That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.

The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However,

there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;
• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply.

In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.

Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object

Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.

There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.

A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.

Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.

In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.

Policy CI1 – Open Space Provision

Position: Support in principle / Object in part

Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.

The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.

There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.

Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be

addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.

Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available

survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.

As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.

Appendix 2 – Summary of Assessment

We comment on the Council's Summary of Assessment as follows:

• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.

• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.

• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.

• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.

• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.

• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.

• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.

• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.

• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.

Suitability for Allocation and Key Benefits

For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.

The proposed development of the site would deliver the following key benefits:

• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;

• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;

• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;

• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;

• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;

• Economic benefits – including that the proposed development is expected to:

o Support the employment of 434 people;

o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.

It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.

Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.

I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Change suggested by respondent:

Amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.

Document Element: CI1 – OPEN SPACE PROVISION
Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

The wording and supporting text must allow greater flexibility to be applied to the open space standards. It is also important that the type and range of provision is reflective of local context/needs. This is reflected in para 6.233 but the policy should also be amended to reflect this directly.
We would question the need for a standalone 'Open Space Strategy' or statement and the policy should be amended to reflect this.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking

We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what

is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy

requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy CII - Open Space Provision
The wording of Policy CII, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy CII should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy CII requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities

Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Change suggested by respondent:

Amend policy wording.

Sound: Not specified

Document Element: CI1 – OPEN SPACE PROVISION
Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

The proposed 62.2sqm per dwelling requirement is overly prescriptive and not aligned with FiT's methodology. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the

7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock

Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy Cll requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning

approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has

been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the

policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy CII - Open Space Provision
The wording of Policy CII, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy CII should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy CII requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Provision of open space in residential developments is supported.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear

settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of

Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: CI1 – OPEN SPACE PROVISION
Respondent: H Jones, L Sungur and P John [3741]
Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the
RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that

serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be

negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: CI2 - PROTECTION OF EXISTING OPEN SPACES

Respondent: Ms Lucie Taylor [2506]

Summary:

Social Farms & Gardens support the policy principles but note some contemporary considerations are missing. Proposals for development on open space within settlements are only permitted if the remaining open space is adequate for local needs and the site lacks significant recreational, social, food growing, visual, or green infrastructure value. Open spaces are vital for community character, recreation, social cohesion, and well-being. Policy CI2 applies to all open spaces within settlement boundaries, covering various typologies including parks, allotments, sports facilities, and informal greenspaces, especially where there is an open space deficit.

Full text:

We support the principles of this policy by there are some important more contemporary considerations missing for the text.
Proposals for development on areas of open space within settlements will only be permitted where:
1. The amount of open space (broken down by typology) remaining in the neighbourhood would still be adequate to serve local needs; and
2. The site has no significant value as a recreational resource, a source of social or food growing provision, or as an area of visual amenity a green infrastructure asset.
6.240 Public open spaces are an important part of the distinctive character of communities within the Vale, providing areas for a range of recreational activities, the provision of food production, social cohesion, as well as making areas attractive to live, and supporting physical and mental well-being. Increasingly, open spaces within existing settlements are under pressure from development and it is important that, where appropriate, those open spaces that have significant social, recreational or visual amenity value are safeguarded, particularly in areas where there is a deficit of open space when compared to the FIT standards for open space provision.
6.241 Policy CI2 applies to all open spaces on unallocated sites within a defined settlement boundary. The open space typologies to which it applies are defined in TAN 16: Sport, Recreation and Open Space, with this including formal facilities such as public parks and gardens, allotments, outdoor sports facilities and provision for children and young people, as well as more informal open space such as community growing areas, amenity greenspace and natural and semi natural greenspace.

Document Element: CI2 - PROTECTION OF EXISTING OPEN SPACES

Respondent: Mr David Entwistle [3264]

Summary:

The points do not offer enough protection of existing open space and do not actively discourage them being used for development enough. Stronger protections are required for our existing open space within the Vale.

Full text:

The points do not offer enough protection of existing open space and do not actively discourage them being used for development enough. Stronger protections are required for our existing open space within the Vale.

Change suggested by respondent:

There should be stronger and more stringent limitations on development of open spaces. Residents views should be directly taken into account as opposed to purely the views of professional planners and ecologists. Whilst a hedgerow/field may not from an ecological point of view offer good habitat for a range of species it may provide oversized joy to local residents and may be the only green space visible from their house for example. There should be more quantifiable points such as: if the space holds more than x amount of species or provides a habitat for certain key species it should be excused from development.

Document Element: CI2 - PROTECTION OF EXISTING OPEN SPACES

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning
guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are
involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the
deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community
amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient
communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: "The Local Development Plan will support resilient and sustainable
local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part
of sustainable growth."

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local
diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

"Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other
opportunities for local food production as part of multifunctional green infrastructure."

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their
proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative
impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid
HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to
ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare
services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Representation on the Vale of Glamorgan Deposit RLDP 2021–2036

Specific Policy/Site Objection:
• Policy SP4.4: Land at Church Farm, St Athan
• Policy SP4.5: Land to the West of St Athan
• Clive Road (Additional Allocation)
• Policy EMP2: MOD St Athan / Bro Tathan

Status: Unsound

1. Introduction

I wish to formally object to the allocation of the above sites and the broader designation of St Athan as a "Primary Settlement" for high-density growth within the Replacement Local Development Plan (RLDP). This allocation fails the Test of Soundness regarding Consistency (with national climate goals) and Effectiveness (deliverability of infrastructure).

2. Failure of Sustainable Transport (Policy SP7 & SP10)

The RLDP identifies St Athan as a "Strategic Hub," yet it remains the only primary settlement in the Vale of Glamorgan without a direct rail link. Relying on the "Active Travel" aspirations of Policy SP10 is unrealistic for a community where the majority of residents commute to Cardiff, Bridgend, or Barry.

The proposed density at the above sites will inevitably lead to an unsustainable increase in private car journeys on the B4265, specifically at the Gileston Road junction and Weycock Cross, which are already at or near capacity.

Concrete infrastructure is needed to be in place prior to any development of the land. Often intentions of infrastructure are not progressed. In addition where infrastructure is not in place prior to housing many commuters will become accustomed to travel by car and wont switch to public transport. It is difficult to see how developments work with Future Wales: The National Plan 2040

Active travel should look at linking key destinations and with the western vale being spread over longer distances more effort should be given to linking population centres with separated bicycle paths and wide accessible pavements. Shared bike / foot paths are inherently dangerous not allowing the safe use of wheelchairs and prams and sufficient use for children and dog walkers. Cycling should not have to stop at every intersection which creates visibility black spots by the way they turn away from traffic.

With current planned housing and that of additional housing in the LDP creating over 1,000 new homes and with each household having 1-2 cars per household this will add significant additional numbers of journeys on already poor road infrastructure. The vale lacks sufficient north / south routes pushing vehicles towards Weycock Cross in Barry which will have its own traffic issues or via Cowbridge with small country lanes. I personally worked in Cowbridge travelling from St Athan where buses would take over 1 hour 10 minutes and even then not arriving in time to start work. In contrast car travel would be 10 minutes or cycle would be 20 minutes but over dangerous roads.

Travel to Barry for meetings at peak times can take over 50 minutes from St Athan with significant delays leading to Weycock Cross and passed the secondary schools even before developments in the RLDP or existing planning. Public transport gets caught in the same traffic issues.

Access into St Athan is already dangerous from the war memorial with one near fatal accident already having taken place since the ‘improvements’ to the junction. Proposals for additional access from B4265 onto developed land would be on a hill with poor visibility and around a blind bend. Currently there is poor visibility leaving St Athan due to the side by side two car exit blocking views in both directions along with more visibility issues looking westward due to traffic furniture and signage.

While Bro Tathan (Policy EMP2) provides jobs, there is no guarantee that the people moving into local developments will work there. If they commute elsewhere, the RLDP fails its own climate goals (Policy SP1) by creating a "commuter colony" rather than a sustainable community.

Reference Policy CI3 (New Community Facilities). The proposed expansion of St Athan Primary School lacks a guaranteed timeline for when these facilities will be operational relative to house completions. New access to the school under existing planning is only ‘proposed’ and existing access to the school via Rock Road is a poorly surfaced and narrow one way road but is
often ignored with traffic coming via Rectory Drive which has a ‘No entry except for access’ restriction but is not enforced causing large numbers of vehicles into residential areas not built for this type of activity.

Speeding is already a great concern in the village with the current level of vehicle traffic with little compliance with the 20mph speed limit and no enforcement.

3. Coalescence and Loss of Settlement Identity (Policy SSC1)

The scale of development proposed for Church Farm, in conjunction with Policy SP4.5 (Land West of St Athan), threatens the distinct character of the village. The erosion of the "Strategic Gap" between St Athan and Eglwys Brewis violates the principles of Policy SSC1 (Settlement Boundaries). This "urban creep" creates a continuous sprawl that permanently destroys the rural setting of the historic Church Farm and the village's unique sense of place.

St Athan should no longer be thought of as a village but as a small town with infrastructure to meet the growing demands of the population and lacks facilities that are given to surrounding towns such as fire / ambulance and police stations.

If the jobs at the Enterprise Zone (Aston Martin, Bro Tathan) do not match the demographic of the new residents, St Athan simply becomes a "dormitory" village, increasing the carbon footprint as people drive to Cardiff or Bridgend for work. In addition people will travel to St Athan from other areas should they be employed at the new commercial sites.

4. Infrastructure Lag and Healthcare Capacity (Policy CI3)

Under Policy CI3, development should only proceed where adequate community facilities exist or can be provided. Current primary healthcare services in St Athan and nearby Llantwit Major are already oversubscribed. The RLDP provides no "Triggers for Delivery" to ensure that new medical and educational facilities will be operational prior to the occupation of the hundreds of homes planned for the Church Farm site. This creates a significant risk to the wellbeing of both new and existing residents. Access to both village GP services are on a part time basis. With new dentist rules in Wales, this will increase the need for further travel around the area to meet simple check ups. With no A&E facilities in the county St Athan often falls between Cardiff and Bridgend hospitals and continued poor roads together with additional traffic gives greater
concern when emergencies happen.

5. Environmental and Biodiversity Impact (Policy SP5)

The Church Farm site consists of high-quality agricultural land and vital greenfield habitats. While Policy SP5 mandates a "Net Benefit for Biodiversity," the total loss of soil permeability and ancient hedgerow connectivity on a site of this scale cannot be mitigated by tokenistic landscaping. Once this valuable land is developed it is irretrievably lost for current and future generations. Currently there are red list species using the space like Yellowhammers and Skylarks. In addition there has been a collapse of invertebrate bio-mass over the last 40 years and personally seen since moving the area in 1980. Net Benefit for Biodiversity plans do not address any of these local and national concerns.

Land to the west of St Athan (SP4.5) This site consists of Grade 2 (Good) or 3a (Excellent) agricultural land. Under Planning Policy Wales (PPW) 12, such land should only be developed if there is an "overriding need" and no lower-grade land is available. The Vale of Glamorgan council has not sufficiently explored brownfield alternatives in the Barry Docks or the St Athan Enterprise Zone. The increased light pollution and "urban glow" will impact the rural character of the Western Vale.

The invertebrate charity Buglife shows that based on citizen science monitoring data, there has been a 75% to 79% decline in the abundance of flying insects in Wales between 2004 and 2023.

Natural Resources Wales also reported

• 79% Decrease in Flying Insects (2004–2023): Data from the "Bugs Matter" survey, which counts insect "splats" on vehicle number plates, recorded this 79% reduction in Wales, with 2023 showing further declines from previous years.
• Specific Invertebrate Declines: Moths, which are key pollinators, have seen an average decline of 43% in abundance since 1970.
• Widespread Biodiversity Loss: Welsh wildlife has decreased on average by 20% since 1994, and 18% of species in Wales are at risk of extinction.
• Habitats in Peril: Over the past 50 years, many insects have suffered declines of 65% to
70% in certain areas, particularly moths, butterflies, ladybirds, and ground beetles.
• Impact on Food Chain: Invertebrates that provide food for farmland birds have seen declines of 50-80%.

The cumulative impact of hard-standing surfaces also raises serious concerns regarding surface water runoff into the River Thaw catchment area. Significant surface flooding already takes place across the western Vale spilling onto roads causing travel disruption.

An increase in hard surfaces also increases ambient temperatures compared to grassland, woodland and other green spaces necessitating increased power use for cooling and comfortable living temperatures. Building practices can help mitigate this but only where this is incorporated into sustainable building rules.

Replacing green fields (which act as a natural sponge) with hundreds of roofs and driveways at Church Farm (SP4.4) and Land West of St Athan (SP4.5) will create a "funnel effect."

Dwr Cymru Welsh Water has previously noted concerns regarding the St Athan Wastewater Treatment Works. Proof is required that the current system can handle the RLDP's projected flow without increasing overflow events. Further

development risks "Combined Sewer Overflows" (CSOs) into local watercourses, which contradicts the Council's Nature Emergency declaration.

The Vale of Glamorgan Council requires a Sustainable Drainage Systems (SuDS) Approval Body (SAB) review. Attenuation ponds are often poorly maintained and can fail during the "1-in-100-year" storm events which are becoming more frequent.

6. Conclusion

The allocation of the above site policies are unsound. It promotes car-dependent growth in a rural location without the necessary infrastructure "trigger points" to protect the local environment or the B4265 road network.

Proposed Remedy: Reduce the housing density at the above sites and re-classify St Athan as a "Minor Rural Settlement" until such time as a dedicated rail link, suitable active travel infrastructure or high-frequency public transport other than rail is fully funded and scheduled for delivery.

Redacted Representation Form - https://valeofglamorgan.oc2.uk/a/34q

6747 Comment

Document Element: Land south of the railway,

Respondent: Hallam Land Management [854]

Agent: Savills

Summary:

Hallam recognise that this site could be a suitable location for a Welsh Medium Secondary School and, as a principle, is agreeable to the safeguarding of land for the footbridge landing on the northern side of the railway line.
Paragraph 6.250 of the Deposit RLDP is clear that the delivery of a Welsh-Medium secondary school is in response to a regional / sub-regional demand rather than a local need as a result generated either by the development of Land West of St Athan or other emerging allocations within St Athan and it cannot be the case that Hallam are expected to make disproportionate contributions to either the delivery of the school or required active travel improvements just because they have control of the site or that it is next to the Key Site.

Full text:

1.1. Savills is instructed by Hallam Land ('Hallam') to respond to the consultation on the Deposit version of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').
1.2. Hallam is the strategic land arm of Henry Boot PLC and is one of the UK's most well established and successful land promoters. Hallam operates throughout England, Scotland and Wales from 7 regional offices working with landowners, developers, local authorities, communities and other parties to bring forward development opportunities. Hallam has been in operation since 1990, specialising in obtaining planning permission and delivering development larger schemes including new communities and urban extensions.
Background to Representations
1.3. The Preferred Strategy was published in November 2023. The Preferred Strategy identified "Land West of St Athan" and "Land South of the B4265, St Athan" (Site IDs 456 and 457) as one of five Key Sites in the Preferred Strategy. Both of these sites are under the control of Hallam and were submitted as part of the Call for Sites. A site-specific illustrative masterplan and policy wording were provided under Policy SP4 KS5 (Land to the West of St Athan).
1.4. Hallam submitted representations on the consultation on the Preferred Strategy. These representations were very much supportive of the identification of "Land to the West of St Athan" as a Key Site and the approach that was taken more generally taken in the Preferred Strategy.
Approach to Responding to Consultation
1.5. The VoG has published the Deposit version of the RLDP. The Deposit is the first version of the RLDP to include emerging allocations, and detailed development management policies, as well as a Proposals Map. It is accompanied by a substantial evidence base which includes various supporting technical documentation submitted as part of the promotion of the allocated sites.
1.6. Building upon the Preferred Strategy, the Deposit RLDP proposes to allocate Land to the West of St Athan as a Key Site. The site is identified under Policy HG1 KS5 (Land to the West of St Athan) as key mixed-use site with capacity for 600 new homes alongside new community and commercial facilities.
1.7. Hallam's representation to this consultation broadly splits into three separate sections:
• It offers general support for the housing requirement, growth strategy and settlement hierarchy. This is covered in Chapter 2 of this Statement;
• It wholly supports the approach of allocating Land to the West of St Athan as part of the Deposit RLDP whilst also providing detailed commentary on the specific wording of Policy HG1 KS5 (Land to the West of St Athan). This is covered in Chapter 3 of this Statement; and
• It provides commentary on a range of development management policies. This is covered in Chapters 4, 5, 6, and 7 of

this Statement.
1.8. As well as this Statement, Savills has provided commentary on these specific policies under the VoG's consultation website.

Policy SP1 (Sustainable Growth Strategy), Policy SP2 (Settlement Hierarchy), and Policy SP6 (Housing Requirement)
2.1. Together, these policies have the effect of:
• Setting the housing requirement to be delivered over the RLDP plan period of 7,890 homes with a flexibility allowance applied on top so that provision is made for a total of 8,660 homes. This is the same housing requirement to that included in the Preferred Strategy which was found by Welsh Government to be in conformity with Future Wales (Policies SP1 and SP6);
• Identifying the extent of the Strategic Growth Area as the primary focus of new housing growth. Concentrations of new housing are focussed in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity. St Athan is a specifically named settlement within the Strategic Growth Area (Policy SP1); and
• Identifying St Athan as a Primary Settlement in the third tier of the settlement hierarchy. This is the same tier of the settlement hierarchy as St Athan is in the adopted LDP (Policy SP2).
2.2. Hallam are generally supportive of the aims of these three policies.
2.3. They recognise that the housing requirement has been subject to extensive scrutiny and been found to be appropriate by Welsh Government in response to the Preferred Strategy. In that sense, there is nothing further for Hallam Land to comment upon here other than to note that it should reasonably be seen as the minimum number of homes that the RLDP should be aiming to deliver, particularly following the publication of the 2022-based household projections between Welsh Government's comments on the Preferred strategy and the publication of the Preferred Strategy.
2.4. The strategy – of focussing new housing in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity – is wholly supported. St Athan is clearly already a sustainable location for growth and its sustainability and connectivity have clear potential to enhance alongside further development. The delivery of growth in St Athan is therefore considered to firmly align with the RLDP's strategy.
2.5. The continued positioning of St Athan as a Primary Settlement in the third tier of the settlement hierarchy is considered appropriate though clearly the delivery of two Key Sites within St Athan as part of the RLDP has the potential to further elevate its position in the future. This is reflected in Table 10 of Background Paper 5 Settlement Appraisal Review where St Athan is given one of the higher scores of the Primary settlements.

Policy HG1 KS5 (Land to the West of St Athan)
3.1. Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.
3.2. There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.
3.3. The relevant policy for Land to the West of St Athan is Policy HG1 KS5.
3.4. As a starting point, Hallam wholeheartedly support the allocation of Land to the West of St Athan as a Key Site within the RLDP. Hallam made a comprehensive submission as part of the Call for Sites stage and since then have worked proactively with the VoG and other stakeholders to demonstrate that the site is suitable, deliverable, and viable. It's identification as a Key Site in the Deposit RLDP represents extensive and thorough assessment – its proposed allocated is therefore considered to be sound and firmly evidence based.
3.5. So that the policy functions as effectively as possible, Hallam has a small number of comments and included at Appendix A is a re-worded version of Policy HG1 KS5 which incorporates those changes with text suggested to be removed crossed through and text to be added shown underlined.
3.6. These proposed adjustments are considered in turn below and are structured around the sub-headings that are contained within the policy wording itself.
Site Capacity and Housing Trajectory
3.7. Extensive environmental and technical work has been undertaken by Hallam to support the promotion of the site and the development of a masterplan (and site capacity) that responds to the site's constraints and opportunities.
3.8. That said, Hallam is not a housebuilder and once an outline planning application has progressed, Hallam will identify a development partner (which could be a single or multiple housebuilders / housing associations). Clearly different housebuilders have different house types and differing approaches to density.
3.9. In addition, whilst a lot of technical and environmental work has been undertaken to date, clearly further technical work would be submitted at planning application stage which would further validate the site's capacity.
3.10. Legislative and guidance changes also have the potential to impact a site capacity. Whilst the masterplanning process has been prepared to be SAB compliant, the impact of the introduction of the requirement to secure SAB approval has had an impact on site capacity and it follows that a further, and as yet unknown, legislative or guidance change could have a similar impact.
3.11. This is not to suggest that there isn't a high degree of confidence that the site can deliver roughly 600 homes, rather that Hallam suggest that the word 'approximately' is added to the policy wording to reflect the potential for a

degree of deviation (which could be upwards or downwards).
3.12. Background Paper 9A Housing Land Supply and Housing Trajectory sets out the anticipated annual delivery rates for housing over the RLDP. With regards to the ability of the site to deliver the number of homes it is allocated for in the RLDP plan period, the housing trajectory for the site reflects that the first completion date was pushed back from 2027/2028 to 2028/2029 since the consultation on the Preferred Strategy. This means that the whole site continues to be shown as being delivered within the RLDP plan period.
3.13. Hallam support and agree with the approach set out in the Draft Housing Trajectory and see it to be realistic and achievable based on their experience and subject to usual caveats around the condition of the market, RLDP progression, and swift determination of a planning application.
Affordable Housing
3.14. At present, Policy HG1 KS5 (like all of the standalone policies for the other four Key Sites), states that the site should provide a minimum of 210 affordable housing units. This figure is derived from 35% of the number of homes that the site is allocated for (600 homes).
3.15. Worded at present, a strict interpretation of this policy could be that 210 affordable units must be provided onsite regardless of the total number of homes that are proposed. For example, it could be interpreted as requiring a fixed number of affordable homes of 210 homes, even if the total number of homes that are proposed on the site is fewer than the 600 homes that the site is allocated for or, conversely, that only 210 homes should be delivered as affordable if more than 600 homes were to be delivered and the RLDP allocation exceeded.
3.16. Hallam recognise that this is not what the policy wording is seeking to achieve (and their viability work for the site is based on the site delivering 600 homes of which 35% are affordable) but suggest that its wording could be clarified by removing reference to a specific number of affordable homes for the site to deliver in favour of just the affordable housing percentage being noted in the policy.
3.17. Hallam also suggest that the requirement for affordable housing units to not be in clusters of more than 10 homes is removed and that the approach is for this to be considered on a site by site and case by case basis and with recognition that Policy HG5 (Affordable Housing Exception Sites) which can provide a framework for 100% affordable sites of more than 10 homes to be delivered. As an example, and in the case of Land to the West of St Athan, the “Land South of the B4265, St Athan” (Site ID 457) portion of the site is likely better suited to a mixed-use development alongside the future St Athan Railway Sation. This portion of the site is probably better suited to a flatted form of development (either above non-residential uses or as a block) which tend to be delivered as 100% affordable housing developments rather than comprising a mix of private and affordable housing.
Sustainable Transport and Highways
3.18. This part of the policy sets out expectations relating to sustainable transport and highways and there are a number of matters which Hallam wish to comment on.
3.19. As a starting point, Hallam support the delivery of St Athan Railway Station and therefore commits to its safeguarding. Likewise, Hallam recognise the potential suitability for the “Land Between the Railway Line and B4265, St Athan” (Site ID 458) site to accommodate a Welsh-Medium Secondary School and can also therefore commit to safeguarding land for the delivery of a pedestrian and cycle bridge over the railway line. Specific comments on Policy TR1 (Transport Proposals) and Policy CI3 (New Community Facilities) are made elsewhere in this Statement.
3.20. With regards to the Sustainable Transport and Highways section of Policy HG1 KS5, Hallam’s overall position is that a careful balance needs to be reached between the policy wording being explicit as to what highway works must be delivered and reserving consideration of this until planning application stage where the exact site capacity is better understood and a full Transport Assessment submitted.
3.21. At present, Hallam’s view is that the policy wording is overly explicit and suggest that it could be qualified through the addition of the following text before listing the offsite highways improvements:
‘Subject to the Strategic Transport Assessment and site-specific Transport Assessment submitted at planning application stage’.
3.22. Turning to the specific offsite highways measures that are listed within the policy wording, Hallam have four comments.
3.23. Firstly, it is suggested that the delivery of an active travel link along the B4265 between the site entrance and the Gileston Road junction should be secured via a financial contribution that is pooled with KS4 Church Farm. This reflects that the delivery of this link not only links Hallam’s site to other services in St Athan but also linking KS4 Church Farm to the services that are proposed and uses for which land is safeguarded within Hallam’s site. Clearly this is also to the benefit of existing residents of St Athan. This would reflect the approach that is proposed to be taking for the pooling of Section 106 monies for the delivery of an active travel route between St Athan and Llantwit Major.
3.24. Secondly, Hallam flag the need for the RLDP to be sufficiently flexible with regards to the delivery of an active travel link between St Athan and Llantwit Major. Ultimately, the purpose of delivering this active travel route would be to provide a connection from St Athan to Llantwit Major Railway Station and the delivery of a Railway Station in St Athan would remove the necessity of delivering this active travel connection. Hallam’s suggested amendments to the policy wording seeks to reflect this.
3.25. Thirdly, Hallam have been consistent in highlighting that, whilst there is an aspiration to deliver an improved pedestrian link along Llantwit Road, a combination of the road width and the extent of third party ownerships make delivering a continuous link very challenging with a pragmatic approach instead needing to take place that recognises the ability to deliver betterments but acknowledges that delivering a continuous link is unlikely to be possible. Hallam has suggested additional wording to clarify this.
3.26. Fourthly, Hallam highlight that the designing of a loop road within the site to facilitate access by a bus may be superfluous and represent an over-engineered solution given the potential for the St Athan Transport Interchange that land is safeguarded for under Policy TR1 (Transport Proposals) is envisaged to accommodate infrastructure to accommodate a bus connection. On that basis, it is suggested that the following clause is added to the policy wording to

reflect that bus connectivity to the site may be delivered not via an internal bus loop:
'Subject to progress on the St Athan Transport Interchange as land is safeguarded for under Policy TR1 (Transport Proposals)'
Community Infrastructure
3.27. There are three points which Hallam wish to make in connection to this element of Policy HG1 KS5.
3.28. Firstly, Hallam suggest that the wording of the part of the policy relating to financial contributions to fund the delivery of additional school places needs to be adjusted. At present this part of the policy is worded as if there is an automatic requirement to provide Section 106 monies for school places where Circular 13/97 is clear that a contribution should only be sought where the schools do not have current projected capacity to accommodate the new children from the development. Hallam's proposed adjustments seek to ensure that this part of the policy reflects this though note that Background Paper 43 Education forecasts a need for a financial contribution to be made for additional school places at all English and Welsh primary and secondary schools that the site is within the catchment of.
3.29. Secondly, Hallam note that Table 10 of Background Paper 34 Community Facilities identifies an existing over-provision of community space within the St Athan Ward of 778sqm and a surplus of 531sqm of community floorspace at 2036 when the level of housing to be allocated in the Deposit RLDP is delivered. It is understood that this is on the basis of no community floorspace being delivered as part of Hallam's proposals or as part of the KS4 Church Farm site. Hallam suggest that the wording of this element of the policy needs to reflect that community floorspace should only be required to be provided in the case of a local shortage in provision. Aligned to this, Hallam also suggest that the reference to specifically providing a 'community building' is adjusted to instead make reference to 'community space'. This reflects that the community space element of scheme, if indeed it is actually required, could be a part of a larger mixed-use building (probably in the Mixed-Use / Community area) rather than as a standalone building.
3.30. Thirdly, Hallam note the error in the wording of the sixth bullet point under the 'Sustainable Transport and Highways' heading where reference is made to the safeguarding of land on the southern side of the railway line as being identified in Policy CI3(2) where-as it should be Policy CI3(6). This is a minor amendment that should be made to ensure consistency.
Green Infrastructure, Recreation Spaces, and Biodiversity
3.31. The masterplan prepared by PAD Design and submitted by Hallam shows the site delivering a mix of public open space and green infrastructure including the provision of allotments, a Neighbourhood Equipped Area of Play, a Local Equipped Area of Play, and a sports pitch. This is welcomed in Background Paper 32A Green Infrastructure Assessment of Key Sites which, at Paragraph 5.55 recognises that a 'ground up' approach has been taken in the masterplanning approach.
3.32. This is shown indicatively to illustrate the composition of public open space and green infrastructure that the site could provide alongside the other elements of built development that the site is allocated and the masterplan makes provision for.
3.33. Whilst, Hallam recognise the need to provide public open space, the starting point for this should be the Fields In Trust Standards and Hallam therefore suggest an approach where the policy wording is not specific about what forms this should take.

Policy TR1 (Transport Proposals)
4.1. This policy identifies three active travel routes and two public transport schemes that the Deposit RLDP safeguards land for, as well as three highway improvement schemes that are identified as being required to mitigate the impact of development. Two of these are in St Athan – one being the St Athan Transport Interchange for which land is safeguarded for and the second being the Gileston Road Junction which is identified as a required highway improvement. Both are considered in turn below.
St Athan Transport Interchange
4.2. Hallam support the safeguarding of land for the St Athan Transport Interchange and see that its delivery would be to the benefit of the Key Site itself but also more broadly to St Athan and western parts of the VoG.
4.3. It is clear from discussions with Transport for Wales that there is a strong business case for the delivery of a railway station and that the creation of "critical mass" through residential development around it has a key role in driving its delivery, as does the nationally significant economic role that the Bro Tathan Enterprise Zone has and the Aberthaw Green Energy Park will have. The proximity of St Athan to both of these hubs clearly contributes to its fundamental sustainability and suitability for growth whilst the further development of a critical mass of housing and employment generating uses will further support linkages between them and strengthen the business case for a new railway station at St Athan. This is reflected in TFW's 'Today, Tomorrow, Together: A Vision for Rail Across Wales and the Borders' which confirms that the delivery of St Athan Railway Station remains in TFW's pipeline which has been endorsed by the Westminster Government.
4.4. The location that is identified on the Proposals Map is Transport for Wales' preferred location within the site and has been incorporated into the masterplanning approach which seeks to create a node around it by incorporating a bus interchange and a mix of uses.
4.5. At present, the Proposals Map identifies the location of the Railway Station using a red star which is positioned on the railway line itself but without the required land take not spatially being defined.
4.6. Whilst Hallam recognise that the exact land take required will need to be refined further through discussion with TFW, it may be the case that the mixed-use element on this portion of the site comes forward before the Railway Station.
4.7. The early delivery of these elements should be welcomed as clearly the mixed-use element both enhances the range of services and facilities in St Athan but also would mean that the Railway Station is integrated upon delivery.
4.8. On that basis, it is imperative that the safeguarding of land for the Transport Interchange is limited only to that land required to deliver the Transport Interchange and is done in such a way such the safeguarding does not sterilise non-transport related development from this portion of the site until the Railway Station has been delivered.

Gileston Road Junction, St Athan
4.9. Paragraphs 6.199 and 6.200 relate to the expectation that vehicle trips as a result of RLDP allocations in St Athan are anticipated to trigger the need to upgrade the Gileston Road Junction to a signal-controlled arrangement. This is informed by the conclusions of Table 3 of the Strategic Transport Assessment which forecasts that the junction will be operating above capacity during both the weekday AM and PM peak by the RLDP's end point.
4.10. Hallam note that Technical Note 08 of the Strategic Transport Assessment identifies that the improvements to the Gileston Road Junction are to be delivered by VoG and funded through financial contributions from seven sites that the RLDP proposes to allocate.
4.11. Improvements to this junction are to be funded by a number of sites; however it is unclear whether (and if so, when) forward funding will be secured by the Council and clearly there cannot be a situation where none of the sites can deliver homes until strategic highways works are funded / completed. We therefore seek further clarification over the phasing of these works and note that early delivery of homes ahead of strategic highway improvements is likely to be important for deliverability of each strategic site.
4.12. To respond to Hallam's above comments, one approach could be for references to highway improvement works to be entirely removed from this policy or, if they are to remain, that qualifying text is added to note that the need for and format of any improvements will be subject to detailed consideration at planning application stage and that such contributions must be justified in planning terms, particularly where (in the case of Pen Y Turnpike Road and Waycock Cross for Land to the West of St Athan), the distance from a site and the junction to be improved is significant and therefore thee number of vehicle trips that would be generated modest.
4.13. This aligns with Hallam's suggested approach to the specific wording of Policy HG1 KS5.

Policy CI1 (Open Space Provision)
5.1. This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.
5.2. Hallam note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.
5.3. Hallam is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter.

Policy CI3 (New Community Facilities)
6.1. As well as allocating land for five new or improved education developments, this policy safeguards 'Land South of the Railway Line, St Athan' for the delivery of a Welsh-medium secondary school.
6.2. This policy is clearly of interest to Hallam because Paragraph 6.250 places a requirement for the safeguarding of land on the northern side of the railway line on their Land to the West of St Athan Key Site for a footbridge to land on.
6.3. With the policy wording being intentionally light-touch, Paragraph 6.250 of the Deposit RLDP provides greater detail about the safeguarding of this land (and other paragraphs in the Deposit RLDP relate to other community facilities that Policy CI3 covers). It effectively does two things.
6.4. Firstly, it notes that the delivery of this school will require active travel improvements including the safeguarding of land for a pedestrian and cyclist footbridge over the railway line.
6.5. Secondly, it is clear that the safeguarding of this land is in response to a forecast increase in demand for Welsh-medium secondary school places across the whole of the VoG as a result of expanded capacity at Welsh-medium primary schools across the VoG. On this basis, it follows that this location has been selected as a preferred location because of its ability to serve the wider sub-region.
6.6. Hallam recognise that this site could be a suitable location for a Welsh Medium Secondary School and, as a principle, is agreeable to the safeguarding of land for the footbridge landing on the northern side of the railway line.
6.7. Paragraph 6.250 of the Deposit RLDP is clear that the delivery of a Welsh-Medium secondary school is in response to a regional / sub-regional demand rather than a local need as a result generated either by the development of Land West of St Athan or other emerging allocations within St Athan and it cannot be the case that Hallam are expected to make disproportionate contributions to either the delivery of the school or required active travel improvements just because they have control of the site or that it is next to the Key Site.

Policy CC1 (Residential Operational Net Zero Carbon Development)
7.1. The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) before the policy wording sets out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.
7.2. As a starting point, Hallam share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) can present challenges. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this will result in an uneven framework for housebuilders, significantly adding cost and reducing certainty.
7.3. The justification for using planning policy to set requirements exceeding building regulations is set out in Section 7

of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.
7.4. There are two points to be made by Hallam here:
7.5. Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage that such an approach would not be sound. This Written Ministerial Statement was subject to an unsuccessful judicial review.
7.6. Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations. Where there are existing Local Plans in England that take this approach, they do not align with the Westminster Government's position and there will be no Local Plans emerging including such policies.
7.7. Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs (Bridgend and Merthyr Tydfil) do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound at Examination stage.
7.8. Secondly, Hallam have concerns with the approach that has been taken with regards to viability.
7.9. From Hallam's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.
7.10. As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated. This is important as it demonstrates that, whilst Hallam do not believe such a policy approach should be taken, the development of the site at the time of the completion of the Development Viability Model for the site is viable whilst meeting the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development).
7.11. Hallam's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. This concern is particularly exacerbated by the fact that, as recognised at Paragraph 6.47 of Background Paper 42 Viability Assessment, takes the lowest estimate for the works required to achieve these policy expectations, Savills' experience – both that of their development land team based in Wales and their environmental sustainability team based across England - is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.
7.12. Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy DNP3 (Glamorgan Heritage Coast)
8.1. This policy relates to the Glamorgan Heritage Coast, identifying a series of land uses that are permissible within the policy area before setting three tests that must be satisfied for development within the Glamorgan Heritage Coast to be permissible where there is an adverse environmental impact.
8.2. Hallam note that the 'Land South of the B4265, St Athan' portion of the land that they control is both proposed to be retained as part of the Glamorgan Heritage Coast (a continuation of the position taken in the adopted LDP) whilst also forming part of the Land to the West of St Athan Key Site where the masterplan at Figure 17 shows it as accommodating the potential new railway station and a mixed-use area (including car parking).
8.3. The relevant extract of the Proposals Map is replicated below:
8.4. The exact composition of the buildings proposed on this portion will require further refinement and will need to be driven by occupier requirements, but the masterplanning work undertaken by pad Design envisages that they could provide a mix of retail and food and drink uses most likely across some or all of the ground floor, alongside workshop, co-working or office incubator space at upper floor levels and perhaps at ground floor level. There could also be the potential for additional homes, likely in the form of apartments at upper floors, as part of a mix of uses. It is realistic therefore to anticipate that this portion of the site will accommodate buildings of up to three or four storeys with a high plot ratio to reflect the uses and supporting infrastructure that it is to accommodate.
8.5. Hallam's position is that the continued inclusion of this parcel of land as part of the wider Glamorgan Heritage Coast is inappropriate for two reasons.
8.6. Firstly, and its most basic level, the approach of allocating the site for development whilst retaining a designation that inherently seeks to restrict the type, form, and quantum of development, is wholly contradictory.
8.7. Designation of this portion of the site as part of the Glamorgan Heritage Coast will mean, given that the uses that Figure 17 envisages as being delivered on the site are not those that the first part of Policy DNP3 (Glamorgan Heritage Coast) allows for, any application for development will need to demonstrate that there is a compelling need for the development, that the benefits outweigh the harm, and that appropriate mitigation measures are in place. This the potential to prejudice its development or, at very least, greatly impact how it is developed whilst requiring.
8.8. Secondly, it is difficult to see how this land warrants ongoing inclusion within the designated Glamorgan Heritage Coast. This is something that is considered in more detail in the Review of Landscape Character and Visual Amenity (December 2022) prepared by FPCR and submitted as part of the Call for Sites (and also available as part of the consultation on the Deposit RLDP as a piece of Key Site Supporting Information). Paragraph 5.13 of the FPCR document

concludes on this piece of land that:
'Through the fieldwork it is considered that the Site does not display any "special environmental qualities" identified by the Policy and plays no intrinsic role in the Policy designation, as it is effectively forms a rather ordinary grazing field. It is influenced by the urbanising elements of the adjacent B4265, the Railway Line, the Tarmac Cement works, and to some degree the built edge of St Athan. Furthermore, it is bound and contained by trees and woodland beside the railway line, which prevents wider intervisibility with the coastline.'
8.9. Taking the above together, Hallam suggest that the preparation of the RLDP provides the opportunity to define the extent of the Glamorgan Heritage Coast to respond to both the landscape value of certain sites but also the wider aspirations of the RLDP. If it is not within the gift of VoG to redefine the boundaries of the Glamorgan Heritage Coast through the RLDP then Hallam suggest that an additional element could be added to this policy to confirm that it does not apply to land which is allocated for development.

Appendix A - rewording of Policy HG1 KS5

Document Element: Land at Clare Gardens,

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Dwr Cymru Welsh Water has made representations on planning application ref 2025/01008/RG3.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure

where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at

capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: St Athan Primary School, St

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Dwr Cymru Welsh Water has made representations on planning application ref 2025/00991/RG3.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.

Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the ‘domestic’ supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the

potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be

undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: Upper Cosmeston Farm,

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Dwr Cymru Welsh Water has made representations on planning application ref 2020/01170/OUT.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision

Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to

accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. 7114 Comment

Document Element: St Athan Primary School, St
Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

As worded, the Policy is not clear what land is allocated. Whilst the principle of transferring land for expansion of the school (as part of Church Farm phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government

Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy CII - Open Space Provision
The wording of Policy CII, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the

Deposit Plan but Policy CII should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy CII requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Document Element: St Athan Primary School, St

Respondent: Mrs Melissa Plimmer [3599]

Summary:

The proposed expansion of St Athan Primary School lacks a guaranteed timeline for when these facilities will be operational relative to house completions.

Full text:

Representation on the Vale of Glamorgan Deposit RLDP 2021–2036
Specific Policy/Site Objection:
• Policy SP4.4: Land at Church Farm, St Athan
• Policy SP4.5: Land to the West of St Athan
• Clive Road (Additional Allocation)
• Policy EMP2: MOD St Athan / Bro Tathan
Status: Unsound
1. Introduction
I wish to formally object to the allocation of the above sites and the broader designation of St Athan as a "Primary Settlement" for high-density growth within the Replacement Local Development Plan (RLDP). This allocation fails the Test of Soundness regarding Consistency (with national climate goals) and Effectiveness (deliverability of infrastructure).
2. Failure of Sustainable Transport (Policy SP7 & SP10)
The RLDP identifies St Athan as a "Strategic Hub," yet it remains the only primary settlement in the Vale of Glamorgan without a direct rail link. Relying on the "Active Travel" aspirations of Policy SP10 is unrealistic for a community where the majority of residents commute to Cardiff, Bridgend, or Barry.
The proposed density at the above sites will inevitably lead to an unsustainable increase in private car journeys on the B4265, specifically at the Gileston Road junction and Weycock Cross, which are already at or near capacity.
Concrete infrastructure is needed to be in place prior to any development of the land. Often intentions of infrastructure are not progressed. In addition where infrastructure is not in place prior to housing many commuters will become accustomed to travel by car and wont switch to public transport. It is difficult to see how developments work with Future Wales: The National Plan 2040
Active travel should look at linking key destinations and with the western vale being spread over longer distances more effort should be given to linking population centres with separated bicycle paths and wide accessible pavements. Shared bike / foot paths are inherently dangerous not allowing the safe use of wheelchairs and prams and sufficient use for children and dog walkers. Cycling should not have to stop at every intersection which creates visibility black spots by the way they turn away from traffic.
With current planned housing and that of additional housing in the LDP creating over 1,000 new homes and with each household having 1-2 cars per household this will add significant additional numbers of journeys on already poor road infrastructure. The vale lacks sufficient north / south routes pushing vehicles towards Weycock Cross in Barry which will have its own traffic issues or via Cowbridge with small country lanes. I personally worked in Cowbridge travelling from St Athan where buses would take over 1 hour 10 minutes and even then not arriving in time to start work. In contrast car travel would be 10 minutes or cycle would be 20 minutes but over dangerous roads.
Travel to Barry for meetings at peak times can take over 50 minutes from St Athan with significant delays leading to Weycock Cross and passed the secondary schools even before developments in the RLDP or existing planning. Public transport gets caught in the same traffic issues.
Access into St Athan is already dangerous from the war memorial with one near fatal accident already having taken place since the ‘improvements’ to the junction. Proposals for additional access from B4265 onto developed land would be on a hill with poor visibility and around a blind bend. Currently there is poor visibility leaving St Athan due to the side by side two car exit blocking views in both directions along with more visibility issues looking westward due to traffic furniture and signage.
While Bro Tathan (Policy EMP2) provides jobs, there is no guarantee that the people moving into local developments will work there. If they commute elsewhere, the RLDP fails its own climate goals (Policy SP1) by creating a "commuter colony" rather than a sustainable community.
Reference Policy CI3 (New Community Facilities). The proposed expansion of St Athan Primary School lacks a guaranteed timeline for when these facilities will be operational relative to house completions. New access to the school under existing planning is only ‘proposed’ and existing access to the school via Rock Road is a poorly surfaced and narrow one way road but is often ignored with traffic coming via Rectory Drive which has a ‘No entry except for access’ restriction but is not enforced causing large numbers of vehicles into residential areas not built

for this type of activity.
Speeding is already a great concern in the village with the current level of vehicle traffic with little compliance with the 20mph speed limit and no enforcement.
3. Coalescence and Loss of Settlement Identity (Policy SSC1)
The scale of development proposed for Church Farm, in conjunction with Policy SP4.5 (Land West of St Athan), threatens the distinct character of the village. The erosion of the "Strategic Gap" between St Athan and Eglwys Brewis violates the principles of Policy SSC1 (Settlement Boundaries). This "urban creep" creates a continuous sprawl that permanently destroys the rural setting of the historic Church Farm and the village's unique sense of place.
St Athan should no longer be thought of as a village but as a small town with infrastructure to meet the growing demands of the population and lacks facilities that are given to surrounding towns such as fire / ambulance and police stations.
If the jobs at the Enterprise Zone (Aston Martin, Bro Tathan) do not match the demographic of the new residents, St Athan simply becomes a "dormitory" village, increasing the carbon footprint as people drive to Cardiff or Bridgend for work. In addition people will travel to St Athan from other areas should they be employed at the new commercial sites.
4. Infrastructure Lag and Healthcare Capacity (Policy CI3)
Under Policy CI3, development should only proceed where adequate community facilities exist or can be provided. Current primary healthcare services in St Athan and nearby Llantwit Major are already oversubscribed. The RLDP provides no "Triggers for Delivery" to ensure that new medical and educational facilities will be operational prior to the occupation of the hundreds of homes planned for the Church Farm site. This creates a significant risk to the wellbeing of both new and existing residents. Access to both village GP services are on a part time basis. With new dentist rules in Wales, this will increase the need for further travel around the area to meet simple check ups. With no A&E facilities in the county St Athan often falls between Cardiff and Bridgend hospitals and continued poor roads together with additional traffic gives greater concern when emergencies happen.
5. Environmental and Biodiversity Impact (Policy SP5)
The Church Farm site consists of high-quality agricultural land and vital greenfield habitats. While Policy SP5 mandates a "Net Benefit for Biodiversity," the total loss of soil permeability and ancient hedgerow connectivity on a site of this scale cannot be mitigated by tokenistic landscaping. Once this valuable land is developed it is irretrievably lost for current and future generations. Currently there are red list species using the space like Yellowhammers and Skylarks. In addition there has been a collapse of invertebrate bio-mass over the last 40 years and personally seen since moving the area in 1980. Net Benefit for Biodiversity plans do not address any of these local and national concerns.
Land to the west of St Athan (SP4.5) This site consists of Grade 2 (Good) or 3a (Excellent) agricultural land. Under Planning Policy Wales (PPW) 12, such land should only be developed if there is an "overriding need" and no lower-grade land is available. The Vale of Glamorgan council has not sufficiently explored brownfield alternatives in the Barry Docks or the St Athan Enterprise Zone. The increased light pollution and "urban glow" will impact the rural character of the Western Vale.
The invertebrate charity Buglife shows that based on citizen science monitoring data, there has been a 75% to 79% decline in the abundance of flying insects in Wales between 2004 and 2023. Natural Resources Wales also reported
• 79% Decrease in Flying Insects (2004–2023): Data from the "Bugs Matter" survey, which counts insect "splats" on vehicle number plates, recorded this 79% reduction in Wales, with 2023 showing further declines from previous years.
• Specific Invertebrate Declines: Moths, which are key pollinators, have seen an average decline of 43% in abundance since 1970.
• Widespread Biodiversity Loss: Welsh wildlife has decreased on average by 20% since 1994, and 18% of species in Wales are at risk of extinction.
• Habitats in Peril: Over the past 50 years, many insects have suffered declines of 65% to 70% in certain areas, particularly moths, butterflies, ladybirds, and ground beetles.
• Impact on Food Chain: Invertebrates that provide food for farmland birds have seen declines of 50-80%.
The cumulative impact of hard-standing surfaces also raises serious concerns regarding surface water runoff into the River Thaw catchment area. Significant surface flooding already takes place across the western Vale spilling onto roads causing travel disruption.
An increase in hard surfaces also increases ambient temperatures compared to grassland, woodland and other green spaces necessitating increased power use for cooling and comfortable living temperatures. Building practices can help mitigate this but only where this is incorporated into sustainable building rules.
Replacing green fields (which act as a natural sponge) with hundreds of roofs and driveways at Church Farm (SP4.4) and Land West of St Athan (SP4.5) will create a "funnel effect."
Dwr Cymru Welsh Water has previously noted concerns regarding the St Athan Wastewater Treatment Works. Proof is required that the current system can handle the RLDP's projected
f

low without increasing overflow events. Further development risks "Combined Sewer Overflows" (CSOs) into local watercourses, which contradicts the Council's Nature Emergency declaration.
The Vale of Glamorgan Council requires a Sustainable Drainage Systems (SuDS) Approval Body (SAB) review. Attenuation ponds are often poorly maintained and can fail during the "1-in 100-year" storm events which are becoming more frequent.
6. Conclusion
The allocation of the above site policies are unsound. It promotes car-dependent growth in a rural location without the necessary infrastructure "trigger points" to protect the local environment or the B4265 road network.
Proposed Remedy: Reduce the housing density at the above sites and re-classify St Athan as a "Minor Rural Settlement" until such time as a dedicated rail link, suitable active travel infrastructure or high-frequency public transport other than rail is fully funded and scheduled for delivery.

Document Element: CI4 - PROTECTING AND ENHANCING EXISTING COMMUNITY FACILITIES

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the saftey of pupils. Achieving Secured By Design acrediation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.

South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.

We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.

We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.

The replacement development plan outlines its Vision and objectives of the RLDP as follows:

'By 2036':

The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.

Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.

The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.

Objectives:

1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment

Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:

Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.

Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.

Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.

TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.

TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'

Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.

Violence against women and Girls:

Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.

In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it

within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at: https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and

25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.

South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local

health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism

(protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver

especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of

new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Change suggested by respondent:

-

Sound: Not specified

Email representation redacted - https://valeofglamorgan.oc2.uk/a/3k5

6730 Comment

Document Element: CI4 - PROTECTING AND ENHANCING EXISTING COMMUNITY FACILITIES

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres.

There is no reference to the expectation that local communities are consulted in relation to the development of community facilities.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning
guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are
involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the
deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community
amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient
communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: "The Local Development Plan will support resilient and sustainable
local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part
of sustainable growth."

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces

that produce food are missed, which could support local
diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

“Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other
opportunities for local food production as part of multifunctional green infrastructure.”

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their
proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative
impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid
HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to
ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare
services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Change suggested by respondent:

Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”

We would like to see a requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

Document Element: CI5 - CEMETERY AND CREMATORIUM PROVISION

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Water Supply - A 3" diameter watermain crosses the site.
Wastewater - There are no public sewers close to this site.
Wastewater Treatment Works (WwTW) - N/a

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.

Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

4690 Support

Document Element: Land east of Cardiff
Respondent: Amstone Developments Limited [3758]
Agent: Tetra Tech Cardiff
Summary:
Amstone Developments Limited (ADL) support the draft RLDP allocation of the Site within the 'Major Employment Allocation – Land East of Cardiff Airport, Roose'

Full text:

These representations relate to 'Land at Tredogan Road, Rhoose, Barry' (the Site), owned by Amstone Developments Ltd (ADL).

Amstone Developments Limited (ADL) support the draft RLDP allocation of the Site within the 'Major Employment Allocation – Land East of Cardiff Airport, Roose'

Requested Modifications
Policy SP14
Amend Policy SP14 and its supporting text to confirm that the Major Employment Allocation at Land East of Cardiff Airport may accommodate a broad range of employment-generating uses, consistent with the definition of economic development in PPW and TAN 23, and not restricted solely to B1, B2 or B8 uses

Policy EMP4
Clarify the definition of "non-employment proposals" so that non-B1/B2/B8 uses capable of generating employment are properly treated as "employment uses". Remove -duplicated criteria already controlled via other policies

Modification- Supporting Text
Update the supporting text to acknowledge that employment allocations within the Enterprise Zone should support a flexible mix of economic uses reflecting the national policy position in PPW, TAN 23 and Future Wales

The evidence and policy context clearly support the continued allocation of the Site for employment, enterprise and commercial use. This is consistent with the Council's own SPG and emerging LDP policies which aim to de-risk the under-delivery of employment land and job creation and enhance the Site's potential to attract inward investment and high-value economic activity.

Amstone Developments Limited fully support that the RLDP allocates the Site for general employment use (B1, B2, and B8) with flexibility to accommodate complementary economic development, consistent with national guidance, the Use Classes Order (Wales), and market evidence

5121 Comment

Document Element: SP14 - EMPLOYMENT GROWTH

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.

The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements

• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to

locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.
The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).
Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.
BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.
Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.
The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.
We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.

The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.
The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.
In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth

required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters.
It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.
Renewable Energy
Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?
It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.
The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.
Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.
The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.
Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.
Minerals
The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.
BMV Agricultural Land
The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:
• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and

• Candidate site assessments.
•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry:
"Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

Document Element: SP14 - EMPLOYMENT GROWTH

Respondent: Welsh Government (Planning Division) (Mr Neil Hemington, Chief Planner) [2386]

Summary:

Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).

Full text:

Thank you for consulting the Welsh Government on the Vale of Glamorgan Council Replacement Local Development Plan (LDP) – Deposit Plan. It is essential the authority is covered by an up-to-date LDP to give certainty to local communities and businesses and provide a robust basis for decision making.
Without prejudice to the Minster's powers, the Welsh Government is committed to assisting Local Planning Authorities (LPAs) minimise the risk of submitting unsound plans by making comments at the earliest stages of plan preparation. The Welsh Government looks for clear evidence that the plan is in general conformity with Future Wales: The National Development Framework, aligns with Planning Policy Wales (PPW) and the tests of soundness, as set out in the LDP Manual.
National planning policies are set out in Planning Policy Wales (PPW) Edition 12 and seek to deliver high quality, sustainable places through a place-making approach (the LDP should ensure it takes into account any further iterations of PPW prior to the examination). The implementation of the core policy areas in PPW, such as adopting a sustainable spatial strategy, appropriate housing and economic growth levels, infrastructure delivery and place-making, are articulated in more detail in the LDP Manual (Edition 3). We expect the core elements of the Manual, in particular Chapter 5 and the 'De-risking Checklist(s)' to be followed. Failure to comply with these key requirements may result in unnecessary delays later in the plan making process. The development planning system in Wales is evidence-led and demonstrating how a plan is shaped by the evidence is a key requirement of the LDP examination.
After considering the key issues and policies in Future Wales, the Welsh Government is of the opinion that the Replacement Deposit Plan is in general conformity with Future Wales: The National Development Framework. Specific comments are set out in the Statement of General Conformity (Annex 1 of this letter). Annex 2 highlights a range of issues that need to be addressed for the plan to align with PPW and the DPM. Collectively, our comments highlight a range of issues that need to be addressed for the plan to be considered 'sound' as follows:
Annex 1 – General Conformity with Future Wales
• No significant concerns
Annex 2 – Core matters that need to be/have been addressed (PPW and the DPM)
• Spatial Strategy and Primary Settlements
• Housing and Economic Growth Levels – Regional Collaboration
• Maximising Affordable Housing Provision
• Delivery & Implementation – General
• Gypsy and Travellers
• Renewable Energy
• Minerals
• Best and Most Versatile Agricultural Land (BMV)
• Welsh Language

I would urge you to seek your own legal advice to ensure you have met all the procedural requirements, including the Sustainability Appraisal (SA), Strategic Environmental Assessment (SEA) and Habitats Regulation Assessment (HRA), as responsibility for these matters' rests with your authority. A requirement to undertake a Health Impact Assessment (HIA) arising from the Public Health (Wales) Act 2017, if appropriate, should be carried out to assess the likely effect of the proposed development plan on health, mental well-being and inequality.
My colleagues and I look forward to meeting you and the team to discuss matters arising from this response.
Yours sincerely,
Neil Hemington
Chief Planner Welsh Government

Annex 1 - Statement of General Conformity
The Welsh Government is of the opinion that the Vale of Glamorgan Council Replacement Local Development Plan (2021-2036) Deposit Plan is in general conformity with the National Development Framework: Future Wales, as set out in paragraphs 2.16 – 2.18 of the Development Plans Manual (Edition 3).
There is a joint position statement on the relationship between Bridgend, Cardiff and the Vale of Glamorgan (BP20A), which considers population growth, migration patterns, housing completions, employment characteristics, demographics, commuting and transport links between the three adjoining authorities. The Welsh Government supports the principle of this work which demonstrates how change in the Vale of Glamorgan relates and complements growth in adjoining local authorities. This approach illustrates a good mechanism for other local authorities to follow.
Reasons
Future Wales places emphasis on the development of National Growth Areas in a sustainable manner. Growth areas must be sustainably planned, reduce the need to travel by car, encourage walking and cycling (active travel), maximise public transport usage and incorporate green infrastructure. Growth areas must embed these principles within a wider regional consensus, focussing on the opportunities they bring to promote social and economic benefits across a broader geographical area. The Welsh Government supports sustainable growth in National Growth Areas to respond to the climate change and biodiversity emergencies, making the best use of resources.
Policy 1 and Policy 33 of Future Wales states that Cardiff, Newport, and the Valleys will be the main focus for growth and investment in the region. The strategic diagram (p163) also identifies the Vale of Glamorgan within the National Growth Area. The Vale of Glamorgan RLDP, specifically BP20A, provides robust evidence on the interrelationship and key issues with adjoining authorities, including their interaction and how they have shaped and influenced the scale/location of growth in the RLDP. This is set out in the three Joint Position Statements (JPSs).
BP45 'Regional Assessment of Future Growth and Migration for the Cardiff Capital Region (CCR), May 2024, provides further evidence on how the scale of growth indicated for the region has shaped the scale of future economic growth within the Vale of Glamorgan. This results in a higher level of employment growth in the Vale of Glamorgan primarily to

increase self-containment and reduce out-flows to adjoining urban areas. Two key areas for future economic growth are identified at Cardiff Airport/Bro Tathan Enterprise Zone and Aberthaw Power Station.
The result is a Sustainable Transport Orientated Growth spatial strategy focusing on the Cardiff – Bridgend railway line and A48 corridor, with the key settlement for growth at Barry, followed by service centres on public transport corridors.
On balance, the Welsh Government considers the Deposit Plan is in general conformity with key policies in Future Wales namely (not exhaustive):
Policy 1: Where will Wales grow
Policy 2: Shaping Urban Growth and Regeneration – Strategic Placemaking
Policy 6: Town Centre First
Policy 10: International Connectivity – Cardiff Airport
Policy 12 Regional Connectivity
Policy 33: National Growth Area – Cardiff, Newport and the Valleys
Policy 36: South-East Metro
Future Wales brings a new perspective that all LDPs have to embrace on how each LDP sits within the region as a whole and the relationship to other LDPs, in essence, a strategic approach to cross boundary relationships. There is evidence to support that approach in advance of an SDP. 4

Annex 2 – Core matters that need to be addressed (PPW and the DPM)
Spatial Strategy - Location of Growth
The Council tested 4 spatial options:
Option 1 – Continuation of the adopted LDP growth strategy
Option 2 – Dispersed Growth
Option 3 – Focused Growth
Option 4 – Sustainable Transport Orientated Growth
The Council has chosen Option 4: Sustainable Transport Orientated Growth for its Deposit Plan. The strategy seeks to locate most of the new growth in those settlements well served by existing/proposed rail infrastructure along the Vale of Glamorgan/Penarth branch lines. This will encourage and maximise the use of sustainable transport modes in the plans designated Strategic Growth Area (SGA). The SGA encompasses most of the Council's largest and more sustainable settlements and the Council considers that focussing development here will reduce the need to travel and will co-locate housing with employment opportunities, services, and community facilities.
With a significant proportion of the Council's brownfield land already developed/committed, there are limited opportunities for brownfield development moving forward. The existing land bank is stated as 5,140 dwellings (land supply 3,837 + windfall assumptions 1,303), to meet a proposed housing requirement 7,890 (provision 8,660). The authority has allocated 3,520 dwellings on new sites (Policy SP6, Table 2). As a result, the plan has adopted a predominantly greenfield strategy allocating the majority of new development on five key sites (Policy HG1, Sites KS1-5 totalling 2,278 dwellings) well-connected edge of settlement sites, close to existing or proposed rail stations. We note the Council has used TfW data in the site assessment process to assess sites and their proximity to transport nodes. The remaining sites are mainly 'rolled' forward from the adopted LDP. The Welsh Government supports the spatial strategy, which accords with Planning Policy Wales (PPW) and is in general conformity with Future Wales.
Spatial Strategy - Primary Settlements
The Council's settlement hierarchy allocates circa 92% of all housing development (committed and proposed) to settlements in the top three tiers of the hierarchy. The Welsh Government does not object to this approach. The recognition that Culverhouse Cross with few facilities on site and the presence of BMV Land, the expectation for limited growth (paragraph 6.14 & 6.15) is welcomed. Similarly, it is noted that Wick benefits from a primary school and has some scope for future growth, albeit in keeping with the scale and accessibility of the settlement. The Welsh Government is content that the scale of growth reflected in these two locations will reflect the availability of local facilities and services.
The Level of Growth - Homes and Jobs
The Deposit Plan (Policy SP1 & SP6) makes provision for 8,660 homes to deliver a housing requirement of 7,890 new homes (526 p/a) over the plan period 2021-2036, of which a minimum of 3,070 homes will be affordable. The flexibility allowance proposed by the Council is 9.8%. The delivery of new jobs is for 5,388 over the plan period (Policy SP14).
Homes: The 2018 WG Principal Projection results in a requirement of 431 units p/a, or 6,465 units over the plan period. The housing growth proposed in the plan (requirement) is around +1,425 units (22%) above the WG 2018 principal projection, the provision being +2,195 (34%) above. The Council consider the 10 year average housing completions to represent a more realistic level of growth to deliver the key issues the plan is seeking to address. The Council considers that a lower level of growth (2018 projection) is not appropriate because the projections do not take account of 5

any policy decisions and were prepared in advance of the Covid-19 pandemic with implications for migration patterns and fewer jobs proposed.
BP8A (November 2025) considers the latest 2022 Welsh Government population and housing projections, noting they are higher than the 2018 based projections. The projections for the Vale of Glamorgan show significant variation in internal migration in particular which the Council considers should be treated with caution. The projections are trend based and are affected by specific factors that may have occurred within the previous 5 years. The 5 years in question included a period of high housebuilding associated with a newly adopted LDP, as well as the Covid 19 pandemic, where many students returned to home from term-time addresses and re-registered with GPs in the Vale.
Given the fluctuation in recent migration figures, the Council consider longer-term trends are more appropriate, and it is noted that the population change identified in the 10-year migration variant is of a similar level to that proposed under the RLDP projection. In conclusion, for the reasons identified above, despite the updated projections, the Council

considers the RLDP housing requirement continues to represent a robust basis to deliver a sustainable and deliverable level of growth over the plan period. The Welsh Government does not object to the scale of housing contained within the plan.
The demographic evidence (February 2023, Edge Analytics) tested 12 growth scenarios comprising: demographic-led, dwelling-led, and employment-led scenarios. The preferred housing requirement is based on a 10-year dwelling-led scenario (526 dpa) that would result in a population growth of 9.7% over the plan period with an annual net in-migration of 1,009 persons. The Council considers this level of housing growth is deliverable with a large proportion met through existing commitments (51%) and a jobs total (4,875 jobs) that broadly aligns with the level of new jobs forecast in the Employment Land Study (5,338 jobs). Moreover, the scale of growth is considered by the Council to be compatible with Future Wales and the role the authority plays within the wider southeast region. With inward migration to the Vale of Glamorgan from Cardiff expected to slow as Cardiff's strategic sites deliver higher levels of housing and with employment opportunities in the Vale co-located with housing sites, there are further opportunities to reduce the high levels of out-commuting into Cardiff. Overall, this approach is proposed by the Council to deliver a level of growth that is balanced with the emerging Cardiff LDP and wider southeast region. The Welsh Government does not object to the level of growth proposed in the plan.
We note that historic completion rates in the Vale of Glamorgan have fluctuated considerably over recent years. The past 10-year (2011-2021) average completion rate is 526 dwellings p/a. This has been exceeded over the last 5-years (2016-2021) with 698 dwellings constructed p/a. Build rates in recent years are in part attributed to the delivery of the current adopted LDP strategy that has more of a 'rural settlement' focus, with multiple sites across many settlements being built out. Replicating this approach going forward (10,470 dwellings) would not comply with FW/PPW in terms of sustainable development and transport, potentially adversely impacting on Cardiff's growth strategy. On this basis, the Council considers that achieving 526 dwellings p/a in the preferred 10-year dwelling-led scenario is sustainable and deliverable and would provide a level of job growth (5,338 jobs) that is balanced with the housing requirement. The Welsh Government does not object to the level of housing proposed in the plan but demonstrating delivery of the key housing sites will be essential.
The Welsh Government notes that BP0A identifies small and large windfalls, based on historic trends of 53/yr and 80/yr respectively. Also, the large windfalls are not included in the first two years of the trajectory, as per the DPM. A non-delivery allowance of 5% is identified, which reflects local characteristics in the Vale of Glamorgan. A flexibility allowance of 9.8% has been factored into the provision. The Welsh Government supports this approach, although whilst Appendix 1 contains a housing trajectory, there is no table to mirror that of Table 21, DPM. This should be included in Appendix 1. 6

