed use and does not meet the VOG's own criteria for a gypsy and traveller site, including because:
o Access is poor, with the lane being only 2.5m wide, which is less than the recommended access requirements for emergency vehicles of 3.7m. Extending the pitches would also restrict the ability of emergency vehicles to turn around on the site.
o The site is situated in low-lying land and has poor drainage.
o There is no public footpath near the site and no street lighting.
o There is no public transport and the site is not reasonably accessible to day-to-day services, such as medical facilities, shops and community facilities. Cowbridge is around 7.5km from the site.
o The size of the site and number of pitches is not appropriate to its location and accommodation needs.
· Further:
o The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
o The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
o The site is in a Special Landscape Area and adjacent to the Llangan Conservation Area. The RDLP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion is contrary to that view.
o The agreement reached with the VOG to transfer the site to the Community Council for use as allotments (following the success of a similar project in the neighbouring village of Treoes) would better meet the VOG's vision to in its RLDP objectives to mitigate the adverse effects of climate change and to enhance and promote community facilities and services in the VOG.
o The proposed expansion of the site goes against the VOG's objective to reduce the need for travel for VOG residents to meet their daily needs.
o The proposed development would also be contrary to the VOG's object to protect and enhance the VOG's historic, built and natural environment.
o The fact that the VOG owns the site does not in and of itself make it suitable for the proposed expansion.

Change suggested by respondent:

· For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.
· The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION

Respondent: Mr Darren Wines [3487]

Summary:

In June 2017, an agreement was made for the site to be transferred to the Community Council for community use, but the RLDP proposal contradicts this. The site is unsuitable due to poor access, drainage, lack of public transport, and its location in a conservation area. It does not meet standards for social housing or the VOG's criteria for gypsy and traveller sites. Expanding the site risks community tension, conflicts with landscape protections, and opposes the VOG's objectives to reduce travel needs and preserve the environment. Ownership alone does not justify expansion.

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION

Respondent: Mrs Helen Hammond [3490]

Summary:

The site is poorly accessible, lacking nearby services, shops, and public transport, contradicting RLDP goals to reduce travel and promote sustainability. Access is narrow and unsuitable for emergency vehicles, with alternative routes also inadequate. Expanding to seven pitches would worsen emergency access, harm the rural character, and alter residents' living conditions. It would increase traffic and safety risks, especially for children, and undermine a 2017 agreement to develop allotments. Flooding and drainage issues would worsen, making the site unsanitary and environmentally damaging to the village's conservation area and protected views.

Full text:

The site is not reasonably accessible to day-to-day services, facilities and employment, medical facilities, shops and community facilities (there are no shops, restaurants, pubs/bars in the area) and there is no public transport. As there is no public transport serving the site and no local facilities within walking distance, the location therefore conflicts with the RLDP objective of reducing the need to travel and promoting sustainable transport.he lack of public transport will no doubt result in multiple vehicles being used to transport to and from the site. Such a need could be avoided if the allocation requirement was situated in an area with better public transport / an area close to facilities such as healthcare etc.Access to the site is poor. The access lanes is too narrow (2.5m min) and can't be widened due to new houses built at the junction near Llangan Primary School. This could impact emergency vehicle access: the recommended access requirements for emergency vehicles is 3.7m. The alternative route through Llangan village is not suitable for emergency vehicles due to it having a weak bridge. Extending the proposal to 7 pitches on the site would further restrict the ability of emergency vehicles to manoeuvre around the site.

The WG inspector has already found the site unacceptable for expansion to 7 pitches the proposals would fundamentally change the living circumstances of the current residents. 7 pitches on that site would cramped and change the rural character of the site. bringing a mixture of families together on 7 pitches is contrary to the cultural needs of the current occupants and the WG guidance for GTAA.

Llangan is a small community. the expansion would have a negative impact on the nature of the village, increasing traffic and pedestrian use of the roads that are unlit, with no footpath, creating a danger to residents, particularly the children using the local school. the agreement made in 2017 would have resulted in the site becoming allotments that would be of benefit to all residents, promote local growing and a positive adaptation to climate change. going back on that agreement is a lost opportunity for Llangan.

the lane is often flooded and the current resident has has problems with the drainage and waste on the site. this would be made much worse by increasing the occupancy of the site to be unsanitary, dangerous and unhealthy environment of anyone to live in.

The rural nature of the village, the conservation area and protected views would all be negatively by such a significant expansion.

Change suggested by respondent:

The agreement of 2017 between VOG and the community should be honoured and the site returned to the community for community facilities and allotments that are much needed in the village. The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.

Sound: No

6217 Object

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION

Respondent: Mrs Elana Farrant [2789]

Summary:

In June 2017, an agreement was reached to vacate the site and transfer it to the Community Council for community use, contrary to the RLDP proposal. The site is unsuitable for gypsy and traveller pitches due to poor access, drainage, lack of amenities, and its location in a conservation area. It does not meet social housing standards, risks community tension, and conflicts with environmental and landscape protections. Transferring the site for allotments would better align with VOG's objectives to promote community facilities, reduce travel needs, and protect the environment.

Full text:

· In around June 2017, Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. The proposal in the RLDP for the site is wholly contrary to what was agreed.
· The site is not suitable for the proposed use and does not meet the VOG's own criteria for a gypsy and traveller site, including because:
o Access is poor, with the lane being only 2.5m wide, which is less than the recommended access requirements for emergency vehicles of 3.7m. Extending the pitches would also restrict the ability of emergency vehicles to turn around on the site.
o The site is situated in low-lying land and has poor drainage.
o There is no public footpath near the site and no street lighting.
o There is no public transport and the site is not reasonably accessible to day-to-day services, such as medical facilities, shops and community facilities. Cowbridge is around 7.5km from the site.
o The size of the site and number of pitches is not appropriate to its location and accommodation needs.
· Further:
o The site would not meet the standards required for social housing. The same standards apply for housing for the Gypsy and Traveller community.
o The scale of the proposed number of pitches poses a real risk of escalating fear and tension within the local community, which would be contrary to encouraging and developing good relations between Gypsy Travellers and the settled community.
o The site is in a Special Landscape Area and adjacent to the Llangan Conservation Area. The RDLP background paper acknowledges the importance of protecting views and landscape character within these areas. The proposed expansion is contrary to that view.
o The agreement reached with the VOG to transfer the site to the Community Council for use as allotments (following the success of a similar project in the neighbouring village of Treoes) would better meet the VOG's vision to in its RLDP objectives to mitigate the adverse effects of climate change and to enhance and promote community facilities and services in the VOG.
o The proposed expansion of the site goes against the VOG's objective to reduce the need for travel for VOG residents to meet their daily needs.
o The proposed development would also be contrary to the VOG's object to protect and enhance the VOG's historic, built and natural environment.
o The fact that the VOG owns the site does not in and of itself make it suitable for the proposed expansion

Change suggested by respondent:

· For the reasons set out above, the allocation of the site at Llangan for additional Gypsy and Traveller pitches is not justified and is inconsistent with the Council's own policy framework and previous legal commitments relating to the land.
· The site should therefore be removed from the Replacement Local Development Plan and alternative sites identified which better meet the criteria set out in the Gypsy and Traveller Accommodation Assessment and Policy MD18.
· New site grants are available and cost should not be a material planning consideration.

Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION

Respondent: Ms Helen Bigley [3500]

Summary:

In June 2017, Llangan Action, the Community Council, and a traveller family agreed to vacate the site for community use. However, the RLDP proposal contradicts this agreement. The site is unsuitable due to poor access, drainage issues, lack of public amenities, and its location in a sensitive landscape area. The site does not meet VOG criteria for gypsy and traveller sites, nor social housing standards. The proposed expansion risks community tension and conflicts with landscape protection policies.