Jobs: The Council's 10-year dwelling-led growth option results in a requirement for 4,875 new jobs (325 p/a) over the plan period. This broadly aligns with the projected growth for 5,338 (355 p/a) new jobs in the Employment Land Review (BP12) and as set out in Policy SP14.
The level of employment growth proposed (5,338 jobs) over the plan period is below the target in the currently adopted plan (7,610-10,610 jobs). The lower target is considered by the Council to more accurately reflect the cohort of working aged people in the Vale of Glamorgan and would support a continuation of long-term housing delivery trends that takes into account lower housing growth post-recession and a shorter period of historically high dwelling completions (2016-2021). The Welsh Government does not object to the level of job growth proposed in the plan.
In summary, (and subject to the above clarification), the Welsh Government has no significant concerns with the level of homes and jobs proposed in the plan, which is in general conformity with Future Wales.
Affordable Housing Provision
The Local Housing Market Assessment 2023 (LHMA) (BP10B) calculates affordable housing need over the replacement plan period using the 'policy neutral' Welsh Government 2018 Principal Projection and the preferred growth option. The LHMA provides the latest evidence on affordable housing need, identifying a net annual need for 1,075 affordable units per annum for the next five-years and a further 154 units per annum over the following 10 years (BP10B, Executive Summary), resulting in a requirement for 6,915 affordable homes over the plan period (461 p/a) with a tenure split of 65% social rent and 35% intermediate. The Welsh Government note that the RLDP housing requirement is higher than the 2018 projections. Accordingly, to take this into account the affordable housing need for the RLDP is 502/yr which equates to a need of 7,530 over the plan period (RLDP, paragraph 6.116, Table 4).
Policy SP7 identifies a target of delivering a minimum of 3,070 affordable homes, the housing need being across all 13 Housing Market Areas, albeit it is more acute in Barry, Penarth, and Llantwit Major for 1-bed properties. The Welsh Government notes that most of the new housing development (51%) is proposed in the Key Settlement of Barry and Service Centre Settlements, which include Penarth and Llantwit Major.
The Welsh Government has no significant concerns regarding the relationship between the LHMA and the Deposit Plan.
Affordable Housing Led Sites
To deliver additional affordable housing above that which market led housing can provide, the authority proposes (Policy SP3 & HG4) to permit small scale affordable housing-led developments that provide a minimum of 50% affordable housing on sites up to 25 dwellings in minor rural settlements and 50 dwellings in primary settlements. The principle of this approach is supported.
Paragraph 6.137 of the plan states:
"Policy HG4 makes provision for affordable housing-led sites in locations outside the Strategic Growth Area. These sites, which are allocated for a minimum of 50% affordable housing, are included within the settlement boundary."
The reference to being within the settlement boundary is not referenced in policy HG4. It would be beneficial to either include such a reference or demonstrate that settlement boundaries do include those sites listed in policy HG4 for clarity.
These sites must be in addition to the market housing led requirement and identified in the LDP. This policy approach is justified by the high level of affordable housing need evidence by the LHMA and must be accompanied by additional

control over the land by the local planning authority to 7

ensure effective delivery. Evidence should include ownership of the land, a binding legal agreement where the land is in private ownership or a resolution of the council to use compulsory purchase powers. RLDP, paragraph 6.133 references to such controls, however, should such controls be contained within the policy?
Affordable Housing Exceptions Sites
Policy HG5, states 100% affordable housing exception sites can be located outside a settlement boundary where they comply with PPW/TAN2 and any threshold/policy requirements set in the Deposit Plan. The Welsh Government supports this approach.
Employment Land
The Council's Employment Land Study (BP12, March 2023) identifies a requirement for 67.80ha of employment land, which includes a 5-year buffer. The requirement is based on rolling forward past trends (over 25 years) and is of a sufficient scale to meet the 5,338 jobs forecast. However, Policy SP14 identifies employment land allocations totalling 182ha, which is an increase of around 114ha above the employment land requirement. The sites that make-up this supply are largely major employment allocations that attract significant regional inward investment at Cardiff Airport and Bro Tathan Enterprise Zone totalling 127.85ha (70%) of the total provision. The Welsh Government does not object to the over-provision of employment land in the plan. The Enterprise Zone designation must be identified and the allocations within it (SP14: 1-3).
Delivery and Implementation
PPW and the DPM (Chapter 5) contain guidance on the requirements in respect of the delivery and implementation of plans. The Deposit Plan should set out site-specific details for Key Sites that includes general phasing timescales, key infrastructure requirements, placemaking principles (including concept / schematic masterplan frameworks), constraints, and developer requirements, where appropriate. We note the Deposit Plan has included emerging master planning/infrastructure work on key sites.
The phasing, timing, funding, and delivery of Key Sites will be critical to ensure the plan delivers the scale of growth required over the plan period. This includes the relationship between the two Key Sites in St Athan (KS4 and KS5) totalling up to 1,150 units and the delivery of a new rail station in St Athan to meet the objectives of the strategy and encourage a modal shift to more sustainable forms of public transport.
The development sites may also impact on the trunk road network, in particular the M4 J34 and there will need to be a suitable level and form of traffic assessment to accompany the plan. (The transport case may consider the South East Wales Traffic Model as part of any masterplan impacts on the Strategic Road Network (SRN) (Wales Regional Transport Models | TfW)). The Council will also need to demonstrate that all housing components are deliverable through a housing trajectory prepared by the Council and Housing Stakeholder Group. Statements of Common Ground for key allocations, especially those that have 'rolled over' from the adopted plan, would be advantageous to demonstrate the sites are deliverable in the timescales set out.
The Deposit plan is supported by a high-level affordable housing study and site-specific viability appraisals for Key Sites. All viability work and must be prepared in conjunction with the Viability Steering Group and site-specific promoters.
It will be for the Council to justify deliverability supported by robust financial viability.
Gypsy and Travellers
The Gypsy and Traveller Accommodation Assessment GTAA (June 2022, approved June 2024) identifies a total need for 11 pitches over the plan period up to 2036, of which 9 pitches are 'immediate' by 2026. WG note that 4 pitches have since gained planning permission, reducing the remaining need over the plan period being 7 pitches. 8

Policy SP9 identifies a site at Llangan (0.76Ha) to accommodate the 7 pitches needed. It will be for the Council to demonstrate the appropriate site selection assessment process has been followed and that the site complies with requirements in PPW (4.2.35), Circular 005/2018 (paragraph 35) any relevant guidance and the DPM (5.80-5.85) to allocate a deliverable site in the plan period. The views of the relevant statutory bodies must also be agreed with no outstanding objections to the delivery of the site. The Welsh Government has no objection in terms of meeting the numerical need for gypsy traveller accommodation.
Renewable Energy
Future Wales: The National Plan 2040 identifies Barry as a District Heat Network (DHN) Priority Area. The Renewable Energy Assessment (BP15) explores the opportunity for a DHN using waste heat from Barry Biomass, but as there is some uncertainty on the future of the plant, the study concludes there is considerable risk to using the plant as a source waste heat. Could the Council provide an update on alternative options for a DHN in Barry?
It is welcome that the Renewable Energy Assessment (REA) has considered BMV policy, specifically for solar PV, and use of the Predictive ALC Map. The assessment has only considered non-BMV land (Subgrade 3b, Grade 4 and 5). The assessment would benefit from referencing the clarification provided in the DCPO letter of 1st March 2022 in respect of solar PV and BMV agricultural land for completeness.
The study identifies that in the Vale of Glamorgan solar development is more suitable than wind energy because of the flight path of aircraft in the south of the County Borough. However, there are some opportunities for wind sites, but these are likely to be small (<10MW) where aviation risks are lower and there is some grid access. Conversely, there are large expanses of land suitable for solar areas (>10MW) to the West of the County Borough, where there is little existing development. The study identifies 20 large-scale solar areas but recognises that grid constraints may impact the ability of sites to come forward.
Solar and wind search areas (where appropriate) below the 10MW Developments of National Significance (DNS) have been identified (Policy CC3). The plan also includes a criteria-based policy for all renewable energy proposals, particularly wind development, under 10MW (Policy CC4). Policy CC3 makes reference to adhering to the criteria in Policy CC4. However, would it not be the case that if search areas have been identified in Policy CC3 have they not

already met the criteria? If they would not, should they be identified in the first place? Clarity would be beneficial. The Welsh Government supports the approach but seeks clarity on the point raised.
The Welsh Government notes the proposed search areas for wind energy near Morfa Ystrad Owen/Nant Rhydhalog, according to the Peatlands of Wales Evidence Score Map, the search area includes areas of peatland (Evidence Score 4). The site is also a SINC. This raises concerns as to how the inclusion of this search areas meets the policy test in PPW 6.4.15, 1a and 1b (Stepwise) regarding avoidance of irreplaceable peatland habitats and PPW 6.4.34.
Policy CC4 refers to Developments of National Significance (DNS) in 6.344 and 6.346. This should now refer to Strategic Infrastructure Projects (SIP) which replaced DNS.
Minerals
The Regional Technical Statement (RTS 2nd Review) identifies a nil apportionment for land-won sand and gravel provision in the Vale of Glamorgan. The Welsh Government policy clarification letter (dated 11 November 2021) identifies a surplus of 1.68mt of crushed rock. As there is a surplus of crushed rock reserves and a lack of sand and gravel production in the Vale, no specific allocations are required in the replacement plan. It is unclear whether a Statement of Sub-Regional Collaboration with adjoining authorities in the Cardiff City sub-region been agreed, or does the latest Position Statement (July 2022) explain how any shortfall will be met across 9

the region, particularly for crushed rock, of which the Vale has a surplus? Clarification would be beneficial.
BMV Agricultural Land
The Welsh Government has engaged with the Council for land quality advice, survey advice and ALC survey validation for candidate sites. The LPA has produced a specific topic paper on BMV policy application. BP23A. The Deposit RLDP allocates 188 hectares of housing land, 5.62 ha is identified as BMV land (under 3% of total housing allocations). The RLDP:
• Has sought to avoid BMV land wherever possible;
• Uses the Predictive ALC Map as a core evidence layer to inform: The spatial strategy;
• Settlement hierarchy decisions; and
• Candidate site assessments.
•
• Directs strategic growth to areas with least BMV land
• Removes or avoids allocations where BMV impacts were significant or unjustified.
• Quantifies total BMV loss and demonstrates it is minimal (5.62ha) and proportionate at plan level.
• Applies a sequential approach through: Preference for brownfield and non-BMV sites;
• Replacement of higher-BMV sites with lower-grade alternatives where possible.
•
• Requires site-specific ALC surveys to verify actual land quality before allocation.
• Demonstrates that allocated BMV land is: Often small, fragmented, or constrained;
• Sometimes previously disturbed or incapable of being farmed differently from surrounding lower-grade land; and
• Necessary to deliver the Plan's housing strategy where reasonable alternatives are unavailable.
•

In conclusion, the Welsh Government consider the Authority has demonstrated a sensible and pragmatic approach to considering BMV loss in the context of national planning policy, and on that basis no objection is offered.
Green Infrastructure
Policy SP19 should explicitly reference the need for development to be accompanied by a Green Infrastructure Statement.
PPW12 requires decision makers to apply the step wise approach to GI, with enhancement secured at every stage where possible, there is no distinction made between the quality of the GI assets – the qualification in the policy statement that states proposals will incorporate measures that protect and enhance high quality multi-functional green infrastructure should be redrafted to remove the quality reference. The need to avoid an impact in the first instance should also be explicitly incorporated into the policy.
Criterion 1 (Policy SP20) should be redrafted – the stepwise approach in PPW 12 6.4.15 1a - does not distinguish between relative ecological value – the avoidance step applies to biodiversity in its widest sense (i.e. the variety of species and habitats and their abundance) and ecosystem functioning.
Welsh Language
There is limited reference to the Welsh language in the plan, either potential adverse impacts arising through development, or mechanisms via a policy framework to support and grow the use of the language. There are references to a number of Welsh-medium schools (3.26) and the increase in the number of people able to speak Welsh according to the 2011 census (3.52) but there is no mention of the authority's Welsh Language Strategy or promoting or cross-referencing to the aims of 10

Cymraeg 2050: A million Welsh-speakers. Paragraph 6.81 of the plan refers to development north west of Barry: "Land at North West Barry is allocated for a residential development of up to 376 dwellings and public open space. The site is in a sustainable location on the edge of the Barry, a key settlement, in a location that is well served by services and facilities, including a major supermarket, GP surgery, community centre, three primary schools (English Medium, Welsh Medium and Church in Wales) and two high schools (English and Welsh Medium) all located in reasonable walking distance. There is an active travel route along Port Road West, bus stops in close proximity providing buses to Llantwit Major, Cardiff and the centre of Barry. Barry station is 1.3 miles from the site entrance."
There is no mention that the Council want to undertake a Welsh Language Impact Assessment (WLIA) so there appears no attempt to measure the impact on the Welsh schools resulting from housing development? Could the Council clarify if

such implications have already been covered in the WLIA for the plan, ISA, or are any specific policies necessary?

Agent: CarneySweeney

Summary:

We write to support Policy SP14 'EMPLOYMENT GROWTH' and in particular to the Policy's allocation of Bro Tathan Business Park.

We note and welcome that the policy allocates additional land at the Business Park compared to the Preferred Strategy consultation document. The Bro Tathan Business Park has the ability to cater for general employment demands, but also has very significant potential to cater for highly specialised/niche employers which require air-side facilities and/or very large single site opportunities.

We note that the Employment Land Study identifies 66.7 hectares of net developable land at Bro Tathan, which we understand reflects areas with planning permission and an application currently pending determination at the eastern zone. While we believe that, depending on tenant/developer demand, Bro Tathan Business Park could accommodate additional development in the Plan period, we note that the whole site is protected as an existing employment site under Policy EMP3 (4). As such, any further development would be able to be determined on its merits and considered to be in accordance with the Development Plan in principle. We consider, therefore, that the Plan accommodates sufficient flexibility to meet changing requirements which could potentially exceed 66.7 hectares at Bro Tathan Business Park.

Document Element: SP14 - EMPLOYMENT GROWTH

Respondent: Mr David Entwistle [3264]

Summary:

The strategic transport routes showing access between enterprise zones and culver house cross/M4 are currently inadequate to cope with increased HGV and business vehicle movements. Improvements on the 5 mile lane are a good start but similar work needs to be carried out on other routes. In order to attract high quality business to the area new roading needs to be built allowing high speed access to the M4. HGV's driving along narrow rural 30/40/50mph roads is not acceptable where the Vale is competing against enterprise zones in the other areas of the country with better roading.

Document Element: Land south of Port Road

Respondent: Barry & Vale Friends of the Earth [708]

Agent: Barry & Vale Friends of the Earth

Summary:

Object to the rolling forward of Model Farm development with no viability assessment as you requires in order that "the RLDP can satisfy new policy requirements and remain viable and deliverable" (refs. DMM+PPW)
The High Court blocked the first officer-recommended approval, because the non-viability had been concealed; this was one reason for Committee rejection in March'23. To now exempt it from viability assessment deviously ignores the your prescription for rolling forward, which the RLDP team has been unable to justify.
The site had no sustainability/viability assessment for the 2015 LDP, pretending siting in the Enterprise Zone covered it.

Document Element: Land south of Port Road

Respondent: Barry & Vale Friends of the Earth [708]

Agent: Barry & Vale Friends of the Earth

Summary:

We submitted a "comment" but need to ensure it's taken as an objection to rolling forward this development into the RLDP. Exempting it from Site Specific Viability Assessment shows unacceptable bias - evidence shows it's unviable.
Its siting in CA&StAthan EnterpriseZone does not exempt it from sustainable development and viability requirements.
'FutureWales' recognised the EZ as a strategic economic location that complements (but does not replace) the National Growth Area structure. The EZ is not a Growth Area itself, but it supports the NGA's economic role.
The attached document ModelFarm-failsDMMcriteria FoE09Mar'26 gives supporting evidence from DMM and FutureWales.

6003 Object

Document Element: Land south of Port Road

Respondent: Councillor Samantha Campbell [1002]

Summary:

Model Farm should not be on this plan. It's an area of significant importance for the local community, wildlife, and the economy as it currently stands. Taking that away for a white elephant of an industrial part would be seriously detrimental to the Vale as a whole, now and for future generations. It would be bring no growth to the area, only extra traffic, pollution, and disruption.

Document Element: Land east of Cardiff

Respondent: Mrs Jacky Williams [3343]

Summary:

The current construction of the Vale College Campus will bring much additional traffic flow and delays on an already busy route that experiences significant delays at numerous times during the day. The situation will be exacerbated with the additional provision of industrial units on this site, the potential development at Model Farm and proposed housing developments in Rhoose.
Noting that Cardiff Airport is considered important as an international gateway and essential to Wales' economy, the access route (already not ideal) will be severely compromised and could further jeopardise the airport's future.

6564 Support

Document Element: Land to the South of
Respondent: Renishaw Plc [1277]
Agent: Turley

Summary:

Renishaw Plc supports the retention of the Junction 34 (Hensol) allocation under Policy SP14.4, noting the rarity of well-connected, high-quality industrial sites. Phase 1 of the site has outline planning permission for up to 151,060.99 sqm of industrial space, a hotel/residential training centre, ancillary uses, and extensive infrastructure, with the first phase completed providing 400,000 sqft of space occupied by Renishaw. The site remains deliverable.

Future phases (Areas B, C, and D) are expected to provide over 1,000,000 sq ft of employment space, potentially creating 2,000 operational and 1,000 construction jobs, contributing significantly to regional sustainable growth.

Full text:

We write on behalf of our client, Renishaw Plc, in response to the current consultation on the Vale of Glamorgan Replacement Local Development Plan (RLDP). We write to provide our comments in relation to the Vale of Glamorgan Deposit RLDP.

This letter is accompanied by the following:
• Completed Public Consultation Representation Form.

Renishaw's comments on the Deposit RLDP policies and allocations are outlined below.

BACKGROUND

Established in 1973, Renishaw is a global leader in measurement, motion control, spectroscopy, and precision machining. The company is renowned for pioneering innovative solutions designed to enhance operational performance – optimising manufacturing efficiencies, improving product quality, advancing research capabilities, and increasing the effectiveness of medical procedures.

As part of a major redevelopment of its Miskin site in South Wales, Renishaw is investing over £50 million to expand its manufacturing capacity and reinforce its commitment to achieving net zero carbon emissions. This investment includes the construction of two new low-carbon production halls, which are designed to meet the growing domestic and international demand for its products, while also supporting research and development initiatives.

Policy SP14 – Employment Growth

Renishaw Plc supports the retention of Land to the South of Junction 34 of the M4, Hensol (36.23ha net) as a Major Employment Allocation under Policy SP14.4. The allocation of the site is crucial to ensure that the Council can meet its projected employment land needs and deliver the anticipated level of sustainable employment growth over the Plan period.

The site's continued allocation as a major employment site reflects it's importance as a key opportunity for investment and employment opportunities within the Vale of Glamorgan. The site is of strategic and regional importance as an

employment site in a market where high quality, well connected industrial sites are rare.

Outline planning permission was originally granted for the proposed site (Ref no. 2014/00228/EAO) on 22 June 2016.

This permission has subsequently been renewed via a S73 application (ref: 2021/00899/EAO) which extends the period of time for the submission of reserved matters for a further 5 years from the date of the new permission (to 22 December 2030). The permission provides for the following development:

"Outline planning permission with all matters reserved except for access, for development comprising class B1, B2 and B8 uses; a hotel/residential training centre (class C1/C2); and ancillary uses within class A1, A2, A3; associated engineering and ground modelling works and infrastructure, car parking, drainage and access for all uses; provision of infrastructure (including energy centre(s)); landscaping and all ancillary enabling works) at Renishaw Plc, Miskin Business Park, Miskin."

A summary of the key elements of the outline permission are:
• Up to 151,060.99sqm of industrial floor space comprising Class B1, B2, B8 uses;
• Up to 9,290.30sqm of Hotel/Residential Training Centre (Class C1/C2);
• Up to 1,300sqm of ancillary Class A1, A2 and A3 uses;
• Up to 3,200 car parking spaces;
• 30.51ha of Green Infrastructure, comprising landscaping, water balancing areas;
• Access and servicing arrangements; and,
• Ancillary services, including power/utilities (with potential to incorporate energy centre (s)).

Reserved matters permission (reference number: 2019/01421/RES) was approved on 20 May 2021 to bring forward the first phase of the development. This phase of the development is now complete and provides 400,000 sqft of floorspace which is occupied by Renishaw as an extension to its existing operations at Miskin. In addition to employment opportunities created over the construction period, the development has created additional operational jobs for Renishaw. Significantly, many of these jobs provide high quality employment opportunities in the skilled and specialist sector, helping to create skills and provide local employment opportunities.

Renishaw will shortly bring its wider land holdings to the market with the intention of attracting major employment generating uses - further enhancing the economy of the region. The remaining phases of the site (Areas B, C and D) provide further opportunity for inward investment over the Plan period and the creation of over 1,000,000 square feet of employment space.

It is anticipated that Areas B, C and D could have the potential to create over 2,000 operational jobs. During the construction phase, the development also has the potential to create over 1,000 jobs further adding to the employment opportunities created through the development.

The recent renewal of the outline planning permission ensures that the development of the site remains deliverable over the Plan period.

EMP3 - Protection of Existing Employment Sites and Premises

Renishaw Plc support the continued allocation of the current Renishaw premises as an existing Major Employment Site under Polic EMP3.6 – Renishaw, Junction 34, M4.

The allocation of the Renishaw site recognises the importance of the established employment site for the local economy. Renishaw continue to represent an important local employer, who provide high quality, skilled and specialist employment opportunities for the local population.

The continued safeguarding of the site for B1, B2 and B8 uses is therefore supported.

EMP4 – Non-Employment Proposals on Existing Employment Areas and Premises

General support is given to Policy EMP4 which seeks to restrict the development of non-B1, B2 and B8 uses to ancillary services and facilities associated with an existing or proposed employment use.

However, the Policy should provide greater flexibility to allow for appropriate employment generating proposals which complement the existing uses and which may not clearly fall within the B1, B2 and B8 use class. This flexibility is essential in order to allow the sites to respond to changing market demand and emerging markets.

Summary

We trust that the above representations assist and are taken into account as the preparation of the Plan progresses.

We would be grateful if we could be kept informed of future stages of the emerging RLDP.

If you require any further information, please do not hesitate to contact me.

Yours sincerely

6666 Comment

Document Element: Land east of Cardiff

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

SP14 (1) Land east of Cardiff Airport, Rhoose Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites

within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of “areas of high ecological value” will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of ‘High Ecological Value’ (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger “policy hook” within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
“the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale.”
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
“Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value”.
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall

seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered. We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites

We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to

ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of

no adverse effect was reached. The justification for this is that it "is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary".
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW's Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational
Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Document Element: Land south of Port Road

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of "areas of high ecological value" will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this

within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of 'High Ecological Value' (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20

itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of
nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
"There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value".

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as 'search areas'). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely

that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to '6 broad habitat types' including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to '6 broad ecosystems' to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP's Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way

Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.

Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it “is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary”.
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW’s Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to

medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational
Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Document Element: Bro Tathan Aerospace and

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

Strategic Opportunity at Bro Tathan

In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS. This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size. Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.

Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of "areas of high ecological value" will also go some way towards resolving the points we raise.

Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of 'High Ecological Value' (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further

enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
"There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value".

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be

supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as 'search areas'). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to '6 broad habitat types' including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to '6 broad ecosystems' to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP's Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it “is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary”.
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW’s Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat

As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational
Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Document Element: Land to the South of

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of "areas of high ecological value" will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.

Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of 'High Ecological Value' (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to

section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of
nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time.

Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to '6 broad habitat types' including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to '6 broad ecosystems' to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP's Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which

supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it “is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary”.
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW’s Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached.

The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Document Element: Windmill Park, Hayes Road,

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to

coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of "areas of high ecological value" will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:

• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of 'High Ecological Value' (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in

order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-

C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan

Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it “is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary”.
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW’s Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of ‘Policy DNP8 – Severn Estuary Recreational
Pressure’ within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate

Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Document Element: Vale Business Park, Llandow

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites

In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of “areas of high ecological value” will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of ‘High Ecological Value’ (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in

order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered. We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as

mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;

We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it “is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary”.
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW’s Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of ‘Policy DNP8 – Severn Estuary Recreational
Pressure’ within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of ‘Policy DNP8 – Severn Estuary Recreational Pressure’ within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that “three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar”. However, we also note that Table 6 in the HRA only

includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Document Element: Land at Llandow Trading

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site

Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of “areas of high ecological value” will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:
• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of ‘High Ecological Value’ (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger “policy hook” within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
“the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green

Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological

connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and

KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development

in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning

application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it "is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary".
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW's Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational
Pressure' within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

6731 Comment

Document Element: SP14 - EMPLOYMENT GROWTH

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales' push for local supply resilience, this is a major opportunity gap.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning
guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are
involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the
deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community
amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: "The Local Development Plan will support resilient and sustainable
local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part
of sustainable growth."

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local
diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

"Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other
opportunities for local food production as part of multifunctional green infrastructure."

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their

proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example: Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as

the Vale. Policy supports general rural business diversification but does not explicitly enable agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production, community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022 01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37 Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.” There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food

production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Change suggested by respondent:

Consider including the following wording: “Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

6759 Support

Document Element: Land south of Port Road
Respondent: Legal and General [1270]
Agent: RPS

Summary:

Our client, Legal and General, fully support the proposed allocation within the Deposit Plan which is to contribute 25% of the RLDP allocated employment land provision.

The 44.75 ha business park is a key component of the St. Athan – Cardiff Airport Enterprise Zone. It aligns perfectly with Planning Policy Wales and Future Wales: The National Plan 2040, which identify this area as a nationally significant economic cluster. The site is already allocated in the current LDP and is proposed as a major employment allocation in the Replacement LDP (RLDP) through 2036.

The project will provide approximately 1.7 million sq. ft of high-quality office, industrial, and warehousing space. This will attract inward investment from knowledge-based and high-tech sectors, creating skilled jobs and training opportunities within the Cardiff Capital Region. As the landowner, Legal and General remains fully committed to delivering this site despite the ongoing appeal process.

The site is a "flagship" location, with strategic connectivity to Cardiff Airport and the Bro Tathan Enterprise Zone, intended to stimulate economic resilience. By collaborating with other users in the Enterprise Zone, this development will consolidate the Vale of Glamorgan’s role as a primary driver of growth in South East Wales.

Full text:

Introduction
The following representation is made in support of the employment allocation of Land south of Port Road (Model Farm), Rhoose (44.75 ha net) within the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan.
Policy SP14: Employment Growth of the Deposit Plan identifies the site as a strategic employment allocation to support job growth and economic prosperity across the Vale of Glamorgan over the plan period and to meet the projected employment land needs of 67.8 hectares of employment land, as well as the delivery of up to 5,338 jobs and provision of 182 net hectares of employment land for B1 (Office and Light Industry), B2 (General Industries) and B8 (Distribution and Storage).
Our client, Legal and General, fully support the proposed allocation within the Deposit Plan which is to contribute 25% of the RLDP allocated employment land provision.

Site Context
The site proposes a 44.75 ha business park on land at Port Road, Rhoose, adjacent to Cardiff Airport. The site will provide approximately 1.7 million sq. ft Class B1, B2 and B8 floorspace, car parking, landscaping, drainage infrastructure and biodiversity enhancement. It will provide high quality offices, light industrial and warehousing and distribution units in a unique setting. It will also deliver an extension to the existing Porthkerry Country Park.
The site is allocated in the adopted Local Development Plan (LDP) 2011 – 2026 under Policy SP2: Strategic Sites for employment uses at land adjacent to the airport and Port Road, Rhoose, as part of the St. Athan – Cardiff Airport Enterprise Zone. Additionally, the site is one of the 11 sites allocated for future employment development under Policy MG9.
The Cardiff Airport and Gateway Development Zone 2011-2026 Supplementary Planning Guidance (SPG) emphasises the strategic significance of the site, highlighting its potential to deliver regionally important economic growth across a range of employment sectors.
An outline planning application was submitted on the allocated site in 2019 for demolition of existing buildings and erection of 44.79ha Class B1/B2/B8 Business Park, car parking, landscaping, drainage infrastructure, biodiversity provision and ancillary works. The application was amended in 2021 to a hybrid planning application ref: 2019/00871/OUT comprising an outline application for the demolition of existing buildings and erection of 44.75ha Class B1/B2/B8 Business Park, car parking, landscaping, drainage infrastructure, ecological mitigation and ancillary

works (all matters reserved aside from access) within Area A and a full application for change of use from agricultural land to country park (Use Class D2) within Area B. The application was recommended for approval at Committee. Notwithstanding the positive recommendation, the site is currently subject to an appeal for non-determination of 2019/00871/OUT. The inquiry was adjourned in March 2025 due to procedural matters and is scheduled to recommence in March 2026. Legal and General remains committed to the delivery of the site through its participation in the appeal process.

Cardiff Airport and St Athan Enterprise Zone
Planning Policy Wales
Planning Policy Wales (PPW) forms the national policy for Wales, outlining guidance for making planning decisions. PPW advises that the planning system plays a central role in supporting economic growth by ensuring that a sufficient supply of appropriately located employment land is identified and protected through development plans.
Employment land should be aligned with the principles of sustainable development, the well-being goals, and national decarbonisation objectives. Planning authorities are required to:
• Plan proactively for a mix of employment opportunities;
• Allocate and protect land that meets the current and future needs of business and industry;
• Ensure that employment land is well-connected, particularly via public transport, road, and digital infrastructure.
Paragraph 5.4.17 recognises Enterprise Zones as an example of where co-ordinated action can take place to encourage investment in a particular sector in a particular place. It refers that planning authorities should seek to support the development of business networks and clusters particularly in relation to innovative and technology-based enterprise.

Future Wales: The National Plan 2040
Future Wales: The National Plan 2040 (Future Wales) forms the development plan for Wales. It influences all levels of the planning system in Wales and helps to shape Strategic and Local Development Plans prepared by councils.
Model Farm falls within the Gateway Development Zone of the St Athan – Cardiff Airport Enterprise Zone which has been designated by Welsh Government for aerospace and defence related investment. It is supported by Policy 10 of Future Wales which recognises:
'The Enterprise Zone offers a wide range of development sites and business accommodation, providing opportunities for the development of bespoke facilities or investment in existing accommodation'.
The strategic role of the Enterprise Zone is reinforced by several policies in Future Wales:
• Policy 1 (Where Wales Will Grow) – supports concentration of economic growth in the South East region, including Enterprise Zones.
• Policy 2 (Shaping Urban Growth and Regeneration) – requires that development at strategic gateways such as Cardiff Airport be maximised to support economic resilience.
• Policy 33 (National Growth Area – Cardiff, Newport and the Valleys) – identifies the Cardiff Airport & Bro Tathan Enterprise Zone as a nationally significant economic cluster.

Replacement Local Development Plan
The Deposit Plan sets out an overall strategy, allocating land for a range of and uses and setting out policies aimed at guiding development and framing development management decision making. The Deposit Plan Vision looks forward 15 years to 2036, where:
The Vale has a thriving local economy with a balanced, diversified business base. New employment growth at Bro Tathan and Cardiff Airport Enterprise Zones has attracted inward investment from knowledge-based and high-tech businesses, creating high quality employment and training.
Key strategic Objectives 9 Building a Prosperous and Green Economy – promotes the Cardiff Airport and St Athan Enterprise Zone as an important employment area, enabling delivery of high-quality and skilled jobs, training, and education opportunities. It promotes a range and choice of good quality employment land and supports infrastructure to enable local businesses to expand. The objective is to create opportunities for inward investment and enable the Vale of Glamorgan's economy to respond to future changes in work and employment patterns. Legal and General fully support the objective which aligns with Welsh Government aspirations for the Cardiff Airport and St Athan Enterprise Zone.

Employment Land Provision
The Council's adopted Economic Development, Employment Land and Premises SPG provides detailed guidance on how planning applications relating to employment land will be considered in support of the LDP strategy. The SPG reinforces the strong policy presumption in favour of retaining and delivering employment uses on allocated and existing employment sites, particularly those of regional economic importance such as land near Cardiff Airport and the Bro Tathan Enterprise Zone (i.e. Model Farm).
Model Farm's position within the Enterprise Zone, in proximity to Cardiff Airport, Bro Tathan Enterprise Zone and the Cardiff and Vale College development presents the opportunity to develop the area into a high-quality business cluster. These strategically located flagship sites are intended to stimulate inward investment and consolidate the role of the Vale of Glamorgan within the Cardiff Capital Region.
The Employment Land Study (March 2023) recognises the value of Model Farm in recommending its allocation in the RLDP. Accordingly, Policy SP14 – Employment Growth of the Deposit Plan consolidates this opportunity through allocating the Model Farm site as a major employment allocation. Legal and General agrees that the position of Model Farm as a major employment site within the employment hierarchy reflects its importance as a key area of investment and employment opportunity within the Vale of Glamorgan.

Delivery

The value that the Deposit Plan places on the development of Model Farm is wholly appropriate given its alignment with PPW, Future Wales and Welsh Government's reaffirmed commitment to delivering Enterprise Zones in Wales.
Legal and General remain committed to delivering the proposal at Model Farm. In doing so, Legal and General intend to collaborate with other users in the Enterprise Zone to realise its full potential in driving economic development of the wider Cardiff Capital Region.

6802 Comment

Document Element: Land south of Port Road
Respondent: Barry & Vale Friends of the Earth [708]
Agent: Barry & Vale Friends of the Earth

Summary:

On Model Farm, WW said the developer would have to undertake a sewerage HMA which L&G have been unwilling to progress, doubtless because their Viability Assessment showed the development was uneconomic. Such an HMA may show the need for sewer links across unexplored land, possibly uncovering archaeological constraints, causing delays of several years.

It seems you have not followed Council's Methodology based on the Development Plans Manual to require this developer to reappraise existing LDP site allocations without extant planning permission through the candidate site assessment process.

I don't see that the Employment Land Study indicating (3.1) Model Farm to be a "realistic development proposal" over-rides the DPM guidance on examining viability constraints, so is this decision documented, please ?

Full text:

Thank you for signposting me to the Infrastructure Delivery document. I see this falls short of detailing the new sewerage infrastructure central to unlocking the development of allocated sites stated in para.i
Para. 3.104 mentions SuDS to prevent surface water entering the sewer system, but nothing on WW's strategic plan for local authority schemes to divert existing highway drainage into surface water out of their sewers.
Para.3.105 says the obvious that capacity may not exist within the existing sewerage network, but does not include sewage treatment capacity and does not specify where it's lacking. There's a comment for NW Barry that pumping capacity "may"not exist.
Para.3.108 says capacity constraints at treatment works and improvements as being in the current AMP or not, so why not be specific on the programme to 2030 ?
We see no mention of the Vale's Bathing beaches (several new ones) and policy to ensure sewage discharges do not undermine attaining Bathing Water standards; does this issue not belong in the RLDP, setting out divided responsibilities of VoG, NRW and DCWW (cf. Watchtower and Ogmore-by-Sea beaches closed 2024,5)?

On specifics, KS4 and KS5 say of capacity limits at West Aberthaw works that "DCWW has confirmed that upgrades are planned as part of the AMP8 programme 2025 and 2030". Can you provide documents on this?
WW said in 2015 they "planned" upgrades so questions are obvious - is the W.Aberthaw upgrade still not programmed and committed? Are the plans sufficient to take the much bigger numbers of homes now planned. Will land purchase and planning consent be needed? Will the developers proposing local sites have to pay via S.106?
On Model Farm, WW said the developer would have to undertake a sewerage HMA which L&G have been unwilling to progress, doubtless because their Viability Assessment showed the development was uneconomic. Such an HMA may show the need for sewer links across unexplored land, possibly uncovering archaeological constraints, causing delays of several years.
It seems you have not followed Council's Methodology based on the Development Plans Manual
to require this developer to reappraise existing LDP site allocations without extant planning permission through the candidate site assessment process.
I don't see that the Employment Land Study indicating (3.1) Model Farm to be a "realistic development proposal" over-rides the DPM guidance on examining viability constraints, so is this decision documented, please ?
In view of the response deadline, we look forward to a timely response. We'd ask that you consider the above omissions, deem that a firm Statement of Common Ground with DCWW similar to that of 2015 is required at this stage, and issue amendments to this draft RLDP to cover them.

Change suggested by respondent:

6870 Object

Document Element: Land south of Port Road
Respondent: The Stevens Family [2390]
Agent: Boyer Planning

Summary:

A summary of our main representations are as follows: - The Stevens Family question the need for Model Farm to be included in the provision for 182 net ha of employment land for the requirement of 67.8 ha under Policy SP14. If the rollover allocation at Model Farm (Policy SP14(2)) was removed, then the provision would still allow for nearly doubling the projected employment land needs.
- Significant concern is raised regarding the 'rollover' Land South of Port Road, Rhoose (Model Farm) Employment Allocation (as part of SP14: Employment Growth) as deliverability is not sufficiently demonstrated by the Council and Representors. Currently there is significant ambiguity regarding the actual delivery, contrary to the Welsh Government's Development Plans Manual (DPM) Edition 3 requirements.
- The proposed Model Farm allocation is currently subject to an Appeal, having had the previous planning applications quashed by the High Court.
- It is inappropriate to allocate an employment site which has been proven to be unviable through detailed independent assessment which predicted a loss of £10,405,000 before interest, or £34,508,455M if interest costs were payable at 5%.
- Supporting evidence confirms that whilst the Representors suggest they remain committed, there is a huge contradiction as they also suggest that they are taking a "long-term view" about when the scheme might come forward.
- Serious questions are raised in terms of the employment demand and delivery for a 161,834 sqm floorspace development considering the current available space, low uptake over the last decade and availability of more attractive and better connected alternatives.
- When assessed against the Tests of Soundness CE2 & CE3, Policy SP14(2) fails to adequately justify Model Farm's continued inclusion in the Deposit Plan.
- There are a number of technical constraints which have not been addressed sufficiently via the planning application process, and these simply cannot be left to roll forward to the Local Development Plan.

Full text:

Boyer have prepared and submitted the following representation on behalf of The Stevens Family in response to the current Vale of Glamorgan Replacement Local Development Plan (RLDP) 2021- 2036 Deposit Plan Consultation.

As you will be aware previous representations were submitted on behalf of The Stevens Family between 2019 and 2024 in response to the Quashed outline application submitted on behalf of Legal & General, and subsequent Appeal, in relation to the proposed Parc Busness Porth Cymru (PBPC) Business Park on land at Model Farm, Port Road, Rhoose (Ref: 2019/00871/OUT).

It is in this context upon which these representations, outlined below, are specifically made in relation to the Deposit Plan, and should also be read in conjunction with the previous 2024 Preferred Strategy representations relating to the proposed identification of the 44.75ha (net) Land South of Port Road, Rhoose (Model Farm) as a rollover Major Employment Allocation within Employment Growth Policy SP14(2).

As identified in previous correspondence, The Stevens Family does not object in principle to the provision of employment land within the Vale of Glamorgan, nor to the overarching objective of supporting economic growth and job creation. However, serious concerns remain as to whether the Model Farm site (SP14(2)) can realistically and credibly be relied upon as a deliverable employment allocation within the emerging RLDP period. These concerns relate to matters of soundness, deliverability, viability, market demand and unresolved technical constraints, as required to be assessed under national policy and guidance.

A summary of our main representations are as follows:
- The Stevens Family question the need for Model Farm to be included in the provision for 182 net ha of employment land for the requirement of 67.8 ha under Policy SP14. If the rollover allocation at Model Farm (Policy SP14(2)) was removed, then the provision would still allow for nearly doubling the projected employment land needs.
- Significant concern is raised regarding the 'rollover' Land South of Port Road, Rhoose (Model Farm) Employment Allocation (as part of SP14: Employment Growth) as deliverability is not sufficiently demonstrated by the Council and Representors. Currently there is significant ambiguity regarding the actual delivery, contrary to the Welsh Government's Development Plans Manual (DPM) Edition 3 requirements.
- The proposed Model Farm allocation is currently subject to an Appeal, having had the previous planning applications quashed by the High Court.
- It is inappropriate to allocate an employment site which has been proven to be unviable through detailed independent assessment which predicted a loss of £10,405,000 before interest, or £34,508,455M if interest costs were payable at 5%.
- Supporting evidence confirms that whilst the Representors suggest they remain committed, there is a huge contradiction as they also suggest that they are taking a "long-term view" about when the scheme might come forward.
- Serious questions are raised in terms of the employment demand and delivery for a 161,834 sqm floorspace development considering the current available space, low uptake over the last decade and availability of more attractive and better connected alternatives.
- When assessed against the Tests of Soundness CE2 & CE3, Policy SP14(2) fails to adequately justify Model Farm's continued inclusion in the Deposit Plan.
- There are a number of technical constraints which have not been addressed sufficiently via the planning application process, and these simply cannot be left to roll forward to the Local Development Plan.

Policy SP14 – Economic Growth
It is acknowledged that the RLDP must make adequate provision for employment land to meet forecast economic needs over the plan period and that a range of sites of differing scales and uses will be required.

Within the Preferred Strategy, Policy SP13 – Economic Growth outlined that the RLDP makes provision for 168 net ha to meet the projected employment land needs of 67.8 ha of employment land, including for B1 (Office and Light Industry), B2 (General Industries) and B8 (Distribution and Storage) employment uses which has the potential to support an additional 5,338 jobs over the plan period.

From a review of the current Deposit Plan, it is noted that employment growth is now assessed under Policy SP14 and that whilst the provision of jobs has not increased, The Stevens Family wish to highlight that the provision of proposed employment land has in fact increased to 182 ha. This is a result of an increase at both the major employment allocations at Bro Tathan Aerospace and Business Park (from 48.5 to 66.7 ha net) and Land to the South of Junction 34 of the M4, Hensol (29.59 to 36.23ha net).

Furthermore, the local employment allocations have also altered from the Preferred Strategy with, Atlantic Trading Estate, Barry (reduced from 6.21ha to 1.59 ha net); Vale Business Park, Llandow (reducing from 12.4 to 10.9 ha net); and Land at Llandow Trading Estate (1.85 ha net) replacing Land to the South of Junction 34 M4 Hensol (Area D 6.64 ha net).

Given this change, The Stevens Family question the actual need for SP14(2) Land south of Port Road (Model Farm), Rhoose. The total amount of employment space within the Vale has increased by 14 net ha by virtue of the amendments to Policy SP14, and in fact without the allocation of Model Farm would still provide 137.25 net ha which would still allow for nearly doubling the projected employment land needs of 67.8 ha of employment land.
Continued RLDP 'Rollover' Allocations

It is acknowledged that the RLDP must make adequate provision for employment land to meet forecast economic needs over the plan period and that a range of sites of differing scales and uses will be required. However, as noted above The Stevens Family consider that this can adequately be met without Model Farm. They reiterate some serious concerns over the deliverability of the rollover allocation, for reasons discussed below.
Welsh Government's Development Plans Manual (DPM) Edition 3 specifies that "Allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan, aligning with PPW. There will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered (Boyer emphasis). The sites should be subject to the same candidate site process requirements as new sites i.e. they must be demonstrated to be sustainable and deliverable". Given that these factors are clearly set out within the latest version of the DPM reinforces their importance for the Welsh Government and the on-going need for Local Planning Authority's to demonstrate deliverability.

Having reviewed both the Preferred Strategy and the current Deposit Plan background technical evidence base there is nothing to indicate that the circumstances surrounding the Model Farm (Policy SP14(2)) have materially improved since the site was previously allocated. The site remains undelivered, subject to planning uncertainty following the quashing of the previous permission and current Appeal process, as well as being constrained by unresolved technical and infrastructure issues. The continued allocation therefore represents a rollover in the strictest sense, without the justification required by national policy.

Furthermore, Paragraph 6.270 of the Deposit Plan outlines that 'Land south of Port Road (Model Farm) Rhoose is currently subject to an appeal for non-determination of an outline planning application for a B1, B2, B8 Business. If the appeal is allowed (Boyer emphasis), the site is anticipated to deliver 1.7 million sq. ft of Class B1, B2 and B8 offices, light industrial and warehousing and distribution units, alongside car parking, landscaping, drainage infrastructure and biodiversity enhancement works which include land for expansion of Porthkerry Country Park to the south.

Clearly, the Quashed decision notice and the subsequent Appeal (which has been significantly delayed and only now looking to reopen in late March 2026) are important factors in the delivery of the employment allocation.
The Council, in their own words, note that the outcome of the Appeal impacts the anticipated delivery and therefore no decisions on the site's acceptability nor allocation should be taken forward until the Appeal is determined. This may not fit with the Council's timeframe for the RLDP, however the level of ambiguity on the actual delivery is so significant as to impact on the Council's ability to deliver their employment land and jobs over the plan period.
The distinct lack of actual timeframes and delivery is further outlined in the supporting Employment Land Study (March 2023 BP12) document. Paragraph 5.40 outlines that 'Model Farm is an employment proposal for Legal and General owned land in the east of the Land adjacent to Cardiff Airport and south of Port Road, Rhoose… Agents for Legal and General have confirmed that the investor remains committed to a development here but is taking a long term view about when the scheme might come forward (Boyer emphasis). It still sees strong potential here for a high-quality business cluster reinforced by Cardiff and Vale College's investment nearby. It has stated that there is a development partner for the project.
Paragraph 3.9 of the Employment Supplementary Paper (November 2025 BP12A) further outlines that 'Consideration will be given to the outcome of the Appeal decision and any implications this may have'.

The lack of evidence for the delivery is further illustrated in the Candidate Site Assessment at Preferred Strategy Stage (October 2023 BP 18) background paper in regard to Candidate Site 551 – Model Farm. The RAG Analysis system to assess sites against the Preferred Strategy (Appendix 2 of BP18) highlights that developer interest is coloured Amber which means that the Council themselves consider that the site accords with the strategy but there are some concerns around deliverability that would need to be addressed.

Evidently, there is a distinct lack of surety on the deliverability of the site, both from the current Appeal and the promoters in terms of timeframe. Moreover, what is conveniently ignored in all of the RLDP assessment is the unviable nature of the proposed allocation.

Viability/Deliverability
The Stevens Family have previously provided detailed comments on this issue in relation to the planning application (Ref: 2019/00871/OUT), however they continue to consider that the matter is of significant relevance to the proposed rollover allocation at Model Farm through the RLDP.
Given there has been no further information provided between the previous Preferred Strategy consultation and the current Deposit Plan, The Stevens Family reiterate that viability is a core determinant of deliverability and must be addressed at plan-making stage. The previously published RPS & Sutton Viability Assessment as well as the Avison Young independent review provided independent viability assessments relating to the quashed planning application and remain highly material. Those assessments demonstrated a substantial and structural viability deficit, even before accounting for interest costs. When realistic assumptions were applied, the deficit increased significantly, confirming that the scheme is not commercially viable.

Crucially, the evidence also illustrated that the development could not support policy-compliant infrastructure and mitigation requirements. Significant reductions in sustainable transport contributions and other obligations were required even to marginally improve viability. This is not a minor viability issue but a fundamental failure to support policy-compliant development.

In summary, the independent viability assessments prepared in relation to the site demonstrate that:
• The scheme generates a significant financial deficit (c. £10.4m without interest and c. £34.5m with interest);
• The development cannot viably support policy-compliant infrastructure or mitigation contributions; and
• Delivery would be dependent on substantial public sector intervention or gap funding, for which no commitment exists.

No updated viability evidence accompanies the Deposit RLDP to demonstrate that circumstances have materially changed. As viability is a core component of deliverability under the Development Plans Manual (Edition 3), the allocation cannot be considered effective or considered justified or deliverable.

Consequently, the demand, and indeed the appetite to construct such a development is highly questionable. Serious concern is raised as to why this information is not taken into consideration in Employment Land Study (March 2023 BP12) document and the update (November 2025 BP12A) as there is clear evidence of the unviable nature of the allocation.
The Stevens Family have considerable business/ commercial experience and seriously question why such an unviable and undeliverable allocation would be maintained, unless it was for a future alternative use.

Employment Need
The Stevens Family maintain that the scale of employment development proposed at Model Farm is not supported by historic or current market evidence.

The Employment Land Study (March 2023 BP12) demonstrates very modest employment floorspace take-up within the Vale of Glamorgan over the past decade. When compared to the quantum proposed at Model Farm alone, it is clear that the allocation assumes an absorption rate significantly exceeding historic trends. The Employment Land Study records that over the past decade approximately 83,950 sqm of industrial floorspace has been transacted across the Vale of Glamorgan. This is only around half of the floorspace proposed at Model Farm alone. Even under optimistic assumptions, the proposed floorspace would take well beyond the plan period to be absorbed. This introduces a high risk that the site would remain undeveloped or only partially developed by 2036, undermining the effectiveness of the RLDP. This is further Page evidenced by the Agents for Legal and General confirming that the investor is taking a long-term view about when the scheme might come forward. Demand for large-format B2 and B8 units has been particularly limited. Transactions for units exceeding 5,000 square metres are rare within the Vale of Glamorgan. The allocation therefore relies heavily on speculative demand that has not historically materialised. When assessed against average annual take-up rates:
• The proposed floorspace would take in excess of 20 years to be absorbed by the market, even if Model Farm were the only site available.
• This timeframe extends well beyond the plan period, directly conflicting with the requirement for effective delivery.

The evidence further shows that:
• There has been very limited demand for large-scale units exceeding 5,000 sqm within the Vale of Glamorgan;
• Only a single transaction of this scale occurred over a ten-year period; and
• Several of the unit sizes envisaged at Model Farm significantly exceed historic demand patterns.
In the surrounding context, the Cardiff Capital Region (CCR) £36 million investment at Aberthaw Power Station, brings into doubt the desirability of the Model Farm. The Study states that CCR have received a range of suggestions from business for uses on the site and is ultimately a more attractive opportunity for businesses and operations that Model Farm. Whilst it is acknowledged that there are on-going works required, the clear investment is evident at Aberthaw, which is in stark contrast to Model Farm and L&G's stance of a very long term view about when the scheme might come forward.

Test of Soundness
When assessed against the Tests of Soundness, Policy SP14(2) fails in several key respects.
• The allocation is not justified (CE2) because it is not supported by robust or proportionate evidence on viability or market demand and fails to demonstrate a substantial change in circumstances required for a rollover allocation.
The continued allocation of Model Farm is not justified by proportionate or robust evidence and the Development Plans Manual (Edition 3) is explicit that rollover allocations must demonstrate a substantial change in circumstances and be subject to the same scrutiny as new sites. No such change has been evidenced. Instead:
• The site remains undelivered;
• Viability evidence demonstrates a substantial financial deficit;
• Market demand assumptions appear optimistic when assessed against historic take-up data; and
• Multiple technical and environmental constraints remain unresolved.
In this context, the allocation of the site under Policy SP14(2) cannot be considered justified.
• The allocation is not effective (CE3) because there is no reasonable prospect of delivery within the plan period, and the site remains constrained by viability deficits, weak demand and unresolved delivery uncertainty.
For a plan to be sound it must be effective and capable of being delivered. The evidence demonstrates that this test is not met in respect of Model Farm (Policy SP14(2)).
The Employment Land Study (March 2023 BP12) and the Employment Supplementary Paper (November 2025 BP12A) confirm that the site promoter is taking a long-term view regarding delivery. This position is fundamentally incompatible with plan-making requirements, which demand a reasonable prospect that allocated sites will come forward within the plan period. There is no delivery programme, no agreed phasing strategy and no evidence of imminent implementation.
The Council's own Candidate Site Assessment (October 2023 BP 18) assigns the site an "Amber" rating for deliverability, acknowledging unresolved concerns. This confirms that uncertainty persists and that the site cannot be relied upon to deliver employment land between 2021 and 2036.

Taken together, these factors demonstrate that there is no reasonable prospect that the Model Farm site will deliver employment development between 2021 and 2036. As such, the allocation cannot be considered effective.

Technical Constraints
In addition to viability and market demand, The Stevens Family have continually reiterated that there are a number of technical constraints which have been highlighted in relation to the planning application, and which materially affect deliverability and reinforce concerns regarding soundness.

Drainage
Drainage remains a fundamental constraint. Concerns have previously been raised by statutory consultees (Dwr Cymru Welsh Water - DCWW) regarding insufficient capacity within existing foul sewerage infrastructure to accommodate development of this scale. A suitable point of connection has not been clearly identified, and there is no confirmed strategy demonstrating how capacity issues will be resolved.

The absence of a comprehensive Hydraulic Modelling Assessment is a significant evidential gap. For a site of this scale, drainage capacity is a prerequisite for delivery. Without certainty on foul and surface water solutions, the site cannot be considered deliverable.

Furthermore, proposed foul drainage routes continue to cross third-party land, including private residential land in the ownership of The Stevens Family. There is a significant conflict in the proposed route as it passes directly through an area of The Stevens Family land which has an extant consent for the reinstatement of a range of domestic garden buildings; the reinstatement and extension of adjoining south facing greenhouse; and the reconstruction of the terraced cold frames (application ref: 2020/01007/FUL – Granted November 2020). Following the discharge of relevant conditions the works on the reinstatement has commencement and is nearing completion. Clearly there is a significant conflict and it would be wholly unreasonable for The Stevens Family to undo any consented works for the sake of any future proposed drainage.

Furthermore, the route impacts sensitive ecological areas (including a SINC and Ancient Woodland), introducing legal, environmental and deliverability risks that have not been resolved at plan-making stage.
Transport

The site is acknowledged to be heavily reliant on off-site transport infrastructure improvements to mitigate its impact and promote sustainable travel. However, the viability evidence demonstrates that the development cannot support policy-compliant transport contributions.
The reliance on land transfer in lieu of financial contributions does not provide certainty that necessary infrastructure will be delivered, nor does it demonstrate compliance with national sustainable transport policy. This creates a clear disconnect between policy aspirations and realistic delivery.

A strategic employment allocation that cannot viably deliver sustainable transport mitigation is inherently unsound.

Ecology
The site is subject to significant ecological constraints, including impacts on SINCs, Ancient Woodland and habitats supporting protected species. Previous ecological assessments provided by The Stevens Family have identified the

potential presence of species such as Great Crested Newts and Dormice, and concerns remain regarding habitat loss and fragmentation.

These constraints were reflected in the Candidate Site Assessment, where the site scored “Red” in relation to impacts on SINCs and Local Nature Reserves and “Amber” across a wide range of environmental criteria. The scale of mitigation required has direct implications for both viability and deliverability and has not been adequately addressed in the evidence base.

Given the significance of the ecological constraints then it is considered that there are still further works required to evidence the allocation of the site. In particular this relates to the concerns around the Habitat Suitability Index (HSI), assessment of the on-site pond for its suitability for Great Crested Newts (GCN) as well as Dormice.

It is considered that this information should be provided now as part of the allocation process as it has significant implications.

Furthermore, The Stevens Family also note that the recently passed Environment (Principles, Governance and Biodiversity Targets) (Wales) Bill establishes a strengthened framework for environmental protection in Wales by embedding key environmental principles such as the precautionary principle, prevention of environmental harm, rectification at source and the polluter pays principle into Welsh law and requiring public authorities to apply them in policy and decision-making. It also introduces a new environmental governance system, including the Office of Environmental Governance Wales, and enables Welsh Ministers to set legally binding biodiversity targets aimed at halting and reversing the decline of nature, increasing native species and improving ecosystem resilience.

In this context, the proposed employment allocation of Model Farm, under Policy SP14(2), should be carefully reconsidered where there is no clear demonstrable need for the allocation. The principles embedded in the Bill emphasise preventative action and the integration of environmental protection into policy decisions, meaning that avoidable harm to biodiversity should be prevented wherever possible. Where development would result in the loss or degradation of habitats and ecological networks, and the allocation is not required to meet identified employment needs, protecting the site from development would better align with the Bill’s objectives to safeguard ecosystems and contribute to reversing biodiversity decline in Wales.

Cumulative Impact of Constraints
Individually, each of the above constraints presents a challenge. Collectively, they demonstrate that Model Farm is a highly constrained site with no clear pathway to resolution. The cumulative impact of drainage, transport, ecological and environmental constraints further undermines the assumption that the site can be viably and effectively delivered within the plan period.
Candidate Site Assessment at Preferred Strategy Stage (October 2023 BP 18)

As highlighted, the proposed Candidate Site 551 (Model Farm) has undertaken a RAG Analysis system to assess sites against the Preferred Strategy (Appendix 2 of BP18). Whilst it has already been noted that the site scored Amber in terms of deliverability (meaning that the Council themselves consider that the site raises concerns around deliverability that would need to be addressed), there are a number of other concerns raised where there is a distinct lack of evidence for the delivery of the site.

In particular, it is illustrated that the site scored Red (does not accord with the strategy) in regard to the direct impact on surrounding SINCs and Local Nature Reserves and is a significant factor that needs addressing to allow any rollover allocation.

Furthermore, in terms of the Amber scores, the following are highlighted as raising concern for the Authority and which need to be addressed:
- Agricultural Land
- Mineral Resource
- Green Wedge Designation
- Special Landscape Areas
- Contaminated Land
- Existing Physical Site Constraints
- Historic Environment

Given the significant amount of Amber scores, it is clearly demonstrated that the Model Farm site has a number of issues which need to be fully assessed and with no apparent solutions or updates, then The Stevens Family seriously question the validity of the proposed rollover allocation at Model Farm.

Summary
In summary, The Stevens Family have strong reservations regarding the proposed rollover allocation at Model Farm under Policy SP14(2), many of which have been previously raised and continue to be unaddressed by the evidence base underpinning the Deposit Plan.
It has been demonstrated that even without the allocation of Model Farm the Deposit Plan would still provide 137.25 net ha which would be nearly double the projected Vale employment land needs of 67.8 ha.

There are significant deliverability concerns, not only with the evidenced lack of viability (as independently assessed), but also demand. It is considered that when assessed against the Tests of Soundness, Policy SP14(2) – Model Farm, fails in several key respects.
In particular, the proposed rollover allocation is not justified under Test of Soundness CE2 because it is not clearly supported by robust or proportionate evidence on viability or market demand and fails to demonstrate a substantial change in circumstances required for a rollover allocation.
Furthermore, the allocation is not effective under Test of Soundness CE3 because there is no reasonable prospect of delivery within the plan period (as suggested by the promoters that they are taking a long-term view), and the site remains constrained by viability deficits, weak demand and unresolved delivery uncertainty.

The Stevens Family consider that the rollover allocation of the site is contrary to the Welsh Government's Development Plans Manual (DPM) Edition 3 and does not substantially evidence any deliverability.

It is considered that the Model Farm (Policy SP14(2)) Employment allocation should not be rolled forward into the Replacement LDP, and rather it would be more appropriate to de-allocate for sites with much more certainty.

Moreover, there still remains concerns regarding drainage, transport, and ecology and the distinct lack of any evidence base update to prove otherwise. This is supported by the Councils own assessment as part of the Candidate Site Assessment at Preferred Strategy Stage (October 2023 BP 18) background paper which maintained an Amber score for a number of issues which, by the Councils own admission, identifies concerns around deliverability that would need to be addressed.

Overall, there remains serious questions as to how such an unviable scheme can even be considered for a rollover allocation.

Change suggested by respondent:

It is considered that the Model Farm (Policy SP14(2)) Employment allocation should not be rolled forward into the Replacement LDP, and rather it would be more appropriate to de-allocate for sites with much more certainty.

Document Element: SP14 - EMPLOYMENT GROWTH

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))

Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the ‘domestic’ supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome

provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

7003 Comment

Document Element: Land east of Cardiff

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Water Supply - 100mm, 160mm & 300mm diameter watermains crossing the site.
Sewerage - 150mm sewer, 225mm surface water sewer & 250mm diameter pressurised rising main crossing the site. Tredogan Sewage Pumping Station is located within the site, and we would recommend that the LPA discuss the potential allocation with their Environmental Health Department. To avoid the potential for noise or odour nuisance for future occupiers it is strongly recommended that any properties are positioned a minimum of 15 metres away from the asset.
Wastewater Treatment Works (WwTW) - The site is in Cog Moors WwTW catchment.

Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

7004 Comment

Document Element: Land south of Port Road

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Water Supply - 4" & 9" diameter watermains crossing the site.
Sewerage - 375mm diameter foul sewer, and a 100mm diameter pressurised rising main sewer crossing the site.
Wastewater Treatment Works (WwTW) - The site is in Cog Moors WwTW catchment.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)

Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the ‘domestic’ supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.

We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary

reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act

1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

7007 Comment

Document Element: Atlantic Trading Estate,

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Water Supply - No watermains crossing the site.
Sewerage - North parcel – 375mm, 1050mm diameter foul sewers, and Combined Sewer Overflow and 825mm diameter outfall pipe crossing the site. South parcel – 150mm diameter foul sewer crossing the site.
Wastewater Treatment Works (WwTW) - The site is in Cog Moors WwTW catchment.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision

Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to

accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: Land at Llandow Trading

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Water Supply - 160mm diameter watermain crossing the site.
Sewerage - There are no public sewers close to this site.
Wastewater Treatment Works (WwTW) - N/a.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.

Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: Former Aberthaw Power Station

Respondent: Cardiff Capital Region Energy (Mr Phil Nightingale, Project Delivery Director) [2736]

Summary:

CCR Energy strongly supports Policy EMP1 and the designation of the former Aberthaw Power Station as a Green Energy, Employment and Innovation Park. The redevelopment will create a regionally significant hub for renewable and low-carbon energy, zero-carbon manufacturing, and innovation, delivering high-quality skilled jobs, training, and education opportunities. The proposals integrate sustainable land use, biodiversity enhancements, green infrastructure, flood risk mitigation, and support the circular economy. Phased development, masterplanning, and stakeholder engagement ensure a comprehensive approach, safeguarding adjacent communities and the East Aberthaw Coast SSSI, while maximising sustainable transport connections and contributing significantly to decarbonisation and the Vale's green economy.

6234 Comment

Document Element: Land at the Port of Barry

Respondent: Associated British Ports (Mr Will Ryan, Land & Planning Manager) [2477]

Summary:

ABP fully supports this policy and looks forward to working constructively alongside VoGC and other key stakeholders to realise the opportunities that the Port of Barry can deliver for the town, the Vale of Glamorgan and the Wales economies.

In order to reflect the current circumstances, it is proposed that paragraph 6.283 is amended to read as follows:

6.283 The plans for the Port of Barry represent the next stage in the regeneration of Barry Docks and focusses on enhancing the docks' future economic role. The identification of the area as an Employment Regeneration Opportunity Area reflects the vision and aspirations of ABP contained within its emerging long-term strategy. This will set out the employment areas and operational port land at the Port and focus on developing the port around low and zero carbon sectors alongside traditional marine related industrial uses.

Document Element: Former Aberthaw Power Station

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites

especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.

General Approach to Designated Sites

In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.

We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.

By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.

We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be

helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites

within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.

With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.

Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the

Green Infrastructure Strategy (GIS) which incorporates the GIA.

It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of “areas of high ecological value” will also go some way towards resolving the points we raise.

Master Planning

We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site

specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.

Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration

at the project/planning application level and in master planning.

Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.

Strategic Opportunity at Bro Tathan

In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already

made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.

This will ensure that development in the area:

• does not cause detriment to the maintenance of the favourable conservation status of protected species;

• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.

Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.

Areas of High Ecological Value

As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding

areas of ‘High Ecological Value’ (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.

2. Integrated Sustainability Assessment (ISA)

With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative

effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of

nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity

provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan
Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on

the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry

Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it “is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary”.
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW’s Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of ‘Policy DNP8 – Severn Estuary Recreational
Pressure’ within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of ‘Policy DNP8 – Severn Estuary Recreational Pressure’ within the deposit plan, which as above, we advise needs
clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome

reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

Attachments:

Email representation redacted - https://valeofglamorgan.oc2.uk/a/3pq

6823 Object

Document Element: Former Aberthaw Power Station

Respondent: National Grid Electricity Transmission (Planning Enquiries) [582]

Summary:

A significant number of NGET assets – including substations – fall within Employment Opportunity Area 1.

NGET do not consider that proposals of EMP1 are necessarily in conflict with these assets and are keen to ensure development is able to come forward even where its assets are present within or adjacent to an allocation. However, it is critical that the presence of these assets is suitably addressed within the supporting policy wording if Policy EMP1 is to be considered effective as otherwise the presence of NGET assets without appropriate acknowledgement will amount to significant constraints on site delivery. In particular, the electrical substations require 24/7 access including for 'abnormal indivisible loads' (AIL) and the land immediately surrounding them is also critical to their safe and secure functioning and to accommodate any change in future requirements which may arise.

It is acknowledged that, as part of masterplanning principles set out at 6.281, the policy already makes mention of existing infrastructure assets within the site and a need for a site layout to be developed that considers the sites existing infrastructure (including electrical substations) however we consider that the policy needs to go further and acknowledge the wider range of NGET assets that are within the site as well as more clearly establish how any future development needs to respond to the presence of NGET assets within the site. With this in mind, we propose the following wording, or wording to similar effect which directly references the full range of NGET assets and specific design guide and principles be added to the list of masterplanning principles as a separate point:

"Development will include a strategy for responding to the NGET Substations, Overhead and Underground Cable Routes present within the site which demonstrates how the NGET Design Guide and Principles have been applied at the masterplanning stage and how the impact of the assets has been reduced through good design."

Without appropriate acknowledgement of the NGET assets present within the sites, Policy EMP1 should not be considered effective as it cannot be delivered as proposed; unencumbered by the constraints posed by the presence of NGET infrastructure. As such, NGET object to the policy as currently drafted.

Full text:

Vale of Glamorgan Replacement Local Development Plan 2021-2036: Deposit Plan Consultation – March 2026
Representations on behalf of National Grid Electricity Transmission (NGET)

National Grid Electricity Transmission has appointed Fisher German LLP to review and respond to local planning authority Development Plan Document consultations on its behalf. We are instructed by our client to submit the following representation with regard to the current consultation on the above document.

About National Grid Electricity Transmission (NGET)

National Grid Electricity Transmission plc (NGET) owns and maintains the electricity transmission system in England and Wales. NGET manage not only today's highly complex network but also to enable the electricity system of tomorrow. Their work involves building and maintaining the electricity transmission network – safely, reliably and efficiently. NGET connect sources of electricity generation to the network and transport it onwards to the distribution system so it can reach homes and businesses.

National Grid Electricity Distribution (NGED) are the electricity distribution division of National Grid and are separate from National Grid Electricity Transmission's core regulated businesses. Please also consult with NGED separately from NGET.

National Grid no longer owns or operates the high-pressure gas transmission system across the UK. This is the responsibility of National Gas Transmission, which is a separate entity and must be consulted independently.

National Grid Ventures (NGV) develop, operate and invest in energy projects, technologies, and partnerships to help accelerate the development of a clean energy future for consumers across the UK, Europe and the United States. NGV is separate from National Grid's core regulated businesses. Please also consult with NGV separately from NGET.

National Energy System Operator (NESO) has taken over the electricity and gas network planning responsibility from National Grid Electricity System Operator Limited (NGESO) as of 1st October 2024. Early engagement with NESO is recommended in order to establish available supply capacity to any potential development sites and what, if any, reinforcement is required to ensure adequate continued supply. Please consult with NESO separately from NGET.

Proposed development sites crossed or in close proximity to NGET assets

Following a review of the above Development Plan Document, we have identified that one or more proposed development sites are crossed by or in close proximity to NGET assets. Details of the sites affecting NGET assets are provided below.

Development Plan Document Site Asset Description

Policy EMP1 (Employment Regeneration Opportunity Area 1) (site 433 on candidate sites map)
Aberthaw leasehold land
ABERTHAW 132KV S/S
ABERTHAW 275KV S/S
SGT2 275KV CABLE: ABERTHAW 275KV S/S
UPPER BOAT 1 275kV CABLE: ABERTHAW 275KV S/S
LL ROUTE: 275kv Overhead Transmission Line route: ABERTHAW – TREMORFA
ZZB ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - UPPER BOAT 1 and ABERTHAW - UPPER BOAT 2
ZZS ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - CARDIFF EAST – PYLE and ABERTHAW – PYLE

Candidate site 516 (Renewable Energy)
LL ROUTE: 275kv Overhead Transmission Line route: ABERTHAW – TREMORFA
ZZB ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - UPPER BOAT 1 and ABERTHAW - UPPER BOAT 2
ZZS ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - CARDIFF EAST – PYLE and ABERTHAW – PYLE

Candidate site 577 (Renewable Energy)
ZZB ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - UPPER BOAT 1 and ABERTHAW - UPPER BOAT 2
ZZS ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - CARDIFF EAST – PYLE and ABERTHAW – PYLE

Candidate site 513 (Renewable Energy)
ZZB ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - UPPER BOAT 1 and ABERTHAW - UPPER BOAT 2
ZZS ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - CARDIFF EAST – PYLE and ABERTHAW – PYLE

Candidate site 511 (Renewable Energy)
ZZB ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - UPPER BOAT 1 and ABERTHAW - UPPER BOAT 2
ZZS ROUTE: 275kv Overhead Transmission Line route: ABERTHAW - CARDIFF EAST – PYLE and ABERTHAW – PYLE

Candidate site 517 (Renewable Energy)
LL ROUTE: 275kv Overhead Transmission Line route: ABERTHAW – TREMORFA

Candidate site 515 (Renewable Energy)
LL ROUTE: 275kv Overhead Transmission Line route: ABERTHAW – TREMORFA

A plan showing details of NGET assets is attached to this letter. Please note that this plan is illustrative only. NGET also provides information in relation to its assets at the website below.
https://www.nationalgrid.com/electricity-transmission/network-and-infrastructure/network-route-maps

NGET Electricity Network Infrastructure

The security and reliability of the UK's current and future energy supply is highly dependent on having an electricity network which will enable the existing and new electricity generation, storage, and interconnection infrastructure that the country needs to meet the rapid increase in electricity demand required to transition to net zero, while maintaining energy security.

In general, NGET does not own the land crossed by its overhead lines but has responsibility for maintaining the equipment and safe supply of electricity. The increasing pressure for development is leading to more development sites being brought forward through the planning process on land that is crossed by NGET assets.

Despite this NGET is not a statutory consultee in the plan-making process but it is recommended that NGET are consulted at the earliest possible opportunity in order that advice and guidance can be taken into account on development near overhead lines, or wider policies that may affect the existing or future supply of electricity.

With the above context in mind, the Council should ensure that development proposals located near transmission assets demonstrate that they will not compromise safety, operability, maintenance access, asset replacement or future network expansion. The Council should safeguard existing and potential access routes required for the delivery and removal of Abnormal Indivisible Loads (AILs) associated with the construction, replacement and maintenance of transmission-scale equipment, including large transformers at strategic substations and resist development or highway alterations that would prejudice, constrain or render impractical AIL access unless suitable mitigation or alternative agreed routes can be secured.

Interactions Commentary

NGET advocates the high standards of design and sustainable development forms promoted through national planning policy and understands that contemporary planning and urban design agenda require a creative approach to new development around high voltage overhead lines and other NGET assets.

Policy EMP1 (Employment Regeneration Opportunity Area 1) (site 433 on candidate sites map)
A significant number of NGET assets – including substations – fall within Employment Opportunity Area 1, as designated within Policy EMP1. This site also appears as site 433 on the candidate sites map.

NGET do not consider that proposals of EMP1 are necessarily in conflict with these assets and are keen to ensure development is able to come forward even where its assets are present within or adjacent to an allocation. However, it is critical that the presence of these assets is suitably addressed within the supporting policy wording if Policy EMP1 is to be considered effective as otherwise the presence of NGET assets without appropriate acknowledgement will amount to significant constraints on site delivery. In particular, the electrical substations require 24/7 access including for 'abnormal indivisible loads' (AIL) and the land immediately surrounding them is also critical to their safe and secure functioning and to accommodate any change in future requirements which may arise.

It is acknowledged that, as part of masterplanning principles set out at 6.281, the policy already makes mention of existing infrastructure assets within the site and a need for a site layout to be developed that considers the sites existing infrastructure (including electrical substations) however we consider that the policy needs to go further and acknowledge the wider range of NGET assets that are within the site as well as more clearly establish how any future development needs to respond to the presence of NGET assets within the site. With this in mind, we propose the following wording, or wording to similar effect which directly references the full range of NGET assets and specific design guide and principles be added to the list of masterplanning principles as a separate point:

"Development will include a strategy for responding to the NGET Substations, Overhead and Underground Cable Routes present within the site which demonstrates how the NGET Design Guide and Principles have been applied at the masterplanning stage and how the impact of the assets has been reduced through good design."

Without appropriate acknowledgement of the NGET assets present within the sites, Policy EMP1 should not be considered effective as it cannot be delivered as proposed; unencumbered by the constraints posed by the presence of NGET infrastructure. As such, NGET object to the policy as currently drafted.

Renewable Energy Candidate Sites

A number of 'candidate sites' as included on the candidate site mapping, as listed in the above table, have NGET assets interacting with them. Whilst it is not clear what their future role as part of the Local Plan will be (they do not currently form part of the Proposals Map as published), NGET are keen to highlight these interactions so that, as with Policy EMP1 above, suitable policy wording can be included as part of any future development options on these sites, should they emerge as allocations in the future.

New Infrastructure

Demand for electricity is expected to rise significantly as the way we power homes, businesses and transport evolves. As

the UK transitions towards net zero, fossil fuels will be replaced by increasing volumes of low-carbon electricity, including from offshore wind and other renewable sources.

The UK Government has committed to achieving net zero emissions by 2050, requiring a balanced approach to greenhouse gas emissions and removals. Decarbonising the energy system is central to meeting this national objective.

National Grid Electricity Transmission (NGET) is delivering a range of infrastructure projects across England and Wales to support this energy transition and ensure that the transmission network can accommodate the rapid growth in low-carbon generation.

The way NGET generates electricity in the UK is changing rapidly, and NGET are transitioning to cheaper, cleaner and more secure forms of renewable energy. NGET need to make changes to the network of overhead lines, pylons, cables and other infrastructure that transports electricity around the country, so that everyone has access to clean electricity from these new renewable sources. These changes include a need to increase the capability of the electricity transmission system between the North and the Midlands, and between the Midlands and the South. It is also needed to facilitate the connection of proposed new offshore wind, and subsea connections between England and Scotland, and between the UK and other countries across the North Sea. Taking this context into account, In planning for the area the Council should:

• Safeguard all existing NGET transmission assets, including overhead lines, underground cables and substations.
• Support future reinforcement and expansion, including works required for the Great Grid Upgrade and other strategic national infrastructure projects.
• Ensure development proposals located near transmission assets demonstrate that they will not compromise safety, operability, maintenance access, asset replacement, or future network expansion.
• Safeguard existing and potential access routes required for the delivery and removal of Abnormal Indivisible Loads (AILs) associated with the construction, replacement and maintenance of transmission-scale equipment, including large transformers at strategic substations.
• Resist development or highway alterations that would prejudice, constrain or render impracticable AIL access, unless suitable mitigation or alternative agreed routes can be secured.
• Encourage early engagement with NGET to identify and resolve any potential impacts at the earliest possible stage of the planning process.

Protecting existing assets and enabling future network development will ensure that the Council contributes effectively to national decarbonisation targets while supporting local growth, resilience and energy security.

Further Advice

NGET is happy to provide advice and guidance to the Council concerning their networks. Please see attached information outlining further guidance on development close to National Grid assets.
If we can be of any assistance to you in providing informal comments in confidence during your policy development, please do not hesitate to contact us.
To help ensure the continued safe operation of existing sites and equipment and to facilitate future infrastructure investment, NGET wishes to be involved in the preparation, alteration and review of plans and strategies which may affect their assets. Please remember to consult NGET on any Development Plan Document (DPD) or site-specific proposals that could affect our assets.
We would be grateful if you could add our details shown below to your consultation database, if not already included.

Further Guidance

NGET is able to provide advice and guidance to the Council concerning their networks and encourages high quality and well-planned development in the vicinity of its assets.
Developers of sites crossed or in close proximity to NGET assets should be aware that it is NGET policy to retain existing overhead lines in-situ, though it recognises that there may be exceptional circumstances that would justify the request where, for example, the proposal is of regional or national importance.
NGET's 'Design guidelines for development near pylons and high voltage overhead power lines' promote the successful development of sites crossed by existing overhead lines and the creation of well-designed places. The guidelines demonstrate that a creative design approach can minimise the impact of overhead lines whilst promoting a quality environment. The guidelines can be downloaded here: https://www.nationalgrid.com/document/345326/download
The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.
NGET's statutory safety clearances are detailed in their Technical Guidance Note 'Third-party guidance for working near National Grid Electricity Transmission equipment', which can be downloaded here:
https://www.nationalgrid.com/document/349291/download
How to contact NGET
If you require any further information in relation to the above and/or if you would like to check if NGET's transmission networks may be affected by a proposed development, please visit the website: https://lsbud.co.uk/

Change suggested by respondent:

We propose the following wording, or wording to similar effect which directly references the full range of NGET assets and specific design guide and principles be added to the list of masterplanning principles as a separate point:

"Development will include a strategy for responding to the NGET Substations, Overhead and Underground Cable Routes present within the site which demonstrates how the NGET Design Guide and Principles have been applied at the masterplanning stage and how the impact of the assets has been reduced through good design."

Document Element: Former Aberthaw Power Station

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

Water Supply - The allocation covers a substantial area of land and there are numerous existing assets crossing the area.
Sewerage - The allocation covers a substantial area of land and there are numerous existing assets crossing the area.
Wastewater Treatment Works (WwTW0 - The site is between East Aberthaw & West Aberthaw WwTW catchments.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037
Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be

undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the 'domestic' supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the

requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: EMP2 - MOD ST ATHAN
Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the

exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.
TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.

Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery.
Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)

identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'
Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with

Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)
South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against

Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.
• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated,

resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com

South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.
Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Document Element: EMP2 - MOD ST ATHAN

Respondent: Ministry of Defence (Mr Chris Waldron, DIO Assistant Safeguarding Manager) [690]

Summary:

The MOD notes and welcomes the intentions of Policy EMP2: MOD ST ATHAN. However, it is recommended that additional wording is added to make clear that this policy relates to the safeguarded MOD technical site.

Tall or narrow profile structures such as masts or flue stacks with a height of 50m or greater above ground level may introduce obstruction hazards to low flying military aircraft using the UK military low flying system.

Full text:

It is understood that Vale of Glamorgan Council are undertaking a Deposit Plan consultation regarding their proposed replacement Local Development Plan 2021 - 2036. This consultation details the overall Strategy, development policies, areas to be protected, and specific land allocations for development (including new housing, employment) over the 15-year period
The Defence Infrastructure Organisation (DIO) Safeguarding Team represents the MOD as a statutory consultee in the UK planning system to ensure designated zones around key operational defence sites such as aerodromes, explosives storage sites, air weapon ranges, and technical sites are not adversely affected by development outside the MOD estate. For clarity, this response relates to MOD Safeguarding concerns only and should be read in conjunction with any other submissions that might be provided by other MOD sites or departments.
The Welsh Government's Development Management Manual as revised May 2025, identifies, at figure 7, that a number of non-site-specific directions are currently in force, the list includes the Town and Country Planning (Safeguarded aerodromes, technical sites and military explosives storage areas) Direction 2002. Through this direction the MOD is involved in the planning system as a statutory consultee. Statutory consultation occurs as a result of the provisions of the Direction, and the plans issued to Local Planning Authorities by the Welsh Government, which are provided by MOD.
The area covered by any Vale of Glamorgan Council Local Plan is partially covered by a safeguarding zone that is designated to maintain the effective operation of a MOD technical site that is retained at St Athan, at which is located a High-Resolution Direction Finder (HRDF) technical asset. This is a navigational aid which serves to maintain air traffic safety.
To illustrate the various issues that might be fundamental to MOD safeguarding assessments, a brief summary of the technical safeguarding zone is provided below. Depending on the statutory safeguarding zone within which a site allocation or proposed development falls, different considerations will apply.
The dimensions and materials used in the construction of a development may be relevant factors in assessing the impact of a given scheme. Developments that incorporate renewable energy systems may be of particular concern given their potential to introduce large expanses of metal or electrical noise interference, which may be a particular issue where solar farms are developed.
The MOD notes and welcomes the intentions of Policy EMP2: MOD ST ATHAN. However, it is recommended that

additional wording is added to make clear that this policy relates to the safeguarded MOD technical site. Therefore, it is recommended that wording is updated. “New development within or adjoining MOD St Athan and the safeguarded MOD technical site that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. Proposals for non-military or non-defence related development within or in the areas around MOD St Athan, or the safeguarded MOD technical site will not be supported where it would adversely affect military operations or capability, unless it can be demonstrated that there is no longer a defence or military need for the site.”
Where development falls outside designated safeguarding zones the MOD may have an interest where development is of a type likely to have any impact on operational capability. Usually this will be by virtue of the scale, height, or other physical property of a development. Examples these types of development include, but are not limited to:
Tall or narrow profile structures such as masts or flue stacks with a height of 50m or greater above ground level may introduce obstruction hazards to low flying military aircraft using the UK military low flying system.
The MOD also needs to be consulted on all proposals to develop wind turbines that are 11m or greater in height to blade tip or, that have a rotor diameter of 2m or greater. This is necessary to safeguard defence radar coverage across the UK used to manage MOD ranges, provide air traffic control and maintain UK air defence.
The MOD notes that Draft Policy CC3 assigns the renewable energy local search areas that have been defined in the deposit plan. This supports the generation of non-domestic renewable, low and zero carbon energy. The Renewable Energy assessment from 2023 identifies potential opportunity areas for renewable energy and provides a high-level assessment of wind and solar energy resource within the Vale of Glamorgan and identifies several sites, known as ‘search areas’ where the potential for development is greatest, and identification of 20 of the largest sites for both wind and solar.
Draft policy CC4 defines requirements that any development will need to demonstrate compatibility with. It is noted that specific reference to aviation safeguarding is included. However, the MOD considers it necessary that this is expanded to include specific reference to those technical assets which facilitate aviation safety such as navigational aids. In addition, the MOD also considers it necessary that specific mention of the need to account for defence radar coverage in relation to wind energy development is specifically identified.
In principle, the MOD has no objection to any renewable energy development occurring in the renewable energy local search areas that have been defined, subject to confirming that that it will be compatible with defence safeguarding requirements.
Some renewable energy generation infrastructure, for example wind turbine generators can, by virtue of their physical dimensions and properties, impact upon the effective operation of safeguarded defence technical installations. Solar farm developments located in proximity to safeguarded navigational aids, or other types of technical sites, can impact upon their effective operation by introducing substantial areas of metallic types of surfaces that may affect transmissions.
Where turbines are erected in line of sight to defence radars, the rotating motion of their blades can degrade and cause interference to their effective operation.
The MOD recommend that any emerging policy makes clear that, where an MOD assessment indicates that a development would have a detrimental impact on the operation and capability of defence assets or sites, that such an application would be refused or that conditions may be attached to any consent that might be issued which may include the removal of permitted development rights.
For your convenience, please find a table at Appendix A which provides a summary of the safeguarding criteria that would apply to those potential development housing allocations identified. MOD recommend that any more detailed policies for these sites include wording which indicates that development should be designed to ensure that it would have no impact on the operation or capability of defence sites or assets. The table below provides a summary of those sites and the triggers for statutory safeguarding consultation that would apply:
I trust this clearly explains our position on this update. Please do not hesitate to contact me should you wish to consider these points further.
Appendix A
Policy HG1 KS4 - MOD St Athan (technical safeguarding zone)
• Development of, or exceeding, 15.2m in height above ground level will trigger statutory consultation requirement
• Development of, or exceeding, 45.7m in height above ground level will trigger statutory consultation requirement
Policy HG1 KS5 - MOD St Athan (technical safeguarding zone)
• Development of, or exceeding, 15.2m in height above ground level will trigger statutory consultation requirement
• Development of, or exceeding, 45.7m in height above ground level will trigger statutory consultation requirement
Policy HG1(7) - MOD St Athan (technical safeguarding zone)
• Any development or change of use will trigger statutory consultation requirement
• Development of, or exceeding, 10.7m in height above ground level will trigger statutory consultation requirement
Policy HG1(8) - MOD St Athan (technical safeguarding zone)
• Any development or change of use will trigger statutory consultation requirement

Change suggested by respondent:

It is recommended that wording is updated as follows “New development within or adjoining MOD St Athan and the safeguarded MOD technical site that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. Proposals for non-military or non-defence related development within or in the areas around MOD St Athan, or the safeguarded MOD technical site will not be supported where it would adversely affect military operations or capability, unless it can be demonstrated that there is no longer a defence or military need for the site.”

5191 Comment

Document Element: EMP3 - PROTECTION OF EXISTING EMPLOYMENT SITES AND PREMISES
Respondent: Welsh Government (Economy, Treasury and Constitution Group - Property Infrastructure) [1213]
Agent: CarneySweeney

Summary:

We write to comment and seek amendments to Policy EMP3 'PROTECTION OF EXISTING EMPLOYMENT SITES AND PREMISES'.

We note that while the the title of Policy EMP3 refers to 'existing employment sites and premises', it is clear form the text of the policy that it also applies to 'Major Employment Sites'. The Proposals Map identifies 'existing employment' and 'major employment' sites separately and with different boundaries, such that 'major employment' sites includes land which is not an existing employment location (eg land at Bro Tathan North as well as land at Cardiff Airport).

In order to avoid any confusion regarding the application of Policy EMP3, we believe it should be re-named 'PROTECTION OF ALLOCATED AND EXISTING EMPLOYMENT SITES AND PREMISES'.

Finally, given the Welsh Government's objectives for the site to cater for general employment demands (including specialised/niche employers, operators requiring air-side facilities and inward investors seeking a very large single site opportunity), we consider the policy should refer to “Bro Tathan Business Park” rather than “Bro Tathan Aerospace and Business Park”.

Document Element: Bro Tathan Aerospace
Respondent: Llantwit Major Town Council (Clerk) [230]

Summary:

We also note that Site ID 424 sits partially within the Llantwit Major boundary and is appropriate for employment

Full text:

Llantwit Major Town Council considers that the five areas identified for the development of Llantwit Major and its immediate localities are appropriate for the future development of the town. The allocation of an area between the Northern Access road and the Eglwys Brewis Road as a major land bank enables future housing developments but we question whether the infrastructure will be appropriate. The land at the former Eagleswell School site should be reserved for health and social care facilities. We note the land between Llantwit Major and Llanmaes should serve as a green wedge and the provision of retail floorspace, both of which are appropriate. We also note that Site ID 424 sits partially within the Llantwit Major boundary and is appropriate for employment

6566 Support

Document Element: Renishaw, Junction 34, M4

Respondent: Renishaw Plc [1277]

Agent: Turley

Summary:

Renishaw Plc support the continued allocation of the current Renishaw premises as an existing Major Employment Site under Policy EMP3.6 – Renishaw, Junction 34, M4.

The allocation of the Renishaw site recognises the importance of the established employment site for the local economy. Renishaw continue to represent an important local employer, who provide high quality, skilled and specialist employment opportunities for the local population.

The continued safeguarding of the site for B1, B2 and B8 uses is therefore supported.

Full text:

We write on behalf of our client, Renishaw Plc, in response to the current consultation on the Vale of Glamorgan Replacement Local Development Plan (RLDP). We write to provide our comments in relation to the Vale of Glamorgan Deposit RLDP.

This letter is accompanied by the following:
• Completed Public Consultation Representation Form.

Renishaw's comments on the Deposit RLDP policies and allocations are outlined below.

BACKGROUND

Established in 1973, Renishaw is a global leader in measurement, motion control, spectroscopy, and precision machining. The company is renowned for pioneering innovative solutions designed to enhance operational performance – optimising manufacturing efficiencies, improving product quality, advancing research capabilities, and increasing the effectiveness of medical procedures.

As part of a major redevelopment of its Miskin site in South Wales, Renishaw is investing over £50 million to expand its manufacturing capacity and reinforce its commitment to achieving net zero carbon emissions. This investment includes the construction of two new low-carbon production halls, which are designed to meet the growing domestic and international demand for its products, while also supporting research and development initiatives.

Policy SP14 – Employment Growth

Renishaw Plc supports the retention of Land to the South of Junction 34 of the M4, Hensol (36.23ha net) as a Major Employment Allocation under Policy SP14.4. The allocation of the site is crucial to ensure that the Council can meet its projected employment land needs and deliver the anticipated level of sustainable employment growth over the Plan period.

The site's continued allocation as a major employment site reflects it's importance as a key opportunity for investment and employment opportunities within the Vale of Glamorgan. The site is of strategic and regional importance as an employment site in a market where high quality, well connected industrial sites are rare.

Outline planning permission was originally granted for the proposed site (Ref no. 2014/00228/EAO) on 22 June 2016.

This permission has subsequently been renewed via a S73 application (ref: 2021/00899/EAO) which extends the period of time for the submission of reserved matters for a further 5 years from the date of the new permission (to 22 December 2030). The permission provides for the following development:

"Outline planning permission with all matters reserved except for access, for development comprising class B1, B2 and B8 uses; a hotel/residential training centre (class C1/C2); and ancillary uses within class A1, A2, A3; associated engineering and ground modelling works and infrastructure, car parking, drainage and access for all uses; provision of infrastructure (including energy centre(s)); landscaping and all ancillary enabling works) at Renishaw Plc, Miskin Business Park, Miskin."

A summary of the key elements of the outline permission are:
• Up to 151,060.99sqm of industrial floor space comprising Class B1, B2, B8 uses;
• Up to 9,290.30sqm of Hotel/Residential Training Centre (Class C1/C2);
• Up to 1,300sqm of ancillary Class A1, A2 and A3 uses;
• Up to 3,200 car parking spaces;
• 30.51ha of Green Infrastructure, comprising landscaping, water balancing areas;
• Access and servicing arrangements; and,
• Ancillary services, including power/utilities (with potential to incorporate energy centre (s)).

Reserved matters permission (reference number: 2019/01421/RES) was approved on 20 May 2021 to bring forward the first phase of the development. This phase of the development is now complete and provides 400,000 sqft of floorspace which is occupied by Renishaw as an extension to its existing operations at Miskin. In addition to employment opportunities created over the construction period, the development has created additional operational jobs for Renishaw. Significantly, many of these jobs provide high quality employment opportunities in the skilled and specialist

sector, helping to create skills and provide local employment opportunities.

Renishaw will shortly bring its wider land holdings to the market with the intention of attracting major employment generating uses - further enhancing the economy of the region. The remaining phases of the site (Areas B, C and D) provide further opportunity for inward investment over the Plan period and the creation of over 1,000,000 square feet of employment space.

It is anticipated that Areas B, C and D could have the potential to create over 2,000 operational jobs. During the construction phase, the development also has the potential to create over 1,000 jobs further adding to the employment opportunities created through the development.

The recent renewal of the outline planning permission ensures that the development of the site remains deliverable over the Plan period.

EMP3 - Protection of Existing Employment Sites and Premises

Renishaw Plc support the continued allocation of the current Renishaw premises as an existing Major Employment Site under Polic EMP3.6 – Renishaw, Junction 34, M4.

The allocation of the Renishaw site recognises the importance of the established employment site for the local economy. Renishaw continue to represent an important local employer, who provide high quality, skilled and specialist employment opportunities for the local population.

The continued safeguarding of the site for B1, B2 and B8 uses is therefore supported.

EMP4 – Non-Employment Proposals on Existing Employment Areas and Premises

General support is given to Policy EMP4 which seeks to restrict the development of non-B1, B2 and B8 uses to ancillary services and facilities associated with an existing or proposed employment use.

However, the Policy should provide greater flexibility to allow for appropriate employment generating proposals which complement the existing uses and which may not clearly fall within the B1, B2 and B8 use class. This flexibility is essential in order to allow the sites to respond to changing market demand and emerging markets.

Summary

We trust that the above representations assist and are taken into account as the preparation of the Plan progresses.

We would be grateful if we could be kept informed of future stages of the emerging RLDP.

If you require any further information, please do not hesitate to contact me.

Yours sincerely

6670 Comment

Document Element: Atlantic Trading Estate, Barry

Respondent: Natural Resources Wales (NRW) (Paige Minahan, Advisor - Development Planning) [692]

Summary:

SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

Full text:

Thank you for consulting Natural Resources Wales (NRW) on the Vale of Glamorgan Replacement Local Development Plan (RLDP) Deposit Plan, which we received on 28 January 2026.
We have reviewed the deposit plan and published documents and have recommendations on matters relating to

coherence and consistency. We advise these are addressed prior to submission of the RLDP.
1. Summary
We welcome that the Vale of Glamorgan Council has declared a 'nature emergency' and in 2021 committed to a target of no net loss of biodiversity in the Vale of Glamorgan. The deposit plan takes this a step further through its vision, objectives and policies in seeking
the achievement of net biodiversity benefit. We also welcome the recognition within the deposit plan and supporting documents that additional growth within the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. We
appreciate that the deposit plan's policies seek to mitigate against these potential adverse effects with detailed wording and requirements.
However, we consider that the deposit plan would benefit from more specific mention of designated conservation sites especially where these are related to specific allocations and their associated policies. We note this issue was raised within the Integrated Sustainability Assessment (ISA) (see Section 2 below) however we do not see this recommendation properly reflected within the deposit plan itself. We consider this is a gap that should be addressed to ensure clarity within the policy requirements for any future planning applications.
General Approach to Designated Sites
In line with our role in development planning and our consultation remit, we advise that where new development may occur within or be likely to affect statutory designated sites including Special Areas of Conservation (SAC), Special Protection Areas (SPA), Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) and Marine Conservation Zones (MCZ) this could be more clearly identified as a key consideration especially with respect to site allocations (housing and employment). We consider that the issue of avoiding or mitigating potential impacts and utilising opportunities for supporting and enhancing these sites (as noted by para 6.401 of the deposit plan) could have more substantial recognition across the deposit plan and its supporting documents. This would improve the clarity of approach.
We have furthermore noted that Policy SP20 (Biodiversity and Ecosystem Resilience) currently excludes specific mention of designated sites (although it does refer to protected species and habitats) and we suggest that this is addressed – our comments on SP20 are set out in Section 3 of this letter.
By across the plan, we mean there is scope to include mention of relevant statutorily designated sites within the constraints text for the sites listed in Appendix B of document BP44 Infrastructure Delivery Plan (perhaps summarising in line with the approach taken to the Historic Environment Record) and within document BP32A Green Infrastructure Assessment of Key Sites, evidence which can then be reflected as appropriate in Key Sites Policies (HG1 KS1 to KS5) to inform their master planning. The Preliminary Ecological Appraisals already undertaken for Key Sites (Key Site Supporting Information) would appear to hold relevant information in this respect.
We note that document BP32A has a useful general paragraph on biodiversity assets at paras 3.7-3.8 linked to the evidence collated in the Green Infrastructure Assessment (GIA). In short, where designated sites are identified in proximity to allocated sites it would be
helpful to make clear reference to them in a consistent manner. This would bring the deposit plan more fully into alignment with the ISA findings. For any employment sites
within proximity of designated sites, we consider that the employment background paper BP12A could potentially be updated to similar effect.
With reference to omissions on this matter, we refer you to our comments on sites set out in Section 4 of this letter, including sites KS1, HG1 (1), SP14 1. and SP14 4.
Overall, we consider that the recognition of designated sites appears somewhat inconsistent in the deposit plan, although we recognise that much of this is done by the
Green Infrastructure Strategy (GIS) which incorporates the GIA.
It may be that Policy SP20 (please see our suggested amendments in Section 3 of this letter) together with addressing the meaning of "areas of high ecological value" will also go some way towards resolving the points we raise.
Master Planning
We welcome the illustrative master plans included in the deposit plan but would caveat that at the detailed stages schemes must be able to adapt, where necessary, to site
specific environmental constraints (including protected sites, species and habitats), for example in response to updated ecological appraisals or detailed species surveys.
Designs need to be flexible enough to ensure compliance with the stepwise approach (avoid, minimise, mitigate) in achieving Net Biodiversity Benefit (NBB) and improving the resilience of ecosystems as required by Planning Policy Wales, edition 12 (PPW12) and Policy 9 of Future Wales, the National Plan. We note the plan has good reference to this within Policy SP20 and supporting paragraph 6.405, thus enabling thorough consideration
at the project/planning application level and in master planning.
Please see our detailed site-specific comments in Section 4 in order to consider where our comments may lead to adjustments in master plans. For example, the species protection issues we highlight with regard to KS3 at Readers Way, Rhoose.
Strategic Opportunity at Bro Tathan
In addition to the above points, we advise that the Bro Tathan area of the Vale includes a number of different allocations and is already known as an important ecological area for great crested newts (GCN) and dormice, in particular. Given the commitments already
made under previous planning applications at the site and the necessary requirement for future biodiversity provisions, we advise a more strategic overview of the area should be considered and either set out within the deposit plan or secured within an updated GIS.
This will ensure that development in the area:

• does not cause detriment to the maintenance of the favourable conservation status of protected species;
• results in green spaces and infrastructure that is meaningfully spatially connected and sufficient in size.
Overall, we consider piecemeal development of the St Athan area will not lead to effective conservation delivery and will make the planning process less efficient at project level.
Areas of High Ecological Value
As previously noted within our preferred strategy response (Ref: CAS-244275-Q4F4, dated: 14th February 2024), the deposit plan continues to make reference to avoiding
areas of 'High Ecological Value' (criterion 1 of SP20). We have not been able to establish where these areas are or how their ecological value is being determined. We consider this issue needs to be clarified and ideally a definition provided.
2. Integrated Sustainability Assessment (ISA)
With regards to Section 9.9 of the ISA, we agree that additional growth in the Vale has the potential to lead to negative effects on nationally and locally designated biodiversity. The ISA concludes that the housing-specific policies set out within the deposit plan work well to
mitigate the potential adverse effects, through design stipulations and policy inclusions.
The ISA then goes on to recommend that Key Site policies are updated, where appropriate, to reference specific designated sites which they are in proximity to, in
order to help establish appropriate protection and/or enhancement measures.
We agree with these recommendations and would go further in advising that all allocations and their associated policies should reference specific designated sites relevant to that site. For instance, we would advise Barry Woodlands SSSI and Walters Farm SSSI is identified in relation to Key Site 1 – Land at North West of Barry, and Barry Woodlands SSSI should also be identified for Housing Allocation HG1 (1) Land to the West of
Pencoedtre Lane. Please refer to our site-specific comments in Section 4 below.

3. Plan and Policy Wording
Strategic Policies
Strategic Policy SP19 – Green Infrastructure
We welcome that the GIS and GIA has informed the master planning of the Key Site allocations (6.395). To ensure this approach is carried forward for other development proposals, we consider there should be a stronger "policy hook" within Policy SP19 to link the content and evidence of the GI work to the policy and its influence on decision-making. Without this we consider there may be a risk of a policy gap/mismatch when determining planning applications.
This could be resolved by a new criterion such as:
"the provision of green infrastructure must have regard to any adopted or emerging guidance including the Green Infrastructure Strategy/Green Infrastructure Assessment
(and the Assets listed therein), and Green Infrastructure (Action) Plan for the Vale."
To strengthen Policy SP19 we also recommend an addition to the wording of criterion 2 to read:
"Protect and enhance connectivity between existing green infrastructure assets and be planned wherever possible to positively support areas of high ecological value".
We furthermore note that criterion 3 of SP19 refers to achieving net benefit for biodiversity whilst the policy overall seeks to provide, protect and enhance high quality multi-functional green infrastructure. We have previously commented that multi-functional green spaces may not always be compatible with biodiversity. It should be recognised that multifunctional uses of space can be to the detriment of the natural environment and so must be carefully considered.
We recommend that paragraph 6.397 wording is updated to reflect this potential conflict so that NBB required by PPW (and as promoted by para 6.396 together with Policy SP20) is able to be prioritised and not compromised.
This point could also be raised under Policy SP4 Placemaking – at para 6.32. It should not be assumed that multifunctional spaces will also be delivering for nature in every situation and in some cases separate provision of spaces to meet biodiversity goals will be essential.
Paragraph 6.401 is welcomed regarding the opportunities that exist for the protection, maintenance and further enhancement of green infrastructure assets.
Strategic Policy 20 (SP20) – Biodiversity and Ecosystem Resilience
We welcome the inclusion of SP20 which recognises the importance of natural assets and aims to protect these. We have made comments regarding the term "high ecological value" in our Summary section at the start of this letter.
We also note that whilst reference is made to sites and areas of European, national and local importance (para. 6.402), this is not distinctly carried through within SP20 or within a specific detailed policy in the deposit plan. We advise that a more detailed policy for the Natural Environment (similar to DNP4 for the Historic Environment) could be included within the deposit plan and this should include reference to the protection of statutorily designated sites. Alternatively, SP20 itself could be updated to include reference to these in a similar manner to the approach taken to non-statutory designated sites provided by criterion 5 of SP20. We consider this would strengthen the deposit plan's alignment to section 6.4.3 of PPW12. This issue is also reflected in our feedback to the ISA as set out in Section 2.
By adding a detailed policy for the wider protection of the natural environment, there is scope to ensure a clearer message within the deposit plan regarding the need for natural resources (including land, air, water and soils) in the Vale to be protected for themselves and the essential ecosystem services they deliver. This is opposed to merely preventing pollution (deposit plan Policy DNP5). Taking such an approach would enable an
opportunity to add the consideration of Sustainable Management of Natural Resources (SMNR) into the plan policy framework rather than confining this to the deposit plan context (para 2.11) and the policy context of the GIS (page 53).
We note that Policy CC4: Renewable, Low and Zero Carbon Energy Generation is more distinct in seeking to safeguard a range of assets (including nature conservation interests and soil conservation interests) and we consider a similar policy approach may be useful
for all development proposals. We also suggest that the placemaking strategic policy (Policy SP4) could be altered in

order to highlight the Natural Environment alongside its
current reference to the Historic Environment. We note that placemaking principles (Figure 11 - Identity) includes the need for development to respond to natural physical attributes of the site. This is an issue is linked to our site-specific comments (Section 4 below) where we cite, for example, the need to buffer woodlands, hedgerows and watercourses and preserve linear corridors.
Ensuring an SMNR approach will impact positively on the ground to safeguard and improve ecological networks and protect and enhance ecosystems, essential to meeting
the nature emergency. Topics we draw your attention to include river restoration where, in particular, the removal/remediation of physical modifications can make a significant impact upon water quality. The GIS provides scope to capture various projects and wider initiatives, including those based on catchment scale improvements and we welcome the opportunity to be continually involved in this work. We note and welcome the recognition of nature-based solutions within Policies SP16, SP19 and SP20 and in detailed Policy CC6.
With regards to natural assets and water resources, we consider that specific reference to water quality is lacking within the strategic and/or detailed policies. Whilst we note that water quality is mentioned within criterion 9 of Policy SP16, we consider the deposit plan should include more direct reference to the Water Framework Directive. We consider there is an opportunity for SP20 to be updated to ensure developments protect water quality and quantity. Alternatively, as mentioned above, this could fit within a detailed policy for the protection of the natural environment.
As a minor point, please note that the South Central Area Statement is not hyphenated (para 2.10 and 2.11). Please note also that, referring to paragraph 6.404 and 6.405, the
requirements for developments to demonstrate NBB is based on PPW12, rather than The Environment (Wales) Act 2016.

Detailed Policies

Infrastructure
Whilst we note that the infrastructure requirements (such as sewerage capacity) have been investigated for certain key sites within the deposit plan, we consider there could be scope for a detailed policy to cover infrastructure requirements for all development.

Policy DNP7
We welcome Policy DNP7 of the deposit plan, which recognises the importance of preserving the natural darkness of the night sky and minimising light pollution, which we consider to be important in limiting adverse impacts upon local biodiversity and ecological
connectivity.

Policy DPN8
Please refer to comments made with regards to this policy under Section 6: Habitats Regulation Assessment (HRA).

Policy HG5 - Affordable Housing Exception Sites
We advise that, particularly given these sites are permissible outside of settlements and could be in countryside locations, criterion 6 should be amended to:
“There is no loss of land with significant recreational, amenity, agricultural, ecological or natural heritage value”.

EMP1 – Employment Regeneration Opportunity Areas
We note that the Former Aberthaw Power Station has been identified as an employment regeneration opportunity area. There are otter and water vole records on the site and we are aware of GCN records within the local area. We would advise against the inclusion of
the Aberthaw Nature Reserve within the allocation and advise that any application on the site would need to be supported by up-to-date ecological survey information and
appropriate conservation measures. Given the nature of the site, future applications will also need to be supported by appropriate land contamination investigations.

CC3 – Renewable Energy Local Search Areas
This policy identifies several sites where the potential for wind and solar development are the greatest (known as ‘search areas’). There are significant search areas located between Llantrithyd and St Hilary; no ecological information has been provided for these search areas, however given the records for GCN, water vole and otter local to these areas, it is likely that provision in the form of suitable habitats will need to be made for these species.
This could be substantial in scale, however without further ecological information we cannot advise further at this time. Notwithstanding, given the scale of the search area in this location and the likely ecological impacts, we advise that this area would benefit from spatial planning of biodiversity provision, at a greater than individual site scale.

Paragraph 2.81 – The Vale Nature Recovery Action Plan
We note reference to ‘6 broad habitat types’ including Woodland, Freshwater, Grassland, Coastal, Agriculture and Urban. We suggest this is amended to ‘6 broad ecosystems’ to reflect correct terminology and the State of Natural Resources Report 2025.

4. Strategic Sites
Overview
We previously provided detailed comments on the RLDP’s Strategic Sites, as set out in our response ref: CAS-234819-

C1V3, dated 4th October 2023, which we refer you to. We welcome the additional information provided and note the inclusion of Green Infrastructure
Strategies for each of the Key Sites. However, we note that these do not include reference to protected species specifically and as a result we are unable to confirm that the provision for each site is appropriate. We observe that the road infrastructure for many of these sites severs woodlands and other substantial linear corridors. We advise that such sites are designed to minimise fragmentation in the landscape and advise that the road layouts and consequent severance is re-visited.

KS4 and KS5 are located within the vicinity of St Athan. This area is important for (and we are aware of) multiple records of GCN and dormice. Some of the area is already secured as compensation for impacts on these species associated with previous developments. We advise that the wider St Athan area is subject to spatial planning of biodiversity provision at a greater than individual site scale (as we have referenced in the Section 1 of this letter), in order to determine that:
• It does not cause detriment to the maintenance of the favourable conservation status of both GCN and dormice (strategic conservation plans should be established for both species);
• To ensure that green spaces and infrastructure are meaningfully spatially connected and sufficient in size;
We consider piecemeal development of these areas will not lead to effective conservation delivery and will cause the delivery of these sites to be less effective during the planning process.

Spatial Planning of Biodiversity
A masterplan or spatial biodiversity or GI plan should demonstrate the retention, provision and enhancement of essential areas for protected species. It should ensure that individual site-based habitat provisions are not designed in isolation but considered in association with nearby sites to demonstrate how habitat connectivity and resilience will be provided both across the site and to the wider landscape. Note that functional separation of public
open space and areas for biodiversity compensation may be required. Suitable buffers will need to be applied to any woodland and retained or created habitats on site. A sensitive lighting strategy will also likely be required for these sites. This point was raised previously during our review of the strategic candidate sites (ref: CAS-234819-C1V3, dated 4th October 2023).

Updated Surveys and Appropriate Buffer Zones
Further to the above comments, we welcome reference within the Infrastructure Delivery Plan for the requirement for updated ecological surveys and appropriate buffer zones to watercourses and retained habitat features for KS1 and KS2. Given the various ecological
constraints for each key site, we consider this advice should be included for each of the key sites.

Site Specific Comments
KS1 – Land at North West Barry
Protected Species – Dormice and bats are present on site. We advise that the masterplan is informed by surveys to ensure that biodiversity interests are maintained and enhanced. The site may require some areas to be retained an/or provision for habitats to support them. Dark areas and/or bespoke lighting scheme may also be required at project stage.
Protected Sites – The site is located in close proximity to Walters Farm and Barry Woodlands SSSI. As raised in our previous responses (CAS-234819-C1V3, dated: 4th
October 2023 and CAS-276923-N7H6, dated 17th April 2025), we have some concerns with the potential for increased and inappropriate use of the protected sites through recreational activities. We welcome that requirements have been detailed within HG1 KS1
under Green Infrastructure, Recreation Spaces and Biodiversity, which includes reference to emerging guidance for Suitable Alternate Natural Greenspace (SANG).

KS2 – North of Dinas Powys, off Cardiff Road
Protected Species – We note the supporting Preliminary Ecological Appraisal (PEA) (13th September 2022) which identifies potential for this site to support GCN, dormouse and bats. In the absence of species specific surveys, we are unable to advise whether the housing number aspirations for the site are realistic. We advise the scheme is designed to minimise severance of ecological corridors.

KS3 – Land at Readers Way
Protected Species – GCN are known to be present on this site (Readers Way Pond). The current masterplan indicates that the pond will be surrounded by built development and therefore built upon much of the terrestrial habitat which supports this pond. It is essential
that the masterplan provides a wide corridor from this pond to the wider countryside, other than via the closely managed grassland at Cardiff Airport. Any masterplan should make provision for this and any loss of habitat should be compensated for.

KS4 – Land at Church Farm
Protected Species - There are records of dormouse and GCN in the wider area. However, the supporting PEA indicates no direct impacts on the latter of the species. There appears to be extensive green space proposed in the illustrative masterplan, which we support.

KS5 – Land to the West of St Athan

Protected Species - The St Athan area is important area for GCN and dormouse. We would generally concur with the lower risk assessed for these species in association with this site. However, this is a substantial site and this and other sites in the St Athan area would benefit from spatial planning of biodiversity provision at a greater scale as reaffirmed elsewhere in this response.

5. Housing And Employment Allocations
Housing Allocations

HG1 (1) Land to the West of Pencoedtre Lane
Protected Sites: The site is within close proximity (200m) to Barry Woodlands Site of Special Scientific Interest (SSSI) and there is a risk from increased recreational use as a result of residential development, which could lead to impacts on the SSSI. Green space design must consider any emerging guidance for SANG to reduce recreational pressure on adjacent sites of biodiversity importance.
HG1 (2) Land at the Mole
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary European Marine Site (EMS). A HRA at project level will therefore be required.

HG1 (3) Land at Hayes Lane
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

HG1 (4) Land at Neptune Road
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

HG1 (5) Land between the Northern Access Road and Eglwys Brewis Road (Site C - Central Parcel)
Flood Risk: The site is located partially within Flood Zone 2 and 3 for Rivers, with the southern area of the site located within Flood Zone 3. We refer you to Sections 10.20 and 10.21 of TAN 15, which state that highly vulnerable development in Zone 3 should be avoided. Notwithstanding, we acknowledge that at masterplanning stage, there is scope to locate residential development away from areas of flood risk. We also welcome that
Appendix B of your Infrastructure Delivery Plan notes the requirement for an FCA at project level for this site.
Watercourse: Boverton Brook (Main River) runs through the site and any development will need to ensure no adverse impacts to the watercourse with appropriate buffers and design considerations.

HG1 (6) Land adjoining St Athan Road
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Rural Affordable Housing Led Sites
HG4 (1) Land to the East of Colwinston
Land Contamination: The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.

Major Employment Allocations
SP14 (1) Land east of Cardiff Airport, Rhoose
Protected Species and Protected Sites: The site is within close proximity (360m) of Barry Woodlands SSSI and there also appears to be significant potential for the site to support dormouse, GCN, otter and water vole. There are large areas of semi-natural habitats associated with this site including woodland, mature hedgerow and watercourses. These should be retained and significantly buffered from development. Connectivity between the
site and the wider environment should also be maintained. It is therefore currently not possible to advise whether the full aspirations of the site could be fulfilled.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (2) Land south of Port Road (Model Farm), Rhoose
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (3) Bro Tathan Aerospace and Business Park
Protected Species: The site is located within an important area for GCN and dormice. As mentioned, this area would benefit from spatial planning of biodiversity provision at a
greater scale to better inform allocation.
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (4) Land to the South of Junction 34 of the M4, Hensol
Protected Sites: The site is located directly adjacent to Ely Valley SSSI. Given the biodiversity interest at the site, previous applications at the site include planning
commitments to conserve and enhance grasslands habitats on the site. These commitments have not yet materialised and the requirement for these provisions should be noted within the LDP.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.

Local Employment Allocations
SP14 (5) Atlantic Trading Estate, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (6) Windmill Park, Hayes Road, Barry
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination. The site is located over a principal aquifer. Any development would need to consider the hydrological setting of the site and vulnerability of pollution.
Flood Risk: The site is located partially within Flood Zone 3 for Sea. We advise that an FCA will be required at project level to determine any flood risk implications at the site.
Marine: An adjacent watercourse forms a hydrological link to the Severn Estuary EMS. A HRA at project level will therefore be required.

SP14 (7) Vale Business Park, Llandow
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

SP14 (8) Land at Llandow Trading Estate
Land Contamination: Given previous land use at site, a Preliminary Risk Assessment would be required at planning application stage to determine risk of land contamination.

6. Habitats Regulations Assessment (HRA)
Marine and Coastal Physical Processes
Coastal Squeeze
We note that coastal squeeze has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is that it “is unlikely that the Vale of Glamorgan RLDP will allocate many developments on
greenfield sites adjoining the estuary”.
We also note that Policy CC6 specifically relates to Coastal Defences and Shoreline Management, with reference to the Shoreline Management Plans. We recommend the use of NRW’s Assessment of Coastal Squeeze at the project level for anyone proposing to
undertake works to coastal structures.

Loss of Functionally Linked Habitat
As part of the Preferred Strategy consultation, we advised that consideration was given to potential impacts on migratory fish features of the Severn Estuary EMS. In particular, we referenced the River Ely and its tributaries providing supporting habitat for essential life cycle processes of some or all the diadromous fish species.
Within the deposit plan HRA, it is noted that likely significant effects to the migratory fish features of the Severn Estuary EMS has been ruled out, as none of the sites allocated in the RLDP lie in close proximity to the River Ely and connected watercourses. We therefore
agree with this conclusion.
In relation to bird features, Table 8 of the Appropriate Assessment identifies many key sites and allocations with high to medium potential for functional linkage to the Severn Estuary EMS. We note that loss of functionally linked habitat has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. The justification for this is the inclusion of ‘Policy DNP8 – Severn Estuary Recreational
Pressure’ within the deposit plan.

Policy DNP8
We advise that clarification is needed in relation to this policy, as while we welcome the supporting text regarding functionally linked land outlined in paragraph 6.76 of the HRA, the policy is mainly focused on recreational pressure and is titled as such. We also note a discrepancy between the policy wording in paragraph 6.76 and Policy DNP8 in the deposit plan itself.

Visual and Noise Disturbance (During Construction)
Within the deposit plan HRA, visual and noise disturbance has been screened in and taken through to Appropriate

Assessment where a conclusion of no adverse effect was reached. The justification for this is through the inclusion of recommendations outlined in 6.83 of the HRA to the supporting text of Policy SP20, which we welcome.
We also welcome the recommendation in relation to potential functionally linked land as outlined in paragraph 6.84 of the HRA.

Recreational Pressure
Within the deposit plan HRA, recreational pressure has been screened in and taken through to Appropriate Assessment where a conclusion of no adverse effect was reached. Again, the justification for this is the inclusion of 'Policy DNP8 – Severn Estuary Recreational Pressure' within the deposit plan, which as above, we advise needs clarification.
We note that no visitor data has been collected from access points within the Vale of Glamorgan, but we welcome reference to the visitor surveys undertaken by
Monmouthshire and Torfaen, as well as the 2022 visitor survey commissioned by Stroud District Council.
We note that paragraph 6.25 of the HRA states that "three Key Sites and several other housing allocations lie within the 12.6km core recreational catchment that has been
deemed most appropriate for the Severn Estuary SAC/SPA/Ramsar". However, we also note that Table 6 in the HRA only includes two Key Sites requiring mitigation, with KS3 being omitted. We advise that clarification is needed at the project level as to whether developments are situated within the 12.6km catchment area.

7. Strategic Flood Consequence Assessment (SFCA)
We have reviewed the submitted SFCA and agree with the scope of the assessment made.
We note there is currently an upper catchment Natural Flood Management (NFM) / Nature Based Solutions (NbS) project on the Cadoxton to reduce flood risk to Dinas Powys, Any updated SCFA should have regard to NFM schemes being progressed in their area and
proposals should be clearly outlined in the Development Plan (in accordance with TAN 15 2025).

8. Green Infrastructure Strategy (GIS)
We understand that the published GIS has not been updated to reflect the latest stage of the deposit plan and refers only to the preferred strategy stage (para 2.2.3). We previously provided advice on the Green Infrastructure Assessment (GIA) (re: CAS-252087-F0H1, dated 14th May 2024) which is included within the GIS. We refer you to these comments, noting that the GIS will be kept under continual review (para 1.2.5).

7181 Object

Document Element: EMP3 - PROTECTION OF EXISTING EMPLOYMENT SITES AND PREMISES
Respondent: Cadoc Castle Land Developments LTD [2261]
Agent: Geraint John Planning Ltd

Summary:

In light of the candidate site submission made by the site promoter, it is considered that the site should be considered acceptable and appropriate as an employment site allocation.
It is considered that the site should be re-allocated as an employment site, given that the previous concerns regarding deliverability have been overcome (as evidenced in the candidate site submission). As a result, it is considered that the site should be identified within the Policy EMP3.
It is considered that the Plan has failed to follow the evidence base that has been undertaken for the Plan preparation process – given that the settlement boundary has not been redrawn around the site in accordance with the recommendations of the Employment Supplementary Paper (2025). This is contrary to the provisions of the Development Plans Manual. Accordingly, notwithstanding the proposed re-allocation of the site, in any event, it should be the case that the site is included within the settlement boundary, which would then follow the recommendations of the evidence base which should inform the Deposit Plan.

Full text:

Representations regarding the Deposit Plan Consultation – 'Land off Millennium Way'

Please find enclosed, on behalf of and under instruction from our client, 'Cadoc Castle Land Developments Ltd, representations for consideration as part of Vale of Glamorgan's RLDP Deposit Plan.

Context to these Representations

The above site has been submitted as a Candidate Site as part of the Deposit Plan consultation. The following has been submitted as part of this process:

• Candidate Site Submission (including Sustainability Appraisal and Assessment against Candidate Site Methodology);
• Development Viability Model (dated March 2026) completed by Cooke & Arkwright.

Having regard to the above information submitted, and in summary, it is considered that the site should be considered acceptable and appropriate as an employment site allocation, in light of the following conclusions drawn:

• The Sustainability Appraisal completed for the site confirms that the site has a range of positive impacts through its allocation for employment uses, and could assist in achieving the Plan's Sustainability objectives.
• In respect of assessing the site against the Candidate Site Methodology, the site is considered available for development and has a viable prosect of coming forward in the short term, for delivering further employment land in the plan period.
• The site is in an inherent sustainable location with excellent access to key services and facilities, and public transport.
• The development of the site would bring about significant employment opportunities in a range of different sectors.
• The site has limited constraints, given that it is currently brownfield land and doesn't include any high grade agricultural land.
• The redevelopment of the site has the ability to make a positive contribution to placemaking and wellbeing.
• The site has been considered acceptable as an allocation previously by the Council in their assessment of the previously proposed uses (residential and mixed-use) – it is only the covenant that prohibited the residential development of the site.

We consider that the site 'performs' well against the defined assessment criteria and methodology, with no evident insurmountable constraints, obstacles, or failings. It has been demonstrated above that there are no insurmountable constraints to development of the site, which includes the covenant that was previously a key constraint to the delivery of the previously proposed development. The latest proposals overcome this, which in turn, evidences that the re-allocation of the site is deliverable, and in turn, sound. As such, the site should be considered a 'reasonable' option, and should progress to the Stage 3 assessment accordingly.

Given that the site is not currently allocated in the Deposit Plan, we would raise an objection to the Plan in its current form, on the basis of the Candidate Site submission. Further details are included below.

Summary of these Deposit Representations

In light of the Candidate Site Submission made by the site promoter, we would suggest that the site should form an employment allocation within the RLDP. As a result, the site promoter looks to raise an objection to the Deposit Plan. Para 5.7 stats that the RLDP will make provision for "An allocation of 182 Ha of employment land across a range of sites to enable 67.8 Ha to be brought forward during the plan period and the delivery of up to 5,338 jobs". It is noted that there are currently a total of 8 sites highlighted as employment allocations in Policy SP14 'Employment Growth'. Policy EM1 also highlights two 'Employment Regeneration Opportunity Areas'.

Although there is no objection raised to the inclusion of the sites already identified within the policy in principle, it is considered that the site should be re-allocated as an employment site, given that the previous concerns regarding deliverability have been overcome (as evidenced in the candidate site submission). As a result, it is considered that the site should be identified within the Policy EMP3.

We also object to the Council's omission of the site within the settlement boundary of Barry, given that the Employment Supplementary Paper (2025) outlined the following recommendation in respect of the site:

"The site has not been allocated but has been retained as white land within the settlement, offering an opportunity for it to be redevelopment for employment should this be deliverable in the future."

Accordingly, the evidence base undertaken to inform the preparation of the Plan recognises the development potential of the site, and outlines that by retaining the site as white land within the settlement, this allows for an opportunity for the site to be developed for employment purposes in the Plan period.

That said, the Deposit Plan Proposals Map shows the site to be located outside of the settlement boundary. As set out in the Development Plans Manual (2020), the policies and allocations in the LDP should flow from the evidence, rather than it being collected retrospectively.

It is therefore the case that we object to the Plan in its current form, as it has failed to follow the recommendations set out in its evidence base, contrary to the provisions of the Development Plans Manual set out above.

The fundamental requirement for a Local Development Plan (LDP) is to be sound, and the Development Plans Manual sets out the statutory and procedural requirements for LDP preparation and the three tests of soundness.

Test 2 relates to whether the plan is appropriate (i.e. is the plan appropriate for the area in light of the evidence). A sub-question to this test is whether the plan is supported by robust, proportionate and credible evidence.

It is considered that the Plan has failed to follow the evidence base that has been undertaken for the Plan preparation

process – given that the settlement boundary has not been redrawn around the site in accordance with the recommendations of the Employment Supplementary Paper (2025). The formulation of a Deposit Plan must be underpinned by the evidence base, which includes the settlement boundary.

Accordingly, notwithstanding the proposed re-allocation of the site, in any event, it should be the case that the site is included within the settlement boundary, which would then follow the recommendations of the evidence base which should inform the Deposit Plan.

Conclusion

These representations raise objection to the Deposit Plan – for the reasons set out above.

Given the nature of these representations our clients would be happy to discuss any aspect of the submission made and credentials of the site when your Authority comes to evaluate matters.

We look forward to hearing from you in due course. In the meantime, however, we hope and trust that all is in order with this submission. Please do not hesitate to contact us in the event that further information is required or considered beneficial.

7242 Object

Document Element: EMP3 - PROTECTION OF EXISTING EMPLOYMENT SITES AND PREMISES
Respondent: Woodwise Ltd (Mr & Mrs S & K Williams) [3772]
Agent: Geraint John Planning Ltd

Summary:

Although there is no objection raised to the inclusion of the sites already identified within the policy in principle, it is considered that Crossways Estate site should be considered as both an existing employment site, which is located near to a sustainable settlement, but also has the ability to provide a larger area for employment, which would help to make the existing business more viable. As a result, it is considered that the site should be identified within the Policy EMP3.

Policy EMP3 'Protection of Existing Employment Sites and Premises' provides a policy which looks to safeguard existing employment allocations within the Vale. The policy states: "The following hierarchy of existing employment sites are safeguarded for B1, B2 and B8 employment uses, and will be protected from development which would compromise their role and function". These are split into Major Employment Sites, Secondary Employment Sites and Key Local Employment Sites. Although Para 6.290 highlights that "Other Premises in Employment Use" are also a type of employment site which has a role and function in the Vale. However, there are a range of smaller and more rural existing employment sites which are not identified or referenced within the policy. We consider that the policy does not go far enough to protect other more rural existing employment sites, such as Crossways Estate.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP)

Representations regarding the Deposit Plan Consultation – 'Crossways Estate, Cowbridge'

Please find enclosed, on behalf of and under instruction from our client, 'Woodwise Limited', representations for consideration as part of Vale of Glamorgan's RLDP Deposit Plan.

Context to these Representations

The above site has been submitted as a Candidate Site as part of the Deposit Plan consultation. The following has been submitted as part of this process:

- Candidate Site Submission (including Sustainability Appraisal and Assessment against Candidate Site Methodology);
- Site Location Plan (dwg ref. A101);
- Illustrative Site Layout plan (dwg ref. A112);
- Development Viability Model (dated March 2026) completed by HRT.

Having regard to the above information submitted, and in summary, it is considered that the site should be considered acceptable and appropriate as an employment site allocation, in light of the following conclusions drawn:

- The Sustainability Appraisal completed for the site confirms that the site has a range of positive impacts through its allocation for employment uses, and could assist in achieving the Plan's Sustainability objectives.
- In respect of assessing the site against the Candidate Site Methodology, the site is considered available for development and has a viable prospect of coming forward in the short term, for delivering further employment land in the plan period.
- The site has limited constraints, given that it is currently partially brownfield land and doesn't include any high grade agricultural land.
- The only policy destination for the site to overcome would be in relation to the SLA, which could be addressed through a Landscape and Visual Impact Assessment submitted as part of any future application.
- The site is located in the countryside but is brownfield and already a well-established existing business which has been running as an employment site for many years. It is considered that the redevelopment of this site presents an opportunity to develop the site for further uses, in order to realise the sites full potential.
- The site already benefits from existing connections to infrastructure such as water, electricity, gas and the local highway.
- The redevelopment of the site has the ability to make a positive contribution to placemaking and wellbeing.

We consider that the site 'performs' well against the defined assessment criteria and methodology, with no evident insurmountable constraints, obstacles, or failings. It has been demonstrated above that there are no insurmountable constraints to development of the site, which would represent an appropriate existing employment site allocation, with the ability to extend this further. Moreover, the site comprises previously developed land and benefits from existing permissions for its current use. As such, the site should be considered a 'reasonable' option, and should progress to the Stage 3 assessment accordingly.

Given that the site is not currently allocated in the Deposit Plan, we would raise an objection to the Plan in its current form, on the basis of the Candidate Site submission. Further details are included below.

Summary of these Deposit Representations – Employment Sites

In light of the Candidate Site Submission made by the site promotor, we would suggest that the site should form an employment allocation within the RLDP. As a result, the site promoter looks to raise an objection to the Deposit Plan.

Para 5.7 stats that the RLDP will make provision for "An allocation of 182 Ha of employment land across a range of sites to enable 67.8 Ha to be brought forward during the plan period and the delivery of up to 5,338 jobs". It is noted that there are currently a total of 8 sites highlighted as employment allocations in Policy SP14 'Employment Growth'. Policy EM1 also highlights two 'Employment Regeneration Opportunity Areas'.

Although there is no objection raised to the inclusion of the sites already identified within the policy in principle, it is considered that Crossways Estate site should be considered as both an existing employment site, which is located near to a sustainable settlement, but also has the ability to provide a larger area for employment, which would help to make the existing business more viable. As a result, it is considered that the site should be identified within the Policy EMP3.

Policy EMP3 'Protection of Existing Employment Sites and Premises' provides a policy which looks to safeguard existing employment allocations within the Vale. The policy states: "The following hierarchy of existing employment sites are safeguarded for B1, B2 and B8 employment uses, and will be protected from development which would compromise their role and function". These are split into Major Employment Sites, Secondary Employment Sites and Key Local Employment Sites. Although Para 6.290 highlights that "Other Premises in Employment Use" are also a type of employment site which has a role and function in the Vale. However, there are a range of smaller and more rural existing employment sites which are not identified or referenced within the policy. We consider that the policy does not go far enough to protect other more rural existing employment sites, such as Crossways Estate.

Policy EMP6 'New Rural Diversification and Employment Uses in the Countryside' provides policy mechanism to support rural employment and diversification in the Vale. However, we consider that the policy does not go far enough to protect and enhance existing employment sites or, provide for opportunities to extend smaller businesses. We would therefore suggest that the following wording is added into Policy EMP6 outlined below in red:

"Proposals for new rural diversification, including tourism facilities, and B1, B2 and B8 employment uses within the countryside outside of defined settlement boundaries or employment areas identified in Policy EMP3 may be appropriate where the proposal is for:

- The re-use or adaptation of existing commercial premises or an existing rural buildings in association with a rural enterprise or farm diversification scheme;
- Small scale new building employment premises that are well related to a rural settlement, or lie within or immediately adjacent to an existing farm building complex;
- Employment uses where a countryside location is essential for the operational requirements that cannot be met on an existing employment area;
- Sustainable low impact tourism and leisure proposals.
- Small-scale extensions to existing employment sites"

It is considered that the employment strategy for the RLDP should go further to support the delivery of smaller employment sites, which would have the effect of a more balanced and equitable distribution of employment sites apportioned across the entire Plan area – including further sites around Cowbridge. The Employment Land Study (2023) highlights that there is a strong demand for B1, B2 and B8 premises within the rural Vale beyond the traditional rural enterprise and diversification of existing agricultural businesses. The proposed changes to Policy EMP6 would provide further support for existing businesses to redevelop or expand, creating better opportunities on existing sites, where there are limited impacts of redevelopment and expansion. Equally, additional employment allocations should be identified to ensure that the overall need is met over the Plan period. Failure to make the necessary changes to the Plan would bring into question the deliverability of the Plan, and by association, its “soundness”.

Conclusion

These representations raise objection to the Deposit Plan – for the reasons set out above.

Given the nature of these representations our clients would be happy to discuss any aspect of the submission made and credentials of the site when your Authority comes to evaluate matters.

We look forward to hearing from you in due course. In the meantime, however, we hope and trust that all is in order with this submission. Please do not hesitate to contact us in the event that further information is required or considered beneficial.

Yours sincerely

Change suggested by respondent:

The Crossways Estate, Cowbridge site should be identified within the Policy EMP3

Document Element: EMP4 - NON-EMPLOYMENT PROPOSALS ON EXISTING EMPLOYMENT AREAS AND PREMISES

Respondent: Amstone Developments Limited [3758]

Agent: Tetra Tech Cardiff

Summary:

Policy EMP4
Clarify the definition of “non-employment proposals” so that non-B1/B2/B8 uses capable of generating employment are properly treated as “employment uses”. Remove -duplicated criteria already controlled via other policies

Modification- Supporting Text
Update the supporting text to acknowledge that employment allocations within the Enterprise Zone should support a flexible mix of economic uses reflecting the national policy position in PPW, TAN 23 and Future Wales

Full text:

These representations relate to ‘Land at Tredogan Road, Rhoose, Barry’ (the Site), owned by Amstone Developments Ltd (ADL).