Full text:

In around June 2017, Llangan Action, Llangan Community Council and the traveller family occupying the site reached an agreement with the VOG for vacation of the site and for the site to be transferred to the Community Council for use by the community. Document Element: GT1 - GYPSY AND TRAVELLER ACCOMMODATION

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.

We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have

been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning

stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf

South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and

existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a

range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for

operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Respondent: Emma Reed [2653]

Summary:

Rhoose is taking some 10 percent of increased development yet there are no improvements to rail or bus services. The Plan allocates St Athan Rail land without any evidence it will be delivered. As a minimum there should be two trains an hour in Rhoose BEFORE any new development is even considered. Same with buses a minimum of 2 per hour. The active travel route to Weycock Cross also must be completed. If the developments at Rhoose cannot provide such enhancements the developments must not happen as the Plan would be unsound having not considered appropriate infrastructure.

Document Element: SP10 - SUSTAINABLE TRANSPORT
Respondent: Professor Andrew Vincent [920]

Summary:

The bus to the airport has been at best a variable and very infrequent item. Most people who are looking not to pay for airport parking will regularly park their car, sometimes for several weeks, in Pontypridd Road and then get a taxi to and from the airport. My wife and I have seen this too many times to count. The airport bus has been too infrequent and too unreliable for most people.

Document Element: SP10 - SUSTAINABLE TRANSPORT

Respondent: Mrs Hilary May [2309]

Summary:

Ensure active travel provision is in place before people move into new housing. All sites have potential to improve active travel for existing residents as well as new residents, reducing car dependency. Ensure active travel routes go beyond the sites to places people want to travel to and link with other active travel routes. Ebikes in particular have a real potential to reduce car use so ensure safe cycle storage for all households is included in plans. Improve access to public transport eg lifts at stations and better bus links to services.

Document Element: SP10 - SUSTAINABLE TRANSPORT

Respondent: Mr David Entwistle [3264]

Summary:

The plan does not go into enough depth in how to council plans to realistically deliver and encourage active travel options. At present public transport services fall far short of the route network and frequency required to make them a realistic alternative for most journeys. Concrete, realistic and deliverable improvements need to be included in the LDP rather than simple vague promises.

The plan does not go into enough depth in how to council plans to realistically deliver and encourage active travel options. At present public transport services fall far short of the route network and frequency required to make them a realistic alternative for most journeys. Concrete, realistic and deliverable improvements need to be included in the LDP rather than simple vague promises.

Change suggested by respondent:

The council needs to commit to expanding the bus network and providing subsidies if required. Better bus linkups to train stations need to be provided along with additional parking at current stations. The timetables need to be overhauled and increased frequencies of services as at present even residents wanting to take public transport to a place of work in Cardiff for example cannot due to a range of factors. The LDP needs to actually lay out how these improvements can be achieved.

5911 Object

Document Element: SP10 - SUSTAINABLE TRANSPORT

Respondent: HBF (Mr Mark Harris) [538]

Summary:

Point 6 of the policy should be reworded, as it is not for a developer to provide transport services, at best and only where required as a direct result of the proposed development; they can contribute towards transport services provided by others.

The wording 'As appropriate, new development proposals will be required to provide Transport Statements, Transport Assessments and Travel Plans to ensure the delivery of travel choice and sustainable opportunities for travel.' is considered to be too vague. There is no clarification on when it would be 'appropriate' and in what scenario would one or all of the reports mentioned be required.

Further, the supporting text para. 6.187 does not really provide any specific guidance to support this policy requirement. At what stage in the planning process would it be decided that one or all of these documents are required, and based on what criteria? This lack of clarity could lead to delays in the delivery of new homes and uncertainty for developers.

Full text:

Document Element: SP10 - SUSTAINABLE TRANSPORT

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built. Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it

within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at: https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and

25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.

South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local

health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism

(protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver

especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of

new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

6725 Comment

Document Element: SP10 - SUSTAINABLE TRANSPORT

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel Act guidance (Link: https://www.gov.wales/sites/default/files/publications/2022 01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing flooding and making use more comfortable during hot weather (such as shading from trees).