Amstone Developments Limited (ADL) support the draft RLDP allocation of the Site within the ‘Major Employment Allocation – Land East of Cardiff Airport, Roose’

Requested Modifications
Policy SP14
Amend Policy SP14 and its supporting text to confirm that the Major Employment Allocation at Land East of Cardiff Airport may accommodate a broad range of employment-generating uses, consistent with the definition of economic development in PPW and TAN 23, and not restricted solely to B1, B2 or B8 uses

Policy EMP4
Clarify the definition of “non-employment proposals” so that non-B1/B2/B8 uses capable of generating employment are properly treated as “employment uses”. Remove -duplicated criteria already controlled via other policies

Modification- Supporting Text
Update the supporting text to acknowledge that employment allocations within the Enterprise Zone should support a flexible mix of economic uses reflecting the national policy position in PPW, TAN 23 and Future Wales

The evidence and policy context clearly support the continued allocation of the Site for employment, enterprise and commercial use. This is consistent with the Council’s own SPG and emerging LDP policies which aim to de-risk the under-delivery of employment land and job creation and enhance the Site’s potential to attract inward investment and high-value economic activity.

Amstone Developments Limited fully support that the RLDP allocates the Site for general employment use (B1, B2, and B8) with flexibility to accommodate complementary economic development, consistent with national guidance, the Use Classes Order (Wales), and market evidence

Change suggested by respondent:

5192 Comment

Document Element: EMP4 - NON-EMPLOYMENT PROPOSALS ON EXISTING EMPLOYMENT AREAS AND PREMISES
Respondent: Welsh Government (Economy, Treasury and Constitution Group - Property Infrastructure) [1213]
Agent: CarneySweeney

Summary:

We write to comment and seek amendments to Policy EMP4 'NON-EMPLOYMENT PROPOSALS ON EXISTING EMPLOYMENT AREAS AND PREMISES'

We note that while the the title of Policy EMP4 refers to 'existing employment areas and premises', it is clear form the text of the policy that it also applies to 'Major Employment Sites'. The Proposals Map identifies 'existing employment' and 'major employment' sites separately and with different boundaries, such that 'major employment' sites includes land which is not an existing employment location (eg land at Bro Tathan North as well as land at Cardiff Airport).

In order to avoid any confusion regarding the application of Policy EMP3, we believe it should be re-named 'NON-EMPLOYMENT PROPOSALS ON ALLOCATED AND EXISTING EMPLOYMENT AREAS AND PREMISES'.

Furthermore, the opening paragraph of text to Policy EMP4 cross refers to Policy EMP2: 'Development proposals on existing employment sites and premises identified in Policy EMP2 will be subject to the following restrictions:...' Policy EMP2 relates to MOD St Athan. We believe this cross reference should be to Policy EMP3.

6239 Object

Document Element: EMP4 - NON-EMPLOYMENT PROPOSALS ON EXISTING EMPLOYMENT AREAS AND PREMISES
Respondent: Associated British Ports (Mr Will Ryan, Land & Planning Manager) [2477]

Summary:

ABP objects to this policy. It is overly restrictive in respect of the Use Classes set out (B1, B2 and B8).

With regards to Port land, and other employment land, many of the proposed and promoted uses within the RLDP are associated with a suis generis use, including renewable energy and sustainable development opportunities. These do not necessarily fit neatly into the stated use classes, and the text of this policy, as drafted, suggests that those uses would not be compliant. This is an unintended consequence of an effort to limit other types of uses within employment land (eg. retail).

Document Element: EMP4 - NON-EMPLOYMENT PROPOSALS ON EXISTING EMPLOYMENT AREAS AND PREMISES
Respondent: Renishaw Plc [1277]
Agent: Turley

Summary:

General support is given to Policy EMP4 which seeks to restrict the development of non-B1, B2 and B8 uses to ancillary services and facilities associated with an existing or proposed employment use.

However, the Policy should provide greater flexibility to allow for appropriate employment generating proposals which complement the existing uses and which may not clearly fall within the B1, B2 and B8 use class. This flexibility is essential in order to allow the sites to respond to changing market demand and emerging markets.

Full text:

We write on behalf of our client, Renishaw Plc, in response to the current consultation on the Vale of Glamorgan Replacement Local Development Plan (RLDP). We write to provide our comments in relation to the Vale of Glamorgan Deposit RLDP.

This letter is accompanied by the following:
• Completed Public Consultation Representation Form.

Renishaw's comments on the Deposit RLDP policies and allocations are outlined below.

BACKGROUND

Established in 1973, Renishaw is a global leader in measurement, motion control, spectroscopy, and precision machining. The company is renowned for pioneering innovative solutions designed to enhance operational performance – optimising manufacturing efficiencies, improving product quality, advancing research capabilities, and increasing the effectiveness of medical procedures.

As part of a major redevelopment of its Miskin site in South Wales, Renishaw is investing over £50 million to expand its manufacturing capacity and reinforce its commitment to achieving net zero carbon emissions. This investment includes the construction of two new low-carbon production halls, which are designed to meet the growing domestic and international demand for its products, while also supporting research and development initiatives.

Policy SP14 – Employment Growth

Renishaw Plc supports the retention of Land to the South of Junction 34 of the M4, Hensol (36.23ha net) as a Major Employment Allocation under Policy SP14.4. The allocation of the site is crucial to ensure that the Council can meet its projected employment land needs and deliver the anticipated level of sustainable employment growth over the Plan period.

The site's continued allocation as a major employment site reflects it's importance as a key opportunity for investment and employment opportunities within the Vale of Glamorgan. The site is of strategic and regional importance as an employment site in a market where high quality, well connected industrial sites are rare.

Outline planning permission was originally granted for the proposed site (Ref no. 2014/00228/EAO) on 22 June 2016.

This permission has subsequently been renewed via a S73 application (ref: 2021/00899/EAO) which extends the period of time for the submission of reserved matters for a further 5 years from the date of the new permission (to 22 December 2030). The permission provides for the following development:

"Outline planning permission with all matters reserved except for access, for development comprising class B1, B2 and B8 uses; a hotel/residential training centre (class C1/C2); and ancillary uses within class A1, A2, A3; associated engineering and ground modelling works and infrastructure, car parking, drainage and access for all uses; provision of infrastructure (including energy centre(s)); landscaping and all ancillary enabling works) at Renishaw Plc, Miskin Business Park, Miskin."

A summary of the key elements of the outline permission are:
• Up to 151,060.99sqm of industrial floor space comprising Class B1, B2, B8 uses;
• Up to 9,290.30sqm of Hotel/Residential Training Centre (Class C1/C2);
• Up to 1,300sqm of ancillary Class A1, A2 and A3 uses;
• Up to 3,200 car parking spaces;
• 30.51ha of Green Infrastructure, comprising landscaping, water balancing areas;
• Access and servicing arrangements; and,
• Ancillary services, including power/utilities (with potential to incorporate energy centre (s)).

Reserved matters permission (reference number: 2019/01421/RES) was approved on 20 May 2021 to bring forward the first phase of the development. This phase of the development is now complete and provides 400,000 sqft of floorspace which is occupied by Renishaw as an extension to its existing operations at Miskin. In addition to employment opportunities created over the construction period, the development has created additional operational jobs for Renishaw. Significantly, many of these jobs provide high quality employment opportunities in the skilled and specialist sector, helping to create skills and provide local employment opportunities.

Renishaw will shortly bring its wider land holdings to the market with the intention of attracting major employment generating uses - further enhancing the economy of the region. The remaining phases of the site (Areas B, C and D) provide further opportunity for inward investment over the Plan period and the creation of over 1,000,000 square feet of employment space.

It is anticipated that Areas B, C and D could have the potential to create over 2,000 operational jobs. During the construction phase, the development also has the potential to create over 1,000 jobs further adding to the employment opportunities created through the development.

The recent renewal of the outline planning permission ensures that the development of the site remains deliverable over the Plan period.

EMP3 - Protection of Existing Employment Sites and Premises

Renishaw Plc support the continued allocation of the current Renishaw premises as an existing Major Employment Site under Polic EMP3.6 – Renishaw, Junction 34, M4.

The allocation of the Renishaw site recognises the importance of the established employment site for the local economy. Renishaw continue to represent an important local employer, who provide high quality, skilled and specialist employment opportunities for the local population.

The continued safeguarding of the site for B1, B2 and B8 uses is therefore supported.

EMP4 – Non-Employment Proposals on Existing Employment Areas and Premises

General support is given to Policy EMP4 which seeks to restrict the development of non-B1, B2 and B8 uses to ancillary services and facilities associated with an existing or proposed employment use.

However, the Policy should provide greater flexibility to allow for appropriate employment generating proposals which complement the existing uses and which may not clearly fall within the B1, B2 and B8 use class. This flexibility is essential in order to allow the sites to respond to changing market demand and emerging markets.

Summary

We trust that the above representations assist and are taken into account as the preparation of the Plan progresses.

We would be grateful if we could be kept informed of future stages of the emerging RLDP.

If you require any further information, please do not hesitate to contact me.

Yours sincerely

6154 Object

Document Element: EMP6 - NEW RURAL DIVERSIFICATION AND EMPLOYMENT USES IN THE COUNTRYSIDE

Respondent: Ms Lucie Taylor [2506]

Summary:

SF&G welcome the Council's recognition of supporting a vibrant countryside, including local employment, farming, and rural businesses, as outlined in policy EMP3. We suggest emphasising the importance of Wales' self-sufficiency through land-based food production in Wales. Policies SP5 and EMP6 should promote farm diversification aligned with the Sustainable Farming Scheme, encouraging smaller-scale farms that produce high food and employment yields. Given the decline in UK sheep farming, horticulture should be acknowledged as a significant rural employer, with diversification and innovative farming methods central to this policy.

Full text:

We are pleased to see the Council recognises the importance of supporting a vibrant living countryside in policy EMP3 - development in the countryside , providing for local employment, supporting farming and rural businesses, enabling the provision of affordable housing to meet local needs and accommodating uses that cannot be located within a defined settlement. We would like to see more reference to the need to feed ourselves from the land we have here in Wales. Policy SP5 subsequent text and Policy EMP6 should encourage farm diversification proposals that are in line with the Sustainable Farming Scheme (there will be lots of diversification away from the traditional ways of farming and the SFS encourages this) and supports farmers to farm in a way that allows nature and biodiversity to thrive. Smaller scale farming units will become more common place and the scepticism around these businesses needs to diminish because they produce a lot more food and employment per sq. metre than what, might be considered traditional/ successful, forms of farming in Wales. This article demonstrates how sheep farming is declining in the UK.
https://www.bbc.co.uk/news/articles/cgrzd72wp5zo
Therefore, the potential of horticulture to be a big employer of people in the countryside should be acknowledged under Policy EMP6. It is not just about 'B' uses in the countryside. Farm diversification and less traditional methods of farming will employ many people over the plan period and these uses should form a centre piece of this policy.

Change suggested by respondent:

Reference to horticulture and farm diversification employment is needed.

Sound: No

Attachments: None

6724 Comment

Document Element: EMP6 - NEW RURAL DIVERSIFICATION AND EMPLOYMENT USES IN THE COUNTRYSIDE

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models. Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning
guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are
involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the
deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community
amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient communities. The vision and strategic objectives currently contain no mention of 'food' or 'farming'.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: "The Local Development Plan will support resilient and sustainable local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part of sustainable growth."

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

"Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other opportunities for local food production as part of multifunctional green infrastructure."

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example: Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of healthcare infrastructure requirements.' The requirement for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference "enhancements to leisure, sport and recreation spaces". Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for 'local affordable food' outlined in SP5.

Consider adding: "The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach."

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: "Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas." This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: "Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations."

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare
services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Change suggested by respondent:

Include the following wording: “Rural diversification
proposals that support agro-ecological farming, sustainable local food production, community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

Document Element: EMP6 - NEW RURAL DIVERSIFICATION AND EMPLOYMENT USES IN THE COUNTRYSIDE
Respondent: Woodwise Ltd (Mr & Mrs S & K Williams) [3772]
Agent: Geraint John Planning Ltd

Summary:

Policy EMP6 'New Rural Diversification and Employment Uses in the Countryside' provides policy mechanism to support rural employment and diversification in the Vale. However, we consider that the policy does not go far enough to protect and enhance existing employment sites or, provide for opportunities to extend smaller businesses. We would therefore suggest that the following additional wording is added into Policy EMP6 outlined below:

It is considered that the employment strategy for the RLDP should go further to support the delivery of smaller employment sites, which would have the effect of a more balanced and equitable distribution of employment sites apportioned across the entire Plan area – including further sites around Cowbridge. The Employment Land Study (2023) highlights that there is a strong demand for B1, B2 and B8 premises within the rural Vale beyond the traditional rural enterprise and diversification of existing agricultural businesses. The proposed changes to Policy EMP6 would provide further support for existing businesses to redevelop or expand, creating better opportunities on existing sites, where there are limited impacts of redevelopment and expansion. Equally, additional employment allocations should be identified to ensure that the overall need is met over the Plan period. Failure to make the necessary changes to the Plan would bring into question the deliverability of the Plan, and by association, its “soundness”.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP)

Representations regarding the Deposit Plan Consultation – 'Crossways Estate, Cowbridge'

Please find enclosed, on behalf of and under instruction from our client, 'Woodwise Limited', representations for consideration as part of Vale of Glamorgan's RLDP Deposit Plan.

Context to these Representations

The above site has been submitted as a Candidate Site as part of the Deposit Plan consultation. The following has been submitted as part of this process:

- Candidate Site Submission (including Sustainability Appraisal and Assessment against Candidate Site Methodology);
- Site Location Plan (dwg ref. A101);
- Illustrative Site Layout plan (dwg ref. A112);
- Development Viability Model (dated March 2026) completed by HRT.

Having regard to the above information submitted, and in summary, it is considered that the site should be considered acceptable and appropriate as an employment site allocation, in light of the following conclusions drawn:

- The Sustainability Appraisal completed for the site confirms that the site has a range of positive impacts through its allocation for employment uses, and could assist in achieving the Plan's Sustainability objectives.
- In respect of assessing the site against the Candidate Site Methodology, the site is considered available for development and has a viable prospect of coming forward in the short term, for delivering further employment land in the plan period.
- The site has limited constraints, given that it is currently partially brownfield land and doesn't include any high grade agricultural land.
- The only policy destination for the site to overcome would be in relation to the SLA, which could be addressed through a Landscape and Visual Impact Assessment submitted as part of any future application.
- The site is located in the countryside but is brownfield and already a well-established existing business which has been running as an employment site for many years. It is considered that the redevelopment of this site presents an opportunity to develop the site for further uses, in order to realise the sites full potential.
- The site already benefits from existing connections to infrastructure such as water, electricity, gas and the local highway.
- The redevelopment of the site has the ability to make a positive contribution to placemaking and wellbeing.

We consider that the site 'performs' well against the defined assessment criteria and methodology, with no evident insurmountable constraints, obstacles, or failings. It has been demonstrated above that there are no insurmountable constraints to development of the site, which would represent an appropriate existing employment site allocation, with the ability to extend this further. Moreover, the site comprises previously developed land and benefits from existing permissions for its current use. As such, the site should be considered a 'reasonable' option, and should progress to the Stage 3 assessment accordingly.

Given that the site is not currently allocated in the Deposit Plan, we would raise an objection to the Plan in its current form, on the basis of the Candidate Site submission. Further details are included below.

Summary of these Deposit Representations – Employment Sites

In light of the Candidate Site Submission made by the site promotor, we would suggest that the site should form an employment allocation within the RLDP. As a result, the site promoter looks to raise an objection to the Deposit Plan.

Para 5.7 stats that the RLDP will make provision for "An allocation of 182 Ha of employment land across a range of sites to enable 67.8 Ha to be brought forward during the plan period and the delivery of up to 5,338 jobs". It is noted that there are currently a total of 8 sites highlighted as employment allocations in Policy SP14 'Employment Growth'. Policy EM1 also highlights two 'Employment Regeneration Opportunity Areas'.

Although there is no objection raised to the inclusion of the sites already identified within the policy in principle, it is considered that Crossways Estate site should be considered as both an existing employment site, which is located near to a sustainable settlement, but also has the ability to provide a larger area for employment, which would help to make the existing business more viable. As a result, it is considered that the site should be identified within the Policy EMP3.

Policy EMP3 'Protection of Existing Employment Sites and Premises' provides a policy which looks to safeguard existing employment allocations within the Vale. The policy states: "The following hierarchy of existing employment sites are safeguarded for B1, B2 and B8 employment uses, and will be protected from development which would compromise their role and function". These are split into Major Employment Sites, Secondary Employment Sites and Key Local Employment Sites. Although Para 6.290 highlights that "Other Premises in Employment Use" are also a type of employment site which has a role and function in the Vale. However, there are a range of smaller and more rural existing employment sites which are not identified or referenced within the policy. We consider that the policy does not go far

enough to protect other more rural existing employment sites, such as Crossways Estate.

Policy EMP6 'New Rural Diversification and Employment Uses in the Countryside' provides policy mechanism to support rural employment and diversification in the Vale. However, we consider that the policy does not go far enough to protect and enhance existing employment sites or, provide for opportunities to extend smaller businesses. We would therefore suggest that the following wording is added into Policy EMP6 outlined below in red:

"Proposals for new rural diversification, including tourism facilities, and B1, B2 and B8 employment uses within the countryside outside of defined settlement boundaries or employment areas identified in Policy EMP3 may be appropriate where the proposal is for:

- The re-use or adaptation of existing commercial premises or an existing rural buildings in association with a rural enterprise or farm diversification scheme;
- Small scale new building employment premises that are well related to a rural settlement, or lie within or immediately adjacent to an existing farm building complex;
- Employment uses where a countryside location is essential for the operational requirements that cannot be met on an existing employment area;
- Sustainable low impact tourism and leisure proposals.
- Small-scale extensions to existing employment sites"

It is considered that the employment strategy for the RLDP should go further to support the delivery of smaller employment sites, which would have the effect of a more balanced and equitable distribution of employment sites apportioned across the entire Plan area – including further sites around Cowbridge. The Employment Land Study (2023) highlights that there is a strong demand for B1, B2 and B8 premises within the rural Vale beyond the traditional rural enterprise and diversification of existing agricultural businesses. The proposed changes to Policy EMP6 would provide further support for existing businesses to redevelop or expand, creating better opportunities on existing sites, where there are limited impacts of redevelopment and expansion. Equally, additional employment allocations should be identified to ensure that the overall need is met over the Plan period. Failure to make the necessary changes to the Plan would bring into question the deliverability of the Plan, and by association, its “soundness”.

Conclusion

These representations raise objection to the Deposit Plan – for the reasons set out above.

Given the nature of these representations our clients would be happy to discuss any aspect of the submission made and credentials of the site when your Authority comes to evaluate matters.

We look forward to hearing from you in due course. In the meantime, however, we hope and trust that all is in order with this submission. Please do not hesitate to contact us in the event that further information is required or considered beneficial.

Yours sincerely

Change suggested by respondent:

Policy EMP6 outlined should be amended to include the following additional text in brackets:

"Proposals for new rural diversification, including tourism facilities, and B1, B2 and B8 employment uses within the countryside outside of defined settlement boundaries or employment areas identified in Policy EMP3 may be appropriate where the proposal is for:

- The re-use or adaptation of [existing commercial premises or] an existing rural building[s] in association with a rural enterprise or farm diversification scheme;
- Small scale new building employment premises that are well related to a rural settlement, or lie within or immediately adjacent to an existing farm building complex;
- Employment uses where a countryside location is essential for the operational requirements that cannot be met on an existing employment area;
- Sustainable low impact tourism and leisure proposals.
- [Small-scale extensions to existing employment sites]"

Respondent: South Wales Police – Secured by Design Officer (Ms Julie Odgers, Designing Out Crime Officer) [694]

Summary:

Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.

Full text:

We would like to thank you for consulting with South Wales Police in respect of the Replacement Local Development Plan 2021 to 2036.
We welcome working with The Vale of Glamorgan Council in respect of The Vale of Glamorgan Replacement Local Development Plan 2021 – 2036: Deposit Plan to ensure the future needs and community safety is addressed within the plan and supporting documents.
We would respectfully ask that our comments are taken into consideration, and included in the plan, and that we can work in partnership to develop the specific planning guidance documents mentioned below.
The replacement development plan outlines its Vision and objectives of the RLDP as follows:
'By 2036':
The Vale of Glamorgan is a healthy and inclusive place for everyone, with equitable access to services and facilities both physically and digitally. Residents are proud of where they live and have access to the homes they need. Housing growth has delivered homes which caters for all, including affordable homes and older person's housing; contributing towards diverse and cohesive communities where residents can maintain their independence.
Through placemaking, places and spaces are safe, accessible and socially inclusive. Development respects local character and sense of place is valued by residents and contributes positively towards health and wellbeing. Positive improvements have been achieved in narrowing the disparities in Integrated Sustainability Appraisal (ISA) for the Replacement Local Development Plan Prepared for: Vale of Glamorgan Council AECOM 5 the quality of life and health outcomes for residents living in the most deprived areas through improved access to employment, education, training, services, and investment in the built environment.
The Vale enjoys a network of connected, multi-functional and accessible green and blue spaces, providing a range of enhanced leisure and health benefits within and between towns, villages, and the countryside. More residents participate in active and healthy lifestyles. Investment in green infrastructure has produced a net biodiversity benefit with the creation of new habitats, enhanced connectivity and Planting providing carbon storage and contributing towards Climate Change resilience and adaptation.
Objectives:
1. Mitigating and adapting to climate change
2. Improving mental and physical health and well-being
3. Homes for all
4. Placemaking
5. Protecting and enhancing the natural environment
Policies that support the role of a Designing Out Crime Officer and Secured by Design are as follows:
Secured by Design (SBD) is the official police security initiative that works to improve the security of buildings and their immediate surroundings to provide safe places to live, work, shop, and visit.
Planning Policy Wales (PPW) states that crime and prevention and fear of crime are social considerations to which regard must be given by local planning authorities in the preparation of development plans. They should be reflected in any supplementary planning guidance and may be material considerations in the determination of planning applications. The aim should be to produce safe environments through good design.
Technical Advice Note (TAN) 12: Design, provides advice for all those involved in the design of development on how good sustainable design can be facilitated through the planning system. TAN 12 reminds practitioners that local authorities (including National Park Authorities) are required to have due regard to crime and disorder prevention in the exercise of their functions under Section 17 of the Crime and Disorder Act 1998.
TAN 12 recognises the Secured by Design initiative as a standard that has been shown to reduce crime.

TAN 12, paragraph states that 'Local authorities are advised to consult Designing out Crime Officers on pre-applications and planning applications for those developments where there is potential to eliminate or reduce crime through the adoption of suitable measures at the design stage. This is especially important for major developments such as new housing estates, industrial estates, shopping centres, leisure complexes, schools, and car parks. It is important to consult Designing out Crime Officers at as early stage as possible – by the time a formal application is submitted, the opportunity to take account of advice may already be limited.'
Section 17 of the Crime and Disorder Act 1988 requires local authorities to consider crime and disorder implications in all their authorities and functions and do all that they reasonably can do all they can do to reduce these problems.
Violence against women and Girls:
Crime has a major impact on people's lives in the Vale of Glamorgan and impacts on the health of the public especially those who have been victims of crime and anti-social behaviour and vulnerable groups such as Women and Girls.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
In Wales, planning is devolved. Planning Policy Wales and Future Wales: The National Plan 2040 set out the Welsh Government's national planning policy, where new developments are proposed. Planning Policy Wales explains: "A clear rationale behind the design decisions made […] should be sought throughout the development process and expressed, when appropriate, in a design and access statement."
76 The guidance for design and access statements for Wales categorises five key objectives of good design (Access, Character, Community Safety, Environmental Sustainability and Movement) and explains how meeting these objectives should ensure that both design quality and inclusive access are given sufficient consideration in the planning process.
77 Design and access statements have been required in Wales for many planning applications since 2009 and have been part of legislative requirements since the Planning (Wales) Act 2015.
The Angiolini Inquiry Part 2 First Report: Prevention of sexually motivated crimes against women in public Ordered by the House of Commons to be printed on 2 December
In Wales, local authorities are under legal obligation to consider and address crime while in the process of planning: "Local authorities [in Wales] are under a legal obligation to consider the need to prevent and reduce crime and disorder in all decisions that they take. Crime prevention and fear of crime are social considerations to which regard should be given in the preparation of development plans and taking planning decisions. The aim should be to produce safe environments that do not compromise on design quality in accordance with the cohesive communities' wellbeing goal."
The Inquiry considers that there would be an opportunity to place a greater focus on preventing sexually motivated crimes against women in public spaces if this priority were reflected in planning guidance and principles.
For instance, neither the English nor the Welsh documentation contains specific reference to considering how design can help prevent violence against women in public spaces. The Inquiry saw evidence of this being discussed: "Under public spaces in the National Model Design Guide it mentioned well located, attractive public spaces. But there is no mention of violence against women and girls. There is minimal mention of crime reduction, just that amenity spaces should make people feel safe, help overcome crime, reduce the fear of crime."
The Terrorism (protection of premises)Act 2025 (Martyn's Law)
This Act became legislation on the 3rd of April 2025. This legislation is to improve protective security and preparedness across the United Kingdom for certain premises.
South Wales Police and Counter Terrorism Policing Wales would ask that where this legislation applies that early consultation takes place with the Designing out crime officers and Counter Terrorism Policing Wales.
If a premises falls within the scope of the The Terrorism (Protection of Premises) Act 2025, the development plans should be referred to South Wales Police Designing Out Crime Officers who will in turn will take advice from Counter Terrorism Policing Wales. This consultation should take place at the pre planning stage.
Standard Tier- will drive good preparedness outcomes. Locations with a maximum occupancy of greater than two hundred people will be required to have appropriate public protection procedures in place to ensure effective protective security and preparedness if an act of terrorism were to occur in their premises or immediate vicinity.
Enhanced Tier- focused on high-capacity locations in recognition of the potential consequences of a successful attack. Locations with an occupancy of eight hundred plus at any time will be required to have in place as reasonably practicable, appropriate public protection procedures and measures that can be expected to reduce the vulnerability of the premises, and the risk of physical harm being caused to individuals if an attack was to occur there or nearby.
Premises will fall within scope of The Terrorism (protection of premises)Act 2025 where "qualifying activities" take place. This will include activities such as entertainment, leisure, retail, food and drink, museums and galleries, sports grounds, public areas of local and central Government buildings (e.g. town halls), visitor attractions, temporary events, Places of Worship, health, and education.
The legislation applies to eligible locations which are either: a building (including collections of buildings used for the same purposes, e.g. a campus); or location/event (including a temporary event) that has a defined boundary, allowing capacity to be known. Eligible locations whose maximum occupancy meets the above specified thresholds will be then drawn into the relevant tier.
Public Spaces:
It should be borne in mind that the development of public spaces which are either owned, managed or they have

influence over should also include protected security and preparedness at the concept stage of the planning process.
South Wales Police recommendations:
Our recommendations are set out below in relation the objectives and specifically to preventing crime and disorder and enhancing community safety:
1. Mitigating and adapting to climate change Secured by Design Residential Guide 2025 states:
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
Secured by Design states 'The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour.
Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.'
Research documentation can be found on the SBD website at: https://www.securedbydesign.come
Recommendations:
• SP 6 - Ensure early consultation with the Designing Out Crime Officer and to achieve Secured by Design on all new developments and refurbishments.
• CC5 - Heat Networks – Advice should be sought from the Designing Out Crime officer to ensure the safe placement of heat pump devices.
• CC5 – Consultation should take place with the Designing Out Crime Officer in respect of wind or solar farms, so Secured by Design can be achieved.
• DNP7 – DARK SKIES – Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage to discuss and be able to make recommendations in relation to lighting.
Reason: To reduce the carbon footprint of development.
2. Improving mental and physical health and well-being
• PGD1 – Creating well designed and inclusive places states:
Development must demonstrate that the following:
Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance
Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards.
Secured by Design Residential Guide states:
Poorly designed and specified public realm and communal areas, such as playgrounds, roof gardens, communal gardens, community dining rooms, toddler play areas, seating facilities have the potential to generate crime, the fear of crime and anti-social behaviour.
The design and layout of play spaces will vary depending on the age requirements. The provision of inclusively designed public amenity/play spaces as an integral part of residential developments, should make a valuable contribution towards the quality of the development and the character of the neighbourhood.
Recommendations:
• PGD 1 - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings.
• SP 5 - South Wales Police would recommend that all new public space is designed to Secured by Design standards (Residential) Guide. Use the 'Safer Parks' document (research by 'Make Space for Girls') to design safe communal spaces. Designing Out Crime officers should be consulted at pre planning stage to give their recommendations for communal space.
Reason: To enhance community safety and prevent antisocial behaviour.
3. Homes for all
Policy 7- Delivering Affordable Homes
The Vale of Glamorgan Housing Strategy 2021-2026
The strategy includes a long-term vision for housing in the Vale where "All residents in the Vale of Glamorgan have access to good quality, suitable housing and can live happily and independently in vibrant, sustainable communities."
• Aim 1: More Homes, More Choice.
• Aim 2: Improved homes and communities.
• Aim 3: Better housing advice and support.
• Aim 4: Equality of access to housing and housing services.
'The Vale has a significant need for affordable homes, with affordable housing need remaining one of the highest in Wales, even though the Vale is one of highest performing authorities in Wales in terms of affordable housing delivery. Using the principal projections, the Council's 2023 Local Housing Market Assessment (LHMA)
identifies a need for 1,075 affordable homes per annum over the 5-year period 2023-2028 and 154 affordable homes per annum for the following 10 years.'

Ensure that all new residential developments provide high quality housing that includes the right mix, tenure and type of homes that respond to the changing needs of the Vale's population. This includes homes that are affordable, accessible and adaptable for people of all ages and that address the identified accommodation needs of all the Vale's communities through all stages of life.
The Vale of Glamorgan Older Persons Housing Strategy
2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
All Welsh Government grant funded housing refurbishments must comply with the Development Quality Requirement (DQR) and achieve Secured by Design Silver award.
South Wales Police would ask that all new developments are designed and built to Secured by Design standards this includes roads, paths, lighting, defensible space and house types/ standards. We would ask that at the pre planning advice is sought from the Designing Out Crime Officer to advise on crime prevention through environmental design.
Violence Against Women and Girls:
The harm caused to victims and society by violence against women and girls (VAWG) in all its forms, including but not limited to, harassment, stalking, rape, sexual assault, murder, honour-based abuse and coercive control is incalculable. While men and boys also suffer from many of these forms of abuse, they disproportionately affect women.
In spring 2023, the Home Secretary announced Violence Against Women and Girls as a national threat and included it within the 9 Strategic Policing Requirement (SPR) alongside terrorism, serious and organised crime, and child sexual abuse.
Secured by Design can assist with ensuring that the built environment in all its forms is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise, for all. The importance of this is outlined within the National Police Chiefs' Council's (NPCC) 'Policing Violence Against Women and Girls – The National Framework for Delivery: 2024 – 2027' under the 'Prevent' element of the strategy; outlining the need for building safer spaces and places. Further information is available at:
https://www.npcc.police.uk/SysSiteAssets/media/downloads/our-work/vawg/vawg-framework-fordelivery.pdf
South Wales Police recommendations:
• SP 6 - All Welsh Government grant funded homes MUST meet Secured by Design Gold or in the case of a refurbishment Silver. Consultation with the Designing Out crime Officer should take place at the pre planning stage when an application for Secured by Design should also be made.
• SP6 - HOUSING REQUIREMENT - Where a change of use/ mixed use retail, community leisure and active travel routes are planned Secured by Design Residential and Commercial guides should be applied. Early consultation with Designing out crime officers particularly in the Town Centres is recommended.
• SP6 - HOUSING REQUIREMENT - Designing Out Crime Officers should be consulted at the concept stage of a development, where there are 10 or more housing units and in the case of commercial space 1000 square metres.
• SP6/ HG 7 - HOUSING REQUIREMENT - South Wales Police Designing Out Crime Officers to work in partnership with the Vale of Glamorgan Council Planning Department to compile a specific planning guidance in relation to Houses of multiple occupancy.
• SP6 - HOUSING REQUIREMENT- South Wales Police would ask that all flats/ apartments' conversions meet WDQR (Welsh Design Quality Standards) and achieve at least a Secured by Design silver award.
• SP6 - Housing Requirement - In the case of the change of use of residential land or properties, South Wales Police would ask that any change of use application is sent to South Wales Police Designing out crime officers.
• SP 6 - South Wales Police are involved in discussion with the Vale of Glamorgan Planning Department and the compilation of Specific planning guidance to cover co-living and similar shared facility developments.
• SP6 - HOUSING REQUIREMENT -Where co- living developments are proposed to deliver a balanced housing mix. South Wales Police would ask that the pre planning discussions take place with the Designing Out Crime officer and that the development is built to Secured by Design standards as set out in the most current Secured by Design Residential Guide.
• SP3 – DEVELOPMENT IN THE COUNTRYSIDE (Policy GT1/ SP9 – Gypsy and Traveller Site Provision). The site is reasonably accessible to essential services and facilities such as healthcare, education, employment, and public transport. Safe and appropriate vehicular access can be provided from the highway network, and the site layout affords adequate provision for parking, turning, servicing and emergency vehicle. South Wales Police would ask that they consulted to provide Secured by Design advice at the pre planning stage of any such development.
• HG6 – PROVISION OF SPECIALIST ACCOMMODATION
The accommodation is appropriately designed to meet the specific needs of the intended residents, including older people, people with disabilities, those with mental health needs, and other vulnerable groups. The development is located in an accessible and sustainable location, with good access to public transport, community facilities, health services, and local amenities –
-All specialist housing is built to Secured by Design and South Wales Police are involved at the pre planning stage of specialist developments.
• The Vale of Glamorgan Older Persons Housing Strategy:
'To secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
HG 6 - All older person's housing to be built to Secured by Design standards and pre application consultation with Designing Out Crime Officers.
• HG7 - HOUSES IN MULTIPLE OCCUPATION (HMO's)

South Wales Police would ask that they work in partnership with The Vale of Glamorgan Planning Department, to develop a specific planning Guidance in relation to Houses of Multiple Occupancy.
• SP3 - Development in the Countryside Affordable Housing (Policy HG5) – Consultation takes place. Where, developments are planned outside the specific main areas South Wales Police would ask that they are consulted about the proposed infrastructure and design of such developments. - Early consultation is recommended with Designing Out Crime officers and South Wales Police Traffic Management.
• PGD 2 /SP 4 - 'Ensure major new development is directed to locations that are or will be by the time of initial occupation easily accessible by walking, cycling, and public transport.'- Early consultation with South Wales Police Designing Out Crime Officers and South Wales Police Road Traffic Management Department where roads and pathways are planned to be built.
• SP5 – Creating Healthy and Inclusive Places and spaces: Ensuring development proposals are designed to facilitate accessible healthy environments to address relevant determinants of health positively, particularly in response to local health needs; • Ensuring that all places and developments are as inclusive as possible, capable of adapting to a broad range of changing needs and delivering a high quality of life. – Designing Out Crime Officers are consulted at pre planning to ensure public space is designed to ensure the space is safe and inclusive for all and especially vulnerable groups. (Safer Parks Document, Angelini Enquiry).
• SP 4 - Supporting the provision of new and enhanced community and healthcare facilities: Where Health care facilities are proposed South Wales Police would ask that Secured by Design Commercial Guide /Hospitals Guide are followed and that the Designing Out Crime officer is consulted at the pre planning stage.
• SP19 – Waste management: Secured by Design guides give guidance in respect of waste management and storage. South Wales Police would ask that pre Planning advice is sought in respect of new developments and waste management.
Reason: To enhance community safety especially vulnerable groups.
4. Placemaking and Good Design
Future Wales - The National Plan 2040 (Welsh Government, February 2021)
Policy 2 - Shaping Urban Growth and Regeneration - Strategic Placemaking
The Placemaking Charter and Placemaking Plans:
Signatories to the Charter agree to promote the following principles in the planning, design and management of new and existing places:
• People and community.
• Location.
• Movement.
• Mix of uses.
• Public Realm
• Identity.
SP4 – PLACEMAKING
Development will be required to follow Placemaking principles by:
1 Ensuring high quality sustainable design that reflects local distinctiveness, character, and cultural identity.
2 Prioritising the determinants of health and well-being during the design process.
3 Creating a diverse mix of uses and multi-functional spaces.
4 Contributing to a vibrant, safe and inclusive public realm that encourages Active Travel, supports public transport use and reduces car dependency.
5 Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits.
6 Providing a range of housing types and tenure.
7 Locating development appropriately where homes, local services and facilities are accessible and well connected and integrated with existing communities.
8 Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses.
9 Protecting or enhancing the Historic Environment and its setting. Placemaking Statements will be required for all major developments setting out how the proposal accords with Placemaking Principles. In the towns of Barry, Cowbridge, Llantwit Major and Penarth Placemaking Statements should also have regard to the adopted Placemaking Plans for the area.
Designing Out Crime officers' recommendations:
• SP 4 / PGD 1/ CC 4 - Research shows that Secured by Design developments are sustainable and reduce the carbon footprint. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage It also has a significant impact on anti-social behaviour. South Wales Police ask that all new developments are built to Secured by Design standards and that they are work with The Vale of Glamorgan planning Department at the pre planning stage.
• SP 4 / PGD 1 -When designing developments road, paths and green space, South Wales Police would ask that the developments are built to Secured by Design standards. We would ask that Designing Out Crime Officers and South Wales Police Traffic Management Department are involved in the pre planning stage.
• PGD 2 /SP 4 - It is important when designing roads and footpaths to maximise the benefits of passive surveillance, and furthermore, when addressing safety and security of street layouts, public realm, and footpaths, that Secured by Design guidance is followed, this includes landscape design, lighting, layout of buildings, etc. to ensure that all roads and footpaths (including public rights of way) are safe, secure, and accessible for all, in support of the Violence Against Women and Girls (VAWG) agenda. Where a mix development e.g. housing and retail/other use (with ten or more units) applications should be referred the designing out crime at the pre planning stage.

• SP4/ PGD1 - Contributing to a vibrant, safe and inclusive public realm - Where active travel routes are being planned, South Wales Police Traffic Management Team should be consulted throughout the planning process.
• PGD1- Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance. Secured by Design considers natural surveillance and the placing of communal spaces and provision provided. All mixed uses and multi-functional) developments should be discussed at the pre- planning stage with the Designing Out Crime Officer.
• PGD 2/ SP 4 - Developing high densities where appropriate, making the most efficient use of land and supporting mixed uses. Work in partnership with Designing out crime officers to write a 'Houses of multiple occupancy' Specific Planning Guidance.
• SP 4 - Strategically integrating Green Infrastructure networks and open space into development, delivering social, environmental and ecological benefits. Where public realm is being planned to include active travel routes, designing out crime officers and Counter Terrorism Security Advisors should be consulted if the space falls under The Terrorism (protection of premises)Act 2025 .
• SP 4 -When planning parks and community space. Public consultation should took place, and the plans referred to the designing out crime officer. (The 'Safer Parks' research by Making space for women is a document that can offer up to date advice in relation to safety/ and inclusivity).
• SP 1- When designing new schools early consultation with the South Wales Police Designing out crime officer and Traffic Management officers is prudent to ensure the safety of pupils. Achieving Secured By Design accreditation for the school will ensure that the school is planned and built with safety in mind from the outset. All schools should achieve SBD GOLD.
• HG 6 - The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age."
• The Vale of Glamorgan Older Persons Housing Strategy 2.84 The Council's Older Persons Housing Strategy 'Creating Homes and Neighbourhoods for Later Life 2022-2036' sets out a vision for the Vale of Glamorgan which seeks: 'to secure the best quality of life for older people to live as independently as possible in later life. This means delivering a range of accommodation that enables older people to live fulfilling lives and enjoy good health in attractive homes that meet their needs and allow them to retain their independence as they age." - Developments, for older residents are built to Secured by Design standards as per the Secured by Design Residential Guide.
• SP4 - Protecting or enhancing the Historic Environment and its setting: Secured by Design can be applied to historic building, contact should be made at the pre planning with the Designing Out Crime Officer.
• PGD1- Creating safe, accessible, integrated, inclusive and active environments that make efficient use of land and promote opportunities for Active Travel, and promote sustainable transport choices – Early liaison with South Wales Police and South Wales Police Traffic Management Officers so that designs can be agreed and are safe.
• SP 1 - A number of new primary and secondary schools have been developed across the Vale as part of the Sustainable Communities for Learning Programme (previously known as 21st Century Schools), with further plans as part of the programme progressing – Consultation should be sought from South Wales Police Designing Out Crime Officers and Road Traffic Management Officers at the pre planning stage planning stage with the Vale of Glamorgan Council.
• PGD 1 Incorporating sustainable design and construction solutions to maximise energy efficiency and positively contributing towards climate change resilience and adaptation. The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. - All developments are built to secured by Design to reduce the carbon footprint.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance - Facilities shall be designed to allow natural surveillance from nearby dwellings with safe and accessible routes for users to come and go. Boundaries between public and private space shall be clearly defined and open spaces must have features which prevent unauthorised vehicular access. Communal spaces as described above should not immediately abut residential buildings – Consultation with Designing Out Crime Officers and the community should take place at the pre planning stage to develop safe, inclusive spaces.
• C I3/SP13 – NEW COMMUNITY FACILITIES – Consultation should be sought from Designing out crime officers where schools/ colleges are proposed and they should meet Secured by Design Gold.
• Town Centre First SP11 - The town centre of Holton Road in Barry and the District Centre of High Street had higher than average vacant units. There is a need to ensure that future policies allow for flexibility for a greater range of uses that would be acceptable within a town centre, in line with the town centre first principle and the need to create vibrant places. South Wales Police would ask that they are consulted and are able to give advice where policies are developed for town centres. We would also ask that Designing Out Crime Officers are consulted at the pre planning stage.
• PGD1/SP 11 - Making a positive contribution to the character of the area, responding to the local context and character through building forms and scale; materials and features, mix of uses, landscape, density, and connectivity of streets and spaces to create and/or enhance locally distinctive design and character - Designing out crime officers should be consulted at pre planning stage to ensure safe spaces.
• PGD1/SP11/SP13 - Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development: South Wales Police Traffic Management

Department to be consulted by the Vale of Glamorgan Highways Department in respect of road layout/active travel routes at the pre planning stage.
• PGD1- Ensuring that public open space, private amenity space and cycle and car parking in accordance with the Council's standards – Where Public open space is being designed, the duty from The Terrorism (protection of premises)Act 2025 should be applied where a premises meets the standard as above. South Wales Police Designing out crime officer should be consulted at the pre planning stage to advice.
• SSC 1/ PG 1 - Car parks are designed and built to 'Park Mark' standards as per Secured by Design Non – Residential (Commercial)Guide.
• PGD1/CC1/ SP19 – Creating well designed and inclusive facilities - 'Providing high quality multi-functional green open spaces which can provide a choice and range of activities, including play, that also deliver enhanced biodiversity and flood mitigation and are designed to be resilient to climate change and adaptable overtime.': Consultation with the community should be sought from the outset. Parks and green spaces must be designed with safety being the key driver especially for vulnerable groups such as women and girls (Safer Parks document). Designing Out Crime Officers should be consulted at the pre planning stage to achieve this.
• PGD1 Ensuring no unacceptable impacts on public and residential amenity, particularly regarding privacy, overbearing, security, noise and disturbance.
(As above)
• PGD1: Demonstrating that traffic movements to and from the development can be accommodated, resolved, or mitigated to an acceptable degree, and where car parking is provided, this must be sensitivity integrated into the development so that it does not dominate the layout of the development – South Wales Police Designing out crime officers and Traffic Management Officers to be consulted on the layout of developments at pre planning stage.
• TR1/SP 10: Future plans for the continued regeneration of the Waterfront include the redevelopment of the Mole for apartments, a linear park and water sports centre – South Wales Police would ask that Designing Out Crime and Road Safety Management Officers are involved where redevelopment is to take place, consultation should be sought at the pre planning stage.
• RC52 – Edge of town centre retailing: South Wales Police would ask that the Designing out crime and traffic management officers are contacted in respect of new developments and the travel routes to them.
• EMP2 - MOD St Athan - New development within or adjoining MOD St Athan that is demonstrated to be required for operational defence and security purposes, and helps enhance or sustain their operational capability, will be supported in principle. – Advice should be sought from Counter Terrorism Wales and Designing Out Crime officers where redevelopment of/ adjacent to MOD St Athan is planned.
• SP15 – Sustainable Tourism: Promoting opportunities for visitors to engage in forms of tourism that have a low impact on the environment; 2 Protecting and enhancing existing tourism attractions and leisure facilities; 3 Enhancing the visitor economy, attracting local investment, providing local employment opportunities and contributing to rural diversification; 4 Recognising and protecting the Vale's distinct local identity, built and natural environment as assets to tourism; Providing a variety of tourism opportunities, particularly through all year round facilities and a range of appropriately located visitor accommodation; and 6 Encouraging tourism visits to be made by active and sustainable transport modes – Designing Out Crime Officers advice and advice in respect of Crowded Places to be sought at the pre planning state of any event.
• CI4 – Protecting and enhancing existing community facilities: Proposals for new community facilities or proposals which seek to retain, enhance or maintain existing community facilities will be supported. This includes the provision of multi-use community facilities, including the colocation of healthcare, schools, libraries and leisure facilities – South Wales Police would ask that all new community facilities plans are referred to the Designing Out Crime Officer and Counter Terrorism Wales for early consultation.
Reason: To ensure all public realm is safe, espcially for vulnable groups such as women and girls.
5. Protecting and enhancing the natural environment
Ecological Networks and Green Infrastructure
Project Zero - The Vale of Glamorgan Council's Climate Change Challenge Plan 2021-2030
The Vale of Glamorgan Local Area Energy Plan (2024)
Maximise reduction in carbon emissions across all activity. • Improve efficiency to reduce energy demand.
Work towards new and existing buildings becoming low carbon prioritising inclusivity, equality, and fairness.
The LAEP is a live document which should be updated every 5 years. It identifies the following priority areas that will be the focus in the short term to assist in setting the Vale on the pathway to net zero: • Making homes low carbon.
Crime committed in 2011 in England and Wales is estimated to have given rise to over 4 million tonnes CO2e, equivalent to emissions of around 900,000 UK homes. Burglary resulted in the largest proportion of the total footprint (30%) due to large volume of offences and the carbon associated with replacing stolen or damaged goods.
Source: "Addressing the Carbon-Crime Blind Spot - A Carbon Footprint Approach" (2016). Helen Skudder, Professor Angela Druckman, Jon Cole, Alan McInnes, Dr Ian Brunton-Smith, Dr Gian Paolo Ansalon.
The environmental benefits of SBD are supported by independent academic research consistently proving that SBD housing developments experience up to 87% less burglary, 25% less vehicle crime and 25% less criminal damage (Note 1.5). It also has a significant impact on anti-social behaviour. Therefore, there are substantial carbon cost savings associated with building new homes and refurbishing existing homes to the SBD standard i.e. less replacement of poor-quality doors, windows and the stolen property from within the home as a result of criminal acts. This has been achieved through adherence to well-researched and effective design solutions, innovative and creative product design coupled with robust manufacturing standards.
Research documentation can be found on the SBD website at: https://www.securedbydesign.com
South Wales Police would ask that Designing Out Crime Officers are consulted to work in partnership with the Vale of Glamorgan Council to reduce the carbon emissions through building to Secured by Design Standards.

Policy 12 - Regional Connectivity
A feasibility study for a new station at St Athan was completed in 2022, which identified four potential site locations for a new station to the south of St Athan.
South Wales Police Recommendations:
• SP10 – Sustainable transport - Ensuring that the design of new developments encourage walking, cycling and public transport use as alternatives to private car use, as well as encouraging options such as mobility hubs and shared car use – South Wales Police Traffic Management Department should be consulted to ensure that sustainable transport links are safe. If these links are rail, then the British Transport Police Designing out crime officer should be contacted at the pre planning stage.
• SP16/CC1 – Net zero carbon developments: pre application consultation from South Wales Police and all new developments to meet Secured by Design.
• CI1/CC1/ SP19 – Open Space Provision: Areas of open space will normally be required to be provided on-site as part of new development proposals. Where it is not practical to make provision on-site, appropriate off-site provision or financial contributions for improvements to existing facilities will be required in lieu of on-site play, outdoor sports provision, or amenity greenspace.
• DNP7 – DARK SKIES: Secured by Design can assist with ensuring that the built environment in all forms, is designed to reduce the opportunity of Violence Against Women and Girls (VAWG) and contribute to such places feeling safe, to live, work and socialise. South Wales Police would ask that Designing Out Crime Officers are involved at the pre planning stage with the Highways Department at The Vale of Glamorgan Council and developer to discuss and be able to make recommendations in relation to lighting.

Document Element: SP16 - CLIMATE CHANGE MITIGATION AND ADAPTATION

Respondent: Cardiff Capital Region Energy (Mr Phil Nightingale, Project Delivery Director) [2736]

Summary:

CCR Energy welcomes the emphasis within SP16 on climate change mitigation and adaptation, including consideration of flood risk at the former Aberthaw Power Station. The proposed redevelopment of the site as the Cardiff Capital Region Aberthaw Green Energy Park will incorporate comprehensive Flood Consequence Assessments and appropriate mitigation measures to ensure safe, resilient development. By integrating sustainable drainage systems, green infrastructure, and regenerative design principles, the proposals will address tidal and fluvial flood risk, support climate resilience, and contribute to the Vale of Glamorgan's broader zero-carbon and environmental objectives, demonstrating exemplar practice in sustainable redevelopment of previously developed land.

Document Element: SP16 - CLIMATE CHANGE MITIGATION AND ADAPTATION
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:
Policy SP16 requires all development proposals to address climate change causes, but it is impractical to meet all these requirements at the outline planning stage. Some information can only be provided at the detailed stage. Certain requirements, such as optimising energy supply and district heat networks, may be unachievable in many new residential developments. Furthermore, care needs to be taken to ensure that any additional decarbonisation policy aspirations, especially for affordable housing-led schemes, are carefully considered in terms of overall viability.

Full text:
It is observed that the wording of Policy SP16 states that “all development proposals” should address the causes of climate change to demonstrate policy compliance. However it is considered that it would not be feasible or even possible to provide all of the information required by Policy SP16 at the outline planning application stage and that some of the information requirements of Policy SP16 can only be expected to be provided at detailed (reserved matters/full) planning application stage. Furthermore, care needs to be taken to ensure that any additional decarbonisation policy aspirations, especially for affordable housing-led schemes, are carefully considered in terms of overall viability.

It is clear that there are some requirements in Policy SP16 that will be unachievable in many new residential developments, for example, requirements 7 relating to the optimisation of energy supply and distribution options, including provision of district heat networks.

Change suggested by respondent:
The wording of Policy SP16 must therefore be amended to acknowledge that the above list will apply to “All development proposals, where possible...”

The term “maximising” should also be removed entirely from Policy SP16 as the term is imprecise. Proposals should be encouraged to be efficient but to require demonstration of maximisation could also lead to viability issues.

The proposed amendments will ensure that Policy SP16 will meet the third test of soundness (Will the Plan deliver?).

6162 Object

Document Element: SP16 - CLIMATE CHANGE MITIGATION AND ADAPTATION

Respondent: Ms Lucie Taylor [2506]

Summary:

SF&G note the Vale's recognition of the climate crisis, with a focus on mitigation over adaptation in the draft plan. More focus on adaption is needed. We suggest emphasising community-scale actions such as community gardens, orchards, local food growing, green spaces, repair hubs, and tree planting for biodiversity and shading. The circular economy should include biological nutrients and community resource recovery. Green infrastructure should be multifunctional, incorporating community-managed green spaces with high biodiversity and food production. Nature-based solutions should also address social heat stress and mental health, beyond water management, by including urban gardens and permeable surfaces.

Full text:

The Vale has already recognised there's a climate crisis. The plan gives mitigation and adaption as the 2 elements, though perhaps the draft plan feels like it focusses more on mitigation with adaption being more secondary.

For SP16 we suggest more on community-scale climate action that help with food security, carbon sequestration, biodiversity gains, social cohesion, and cooling e.g.
community gardens and orchards
local food growing
shared green spaces
local repair and reuse hubs
tree planting (but not just for green design with the aesthetic/landscaping but trees for biodiversity, shading, food)

No. 2 Circular Economy, the statement focuses on buildings and materials.
The circular economy also applies to biological nutrients and waste.
Community gardens are hubs for the circular economy—composting local green waste and recycling nutrients back into the soil. Suggest adding "community-scale resource recovery" to the circular economy principles

No. 5 & 8 Green infrastructure, the 2 statements identify only carbon sequestration and urban shading & cooling. Green infrastructure should have multifunctional roles i.e. not just be "trees to look at". For GI there should be measurable standards. Welsh Government and NRW have spent considerable resources developing Green Infrastructure toolkits and these should be used better within the LDP.
Suggestion: that "Green Infrastructure" specifically includes Community Managed Green Space. These spaces provide higher biodiversity value and better social outcomes than "standard" landscaping PLUS food especially if orchards are planted.

No. 10 Nature-Based Solutions The policy links nature-based solutions primarily to water/flooding.
Nature-based solutions can also address social heat stress and mental health during extreme weather.
Suggestion: add community gardens, community allotments and orchards, which provide cooling and permeable surfaces while simultaneously tackling the "nature deficit" in urban areas.

Change suggested by respondent:

encouragement for community focussed initiatives that mitigate and help adapt to climate change.

Document Element: SP16 - CLIMATE CHANGE MITIGATION AND ADAPTATION

Respondent: Cardiff and Vale University Health Board (Claire Beynon, Executive Director of Public Health) [2397]

Summary:

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.

Full text:

The overall contribution to health and wellbeing of the Deposit RLDP is positive and there are opportunities to develop further detail through the supplementary planning
guidance (SPG) proposed. We are keen to ensure that these SPG's are progressed within the short-term and that Cardiff and Vale University Health Board (CAVUHB) are
involved in the development of some of these. The content and application of the SPG's will be fundamental to the effectiveness of several of the policies identified in the
deposit plan. These must be supported by effective processes and relationships that ensure the intentions for positive contributions to health and wellbeing are delivered.

The Deposit RLDP provides a strong framework for placemaking, climate action, and healthy communities. Opportunities exist to further embed healthy and sustainable food systems as essential spatial infrastructure rather than solely as community
amenity or retail management issues. Strengthening policy wording in areas such as placemaking, rural diversification, employment land, green infrastructure, and community infrastructure would better align the Deposit Plan with the Well-being of Future Generations Act, Planning Policy Wales Placemaking agenda, and emerging Welsh food system strategies. This is particularly relevant as the Future Generations Commissioner named his first priority area in office being food, and the Welsh Government has recently published its Community Food Strategy. The Future Generations Office also recently produced guidance for local authorities including several planning-related recommendations.

The following comments are provided in the order they appear in the document:

Spatial strategy: SP1 - Sustainable growth: While the plan addresses overall growth distribution, it does not consider how development affects local food resilience, including the protection of agricultural land, peri-urban growing spaces, or local supply chains. There is no strategic reference to food as a component of sustainable, resilient communities. The vision and strategic objectives currently contain no mention of ‘food’ or ‘farming’.

Request to add reference (Spatial strategy or Strategic objectives section) to supporting resilient and sustainable local food systems in spatial strategy principles, including protection of productive land and support for local supply chains. Suggested wording includes: “The Local Development Plan will support resilient and sustainable
local food systems by safeguarding productive agricultural land, promoting peri-urban food growing opportunities, and facilitating local food supply chains as an integral part
of sustainable growth.”

SP4 Placemaking: Placemaking principles are clear and it is encouraging that prioritising the determinants of health and wellbeing during the design process are included as one of the principles. The placemaking statement forming part of the Design and Access statement is welcome to ensure any proposal aligns with the principles. The placemaking SPG will be key to consolidate guidance on physical activity, transport, climate resilience, mental wellbeing, access to food and food production, and inclusive design. Whilst this section focuses on design quality, density, and public spaces it does not explicitly incorporate food production or edible landscaping. Opportunities for multifunctional green spaces that produce food are missed, which could support local
diets, biodiversity, and community engagement. Suggestion to include wording to support multi-functional green infrastructure consistent with placemaking principles:

“Development proposals, where appropriate, should incorporate productive landscapes, edible landscaping, rooftop or community growing spaces, and other
opportunities for local food production as part of multifunctional green infrastructure.”

SP5 Creating Healthy and Inclusive Places and Spaces: CAVUHB support the statement that 'Developers are required to undertake a screening assessment of their
proposal at the pre-application stage to identify the potential health impacts of their development'. CAVUHB agrees with the criteria set out in the table and would like to see examples/further guidance of 'other' developments where there is likely to be a significant impact on health and wellbeing. HIA should also consider the cumulative
impact across multiple smaller developments in the same area, and whether they trigger thresholds collectively.

6.54 We suggest adding the word 'abilities' to the sentence '...enabling people of all ages, backgrounds and abilities to live in an environment that will support them to live
full, productive and prosperous lives.'

6.60 We welcome the requirement for new developments to conduct screening at the pre-application stage using the Council's Health and Wellbeing checklist and the rapid
HIA. We are keen that CAVUHB are involved in the development of the Healthy Placemaking SPG to consider how submitted HIAs will be assessed by the Council to
ensure Developers submit a quality HIA and implement the conclusions.

6.61 Amendment to organisation titles to: Cardiff and Vale University Health Board and Wales Health Impact Assessment Support Unit (Public Health Wales).

6.62 Wales Health Impact Assessment Support Unit has recently released guidance on HIA - see https://phwwhocc.co.uk/whiasu/ for more information and toolkits to ensure most up to date is in use.

6.63 Suggestion to amend the paragraph to include reference to 'access' to services, for example 'A further role of the RLDP is to support the access to and delivery of community, health and social care and wellbeing services within the community..'.

6.65 Suggestion to change wording from 'encouraged' to 'expected' for example:
Developers are expected to engage with the Health Board at pre-application stage to enable due consideration of

healthcare infrastructure requirements.' The requirement
for HIA will assist with this expectation.

Key housing sites (HG1 KS1 onwards): The Key Site requirements reference “enhancements to leisure, sport and recreation spaces”. Without quantified standards or phasing triggers, however, these requirements may be difficult to enforce consistently at the planning application stage. Clear policy hooks or supporting standards prior to submission would strengthen implementation. It is recommended that the Key Site schedules include minimum on-site provision standards and delivery
phasing obligations to ensure that both sport infrastructure and recreational space provision keep pace with the additional demand generated by future population
growth.

SP11 Retail, commercial and service centre hierarchy and RCS1 Resilient retail, commercial and service centres: This policy focuses on hierarchy and vitality of retail
centres but fails to actively support the resilience of local retail, through measures which support local food markets, small-scale fresh food retailers, or local producer
supply chains. This limits opportunities for strengthening local food economies.
It is important that the need for convenience food retail space within Barry, Penarth and Llantwit Major, recognised in SP11, is matched with this rational for ‘local affordable food’ outlined in SP5.

Consider adding: “The Council will support local food markets, cooperative food retail, and initiatives that strengthen local producer supply chains within town and service centres, in line with the Town Centres First approach.”

RCS3 - hot food takeaways: CAVUHB commends the recognition that the clustering of unhealthy food outlets is a significant health issue and supports the proposals to
consider controls on takeaway proliferation (RCS3). This will support the creation of healthy environments, a commitment within the Cardiff and Vale Good Food and
Movement Framework endorsed by RPB. Health and inclusion policies mention general wellbeing but do not specifically address access to healthy food, food deserts, or distribution of retail providing fresh/local food, especially in new or expanding residential areas.

Proposal to include criteria for equitable access to healthy food and community food infrastructure in development proposals, such as: “Major developments should demonstrate equitable access to healthy food outlets, community growing facilities, or other community food
infrastructure within walking distance of new residential areas.” This addresses diet related health inequalities, encourages healthier communities and aligns with HIA
guidance.

EMP6 Rural diversification: The plan frames food production predominantly as a community activity rather than recognising its commercial, economic, and supply
chain potential. This limits opportunities for climate-resilient rural economies in a county with such a rural character as the Vale. Policy supports general rural business diversification but does not explicitly enable
agro-ecological practices, local food processing, CSA (community-supported agriculture), or other sustainable farming models.

Proposal that the plan should explicitly support sustainable, commercially viable local food enterprises as legitimate rural employment uses - to include the following wording: “Rural diversification proposals that support agro-ecological farming, sustainable local food production,
community-supported agriculture, and short supply chain enterprises will be supported where compatible with landscape and environmental considerations.”

SP10 Sustainable transport: We support these policies, and suggest the plan is explicit that all new active travel infrastructure should meet the statutory Active Travel
Act guidance (Link: ttps://www.gov.wales/sites/default/files/publications/2022
01/active-travel-act-guidance.pdf) and also that infrastructure should be built to a specification to ensure resilience as extreme weather events increase, preventing
flooding and making use more comfortable during hot weather (such as shading from trees). We note the absence of reference to people living with disabilities and suggest adding 'wheeling' as well as walking and cycling.

SP13 Community infrastructure and planning obligations:

We want to take this opportunity to highlight the challenges that population growth places on healthcare
services. The projected level of population growth identified within the RLDP will have an impact on the CAVUHB's community healthcare facilities and infrastructure. Please refer to the information provided as part of the background evidence paper titled 'BP37
Primary, Community and Intermediate Health Care 'for more detail on the CAVUHB response which identifies there is limited scope for the current infrastructure within
existing GP premises to absorb the LDP growth. CAVUHB recognises the need to prioritise the expansion of the existing

estate (where feasible) or support new
developments to take forward its strategic objectives.

Open space and recreation (CI1 and CI2): The evidence base supporting the sport and recreation elements of Policies CI1 and CI2 could be strengthened. At present
there does not appear to be a full Open Space Assessment setting locally-derived standards, nor a Playing Pitch Strategy nor Indoor Sport Facility Assessment. The Cardiff and Vale of Glamorgan Sports and Physical Activity Facilities audit report is
currently underway (with completion anticipated in May 2026), which should make a useful contribution to the evidence base once available.

Community Facilities: this policy focusses on schools, healthcare and social infrastructure, but does not include food-related community facilities such as kitchens, food hubs or education centres. Proposal to include the following information: “Community facilities should include, where appropriate, community kitchens, food hubs, educational facilities for food skills, and other infrastructure that enhances local food resilience and social cohesion.”
There is no reference to the expectation that local communities are consulted in relation to the development of community facilities. We would like to see a
requirement for community engagement and that such developments are based on a detailed understanding of existing community strengths, assets, needs and
challenges. This might be achieved as part of the HIA which includes stakeholder engagement.

SP14 Employment Growth: Employment land allocations focus on general industrial and office uses, with no explicit support for food hubs, processing, or logistics facilities
that would enable local food supply chains. Again, in an agricultural county such as the Vale, and given Wales’ push for local supply resilience, this is a major opportunity gap. Consider including the following wording:

“Employment land allocations should consider the needs of food processing, distribution, and logistics facilities that support local and regional food supply chains.” This supports local supply chain development, reduces food miles and provides local employment opportunities, Welsh Government evidence highlights the importance of food processing in local supply resilience.

SP19 Green infrastructure: this policy emphasises the biodiversity, climate adaptation and recreation, but does not explicitly recognise productive landscapes or
urban agriculture as part of the multifunctional green infrastructure.

Suggested wording: “Green infrastructure networks should recognise and integrate food productive landscapes, urban agriculture, and community growing spaces as multifunctional components contributing to biodiversity, climate adaptation, and wellbeing.”

SP16 Climate change: this policy addresses migration and adaptation but omits food systems. It also does not recognise the emissions reductions from local food
production, short supply chains or sustainable farming practices.
Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Change suggested by respondent:

Consider including the following wording: “Development proposals should encourage short supply chains, low-carbon farming methods, and local food production where feasible, in order to support climate change mitigation and adaptation objectives.”

Members welcomed the inclusion of specific climate change mitigation and adaptation measures under SP16.

Full text:

Penarth Town Council Deposit RLDP Consultation Response

Comments collated at a meeting of the Council’s Consultation Task and Finish Group on 9th February 2026

Some Members attended the RLDP consultation drop-in session in Penarth and in general found it to be very informative.

Members support the general development strategy but did note the lack of information concerning discussions with adjacent and other nearby Principal Councils in the CJC Region. In view of the forthcoming Strategic Development Plan, encompassing the ten authorities, members felt that some further commentary regarding this is warranted.1

It is clear that the approach taken in the Cardiff paper is still that ideally, each Council is self-contained and "consumes its own smoke," which does not show any wider strategic thinking between the ten authorities in preparation for a regional Strategic Development Plan.

Members agreed with the view that infrastructure to support new housing developments was required in order to create successful developments, although they acknowledged that logistically it was difficult to pre-empt demand for some services such as travel and health services. Members also noted that predicting developmental needs and opportunities within wider context surrounding the UK's economic, political, and social landscapes.

Members noted that there was not much focus on Penarth or identified potential future development for Penarth beyond that already underway at the location near to Cosmeston but welcomed flexibility in its approach. Members expected to be more closely involved in the decisions and planning of this, and other such developments, and provide opportunity for wider consultation where appropriate, such as pre-application consultations, as well as would expect to be included in consultations concerning sites adjacent to Llandough, Dinas Powys, and Sully given their impact upon the town.

Penarth as a town is currently developed to its boundaries, save for the development at Cosmeston. It is, therefore, more dependent than other Service Centres on windfalls of land or buildings which may arise during the currency of the Plan. In 2023, an extensive assessment of the potential of the town concluded the following:

"There is marginally less capacity in Penarth [and Llandough] than the projected figures. However, this does not mean that the projections are incorrect or unjustifiable. The reported figures have not included a significant amount of capacity on open space land, and the projected figures for conversion of existing buildings and intensifications will be surpassed if the extant consents that exist this early in the Plan period are implemented."

The degree of flexibility, however, is substantially depending on one large site. P009, Headland School, is identified as both a potentially disused building and as a site with a capacity of 111-120 units. This special school is full to capacity and used by many Council in both Wales and England.

Members did note the inclusion of Cogan Transport Interchange under section 6.196 but would have liked to see more information about its future developments as they see it as key to increasing public transport use to Barry and further to West Wales in general.

Members wished to advise that issues with both the bridge and the platforms at Cogan have been long term, with accessibility being central to these issues. Members felt that improvements to accessibility should be a priority at this site, with planting and landscaping considered secondary to this.

Members felt it was key to consider the additional stress on Penarth from increased anticipated demand of public transport needs and emphasised the need for this to be aptly considered by bus route providers as part of development work.

Members wanted to see a strategy that actively protects the town's heritage and culture whilst still being able to provide for current and future generations.

Members welcomed the inclusion of specific climate change mitigation and adaptation measures under SP16 and section CC1-CC6, noting the considerable attention given to Net Zero transition proposal relating to public buildings and energy. Whilst the evidence presented does not include the UK Climate Change Committee Report2, Members were pleased to see that CC1-CC6 largely reflect the Committee's finds and are tailored to a transition which reflects what is presently feasible. This is providing that the necessary skills to understand and undertake carbon assessments within a policy implementation and regulation context are readily available.

Under CC2, it was noted that the presumption against demolition3 in favour of retrofit and reuse may constrain maximum transition to net zero as, whilst there is grant aid available for public buildings and social housing, the retrofit monies available for private stock is limited.

Additional considerations will also need to be made as part of the Third Carbon Budget (2026-2030), Local Area Energy Plans and the climate change ISA theme.

Members also felt similar about the inclusion and consideration of sustainable development through the specific strategy outlined in section 5 of the document and felt this linked in well with ongoing Placemaking work and its strategic approach as detailed in SP4.

Members were pleased to see mention of the diversification of high streets, although noted that Penarth was above average in terms of occupancy. They hoped that the RLDP would be able to support the town centre and support other ways it could be improved, such as a fishmonger or identifying a site for a new Cemetery.

With Penarth classified as a Service Centre, they are identified as having a defined role. However, the decline of in-person retailing means that defining role is not that evident, and Members felt there is potentially a need to move away from the traditional retail role of Town Centres in favour of "repurposing, creating multifunctional, commercial, and service centres that meet the needs of the communities they serve" in line with Future Wales Town Centre First Policy. The term 'repurposing' suggests a stronger role for the public sector in enabling these new purposes, and Members felt that Placemaking Plans could be one potential framework for this.

Members felt that potential functional support that could be provided could include:
• The appointment of a Town Centre Manager
• Using supporting interventions such as an extension or reshaping of normal services such as Neighbourhood Services.
• Using existing or emerging new powers, such as compulsory purchases.

Members wished for the RLDP to facilitate the safeguarding of essential public services, including health, policing, fire and rescue in the town, which would help to develop the defining role of a Service Centre, and felt that specific reference to these would be beneficial.

Members supported the avoidance of coalescence with adjacent settlements through the reconfirmation of Green Wedges as it allows for relevant extensions to those settlements whilst allowing them to retain their identity.

Members noted that the Quiet Area provision under DNP6 only applies to Penarth and wished to know why this was the case.

Members advised that they welcomed further opportunity for consultation, particularly in relation to developments in the neighbouring Cardiff Bay area whilst acknowledging that this is not necessarily an RLDP concern.

Footnotes

1 There is an evidence paper concerning relations with Cardiff and a Statement of Common Ground with Bridgend. However, there is only a reference in the RLDP text to discussions with other regional Councils and not the paper itself. We would be grateful if you could provide the paper as it does impact on the soundness of this Plan.

2The UK Climate Change Committee's 'Progress Report: Reducing Emissions in Wales' highlighted the following aspects of import: Skills, Vehicle Charging Networks, Improving Recycling, Energy Plans, Decarbonising Public Buildings and Social Housing, and reducing Road transport Demand (Car-Kilometres).

3The UK Environmental Audit Committee (2022) noted that "the evidence we received consistently recommended that retrofit and reuse be prioritised over new build."

6969 Support

Document Element: SP16 - CLIMATE CHANGE MITIGATION AND ADAPTATION

Respondent: Dwr Cymru Welsh Water : Developer Services (Mr Dewi Griffiths, Development Growth Officer) [1741]

Summary:

We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.

Full text:

Vale of Glamorgan Replacement Local Development Plan (RLDP) 2022-2037

Thank you for consulting Welsh Water on the Vale of Glamorgan Deposit LDP, we appreciate and welcome the opportunity to engage in the Local Development Plan process.
Settlement boundaries
SSC1 – development within settlement boundaries
We welcome the requirement for new development to make efficient use of land and benefit from existing infrastructure provision or, where necessary, make provision for new infrastructure without any unacceptable effect on the natural environment (10).
Housing delivery
HG1 - housing allocations
A. Key sites (Policy HG1 KS1-5)
Our representation on the above sites are included in appendix 1.
B. Housing allocations (HG1 (1) to HG1 (9))
Our representation on the above sites are included in appendix 1.
C. Major landbank sites (HG2 (1) to HG2 (5))
These sites are existing commitments and Dwr Cymru Welsh Water has made representations on the planning applications submitted for these sites.
D. Housing led redevelopment opportunity (HG3 (1))
Our representation on the above site is included in appendix 1.
E. Rural affordable housing led sites (HG4 (1) to HG4(4))
Our representations on the above sites are included in appendix 1.
Our representations on the proposed allocated sites are included in appendix 1. Where planning applications have already been submitted and are pending a decision, we have made representations during the planning application consultation process regarding the capability of our infrastructure to accommodate the proposed development. If capacity does not exist within our infrastructure to accommodate the demands arising from a development site, the planning authority can make planning permission conditional upon there being adequate infrastructure available to cater for the development. A developer has a right to connect to our sewerage networks provided that a development site benefits from planning permission and there are no overriding planning conditions attached to the permission that controls the location or timing of that physical connection.
Gypsy and traveller accommodation (GT)
SP9 - gypsy and traveller site provision
Our representation on the site allocation is included in appendix 1.
Retail, commercial and service centres (RCS)
SP12 - retail floorspace provision
Our representations on the site allocations are included in appendix 2.
Community infrastructure (CI)
SP13 - community infrastructure and planning obligations
We support the provisions within the policy that the Council will secure new and improved community infrastructure where appropriate and within a timely manner, and the specific reference to utilities infrastructure. Where existing water and sewerage infrastructure requires reinforcement to serve a development it must be provided as part of the development to mitigate any adverse impacts. In circumstances where the development generates the need for infrastructure improvements that are not programmed for delivery by infrastructure providers then it must be funded by the development. Therefore, it is important for developers to engage early with relevant infrastructure providers, including the statutory sewerage and water undertaker. We welcome that the policy states that improved infrastructure must be undertaken in a timely manner. The delivery of reinforcements to the sewerage and water networks can controlled either through planning condition or a commercial agreement between the developer and Welsh Water.
Adequate potable water supply and drainage infrastructure is key to ensuring new development sites are sustainable, viable and deliverable. Hydraulic modelling assessments (HMA) may be required to determine an adequate point of connection to the water network and/or public sewers, and developers would be strongly recommended to fund investigations at pre-planning stage. Once commissioned and completed the HMA would identify suitable connection points and/or the necessary reinforcement works required to accommodate the development (for example upsizing sewers/water mains, additional storage tanks etc). In certain circumstances surface water removal could be an alternative option for allocations where foul sewer HMAs are being requested, and we would welcome early engagement with the site developer.
The reinforcements required to the network would be established by the HMA and costings would be provided at detailed design stage. The developer would need to fund a scheme by way of the requisition provisions of the Water Industry Act or via a legal/commercial agreement with Welsh Water.
Community facilities
CI3 – new community facilities
Our representations on the site allocations are included in appendix 2.
CI5 - cemetery and crematorium provision
Our representation on the site allocation is included in appendix 2.
Productive and enterprising places
SP14 - employment growth
Our representations on the site allocations are included in appendix 2.
We support sustainable economic development, however the LPA and potential developers should be aware that the obligations of a water and sewerage undertaker only extend to the ‘domestic’ supply part of an employment development (sinks, toilets, kitchen facilities etc). We are not obliged to provide potable water for use in any industrial process. Where an employment development results in higher demands of water supply and/or trade effluent discharge

consent, under Section 118 of the Water Industry Act 1991, we recommend and welcome early consultation with developers. The capability of our infrastructure to service future employment allocations will be assessed when the potential demands arising from the developments are known.
EMP1 - employment regeneration opportunity areas
Our representations on the site allocations are included in appendix 2.
Climate change and transition towards net zero (CC)
SP16 - climate change mitigation and adaptation
We are supportive of this policy as the protection of water resources are key in ensuring we maintain a safe, healthy and reliable water supply. Incorporating water efficiency measures into developments will help minimise adverse impacts on localised and wider water supply networks including the quality of water resources.
We are also pleased that the policy includes particular emphasis on the importance of sustainable urban drainage systems (SuDS), in conjunction with Schedule 3 of the Flood and Water Management Act 2010. The tackling of surface water at source is a vital component of sustainable development and will mitigate against overloaded sewers which can ultimately lead to flooding. Disposing of surface water in a sustainable manner by ensuring that it does not communicate with the public sewerage network, including rainwater harvesting systems, protects the environment and assists in ensuring that there is sufficient capacity in the public sewerage network for foul-only flows from development sites.
SP19 – Green Infrastructure
In conjunction with SAB applications, under Schedule 3 of the Flood and Water Management Act 2010, we welcome provision within this policy to integrate green infrastructure with sustainable drainage systems.
Environmental protection
DNP5 – environmental protection
We welcome provisions within the policy to protect the natural environment from unacceptable impact from pollution of land, surface water, ground water and the air as well as flooding risks.
We hope that the above will assist you as you continue to progress the LDP. If you require any further information, then please do not hesitate to contact us on 0800 917 2652 or forward.plans@dwrcymru.com.

Appendix 1 – HG1 Housing Allocations, SP9 Gypsy & Traveller Site
Our representations on site allocations are provided in the table below. The following caveats are applicable to all sites:
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are sewers and/or water mains crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion.
• Where insufficient hydraulic capacity exists within the public sewerage network or water supply network to accommodate/serve a development site, hydraulic modelling assessments (HMA) may be required, and developers would be strongly recommended to fund investigations during pre-planning stages. The findings of the HMA will identify the extent of any reinforcement required to accommodate the development, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). If the sewerage network system in the locality is currently at capacity, there may be an opportunity to overcome our concerns by delivering a surface water removal scheme. This approach would ensure that there is no net increase in volume of flows communicating with the public sewer network, and therefore no further detriment to the public sewer network downstream of the development.
• In some instances, off-site water mains or public sewers may be required to connect to a suitable point on the existing networks at the developers' cost. We may seek to control points of connection to the public sewerage network via appropriate planning conditions. Where assets need to be laid over private land, developers will need to comply with the requisition provisions of the Water Industry Act 1991.
• If there is limited or no capacity available at a Wastewater Treatment Works (WwTW), developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcement works.
• Where capacity is currently available in the water supply network to accommodate development, we reserve the right to reassess our position at the time of the formal application for the provision of new water mains under Section 41 and Section 51 of the Water Industry Act (1991) to ensure there is sufficient capacity available to serve the development without causing detriment to existing customers' supply as demands upon our water systems change continually.
• Please note the below comments are subject to change as the LDP progresses and/or as planning applications are submitted.

See tables in attachment for site specific comments.

Appendix 2 - Employment sites & other uses
Capacity comments for employment allocations can only be provided once the type of development and occupier/end-user of a site is known. Once requirements are confirmed, usually through the planning application process, further assessments will be undertaken. High-level comments are provided in the table below regarding any watermains/sewers crossing the proposed allocations, and the WwTW catchment that the sites are located within.
The following provisions are applicable to all allocated employment sites:
• the obligations of a water and sewerage undertaker extend to 'domestic' supplies only. We are not obliged to provide potable water for use in any industrial process. Where an employment allocation results in higher demands of water supply and/or trade effluent discharges we recommend and welcome early consultation with Welsh Water.
• The individual plots available for development can represent a substantial area of land for which the potential demands upon our assets are unknown at present. It is essential that we understand these demands to allow us to assess the impact on our assets. It may be necessary for water and/or sewerage hydraulic modelling assessments (HMAs) to be

undertaken at the developer's expense to establish where the proposed development could connect to the existing networks, and to identify any required infrastructure reinforcement works. Water mains and/or sewerage infrastructure required for any potential development site can be acquired through the requisition provisions of the Water Industry Act 1991 (as amended).
• In accordance with the Water Industry Act 1991, Welsh Water retains rights of access to its assets at all times. Where there are water mains and/or sewers crossing sites then protection measures in respect of these assets will be required, usually in the form of an easement width or in some instances a diversion of the asset.
• Where there is limited or no capacity at a WwTW, dependant on the scale and pace of development, developers may need to fund a Developer Impact Assessment (DIA) to identify required reinforcement works. In these instances, a commercial agreement would be required between the developer and Welsh Water to deliver the necessary reinforcements.
• If any development site gives rise to a new discharge (or alters an existing discharge) of trade effluent, directly or indirectly to the public sewerage system, then a Discharge Consent under Section 118 of the Water Industry Act 1991 is required from Welsh Water. Please note that the issuing of a discharge consent is independent of the planning process and a consent may be refused despite planning permission being granted.

Document Element: SP16 - CLIMATE CHANGE MITIGATION AND ADAPTATION

Respondent: H Jones, L Sungur and P John [3741]

Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in

the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as 'Minor Rural Settlements'. Within the RLDP the supporting text of Policy SP2 states:
'several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate'.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale's own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council's climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a

maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.

Given the concerns raised with regard to Policy SP1 there is fear that the affordable housing numbers will not be sufficient to meet need. The site north of Westwinds business park, Fferm Goch has the ability to expand to the south (as per the CS Ref 398) in order to accommodate additional dwellings (both market and affordable dwellings in order to sustain the viability of the site).

SP7 – Affordable Housing Provision

In accordance with Policy SP7 the allocated site HG4(4) at Fferm Goch provides a range of tenures, types and sizes in response to the LHMA, waiting list data and Older persons housing strategy in order to provide for 11 dwelling units and contributing toward the 3,070 affordable requirement to 2036. Changes in the household composition mean more single person and small homes are required, plus older person accommodation for those wishing to downsize and stay in the area.

Please see comments for Policy SP1 / Policy SP2 above regards concern over the proposed housing numbers and supply of affordable homes against demand - this therefore brings the Deliverability of the plan in to question (Test of Soundness 3).

SP8 – Affordable Housing Requirements

Policy SP8 is supported in so far as contributing much needed affordable housing development commensurate with the size of the settlement in which it sits. We are encourage to see reference to the provision of affordable housing to be negotiated on a site by site basis considering evidenced viability fo the development.

The affordable dwellings proposed foster stability in rural areas by allowing a range of households (from single person to growing families) to stay in their local area.

Policy SP8 states 40% affordable for those developments in primary and minor settlements outside of the SGA yet 50% requirement on affordable housing led allocations in minor rural settlements (also outside of the SGA). This appears inconsistent and penalising those smaller rural sites that will already be more delicately balanced in viability terms by virtue of their limited size of 25 units. Further viability issues covered in other policies (such as SP20, relating to biodiversity, Net Zero and sustainability credentials must (with the required evidence submitted and assessed by the council as stated in Policy SP8) be flexibly reviewed to ensure sites are viable and deliverable as recognised by the Council, there is a danger the stringent requirements, especially for smaller sites, could render those sites unviable in the current climate with rising build costs.

HG4 – Rural affordable housing led sites

The allocation of land north of West Winds Business Park under policy HG4(4) for rural affordable housing led development of 22 units is strongly supported. Then allocation will assist in delivering homes in the rural Vale and contribute to the important stability to the settlement of Fferm Goch to 2036.

The extension of the settlement limit including the site north of West Winds Business Park is supported. The site provides an obvious infill to the small break in the built up area to both the north and south of the site, with the main road running to the eastern boundary of the site.

The inclusion of the site within the settlement of Fferm Goch is logical and in harmony with the existing linear settlement.

The proposal supports the aims of the Local Development Plan and the Welsh Government's commitment to increasing affordable housing supply. By providing for affordable led allocations the policy aligns with the Well-being of Future Generations (Wales) Act 2015 in aiming to promote a healthier, more equal, and cohesive community.

There is concern however surrounding the number of dwellings proposed and if the Plan seeks sufficient dwellings and affordable provision given the predicted need to 2036 shown in the LMHA.

SP13 – Community infrastructure and planning obligations

Policy SP13 demonstrates the importance of community infrastructure in sustaining both the residents well being and economic growth of an area. See also the response to Policy SP2 that refers to the allocation of housing in the rural areas specifically supporting those settlements with local primary school provision.

The viability of developments however must not be compromised in order to ensure delivery of the plan. To see in Policy SP13 that 'development viability' is recognised as a key factor in delivering community infrastructure under planning obligations, is supported. It is recommended that this recognition is replicated in other policies of the LDP in order that the third Test of soundness can be fully met; Deliverability – ensuring the plan is likely to be effective). See comments in relation to Policies SP8/CC1/SP16/CI1.

CI1 – Open Space Provision

Provision of open space in residential developments is supported. HG4(4) promotes open space within the draft allocation.

The viability of developments however must not be compromised in order to ensure delivery of the plan. The 'development viability' should recognised as a key factor in delivering open space (see comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP16 - Climate change Mitigation and Adaptation

The provisions of SP16 are generally supported as practical measures to ensure important sustainable development is achieved.

CC1 – Residential Operational Net Zero Carbon Development

The provisions of Policy CC1 echo the WG targets for Net Zero by 2050.
Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP19 – Green Infrastructure

Provision of Green Infrastructure in residential, and all developments is supported.

HG4(4) retains and enhances existing and will promote green infrastructure on the draft allocation.

The viability of developments however must not be compromised through green infrastructure provision - in order to ensure delivery of the plan. The 'development viability' should therefore be recognised as a key factor in delivering Green Infrastructure. See comments on SP13 / SP8 where evidenced viability is specifically referenced within those policies – this approach is supported.

SP20 – Biodiversity and Ecosystem resilience

The above Policy is in accordance with Chapter 6 PPW. The approach is supported and dovetails with SP19 above.

DNP1 – Special Landscape Areas

DNP1 identified Special Landscape Areas across the Vale.

Fferm Goch is one of the settlements that remains fully within and covered by the Upper and Lower Thaw Valley Special Landscape Area (SLA). It is noted that in such settlements, while there have been amendments to the identified settlement boundary (inclusion of HG4 (4) rural affordable led housing allocation) this has not affected the SLA designation in these areas. (Background Paper 45; Paragraph 1.16 refers).

The location of the small allocated site HG4(4) is nestled within the settlement of Fferm Goch. It is built up on both the northern and southern boundaries, with the main road running along the eastern boundary. There is no unacceptable harm to the SLA of the Upper and Lower Thaw valley.

The allocation of the site for residential development does not give rise to unacceptable harm to the special qualities and characteristics of the SLA, based on LANDMAP information, continues to be preserved.

Document Element: SP16 - CLIMATE CHANGE MITIGATION AND ADAPTATION

Respondent: Ms Lynne Squires [3520]

Summary:

I am concerned that, as drafted, the Plan does not provide enough evidence or practical measures to ensure new development is sustainable and climate resilient. The RLDP is not fully justified, effective, or consistent with national policy on climate change and sustainability.
Key gaps include alignment with carbon reduction targets, enforceable delivery of low carbon travel, energy-efficient homes, sustainable drainage, and climate-resilient
infrastructure.
Without clear policies and enforceable commitments on low-carbon travel, energy-efficient homes, sustainable drainage, and climate-resilient infrastructure, the Plan risks harming both the environment and the wellbeing of communities.
I am worried that the Plan relies too much on people walking, cycling, or using public transport without clear plans to make this happen.
There is also little information on whether new homes will be energy-efficient or if systems to manage rainfall and reduce flooding (like sustainable drainage) will be properly installed and maintained.
I want to see clear, practical measures to make low-carbon travel, energy-efficient homes, and safe drainage a reality.
The Plan does not clearly show how new developments or existing infrastructure will be designed to cope with the risks of extreme weather events.
I would like to have assurance that any buildings, roads, drainage, and community facilities will be climate-resilient and protect people's health and safety.

Full text:

1. Air Quality and Traffic
The RLDP has not been supported by a sufficiently robust, transparent and locally specific
evidence base in relation to traffic capacity, mitigation, air quality and sustainable transport delivery in Dinas Powys.
The Plan relies on high-level assumptions rather than detailed assessments of known local constraints, and it does not provide adequate certainty that necessary mitigation and sustainable transport measures will be delivered, funded and implemented in a timely manner.
As a result, there is a significant risk that the cumulative impacts of development will lead to increased congestion, adverse effects on air quality and a deterioration in the quality of life for existing and future residents.
Until these evidence gaps are addressed and clear, enforceable measures are put in place, the RLDP cannot be considered fully justified, effective or consistent with national policy in its application to Dinas Powys.
Traffic Capacity
I am concerned that the RLDP has not demonstrated that the existing road network in Dinas Powys can cope with the scale of development proposed. Roads and junctions within the village already experience significant congestion both at peak times and throughout the day, particularly along Cardiff Road, St Andrew's Road and the A4055.
The Plan does not provide clear or accessible evidence, such as detailed junction capacity assessments or peak-hour traffic modelling, to show that additional development will not worsen these problems. Without this information, I cannot be confident that growth can be accommodated without unacceptable impacts on daily travel, safety and quality of life.
Questions: Can the Council confirm that the existing highway network in Dinas Powys can accommodate the growth proposed in the RLDP without causing unacceptable congestion?
Can the Council provide evidence including junction capacity assessments and peak hour traffic modelling?
Mitigation Measures
Where development in Dinas Powys is likely to increase traffic, I am concerned that the RLDP does not clearly explain how congestion will be mitigated.
Mitigation measures are described in general terms, but there is little clarity on what will actually be delivered, when it will happen, or who will pay for it. There is also no clear reassurance that mitigation will be in place before development

takes place.
I am concerned that traffic conditions could deteriorate further if development proceeds without effective safeguards.
Questions: For any development allocations in Dinas Powys that may impact congestion, what measures are proposed to mitigate these effects?
Are these measures fully funded, deliverable, and enforceable?
Air Quality Impacts
Increased traffic has clear implications for local air quality, particularly in residential areas and near schools and community facilities. I am concerned that the RLDP has not clearly assessed how the proposed growth in Dinas Powys will affect air quality, especially when the cumulative impact of multiple developments is considered.
The Plan does not explain how compliance with statutory air quality standards will be monitored or maintained as traffic levels increase. This creates significant uncertainty about potential impacts on public health and the local environment.
Questions: Has the Council assessed the likely impact of the proposed growth on local air quality in Dinas Powys, including cumulative effects?
How will the Plan ensure compliance with statutory air quality standards?
Sustainable Transport
While the RLDP refers to encouraging walking, cycling and public transport, I am not convinced that realistic alternatives to car/motor use will be delivered in Dinas Powys.
There is limited detail on specific improvements, timescales or funding for sustainable transport. Without frequent, reliable public transport and safe, direct walking and cycling routes, it is unlikely that car use will reduce in practice.
As a result, traffic growth and air quality impacts may be greater than the Plan assumes.
Question: How does the Plan/Council intend to ensure that sustainable travel options (walking, cycling, public transport) will be delivered and used to reduce traffic and air quality impacts in Dinas Powys?
Evidence Gaps
Overall, I am concerned that key evidence relating to traffic and air quality in Dinas Powys is either missing or insufficiently detailed. Without clear, locally specific assessments, it is difficult to understand how the Council can be confident that the Plan is sound or that its impacts on the community are acceptable.
Question: There are limitations in the transport and air quality evidence for Dinas Powys, how does the Council justify that the RLDP remains sound in light of these uncertainties?
2. Flood risk
I am concerned about the Replacement Local Development Plan (RLDP) and its impact on Dinas Powys, in relation to flood risk.
Dinas Powys already experiences surface water flooding, overloaded drains and pressure on local watercourses. Any new development must be proven to be safe and must not make these problems worse. At present, the RLDP does not give me confidence that this has been properly addressed.
Flood Risk Has Not Been Properly Resolved
Welsh Government policy (TAN 15) says new development must be safe from flooding for its lifetime and that flood risk should be dealt with when the Plan is written, not later on.
The RLDP appears to allocate sites that are affected by flood risk without clearly showing how they can be made safe. Instead, it relies on the idea that solutions will be worked out later when planning applications are submitted. As a resident, this is worrying, as there is no guarantee that those solutions will ever work or be delivered.
Questions: Can the Council explain how allocations within [or affecting] TAN 15 flood risk areas comply with TAN 15's requirement that development be flood-safe for its lifetime, rather than relying on mitigation to be designed later?
Where the Plan relies on mitigation to address flood risk, what evidence demonstrates that such mitigation is deliverable, funded, and capable of implementation within the Plan period?
Is it the Council's position that compliance with TAN 15 can be deferred to the planning application stage, and if so, how does that align with the requirement for strategic flood risk to be resolved at plan-making stage?
Lack of Clear Evidence Behind Flood Assessments
The flood studies supporting the Plan are not easy for a lay person to understand and do not clearly show that the full impact of new development has been properly assessed.
In particular, it is unclear whether:
• The combined effect of multiple new developments has been considered
• The worst-case impacts of climate change and heavier rainfall have been tested
• Flood risk to existing homes and streets has been fully taken into account
Without this information, it is hard to see how the Council can be confident that new development will not increase flooding in Dinas Powys.
Questions: What level of modelling underpins the SFCA, and can the Council confirm whether it assesses downstream and off-site impacts arising from cumulative
development?
Does the SFCA test a 'worst-case' climate change scenario consistent with current Welsh Government guidance, and if not, why not?
How does the SFCA move beyond a desktop exercise to demonstrate that individual allocations are genuinely developable without increasing flood risk elsewhere?
Too Much Reliance on Future Drainage Solutions
The Plan relies heavily on Sustainable Drainage Systems (SuDS) to manage surface water, but there is little evidence showing that these systems can realistically work on all proposed sites.
I am concerned that:
• There may not be enough space on sites for effective drainage
• Water will still end up flowing into already stretched drains and streams

• Long-term maintenance of drainage systems is unclear
If these systems fail or are not properly maintained, flooding problems could become worse over time.
Questions: What evidence does the Plan rely on to show that SuDS can be accommodated on all relevant allocations without loss of developable area or displacement of flood risk?
Has the capacity of receiving watercourses and drainage networks been assessed at a strategic level, or is this assumed to be resolved site-by-site?
How does the Plan address the cumulative impact of multiple SuDS systems discharging into the same catchment?
What mechanisms are proposed to secure long-term maintenance of SuDS, and where is this evidenced in the Plan?
Doubts About Whether Sites Are Truly Deliverable
Some housing numbers in the Plan appear to depend on sites that may only work if major flood prevention measures are put in place, I believe that Dinas Powys is an example of this.
• It is not clear which sites depend on such measures
• There is no clear timetable or funding in place
• There is no backup plan if flood mitigation does not happen
I am concerned that the Plan may be relying on sites that cannot realistically be developed.
Question: Can the Council identify which allocations are dependent on flood mitigation infrastructure, and where the delivery, timing, and funding of that infrastructure are set out?
If mitigation fails to come forward, what contingency does the Plan provide to ensure housing delivery does not rely on undeliverable sites?
How does the Plan demonstrate that housing numbers are not inflated by sites whose flood risk constraints may ultimately prevent development?
Where NRW has expressed concerns or conditions relating to flood risk, how has the Council reflected those concerns in policy or allocations, rather than deferring them to later stages?
Has any NRW advice been departed from, and if so, what is the evidence base justifying that departure?
Climate Change and Long-Term Safety
Flooding is likely to become more frequent and severe due to climate change. The Plan does not clearly show that new development in or around Dinas Powys will remain safe for decades to come, not just during the Plan period.
Residents need reassurance that today's decisions will not create long-term flooding problems for future generations.
Question: How does the Plan ensure resilience to increased rainfall intensity and flood frequency over the full lifetime of development, not just the Plan period itself? Does the Plan assume future flood defences or upgrades, and if so, where are those projects committed and funded?
For these reasons, I believe the RLDP has not properly resolved flood risk issues affecting Dinas Powys, I ask that the Council be required to:
• Properly address flood risk at the plan-making stage, not later
• Remove or review sites where flood risk has not been clearly resolved
• Provide stronger evidence that new development will not increase flooding for existing residents.
Until this is done, the Plan cannot be considered sound.
3. Wastewater Treatment
This objection relates to the proposed level of housing growth in Dinas Powys and whether the existing wastewater and sewerage system can safely and realistically support it.
I am concerned that the RLDP does not provide clear, settlement-specific evidence to show that wastewater treatment works and the local sewer network have enough capacity to accommodate the planned development, either now or within the Plan period.
Without this evidence, the Plan risks placing unacceptable pressure on already constrained infrastructure, increasing the risk of flooding and environmental harm.
Wastewater Treatment Capacity
The RLDP does not clearly explain whether the wastewater treatment works serving Dinas Powys has sufficient spare capacity to deal with additional development.
In particular, the Plan does not set out:
• how much wastewater the treatment works is currently allowed to treat (its "consented capacity"),
• how much spare capacity is actually available,
• when this information was last assessed, or
• whether this assessment has been formally confirmed by Dŵr Cymru Welsh Water.
Without this basic information, I lack sufficient information to understand whether the existing system is already close to capacity or whether it genuinely has room to cope with new development.
The Plan also does not clearly state how much additional wastewater would be generated by the new housing proposed for Dinas Powys, or how this compares with any available
capacity. This makes it impossible to judge whether the level of growth proposed is realistic.
There is no clear evidence that a Dinas Powys–specific assessment has been carried out. If the Council is relying on broad, county-wide modelling instead, this does not reflect local conditions or known issues within the village.
Sewer Network Constraints & Flood Risk
Many residents are already aware of problems with drainage, surface water, and sewer performance in Dinas Powys, particularly during periods of heavy rainfall.
However, the RLDP does not provide clear evidence on:
• existing sewer surcharging or flooding incidents,
• past or current problems with overloaded sewers, storm overflow activity affecting the area.
There is also no clear explanation of how the combined impact of multiple new development sites in Dinas Powys has been assessed together, rather than individually. This is especially concerning given the increasing frequency of intense

rainfall linked to climate change.
Dinas Powys has known surface water and flood risk sensitivities, yet the Plan does not convincingly demonstrate that increased wastewater flows will not make flooding worse or lead to pollution of local watercourses.
I am concerned that problems will only become apparent after development has already taken place.
Deliverability & Infrastructure Planning
The RLDP does not identify any specific wastewater or sewerage upgrades needed to support the proposed growth in Dinas Powys.
Where upgrades may be required, the Plan does not explain:
• what infrastructure improvements would be needed,
• how much they would cost,
• who would pay for them, or
• when they would be delivered.
This creates significant uncertainty. I am concerned that development could go ahead before infrastructure is in place, leaving existing communities to deal with the consequences of overloaded systems.
There is also no clear explanation of how infrastructure will be phased to ensure that wastewater capacity is available before new homes are occupied, rather than relying on solutions being found later.
Role of the Statutory Undertaker – Dŵr Cymru Welsh Water
The Plan appears to rely heavily on future discussions with Dŵr Cymru Welsh Water at the planning application stage to resolve wastewater issues.
I am concerned that this approach puts off important decisions that should be made now, during the Plan-making process. National planning policy requires development plans to be based on a clear understanding of infrastructure capacity, not assumptions that problems can be fixed later.
Without clear, written confirmation from Dŵr Cymru Welsh Water that the proposed level of growth in Dinas Powys can be accommodated, I believe the Plan lacks the certainty needed to be considered sound.
Soundness & Policy Compliance
Because the RLDP does not clearly demonstrate that wastewater infrastructure:
• is available,
• can be upgraded in time, and
• has a realistic and funded delivery plan,
I do not believe the Plan is effective, which is a key test of soundness.
The Plan also appears to conflict with Planning Policy Wales, which states that development should be directed to locations where infrastructure is already in place or can be secured.
Deferring wastewater solutions to a later stage does not meet this requirement.
If wastewater capacity problems cannot be resolved within the Plan period, I question why the level of development proposed for Dinas Powys has not been reduced to reflect real infrastructure constraints.
4. Green Space & Green Infrastructure
For the reasons set out below I consider that the RLDP is unsound in relation to green space and green infrastructure in Dinas Powys because it:
• Fails to justify the loss of existing green space or show that mitigation will be delivered;
• Lacks clear evidence on the quantity, quality, and accessibility of green space;
• Does not safeguard the integrity of green infrastructure networks;
• Provides no mechanisms to ensure timely delivery of green space alongside new development;
• Does not demonstrate that alternatives were properly considered through the Sustainability Appraisal.
Until these issues are addressed, there is no clear basis to conclude that the proposed growth in Dinas Powys can be accommodated without unacceptable impacts on local green spaces and the wider environment.
I urge the Council to carefully consider these concerns and provide further evidence or modifications to ensure that the Plan is effective, sustainable, and compliant with national planning policy
Protection of Existing Green Space
The RLDP does not clearly explain why any existing green spaces in Dinas Powys might be lost, or whether the loss is unavoidable.
I am concerned that the Plan does not demonstrate:
• that all alternatives to protect existing green space have been considered, or
• that any replacement or mitigation will be provided within or near the village.
Without this evidence, there is no assurance that valued local green spaces, which are important for recreation, biodiversity, and the character of the settlement, will be preserved. This is a serious omission that makes the Plan unsound in this respect.
Question: How does the Plan justify the loss of any existing green spaces in Dinas Powys? Has an assessment been carried out demonstrating that loss is unavoidable, and that adequate replacement or mitigation will be provided within or near the settlement?
Quantity, Quality, and Accessibility of Green Space
The RLDP does not provide clear, settlement-specific information about the amount, quality, or accessibility of green space for Dinas Powys residents.
It is unclear whether the standards being applied:
• meet national policy requirements,
• reflect the needs of the local population, or
• will be sufficient to support an increased population from new housing.
Without clear evidence, I cannot be confident that new development will maintain adequate recreational and amenity space for all residents.

Question: What evidence supports the quantity, quality, and accessibility standards for green space in Dinas Powys? How do these standards compare with national policy and the needs of the local population?
Green Infrastructure Network Integrity
The Plan does not explain how green infrastructure networks—including wildlife corridors, footpaths, cycleways, and recreational routes—will remain coherent and functional as new development comes forward.
There is a real risk that the proposed growth could fragment these networks, reducing connectivity for wildlife and limiting access to recreational spaces. I am concerned that the Plan does not set out measures to prevent these negative impacts.
• Question: How does the Plan ensure that green infrastructure networks in Dinas Powys, including wildlife corridors, footpaths, and recreational routes, remain coherent and functional despite new development?
Delivery and Implementation
The RLDP does not make it clear how green space provision will be delivered at the same time as development, rather than being left to later planning agreements or discretionary decisions.
Without clear delivery mechanisms, there is no certainty that new or replacement green space will be provided when needed.
This creates risk that residents will face reduced access to recreation, wildlife habitats, and open space for years after new homes are built.
• Question: What mechanisms are in place to ensure that green space provision in Dinas Powys will be delivered alongside development, rather than deferred to later discretionary planning stages?
Consideration in the Sustainability Appraisal
It is not evident that the Plan's Sustainability Appraisal has fully assessed the impact of proposed development on green space and green infrastructure in Dinas Powys.
There is no clear explanation of whether alternative development options were considered that would reduce the loss or fragmentation of green spaces, and if so, why these
alternatives were rejected.
I am concerned that the lack of settlement-specific analysis weakens the credibility of the Plan and its ability to safeguard local environmental assets.
Question: Has the Integrated Sustainability Appraisal fully considered the impacts of proposed development on green space and green infrastructure in Dinas Powys?
Were alternatives considered that would reduce loss or fragmentation, and if so, why were they rejected?
5. Health & Wellbeing
Alignment with RLDP Policy SP6
The RLDP does not clearly demonstrate how proposed allocations and policies affecting Dinas Powys will achieve the health and well-being objectives set out in Policy SP6.
In particular, the Plan does not provide evidence that new development will:
• maintain or enhance access to green spaces,
• support active travel (walking, cycling, public transport), or
• deliver inclusive and safe public environments for all residents.
Without clear mechanisms to ensure these outcomes, it is unclear how the Plan will contribute to the creation of healthy, inclusive communities in line with its own strategic policy.
Question: How does the Plan ensure that proposed allocations and policies affecting Dinas Powys will deliver the health and well-being objectives set out in Policy SP6, including access to green space, active travel, and inclusive public environments?
Alignment with the Vale of Glamorgan Well-Being Plan
The RLDP does not clearly show how its proposals for Dinas Powys are consistent with the objectives of the Vale of Glamorgan Public Services Board Well-Being Plan, particularly in relation to:
• physical and mental health,
• health equity, and
• equitable access to green and recreational spaces.
There is no settlement-specific evidence demonstrating that new housing or other
allocations will support these well-being objectives, leaving a gap in the Plan's justification and effectiveness.
Question: How does the RLDP demonstrate consistency with the Vale of Glamorgan Public Services Board Well-Being Plan, particularly the objectives relating to physical and mental health, health equity, and access to green spaces in Dinas Powys?
Evidence for Health and Well-Being Outcomes
The Plan does not provide sufficient evidence that its spatial strategy, site allocations, or policies will produce measurable improvements in health outcomes for residents of Dinas Powys, particularly in areas where health needs are identified.
Without this evidence, it is impossible to determine whether the proposed development will genuinely support improved physical or mental health, reduce health inequalities, or provide accessible, high-quality spaces for recreation and social interaction.
Question: What evidence demonstrates that the Plan's spatial strategy, allocations, and policies in Dinas Powys will produce measurable improvements in health outcomes for residents, especially in areas of identified need?
Integration with the Sustainability Appraisal
The RLDP's Integrated Sustainability Appraisal (ISA) does not clearly demonstrate how health and well-being impacts have been addressed specifically for Dinas Powys.
There is limited information on:
• mitigation or enhancement measures to support healthy communities,

• the contribution of proposed allocations to active travel networks, or
• ways in which new development will improve access to green infrastructure or inclusive public spaces.
Without settlement-specific consideration, the ISA does not provide sufficient assurance that health and well-being outcomes will be achieved, nor does it demonstrate compliance with national planning policy on creating healthy and sustainable places.
Question: How has the Integrated Sustainability Appraisal addressed health and well-being impacts specifically for Dinas Powys, and what mitigation or enhancement measures are proposed to ensure alignment with national planning policy on healthy places?
6. Education & Medical Services
I believe that the RLDP is unsound in relation to education and healthcare services in Dinas Powys
Education Provision
The RLDP does not provide clear, settlement-specific evidence regarding school capacity in Dinas Powys.
My key concerns include:
• There is no demonstration that local primary and secondary schools have enough places for the children who will arise from the proposed housing.
• It is unclear whether the Plan relies on borough-wide estimates, which may overlook local pressures and result in shortages at specific schools.
• The Plan does not identify any specific improvements to school infrastructure (such as new classrooms, extensions, or new schools), nor does it set out funding, timing, or delivery mechanisms.
Without these assurances, there is no certainty that school places will be available before families move in, which could lead to overcrowding and diminished educational standards.
I am concerned that, in the absence of firm evidence and infrastructure commitments, the proposed scale of housing growth in Dinas Powys may be unsustainable and undeliverable.
Healthcare / Medical Services
The RLDP does not demonstrate that local healthcare services—including GP practices, dental services, and community health facilities—can accommodate the increased population.
My specific concerns include:
• There is no settlement-specific assessment of current or future healthcare capacity in Dinas Powys.
• The Plan does not indicate whether additional or expanded healthcare facilities will be provided, nor how this would be funded, phased, or secured alongside new housing.
• Without clear planning, the proposed growth could reduce access to essential health services for both existing and new residents, impacting physical and
mental health outcomes.
I am particularly concerned that increased demand without confirmed provision could lead to longer waiting times, reduced appointments, and pressure on local medical staff,
undermining the well-being of the community.
These gaps mean the Plan is not effective, justified, or consistent with national planning policy, which requires growth to be planned where infrastructure is available or can be secured.
7. Affordable Housing Allocation
I support the principle of providing affordable homes for local residents, especially young families, first-time buyers, and key workers who cannot afford market rates.
Well-planned affordable housing can help maintain a mixed and vibrant community and retain younger residents.
Affordable homes in Dinas Powys could reduce commuting pressures by allowing residents to live and work locally.
However, the RLDP does not provide clear evidence for how many affordable homes are needed in Dinas Powys or what types of homes are required for different groups (families, older residents, low-income households).
There is insufficient information about how and when affordable homes will actually be delivered alongside market housing.
Without clear delivery plans or safeguards, affordable homes may not remain genuinely affordable in the long term.
Concentrated or poorly planned affordable housing may put pressure on local schools, healthcare, transport, and green spaces, which are already constrained in Dinas Powys.
The Plan does not explain how affordable housing will be integrated with market housing to create sustainable, mixed communities rather than segregation or social imbalance.
Because of the lack of clear evidence, delivery mechanisms, and mitigation for potential negative impacts, I do not consider the Plan sound in terms of affordable housing in Dinas Powys.

8. Community Cohesion & Social Integration
I am concerned that the Plan, as currently drafted, does not ensure new growth will support strong, healthy, and inclusive communities.
Until the Council provides clear evidence and enforceable measures addressing community cohesion, housing mix, and health impacts, I cannot have confidence that the Plan is sustainable or fair.
Impact on Community Cohesion and Social Integration
I am concerned that the Plan does not explain how new housing and growth will integrate with existing communities.
There is a risk that rapid development could strain local services, schools, and community spaces, and make it harder for neighbours to get to know one another.
I would like to see evidence that social infrastructure will keep pace with population growth and that communities will remain inclusive and connected.
Risk of Over-Concentration of Affordable Housing
I am concerned that clusters of affordable housing in certain areas could lead to pockets of social exclusion or limit

access to opportunities.
The Plan does not explain how it will ensure a good mix of housing types and tenures across the Vale.
I ask that the Council provide evidence that housing allocations will support socially balanced, inclusive communities.
Impacts on Mental and Physical Wellbeing
I am concerned about increased traffic, air pollution, noise, and the loss of green spaces
affecting health and wellbeing. The Plan does not provide clear commitments to protect or improve accessible green spaces or safe walking and cycling routes.
I would like to see evidence that the Plan has assessed the health impacts of growth and will take steps to mitigate them.
9. Climate Change & Sustainability
I am concerned that, as drafted, the Plan does not provide enough evidence or practical measures to ensure new development is sustainable and climate resilient. The RLDP is not fully justified, effective, or consistent with national policy on climate change and sustainability.
Key gaps include alignment with carbon reduction targets, enforceable delivery of low-carbon travel, energy-efficient homes, sustainable drainage, and climate-resilient infrastructure.
Without clear policies and enforceable commitments on low-carbon travel, energy-efficient homes, sustainable drainage, and climate-resilient infrastructure, the Plan risks harming both the environment and the wellbeing of communities.
Alignment with Welsh Government's Carbon Reduction Targets
I am concerned that the Plan does not explain clearly how new homes, workplaces, and other development will help Wales meet its legally binding carbon reduction targets.
Without this, there is a risk that growth in the Vale could increase emissions rather than reduce them. I would like to see evidence showing how this (and each) new development contributes to lowering carbon emissions.
Promotion of Low-Carbon Travel, Energy-Efficient Homes, and Sustainable Drainage
I am worried that the Plan relies too much on people walking, cycling, or using public transport without clear plans to make this happen.
There is also little information on whether new homes will be energy-efficient or if systems to manage rainfall and reduce flooding (like sustainable drainage) will be properly installed and maintained.
I want to see clear, practical measures to make low-carbon travel, energy-efficient homes, and safe drainage a reality.
Resilience of Infrastructure to Extreme Weather Events
I am very concerned about the impacts of extreme weather, including flooding, heatwaves, and storms, on roads, utilities, and homes.
The Plan does not clearly show how new developments or existing infrastructure will be designed to cope with these risks.
I would like to have assurance that any buildings, roads, drainage, and community facilities will be climate-resilient and protect people's health and safety.
10. Plan-making Process & Evidence Base
In my view, the RLDP is not fully justified or effective in its current form with respect to plan-making and the evidence base. Key gaps include accessibility and transparency of evidence, consideration of resident and stakeholder feedback, and robust monitoring and review
arrangements.
Without clear and accessible evidence, demonstrated consideration of local feedback, and robust monitoring and review mechanisms, residents cannot be confident that the Plan will be fair, effective, or responsive to changing circumstances.
Clarity, Transparency, and Accessibility of Evidence
The RLDP is not always clear and is not easy to access.
Technical reports, data, and assumptions are often difficult to find or understand, making it hard for residents to see why particular sites or policies were chosen.
The Council should provide accessible summaries and clear explanations so that everyone can understand and comment on the evidence.
Local Consultation and Consideration of Resident Feedback
I am concerned that residents' views may not have been fully taken into account in shaping the Plan.
It is unclear how consultation responses have influenced allocation decisions or policy wording.
I seek assurance that feedback from local people and community groups has genuinely informed the Plan, and that future consultations will be inclusive and clearly reported.
Monitoring and Review Mechanisms
The Plan does not clearly explain how progress will be monitored or how changes will be made if things do not go as planned. For example, if housing delivery is slower than expected or infrastructure is delayed, there is little information on how allocations or policies would be adjusted.

Respondent: Mr David Entwistle [3264]

Summary:

I support this policy but do question why such a long period for the initial space heating demand requirements and energy use requirements. The council should be pushing for the higher efficiency standards immediately rather than up until 2030. It feels like the council is deliberately giving housing developers an opportunity to increase profits and build cheaper less efficient housing by having these dates knowing the vast majority of new housing within the plan is likely to be delivered before 2030.

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Professor Andrew Vincent [920]

Summary:

Net zero building techniques would be a wonderful thing, but have Planning had anything but "vague promises" from Building firms? Are there statutory teeth to deal with defaulting behavior? From everything I have read recently about about such firms in the UK, compared to Europe, there can be a deep reluctance to engage in net zero building techniques. It is seen to eat into their profits. I am sure promises might be made but (as in the recent Barry waterfront developments) unfulfilled promises (and contracts) from such firms often limp along into long expensive legal cases.

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Mr Jonathan Davies [3407]

Summary:

I fully support the ambition of VoGC to address, mitigate and adapt to anthropogenic climate change by applying demand-based metrics to reduce carbon emissions from the built environment. Monmouthshire County Council are advancing similar proposals to Inspection this summer and multiple LAs in England have successfully introduced similar targets, defining space heating demand (SHD) and energy use intensity (EUI) targets as scientifically robust metrics that align with best practice for achieving Net Zero emissions. It has been exhaustively demonstrated that better performing buildings, those with improved (reduced) SHD and EUI, more economically achieve operational Net Zero than those delivered to business as usual (BAU) and deliver considerable lifecycle cost savings for occupants. The Building Regulations methodology through the standard assessment procedure (SAP) is deeply flawed and inconsistent with efficiently or effectively achieving Net Zero (as the 2021 report for the Department for Business, Energy and Industrial Strategy "Making SAP and RdSAP 11 fit for Net Zero" concluded) and the replacement Home Energy Model (HEM) has not been demonstrated to be any better aligned. In the context of the declared Climate Emergency, action by the Senedd and Westminster is not moving fast enough to deliver our legal commitments to decarbonise.

Document Element: CC1 - Residential Operational Net Zero Carbon Development
Respondent: HBF (Mr Mark Harris) [538]

Summary:

Delete the policy and instead allow Building Regulations to set the way homes are constructed and their energy efficiency through Part L & F.

If the policy is not fully removed, amend it to remove the energy use intensity element.

New higher Building Regulation standards will be published before this plan's adoption, so they will apply to many of the homes delivered by the plan.

Full text:

The HBF objects to this policy, as it considers that controlling how a property is built should be achieved through Building Regulations, as it has historically been the case.

This is a position in part is supported by the Council in para 6.60 of BP42 Viability Assessment, where it states:

'As discussed in BP33A Net Zero Buildings, ... then consideration should be given to whether it remains appropriate to have a planning policy that is broadly similar, as it would be more desirable to deal with the relevant assessments through the Building Control process rather than the planning system'

Such policies are also creating inconsistent standards across LPAs, as each is choosing slightly different standards and ways to measure compliance, making it harder to deliver new homes at scale.

In particular, concern is raised about the operational element of this policy and the future monitoring. This type of assessment relies on assumptions and averages, and is likely to change over time. This makes it almost impossible to monitor or enforce, and is therefore not considered appropriate as a planning policy.

The Welsh Government recently confirmed that the new Part L & F Building Regulations will come into force in the spring/summer of 2026. This means that this higher standard will apply to the housing allocations in this plan.

HBF notes that this is an issue which has also arisen in Local Plans in England; where it appears that the Government has decided to clarify the position in its latest consultation (Dec 2025) on the NPPF, where it states:

'Streamlining local standards. - We want to promote certainty for applicants and speed up local plan production by limiting quantitative standards in development plans to only those specific issues where local variation is justified. We also want to limit duplication of matters which are covered by the Building Regulations – other than where there is the existing ability to use 'optional technical standards.'

Change suggested by respondent:

Delete or amend the policy in accordance with the comments above.

6047 Object

Document Element: CC1 - Residential Operational Net Zero Carbon Development
Respondent: Barratt Redrow Homes [2669]
Agent: Lichfields

Summary:

Policy CC1 requires an Energy Report at outline planning stage. It would not be possible to provide all of the information required to demonstrate compliance with Policy CC1 at the outline planning application stage and that the information requirements for Policy CC1 can only be expected to be provided at detailed application stage. Space heating demand should remain within Building Regulations, not local policy, to avoid inconsistency. Clarification is needed on measurement points and whether Policy CC1 applies only to regulated energy use. Flexibility should be included if Building Regulations change. Impact on development viability, including AH must be assessed.

Full text:

As an industry leader in delivering high quality and energy efficient homes, BDWR is supportive of the overall aspirations of Policy CC1. However, it is observed that the wording of Policy CC1 requires all proposals for one or more new dwellings to demonstrate policy compliance through an Energy Report. It is considered that it would not be possible to provide all of the information required to demonstrate compliance with Policy CC1 at the outline planning application stage and that the information requirements for Policy CC1 can only be expected to be provided at detailed (reserved matters/full) planning application stage.

Welsh Government consulted on changes Building Regulation relating to Part L (Conservation of Fuel and Power), Part O (Overheating) and Part F (Ventilation) for dwellings and non-domestic buildings in August 2025. It is considered that space heating demand should remain within the remit of Building Regulations control as additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy and legislation.

In addition, there needs to be clarity on where the measurement point begins (for example, if the guidance were to require developers to take the heating demand before the efficiency of an air source heat pump is factored into the heating load, then the efficiency of the heating pump could not be included in the calculation of demand). Policy CC1 should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This would also ensure consistency with Building Regulations methodology.

Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.

Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.

Change suggested by respondent:

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

As such, Policy CC1 should be amended as follows to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness:

"Proposals for one or more new dwellings will be required to achieve net-zero carbon operational emissions by:
1 Following the principles of the Energy Hierarchy for Planning, prioritising a reduction in energy demand and improved energy efficiency.
2 Achieving the following standards in individual dwellings as calculated using an identified energy performance model:
Developments that secure planning permission from RLDP adoption to 31st March 2030
iii. Space heating demand less than or equal to 40kWh/m2/year;
iv. Energy use intensity less than or equal to 75kWh/m2/year;

and developments that secure planning permission from 1st April 2030 onwards
iii. Space heating demand less than or equal to 15kWh/m2/year;
iv. Energy use intensity less than or equal to 40kWh/m2/year; and

3 Providing on-site renewable electricity generation with an output equivalent to at least the annual energy consumption of the development, as calculated using an energy performance model

Where the use of onsite renewable energy generation to match total energy consumption is demonstrated to not be technically feasible the following hierarchy should be followed:
• Renewable energy generation should be maximised as much as possible; and/or
• Connection made to an existing or proposed low carbon district energy network (in compliance with Policy sp1); or
• Where this is not possible the residual energy (the amount by which total energy demand exceeds the renewable energy generation) is to be offset by a contribution to the Council's Project Zero fund as far as economic viability allows.

Compliance will be evidenced within an Energy Report."

Sound: No

6080 Object

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Barratt Redrow Homes [2669]

Agent: Lichfields

Summary:

Policy CC1 requires an Energy Report at outline planning stage. It would not be possible to provide all of the information required to demonstrate compliance with Policy CC1 at the outline planning application stage and that the information requirements for Policy CC1 can only be expected to be provided at detailed application stage. Space heating demand should remain within Building Regulations, not local policy, to avoid inconsistency. Clarification is needed on measurement points and whether Policy CC1 applies only to regulated energy use. Flexibility should be included if Building Regulations change. Impact on development viability, including AH must be assessed.

Full text:

As an industry leader in delivering high quality and energy efficient homes, BDWR is supportive of the overall aspirations of Policy CC1. However, it is observed that the wording of Policy CC1 requires all proposals for one or more new dwellings to demonstrate policy compliance through an Energy Report. It is considered that it would not be possible to provide all of the information required to demonstrate compliance with Policy CC1 at the outline planning application stage and that the information requirements for Policy CC1 can only be expected to be provided at detailed (reserved matters/full) planning application stage.

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Welsh Government consulted on changes Building Regulation relating to Part L (Conservation of Fuel and Power), Part O (Overheating) and Part F (Ventilation) for dwellings and non-domestic buildings in August 2025. It is considered that space heating demand should remain within the remit of Building Regulations control as additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy and legislation.

In addition, there needs to be clarity on where the measurement point begins (for example, if the guidance were to require developers to take the heating demand before the efficiency of an air source heat pump is factored into the heating load, then the efficiency of the heating pump could not be included in the calculation of demand). Policy CC1 should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This would also ensure consistency with Building Regulations methodology.

Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.

Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.

Change suggested by respondent:

As such, Policy CC1 should be amended as follows to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness:

"Proposals for one or more new dwellings will be required to achieve net-zero carbon operational emissions by:
1 Following the principles of the Energy Hierarchy for Planning, prioritising a reduction in energy demand and improved energy efficiency.
2 Achieving the following standards in individual dwellings as calculated using an identified energy performance model:
Developments that secure planning permission from RLDP adoption to 31st March 2030
iii. Space heating demand less than or equal to 40kWh/m2/year;
iv. Energy use intensity less than or equal to 75kWh/m2/year;

and developments that secure planning permission from 1st April 2030 onwards
iii. Space heating demand less than or equal to 15kWh/m2/year;
iv. Energy use intensity less than or equal to 40kWh/m2/year; and

3 Providing on-site renewable electricity generation with an output equivalent to at least the annual energy consumption of the development, as calculated using an energy performance model

Where the use of onsite renewable energy generation to match total energy consumption is demonstrated to not be technically feasible the following hierarchy should be followed:
• Renewable energy generation should be maximised as much as possible; and/or
• Connection made to an existing or proposed low carbon district energy network (in compliance with Policy sp1); or
• Where this is not possible the residual energy (the amount by which total energy demand exceeds the renewable energy generation) is to be offset by a contribution to the Council's Project Zero fund as far as economic viability allows.

Compliance will be evidenced within an Energy Report."

6600 Comment

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Mr David Barton [2683]

Summary:

Embodied energy and embodied carbon- must remain a central priority and so influence new construction to readopt Traditional Architecture principles as this will be pivotal towards the area's future green credentials as outlined in many existing auxiliary planning documents approved presently with Carbon Studies taken of existing architecture, notably buildings saved from demolition.

Full text:

Context:
This consultation feedback submission has been produced by Mr. David Richard Barton, also known as Community Campaigner David Barton who is promoting both the existing Built Historic Environment and Traditional Vernacular Architecture (TVA)/ Traditional Architecture (TA) as a key feature across UK and Ireland-wide Local Authorities and associated Planning Departments at all tiers of Local, Regional and Central Government.
This universal consultation therefore acts as an official Representation at all and any stage of official area UK Planning Consultations- Preliminary Scoping Documents, Named Stages of the Local Plan, Conservation Area Appraisals and Supplementary Planning Documents (SPDs), primarily regarding Design Codes.
Representations are being made by Mr. Barton as part of his ongoing work to champion the key stakeholders at various key areas old and new with a view to supporting their economic growth through the merits of High-Quality style Conservation with the hope of encouraging wider constructive and restorative support through positive and constructive working.
It is submitted that TVA should play a key part in any and all policy moving forwards on the grounds of conferring practical benefits be these periodic maintenance, their perceived support from the public, their invaluable contribution to achieving Climate Crisis Targets set local, nationally and internationally alongside their overall cost-effectiveness to key stakeholders alike in terms of Planning and sourcing of raw materials.
*One primary document that should be considered with significance especially alongside my own representation is a written academic account of the actual practicalities associated with Traditional Architecture from a leading expert in their field.i.) Not only does this in-depth analysis provide an in-depth take on the widely assorted merits of this type of Architecture but it fully corroborates my case made across all sections typically found in one of the consultations highlighted above.
Furthermore, my representations to date and contained herein this document are duly supported by the Founder and Director of The Institute for Traditional Architectureii.) who has identified and recognised my own contribution(s) to communities up and down the Sefton Borough. This is an internationally acclaimed organisation which periodically works with other leading agencies and organisations to bring about effective positive change.
Outlined throughout Submission are responses to existing Consultations which set out why I consider amendments to

existing Planning Policy documents are necessary to ensure the best possible outcomes.
References to supporting documents are contained in the indented blue numbering.
This Submission has been prepared for UK and Ireland-wide Local Authorities in the hope that it may serve as an umbrella representation by Mr. Barton. This does not prejudice his ability to also comment on live stages of any one Consultation, merely providing the ability to be put in touch directly with any one Local Authority in receipt of this Representation with the prospect of also taking part in any version(s) of Consultations begin ran by said Local Authorities. If there are future consultations, especially regarding Design Codes and SPDs relating to this across both designated and non-designated heritage assets then it is hoped that these are duly provided to Community Campaigner David Barton.
Mr. Barton has cited material references and sources from his previous Representation to the Bootle Area Action Plan Consultation (2021-2026) that align with his existing and ongoing points which he would like to raise in parallel with other Local Authorities. Where a more detailed discussion with leading sources, such as Architects and Academics may prove conducive with these Councils then Mr. Barton would be delighted to discuss this further.
Community Campaigner David Barton:
Community Campaigner David Barton is a Heritage Campaigner of over 11 years' experience who has championed and led a number of successful campaigns to promote TVA in modern-day life. His dual mandate is to provide effective (alternative) use of historical buildings encompassing a full restoration alongside achieving the mainstream construction of new classical architecture on numerous economic, environmental and ecological grounds that align with existing policy set out by Central Government covering the UK and increasingly elsewhere across the world.
Having worked with a wide array of residents, businesses and organisations in that time, which has included the full restoration of the Victorian Verandahs on Lord Street, Southport in tandem with the respective key stakeholders and other property owners to prevent demolition of Old Builds across Sefton, Mr. Barton is now hoping to make the process of utilising the built environment to its fullest potential a far simpler one that will enable Bootle to fully reach its maximum potential as a historic town.
SECTION 1: Design Codes:-
1. Design Codes based on TVA should be utilised in preference to Design Guides
2. LAs should establish recurring partnerships with key Consultation Bodies, such as Create Streets and The King's Foundation, etc who specialise in getting through to a huge swathe of grassroots members of the public with tried and tested previous experience in Local Plans, such as Lichfield, etc.
3. Non-demolition of historic buildings prior to the 1950s must be made policy or adhered to as part of LCC's commitment to combatting the Climate Crisis through sequestering carbon in its Old Builds.
4. LAs should adopt a Local List of Valued Buildings (Non-designated Heritage Assets), which have been a Government requirement since the policy introduction through the NPPF in 2012. Historic England produced a guide to help Councils in May 2012. Bristol produced an exemplar list in 2015, which is well worth reviewing.
5. Existing Action Plan if present for Designated and Non-designated Heritage Assets needs identifying and/ or establishing (I may support this if invited).
6. Option for people to provide feedback even if out of time for additional documents, such as SPDs or at the discretion of Councils where feedback may be particularly assistive or lead to additional academic and architect guidance. Option for public publishing of feedback should be encouraged with the consultee's consent to encourage wider consultation uptake moving forwards.
7. Era-style Buildings, especially rows of Georgian, Victorian and Edwardian architecture must be faithfully restored, retained and recreated to complement surrounding historic streets that may or may not be classed in official Conservation Areas preventing harsh contrast with newer built housing estates from the 1950s onwards.
8. Where demolition is proposed for 1950s style housing onwards- any new construction must be in the historic building style and local materials to ensure high carbon capacity, quality aesthetic and true blending of the interconnected conurbations of any one area, place or location.
9. Concerted efforts to identify and locate core suppliers for raw materials and specific heritage skills should encourage new uptake of these limited artisan craft skills by new contractors locally based to support the local economy, provide employment, and reduce the cost of product and service in the long-term.
10. Volunteer labouring assemblies should be fully encouraged and supported identifying key individual an group skillsets that can be utilised to protect historic buildings or areas at risk with a view to supporting the construction of new authentic style housing (as and where appropriate) and the reconstruction of demolished prized old buildings beloved by the community, such as community pubs, libraries and community centres.
11. Simplified streamlined Planning Process for key stakeholders either working to authentically restore buildings and/ or build new ones, such as observed with many civic buildings in Budapest Hungary and the Federal University Buildings in the US.
12. Where there have been evolving building styles over years, eg. Combination of one or more: Georgian, Edwardian and Victorian, the style that best promotes the area, ie. One that has the majority era structures left or capacity size requirements as examples should be utilised by house builders, especially where a streetscape may have been annihilated during the World Wars.
SECTION 2: Designated & Non-Designated Heritage Assets:
1. Enhancement of Historic Areas to remove modern street furniture with the integration of classical style timepieces should be encouraged and pursued wherever possible with clear preferred guides set out for each part of the City.
2. Enhancement of Setting with funding grants and financial incentives from all tiers of Government for Private Investors especially those contributing actively towards achieving Net Zero through Embodied Energy/ Carbon Capacity rich measures, i.e. Retention of Old Builds.
3. Archive Pooling of invaluable source material, such as Historic Photographs, Oil Paintings, such as "Memory Lane" featured on InYourArea Magazine to enrich existing material archives.

4. New officialising of Non-Designated Heritage Assets must be actively supported even if informed by the (wider) community thereby providing some possibility of removing these from risk of demolition.
5. Incentives must be provided to those dependable sincere third party investors that take on, maintain and protect said sites against their annihilation from the streetscape with rescue-packages actively promoted and supported once again with a trusted Directory creating goodwill amongst the local community.
6. Opportunity to meet or correspond on Zoom Conference Call regarding key areas, buildings and places at risk where key stakeholders, such as property owners may be better placed to engage in positive and constructive discussion through third parties, such as myself and a trusted panel of experts in their fields and sectors who could enable these people and organisations to maximise their civic heritage, whilst proactively striving to protect more historic buildings from decline and/ or demolition where a strategy package for raising the revenue to do this could be arranged and facilitated.
7. Defining Character Areas- zoning symmetrical parallel construction recommended where distinctive individualised properties remain as checked against authentic archive blueprints. This will ensure high-quality housing for everyone reducing the societal divides between misperceived “good areas” where affluent people reside in historical style properties and less advantaged reside in contemporary ones.
8. Industry should be conserved at former industrial complexes, such as Economic Docks with equivalent sites offering modern-day uses, alongside traditional uses such as export and import of raw materials at places such as Docks and Port encompassing: ICT sector, Green Research & Development, etc.
9. Every effort must be made to reach out to Property Owners, especially Housebuilders that are pursuing demolition of long-beloved buildings, especially those with demonstrable evidence of Holy Worship.
10. Every effort must be made to reach out to Property Owners, especially Housebuilders that are pursuing demolition of landmark buildings, especially those with key links to an area’s founding or history locally.
11. All Powers to monitor, collaborate with existing and/ or new property owners to conserve these buildings should become mandatory with appointed Community Champions for Civic Heritage that area direct link between Local Authorities and said wider key stakeholders to prevent demolition of structures that may be at risk of destruction from vandalism, urban exploration and demolition.
12. Reconstruction Programme harnessing existing limited crafts people’s skillsets to be used as a fundraising vehicle to bring back buildings that may have been demolished to dissuade future demolition as a choice by property owners and by means of expanding these otherwise lost skillsets that are at live risk of becoming extinct from the UK.
13. Checklist of buildings at high risk must be expanded beyond the existing groups and organisations that are saturated with high caseloads, such as SAVE Britain’s Heritage, etc so that dialogue channels can be created and fostered between Community Champions for Civic Heritage.
14. Bespoke-tailored funding packages for Properties at Risk of decline or demolition should be integrated with Local, Regional and Central Government-funding as a means of regional economic output through the return on investment that may support other key grant funding capital infrastructure projects, such as transportation and drainage improvements.
SECTION 3: Conservation Areas:-
1. Alterations for Listed Building Consent must be simplified with additional streamlined testing methodologies, such as proof of legitimate third party support, such as correspondence chains between applicant and Groups, such as The Victorian Society that can assist LAs complete workload much sooner allowing more attention for challenging cases, such as Non-Designated Heritage Assets at live or upcoming risk of demolition by Housebuilders, etc.
2. Highways & Street Furniture should be duly supported across the whole of an area to enhance its historic appeal to the commercial community as much to its indigenous community; as this is supported greatly in equivalent Public Realm Strategy SPDs- where any and all guidance and support must and should be provided, with key at risk projects being an exceptional anecdote that may be cited in future documents or versions of this and other consultations to stimulate economic construction and restoration across other designated Conservation Areas, etc or otherwise.
3. Provide incentives for the return of lost adornments and decorative features, such as roof fixtures like Chimney Stacks once again with an approved contractor directory to make Old Builds practical to own, live and work in the 2020s onwards. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of decorative features must be provided by the Local Council.
4. Permissions for authentic replica and more durable materials, such as reproduction sash windows must be supported to prevent exorbitant high costs through procuring these, limited longevity and economic climates being unstable. This must be assessed on a case by case basis.
5. No more deliberate manipulation and selective misinterpretation of using contemporary modern designs using old-style fabric raw materials, such as stone cladding for new housing where the design and shape clearly undermine the concept of blending within or around a Conservation Area.
6. Compendium of approved and recognised TVA Architects based across the UK with a view to supporting the training in time of more Northern counterparts to reduce cost associated with travel expenses, etc. This will actively reduce the level of demolition applications countering the purpose of this SPD and other live Policy. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of decorative features must be provided by the Local Council.
7. New Conservation Areas should be established covering areas of surviving built historic environment to positively reverse fascia changes to more modern ones.
8. Blue Plaques should be fully supported across as many different Conurbations, especially if Applicants reach out for endorsements.
9. Discretionary Rate Relief should be provided to those proactively support LAs with conserving their respective Conservation Areas through their own resources, skillsets and time as an incentive to others to work alongside the Council positively and constructively.
10. Where long-lost prized buildings are reconstructed whether based in a Conservation Area or not this should confer

discretionary financial support, e.g. Rate Relief for the length of time taken to produce this outcome acknowledging the embodied carbon now contributing positively towards the LA's Climate Change Action Plan Targets.
11. Retention of historic street furniture, such as Lamp Posts adorning high streets or Promenade style streetscapes with collaborate fundraising models utilised from key stakeholders, such as property owners, undisclosed third party investors, Residents' Groups, etc.
12. Retention of historic street furniture, such as Lamp Posts adorning high streets or Promenade style streetscapes with authentic identical reproductions permitted where all options to secure finance have been fully exhausted and/or the existing streetscape is at imminent risk of receiving contemporary replacement street furniture on health and safety grounds, eg. Lap Posts.
SECTION 4: Climate Change:-
1. Pleased to note that LAs broadly acknowledge and grasp this concept therefore the aim should be to increase the net number of carbon-rich Old Builds long-term through support packages that will combat the Climate Crisis, provide economic benefit and improve Conservation in a pioneering fashion that may draw wider funding opportunities for the area.
2. Retrofit Ventilation is a key point that should warrant future new construction utilising higher ceilings through the reconstruction of Old Builds outfitted for the modern day with retrofitted energy supplies, etc that will also serve to break down societal dives regarding perceived good and bad areas where streetscapes are harmonious yet distinctly unique in beauty like any one Conservation Area.
3. Embodied energy and embodied carbon- must remain a central priority and so influence new construction to readopt TVA principles as this will be pivotal towards the area's future green credentials as outlined in many existing auxiliary planning documents approved presently with Carbon Studies taken of existing architecture, notably buildings saved from demolition.
4. A brick by brick case study of as many buildings as possible may warrant invitation of national and international academic institutions to undertake a regional or national Carbon Study further justifying the retention of prized Old Builds elsewhere across the area, region and the UK.
5. Sustainable Materials- an approved contractor directory that could readily advise and source the necessary raw materials with realistically reduced costs substantially again deterring potential demolition-driven applicants from consuming workload time of the Planning Department. If a Directory cannot be provided then specific wording and guides on esoteric restoration and new traditional building styles that would see modern-day use of sustainable materials must be provided by the Local Council.
6. Biodiversity- maximise greenery along all arterial roads ad commuter routes with dense tree planting and the introduction of hedgerows and wherever possible financial incentives to get more private property owners on side.
7. Flooding Defences- existing and prospective hotspot areas should be clearly identified for emergency grant funding whereby Local Authorities, especially across a region may agree with the respective Government Department to distribute emergency flooding to prevent costly consequential recurrent repairs.
8. Transportation using arterial roads and commuter routes (Motorways and Railways) should prioritise linking each end of a Local Government sphere with the surrounding Local Government spheres, such as Southport at the very northern tip of Merseyside where transportation links are much weaker with Lancashire in the north and east than with the rest of Merseyside to the south.
9. Coastlines should be reclassified as SSSIs, especially where the economic potential is not being fully realised, such as Coastal Towns with underused Beaches, such as Southport in Sefton as one example for other LAs.
10. Financial Incentives for the demolition of Carbon-poor Glass Towers and contemporary construction should be utilised to restore the skylines across any one area whilst providing better mathematical application of the space for residential and commercial use, such as larger tenement buildings or the original streetscape reinstated yet designated specifically for housing where there may be a deficit.
SECTION 5: Historic Buildings:-
1. Create a Designated AND a Non-Designated Heritage Asset List, such as AHV whereby existing buildings and those that may yet return can be logged and recorded to combat the Climate Crisis whilst making heritage work for LAs in modern day with attractive locations timeless for everyone to appreciate enhancing the investor appeal, all-round interest and acknowledging the industrial pioneering legacy of the City.
2. Clearance of vegetation along the Railway Lines alongside other equivalent parts of the Line to eradicate the perceived neglected aesthetic.
3. Exception Areas, such as those at risk or recently restored have the real potential for wider grant funding for ambitious projects out of the realm necessarily of undisclosed third party investors supporting Property Owners, therefore all and any support in reaching these person(s) will greatly contribute to all possible tangible success in the interim period.
4. Providing key guidance, such as agreed in-keeping historic street furniture, such as Cast Iron Lamp Posts, Bins, Planters approved upon inspection of historic photographs, agreed installation and where appropriate maintenance by the LA will ensure the iterative success of this transferring to other Conservation Areas, etc.
5. Scheme to rebuild and reconstruct long-lost buildings, prioritising vacant sites that could adapt some mixed use with residential accommodation and commercial application thereby supporting Climate Action, creating employment and recordable success through placing of necessary economic drivers, such as offices for Technology Sector if original use cannot be sourced in sufficient time simultaneously meeting housing targets.
6. Archive Blueprints for historic conurbations that have suffered architecturally over time through building conversions, demolitions, etc should be provided to key stakeholders, if necessary with a printing charge available for official spiral hard copy version to view detailed historic plans covering layouts, etc.
7. Those people and organisations that have either/ both maintained their properties well over the years or may wish to provide additional support to others, such as restorative support, archive blueprint guidance, etc should be eligible for discretionary reductions by the Council across various property taxes where they may be suffering hardship or through

personal circumstances.
8. “Newer” style housing with true authentic rhythm, such as Suburban style faux Tudor fascia frontages with red clay tile pitched roofs and terracotta design windows (tile hung walls) are a good compromise whereupon finance and scheduling may otherwise adversely impact on housing settlements.
9. Fascia Frontage details should be reinstated whether in a Conservation Area or not, especially where approval has been granted to rebuild an entire house using breeze block to produce a stereotypical black, white and grey dwelling out of place.
10. LAs should work closely with Foundries to procure raw materials and building services in the event of harnessing their own Contractor Firm(s) in-house that could work cross-authority to make net savings whilst ensuring particular new housing neighbourhoods conform to an appropriate style.
11. Modern “Carbuncle” extensions should not be permitted at any one area- instead an authentic style addition may be used to retain blending.
12. Discretionary financial support packages to assist House Builders choosing the traditional vernacular route should be considered and utilised where it can be proven that this third party will restore the historic streetscape yet making it applicable or modern day requirements- residential or commercial. This may be especially so where they are able to help others prevent the demolition of a prized Old Build built before the 1950s.
SECTION 6: Traditional Vernacular Architecture:-
1. Provide a directory of approved and trusted Conservation Specialist Contractors- this will be key for repairs and maintenance reducing costs for all parties, expediting the physical process of regeneration and smoothen planning work schedules so that finer detail may be considered on priority cases or those that may be at risk of consequential repair, such as Places of Worship and detached Buildings with flat roofs, etc at higher risk of damage than customary dwellings.
2. These same people should be readily contactable for new construction
3. Encourage smart building methods and use of TVA as meticulously explained in this SPD outlining “Breathing” Solid Wall Construction using older style materials thereby reducing maintenance cost which combined with the approved contractor directory will further drive down costs, time and effort for everyone.
4. Alterations- must introduce a simplified listed building consent form and application process that is streamlined encouraging better maintenance of Old Builds and reducing the rising propensity of builders to allow buildings to deteriorate, such as the Historic Pub that had to be rebuilt in Kilburn, London post 2015.
5. Provide specialist Heritage Arts & Craft Skills Programmes that anyone can learn and use so that these high cost tasks can eventually stabilise in price making them more affordable and available to those that don’t have the time to do this themselves or may be risk averse even.
6. Extensions- there must be a proactive emphasis on in-keeping structural fabric to prevent future errors, such as the Municipal Building depicted in the SPD being replicated again thereby harming the Conservation value.
7. New Housing Estates should adopt historical archival blueprints, ie. A Georgian, Victorian or Edwardian layout with the likeliest period architecture utilised where this area remained greenbelt until the 1950s.
8. Area Expansion of housing must revert to traditional timeless designs that confer many practical advantages over modern styles that are harder to maintain are timeless with regard to dating and ensure a more evenly distributed community atmosphere in the long-term future.
9. Infrastructure should be appropriately considered for existing and new areas so that no one area is at risk of becoming congested through traffic for a particular commodity, such as Schools, Doctor Practice, Dental Practice, etc.
10. Site Layouts should complement the historic layout with a view to Post 1950s contemporary Architecture out of place being one day demolished to reinstate Long-lost beloved buildings from before the World Wars that could blossom economically today.
11. Building Form shouldn’t permit for dated modern structures that delineate and essentially divide communities between the old and new parts of any one location.
12. Façade Design mustn’t be compromised for contemporary architecture, especially in view of coveted Heritage Status for any one area being at risk of being lost if said contemporary architecture is pursued.
SECTION 7: Making an application:-
1. Identify recurring applicants that are harming civic heritage, be this across Conservation Areas, Non-designated heritage assets or elsewhere with experience of demolition to date- this should be considered before granting permission to apply or acquire planning approval.
2. Enforcement Penalties for key stakeholders that purposely allow their properties to fall into decline and hoped eventual demolition through this tactic, which is more prevalent since 2020.
3. Create an Action Plan to deter persons or organisations from pursuing demolition, such as financial incentives, sincere investor network directory set by Central Government to offload for profit and enforced Design Codes that cannot be manipulated through semantics like Design Guides in isolation as has happened elsewhere. This must be kept for emergency instances where there is an expected threat of decline or demolition.
4. Agreed that temporary alteration of heritage sites, such as stairs or ramps for wheelchairs should be utilised to prevent deleterious loss of historic surroundings and features alike.
5. Full Pre-Consultation publicised and utilised to ensure appropriate Design Codes for new housing alongside positioning and layout in case volunteer assemblies may assist property owners with restoration of historic buildings.
6. Brick by brick Analysis undertaken of projects set for Traditional reconstruction so that these statistics may provide both the Council with evidence for green grant funding support for other key infrastructure projects, such as Transportation and
Drainage Defences and property owners may incur a discretionary reduction in associated reconstruction costs of heritage buildings and vistas.
7. Ability to lock feedback in for Consultation automatically unless the council can alert interested consultees in taking

part again whether they are locally, regionally or nationally based.
8. Special partnerships with Property Owners of historic buildings at risk of decline/ demolition to discreetly support them with the option to publicise this accordingly to reach out to others in the same position to secure alternative use for these structures as opposed to demolition.
9. Proactive effort to stop Breaking and Entering style of “Urban Explorers” who are coincidentally apparent whenever demolition is scheduled for buildings especially since 2020.
10. LAs to proactively work closely alongside Community Champions and other leading Heritage Groups, such as English Heritage giving these organisations a voice on the frontlines, especially where so many buildings are presently being overlooked for additional guidance and/ or support due to cost and time restraints facing these same groups and organisations (including the LA).
SECTION 8: MISCELLAENOUS:-
1. Provide all possible support for the reconstruction of Old Builds as is happening elsewhere across Europe, especially Budapest, Hungary, North America, etc to significantly increase Embodied Energy/ Carbon storage.
2. Establish a Plan to adopt Unadopted Roads or supply key services, such as carriageway resurfacing as disabled access and entry/ exit of Emergency Vehicles is presently a cause for concern.
3. Provide Pre-Approval and agreement of specialist Conservation Area style Historic Street Furniture, such as Cast Iron Lamp Posts, Bins and Planters for this prime Conservation Area including installation, maintenance costs (where appropriate).
4. Provide full access to the Archive Resources (at no/minimal cost) as an invaluable incentive for existing and parallel undisclosed third Party Investors. Discretionary waivers may be appropriate for those third parties proactively working to prevent decline and demolition of historic buildings.
5. Car Parking on and off street should be supported to ensure freedom of choice for everyone, accessibility and connectedness.
6. Car Parking abodes should be tastefully designed like modern-day stables for vehicles that are in-keeping with the built historic environment.
7. Provide publicly published names of consultees willing to work alongside the Local authority and other key stakeholders, such as property owners and undisclosed third party investors, etc.
8. Provide select tours for prospective investors and housebuilders of existing traditional architecture where Design Codes of this identical style would complement both old and new architecture bending the area better more cohesively, eg. the form and layout of Oxford City Centre which has changed minimally structurally since the 1800s.
9. Provide a focused effort on utilising people’s skillsets on a meritocratic basis, ie. Procure specialists and volunteers that could work together on key emergency projects, such as Historic buildings at risk without layered bureaucracy on achieving positive outcomes, such as Community Assets where deadlines can be thwarted by separate third parties.
10. Create a Top Ten Historic Buildings at Risk Register where appropriate conditions, such as security against Urban Exploration, etc can be utilised safeguarding these structures, providing the respective property owners peace of mind whilst actual scope for revitalising these for solid economic gain.
11. Infrastructure assessments should be fully outlined, such as Air Quality risk from new construction at presently congested areas, hence the case for Traditional Architecture that will confer longevity benefits in the long-term with as much free car parking as possible.
12. Free Car Parking may be monitored through expected proof of purchase when visiting, eg. minimal £1.00 at a shop encouraging partnerships between private businesses and LAs.

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Persimmon Homes (East Wales) [1068]

Agent: Asbri Planning

Summary:

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes has significant concerns regarding Policy CC1 and objects to it on the basis that it replicates requirements already being progressed at a national level through Welsh Government's Future Homes Standard (FHS). The FHS is intended to deliver "zero carbon ready" homes via a unified Building Regulations framework, making additional local policy unnecessary. At present, Building Regulations Part L1A sets out the standards for energy efficiency in new dwellings, and Persimmon already designs its homes to go beyond these minimum thresholds. This includes enhanced insulation
and improved building fabric performance, with reduced U values for elements such as walls, roofs, floors and windows to minimise heat loss. As a result, our homes typically achieve strong Energy Performance Certificate (EPC) ratings, generally in the A–B categories.

Introducing further operational net zero requirements at a local planning level risks adding cost, complexity and uncertainty, potentially affecting the viability and deliverability of housing sites. The Development Plans Manual for Wales is clear that local plans should not repeat national policy or seek to regulate matters already addressed through other statutory regimes. On that basis, Policy CC1 is not considered to be justified and is inconsistent with the second test of soundness.

The proposed shift in standards from April 2030 represents a substantial and abrupt escalation in expectations. Although the policy refers to schemes such as Tai ar y Cyd and AECB CarbonLite, these examples largely relate to grant funded affordable housing projects. There is no robust evidence that equivalent standards can be met on mainstream housing sites without undermining overall viability. The Development Plans Manual requires policies to be based on strong evidence and to be realistically deliverable across the plan period. Without this, there is a risk that the proposed policy could impede
housing delivery and compromise the RLDP's ability to meet identified needs.

Policy CC1 could also lead to inconsistent energy performance requirements across Local Planning Authorities in Wales, contradicting the advantages of a unified regulatory system via Building Regulations. For volume housebuilders working across several authority areas, this would introduce unnecessary variation and complication. The DPM highlights the importance of policies that support
housing delivery and avoid avoidable burdens. By introducing bespoke modelling thresholds and operational monitoring requirements, CC1 risks blurring the line between planning and Building Control, raising questions about the policy's justification and practical application.

It is Persimmon's view that Policy CC1 is premature and that it is more appropriate for such matters to be addressed through building control rather than planning policy. In its current form, the policy risks impacting housing supply, affordable housing delivery and overall implementation across the plan period. For these reasons, we consider that Policy CC1 fails to satisfy the relevant tests of soundness and should be removed from the emerging RLDP.

Full text:

We write specifically with regard to the Key Site at 'North West Barry' (Policy SP4: KS1). As the Authority are aware, a significant amount of supporting information has been prepared in relation to the Key Site over the course of the preparation of the Replacement LDP to date – this detailed evidence has clearly demonstrated that the inclusion of 'North West Barry' as a Key Site with the Replacement Plan fully accords with the Replacement LDP strategy. Furthermore, the detailed submissions have evidenced that the site is entirely deliverable and viable.

In summary, this representation sets out support for the inclusion of Land at North West Barry as a Key Site within the Replacement LDP. Our Client (Persimmon Homes) is fully committed to the delivery of the allocation, in accordance with the policies of the Replacement Plan (both site-specific and plan-wide policies inclusive).

We would highlight that although the representation provides overarching support for the Deposit Plan (and the inclusion of North West Barry as a Key Site), a number of detailed objections are submitted in relation to specific elements of the proposed wording of the Key Site policy (HG1: KS1). In addition, the wider policies of the Deposit Plan have been reviewed in detail and comments are submitted accordingly.

Background

By way of background context, as the Authority are aware, a Candidate Site representation was submitted on behalf of Persimmon Homes in relation to Land at Weycock Cross, Barry, at the Stage 1 Call for Sites in September 2022 (Site Ref. 449). The land (circa 7 hectares) was put forward for inclusion in the Replacement LDP for a housing allocation (for circa 180 units). Within the Replacement LDP Preferred Strategy (published November 2023), the Candidate Site at Weycock Cross was not identified as a Key Site, in light of the preferred allocation of 1,500 units at land at North East Barry. Further to issues arising in relation to the deliverability of the North East Barry Key Site, the Authority subsequently consulted on alternative options for the provision of sufficient housing land within Barry, with the Candidate Site at Weycock Cross ('North West Barry') identified as capable of delivering 376 units (as taken forward within the Deposit Plan). A significant degree of supporting survey and assessment work has been prepared in relation to the North West Barry Key Site which serves to demonstrate that the site (at a capacity of 376 units) presents a sustainable, deliverable and viable allocation, capable of accordance with national sustainable placemaking outcomes.

Sustainable Growth Strategy (Policy SP1)
The Deposit Plan's overarching strategy in relation to sustainable growth is supported. The primary focus of concentrating housing growth within the 'Strategic Growth Area' (i.e. where the main centres of population are accommodated, and which are served by a range of facilities and services, and are accessible by a range of transport modes) as outlined by Policy SP1 is considered appropriate and will allow for the delivery of sustainable and resilient communities. As per previous representations
submitted by Asbri Planning on behalf of Persimmon Homes in relation to the RLDP Preferred Strategy,
the prior identification of the strategic-scale (1,500 unit) Key Site at North East Barry was considered to represent an over-reliance on one site to meet the housing demand of the Authority's Key Settlement (with associated constraints in relation to the delivery of units on a strategic-scale site within the earlymid part of the plan period). It is considered that the inclusion of North West Barry as a Key Site, supplemented by a number of smaller housing allocations as identified in Policy HG1, will ensure that the housing requirement for the Barry can be met in a robust and deliverable manner.

Overall Growth Levels (Policy SP6)
It is acknowledged that the preferred growth option (dwelling-led 10 Year scenario), upon which the
RLDP housing requirement figure is based, reflects what has been delivered in the Authority in recent years, and is considered by the Authority to be realistic and suitably ambitious given the Vale's position within the National Growth Area. However, as a general comment, it is considered that targeting a higher/more ambitious growth rate would be appropriate. In reviewing the most recent LDP Annual Monitoring Report (Vale of Glamorgan LDP 2011-2026, 7th Annual Monitoring Report, 1st April 2024
31st March 2025) (published October 2025), it is clear that there is a shortfall in housing delivery in the Vale of Glamorgan. It is stated that: "Between 1st April 2011 and 1st April 2025, a total of 6,999 dwellings were completed within the Vale of Glamorgan of which 4,641 units were general market dwellings against the 2025 AMR target of 6,387 that should have been developed at this point in the plan period, in accordance with the target. The number of additional general market dwellings delivered is 27.3% below the monitoring target".

In light of the fact that there is a significant shortfall in housing delivery (i.e. currently 27.3% lower than the LDP target), it is considered that a higher growth level for the
Replacement Plan period would assist in rectifying under-delivery, allowing for housing completions to be better aligned with evidence of need (rather than repeating past shortfalls).

On February 12th 2026, the Welsh Government published updated estimates of additional housing need in Wales. The figures replace the 2019-based estimates and draw on the latest available data, including the 2022-based household projections published in late 2025. In summary, Welsh Government identify that there is a current estimated existing unmet need of 9,400 housing units. Estimates of existing unmet need have increased by 64% since the 2019-based estimates, due to a rise in homeless households in temporary accommodation.

In terms of future housing need, on average, between 7,800 and 9,300 additional housing units are estimated to be needed annually over the five-year period from July 2025 to June 2030, with a central estimate of 8,700 from newly arising need. The estimated newly arising need for July 2025 to June 2030 is higher than in the 2019-based estimates. This increase reflects higher projected household growth in the 2022-based household projections compared with the 2018-based projections used previously. The Authority will need to give detailed consideration to the implications of the updated estimates of housing need. As the most up to date projections, the Replacement LDP must properly account for the
new dataset to ensure soundness of the plan. In this regard, it is stated at Paragraph 5.34 of the Development Plans Manual that "In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base."

Accordingly, Paragraph 5.35 goes on to state that "All LPAs should use these projections and the resultant household numbers when considering the level of housing provision for a plan period".

In light of the February 2026 publication of updated estimates of housing need in Wales (which indicate
a substantial increase in both existing unmet housing need and newly arising need), and in the context of the existing under-delivery of units evidenced within the most recent LDP AMR (i.e. which identifies a shortfall in housing delivery of 27.3% on the adopted LDP target), it is considered essential that the overall growth levels for the Replacement Plan are revisited (and increased accordingly).

Policy HG1 KS1 – Land at North West Barry
Overall Support for Allocation

The detailed supporting information prepared on behalf of Persimmon Homes in relation to the Land at North West Barry site to date, including the masterplanning work undertaken in liaison with the Local Authority and their statutory consultees, has demonstrated that a sustainable, high-quality residential development which responds sensitively to both local character and landscape setting can be delivered on the site. It is considered that the allocation of Land at North West Barry (KS1) represents an entirely suitable housing allocation, which has been evidenced as being both viable and deliverable. The
inclusion of KS1 as a housing allocation in the Deposit Plan is therefore welcomed and supported.

Policy HG1 KS1 - Detailed Wording - Objections As stated, although the representations provide overarching support for the Deposit Plan and the inclusion of Land at North West Barry as an allocation, a number of detailed matters are objected to in relation to specific elements of the proposed KS1 policy wording.

It is acknowledged that the Key Site will need to be delivered in accordance with placemaking principles (as set out in Policy SP4 Placemaking and Policy PGD1 Creating Well Designed Places), and masterplanning work to date has demonstrated that the site is fully capable for compliance with both Policy SP4 and PGD1.

Comments are provided on the additional requirements which the site is anticipated to comply with as set out at Policy HG1 KS1. Revised wording where required is identified in red.

• The provision of a minimum of 113 affordable housing units (30%) with a unit mix reflecting the requirements of the latest Local Housing Market Assessment and the Council's waiting list data.

In order to deliver a greater social mix, the affordable units should be dispersed across the site in clusters of no more than 10 units, The positioning of the affordable units will be informed by the experience and best-practice of the Registered Social Landlord responsible for the delivery and ongoing management of the units, with their delivery being phased across the development trajectory.

The policy as currently worded is considered to be overly prescriptive with regards to the positioning of affordable units on the site. It is the case the Registered Social Landlord who is responsible for the delivery and ongoing operation/management of the affordable units is best-placed to advise upon the positioning of the affordable units within the site layout. As such, it is requested that the prescriptive nature of the above bullet point is mended to allow for the RSL to advise on best practice.

• Provision of land across the site frontage to allow for the widening of the A4226 Port Road West and the delivery of an Active Travel route across the frontage of the site as part of the Weycock Cross to Cardiff Airport Active Travel route, as identified in Policy TR1 (relating specifically to the delivery of the section of the Active Travel route adjoining the northern boundary of the Key Site only).

• Creation of a new signalised junction on to the A4226 Port Road West, which will need to accommodate controlled pedestrian/cycle crossing facilities.

With regards to the first two bullet points set out under the 'Sustainable Transport and Highways' section of the Policy HG1 KS1 (copied above), to confirm, as part of the development of the Key Site, it is proposed (as detailed within the submitted Transport Assessment) to construct a new junction from Port Road to the west of the Weycock Cross roundabout at the location of the existing field gated access in the form of a signal-controlled junction, which would allow for the safe and timely exit of traffic from
the development onto the local highway network. Such an access would also provide enhanced Active Travel infrastructure in conjunction with the proposed Active Travel route between the Weycock Cross junction and Cardiff Airport. Traffic signals at the proposed site access would provide for dedicated demand dependent green time for pedestrians and cyclists along this section of the A4226 Port Road.

Significant work has been undertaken to date in demonstrating that the above is deliverable. However,
it is requested that further clarification is included within the policy text to confirm that the Key Site is not responsible for the delivery of any further/additional sections of the Weycock Cross to Cardiff Airport Active Travel route, over and above the section of the route which adjoins the Key Site.

Suggested additional text is outlined in red above.
• A proportionate contribution towards off-site improvements to the capacity and flow of Weycock Cross roundabout and other junctions on the strategic highways network where necessary (in the context of the impact of wider committed developments on the strategic highway network).

As set out within the Transport Assessment (May 2025) prepared in support of the Key Site, the traffic movements associated with the North West Barry allocation could be accommodated on the highway network with a marginal and inconsequential impact on the conditions already experienced on the local highway network. An appraisal of the impact of committed development (as agreed with the Highways Authority) has been undertaken as part of the Transport Assessment, which identifies that committed
development within the vicinity of the Weycock Cross junction would have a greater impact upon the local highway network than the North West Barry Key Site. The North West Barry development is smaller in comparison to the other committed development assessed, and would have a marginal and inconsequential impact upon the operation of the Weycock Cross junction. It is therefore considered that the policy wording should be amended to reflect the 'proportionate' nature of contributions required.

Suggested additional text is outlined in red above.
• A contribution towards off-site sustainable transport measures in the area (as necessary and related to the Key Site).

Further clarification is required in regards to the above bullet point. It will be important to ensure that any off-site

measures are directly related to the proposed development, and are necessary to ensure the acceptability of the proposed development. The requirement for a contribution towards off-site measures 'in the area' is not specific enough, and it is requested that the wording is amended as per the suggested text outlined in red above.

• The provision of a key area of open space (minimum 2.3 ha) to the south of the site adjoining Porthkerry Country Park which will serve as a buffer to the adjoining SINC at Mill Wood and offer opportunities for significant iodiversity enhancements. The ownership of this area should be
transferred to the Vale of Glamorgan Council, together with an appropriate financial contribution, for management as part of Porthkerry Country Park.

It is considered that the inclusion of a specified figure for the area of open space to be provided within the southern section of the site is unnecessary within the policy text.

The Indicative Plan for the Key Site included at Figure 13 of the Deposit Plan illustrates the indicative extent of 'Significant Open Space' to be provided adjoining Porthkerry Country Park, which will be subject to further detailed masterplanning work as the Planning Application is prepared in due course. A figure for the exact area
of open space to be provided within this section of the site cannot therefore be robustly specified until the further stages of masterplanning work are completed. As such, it is requested that the figure is removed from the policy text, with the identification of 'Significant Open Space' on Indicative Plan being considered satisfactory.

Furthermore, it is not considered appropriate that the policy wording should refer specifically to the financial contribution towards the management of this land, in addition to its transfer, as such contributions will be subject to detailed viability appraisal work at the Planning Application stage.

Deposit Plan Appendix 1 - Housing Trajectory
The identified delivery timescales and quantum of units for the site as set out at Appendix 1 of the Deposit Plan (as copied below) are agreed with and considered to be suitable/deliverable:

2028-2029: 30 units
2029-2030: 60 units
2030-2031: 60 units
2031-2032: 60 units
2032-2033: 60 units
2033-2034: 60 units
2034-2035: 46 units

Persimmon Homes are committed to the delivery of the allocation, in accordance with the phasing trajectory outlined in the Deposit Plan. Further to the detailed submissions previously made, including extensive viability evidence which has been discussed in detail with the Local Authority and their viability consultant, it is confirmed that the site is viable and deliverable in accordance with the identified delivery timescales. It should be noted that there is a possibility that the number of units to be delivered within the first year (2028-2029) could be increased slightly, however, it is considered that the above presents a realistic trajectory for the site.

Deposit Plan Appendix 2 – Infrastructure Delivery Plan
A number of amendments to the text are requested in regard to the infrastructure requirements for KS1
North West Barry as set out within the Infrastructure Delivery Plan at Appendix 2 of the Deposit LDP.

Within the 'Key site issues and constraints' section of the Infrastructure Requirements table, the following amendments to the text are considered necessary:

• Proportionate access and junction arrangements on to the A4226 and a financial contribution towards strategic highway network enhancements (in the context of the impact of wider committed developments on the strategic highway network).

As set out above, it is important that the required financial contribution towards strategic highway network enhancements is proportionate to the scale of the North West Barry development, and that additional committed developments, which would have a greater impact on the strategic highway network, are considered in the round.

• Previous desk-based assessment and site visits dentified that development would have a major impact on five features (?), including important hedgerows which form historic boundaries. Archaeological features were also identified.

The above bullet point requires clarification as to the 'five features' which the development would have a 'major impact' upon. It should be noted that masterplanning work to date has been informed by extensive survey and assessment work which ensures that the proposed development is capable of addressing all constraints.

Within the section of the table where 'broad costs' of key infrastructure requirements are outlined, it is considered that the following amendments to the text are necessary:

• Education – Estimated Cost Circa £3,730,000 (£TBC)
It is considered that an estimated cost for education contributions cannot be specified at this stage, as the contribution will be directly related to current school capacity figures at the time of the Planning Application, with school capacities being fluid and subject to change. As such, the 'circa' figure should be removed from the text and replaced with 'TBC' at this point.

• A proportionate contribution towards on-site improvements to the capacity and flow of Weycock
Cross roundabout and other junctions on the strategic highways network where necessary (in the context of the impact of wider committed developments on the strategic highway network).

• VOGC to deliver improvements to junctions on the Strategic Highways Network using s106 contributions (from the North West Barry Key Site and other relevant commitments) . As set out above, it is important that the required financial contribution towards strategic highway
network enhancements is proportionate to the scale of the North West Barry development.

• Contribution towards off-site sustainable transport measures in the area as necessary and related
to the Key Site.

As per the wording contained within the policy text of HG1 KS1, the requirement for a contribution towards off-site measures 'in the area' is not specific enough to provide certainty for the developer, and it will be important to ensure that any off-site measures are necessary and directly related to the North West Barry development.

• Community Facilities – Estimated Cost Circa £665,000 (£TBC) It is considered that an estimated cost for community facility contributions cannot be specified at this
stage – no background calculations are provided to evidence that this estimate is robust. As such, the 'circa' figure should be removed from the text and replaced with 'TBC' at this point.

Policy CC1 – Residential Operational Net Zero Carbon Development

Persimmon Homes has significant concerns regarding Policy CC1 and objects to it on the basis that it replicates requirements already being progressed at a national level through Welsh Government's Future Homes Standard (FHS). The FHS is intended to deliver "zero carbon ready" homes via a unified Building Regulations framework, making additional local policy unnecessary. At present, Building Regulations Part L1A sets out the standards for energy efficiency in new dwellings, and Persimmon
already designs its homes to go beyond these minimum thresholds. This includes enhanced insulation and improved building fabric performance, with reduced U values for elements such as walls, roofs, floors and windows to minimise heat loss. As a result, our homes typically achieve strong Energy Performance Certificate (EPC) ratings, generally in the A–B categories. Introducing further operational net zero requirements at a local planning level risks adding cost, complexity and uncertainty, potentially affecting the viability and deliverability of housing sites. The Development Plans Manual for Wales is clear that local plans should not repeat national policy or seek to regulate matters already addressed through other statutory regimes.

On that basis, Policy CC1 is not considered to be justified and is inconsistent with the second test of soundness. The proposed shift in standards from April 2030 represents a substantial and abrupt escalation in expectations. Although the policy refers to schemes such as Tai ar y Cyd and AECB CarbonLite, these examples largely relate to grant funded affordable housing projects. There is no robust evidence that equivalent standards can be met on mainstream housing sites without undermining overall viability. The Development Plans Manual requires policies to be based on strong evidence and to be realistically deliverable across the plan period. Without this, there is a risk that the proposed policy could impede
housing delivery and compromise the RLDP's ability to meet identified needs.

Policy CC1 could also lead to inconsistent energy performance requirements across Local Planning
Authorities in Wales, contradicting the advantages of a unified regulatory system via Building Regulations. For volume housebuilders working across several authority areas, this would introduce unnecessary variation and complication. The DPM highlights the importance of policies that support housing delivery and avoid avoidable burdens. By introducing bespoke modelling thresholds and
operational monitoring requirements, CC1 risks blurring the line between planning and Building Control, raising questions about the policy's justification and practical application.

It is Persimmon's view that Policy CC1 is premature and that it is more appropriate for such matters to be addressed through building control rather than planning policy. In its current form, the policy risks impacting housing supply, affordable housing delivery and overall implementation across the plan period. For these reasons, we consider that Policy CC1 fails to satisfy the relevant tests of soundness and should be removed from the emerging RLDP.

Summary

As summarised above, and set out in full detail within the supporting survey/assessment work that has been provided to the Local Authority in relation to the site, the inclusion of Land at North West Barry as a Key Site (Policy HG1: KS1) with

the Replacement Plan fully accords with the RLDP strategy. Furthermore, it is considered that (with the inclusion of the site), the Deposit Plan complies with the tests of soundness. Further to ongoing discussions with the Authority, we would reiterate the Site Promoter's commitment to delivering the allocation which has been evidenced as being entirely deliverable and viable
As set out within this representation, overall support is provided for the Deposit Plan (and the inclusion of North West Barry as a Key Site), however, as detailed, bjections are submitted in relation to the specific elements of the proposed wording of the Key Site policy (SP4: KS1).

We look forward to the RLDP progressing towards examination, and would welcome the opportunity to take part in the relevant Hearing Sessions (in relation to Policy HG1: KS1, and wider strategic policies as required). Please do not hesitate to contact me should you require any further detail or wish to discuss any aspect of the representations.

Persimmon Submission - https://valeofglamorgan.oc2.uk/a/367

6748 Object

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Hallam Land Management [854]

Agent: Savills

Summary:

Not only is the approach proposed to be taken in Policy CC1 out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Full text:

1.1. Savills is instructed by Hallam Land ('Hallam') to respond to the consultation on the Deposit version of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').
1.2. Hallam is the strategic land arm of Henry Boot PLC and is one of the UK's most well established and successful land promoters. Hallam operates throughout England, Scotland and Wales from 7 regional offices working with landowners, developers, local authorities, communities and other parties to bring forward development opportunities. Hallam has been in operation since 1990, specialising in obtaining planning permission and delivering development larger schemes including new communities and urban extensions.
Background to Representations
1.3. The Preferred Strategy was published in November 2023. The Preferred Strategy identified "Land West of St Athan" and "Land South of the B4265, St Athan" (Site IDs 456 and 457) as one of five Key Sites in the Preferred Strategy. Both of these sites are under the control of Hallam and were submitted as part of the Call for Sites. A site-specific illustrative masterplan and policy wording were provided under Policy SP4 KS5 (Land to the West of St Athan).
1.4. Hallam submitted representations on the consultation on the Preferred Strategy. These representations were very much supportive of the identification of "Land to the West of St Athan" as a Key Site and the approach that was taken more generally taken in the Preferred Strategy.
Approach to Responding to Consultation
1.5. The VoG has published the Deposit version of the RLDP. The Deposit is the first version of the RLDP to include emerging allocations, and detailed development management policies, as well as a Proposals Map. It is accompanied by a substantial evidence base which includes various supporting technical documentation submitted as part of the promotion of the allocated sites.
1.6. Building upon the Preferred Strategy, the Deposit RLDP proposes to allocate Land to the West of St Athan as a Key Site. The site is identified under Policy HG1 KS5 (Land to the West of St Athan) as key mixed-use site with capacity for 600 new homes alongside new community and commercial facilities.
1.7. Hallam's representation to this consultation broadly splits into three separate sections:
• It offers general support for the housing requirement, growth strategy and settlement hierarchy. This is covered in Chapter 2 of this Statement;
• It wholly supports the approach of allocating Land to the West of St Athan as part of the Deposit RLDP whilst also providing detailed commentary on the specific wording of Policy HG1 KS5 (Land to the West of St Athan). This is covered in Chapter 3 of this Statement; and
• It provides commentary on a range of development management policies. This is covered in Chapters 4, 5, 6, and 7 of this Statement.
1.8. As well as this Statement, Savills has provided commentary on these specific policies under the VoG's consultation website.

Policy SP1 (Sustainable Growth Strategy), Policy SP2 (Settlement Hierarchy), and Policy SP6 (Housing Requirement)
2.1. Together, these policies have the effect of:
• Setting the housing requirement to be delivered over the RLDP plan period of 7,890 homes with a flexibility allowance

applied on top so that provision is made for a total of 8,660 homes. This is the same housing requirement to that included in the Preferred Strategy which was found by Welsh Government to be in conformity with Future Wales (Policies SP1 and SP6);
• Identifying the extent of the Strategic Growth Area as the primary focus of new housing growth. Concentrations of new housing are focussed in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity. St Athan is a specifically named settlement within the Strategic Growth Area (Policy SP1); and
• Identifying St Athan as a Primary Settlement in the third tier of the settlement hierarchy. This is the same tier of the settlement hierarchy as St Athan is in the adopted LDP (Policy SP2).
2.2. Hallam are generally supportive of the aims of these three policies.
2.3. They recognise that the housing requirement has been subject to extensive scrutiny and been found to be appropriate by Welsh Government in response to the Preferred Strategy. In that sense, there is nothing further for Hallam Land to comment upon here other than to note that it should reasonably be seen as the minimum number of homes that the RLDP should be aiming to deliver, particularly following the publication of the 2022-based household projections between Welsh Government's comments on the Preferred strategy and the publication of the Preferred Strategy.
2.4. The strategy – of focussing new housing in those locations served by existing transport routes and where there are opportunities to enhance sustainable transport connectivity – is wholly supported. St Athan is clearly already a sustainable location for growth and its sustainability and connectivity have clear potential to enhance alongside further development. The delivery of growth in St Athan is therefore considered to firmly align with the RLDP's strategy.
2.5. The continued positioning of St Athan as a Primary Settlement in the third tier of the settlement hierarchy is considered appropriate though clearly the delivery of two Key Sites within St Athan as part of the RLDP has the potential to further elevate its position in the future. This is reflected in Table 10 of Background Paper 5 Settlement Appraisal Review where St Athan is given one of the higher scores of the Primary settlements.

Policy HG1 KS5 (Land to the West of St Athan)
3.1. Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.
3.2. There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.
3.3. The relevant policy for Land to the West of St Athan is Policy HG1 KS5.
3.4. As a starting point, Hallam wholeheartedly support the allocation of Land to the West of St Athan as a Key Site within the RLDP. Hallam made a comprehensive submission as part of the Call for Sites stage and since then have worked proactively with the VoG and other stakeholders to demonstrate that the site is suitable, deliverable, and viable. It's identification as a Key Site in the Deposit RLDP represents extensive and thorough assessment – its proposed allocated is therefore considered to be sound and firmly evidence based.
3.5. So that the policy functions as effectively as possible, Hallam has a small number of comments and included at Appendix A is a re-worded version of Policy HG1 KS5 which incorporates those changes with text suggested to be removed crossed through and text to be added shown underlined.
3.6. These proposed adjustments are considered in turn below and are structured around the sub-headings that are contained within the policy wording itself.
Site Capacity and Housing Trajectory
3.7. Extensive environmental and technical work has been undertaken by Hallam to support the promotion of the site and the development of a masterplan (and site capacity) that responds to the site's constraints and opportunities.
3.8. That said, Hallam is not a housebuilder and once an outline planning application has progressed, Hallam will identify a development partner (which could be a single or multiple housebuilders / housing associations). Clearly different housebuilders have different house types and differing approaches to density.
3.9. In addition, whilst a lot of technical and environmental work has been undertaken to date, clearly further technical work would be submitted at planning application stage which would further validate the site's capacity.
3.10. Legislative and guidance changes also have the potential to impact a site capacity. Whilst the masterplanning process has been prepared to be SAB compliant, the impact of the introduction of the requirement to secure SAB approval has had an impact on site capacity and it follows that a further, and as yet unknown, legislative or guidance change could have a similar impact.
3.11. This is not to suggest that there isn't a high degree of confidence that the site can deliver roughly 600 homes, rather that Hallam suggest that the word 'approximately' is added to the policy wording to reflect the potential for a degree of deviation (which could be upwards or downwards).
3.12. Background Paper 9A Housing Land Supply and Housing Trajectory sets out the anticipated annual delivery rates for housing over the RLDP. With regards to the ability of the site to deliver the number of homes it is allocated for in the RLDP plan period, the housing trajectory for the site reflects that the first completion date was pushed back from 2027/2028 to 2028/2029 since the consultation on the Preferred Strategy. This means that the whole site continues to be shown as being delivered within the RLDP plan period.
3.13. Hallam support and agree with the approach set out in the Draft Housing Trajectory and see it to be realistic and

achievable based on their experience and subject to usual caveats around the condition of the market, RLDP progression, and swift determination of a planning application.

Affordable Housing

3.14. At present, Policy HG1 KS5 (like all of the standalone policies for the other four Key Sites), states that the site should provide a minimum of 210 affordable housing units. This figure is derived from 35% of the number of homes that the site is allocated for (600 homes).

3.15. Worded at present, a strict interpretation of this policy could be that 210 affordable units must be provided onsite regardless of the total number of homes that are proposed. For example, it could be interpreted as requiring a fixed number of affordable homes of 210 homes, even if the total number of homes that are proposed on the site is fewer than the 600 homes that the site is allocated for or, conversely, that only 210 homes should be delivered as affordable if more than 600 homes were to be delivered and the RLDP allocation exceeded.

3.16. Hallam recognise that this is not what the policy wording is seeking to achieve (and their viability work for the site is based on the site delivering 600 homes of which 35% are affordable) but suggest that its wording could be clarified by removing reference to a specific number of affordable homes for the site to deliver in favour of just the affordable housing percentage being noted in the policy.

3.17. Hallam also suggest that the requirement for affordable housing units to not be in clusters of more than 10 homes is removed and that the approach is for this to be considered on a site by site and case by case basis and with recognition that Policy HG5 (Affordable Housing Exception Sites) which can provide a framework for 100% affordable sites of more than 10 homes to be delivered. As an example, and in the case of Land to the West of St Athan, the "Land South of the B4265, St Athan" (Site ID 457) portion of the site is likely better suited to a mixed-use development alongside the future St Athan Railway Sation. This portion of the site is probably better suited to a flatted form of development (either above non-residential uses or as a block) which tend to be delivered as 100% affordable housing developments rather than comprising a mix of private and affordable housing.

Sustainable Transport and Highways

3.18. This part of the policy sets out expectations relating to sustainable transport and highways and there are a number of matters which Hallam wish to comment on.

3.19. As a starting point, Hallam support the delivery of St Athan Railway Station and therefore commits to its safeguarding. Likewise, Hallam recognise the potential suitability for the "Land Between the Railway Line and B4265, St Athan" (Site ID 458) site to accommodate a Welsh-Medium Secondary School and can also therefore commit to safeguarding land for the delivery of a pedestrian and cycle bridge over the railway line. Specific comments on Policy TR1 (Transport Proposals) and Policy CI3 (New Community Facilities) are made elsewhere in this Statement.

3.20. With regards to the Sustainable Transport and Highways section of Policy HG1 KS5, Hallam's overall position is that a careful balance needs to be reached between the policy wording being explicit as to what highway works must be delivered and reserving consideration of this until planning application stage where the exact site capacity is better understood and a full Transport Assessment submitted.

3.21. At present, Hallam's view is that the policy wording is overly explicit and suggest that it could be qualified through the addition of the following text before listing the offsite highways improvements:

'Subject to the Strategic Transport Assessment and site-specific Transport Assessment submitted at planning application stage'.

3.22. Turning to the specific offsite highways measures that are listed within the policy wording, Hallam have four comments.

3.23. Firstly, it is suggested that the delivery of an active travel link along the B4265 between the site entrance and the Gileston Road junction should be secured via a financial contribution that is pooled with KS4 Church Farm. This reflects that the delivery of this link not only links Hallam's site to other services in St Athan but also linking KS4 Church Farm to the services that are proposed and uses for which land is safeguarded within Hallam's site. Clearly this is also to the benefit of existing residents of St Athan. This would reflect the approach that is proposed to be taking for the pooling of Section 106 monies for the delivery of an active travel route between St Athan and Llantwit Major.

3.24. Secondly, Hallam flag the need for the RLDP to be sufficiently flexible with regards to the delivery of an active travel link between St Athan and Llantwit Major. Ultimately, the purpose of delivering this active travel route would be to provide a connection from St Athan to Llantwit Major Railway Station and the delivery of a Railway Station in St Athan would remove the necessity of delivering this active travel connection. Hallam's suggested amendments to the policy wording seeks to reflect this.

3.25. Thirdly, Hallam have been consistent in highlighting that, whilst there is an aspiration to deliver an improved pedestrian link along Llantwit Road, a combination of the road width and the extent of third party ownerships make delivering a continuous link very challenging with a pragmatic approach instead needing to take place that recognises the ability to deliver betterments but acknowledges that delivering a continuous link is unlikely to be possible. Hallam has suggested additional wording to clarify this.

3.26. Fourthly, Hallam highlight that the designing of a loop road within the site to facilitate access by a bus may be superfluous and represent an over-engineered solution given the potential for the St Athan Transport Interchange that land is safeguarded for under Policy TR1 (Transport Proposals) is envisaged to accommodate infrastructure to accommodate a bus connection. On that basis, it is suggested that the following clause is added to the policy wording to reflect that bus connectivity to the site may be delivered not via an internal bus loop:

'Subject to progress on the St Athan Transport Interchange as land is safeguarded for under Policy TR1 (Transport Proposals)'

Community Infrastructure

3.27. There are three points which Hallam wish to make in connection to this element of Policy HG1 KS5.

3.28. Firstly, Hallam suggest that the wording of the part of the policy relating to financial contributions to fund the delivery of additional school places needs to be adjusted. At present this part of the policy is worded as if there is an

automatic requirement to provide Section 106 monies for school places where Circular 13/97 is clear that a contribution should only be sought where the schools do not have current projected capacity to accommodate the new children from the development. Hallam's proposed adjustments seek to ensure that this part of the policy reflects this though note that Background Paper 43 Education forecasts a need for a financial contribution to be made for additional school places at all English and Welsh primary and secondary schools that the site is within the catchment of.
3.29. Secondly, Hallam note that Table 10 of Background Paper 34 Community Facilities identifies an existing over-provision of community space within the St Athan Ward of 778sqm and a surplus of 531sqm of community floorspace at 2036 when the level of housing to be allocated in the Deposit RLDP is delivered. It is understood that this is on the basis of no community floorspace being delivered as part of Hallam's proposals or as part of the KS4 Church Farm site. Hallam suggest that the wording of this element of the policy needs to reflect that community floorspace should only be required to be provided in the case of a local shortage in provision. Aligned to this, Hallam also suggest that the reference to specifically providing a 'community building' is adjusted to instead make reference to 'community space'. This reflects that the community space element of scheme, if indeed it is actually required, could be a part of a larger mixed-use building (probably in the Mixed-Use / Community area) rather than as a standalone building.
3.30. Thirdly, Hallam note the error in the wording of the sixth bullet point under the 'Sustainable Transport and Highways' heading where reference is made to the safeguarding of land on the southern side of the railway line as being identified in Policy CI3(2) where-as it should be Policy CI3(6). This is a minor amendment that should be made to ensure consistency.
Green Infrastructure, Recreation Spaces, and Biodiversity
3.31. The masterplan prepared by PAD Design and submitted by Hallam shows the site delivering a mix of public open space and green infrastructure including the provision of allotments, a Neighbourhood Equipped Area of Play, a Local Equipped Area of Play, and a sports pitch. This is welcomed in Background Paper 32A Green Infrastructure Assessment of Key Sites which, at Paragraph 5.55 recognises that a 'ground up' approach has been taken in the masterplanning approach.
3.32. This is shown indicatively to illustrate the composition of public open space and green infrastructure that the site could provide alongside the other elements of built development that the site is allocated and the masterplan makes provision for.
3.33. Whilst, Hallam recognise the need to provide public open space, the starting point for this should be the Fields In Trust Standards and Hallam therefore suggest an approach where the policy wording is not specific about what forms this should take.

Policy TR1 (Transport Proposals)
4.1. This policy identifies three active travel routes and two public transport schemes that the Deposit RLDP safeguards land for, as well as three highway improvement schemes that are identified as being required to mitigate the impact of development. Two of these are in St Athan – one being the St Athan Transport Interchange for which land is safeguarded for and the second being the Gileston Road Junction which is identified as a required highway improvement. Both are considered in turn below.
St Athan Transport Interchange
4.2. Hallam support the safeguarding of land for the St Athan Transport Interchange and see that its delivery would be to the benefit of the Key Site itself but also more broadly to St Athan and western parts of the VoG.
4.3. It is clear from discussions with Transport for Wales that there is a strong business case for the delivery of a railway station and that the creation of "critical mass" through residential development around it has a key role in driving its delivery, as does the nationally significant economic role that the Bro Tathan Enterprise Zone has and the Aberthaw Green Energy Park will have. The proximity of St Athan to both of these hubs clearly contributes to its fundamental sustainability and suitability for growth whilst the further development of a critical mass of housing and employment generating uses will further support linkages between them and strengthen the business case for a new railway station at St Athan. This is reflected in TFW's 'Today, Tomorrow, Together: A Vision for Rail Across Wales and the Borders' which confirms that the delivery of St Athan Railway Station remains in TFW's pipeline which has been endorsed by the Westminster Government.
4.4. The location that is identified on the Proposals Map is Transport for Wales' preferred location within the site and has been incorporated into the masterplanning approach which seeks to create a node around it by incorporating a bus interchange and a mix of uses.
4.5. At present, the Proposals Map identifies the location of the Railway Station using a red star which is positioned on the railway line itself but without the required land take not spatially being defined.
4.6. Whilst Hallam recognise that the exact land take required will need to be refined further through discussion with TFW, it may be the case that the mixed-use element on this portion of the site comes forward before the Railway Station.
4.7. The early delivery of these elements should be welcomed as clearly the mixed-use element both enhances the range of services and facilities in St Athan but also would mean that the Railway Station is integrated upon delivery.
4.8. On that basis, it is imperative that the safeguarding of land for the Transport Interchange is limited only to that land required to deliver the Transport Interchange and is done in such a way such the safeguarding does not sterilise non-transport related development from this portion of the site until the Railway Station has been delivered.
Gileston Road Junction, St Athan
4.9. Paragraphs 6.199 and 6.200 relate to the expectation that vehicle trips as a result of RLDP allocations in St Athan are anticipated to trigger the need to upgrade the Gileston Road Junction to a signal-controlled arrangement. This is informed by the conclusions of Table 3 of the Strategic Transport Assessment which forecasts that the junction will be operating above capacity during both the weekday AM and PM peak by the RLDP's end point.
4.10. Hallam note that Technical Note 08 of the Strategic Transport Assessment identifies that the improvements to the Gileston Road Junction are to be delivered by VoG and funded through financial contributions from seven sites that the

RLDP proposes to allocate.
4.11. Improvements to this junction are to be funded by a number of sites; however it is unclear whether (and if so, when) forward funding will be secured by the Council and clearly there cannot be a situation where none of the sites can deliver homes until strategic highways works are funded / completed. We therefore seek further clarification over the phasing of these works and note that early delivery of homes ahead of strategic highway improvements is likely to be important for deliverability of each strategic site.
4.12. To respond to Hallam's above comments, one approach could be for references to highway improvement works to be entirely removed from this policy or, if they are to remain, that qualifying text is added to note that the need for and format of any improvements will be subject to detailed consideration at planning application stage and that such contributions must be justified in planning terms, particularly where (in the case of Pen Y Turnpike Road and Waycock Cross for Land to the West of St Athan), the distance from a site and the junction to be improved is significant and therefore thee number of vehicle trips that would be generated modest.
4.13. This aligns with Hallam's suggested approach to the specific wording of Policy HG1 KS5.

Policy CI1 (Open Space Provision)
5.1. This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.
5.2. Hallam note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.
5.3. Hallam is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter.

Policy CI3 (New Community Facilities)
6.1. As well as allocating land for five new or improved education developments, this policy safeguards 'Land South of the Railway Line, St Athan' for the delivery of a Welsh-medium secondary school.
6.2. This policy is clearly of interest to Hallam because Paragraph 6.250 places a requirement for the safeguarding of land on the northern side of the railway line on their Land to the West of St Athan Key Site for a footbridge to land on.
6.3. With the policy wording being intentionally light-touch, Paragraph 6.250 of the Deposit RLDP provides greater detail about the safeguarding of this land (and other paragraphs in the Deposit RLDP relate to other community facilities that Policy CI3 covers). It effectively does two things.
6.4. Firstly, it notes that the delivery of this school will require active travel improvements including the safeguarding of land for a pedestrian and cyclist footbridge over the railway line.
6.5. Secondly, it is clear that the safeguarding of this land is in response to a forecast increase in demand for Welsh-medium secondary school places across the whole of the VoG as a result of expanded capacity at Welsh-medium primary schools across the VoG. On this basis, it follows that this location has been selected as a preferred location because of its ability to serve the wider sub-region.
6.6. Hallam recognise that this site could be a suitable location for a Welsh Medium Secondary School and, as a principle, is agreeable to the safeguarding of land for the footbridge landing on the northern side of the railway line.
6.7. Paragraph 6.250 of the Deposit RLDP is clear that the delivery of a Welsh-Medium secondary school is in response to a regional / sub-regional demand rather than a local need as a result generated either by the development of Land West of St Athan or other emerging allocations within St Athan and it cannot be the case that Hallam are expected to make disproportionate contributions to either the delivery of the school or required active travel improvements just because they have control of the site or that it is next to the Key Site.

Policy CC1 (Residential Operational Net Zero Carbon Development)
7.1. The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) before the policy wording sets out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.
7.2. As a starting point, Hallam share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) can present challenges. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this will result in an uneven framework for housebuilders, significantly adding cost and reducing certainty.
7.3. The justification for using planning policy to set requirements exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.
7.4. There are two points to be made by Hallam here:
7.5. Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage that such an approach would not be sound. This Written

Ministerial Statement was subject to an unsuccessful judicial review.
7.6. Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than building regulations. Where there are existing Local Plans in England that take this approach, they do not align with the Westminster Government's position and there will be no Local Plans emerging including such policies.
7.7. Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs (Bridgend and Merthyr Tydfil) do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound at Examination stage.
7.8. Secondly, Hallam have concerns with the approach that has been taken with regards to viability.
7.9. From Hallam's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.
7.10. As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated. This is important as it demonstrates that, whilst Hallam do not believe such a policy approach should be taken, the development of the site at the time of the completion of the Development Viability Model for the site is viable whilst meeting the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development).
7.11. Hallam's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. This concern is particularly exacerbated by the fact that, as recognised at Paragraph 6.47 of Background Paper 42 Viability Assessment, takes the lowest estimate for the works required to achieve these policy expectations, Savills' experience – both that of their development land team based in Wales and their environmental sustainability team based across England - is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.
7.12. Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy DNP3 (Glamorgan Heritage Coast)
8.1. This policy relates to the Glamorgan Heritage Coast, identifying a series of land uses that are permissible within the policy area before setting three tests that must be satisfied for development within the Glamorgan Heritage Coast to be permissible where there is an adverse environmental impact.
8.2. Hallam note that the 'Land South of the B4265, St Athan' portion of the land that they control is both proposed to be retained as part of the Glamorgan Heritage Coast (a continuation of the position taken in the adopted LDP) whilst also forming part of the Land to the West of St Athan Key Site where the masterplan at Figure 17 shows it as accommodating the potential new railway station and a mixed-use area (including car parking).
8.3. The relevant extract of the Proposals Map is replicated below:
8.4. The exact composition of the buildings proposed on this portion will require further refinement and will need to be driven by occupier requirements, but the masterplanning work undertaken by pad Design envisages that they could provide a mix of retail and food and drink uses most likely across some or all of the ground floor, alongside workshop, co-working or office incubator space at upper floor levels and perhaps at ground floor level. There could also be the potential for additional homes, likely in the form of apartments at upper floors, as part of a mix of uses. It is realistic therefore to anticipate that this portion of the site will accommodate buildings of up to three or four storeys with a high plot ratio to reflect the uses and supporting infrastructure that it is to accommodate.
8.5. Hallam's position is that the continued inclusion of this parcel of land as part of the wider Glamorgan Heritage Coast is inappropriate for two reasons.
8.6. Firstly, and its most basic level, the approach of allocating the site for development whilst retaining a designation that inherently seeks to restrict the type, form, and quantum of development, is wholly contradictory.
8.7. Designation of this portion of the site as part of the Glamorgan Heritage Coast will mean, given that the uses that Figure 17 envisages as being delivered on the site are not those that the first part of Policy DNP3 (Glamorgan Heritage Coast) allows for, any application for development will need to demonstrate that there is a compelling need for the development, that the benefits outweigh the harm, and that appropriate mitigation measures are in place. This the potential to prejudice its development or, at very least, greatly impact how it is developed whilst requiring.
8.8. Secondly, it is difficult to see how this land warrants ongoing inclusion within the designated Glamorgan Heritage Coast. This is something that is considered in more detail in the Review of Landscape Character and Visual Amenity (December 2022) prepared by FPCR and submitted as part of the Call for Sites (and also available as part of the consultation on the Deposit RLDP as a piece of Key Site Supporting Information). Paragraph 5.13 of the FPCR document concludes on this piece of land that:
'Through the fieldwork it is considered that the Site does not display any "special environmental qualities" identified by the Policy and plays no intrinsic role in the Policy designation, as it is effectively forms a rather ordinary grazing field. It is influenced by the urbanising elements of the adjacent B4265, the Railway Line, the Tarmac Cement works, and to some degree the built edge of St Athan. Furthermore, it is bound and contained by trees and woodland beside the railway line, which prevents wider intervisibility with the coastline.'
8.9. Taking the above together, Hallam suggest that the preparation of the RLDP provides the opportunity to define the

extent of the Glamorgan Heritage Coast to respond to both the landscape value of certain sites but also the wider aspirations of the RLDP. If it is not within the gift of VoG to redefine the boundaries of the Glamorgan Heritage Coast through the RLDP then Hallam suggest that an additional element could be added to this policy to confirm that it does not apply to land which is allocated for development.

Appendix A - rewording of Policy HG1 KS5

Change suggested by respondent:

-

Sound: Not specified

Attachments:

Email Representation - Redacted - https://valeofglamorgan.oc2.uk/a/3y3

6788 Object

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Persimmon Homes (East Wales) [1068]

Agent: Boyer Planning

Summary:

Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.

Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency.
As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.

Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently.

The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Full text:

This submission relates to the site known as 'Land North of Dinas Powys' and builds upon previous responses provided in respect of the Call for Sites exercise in September 2022 and more recently Preferred Strategy in February 2024.

For context the site is identified as part of Candidate Site Ref. No 444 within the latest Candidate Sites Assessment (Background Paper – BP18A) which has been published as part of the supporting evidence base.
As you are aware to date Persimmon have presented, what is in effect, two options for the development of the site with a Smaller Option (extending c13ha) and an Extended Scheme (extending to c31ha). Whilst there are significant benefits of both schemes this representation will focus on the smaller option which has been identified as a proposed site allocation for residential development within the Deposit under Policy HG1 – KS2 'Land North of Dinas Powys'.
Having reviewed the Deposit Plan it is evident that the document is structured around a number of key themes/ sections. For convenience this submission discusses each of which in chronological order and should be considered in conjunction with the accompanying technical reports/ plans provided to date.
The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):
• Test 1 – Does the Plan Fit?
• Test 2 – Is the Plan Appropriate?
• Test 3 – Will the Plan Deliver?

Section 3: Key Characteristics
Settlement Pattern
In principle, Persimmon support the Settlement Pattern as set out in Section 3 and in particularly the identification of Dinas Powys as a Primary Settlement.
Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Persimmon consider that Dinas Powys, in particular, is capable of a higher role/ function and thus accommodate even further levels of growth. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Market and Housing Need
In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
Section 4: Key Themes, Vision & Objectives
Key Themes
Persimmon supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect site Land north of Dinas Powys provides an opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location, whilst also facilitating additional services and facilities as part of the proposed offer.
In principle, Persimmon support the 'Placemaking' theme and consider that the proposed allocation in Dinas Powys shall ensure a strong sense of identity is achieved.
Persimmon also support the theme of 'Promoting active travel and sustainable transport choices', and highlight that the proposed residential development at Dinas Powys clearly further assists in ensuring that the new development be in a highly sustainable location with very good access to alternative transport, other than the private car.
Vision
In general, Persimmon support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements to deliver sustainable and high-quality residential development also needs to be suitably recognised.
The site Land north of Dinas Powys clearly aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand. Whilst simultaneously facilitating much needed additional infrastructure improvements to further enhance Dinas Powys' role as a Primary Settlement thereby supporting both existing and future residents.
In light of the above it is considered that Dinas Powys plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.

Strategic Objectives
Objective 3 – Home for All
Persimmon supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Persimmon supports the notion of providing residential development in places which people want to live, and in particular Dinas Powys as a Primary Settlement.
Objective 4 – Placemaking
As above, in principle Persimmon support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally effective from a functional standpoint.
Our site in Danis Powys aligns with such principles whilst also providing an opportunity to facilitate a logical extension to the existing urban form and in doing so meet local need in a sustainable matter. The scope of which includes full market and affordable housing in accordance with proposed policy requirements along with ample public open space, active travel links via dedicated pedestrian footpaths and cycleways and SuDS features.
Objective 8 – Promoting Active and Sustainable Travel Choices
Persimmon supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Dinas Powys has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
Moreover, the proposed allocation would also facilitate both on-site and off-site infrastructure improvements further enhancing the existing excellent accessibility to Eastbrook Station. Therefore, providing an opportunity to encourage a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint the proposed allocation at Land north of Dinas Powys (HG1 KS2) is therefore crucial to ensure growth is prioritised in such a highly sustainable location and maximise opportunities for greater connectivity at both a regional and local level.
Section 5: Sustainable Growth Strategy
RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Persimmon support the proposed approach, however maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
Whilst we appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan. It is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
In light of the above we believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
As evidence above, the proposed allocation Site Ref HG1 KS2 – Land to the North of Dinas Powys, represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering units in the first five years of the emerging plan period.
Persimmon Homes remain fully committed to the development opportunities presented by the site and its progression as a proposed allocation within the RLDP. The latter is essential in assisting the Vale of Glamorgan meet local housing need which ultimately goes to the heart of the plan and ensuring it has been soundly prepared.

2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
Persimmon supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Dinas Powys as the most sustainable primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria (as shown within the table below), it is clear Dinas Powys is considered to be the third most accessible settlement to modes of public transport which clearly aligns with the Council's intension to pursue a transport orientated spatial strategy for future growth. On this basis it is evident that Dinas Powys is more sustainably located when compared to Cowbridge and Llantwit Major, and therefore warrants a higher ranking within the Settlement Appraisal Review and thus greater levels of growth within the RLDP.
Tables 1& 2. Extracts of Key Settlement, Service Centres & Primary Settlement Scores from Settlement Appraisal Review (BP5)
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.
The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
Persimmon supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Persimmon wholly agree with this approach on the basis that this would enable the RLDP to achieve a more sustainable pattern of development and in doing so support growth over the emerging plan period.
In order to help identify suitable locations for future development Transport for Wales have produced isochrone maps which delineates different travels times for walking and cycling around each of the existing railway stations in the Vale. Most notably the site known as at 'Land North of Dinas Powys' is situated within 5-10 minutes walking / 0-5 minutes cycling distance to Eastbrook Station and 15-20 minutes walking/ 5-10 minutes cycling distance from the station at Dinas Powys. This evidence clearly demonstrates the proposed site represents one of the most sustainable locations for residential-led growth and thereby justified its position within the RLDP as a key allocation.
Land North of Dinas Powys further strengthens the spatial strategy by prioritising development at a location that is well served by existing rail stations. Focusing growth in settlements with established rail connectivity ensures that future residents have direct access to sustainable transport infrastructure from the outset. This approach supports a more sustainable pattern of development by reducing reliance on the private vehicle and encouraging a modal shift towards rail, alongside walking and cycling for local trips.
By directing development to locations well served by existing bus and rail infrastructure , the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
Moreover, the proposed allocation HG1 KS2 presents a significant opportunity to support local facilities and facilitate green infrastructure provision within a highly accessible and sustainable location. The scope of which shall include ample public open space, dedicated active travel links via pedestrian footpaths and cycleways, Sustainable Drainage Systems (SuDS) features, and other associated infrastructure. Integrating these elements at the heart of the site shall enable residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport connections.
In terms of the overall distribution of growth, Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail infrastructure as depicted by the strategic transport corridor within the RLDP Key Diagram (Figure 10). However, to optimise the effectiveness of this strategy it would be prudent to focus growth in areas of greatest demand.
Paragraph 3.14 of the Deposit Plan explains that a significant proportion of the population increase in the Vale over the past 10 years has been as a direct result of a people migrating from Cardiff to the Vale, with the Vale ultimately experiencing a net increase of an average of 716 people per year for the period 2011-2021. These principles should therefore be better reflected in the general pattern of development set out within the RLDP. This would be achieved by prioritising higher levels of growth in areas such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
Focussing further growth in well-connected, sustainable locations such Dinas Powys will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

Figure 1. Extract of Key Diagram/ Strategic Growth Area from Deposit Plan
Section 6: Policy Framework
This section identifies the strategic policies, criteria-based development management policies, site specific allocations and designated areas to be protected. These are broadly arranged by topic theme under the key policy headings set out

in PPW which are reflected below.
Strategic and Spatial Choices (Placemaking)
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)
This policy states that in order to deliver the Sustainable Growth Strategy for the VoG, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst Persimmon supports the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority. Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526 dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
As noted, Persimmon are wholly in support of Key Housing-Led Site Ref. KS2 - North Dinas Powys, off Cardiff Road, which seeks to actively contribute towards the housing requirement.
However, the Deposit Plan also needs to recognise that there exists an opportunity to further extend the allocation to provide a logical extension to the defined urban area of Dinas Powys and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale. This additional land is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Persimmon consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold, and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
Whilst Persimmon appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range. Having reviewed the Deposit Plan evidence base we believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes

annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.

In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need.

Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual

As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.

Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.

Although Persimmon acknowledge that this is partly derived on the basis that emerging plan period has technically already commenced (2021 to 2036), and therefore is made up of sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

Table 3. Extract of the Vale of Glamorgan's Housing Supply and Housing Requirement

From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Persimmon's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising the use of sites such as Land north of Dinas Powys, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

Table 18 of the Development Plan Manual (DPM) is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset, but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified "has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area." It also notes that this level of growth has been chosen so that it is "complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).".

Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025. Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the VoG would detrimentally impact upon housing delivery or 'compete' with Cardiff.

In summary, Persimmon supports the overall medium growth strategy and key allocations such as North Dinas Powys. Although given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates

which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance is necessary to the ensure the RLDP is able to effectively meet local need over the plan period. From a practical standpoint whilst further sites may well be required to accommodate the additional growth, it is important the current proposed allocations are safeguarded and therefore supplemented accordingly. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

In principle, Persimmon supports the Settlement Pattern set out in Policy SP2, particularly the identification of Dinas Powys as a Primary Settlement.

Whilst the role of Primary Settlements is acknowledged, in that they contain several key services and facilities, vital to supporting sustainable communities including primary schools, small convenience shops, food and drink outlets and employment opportunities.

Persimmon considers that Dinas Powys is capable of fulfilling an enhanced role given its proximity to strategic transport infrastructure which provide regular services to key designations throughout the region and Cardiff city centre. Whilst the proposed allocation HG1 KS2 undoubtedly supports such principles, given the area is inherently well served by existing infrastructure we maintain that it has the capacity to accommodate even further levels of growth, which could be delivered through the extended Candidate Site (Ref. No. 444). This approach would align with the Council's spatial strategy given that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally subject to greater physical and environmental constraints.

Policy SSC1 – Development within Settlement Boundaries

Persimmon Homes support the premise of Policy SSC1, and the objective of directing development to areas within defined settlement boundaries. This approach will help reinforce sustainable growth patterns and prioritise development in locations well served by both existing and planned infrastructure. Collectively these principles align with the Councils ambitions for Land north of Dinas Powys (HG1 KS2) and supporting local services and facilities to reduce overreliance on private vehicle travel.

Policy SP4 – Placemaking

In principle Persimmon Homes supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.

The proposed allocation Land north of Dinas Powys has been designed with landscape led approach and therefore clearly aligns with the placemaking principles set out in Policy SP4 and the sustainable placemaking framework of PPW12. The site's location on the edge of Dinas Powys enables the scheme to positively responds to the character of the local area whilst remaining in keeping with the wider landscape setting. The layout reflects the prevailing scale and form of surrounding neighbourhoods, incorporating similar architectural cues and a coherent street hierarchy. Green infrastructure forms the structural framework of the masterplan, integrating retained landscape features, new planting, and sustainable drainage measures to ensure climate resilience and biodiversity enhancement. The density proposed makes efficient use of land in accordance with national policy while remaining sensitive to local character and the edge-of-settlement context.

In line with PPW12's emphasis on health and well-being, the scheme promotes active travel that connects to existing pedestrian routes, public transport links and community facilities within Dinas Powys. The development prioritises walking and cycling, supports access to local schools, shops and services, and reduces reliance on the private car. Public open spaces have been prioritised towards the centre of the scheme and homes orientated accordingly to promote natural surveillance, thereby creating a safe area that encourage recreation, social interaction and community cohesion. The integrated green network delivers benefits such as improving general air quality and strengthening ecological connectivity within the Vale of Glamorgan.

The proposal also reflects the design principles set down within the Design Commission for Wales in respect of quality architectural design, contextual response and multifunctional spaces. This will be achieved through a balanced mix of housing types and tenures responds to local need. Careful consideration has also been given to the wider landscape setting of Dinas Powys, ensuring that key views, settlement edges and local character are respected and enhanced.

Policy PGD1 – Creating Well Designed and Inclusive Places

Persimmon question the need for both Policies SP4 and PGD1 as there is notable repetition between the two. In principle the criteria set out within the proposed policy aligns with our expectations, however there is a need to recognise that not all criteria will be able to be accommodated on development sites. Particularly given the need to accommodate other legislative requirements relating to environmental and economic matters that warrant equal consideration as part of the planning process.

On that basis if the Council are minded to continue with this particular policy's inclusion, we request the proposed wording be updated to clarify that such the merit of such principles will be considered on a site-by-site basis rather than the current blanket approach suggested.

Policy PGD2 – Residential Development Densities

Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the proposed density achieves a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.

From a planning standpoint, Persimmon support the Councils approach to prioritise higher density development in Key Settlements, Service Centres and Primary Settlements. These locations are naturally better connected to existing transport infrastructure, modes of public transport, Active Travel routes and local services/facilities to accommodate future growth.

A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure

requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
The density requirement appears to be reasonable in its approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is welcomed. As there will undoubtedly be occasions where the density will need to be considered in further detail due to other on-site factors/ mitigation measures.
Possibly update to highlight support for higher net densities being prioritised in Key, Service Centres and Primary Settlements which are naturally well served by regular public transport provision and Active Travel routes, or near to services and facilities.
Policy SP5 – Creating Healthy & Inclusive Places and Spaces
Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.
Table 4. Extract of Proposed Criteria for HIA Assessments
The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.

Active and Social Places
Policy SP6 – Housing Requirements
Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.
Policy HG1 – Housing Allocations
HG1 KS2 – Land to the North of Dinas Powys
Persimmon wholly support the inclusion of Land to the North of Dinas Powys (HG1 KS2) as a proposed site allocation within the emerging RLDP. The site represents a logical extension to the existing settlement of Dinas Powys and provides an opportunity to address local housing needs within a highly accessible and well-connected location. Given its position adjacent to the existing settlement boundary of Dinas Powys, the site also is also well served by existing services, public transport links, schools and community facilities, thereby reducing reliance on private car travel and supporting national and local placemaking objectives.
The proposed scheme has also been designed to make effective use of land that is both logically related to the existing urban form and clearly aligns with the Council's growth strategy. Given the level of demand in the area, a particularly significant benefit of proposed allocation HG1- KS2 is the commitment to deliver a minimum of 100 affordable homes, representing 40% of the total provision. The site will therefore make a meaningful contribution to meeting locally needs and incorporate a mix of tenures that directly responds to the Vale's LHMA/evidance base. These principles align with the Councils aspirations to foster more inclusive communities and thus remain consistent with Policy SP4 and Policy PGD1. From a design perspective the proposed scheme has also informed by a comprehensive masterplanning process ensuring that high quality design, integrated green infrastructure, and sustainable transport connections integrated throughout the proposed layout.
Ecological considerations have similarly informed the proposed layout for the site. Technical work, including the

Preliminary Ecological Appraisal and subsequent strategy documents, have confirmed suitable biodiversity enhancements can be delivered through a network of retained and reinforced green corridors, historic woodland protection, and supplementary planting. The masterplan prioritises ecological connectivity, incorporating wildlife corridors, dark routes for nocturnal species, and extensive areas of multifunctional open space. These measures not only mitigate potential impacts on identified species, such as dormice, but provide clear opportunities for biodiversity net gain in accordance with the Environment (Wales) Act 2016. The integration of Sustainable Drainage Systems within landscaped areas further demonstrates how flood attenuation, habitat creation and recreational provision can be delivered in a cohesive manner. Thereby ensuring that environmental enhancements are incorporated throughout the scheme from the outset which fully accord with the RLDP's objectives in that respect.

In transport and community infrastructure terms, the site's sustainable credentials are equally compelling. The proposed access arrangements onto Cardiff Road have been refined in response to feedback from the highway department, whilst demonstrating deliverability and promoting safe access for all users to avoid having any adverse impacts on local highway network. Geographically the site also lies within immediate walking distance of Eastbrook and Dinas Powys rail stations, which inevitably aligns with the Council's transport-orientated growth strategy. In turn these principles accord with national placemaking objectives set out in PPW12 and shall actively encouraging a modal shift away from private vehicles to incentivise more active forms of travel. Most notably this includes dedicated pedestrian and cycle links through the site providing connectivity with a range of local services and facilities.

By virtue of the above we fully support the proposed allocation of Land to the North of Dinas Powys (HG1 KS2). As the proposed developer Persimmon Homes remain committed to development opportunities the site presents and its ability to help deliver much needed full market and affordable homes in a highlight sustainable location, which clearly accord with the Council's proposed growth strategy.

Policy HG1 (B) – Housing Allocations

HG1 (3) Barry - Land at Hayes Lane

Persimmon Homes question to suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:

Unsustainable Location & Poor Connectivity

Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's), and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.

Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development. Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.

As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.

The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.

Loss of Allocated Employment Land

Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.

Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability

to meet the region's employment needs up to 2036.
By virtue of the above, Persimmon Homes object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Dinas Powys.

HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The overarching purpose of which shall be to ensure the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
Policy HG3 – Housing Led Redevelopment Opportunity
Persimmon Homes acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
Although we welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
Policy SP7 – Affordable Housing Provision
In principle, Persimmon support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
As mentioned above Persimmon maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexible allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
Policy SP8 – Affordable Housing Requirements
Persimmon supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed are viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted.

Policy SP10 – Sustainable Transport
Persimmon support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Dinas Powys and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
In this regard, the extend site at Dinas Powys represents a suitable and deliverable opportunity that aligns fully with the objectives of Policy SP10. The Authority will be aware that Transport Strategies were submitted at earlier plan-making stages, and these have now been refined through a Technical Note prepared by Vectos (now SLR) in direct response to the Candidate Sites Assessment. The scope of which confirms the proposed access arrangements presented within Policy HG1 KS2 with regards to the primary and secondary vehicular entry/ egress points on to Cardiff Road are acceptable. The former includes the creation of a new signalised junction on to the A4055/ Cardiff Road which has been modelled by Vectos (now SLR) to confirms there will be no adverse impacts with regards to the overall capacity of the local highway network. Furthermore, these measures shall be supplemented by financial contribution towards off-site improvements to help alleviate any existing connection issues/ pinch points and thus enable traffic to flow more freely within Dinas Powys and the wider surrounding area.
In addition, the scheme will deliver significant active travel benefits, including dedicated pedestrian footpaths and cycleways throughout the site that connect seamlessly into the surrounding network. The site lies within immediate walking distance of Eastbrook and Dinas Powys railway stations and therefore aligning with the Vale's transport-orientated growth strategy. Overall, the refined Transport Strategy demonstrates that the development would not result in any significant adverse impact on the highway network, while actively promoting sustainable travel choices. Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
Policy TR1 – Transport Proposals
Persimmon supports the overarching objectives of Policy TR1, which seeks to protect and enhance strategic transport infrastructure across the Vale of Glamorgan, including active travel routes, public transport schemes and highway improvements. Land north of Dinas Powys aligns with these objectives by directing growth to a sustainable settlement capable of supporting integrated transport solutions. The scheme has also been designed to incorporate dedicated pedestrian and cycle routes that ensures development sympathetically integrates with the surrounding area. Most notably that includes measures to enhance pedestrian permeability whilst also encouraging a shift towards more sustainable modes of travel.
In addition to the above, allocation future growth at Land North of Dinas Powys will support planned improvements between the Barry/Biglis roundabout and Dinas Powys Active Travel Route by providing on-site pedestrian and cycle infrastructure that links directly to the proposed 2 km shared walking and cycling corridor. By aligning the site layout and access points with this strategic route the scheme shall naturally maximise the route's functionality, safety and long-term success.
Finally, the site's highly sustainable location reinforces its accordance with the Council's transport-led growth strategy. The development is within immediate walking distance of both Eastbrook and Dinas Powys railway stations, which provide frequent services to Cardiff and Barry other key destinations. Prioritising residential growth in such locations continues towards the Vale of Glamorgan's aim of creating a more sustainable pattern of development, maximising the use of public transport, supporting active travel and reducing reliance on private cars.
Policy SP13 – Community Infrastructure and Planning Obligations
Persimmon Homes do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
Policy CI1 – Open Space Provision
Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision. As such Persimmon query the requirement for an Open Space Strategy for all sites that meet the thresholds.
The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site.
Productive and Enterprising Places
Policy CC1 – Residential Operational Net Zero Carbon Development
Persimmon Homes, strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
Building Regulations Part L currently sets the requirements for energy efficiency in new homes, with the current dwellings built by Persimmon Homes being designed to exceed the minimum requirements of Part L by incorporating enhanced insultation and improved building fabric performance. This includes low U-values for key elements such as walls, roofs, floors and windows to minimise heat loss and improve overall energy efficiency. As a result, Persimmon Homes are achieving a high rating under the Energy Performance Certificate (EPC) System, typically within the A-B range.
Introducing a separate and potentially more onerous operational net zero requirement at the local level risks imposing

additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 is not considered justified or appropriate and thereby conflicts with the second test of soundness set out within the DPM.

The proposed step change in standards from 1 April 2030 (particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year) represents a significant and abrupt step change in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards are able to be delivered on mainstream housing sites without compromising their overall viability. On that note the Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of which the proposed policy could well prevent housing delivery and undermines the emerging RLDP's ability to effectively meet housing need.

Further to the above Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This contradicts the benefit of a consistent national approach through Building Regulations and makes it significantly more difficult for mainstream housebuilders operating across multiple authority areas to deliver homes efficiently. The DPM emphasises the need for development plans to create policy frameworks that encourage housing delivery and avoid unnecessary complications. By introducing bespoke operational monitoring requirements and energy modelling thresholds the policy as currently worded blurs the boundary between planning and Building Control functions. In turn this raises concerns as to whether the policy is justified and capable of being applied consistently across the board.

Finally, the Council's own Viability Assessment (Paragraph 6.60 of BP42) acknowledges current uncertainty given the outcome of Welsh Government's consultation on this topic are still unknown at the time of writing. In the event the Welsh Government decide to peruse national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. Once again, this reinforces Persimmon's concern that Policy CC1 is premature and not in general conformity with national policy. As drafted, the policy risks undermining the council's proposed housing supply, affordable housing delivery rate and general implementation over the plan period. For these reasons, we believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Distinctive and Natural Places

Policy SP19 – Green Infrastructure

In principle Persimmon Homes support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

For completeness the proposed allocation (Land at north Dinas Powys) has been informed by a comprehensive Green Infrastructure Strategy and Landscape Summary Note prepared by Tir Collective (August 2023). The reports demonstrate that the site has been designed in a manner consistent with the objectives of Policy SP19. While future development of the site technically requires a release from the locally designated Green Wedge between Dinas Powys, Penarth and Llandough, the scope of which is limited in nature. Paragraph 3.70 of PPW12 states that Green Wedge boundaries should only include land that is required to remain open for the longer term. In this context, the Council's Green Wedge Background Paper indicates that proposed allocation HG1 KS2 shall not result in any coalescence between settlements and nor does it make a significant contribution to the overall integrity of the designation. These factors confirm that the site is suitable for accommodating future residential development.

The emerging masterplan adopts a landscape-led approach that responds to the site's physical characteristics and surrounding context. Development has therefore been excluded from the most visually sensitive parts of the site which will instead be retained as public open space to avoid having any adverse impact in that respect. This approach is reinforced through the retention and enhancement of existing hedgerows, woodland and field boundaries, alongside supplementary planting to naturally integrate the site into the wider landscape framework.

Policy SP20 – Biodiversity and Ecosystem Resilience

In principle, Persimmon support the objective of Policy SP20 which intends to protect and enhance biodiversity and ecosystem resilience. However, in the interests of soundness we believe the proposed requirement relating to biodiversity enhancement should be reframed to ensure it remains consistent with national policy. In particular, the policy should clarify that development proposals are expected to deliver biodiversity betterment in a manner that is proportionate to the scale and nature of development and consistent with national guidance. The wording should avoid introducing a requirement for a specific or quantified biodiversity net gain approach that goes beyond the national policy framework. Ensuring that the policy reflects the approach set out in Planning Policy Wales 12 will provide greater certainty for applicants and decision-makers while still providing sufficient comfort in securing the requisite biodiversity improvements.

Policy DNP1 – Special Landscape Areas

Persimmon support the revision of the Cwrt-yr-Ala Basin Special Landscape Area (SLA) to reflect the allocation of key site (HG1KS2 North of Dinas Powys off Cardiff Road) as per Policy DNP1. As indicated in Background Paper BP28 – Special Landscape Areas, the future development proposals for the site will be required to incorporate mitigation to reduce the impact of the site on the SLA. These works are incorporated into the proposed masterplan.

Policy DNP2 – Green Wedges

Persimmon support the revision to the green wedge between Dinas Powys, Penarth and Llandough, at Policy DNP2 (1) which has been amended to reflect the key site allocation HG1KS2 North of Dinas Powys.

Policy DNP8 – Severn Estuary Recreational Pressure

Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Persimmon appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that

key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
The policy also provides no clear threshold or criteria for determining what level of activity would constitute “visitor pressure” or an “adverse impact” on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced, the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidance. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan’s ability to meet its housing requirements and risk finding the RLDP unsound.
Conclusion
Subject to the comments within this response, Persimmon are broadly supportive of the Deposit RLDP put forward. Persimmon Homes’ most pertinent comments on the consultation document are summarised below:
• Persimmon fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of greatest demand, such as Dinas Powys, which is not only the nearest settlement geographically to Cardiff but also inherently well connected by the existing rail network and other modes of public transport.
• Persimmon support the principle of the Settlement Hierarchy and the identification of Dinas Powys as a Primary Settlement. Whilst the importance of which is noted, Persimmon maintain that Dinas Powys, in particular, is capable of a higher role and function which can be accommodated in the extended Candidate Site Ref. No 444. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Whilst Persimmon supports the overall principle of a medium growth strategy and key allocations such as North Dinas Powys. Given the Vale’s position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan’s ability to address unmet housing need. Persimmon therefore conclude that a higher flexibility allowance and additional site allocations, such as the extended option at Dinas Powys, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Persimmon welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government’s Future Homes Standard (FHS), which is intended to ensure all new homes are “zero-carbon ready” through a consistent national Building Regulations framework.
• Although Persimmon appreciate the overarching purpose of Policy DNP8 (Severn Estuary Recreational Pressure). In its current form the proposed policy lacks sufficient information to understand how it will operate in practice. Whilst supporting text suggests that key details relating to mitigation delivery will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• Persimmon are wholly supportive of Land North of Dinas Powys’ (HG1 KS2) position as a proposed allocation within the emerging RLDP. The site represents a suitable, available and deliverable location for residential development without any constraints preventing it from delivering much needed homes in line with the Council’s proposed housing trajectory. Furthermore, its position as a key site is crucial to ensure growth is prioritised in such a highly sustainable location, adjacent to the defined urban area of Dinas Powys, and maximise opportunities for greater connectivity at both a regional and local level.
Persimmon would welcome the opportunity to continue on-going conversations with Officers and subsequently support the site’s progression through the next stages of the plan-making process.

Change suggested by respondent:

We believe it fails to meet the relevant tests of soundness and should be omitted from the proposed RLDP.

Sound: No

Document Element: CC1 - Residential Operational Net Zero Carbon Development
Respondent: Taylor Wimpey [386]
Agent: Savills

Summary:
Taylor Wimpey formally expresses significant concerns regarding Policy CC1 (Residential Operational Net Zero Carbon Development), which mandates that new build developments achieve net-zero operational emissions. This policy requires adherence to a specific energy hierarchy, setting stringent space heating and energy use intensity standards from the adoption of the RLDP through 2030 and beyond. It further requires on-site renewable electricity generation equivalent to a development's annual energy consumption, only allowing for off-site contributions or heat network connections when on-site solutions are technically unfeasible.

A primary objection raised by Taylor Wimpey is that setting local requirements that exceed national Building Regulations, such as the 2025 Future Homes Standard, is inappropriate and creates an uneven framework for housebuilders. They argue that Building Regulations are the proper mechanism for establishing fixed technical requirements. In the English context, a Written Ministerial Statement—which has been upheld by judicial review—clarified that local plans should not set energy efficiency standards stricter than national regulations. While Taylor Wimpey acknowledges this is a Westminster position, they contend it is incorrect to suggest there is a clear emerging trend for such localized policies in England.

Furthermore, Taylor Wimpey notes a lack of precedent within the Welsh planning landscape. They point out that two recently adopted RLDPs in South East Wales did not include such policies, leading to a lack of confidence that Policy CC1 will be found sound at examination. The company also questions the robustness of the Council's viability evidence, noting that the cost analysis is based on only three building typologies. This narrow scope fails to account for the broad range of house types used by active developers across Wales, which Taylor Wimpey suggests leads to a significant underestimation of delivery costs.

The financial viability of these requirements is a major point of contention, as Taylor Wimpey's experience suggests the actual cost per unit is closer to £15,000 or £20,000, far higher than the Council's estimates. They also highlight a significant timing gap in the evidence; the cost assessments were established in early 2024, yet the housing trajectory does not forecast first completions until 2028 or 2029. This five-year lag between the cost baseline and actual delivery creates unacceptable uncertainty. Consequently, Taylor Wimpey concludes that Policy CC1 is out of step with broader planning approaches and lacks the necessary certainty to be implemented without harming the overall deliverability of housing.

Full text:
1. Introduction

1.1.1 Savills is instructed by Taylor Wimpey PLC ('Taylor Wimpey') to respond to the consultation on the Deposit Plan as part of the preparation of the Replacement Local Development Plan ('RLDP') by the Vale of Glamorgan Council ('VoG').

1.1.2 The submission is made in the context of Taylor Wimpey's position as the promoter of Site ID 376 (Land West of Swanbridge Road, Phase 3). The site is being promoted for a residential development comprising of 260 homes.

1.1.3 Taylor Wimpey is one of the UK's leading national housebuilders, with extensive experience in delivering high-quality residential developments across a wide range of local authority areas. The company has an established presence within the VoG area. Taylor Wimpey is in the process of delivering Phase 1 of the site with development of Phase 2 close to commencing to dovetail with the completion of Phase 1. Phase 3 would act as a logical extension to the site, effectively rounding off development in this part of Sully and dovetailing with Phase 2 which is anticipated to be completed in 2029.

1.1.4 The site was originally submitted as a candidate site as part of the Call for Candidate Sites stage in September 2022 by Taylor Wimpey. This was a comprehensive site submission demonstrating that the site was viable, deliverable and sustainable – the three tests for Candidate Sites to satisfy as set out in Paragraph 3.36 of the Development Plans Manual. The Candidate Site submission consisted of the following information:

• Archaeological Desk-based Assessment (prepared by RPS);
• Design Vision (prepared by Pegasus Group);
• Drainage Strategy & Flood Risk Assessment (prepared by Pheonix Design);
• Landscape Appraisal (prepared by Pegasus Group);
• Preliminary Ecological Appraisal (prepared by Soltys Brewster);
• High Level Viability Statement (prepared by Savills);
• Transport Technical Note (prepared by Vectos); and
• Supporting Statement (prepared by Savills).

1.1.5 Since then, and on behalf of Taylor Wimpey , Savills have also responded to the consultation on the Preferred Strategy in February 2024 as well as the Housing Growth in Barry consultation in July 2025 and the Housing Trajectory in

October 2025.

1.1.6 This supporting statement is structured to initially comment on the approach taken by the VoG in assessing the Land West of Swanbridge Road, Phase 3 site before commenting on specific policies that are contained within the Deposit RLDP.

1.1.7 In general, Taylor Wimpey's position is that, at present, the Deposit RLDP is not sound but that it could be made sound through the amendments as suggested throughout this Statement.

2. Candidate Site Assessment Process and Integrated Sustainability Assessment
Introduction

2.1.1 Candidate sites are in essence assessed through two means – the Candidate Site Assessment Background Papers and the Integrated Sustainability Appraisal.

2.1.2 Taylor Wimpey's position is that both of these documents do not provide an adequate assessment of the Land West of Swanbridge Road, Phase 3 site.

2.1.3 Each is considered in turn below.

Candidate Site Assessment Process

2.1.4 All candidate sites have been assessed at Preferred Strategy stage (reported as Background Paper 18) and Deposit stage (reported as Background Paper 18a).

2.1.5 The reason for the Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site not being carried forward as part of these assessments was presented in Background Paper 18 at the time of publication of the Preferred Strategy with Backgropund Paper 18a providing no further site analysis. The reason for the site not progressing this stage of the Candidate Site assessment process is as follows:

"Development of the site would lead to a loss of the Best and Most Versatile Grade 3a agricultural land contrary to national policy."

2.1.6 Whilst parts of the site do constitute Best and Most Versatile (BMV) land, Taylor Wimpey's position is that there are compelling reasons relating to the site's context and how it is utilised that mean a more nuanced position needs to be taken. Without such nuance, the RLDP risks not allocating a site that, whilst perhaps containing BMV, is otherwise suitable for development and more suitable for development then sites that the Deposit RLDP proposes to instead allocate.

2.1.7 Included at Appendix A, and included as part of Taylor Wimpey's representations on the Preferred Strategy and the Housing Growth in Barry consultations, is an Agricultural Assessment prepared by The Andersons Centre.

2.1.8 The key conclusions from this Assessment are that:

• The site is farmed by a tenant farmer whose main base is approximately 12km away which presents logistical and practical challenges. These challenges are exacerbated by the lack of farm buildings and the fact that there is no mains electricity;

• The site forms part of a wider 230 acre farm and so the cessation of agricultural practices on this parcel will not, by virtue of its size, prejudice the continued farming of the wider land parcel;

• The tenant farmer farms approximately 3,000 acres of land and so the loss of the ability to farm this parcel will have a negligible impact on the continuation of their agricultural operations;

• The site is bound on two sides by existing or permitted housing, on a third boundary by a railway line, and on its eastern boundary by a road; and

• Farming of the land does not support a high level of employment and if the land was lost for development, 0.15 of a full time labour unit's equivalent work would be lost.

2.1.9 Taking the above together, the conclusion needs to be reached that the site's size and context presents challenges for farming and that the development of Phase 2 by Taylor Wimpey has the potential to exacerbate these challenges. Aligned to this, the level of employment that the farming of the site supports is negligible and the cessation of farming of this particular parcel of land will not materially impact either the continued farming operations of the wider farm that the land sits apart of or the tenant farmer that farms the land.

Integrated Sustainability Appraisal

2.1.10 The Initial Integrated Sustainability Appraisal undertaken at Preferred Strategy stage provides a GIS based appraisal of all sites against 17 objectives. Inherently the Initial Integrated Sustainability Appraisal can be a bit of a blunt tool but Taylor Wimpey's position is that the site performs better against a substantial number of the 17 objectives than the current assessment.

2.1.11 Included at Appendix B is an assessment undertaken by Taylor Wimpey which provides commentary against certain objectives and suggests why the site performs considerably better than forecast in the Initial Integrated Sustainability Appraisal.

2.1.12 A summary of this is presented below:
Table 1 Summary of ISA and Suggested Taylor Wimpey Approach

2.1.13 Taylor Wimpey's position here is clear – the inadequacy of the Integrated Sustainability Appraisal as a tool for assessing candidate sites can only be appropriate where the Integrated Sustainability Appraisal is done correctly and considers the mitigation measures that a candidate site submission proposed to put in place. Without this, the Integrated Sustainability Appraisal risks a situation – as Taylor Wimpey suggest has been the case in Policy HG1 KS1 – where a Key Site is selected in favour of alternative sites that are better performing.

3. Deposit Plan

3.1 Introduction

3.1.1 The following section of this Statement comments on the relevant Key Themes, Strategic Objectives and draft Policy Framework forming part of the Deposit Plan Consultation.

3.1.2 The Policy Framework has been reviewed with comments provided on only those policies considered to be of most relevance to Land West of Swanbridge Road (Phase 3), Sully. The position on individual policies contained within the Deposit RLDP are summarised in the table below:

Table 2 Taylor Wimpey Policy Position

Relevant Policy Support or Object
SP1 Sustainable Growth Strategy - Object
SP2 Settlement Hierarchy - Support
SP 6 Housing Requirement - Object
HG1 Housing Allocations: HG1 KS1 – Land at North West Barry - Object
TR1 Transport Proposals: TR1(2) Active Travel Route Sully to Cosmeston - Support
TR1 Transport Proposals: TR1(6) Highway Improvement Works Weycock Cross Roundabout - Object
CC1 Residential Operational Net Zero Carbon Development - Object
CI1 Open Space Provision - Clarity required
DNP5 Environmental Protection - Object as currently worded

3.2 Key Themes and Strategic Objectives

Homes For All

3.2.1 As noted in paragraphs 3.17 and 3.18 of the Deposit Plan the VoG has the highest affordability ratio in Wales with average house prices 9.7 times the average workplace earnings compared to the Welsh average, giving rise to a significant need for affordable homes which is under significant pressure. This highlights the ever increasing need for sufficient high quality housing, which Taylor Wimpey are committed to provide and supply the mix, type and tenure of housing needed within the local authority's growing population.

Placemaking

3.2.2 Taylor Wimpey embed strong placemaking standards across their developments as detailed within their Placemaking Charter. Taylor Wimpey consider Land West of Swanbridge Road (Phase 3) to present an opportunity to provide a comprehensive residential development that is accessible and well-connected with the existing settlement of Sully and compliments the earlier phases of development. As demonstrated in the earlier phases of development, the Site offers a sustainable location for future growth with easy access to a range of services and facilities in Sully.

Protecting and Enhancing the Natural Environment

3.2.3 Taylor Wimpey support the VoG's commitment to protect and enhance the natural environment through the integration of green/blue infrastructure network and the sustainable management of resources within the VoG. However where Objective 5 seeks to safeguard land from inappropriate development, proposals must be subject to the relevant planning balance giving weight to the surrounding land use and appropriateness of safeguarding agricultural land that would otherwise be unconstrained and considered suitable for development given the outstanding need for housing.

Promoting Active and Sustainable Travel Choices

3.2.4 Taylor Wimpey support the promotion of sustainable travel and active modes of transport, including the provision of designated active travel routes that improve the connectivity between primary and key settlements, such as the Sully to Cosmeston active travel route.

3.2.5 As demonstrated in the earlier phases of Land West of Swanbridge Road, Taylor Wimpey support the promotion of active travel within new developments and provide opportunities for residents to easily engage with active travel.

3.3 Policy Framework

Policy SP1 Sustainable Growth Strategy

3.3.1 Taylor Wimpey's comments on this policy relate to the sustainable growth strategy in so much as it relates to the spatial strategy rather than the housing requirement that the RLDP adopts with further comments on the housing requirement provided in connection to Policy SP6 (Housing Requirement).

3.3.2 Taylor Wimpey appreciate the need to balance the ten strategic objectives against the need for growth and protection of the VoG's natural and built environment, and strongly support the strategic objective to provide homes for all. Taylor Wimpey maintain their position on the proposed growth strategy that has been established within earlier consultation responses submitted throughout the RLDP process, including the most recent consultation on 'Growth Options in Barry'.

3.3.3 Taylor Wimpey consider that to date the growth strategy has placed disproportionate emphasis on identifying an alternative site within Barry, rather than giving due consideration to potential sites in nearby high-performing settlements such as Sully. Taylor Wimpey therefore strongly encourage the VoG to widen the search for additional allocations beyond the administrative boundary of Barry Town Council and to consider locations that represent a logical and sustainable extension to neighbouring primary settlements that are located within the Strategic Growth Area, including Sully.

3.3.4 The six key elements of the Sustainable Growth Strategy are noted and Taylor Wimpey support a spatial strategy that locates major new development for the delivery of sustainable housing growth in appropriate locations, such as Sully, that are supported by the relevant infrastructure, services and facilities. Providing new homes within Phase 3 aligns with the Strategic Growth Area identified within the RLDP Strategy which forms the primary focus for housing growth.

3.3.5 Policy SPG1 continues to identify Sully as a location where new housing development will be concentrated, therefore establishing a principle of development for Phase 3 and help to further align the provision of new housing with the existing facilities of Sully, reducing the need to travel. Sully represents an inherently sustainable location for future growth and aligns well with the Sustainable Transport Oriented Growth Option. As identified in the Deposit RLDP, Sully is classified as a Primary Settlement and performs a complementary role to Barry as a key centre. Its position within the Strategic Growth Area further indicates that an appropriate level of development at Sully would be acceptable, with both existing housing delivery and the current allocation at Swanbridge Road supporting its established role.
3.3.6 With existing development ongoing to the north of the Site, at Phases 1 and 2 of Land West of Swanbridge Road, Phase 3 is considered to provide an appropriate level of growth in a sustainable location that would form a logical extension to existing allocations. The sustainability and suitability of Sully to accommodate residential development is reinforced by the allocation of 500 dwellings under Policy MG2(37) ('Land West of Swanbridge Road, Sully') on land directly north of the site promoted by Taylor Wimpey. The progression of this location into a phase 3 development would continue to strengthen Sully's function as a primary settlement and would constitute a logical and coherent extension to the existing built form.

Figure 1 Extract of Growth Strategy

3.3.7 Taylor Wimpey appreciate the aspirations of the Council to deliver housing to meet the identified future housing needs of the VoG and wider growth aspirations of the South East Wales Region at a strategic level. Taylor Wimpey support the revised strategy moving away from North East Barry, however maintain the position that this level of growth should be re-allocated to those locations that are most suitable for growth, including sustainable settlements outside of Barry. Growth should not be focuses solely on Barry.

Policy SP2 Settlement Hierarchy

3.3.8 Taylor Wimpey support the conclusions of the Settlement Appraisal Review Background Paper which identifies Sully as a Primary Settlement, reflecting its important role in providing a level of housing growth, in addition to key local services and facilities. Within this Background Paper, Sully is recognised for its vital role as a sustainable community, scoring highly across all key principles in demonstrating its sustainability by providing for the day-to-day needs of its residents. Taylor Wimpey concur with the supporting evidence which reinforces Sully's importance within the settlement hierarchy.

3.3.9 Whilst Draft Policy SP2 presents a 'broad distribution of development within the Strategic Growth Area..', serious

concerns continue to be raised around the level of growth around Barry and the emphasis placed on it as the focus for future development. Taylor Wimpey do not dispute the identification of Barry as a Key Settlement, given its position as the largest town within the VoG, however believe Barry should not remain the sole focus for growth where there are opportunities available around primary settlements located within the Strategic Growth Area.

3.3.10 Put another way, it seems perverse for the Deposit RLDP to direct no new growth to a Primary Settlement within the identified Strategic Growth Area.

Policy SP 6 Housing Requirement

3.3.11 The purpose of this policy is to set the housing requirement and then identify the components of supply that are anticipated to meet this housing requirement. A number of Background Papers (nos. BP7, BP8, BP8A, ad BP9A) underpin the approach that is taken. Taylor Wimpey have a number of comments to make on the approach taken in this policy.

Housing Requirement

3.3.12 The approach taken in the Deposit RLDP, as with the Preferred Strategy beforehand, is for the housing requirement to make use of a 10 year dwelling-led scenario, an approach that reflects past completions and looks to extrapolate this forward over the lifetime of the RLDP.

3.3.13 Taylor Wimpey provided detailed commentary on the proposed housing requirement in their comments on the Preferred Strategy but note that Welsh Government have subsequently provided their comments on the Preferred Strategy raising no objection with the housing requirement proposed to be taken.

3.3.14 Taylor Wimpey's position though remains – if a dwelling-led scenario is to be used to determine the housing requirement then it needs to have a far shorter scenario length then 10 years as the first three years of the 10 year period selected were when supply was suppressed as a result of the current LDP not having been adopted.

3.3.15 That said, there is a clear contextual change since the Preferred Strategy was adopted, this being the publication of the 2022-based household projections have been published. Table 5 of Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections provides a comparison of the 2022-based projections with the 2018-based projections and the Deposit RLDP's housing requirement. A simplified version of this table is shown overleaf:

Table 3 RLDP Housing Requirement
Scenario Housing Requirement
RLDP 7,587
2018-based projections 6,214
2022-based projections 9,623

3.3.16 This is important as Paragraph 4.2.6 of PWW states that:

'The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans.'

3.3.17 The proposed approach of continuing to use the 10 year dwelling-led scenario, as a methodology, clearly does not do this.

3.3.18 The approach of using the 2022-based household projections would comply with the aspirations of PPW. Taylor Wimpey's position is that the commentary provided in the Background Paper 8A Supplementary Demographic Evidence – 2022-based WG Projections for not using 2022-based projections is wholly inadequate and that these projections should be used.

Flexibility Allowance

3.3.19 Paragraph 5.58 of Edition 3 the Development Plans Manual (March 2020) makes it clear that there is a requirement for a flexibility allowance to be added on top of the housing requirement to derive the number of homes the RLDP should plan for. This is in the interest of ensuring that sufficient housing is delivered in the event of some allocated sites either not delivering in their entirety or delivering less homes than anticipated. Paragraph 5.59 of the Manual clarifies that the extent of the flexibility allowance should be informed by local issues with 10% as a starting point (i.e. as the minimum).

3.3.20 The Adopted Local Development Plan (ALDP) applies a 10% flexibility allowance on top of the housing requirement for 9,460 homes so that provision is made for 10,408 homes.

3.3.21 Paragraph 1.2.34 of the Annual Monitoring Report 2024-2025 provides a comparison of the number of homes that have been completed and the level of completions that the ALDP anticipates. This shows that 6,999 homes have been delivered up to 1st April 2025 against a cumulative dwelling target of 8,829 homes, representing a shortfall of 20.7%.

3.3.22 Taylor Wimpey's point here is that the ALDP's flexibility allowance of 10% is insufficient to ensure that the ALDP's housing requirement is actually being delivered. This is clear evidence that a higher flexibility allowance should be used for the RLDP. Although for different reasons, but following a direction from the Welsh Government Planning Inspector, Bridgend County Borough Council has increased its flexibility allowance to 20% and, it is considered that such a buffer is appropriate for the VoG's RLDP.

Non-Delivery Allowance on Land Bank

3.3.23 Line C of Table 2 of the Preferred Strategy relates to those sites that either benefit from planning permission or are subject to a resolution to grant planning permission subject to planning permission. Combined, these sites are identified as having capacity for 1,860 homes.

3.3.24 The current approach, which assumes that all other sites which are under construction or sites where there is either a planning permission in place or sites where there is a resolution to grant planning permission subject to the signing of a Section 106 agreement will be completed in full, causes concern for Taylor Wimpey.

3.3.25 There are multiple reasons why homes that benefit from either planning permission or a resolution to grant planning may not be delivered. These relate to viability, but also to specific site constraints and landowner intentions.

3.3.26 A point that is separate, but inherently linked, to the above is that often the capacity of a site for which reserved matters approval is sought is less than that permitted at outline stage. Requirements for SAB approval and the demonstration of a biodiversity net benefit, for example, reduce the capacity of a site at detailed design stage but are often not factored in at outline stage, particularly where the outline application is not progressed by a housebuilder.

3.3.27 Research undertaken by the Local Government Association for England (no such data is available for Wales) suggests that, between 2010/2011 and 2019/2020 a total of 2,782,300 dwelling were granted planning permission whilst there were only 1,627,730 completions. This means that during this period just 58.5% of those homes which were granted planning permission were completed.

3.3.28 Taylor Wimpey is not suggesting that applying a discount of 41.5% is necessarily correct and the above is both from England and a few years out of date but the need for a discount that relates specifically to Line C is very clear.

3.3.29 It's difficult to know what this figure should be but Taylor Wimpey suggest that a 20% figure is used to reflect the flexibility allowance.

Windfall Allowances

3.3.30 The approach taken in the Deposit RLDP is to assume that 1,303 homes will be delivered across Windfall Sites. This has been calculated on the basis of previous completion delivered as windfalls.

3.3.31 Taylor Wimpey's concern is that the delivery of homes on Windfall Sites inherently becomes more challenging over time as the easier to develop sites have been delivered and the buildings and land that hasn't been developed is subject to increasing levels of policy protection. The approach taken by Cardiff Council in their Deposit RLDP is to assume that 75% of the 10 year average Windfall Sites will be delivered and such an approach seems entirely appropriate in this case.

3.3.32 An Urban Capacity Study (October 2023) prepared by the VoG, seeks to corroborate this by identifying 2,627 homes that could be delivered across the VoG. Whilst the windfall allowances would be less than the suggested urban capacity, this shouldn't be seen as problematic or as a conflict as the purpose of the Urban Capacity Study is, as the name suggests, just to identify sites which may have capacity. It doesn't account for land ownership (and whether the land owners have aspirations to dispose of the site) or development viability. In addition, the approach taken to site capacity to is to assume a density based on site type but it does this without an appreciation of site constraints and is based on the gross rather than net area.

Rolled Forward Sites

3.3.33 Taylor Wimpey have concerns with the approach that is taken in Table 2 of the Deposit RLDP which identifies allocations for 959 homes that are to be rolled over from the ALDP to the RLDP.

3.3.34 Concerns are raised around two sites in particular - Land to the west of Pencoedtre Lane, Barry and Land between new Northern Access Road and Eglwys Brewis Road, These sites are allocated in the ALDP but have failed to be delivered. Given the longstanding period during which there has been clear policy support for development but no completions, it follows that there are serious concerns around the deliverability of these two sites which, together, are allocated for 370 homes.

3.3.35 The failure to deliver these dwellings is due to a number of factors which are detailed in Taylor Wimpey's Preferred Strategy consultation response, which questions whether these sites will deliver at all or at a significantly

reduced capacity due to the following reasons:

■ Viability constraints;
■ Site specific constraints;
■ Landowner intentions;
■ Requirements for SAB approval; and
■ Biodiversity net benefit;

3.3.36 Whilst it is recognised that there may be policy support for the delivery of these two sites, there deliverability is clearly uncertain and they should be removed from Table 2.

Conclusion

3.3.37 The following table summarises the approach previously proposed in the Deposit RLDP and compares it to the amendments suggested by Taylor Wimpey in the preceding sections of this Statement.

Table 4 Deposit RLDP Housing Supply and Taylor Wimpey's Suggested Approach
Housing Supply - Deposit Plan (December 2025) - Taylor Wimpey Suggested Approach (March 2026)
Housing Requirement - 7,890 - 9,623
Flexibility Allowance - 10% - 20%
Flexibility Allowance – 770 - 1,925
Housing Requirement + Flexibility Allowance - 8,660 - 11,548
A – Completions - 1,747 - 1,747
B – Units Under Construction - 313 - 313
C and D- Units with Planning Permission Minus Non-Delivery Allowance - 1,777 1,488
Existing Supply - 3,827 - 3,548
E – Large Windfall Sites - 720 - 540
F – Small Windfall Sites - 583 - 438
E+ F Total Windfall Allowance - 1,303 - 978
RLDP Allocations - 3,520 - 3,150

3.3.38 The conclusion reached in Taylor Wimpey's analysis is that, as a result of both the suggested housing requirement and flexibility allowance combined with Taylor Wimpey's comments on the components of supply, the Deposit RLDP needs to find allocations to deliver a further 3,872 homes.

Policy HG1 KS1 – Land at North West Barry
3.3.39 Policy HG1 (Housing Allocations) identifies those sites that are to be allocated to meet the housing requirement of 7,890 homes that is set out in Policy SP1 (Sustainable Growth Strategy) and Policy SP6 (Housing Requirement) of the RLDP. Taylor Wimpey has provided comments on the housing requirement that is set in the RLDP and the components of supply that are anticipated to meet it in the proceeding sections of this Statement.

3.3.40 As well as the existing landbank and an allowance for windfalls, Policy HG1 notes that this requirement will be met through a mix of Key Sites, conventional housing allocations, housing-led regeneration opportunities, and rural affordable housing led sites.

3.3.41 There is a standalone separate policy for each of the five Key Sites that are identified in Policy HG1 (Housing Allocations). Each separate Key Site policy identifies what the site is proposed to be allocated for before providing setting out expectations of how each Key Site should come forward – both in terms of land uses that should be delivered and constraints and opportunities needing to be responded to – that are framed under a series of sub-headings. A masterplan sits alongside each Key Site policy whilst a package of supporting documentation for each Key Site submitted by the site promoter is also made available as part of the consultation on the Deposit RLDP.

3.3.42 Policy HG1 KS1 proposes to allocate the site known as 'Land at North West Barry'.

3.3.43 The proposed allocation of this site follows a consultation – entitled 'Housing Growth in Barry' - undertaken by the VoG in July 2025 which proposed to allocate three sites in Barry as an alternative to the North East Barry site that was identified as a Key Site in the Preferred Strategy but was considered to no longer be deliverable.

3.3.44 Taylor Wimpey responded as part of the 'Housing Growth in Barry' consultation, supporting the removal of North East Barry as a Key Site but raising serious concerns with the proposed allocation of 'Land at North West Barry' as an alternative.
3.3.45 These concerns remain and Taylor Wimpey strongly consider there need to be other alternative sites – such as Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) - within nearby settlements that perform better than the Land at North West Barry site and should be allocated for housing.
3.3.46 To support this conclusion, Taylor Wimpey has undertaken a review of the Integrated Sustainability Appraisal (ISA) which provides a scoring of different candidate sites against the 17 objectives as well as considering and comparing the sustainability and accessibility of the two sites.

Integrated Sustainability Appraisal

3.3.47 The below table provides a comparison of how the Integrated Sustainability Appraisal scores Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) compared to the Land at North West Barry site. Two different comparisons are provided – one which compares the actual scoring in the ISA and a second which compares the two sites following Taylor Wimpey's suggested scoring which is included as Appendix A.

3.3.48 These tables clearly highlight where the subject site out performs North West Barry across numerous objectives.

Table 5 Comparison of Phase 3 Land West of Swanbridge Road (Site ID 376) and North West Barry (Site ID 490) ISA performance

3.3.49 From an initial review, the Integrated Sustainability Appraisal shows that Land West of Swanbridge significantly outperforms North West Barry in terms of the number of significantly positive scores '++' and the number of '—' scores. To this end the subject site provides clear advantages above and beyond North West Barry in terms of homes, health, and transport. As such Land West of Swanbridge is considered to have the capacity to deliver a significant number of new homes (≥ 100 dwellings) and it does not intersect with a designated green wedge; The site is within 800m of a health service and an active travel route; and, The site is within close proximity (≤800m) to a railway station or bus stop, town/ retail centre and an active travel route. Taylor Wimpey consider this assessment should go further to recognise the associated benefits to the leisure than be provided by the site's development.

3.3.50 Following Taylor Wimpey's re-assessment of the site against the Integrated Sustainability Appraisal ISA objectives it is also considered to obtain notably more positive '+' scores than North West Barry. It is also worth noting that North West Barry has more unknown impacts than Land West of Swanbridge which introduces a level of uncertainty around its potential for further negative impacts. Moreover, North West Barry scores a significant number of negative impacts across the ISA, with the extension site obtaining double the amount than Land West of Swanbridge Road.

3.3.51 Taylor Wimpey's position is that it would be unsound to allocate a site that performs considerably poorer in the Integrated Sustainability Appraisal than a site that is not proposed to be allocated.

Accessibility and Sustainability

3.3.52 SLR Consulting have prepared an updated document demonstrating the Site's sustainability credentials and providing a detailed overview of existing and future active travel and public transport infrastructure. This is included as Appendix C.

3.3.53 As a starting point, it considers those services within Sully. In terms of local amenities, the population size of Sully, naturally benefits from a good range of local amenities and services, and therefore it is anticipated that a high proportion of future residents' day-to-day journeys would be contained within the village and undertaken via walking or cycling. The Walking Catchment Map prepared by SLR demonstrates this and illustrates services within walking distance from the Site.

3.3.54 The proposed development benefits from local existing and future / planned infrastructure which will help support travel by sustainable modes such as walking, cycling and public transport. The Site falls within the less than 15 minutes Public Transport Catchment for bus and rail services. The Site is supported by the existing bus network, connecting Sully with Barry, Penarth and Cardiff – the nearest bus stop approximately 400m from the centre of the site; Moreover the Site is within proximity to Cadoxton and Penarth railway stations which have regular services in each direction in addition to the existing walking and cycling infrastructure in and around Sully.

3.3.55 The future accessibility of the Site will be further enhanced through the ongoing and planned South Wales Metro improvements, future active travel routes and the proposed Sully to Penarth mixed use link. The below figure shows several newly proposed active travel routes running close to the site including a new walking / cycling route along Swanbridge Road. Planning applications are now being submitted to support the delivery of these new active travel links. In March 2025 a planning application was submitted proposing a new route between Palmerstown and Dinas Powys.

3.4 SLR have undertaken further assessment work comparing the sustainability credentials of Land West of Swanbridge Road to Land North West of Barry. Land North West of Barry, is separated from the existing built-up area by the B4266 Pontypridd Road where the eastern and southern boundaries abut residential properties. As such, the proposed access for all modes would be taken from the A4226 Port Road West. The A4226 and B4266 can be a barrier to the promotion of active travel in that they facilitate vehicular travel and do not provide an attractive environment for pedestrians.

3.5 Furthermore, Land North West of Barry is on the fringes of Barry and had few if any facilities within a 10 minute walk, other than bus stops. In comparison, Land West of Swanbridge Road in Sully benefits from its proximity to the High Street in Sully and the services there.

3.6 The below table demonstrates differences in accessibility to amenities between the two sites, where Land West of Swanbridge Road presents a more favourable location for future development.

Table 6 Comparison of Local Facilities Between Land North West of Barry (Site ID 449) and Land West of Swanbridge Road (Phase 3) (Site ID 376)

3.7 Whilst the walking distance shown from Land North West of Barry to the nearest bus stop is slightly less than the Swanbridge Road Site, it should be noted that the bus services that can be accessed from Sully are more frequent and more direct than those which can be accessed from Land North West of Barry.

Conclusion

3.8 Taking the above together, the conclusion Taylor Wimepy reach is that their Land West of Swanbridge Road (Phase 3), Sully (Ref. 376) site performs more strongly than the Land North West of Barry site.

Policy TR1 Transport Proposals

3.9 The draft transport proposals contained within the Deposit RLDP have been reviewed with the following proposals considered to be pertinent to the Site and draft residential allocations.

TR 1 (2) Active Travel Route: Sully to Cosmeston

3.10 Taylor Wimpey support the designation of an active travel route connection the eastern side of Sully with Cosmeston in the north-east. Most notably the proposed route will pass Swanbridge Road which provides direct access to Land West of Swanbridge Road Site, with Phase 3 in close proximity to the travel route. The proposal would further enhance the accessibility and sustainability of the Site as a logical extension for residential development in Sully.

Figure 4 Extract of Deposit RLDP Proposals Map with Land West of Swanbridge Road (Phase 3) Identified

TR1 (6) Highway Improvement works: Weycock Cross Roundabout, Barry

3.11 Taylor Wimpey raise concerns around the proposed works at the Wyecock Cross Roundabout, compared to the other improvement works proposed. As noted in the Deposit RLDP, this roundabout forms a key connection within the wider strategic highway network and therefore of high importance for the local area and surrounding communities. The proposed options presented within the Deposit RLDP provide little certainty of the scope of works required with no preferred option identified. This raises concerns around the impacts of the highway improvements on the deliverability of the adjacent draft allocation of North West Barry. The same concerns arise when considering the roundabout improvement works in combination with the proposed access strategy contained within North West Barry's supporting information package. The proposed road widening measures (c.11m increase) required to make the draft allocation accessible would have a significant impact on the wider transport network at this strategic junction.

Policy CC1 (Residential Operational Net Zero Carbon Development)

3.12 The effect of this policy is to require new build development to achieve net-zero operational emissions. This is to be achieved through the following of the Energy Hierarchy for Planning with Policy CC1 (Residential Operational Net Zero Carbon Development) then setting out space heating and energy use intensity standards to be met from RLDP adoption through to 2030 and then from 2030 onwards, and setting a requirement for on-site renewable electricity generation to have an output equivalent to annual energy consumption. The policy notes that this may not be technically feasible and, in these cases, requires that development maximises onsite renewable generation and / or connects or proposes to connect to a heat network and / or contributes to offsetting.

3.13 As a starting point, Taylor Wimpey share the concerns expressed by the wider development industry that setting requirements above and beyond building regulations (the 2025 Future homes Standard) is not appropriate. Building regulations are there as a mechanism to set fixed requirements that any development must achieve and the effect of introducing requirements to go beyond this results to an uneven framework for housebuilders, significantly adding cost and reducing certainty.

3.14 The justification for exceeding building regulations is set out in Section 7 of Background Paper 33A Net Zero Buildings and throughout Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment and centres on the fact that there is a precedent for such policies in both adopted and emerging policies.

3.15 There are two points to be made here:

3.16 Firstly, a Written Ministerial Statement by then Housing and Planning Minister Lee Rowley made clear that it was not for Local Plans to set local energy efficiency standards that go beyond the requirements of building regulations with Inspectors to take this position at Local Plan examination stage. This Written Ministerial Statement was subject to a judicial review which was dismissed with the position taken in it found to be legally sound.

3.17 Clearly this is the position of the Westminster Government rather than the Welsh Government but the point is that it is wrong to suggest that there is a clear approach emerging in England for Local Plans to incorporate such policies when the Written Ministerial Statement warns Local Plans against setting energy efficiency targets that are stricter than

building regulations.

3.18 Turning to a Wales context, whilst it may be the case that other local planning authorities are considering or looking into the use of such policies, it is worth noting that the two South East Wales local planning authorities which have adopted RLDPs do not include such policies and therefore that can be no confidence that the incorporation of such a policy approach will be found to be sound.

3.19 Secondly, Taylor Wimpey have concerns with the approach that has been taken with regards to viability.

3.20 From Taylor Wimpey's review, a figure for achieving the requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is based on an analysis of three separate house type typologies as presented in Figure 4 of Background Paper 33A Net Zero Buildings. Background Paper 33A Net Zero Buildings is dated November 2025 but Background Paper 33 Net Zero Buildings Feasibility Study and Cost Assessment is from January 2024.

3.21 As a starting point, the figures for achieving this upgrade have been used by Hallam in the undertaking of the Development Viability Model with the development of the site found to continue to be viable with these incorporated.

3.22 Taylor Wimpey's concern is around the robustness of an approach that considers only three building typologies and does not carry out the exercise for a far broader range of house types that are deployed by all of the active housebuilders (both market and affordable) across Wales. Savills' experience is that in reality the cost associated with delivering these standards is in reality far higher and closer to the £15,000 or £20,000 per unit mark.

3.23 Taylor Wimpey's other concern with this approach is that the figure assumed as being required to achieve the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) is driven from a Cost Assessment report published in January 2024. With the Background Paper 9A Housing Land Supply and Housing Trajectory not forecasting first completion onsite until 2028/2029, there is likely to be a period of approximately five years from the establishment of the figure for delivering the policy requirements of Policy CC1 (Residential Operational Net Zero Carbon Development) and when the first units would be delivered onsite.

3.24 Taking the above together, not only is the approach proposed to be taken in Policy CC1 (Residential Operational Net Zero Carbon Development) out of line with the approach that is to be taken in England and the approach that has been taken in Wales, it is considered that there is insufficient certainty around the ability for these works to be delivered when they are required to be without harming viability.

Policy CI1 (Open Space Provision)

3.25 This policy consists of four parts which, combined, dictate how open space should be provided. These parts of the policy set expectations for the level of public open space that should be provided for, confirm that provisions for open space should also be made for commercial uses, notes that it is expected that open space will be provided onsite, and requires that an open space strategy is submitted as part of applications where open space is required to be provided.

3.26 Taylor Wimpey note that Policy CI1 (Open Space Provision) of the Deposit RLDP, when compared with Policy MD3 (Provision of Open Space) of the adopted LDP, proposes an increase in public open space provision from a total of 2.4ha / 1000 people to 2.75ha / 1000 people.

3.27 Taylor Wimpey is not clear as to what has driven the increased level of public open space that Policy CI1 (Open Space Provision) identifies as being required and would welcome clarification on this matter, Policy DNP5 Environmental Protection

3.28 Taylor Wimpey consider the inclusion of 'the loss of the best and most versatile agricultural land' to be at odds with the other elements listed, where unlike the others mentioned, the loss of agricultural land would have limited, if any, impact on people, residential amenity and property.

3.29 It is acknowledged that the loss of BMV agricultural land may impact the VoG's overall amount of high quality agricultural land, however this should be assessed against the existing high level of BMV agricultural land within the County. The extent to which its loss is considered "unacceptable" should be subject to the planning balance against the overriding need for affordable housing and local housing need. Consideration towards the farming business case and economic viability are also required within the planning balance. In the case of Land West of Swanbridge Road, the loss of BMV agricultural land remains the only constraint that cannot be overcome, as noted in the Candidate Site Assessment. Whilst the loss of high quality agricultural land should be avoided, Taylor Wimpey consider that where the merits of the Site are overwhelmingly in favour for sustainable residential development in a suitable and logical location, Policy DNP5 should not stand in the way of housing delivery.

3.30 Whilst Taylor Wimpey support the clause within the draft policy: "Where impacts are identified the Council will require applicants to demonstrate that appropriate measures can be taken to minimise the impact identified to an acceptable level. Planning conditions may be imposed, or legal obligation entered into, to secure any necessary mitigation and monitoring processes." However, in the context of BMV agricultural land, it is not clear how the mitigating measures, in the form of planning conditions or legal obligations, can be applied. This reinforces the earlier view that the

inclusion of 'the loss of the best and most versatile agricultural land', as currently worded within the draft policy, is at odds with the other elements listed where mitigation strategies for pollution can be suitably conditioned.

6921 Object

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Barratt Redrow Homes [2669]

Agent: Boyer Planning

Summary:

Barratt Redrow strongly object to Policy CC1 on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. risks imposing additional cost and complexity that undermines site viability and deliverability.

The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).

The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy.

Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale.

Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.

1. INTRODUCTION

1.1 These representations build upon the responses previously provided to the Call for Sites Consultation, additional information submission, and more recently the Barry Growth Paper in July 2025. For the avoidance of doubt these representations relate to Barratt Redrow Homes' land interest know as 'Swn Y Coed, Wenvoe'. The site has previously been identified as Ref No 437 within the Council's Candidate Site Assessments including the Preferred Strategy Stage, which has been published as part of the technical evidence base and background papers alongside the Deposit Plan.

1.2 Having reviewed the Deposit Plan it is evident that the document is structured around a number of key sections including:

- Section 3 – The Vale of Glamorgan Key Characteristics;
- Section 4 – RLDP Key Themes, Vision, and Objectives;
- Section 5 – Sustainable Growth Strategy; and
- Section 6 – Policy Framework.

1.3 For completeness this submission shall discuss each section in turn.

1.4 The overarching purpose of which shall be to respond to the relevant draft Replacement Local Development Plan policies, with particular consideration given to the Welsh Government's tests of soundness as set out within the Development Plan Manual for Wales (Third Edition) March 2020)):

- Test 1 – Does the Plan Fit?
- Test 2 – Is the Plan Appropriate?
- Test 3 – Will the Plan Deliver?

2. THE VALE OF GLAMORGAN KEY CHARACTERISTICS
Settlement Pattern
2.1 Barratt Redrow support, in principle, the Settlement Pattern as set out in Section 3 of the Deposit Plan and in particular the identification of Wenvoe as a Primary Settlement.
2.2 Paragraph 3.9 explains that primary settlements "offer several key services and facilities, which are vital to their role as sustainable communities, as they reduce the need to travel to Barry or the Service Centre Settlements to address day-to-day needs".
2.3 The importance of the Primary Settlements in supporting the Service Centre Settlements is noted, however Barratt Redrow consider that Wenvoe, in particular, is capable of a higher role and function and can accommodate a higher level of growth over and above affordable led exception sites, which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
Housing Need
2.4 In light of the Vale of Glamorgan's strategic location in-between Cardiff and Bridgend, and the significant employment opportunities associated with these areas, the Deposit RLDP should seek to maximise housing provision to ensure a more sustainable balance is achieved between homes and jobs, and in turn reduce commuting distances/ carbon emissions.
2.5 Paragraph 3.18 clearly acknowledges the scale of affordable housing need, identifying a requirement for 1,075 affordable homes per annum between 2023–2028 and 154 per annum thereafter. Yet it remains unclear whether existing unmet need has been fully factored into the overall housing requirement presented within the Deposit RLDP. This is particularly importance in the context of the Welsh Government's 2025-based estimates which identify 9,400 units of unmet need at a national level and a requirement for 8,700 additional homes per annum over the next five years simply to address newly arising need.
2.6 Accordingly, there is a compelling justification for a further uplift in housing numbers to ensure the Plan proactively addresses both existing and emerging need. Increasing the overall housing requirement would directly enhance the overall delivery rate for affordable homes which is crucial in a local authority area with the highest affordability ratio in Wales. Paragraph 3.17 confirms that in the Vale average house prices are 9.7 times average workplace earnings compared to the Wales average of 6.1, therefore a step change in housing targets is needed to support a more balanced housing market across the region.
3. RLDP KEY THEMES, VISION, AND OBJECTIVES
3.1 Section 4 of the Deposit RLDP sets out the Council's vision over the emerging plan period. The vision establishes a series of strategic goals the Council intends to work towards and in doing so provides an insight into how the Vale of Glamorgan is envisioned to develop up to 2036.
Key Themes
3.2 Barratt Redrow supports the theme 'Homes for all' and the need for the housing supply to respond to the growing population and provided in appropriate locations, with a mix of tenure and types. In that respect the site at Swn Y Coed, Wenvoe offers a sustainable and deliverable opportunity to ensure future residential development aligns with such objectives to deliver high quality housing development in a sustainable location.
3.3 In principle, Barratt Redrow support the 'Placemaking' theme and consider that development in Swn Y Coed, Wenvoe would ensure a strong sense of identity and that the scheme is capable of providing a well designed and sustainable development.
3.4 Barratt Redrow also support the theme of 'Promoting active travel and sustainable transport choices', and in particular the need to ensure that the new development will be in a highly sustainable location with very good access to alternative transport, such as bus services, rather than a reliance on the rail network. This is clearly evident at Swn Y Coed, Wenvoe.
Vision
3.5 In general, Barratt Redrow support the RLDP Vision, however highlight that whilst Barry and other Sustainable Service Centres are identified as playing a vital role in delivering the strategy, the importance of the ability for Primary Settlements, such as Wenvoe, to deliver sustainable and high-quality residential development also needs to be suitably recognised.
3.6 The allocation of Swn Y Coed (Candidate Site Ref: 437) is capable of providing a comprehensive residential development in a highly sustainable location and within an important Primary Settlement. The principle of which aligns with the Council's ambition to ensure future growth delivers homes which caters for all (including affordable homes) and are prioritised in areas of greatest demand.
3.7 In light of the above it is considered that Wenvoe plays a significant part in delivering the Council's strategy and the role, function, and ability of this settlement to accommodate growth needs to be significantly reinforced. The settlement is capable of accommodating more growth in a highly sustainable location we believe warrants greater recognition within the vision itself.
Strategic Objectives
Objective 3 – Home for All

3.8 Barratt Redrow supports the principle of Objective 3, in particular the provision of high quality housing which includes the right mix, tenure and type. Barratt Redrow supports the notion of providing residential development in places which people want to live, and in particular Wenvoe as a Primary Settlement.
Objective 4 – Placemaking
3.9 As above, in principle Barratt Redrow support the Council's placemaking objectives which seeks to ensure all development will contribute positively toward creating a sense of place. Most notably this involves prioritising future growth in sustainable locations which are placed to create attractive, safe and accessible schemes that are equally

effective from a functional standpoint.
3.10 The proposed allocation at Swn Y Coed (Ref 437) at Wenvoe aligns with such principles whilst also providing an opportunity to facilitate a high quality, mixed tenure residential development of circa 80+ open market & affordable homes, with a high-quality distinct character responding to the site context and creating a sense of place.
Objective 8 – Promoting Active and Sustainable Travel Choices
3.11 Barratt Redrow supports the principle of promoting active and sustainable travel choices and highlight that their residential development at Wenvoe has been designed to ensure accessibility it's at the heart of the scheme with regards to walking, cycling and connectivity to public transport.
3.12 Given the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
3.13 Therefore, the site provides an opportunity to promote a modal shift towards more active forms of travel and consequently reducing dependency on private vehicle and associated carbon emissions. From a plan-making standpoint allocating further growth in this highly sustainable location would help achieve greater connect at both a regional and local level.

4. SUSTAINABLE GROWTH STRATEGY
Growth Strategy
4.1 RLDP Sustainable Growth Strategy comprises six key elements as follows:
1. Delivering a sustainable level of housing and employment growth supported by appropriate infrastructure that accords with the Vale's position within the Cardiff Capital Region (CCR).
4.2 In order to meet the overarching Vision, the Vale have identified a need to deliver at least 8,679 new dwellings over the proposed plan period which responds to the identified housing requirement of 7,890 homes (526 per annum) and incorporates a 10% flexible allowance. Barratt Redrow acknowledge the proposed approach, however, maintain it should be considered a minimum figure with aspirations to achieve greater levels of growth in sustainable locations across the district.
4.3 Whilst Barratt Redrow appreciate these figures are based on average completion rates over the first ten years of the adopted Local Development Plan, it is important to recognise that a higher rate of housing delivery is demonstrably achievable. Annual completion rates peaked at 917 dwellings, with six of the ten monitoring years exceeding the 526 per annum figure currently relied upon. This demonstrates that delivery capacity within the Vale has historically operated well above the proposed requirement and should therefore provide confidence that a higher housing target could realistically be achieved over the emerging plan period.
4.4 Furthermore, the Council's own evidence base (BP7 - Housing and Employment Growth Options) identifies a five-year average build rate of 780 units per annum between 2016 and 2021. Again, this figure exceeds the annual delivery rate currently proposed within the emerging RLDP and reinforces the fact that the proposed housing requirement should not be unduly constrained by a lower long-term average.
4.5 Whilst Paragraph 5.8 explains that the proposed figures are based on a ten-year average delivery rate, it fails to acknowledge that this period included the Covid-19 pandemic and at a time where construction costs experienced significant inflation. These factors had a material impact on the housebuilding industry nationally and inevitably suppressed delivery rates during those years. From an objective perspective, basing the future housing requirement on an average that includes these exceptional circumstances risks skewing the figures and underestimates the district's true delivery potential for the Vale.
4.6 In light of the above Barratt Redrow believe a sensible response would be to incorporate a greater flexible allowance of 15% within the RLDP to demonstrate an appropriate level of growth will be achieved. Whilst also ensuring there is sufficient supply of sites to come forward early on during the plan period to proactively address housing need from the point of adoption up to 2036.
4.7 From a procedural standpoint it is also important to note that the currently adopted plan predates the publication of Future Wales: The National Plan 2040 and the Vale's position within a national growth area. As such, pursuing an approach which seeks to maintain historic delivery rates is not considered to reflect this enhanced role and arguably lacks the level ambition set out at a national level. The proposed housing requirement should therefore be uplifted to positively respond to such matters in order to ensure conformity with Future Wales and regional aspirations.
4.8 Increasing the overall housing target would also act as a catalyst to enhance the delivery of affordable housing which is identified as a key objective for the RLDP. Each proposed site allocation is subject to a policy-compliant percentage contribution, therefore a higher level of market housing would proportionately generate a greater number of affordable homes to meet local need across the region.
2. Aligning locations for new housing, employment, services and facilities to reduce the need to travel.
4.9 Barratt Redrow supports the Vale's objective to locate new major development in areas of the region best served by existing infrastructure and supporting services. The Settlement Appraisal Review (BP5) identifies Wenvoe as primary settlement in the region with suitable local services to accommodate future growth which remains in keeping with the overall function of the existing settlement.
4.10 Whilst the settlements of Barry, Penarth, Llantwit Major and Cowbridge are deemed to score higher on certain criteria it is clear that Wenvoe has a role and function providing both local key facilities and also acceptable linkages and distance to wider key and daily facilities.
3. Focusing development at locations that are well served by existing and proposed rail stations as part of the South Wales Metro and in areas with good bus links.

4.11 The Deposit RLDP explains that whilst reducing the need to travel is a key policy objective, it is recognised that there are journeys that will need to be made by other modes of transport, particularly due to the strong relationship with Cardiff as a designation for employment, retail and entertainment. As such the proposed growth strategy seeks to locate development in places that are inherently well served by sustainable transport in line with the Vale of Glamorgan's transport hierarchy.
4.12 Barratt Redrow supports these principles and recognises the importance of prioritising development in sustainable locations across the regions, particular those well connected to Cardiff city centre. Paragraph 5.18 of the Deposit Plan states that "Targeting new development to the settlements that are served by the rail network is a key part of the strategy, as it will facilitate journeys being made by means other than the car". Barratt Redrow consider that the rail network is an important way to facilitate journeys other than by car, however it is not the only option available and that other sustainable sites, such as Swn Y Coed, are also accessible by public transport – namely bus services.
4.13 Whilst Barratt Redrow support the principle of prioritising growth within the Council's sustainable transport corridor, it is important to recognise that there is not an infinite supply of land within close proximity to railway stations across the Vale of Glamorgan. Physical constraints, settlement patterns and environmental designations mean that the availability of suitable and deliverable sites within immediate walking distance of rail infrastructure is somewhat limited. Therefore, relying solely on these locations risks unnecessarily constraining the overall supply of land for housing and may limit the Council's ability to maintain a consistent supply of homes up to 2036.
4.14 In this context, Barratt Redrow believe the RLDP should be updated to also identify opportunities for growth in locations that are well served by the strategic bus network. From a procedural standpoint this approach would remain consistent with the overarching objective of a transport-orientated growth strategy, whilst recognising the wider role bus corridors can play in facilitating a sustainable pattern of development. The benefits of which would provide greater certainty that local housing needs can be met over the proposed plan period and in turn strengthen the council's ability to demonstrate the plan has been soundly prepared.
4.15 By directing development to locations well served by existing bus infrastructure, the proposal would help reduce the need for commuting via private vehicles, particularly for journeys to key employment and service destinations. In doing so, it would make a positive contribution towards the Council's climate change targets through the reduction of carbon emissions and promoting a modal shift within the local community.
4.16 In relation to Swn Y Coed, bus stops are conveniently located at Walston Castle and Station Road approximately 95m and 440m from the site off the A4050, providing regular services to Cardiff City and surrounding settlements.
4.17 Furthermore, to the north of the site Culverhouse Cross is easily accessed by cycling, walking or via bus routes which can be caught just 100m east of the site. Culverhouse Cross Retail Park has an extensive range of facilities and employment opportunities that are within 2km of the site (easy walking and cycling distance).
4.18 Overall, it is considered that the site is in a relatively sustainable location and is within easy walking distance of public transport and Wenvoe village centre, which provides some basic facilities approximately 600m south of the site. For the reasons set out above, the site is considered to offer an opportunity for residential development in a suitable location that would facilitate and encourage sustainable travel, with no major highway related concerns.
4.19 Focussing further growth in well-connected, sustainable locations such Wenvoe will therefore support the Council's transport-led placemaking approach. These principles fully align with the Welsh Governments strategic objectives as set out within the Future Wales – the National Plan 2040, Planning Policy Wales Edition 12 and Llwybr Newydd: The Wales Transport Strategy, which in turn shall contribute towards achieving a more sustainable pattern of development within the RLDP.

5. POLICY FRAMEWORK
5.1 Section 6 of the Deposit Plan outlines the policy framework for delivering the plan, including both Strategic and Development Management Policies following revisions pursuant to the Preferred Strategy consultation.
5.2 The Deposit Plan has arranged these policies into the four themes of Planning Policy Wales as follows:
• Strategic and Spatial Choices
• Active and Social Places
• Productive and Enterprising Places
• Distinctive and Natural Places
5.3 Whilst some of the technical details overlap, each of the policies considered to be of relevance are discussed in further detail below.
Policy SP1 – Sustainable Growth Strategy (& Policy SP6 – Housing Requirements)

5.4 This policy states that in order to deliver the Sustainable Growth Strategy for the Vale, the emerging RLDP will make provision for 7,890 dwellings and 5,338 jobs over the plan period. In order to achieve the former Policy SP6 explains that to meet the identified housing requirement of 7,890 dwellings, provision will be made for the delivery of 8,660 homes in the Plan Period 2021 to 2036 which incorporates a 10% flexible allowance. In turn this will be distributed as follows: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.5 Barratt Redrow acknowledge the Council's conclusion that in principle the 'Medium' growth option reflected in Policy SP1 generally accords with the Welsh Government's aspirations for the Vale of Glamorgan within the Future Wales national growth area, which is identified as a focus for strategic economic and housing growth. Given the Vale forms part of the Cardiff Capital Region, it is equally important that the overall level of growth remains suitably ambitious to support the region's economic aspirations and continues to complement Cardiff which remains the nearest neighbouring authority.
5.6 Although we understand the proposed approach uses the Dwelling-led 10 Year scenario, which is based on the average annual build rate for the first 10 years of the adopted plan and equates to a total of 7,890 new homes or 526

dwellings per annum over the emerging plan period. The overarching intention is to ensure the projected level of growth is deliverable whilst recognising the fact there is sufficient capacity within the Vale to support further growth towards the higher end of the 'medium' range.
5.7 As noted, Barratt Redrow are wholly in support of providing additional sites, such as Swn Y Coed, Wenvoe, which would provide a logical extension to the defined urban area of Wenvoe and which will facilitate the delivery of much needed full market and affordable housing to help address the significant level of demand identified across the Vale.
5.8 Swn Y Coed is promoted in the context of the concerns raised regarding the current figure of 8,660 new dwellings which is underpinned by a 10% flexible allowance in relation to housing delivery. Barratt Redrow consider it relevant to take account of recent evidence provided to other Local Planning Authorities in Wales which have either adopted or are in the latter stages of bringing forward a new Local Development Plan.
5.9 For example, in Bridgend the Council recently adopted their new Local Development Plan (covering the period 2018 to 2033) which is underpinned by a flexibility allowance of 14% equating to an additional 1,053 dwellings. This level of provision was required in order to demonstrate the Anticipated Annual Build Rate (AABR) were deliverable and ensure that the Plan remains effective in the event of changing circumstances. During the examination process the Inspector explained that an increase beyond the standard 10% was fundamental to enable the plan and its housing trajectory to be resilient and sufficiently adaptable. The overarching purpose of which is to account for any unforeseen changes and potential shortfalls/ delays to the strategic site allocations whilst still enabling the overall housing requirement to be delivered.
5.10 For Swansea, the Council published their LDP2 Pre-Deposit Plan (Preferred Strategy) for consultation last year. In terms of housing delivery this incorporates a 20% flexible allowance above the proposed housing requirement and is predicated on the basis of needing to account for certain sites not coming forward as anticipated and other unforeseen factors affecting delivery. Similar to the Vale, Swansea City Council's latest Annual Monitoring Report (6th Edition) (October 2025) confirms that since adoption of the current LDP in February 2019 they have not met their annual housing target for any of the past six years. To date this has resulted in a shortfall of approximately 3,767 homes which is predominantly attributed to delays associated with larger strategic allocations. Therefore, in order to avoid having similar implications next time around the Council have uplifted the proposed flexible allowance within LDP2 and intend to incorporate a more diverse portfolio of sites going forward. The main purpose of which is to build in an additional margin of flexibility above the standard 10% threshold and therefore enable other sites to come forward to account for potential slippage elsewhere to ensure the plan is effective in meeting local need.
5.11 More recently in Monmouthshire, the Council submitted their proposed RLDP to PEDW in November 2025. As part of which they have identified a requirement of 6,210 homes which incorporates a 15% flexible allowance. Similar to above an increase beyond the standard 10% threshold has been justified to account for potential shortfalls/ delays due to longer lead in times needed for strategic site allocations whilst proactively addressing any historic unmet need.
5.12 Whilst Barratt Redrow appreciate that the Council intends to prioritise growth towards the higher end of the 'medium' range, having reviewed the Deposit Plan evidence base Barratt Redrow believe a minimum allowance of 15% would be more reflective of the Vale's strategic position and would seek an additional 395 dwellings to the medium growth option equating to a total of 9,074 homes. The benefits of which are evident above and justification well-established from a plan-making perspective to ensure the RLDP is underpinned by a robust evidence base which incorporates a suitable level of flexibility to effectively meet local housing need from the outset.
5.13 In addition to the above the importance of increasing the RLDP's housing target, by virtue of uplifting the proposed flexible allowance, has recently been highlighted by the findings of data published by the Welsh Government (WG). Most notably that includes the 2022-based Local authority household projections (Dated 20th November 2025) and 2025-based estimates of additional housing need (Dated 12th February 2026).
5.14 Upon publishing the former superseded the previous 2018-based demographic projections and provides updated figures from mid-2022 to mid-2032. The results show that whilst the overall number of households in Wales is projected to increase by around 98,500/ 7.2%, to a total of 1.46 million. The local authorities projected to see the largest percentage increases are the Vale of Glamorgan (up 11.7%) and Cardiff (up 11.1%).
5.15 In turn these trends are carried through into WG's 2025-based estimates of additional housing need, which identifies an existing unmet need of 9,400 homes. This is supplemented by a requirement to deliver an average of 8,700 new homes annually over the next five years to account for newly arising need alone. The combination of which demonstrates that there is an urgent need to increase delivery rates on both a national and local level, and therefore it's imperative that the latest position with regards to the need for affordable and full market homes are accurately reflected within the Council's housing figures.
5.16 In terms of considering the level of housing provision for a plan, Paragraph 5.34 of the DPM is explicit in that the most up-to date suite of Welsh Government Population and Household Projections must form the foundation of any evidence base. LPAs are then required to use a household conversion factor when translating households to dwellings to establish overall need. Once again, the DPM explains that failure to include a robust conversion rate from the outset is a high-risk strategy and may undermine the overall soundness of any emerging plan. To avoid such circumstances, we believe it's essential the LMNA is updated to reflect the latest WG datasets, which in turn is likely to provide grounds to warrant extending the proposed 15% threshold further. Ultimately this approach intends to ensure the emerging RLDP more effectively meet local need over the entire plan period and thus soundly prepared.
5.17 As mentioned above, Policy SP6 provides a high-level breakdown of how the Council's housing growth is expected to be delivered over the plan period. For completeness this includes: i) 3,837 dwellings from the existing land supply; ii) 3,520 dwellings on allocated sites; & iii) 1,303 dwellings from large and small windfall developments.
5.18 Whilst we do not dispute those relating to proposed site allocations and/ or windfall developments. The proportion of dwellings set to be accounted for within the Vale of Glamorgan's existing landbank (3,837 units) is considered excessive given it represents 44.3% of the Council's overall housing requirement.
5.19 Although Barratt Redrow acknowledge that this is partly derived on the basis that emerging plan period has

technically already commenced (2021 to 2036) and therefore is made up of

Figure 2. Extract of the Welsh Government's Calculation Method for Total Dwellings as per the Development Plan Manual
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

sites at various different stages of planning process (i.e. either already built out, being constructed or secured consent - as shown below). It is important to recognise the potential implications this approach has in terms of stifling opportunities for growth, which is contrary to the Welsh Government's aspirations for the Vale of Glamorgan as part of a National Growth Area within Future Wales: The National Plan 2040.

5.20 From an objective standpoint this means there is only a need for 2,561 additional dwellings (3,520 dwellings minus 959 units rolled forward) to be delivered from new allocations over the emerging plan period. This reinforces the point that in reality the overall quantum of new homes will be significantly lower than the figure set out within the RLDP's vision and strategic objectives. In turn this prevent opportunities for new sites to come forward as part of the plan-making process and in doing so hinder the Council's ability to account for historic unmet need. Collectively this substantiates Barratt Redrow's position that in order for the plan to be considered sound the Council must accommodate a greater flexible allowance, optimising sites such as Swn Y Coed, Wenvoe, to ensure the emerging local plan complies with the Welsh Government's aspirations set out within Future Wales.

5.21 As illustrated above, the Council anticipate 1,303 dwellings coming forward in the form of windfall sites. This accounts for both small and large sites which in turn represents around 15% of the Council's overall housing requirement. Once again, whilst we do not contest the overall windfall provision or the projected delivery rate of 87 dwellings per annum up to 2036. It is important to recognise that based on past trends the annual number of homes which comes forward on windfall sites varies significantly year on year.

5.22 Table 18 of the Development Plan Manual is explicit in that respect and explains that although due regard must be attributed to analysis of past delivery rates, periods of abnormally high or low completions should be considered inappropriate/anomalies when extrapolating future rates of windfall sites. On that basis ensuring the RLDP incorporates a greater flexible allowance will not only provide certainty that any shortfalls/fallow periods are offset but also enable a more consistent supply of homes to be achieved over the plan period as a whole.

5.23 Lastly, in terms of overall growth Paragraph 5.8 of the Deposit Plan states that the level of growth they have identified ''has been demonstrated to be deliverable and is sufficiently ambitious to reflect the Vale's position in the Future Wales national growth area.'' It also notes that this level of growth has been chosen so that it is ''complementary to, rather than competing with, the neighbouring authority of Cardiff and the wider Cardiff Capital Region (CCR).''.

5.24 Whilst it is agreed that the level of growth may be realistic based on past trends, the claim that this is sufficiently ambitious and needs to be at this level to avoid competing with Cardiff is not substantiated by evidence to suggest that a higher level of growth could not also achieve these principles.

5.25 Cardiff, as the capital city of Wales, also demonstrated historic under delivery when publishing its deposit plan for consultation in February 2025, which was the case for allocated sites as well as generally for annual delivery rates over the adopted plan period. This resulted in a failure to meet targets over the last 10 years of their adopted plan. Whilst Cardiff has made progress in more recent years, the latest Annual Monitoring Report published in October 2025 notes that to date the region has met just 58% of its overall dwelling requirements over the plan period from 2006-2025.

5.26 Accordingly, with Cardiff opting to continue with a medium growth option for their RLDP despite these shortfalls, there is no sound basis to suggest that adopting a higher growth level within the Vale would detrimentally impact upon housing delivery or 'compete' with Cardiff.

5.27 In summary, Barratt Redrow acknowledge the overall medium growth strategy, however given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, Barratt Redrow maintain that the proposed RLDP should be more ambitious when it comes to housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.

5.28 These steps would help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Overall, we conclude that a higher flexibility allowance and additional site allocations, such as Swn Y Coed, Wenvoe, are necessary to ensure the RLDP is able to effectively meet local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.

Policy SP2 – Settlement Hierarchy

5.29 Policy SP2 highlights that development will be focused with the Strategic Growth Area and that its distribution will be shaped by settlement hierarchy and seeks to direct 'growth to locations that will provide the greatest opportunities for delivering housing to meet affordable needs, community infrastructure and enhanced sustainable transport provision'.

5.30 Accordingly, despite Wenvoe being identified as a primary settlement, Policy SP2 notes that development in this location will be limited to 'the efficient and sustainable use of existing buildings, infill opportunities, small-scale affordable housing led schemes, and rural enterprise/ agricultural related developments.' Similarly, it is noted that Policy SP2 does not consider Wenvoe to be an appropriate location for ''substantial additional growth''.

5.31 Barratt Redrow object to the approach to Primary Settlements as set out under this Policy, as Wenvoe is inherently sustainable and the explanation for discounting it as an area to accommodate growth is considered unjustified.

5.32 First of all, the Deposit Plan acknowledges that it performs a similar function to the Primary Settlements located within the Strategic Growth Area and it is described as one of the 'sustainable communities' in The Vale of Glamorgan

Key Characteristics section, as noted previously in Section 3.
5.33 Likewise, the site benefits from excellent accessibility the local public transport network, active travel routes and local services. These characteristics fully accord with Welsh Government's strategic objectives and emphasise the fact that Swn Y Coed constitutes an appropriate location for future housing.
5.34 With regard to Policy SP2 discounting Wenvoe as a location to accommodate growth, this is due to the Vales's stance that the settlement is ''significantly limited by the presence of Best and Most Versatile (BMV) agricultural land on the edge''. Barratt Redrow do not consider this to be sufficient justification to discount the site from allocation as there would be limited impact on BMW agricultural land arising from the development of Swn Y Coed.

5.35 For example, as set out in the ALC report prepared by Kernon CCL and provided as part of the Candidate Submission Ref 437, the highest grade on site would be Subgrade 3a, with the site comprising a mix of Subgrades 3a and 3b. This means that in National Policy terms, development of the site would be in accordance with paragraph 3.59 of PPW 12 as the lowest grade available.
5.36 Furthermore, any perceived harm in terms of agricultural land is not considered to outweigh the benefits brought by the development in terms of contributing to both affordable and market housing need over the plan period, not least given the historic shortfalls identified earlier in this submission.
Policy SP4 - Placemaking
5.37 Policy SP4 is recognised as a key Policy in the emerging RLDP to ensure that new proposals align with existing communities and placemaking principles across the county.
5.38 Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
5.39 Nonetheless, the development of Swn Y Coed is considered to coincide with the objectives of Policy SP4, where the illustrative masterplan submitted as part of previous representations demonstrates its capability to deliver a range of housing types and tenures, whilst integrating key green infrastructure features.
5.40 Local services and facilities are also accessible from this location, tying in with criteria 7, and supports public transport use (as per criteria 4) given the close proximity to a frequent bus route.
5.41 Likewise, the quantum of units proposed demonstrates efficient use of the land based on the net developable area and site constraints in line with emerging Polic PGD2.
5.42 In principle Barratt Redrow supports Policy SP4 and the aim of ensuring all new development is of high-quality sustainable design.
Policy PGD1 – Creating Well Designed and Inclusive Places
5.43 Barratt Redrow question the need for both Policies SP4 and PGD1 as there is repetition. In principle the criteria as set out is as to be expected, however there is a need to recognise that not all criteria can always be accommodated on development sites. There are other environmental and economic factors need to be considered. However, if Policy PGD1 remains, then the text needs to be updated to suggest a site by site basis rather than the current blanket approach suggested.
Policy PGD2 – Residential Development Densities
5.44 Residential densities are supported as a principle, however, should not be so prescriptive as to unnecessarily restrict development. Policy PGD2 outlines that residential development over 0.5ha will be permitted where the residential density is a minimum of 35 dwellings per net hectare within Key, Service Centre and Primary Settlements and 30 dwellings per net hectare in Minor Rural Settlements.
5.45 A minor point in relation to the policy wording is the 'dwellings per net hectare' and the removal of non-developable space in any calculations. Whilst this is normal, the increased requirements relating to SAB, green infrastructure requirements and increased ecological mitigation all have a direct impact on the remaining available land and it is positive to see there is an allowance for some flexibility.
5.46 The density requirement appears to be reasonable in approach, and the flexibility to allow individual site adjustments (as per the remaining text within the Policy) is supported. There will be occasions where the density will need to be considered due to other on-site factors.
5.47 Policy SP5 is supported in principle insofar as it seeks to promote healthier and more inclusive places, consistent with the objectives of Planning Policy Wales and the Well-being of Future Generations (Wales) Act 2015. However, to ensure the policy is robust and effective, it is important that it is supported by an up-to-date and clearly evidenced policy framework. In this regard, the supporting evidence base, particularly BP36 – Planning Healthy Places (June 2024), should be reviewed to ensure that the datasets referenced reflect the most recent available information. For example, life expectancy data currently cited (2018–2020) and indicators based on the Welsh Index of Multiple Deprivation 2019 should be updated where possible to reflect the most recent datasets, including the Welsh Index of Multiple Deprivation 2025 and any updated public health, active travel, air quality and demographic data. Ensuring that the evidence base reflects the latest available information is necessary to demonstrate that the policy is justified and based on an accurate understanding of local health conditions and inequalities.
5.48 The policy framework should also be updated to reflect the Health Impact Assessment (Wales) Regulations 2025, which were approved by the Senedd in November 2025 and will come into force on 6 April 2027. At present, these forthcoming statutory requirements are not referenced within Policy SP5 or the supporting guidance. Given that the regulations will establish a statutory framework for the preparation of Health Impact Assessments in Wales, it will be important for the RLDP and supporting documents to clarify how the policy's screening, checklist and Rapid HIA requirements will interact with the statutory regime once implemented. Including reference to the regulations would help

ensure that the policy remains aligned with national legislation and is future-proofed over the plan period.
5.49 The supporting Rapid Participatory HIA of the Deposit RLDP (BP3, September 2025) provides useful background regarding the Council's engagement with stakeholders in preparing the plan. However, it would be beneficial for the Council to clearly explain how the findings of that work have informed the specific requirements contained within Policy SP5. Providing a clearer link between the outcomes of the participatory HIA and the policy approach adopted in the RLDP would improve transparency and demonstrate that the policy has been shaped by the evidence gathered through the stakeholder engagement process.

Policy SP5 - Creating Healthy and Inclusive Places and Spaces

5.50 The emerging Health Placemaking Supplementary Planning Guidance (SPG) is broadly welcomed as a practical tool to support implementation of the policy. Nevertheless, a number of matters require further clarification prior to its adoption. In particular, whilst the SPG provides greater clarity regarding the use of the Healthy Placemaking Checklist and Rapid HIAs, it does not clearly identify the circumstances in which a comprehensive (full) HIA would be required. The SPG should also be updated to reflect forthcoming guidance from the Welsh Health Impact Assessment Support Unit (WHIASU) expected in 2026, and ensure alignment with other relevant policies and guidance, including those relating to design, travel plans, public transport accessibility and open space provision. Given the number of cross-references within the SPG, it will be important that these documents are fully aligned and consistent.
5.51 Finally, any requirement for a Health Impact Assessment should be applied on a proportionate basis, reflecting the scale, nature and likely impacts of the development proposed. The policy should therefore make clear that the scope and level of detail required for HIAs will be proportionate to the scale and type of development. Subject to these amendments and clarifications, the policy would provide a clearer and more effective framework for integrating health considerations into the planning process.
5.52 Please refer to Policy SP1 as written response also accounts for information proposed under this particular policy.

Policy SP6 – Housing Requirements
Policy HG1 – Housing Allocations
Policy HG1 (B) – Housing Allocations
• HG1 (3) Barry - Land at Hayes Lane 5.53 Barratt Redrow question the suitability of allocating residential development on the site known as Land at Hayes Lane, The Bendricks. These concerns are centred on the following:
• 5.54 Whilst the site is technically identified within the settlement boundary, it is clearly not a sustainable location for residential development. This is evident by virtue of the fact that Land at Hayes Lane is situated within an existing industrial estate and lacks any supporting facilities. The former reinforces the principle that as a whole the area is characterised by a mix of light industrial and heavy industrial uses which naturally conflicts with the prospect of future residential housing. Moreover, it is reasonable to assume vehicles using the local highway network will be larger in nature (such as HGV's) and given the majority of streets do not contain dedicated pedestrian footpaths/ cycleways, this raises concerns from a highway safety perspective.
• 5.55 Although we note the Transport Statement from AECOM suggests access can theoretically be achieved to Barry and Sully. Both of these settlements remain over 2km from the site and lie outside of the distances deemed acceptable by Transport for Wales (TfW) to support resident development.
•

Unsustainable Location & Poor Connectivity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.56 Allocating housing on Land at Hayes Lane which therefore does not comply with such criteria would clearly undermine the Council's objective of pursuing a Transport Orientated Growth approach and by virtue of which risk promoting an unsustainable pattern of development within the emerging RLDP.
• 5.57 As outlined above given the nature of the area there are almost no existing active travel routes in this part of the region. This lack of provision would ultimately lead to future residents using alterative options and many of which would require residents to overcome physical barriers in order to travel in a more sustainable manner. For instance, due to the level of infrastructure associated with the port, the site is effectively detached from the main urban area of Barry and would involve crossing an active railway line halfway along Wimborne Road without sufficient mitigation measures in place. On the other hand, whilst Hayes Road extends further west towards Sully, it follows the southern boundary of the Polaris Industrial Estate which contains various access points that are in regular use throughout the day. Collectively these characteristics would prevent future occupants travelling in a more active manner which is in direct conflict with both local and national planning policy objectives.
• 5.58 The site's geographic isolation means that access to modes of public transport are extremely limited. Most notably that includes railway stations with the nearest being Cadoxton Station which is located circa 3.8km north of the site. By AECOM's own accord this is considered to equate to a minimum walking distance of 52 minutes which exceeds TFW's standards for residential development. Again, this reinforces the fact future residents would be overly reliant on private vehicles to access local services (such as employment opportunities, schools, doctor surgeries etc) which in turn shall achieve an unsustainable pattern of growth and increase associated carbon emissions.
• 5.59 Crucially, the site remains allocated in the adopted LDP for B1/B8 employment uses. These intended to facilitate

small industrial and workshop units as part of the Atlantic Trading Estate's expansion and in turn support opportunities for local businesses/ enterprise ventures. The council's latest Employment Land Review confirms a clear demand for such uses in Barry, with Land at Hayes Lane representing the most logical location for further growth. Reallocating this land for housing would therefore diminish the Vale of Glamorgan's ability to attract sufficient economic investment to support the requisite levels of growth over the emerging plan period, and potentially displace businesses to other less suitable parts of the region which would not be in the interests of good placemaking as per PPW12.
• 5.60 Although the RLDP's evidence base suggests there are other development opportunities within the region that could compensate for the proposed loss of employment land. Upon further review it is apparent these are in less favourable locations from both a strategic and operational standpoint. Reassigning Land at Hayes Lane from employment to residential would therefore undermine the Council's objective of safeguarding existing employment land and prioritising business/ industrial uses in area's well served by infrastructure designed to accommodate such activities (such as Barry Docks). Furthermore, it would also set a precedent for other potential losses and in doing so impact the Council's ability to meet the region's employment needs up to 2036.
•

Loss of Allocated Employment Land Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.61 By virtue of the above, Barratt Redrow object to the proposed allocation of residential development on Land at Hayes Lane. The principle of which is in direct conflict with the Welsh Government's objectives set out within PPW12 & Future Wales: The National Plan 2040 and the need to ensure existing employment land is suitably protected. The latter is crucial in attracting future investment to the region and shall act as a catalyst to enable housing to be delivered elsewhere, in more sustainable locations better connected to local services/ facilities, such as Wenvoe.
• 5.62 Whilst we do not oppose the overall principle of residential development at Site C (Central Parcel), this position must be considered in the context of the wider allocation. Applications for Sites A and B (2020/00351/OUT (Site A) & 2020/00352/OUT (Site B)) are currently pending subject to respective Section 106 Agreements, with prolonged negotiations resulting in significant delays to delivery. This experience clearly demonstrates that development within this allocation is complex and subject to extended viability and legal discussions, which inevitably impacts the rate at housing is able to come forward.
• 5.63 According to the Council's register we understand Site C has not been subject to any formal planning application, and therefore there is no detailed evidence available regarding the proposed layout design, infrastructure requirements, viability, or anticipated submission and determination timeframes. Despite this, the Council's housing trajectory assumes development commencing in 2028/29, with 35 units initially and 45 units annually thereafter. Given the absence of a live application and the precedent of delays on Sites A and B, these delivery assumptions appear overly optimistic based on current evidence.
• 5.64 On that basis we maintain that the Council should reassess the trajectory assumptions for this particular site and identify other alternatives to help account for any unforeseen slippage on Site C. The provision of Swn Y Coed, Wenvoe represents an ideal opportunity to absorb the fallout in terms of housing numbers whilst ensuring the RLDP incorporates sufficient flexibility to consistently meet housing need over the entire plan period.
• 5.65 Although we do not necessarily dispute this sites progression, given Wates have submitted a full planning application (Ref 2024/01152/FUL) which is currently under consideration.
• 5.66 It is important to recognise that, according to the Council's online planning register, two substantive consultation concerns remain outstanding. Firstly, the Highways response raises fundamental layout issues; and secondly, the Ecology department maintains a holding objection on the basis of insufficient supporting evidence. To date we understand both matters remain unresolved and may well require extensive design amendments, additional technical work, and potentially further consultation before the application can ultimately be determined.
• 5.67 In the absence of confirmed solutions to these issues, there remains uncertainty regarding the timeframe for determining the planning permission. Furthermore, even if consent is secured, there will be a need to discharge conditions and address any pre-commencement requirements, which will inevitably impact the lead-in time before development gets underway.
•

• HG1 (5) Llantwit Major - Land between the Northern Access Road and Eglwys Brewis Road (Site C – Central Parcel)
• HG1 (7) St Athan - Former Stadium Site, adjacent to Burley Place
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.68 Given these outstanding matters, the assumption that development will commence in 2027/28 appears optimistic at this stage. Delivery timescales may be extended depending on the scale of amendments required and the duration of condition discharge processes. With this in mind, we believe it is prudent for the emerging RLDP to identify a broader and more diverse portfolio of site allocations to support housing delivery earlier on in the plan period. Ensuring flexibility through additional deliverable sites (such as Swn Y Coed) will reduce the Council's overreliance on sites such as this one and provide greater certainty in maintaining a more consistent supply of homes over the plan period irrespective of potential delays that may arise on this site.
• 5.69 Whilst we understand that the proposed developer, Edenstone Homes, has recently engaged with the Council through its pre-application service. According to the Council's planning register, no formal planning application has been submitted to date. As such, there remains no confirmed development proposal, agreed technical evidence base, or indicative determination timeframe associated with the allocation.

• 5.70 In the absence of a live application, there is a considerable degree of uncertainty surrounding the anticipated delivery programme. The housing trajectory assumes development commencing in 2027/28; however, this appears optimistic given that an application has yet to be submitted, validated or determined. Even following any grant of planning permission, there would be a requirement to discharge pre-commencement conditions and satisfy any relevant planning obligations before development could lawfully begin. From experience these processes can be time-consuming and may result in significant delays with regards to lead-in times prior to first completions.
• 5.71 Given this uncertainty, reliance on the site to deliver within the early phases of the plan period carries risk. It is therefore important that the emerging RLDP identifies a broader and more diverse portfolio of deliverable site allocations to support housing delivery, particularly in the earlier years of the plan. Incorporating additional sites with stronger prospects of short-term delivery will provide flexibility, resilience, and greater confidence in maintaining a robust housing land supply should delays arise on this allocation.
• 5.72 Barratt Redrow acknowledges the Council's position in respect of Site HG3 (1) – Former Eagleswell Primary School, including the temporary five-year consent (2024–2029) for 90 units of short-term accommodation and their inclusion within housing completions for monitoring purposes.
• 5.73 Given their expressly temporary nature and planned relocation to other sites within the Vale by 2029, it is essential that these units are not double counted in a way. As the risk of doing so would artificially inflate the Vale's housing numbers, thereby preventing delivery opportunities elsewhere over the plan period.
• 5.74 Although Barratt Redrow welcome the clarification provided at paragraph 6.111 which states that once the temporary units are removed and the site is redeveloped for permanent accommodation, any future dwellings will not be included within the RLDPs housing supply
•

• HG1 (8) St Athan - Clive Road, St Athan

Policy HG3 – Housing Led Redevelopment Opportunity Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• figures. In the interest of soundness, we believe this should explicitly set out within the proposed wording of Policy HG3 to avoid any potential ambiguity and thus ensure no additional net housing contributions will arise from the site upon its redevelopment later down the line.
• 5.75 This approach is critical given the Vale's substantial existing landbank and the number of allocations being rolled forward, as cumulatively factoring in additional units from this site would further constrain opportunities to accommodate genuine growth elsewhere. Thereby limiting the Council's ability to effectively meet local housing need up to 2036.
• 5.76 In principle, Barratt Redrow support Policy SP7's objective to secure a minimum of 3,070 affordable homes over the plan period. That said, given the level of affordable housing is directly proportionate to the total housing provision within RLDP we believe there is scope for further uplifts in that respect.
• 5.77 As mentioned above Barratt Redrow maintain that there is sufficient evidence to justify increasing the proposed housing requirements through the Vale's flexibility allowance in order to maximise opportunities for growth. In turn this would prevent artificially capping affordable housing provision at 3,070 homes to ensure the plan is positively prepared by incorporating measures that proactively address demand across the region.
• 5.78 National policy clearly supports this approach. Planning Policy Wales requires development plans to be positively prepared and to maximise the delivery of affordable housing as a key component of sustainable placemaking. The Development Plan Manual reinforces the need for plans to be aspirational, evidence-led and sufficiently flexible to ensure delivery. Furthermore, the Welsh Government 2025-based estimates of additional housing need report highlights the need for a step change in affordable housing delivery across Wales, recognising that continuation of past trends will not address the current affordability challenges. Collectively, this provides a clear direction of travel in that it's imperative to uplift housing provision where affordability pressures are acute such as the Vale of Glamorgan.
• 5.79 To ensure the RLDP is sound, the Council should increase the overall housing requirement by apply a meaningful flexibility allowance that ensure sufficient contingency measures are in place to consistently meet local need over the plan period. This would directly increase the quantum of affordable housing secured through policy mechanisms, thereby aligning the Plan with national policy objectives. The latter goes to the heart of the tests of soundness within the Development Plan Manual in ensuring the plan is not only appropriate but capable of delivering the step change required to address affordable housing needs up to 2036.
• 5.80 Similarly, it is considered that Policy SP7 should be updated to allow flexibility and avoid the risk of contradicting Policy SP8. At present the blanket approach to affordable provision does not allow for site-specific delivery or viability requirements which may arise and as such, the amplification text should also include a note similar to the following:
•

Policy SP7 – Affordable Housing Provision
'Where the target affordable housing percentage is considered unviable due to physical, financial, or other constraints, sites will be reviewed on an individual basis following submission of a detailed viability assessment and any supporting evidence as necessary'. Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.81 Barratt Redrow supports the position that residential development should help meet affordable housing need. Although to ensure Policy SP8 is effective its important the percentage requirements and site thresholds proposed must

be viable across a range of site types and market areas to ensure they do not inadvertently suppress delivery.
• 5.82 On that basis we believe it would be prudent for the Deposit Plan to clarify that affordable housing targets are subject to site-specific viability considerations and can be adjusted in circumstances where comply with such parameters would render the sites viable and thus prevent delivery. Greater flexibility is also needed in tenure and mix to better reflect evolving local needs over the entire plan period including the point when planning applications are formally submitted. This would help ensure that the approach is consistent with paragraph 4.2.32 of PPW 12 which suggests that 'site specific targets are indicative affordable housing targets which should be established for each residential site…'.
• 5.83 As noted above, the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities that many sites could face, nor viability considerations which may affect delivery, particularly early on in the plan period. As such, re-wording of the policy text to allow for sites to be reviewed on an individual basis where such circumstances apply is considered necessary for soundness.
• 5.84 Barratt Redrow support the overall objective of Policy SP10 in seeking to promote sustainable transport, increase active travel opportunities and reduce reliance on the private car in accordance with national placemaking objectives. Encouraging development in accessible locations such as Wenvoe and enhancing connectivity between settlements is welcomed. However, for soundness its important the policy recognises the different physical characteristics across the Vale of Glamorgan, particularly in edge-of-settlement and rural contexts where flexibility is necessary to ensure sustainable growth is not unduly constrained.
• 5.85 In this regard, the Swn Y Coed, Wenvoe site (Ref 437) represents a sustainable and deliverable opportunity that aligns fully with the objectives of Policy SP10.
• 5.86 The Candidate Site submission was accompanied by a Technical Note prepared by Lime Transport. Seen as the site abuts the defined urban area of Wenvoe it represents a logical extension to the existing settlement and is well served by a range of local amenities and public transport. In terms of the latter the nearest bus stop is located within 100 meters of the site whilst the majority of local amenities are situated within 1.2 kilometres walking distance. Together these factors naturally promote the principle of linked trips which fully accords with the Chartered Institution of Highways and Transportations (CIHT) guidelines and reinforces the fact the site is a sustainable location for residential development.
• 5.87 As shown within the latest illustrative masterplan the proposed site will be served by a new junction off Old Port Road. This is confirmed as being the most appropriate arrangement from a highway safety perspective and would be supported by other technical analysis to demonstrate that sufficient visibility can be achieved on to the road for all potential users.
•

Policy SP8 – Affordable Housing Requirements
Policy SP10 – Sustainable Transport Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.88 The accompanying Transport Assessment also demonstrates that there is sufficient capacity within the local highway network to accommodate the projected level of demand associated with this level of development. Where necessary, any future scheme would also facilitate other improvements which may well include widening the highway along Old Port Road and/ or Walston Road to accommodate two-way traffic and providing a dedicated pedestrian/ cycle junction to connect on to the existing active travel route which leads into the centre of Wenvoe. The existing field access would also be blocked up to create a more cohesive layout. However as shown within the latest masterplan the existing public right of way which crosses the site shall be retained and enhanced to promote better pedestrian connectivity throughout the local area.
• 5.89 In terms of active travel, dedicated pedestrian footpaths and cycleways will be incorporated throughout the scheme before filtering into the surrounding area. The site is also situated within an area which benefits from good access on to existing active travel routes and a number of which have also been identified for further improvements which reinforces the schemes sustainability. These principles fully accord with the relevant placemaking objectives set out within the National Plan 2040 and PPW12, and demonstrates that safe and suitable access can be achieved for all users.
• 5.90 Subject to proportionate application of Policy SP10 and recognition of the robust mitigation proposed, the site clearly supports and advances the sustainable transport objectives of the emerging RLDP.
• 5.91 Barratt Redrow object to Policy CC1 on the basis that it duplicates and potentially exceeds Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework. Introducing a separate and more onerous operational net zero requirement at the local level risks imposing additional cost and complexity that undermines site viability and deliverability. The Development Plans Manual for Wales is clear that development plans must avoid repeating national policy and should not introduce requirements that are more appropriately addressed through other regulatory regimes. In this respect, Policy CC1 conflicts with the principle that plans should be clear, proportionate and not duplicate national controls, raising concerns under the tests of soundness relating to coherence and consistency with national policy (Test 2) and whether the plan is justified (Test 3).
• 5.92 The proposed step change in standards from 1 April 2030 — particularly the reduction in space heating demand from 40 kWh/m²/year to 15 kWh/m²/year — represents a significant and abrupt escalation in performance expectations. Whilst reference is made to initiatives such as Tai ar y Cyd and AECB CarbonLite, these have largely been associated with grant-funded affordable housing schemes. There is no clear evidence that equivalent standards can be viably delivered across mainstream private housing schemes without public subsidy. The Development Plans Manual requires policies to be underpinned by robust evidence and deliverable over the plan period. In the absence of clear viability

evidence across different site typologies and market conditions, the policy fails to demonstrate that it is justified and effective (Tests 3 and 4).
•

Policy CC1 - Residential Operational Net Zero Carbon Development Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.93 Policy CC1 also risks creating fragmented energy performance standards across different Local Planning Authorities in Wales. This undermines the benefit of a consistent national approach through Building Regulations and makes it more difficult for volume housebuilders operating across multiple authority areas to deliver homes efficiently at scale. The Manual emphasises that development plans should facilitate delivery and avoid unnecessary complexity. By introducing bespoke operational monitoring requirements, energy modelling thresholds and potential financial offset mechanisms, the policy blurs the boundary between planning and Building Control functions. This raises concerns as to whether the policy is effective and capable of consistent implementation (Test 4).Finally, the Council's own Viability Assessment (BP42, paragraph 6.60) acknowledges uncertainty pending Welsh Government's consultation outcome and suggests that, if national regulation progresses, it may be more appropriate for such matters to be addressed through Building Control rather than planning policy. This reinforces the concern that Policy CC1 is premature and may quickly become misaligned with national policy. As drafted, the policy risks undermining housing supply, affordable housing delivery and overall plan implementation. For these reasons, it fails to satisfy the tests of soundness in respect of coherence with national policy, justification and effectiveness, and should be deleted or fundamentally amended to align fully with the national regulatory framework.
• 5.94 Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CC1 relate to the date of planning approval.
• 5.95 Furthermore, the demands of Policy CC1 have to be considered in the context of all of the other demands that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HG1, can bear the cumulative policy costs of the RLDP, including Policy CC1.
• 5.96 The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.
• 5.97 As such, Policy CC1 should be amended to ensure that it is precise, measurable and enforceable and achieves the three tests of soundness. The proposed amended wording is as follows:
•

Developments that secure a planning permission from RLDP adoption to 31st March 2030 will be required to meet the following criteria:
i. Space heating demand less than or equal to 40kWh/m2/year;
ii. Energy use intensity less than or equal to 75kWh/m2/year; and Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.98 Barratt Redrow do not consider that Policy SP13 – Community Infrastructure and Planning Obligations is required. This is predicated on the basis that such matters are dealt with under separate legislative and policy frameworks. Therefore, as currently drafted the proposed policy (and supporting text) do not add anything further information for planning purposes and risk unnecessary duplication.
• 5.99 Whilst there are no comments regarding the principle, thresholds and use of the FIT standards in terms of the open space provision, Barratt Redrow do question the requirement for an Open Space Strategy for all sites that meet the thresholds.
• 5.100 The requirement within emerging Policy CI1 for applicants to prepare or submit an Open Space Strategy is not considered to be sufficiently justified or proportionate when assessed against Planning Policy Wales, which promotes access to open space and recreational provision but does not prescribe the preparation of standalone Open Space Strategies for individual planning applications. There is a lack of clarification as to what it proposed and also how the level of detail would be proportional to the size of the site, which would be addressed comprehensively in a DAS or Green Infrastructure Statement in any event.
• 5.101 Furthermore, the proposed 62.2 m² per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy burdens of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
• 5.102 In principle Barratt Redrow support the aim of this policy in ensuring proposed development incorporate measures that protect and enhance green infrastructure provision.

• 5.103 For completeness Swn Y Coed, Wenvoe exhibits a landscape led design that sensitively responds to its existing features, and provides an attractive, landscaped and high-quality public realm throughout. A number of priority habitats including a network of hedgerows have been retained throughout. Extensive landscape buffers and a continued natural edge will be provided to the site to accommodate root protection zones of existing trees and hedgerows which visually screen the development from adjacent uses. Moreover, a dedicated area of Public Open Space and Local Equipped Area of Play (LEAP) is proposed to the south of the site.
•

Developments that secure a planning permission from 1st April 2030 onwards will require:
i. Space heating demand less than or equal to 15kWh/m2/year;
ii. Energy use intensity less than or equal to 40kWh/m2/year; and
Policy SP13 - Community Infrastructure and Planning Obligations
Policy CI1 – Open Space Provision
Policy SP19 – Green Infrastructure Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.104 Barratt Redrow object to the continued inclusion of Swn Y Coed within the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area (SLA) under Policy DNP1.
• 5.105 As highlighted in Background Paper BP28 – Special Landscape Areas, Paragraph 1.8, the Council considers that the SLA as defined in the 2008 'Designation of Special Landscape Areas - Final Report' remain relevant, up-to-date, and based on current best practise and have therefore not undertake a review of the report to inform the emerging Replacement Local Development Plan (RLDP).
• 5.106 Whilst the Authority have not sufficiently updated their evidence base, the site was subject to a detailed review as part of the Candidate Site submission by Soltys Brewester Landscape which highlighted that the site is located on the edge of land subject to Dyffryn Basin and Ridge Slopes SLA. This designation is 'underpinned' by LANDMAP Areas St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614) and St Nicholas and Bonvilston Ridge Crest (VLFGLVS271), both evaluated as High.
• 5.107 However, the vast majority of the designated land will fall outside the visual envelope for the Swn Y Coed site and there will be no change to the key characteristics of the SLA or the LANDMAP areas to the west or to the north of the site boundary.
• 5.108 A noted characteristic of the SLA relates to the prominence of the sloping edge, (i.e. St Nicholas and Bonvilston Ridge Slopes, (VLFGLVS614), within views from Wenvoe Valley to the east. The visual appraisal establishes that site development has the potential to partially change the appearance of this edge within available views.
• 5.109 However, opportunities for GI provision within the site including retention and enhancement of the existing boundary hedges and trees which has the potential to minimise any visible change. Furthermore, as illustrated on the submitted masterplan, the existing hedges and field pattern within and around the site will be key structural elements guiding and sub-dividing the development form.
• 5.110 When considered in the context of the extensively wooded nature of the slopes visible to the east, any visible change to valley slope characteristics is likely to be very marginal and visually insignificant within the study area.
• 5.111 Moreover, the illustrative masterplan includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces.
• 5.112 Therefore, it was concluded that from a landscape and visual perspective the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe, and should be removed from the Dyffryn Basin & Ridge Slopes - 5 Special Landscape Area under Policy DNP1.
•

Policy DNP1 - Special Landscape Areas Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.113 Barratt Redrow object to the site at Swn Y Coed, Wenvoe still forming part of Green Wedge 3 - North of Wenvoe within Policy DNP2, which seeks to prevent coalescence between the western edge of Cardiff and Wenvoe.
• 5.114 Barratt Redrow have reviewed BP27 Green Wedges and consider that the assessment under NW2 does not consider nor reference the fact that the site at Swn Y Coed relates to the context of built development at Wenvoe and is very well-contained by both mature woodland and landform and possesses strong intervisibility with the northern edge of Wenvoe. Instead, BP27 looks to discuss the southern boundary of Culverhouse Cross and the association with the wider countryside.
• 5.115 As previously states Barratt Redrow consider that the site boundaries are well-defined and would provide a strong established 'defensible' limit to development. The topography connects with the main settlement to the extent that any new development would appear well connected to the existing settlement, physically and visually. This is a similar situation to the adjoining former Wenvoe Quarry and Vale of Glamorgan Council Depot which are considered to be 'largely shielded from view by woodland blocks/strips'.
• 5.116 Furthermore, the existing dispersed housing and the hotel/pub along Old Port Road also provide some precedent for 'infilling' the site. Proposed development should seek to reflect the low density, height and well-treed character of Wenvoe to help ensure it has a coherent and visually connected relationship. GI mitigation and enhancement benefits likely to result from the site development, including placemaking, value or integration in relation to landscape and visual considerations.

• 5.117 The proposed development of the small area of the Green Wedge would not undermine the principles and would still prevent the coalescence of Wenvoe with Cardiff by maintaining a minimum 0.7km separation and would not significantly impact upon the openness of land.
• 5.118 Moreover, the illustrative masterplan provided as part of Candidate Site 437 includes measures that will assist with GI mitigation and enhancement, including SUDs features, accessible landscape buffers and green spaces. Further recommendations to maximise opportunities to reinforce GI, including placemaking, value or integration are outlined below:
• 5.119 Overall, Barratt Redrow maintain their objection to the inclusion of the Swn Y Coed site within Green Wedge 3 - North of Wenvoe under Policy DNP2. From a landscape and visual
•

Policy DNP2 – Green Wedges
• Retention, management and strengthening of structural green corridors and boundaries to the site, including the overgrown hedges and trees;
• More visible areas on elevated sections of the site should include a higher proportion of trees, including gardens and street trees and woodland to more visually integrate the development when viewed from the Wenvoe Valley to the east; and
• Footpath corridors through the site could be integrated with the development through appropriate hedge and garden vegetation to ensure attractive recreational corridors are provided. Similarly informal routes around the perimeter could continue to offer amenity value through sympathetic boundary treatments and informal planting.
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• perspective, the site has the ability to suitably incorporate residential development and include GI enhancements, to assist with its visual integration, as a visually appropriate extension to Wenvoe. Moreover, the development of the site immediately adjoining the existing settlement boundary at Wenvoe would not detract from the purpose of the wider Green Wedge.
• 5.120 Policy DNP8 seeks to address recreational pressure on the Severn Estuary Special Area of Conservation, Special Protection Area and Ramsar Site. Whilst Barratt Redrow appreciate the overarching purpose in its current form the proposed policy lacks sufficient supporting information explaining how it will operate in practice. The supporting text suggests that key details relating to mitigation delivery, including mechanisms such as Suitable Alternative Natural Greenspace and wider access management measures, will be set out in future Supplementary Planning Guidance. Deferring these important details until later down the line creates uncertainty at the plan-making stage and makes it difficult to assess whether the policy is sound, effective and/ or capable of being implemented on a consistent basis.
• 5.121 The policy also provides no clear threshold or criteria for determining what level of activity would constitute “visitor pressure” or an “adverse impact” on the integrity of the designated sites. Similarly, the evidence demonstrating what level of impact residents moving into new homes across the Vale of Glamorgan will generate additional recreational pressure on the Severn Estuary does not appear to have been quantified to date. While a 12.6 km recreational catchment is referenced (in which Swn Y Coed, Wenvoe would technically sit within), the supporting text does not clearly explain the evidence or methodology underpinning this distance. Moreover, the proposed text also fails to set out how new residential development will be assessed in terms of measurable impacts on the European site and thus the scope of mitigation that would subsequently be required.
• 5.122 From a practical standpoint this level of uncertainty is concerning given the implication of this policy are unable to be fully assessed due to the lack of evidence. For instance, if development sites within the catchment are expected to contribute financially towards mitigation measures, then the scale and mechanism of those contributions must be clearly established as part of the plan-making process. Without this clarity, there is a risk that Policy DNP8 could introduce unforeseen costs and extensive time delays, potentially affecting the viability and overall deliverability of proposed housing sites. The cumulative impact of which would then undermining the plan’s ability to meet its housing requirements and risk finding the RLDP unsound.
• 5.123 Barratt Redrow understand the need for a sustainable provision of minerals, as per Policy SP18, however object to the continued inclusion of Swn Y Coed, Wenvoe within an area that is designated as a Category 1 Limestone mineral resource. The site should not be safeguarded from permanent development as detailed in response to Policy MIN1.
•

Policy DNP8 – Severn Estuary Recreational Pressure
SP18 - Sustainable Provision of Minerals Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 5.124 Barratt Redrow object to the continued inclusion of the land at Swn Y Coed as a Category 1 Limestone mineral resource safeguarding area.
• 5.125 A Mineral Resource Assessment, undertaken by Wardell Armstrong, was provided as part of the Candidate Site Assessment and considered the proposed development against the four criteria of Policy MG 22 of the current Adopted Local Development Plan and National Policy. Those criteria are carried forward into Policy MIN1 and the following conclusions are reiterated:
• 5.126 As the resource is constrained by sensitive development any prior extraction would have an unacceptable impact on environmental and amenity considerations.
• 5.127 Limestone extraction has the potential to give rise to unacceptable impact to the immediate residential properties

and would be wholly inappropriate.
• 5.128 The extraction of limestone resources beneath the Site has the potential to have an unacceptable impact upon:
•

MIN1 - Development in Minerals Safeguarding Areas
• Criterion 1: Prior extraction of economic minerals prior to development
• Criterion 2: Demonstrating extraction would have unacceptable impact

a) Ambient noise levels,
b) Air quality,
c) Ground vibration and air overpressure from blasting,
d) Limited site access/egress onto the Old Port Road would be problematic, and
e) Increased traffic generation by HGVs.
• Criterion 3: Development would have no significant impact on the possible working of the resource by reason of its nature or size 5.129 Development would not have significant impact on mineral resources
•
• Criterion 4: Poor quality resource 5.130 The quality and quantity of the mineral resources have not been assessed given the resource is already constrained by sensitive development and any testing or extraction would not be viable nor possible.
• 5.131 As already demonstrated the Category 1 resources cannot be extracted under Criteria 1 and 2 (due to the impact upon amenity) and the proposed residential development would not have a significant impact upon the wider mineral resource (Criterion 3).
• 5.132 Therefore, it is considered unnecessary to undertake site investigations by boreholes and trial pits to determine the ratio of overburden to mineral resource, mineral quality and estimation of the gross mineral resource affected by the proposed development.
• 5.133 Overall, Barratt Redrow consider that the presence of the mineral resource does not preclude the allocation and development of the site as any extraction does not accord with the criteria
•
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• requirements in MIN1. Therefore, the site at Swn Y Coed should be removed from the safeguarding area.
• 5.134 Barratt Redrow acknowledge the need to retain buildings in some circumstances, however consider that the wording of Policy CC2 is overly restrictive in the sense that a presumption against demolition could impact upon delivery timescales for sites, particularly those including farm buildings.
• 5.135 Accordingly, it is considered necessary to re-word the policy to allow for the demolition of buildings where they are no longer used or needed in the event that a site is proposed to be developed for residential purposes, to assist in meeting the housing need over the plan period.
• 5.136 An additional point should be added to the list of 4 criteria, to note that demolition will be acceptable where it is demonstrated that 'The existing building occupies a minority portion of the site, and to not demolish the building would prevent and/or restrict the delivery of the wider land for the provision of housing'.
•

CC2 – Presumption Against Demolition Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

• 6.1 In summary, Barratt Redrow, remain committed to the development opportunities at 'Swn Y Coed, Wenvoe'. By virtue of its location the site represents a sustainable extension to the existing settlement of Wenvoe, and we maintain that its inclusion within the emerging RLDP would help promote a more sustainable pattern of development in line with the Council's vision for the VoG.
• 6.2 Although we understand the Council have opted to pursue a 'medium growth option'. Having reviewed the accompanying evidence base there is clear justification to warrant higher levels of growth, particularly in respect of housing over the emerging plan period. This would better accommodate the identified housing requirements and align with the Welsh Government's aspirations to prioritise future development within a National Growth Area. These principles fully accord with PPW12 and Future Wales, whilst also enabling the VoG to proactively take action in order to account for historic unmet need across the county as shown within the latest Annual Monitoring Report (7th Edition).
• 6.3 Barratt Redrow Homes' most pertinent comments on the consultation document are summarised below:
•

6. CONCLUSION
• Barratt Redrow fully supports the proposed approach to prioritise development in sustainable locations near existing rail and bus infrastructure as depicted by the strategic growth area within the RLDP Key Diagram. However, to optimise the effectiveness of this strategy growth should be focused in areas of high demand, such as Wenvoe, which is near to Cardiff but also inherently well connected by the existing bus network.
• Barratt Redrow support the principle of the Settlement Hierarchy and the identification of Wenvoe as a Primary Settlement. Whilst the importance of which is noted, Barratt Redrow maintain that Wenvoe, in particular, is capable of a higher role and function which can be accommodated at Candidate Site Ref. No 437. This is particularly relevant given

the fact that the Service Centres at Cowbridge, Llantwit Major and Penarth are generally more constrained physically and environmentally.
• Barratt Redrow maintain that a higher growth option should be followed. Given the Vale's position within the Cardiff Capital Region and its designation as a national growth area, we maintain that the proposed RLDP should be more ambitious when it comes to overall housing targets. Drawing on examples from Bridgend (14% flexibility), Swansea (20%), and Monmouthshire (15%), alongside evidence of historic under-delivery and recent Welsh Government household projections, there are sufficient grounds to warrant increasing the proposed flexibility allowance to a minimum of 15%, equating to a total requirement of 9,074 homes up to 2036.
• In the interests of soundness these changes shall help account for any potential overreliance on existing landbanks and variable windfall delivery rates which could in theory limit the plan's ability to address unmet housing need. Barratt Redrow therefore conclude that a higher flexibility allowance and additional site allocations, such as the land at Swn Y Coed, are necessary to ensure the RLDP is able to effectively meet
Vale of Glamorgan Deposit Plan Representations | Swn Y Coed, Wenvoe – Site 437

local need over the plan period. The benefits of which shall also demonstrate the emerging RLDP is supported by a robust, proportionate and credible evidence base to accord with the requirements of the Development Plan Manual for Wales and national growth objectives.
• Whilst Barratt Redrow welcome the majority of the proposed planning policies from a development management perspective. They strongly object to Policy CC1 (Residential Operational Net Zero Carbon Development) on the basis that it duplicates Welsh Government's Future Homes Standard (FHS), which is intended to ensure all new homes are "zero-carbon ready" through a consistent national Building Regulations framework.
• Although Barratt Redrow support the requirements for affordable housing in new development. In its current form the proposed policies SP7 and SP8 lack sufficient flexibility for site specific circumstances and physical constraints which may impact upon delivery. This inevitably creates uncertainty for a number of sites, where the blanket approach to affordable housing requirements based on the Council's latest needs evidence does not have due consideration for the event of unique technical complexities.
• From a planning perspective it is also important to recognise the additional benefits the site (Candidate Site Ref No. 437) could provide in accommodating the increased housing need generated by the suggested 15% flexibility allowance within a highly sustainable location. The principles of which clearly align with the Council's aspirations and would maximise opportunities for linked trips, enabling residents to meet a greater proportion of their daily needs locally while benefiting from high-quality public transport

Change suggested by respondent:

It should be deleted or fundamentally amended to align fully with the national regulatory framework. Alternatively, if Policy CC1 is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CC1 during the lifetime of the RLDP.

Sound: No

Summary:

Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of

onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider

employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.

5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.
In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP

on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply

base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.

Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part

Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.

The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.

That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.

There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.

The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.

In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.

Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part

Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.

The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.

In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest

needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.

The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.

Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:

• the Plan is overly reliant on a small number of key sites;

• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;

• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and

• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.

The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.

Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.

The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:

• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.

• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.

• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.

All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.

In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.

Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part

Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.

However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites

suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to

provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain

cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;

• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.

Countryside Impacts

The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.

The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.

Agricultural Land Quality

Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.

As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.

Appendix 2 – Summary of Assessment

We comment on the Council's Summary of Assessment as follows:

• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO_2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.

Suitability for Allocation and Key Benefits

For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.

The proposed development of the site would deliver the following key benefits:

• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;

• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Summary:

Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That

means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.
Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the

settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.
5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;

• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.

In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.

That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.

The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.

This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.

The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.

There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.

A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.

The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.

The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a

1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623

households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.

Policy SP6 – Flexibility, housing land supply and trajectory Position: Object

Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.

The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.

In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.

The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.

The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.

Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.

The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.

There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.

In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.

Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part

Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the

RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.
That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.
There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.
The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.
In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.
Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part
Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.
The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be "informed" by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council's latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan's blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market

and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.

8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part

Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.

The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan's supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.

Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:

• the Plan is overly reliant on a small number of key sites;

• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;

• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and

• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.

The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.

Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.

The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:

• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.

• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.

• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.

All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.

In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.

Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part

Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.

However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.

Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.

The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.

We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever

more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the

principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph 6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph 6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites

containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.

Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment
We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.

I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Barratt Redrow Homes [2669]

Agent: Highlight Planning

Summary:

If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.

Full text:

Introduction
These representations are provided on behalf of Barratt Redrow in respect of the Vale of Glamorgan Council's consultation on the Replacement Local Development Plan (RLDP) Deposit Plan and Candidate Site Register. They should be read in conjunction with the enclosed completed Comments Forms.
Barratt Redrow are promoting land at St Nicholas (Site ID 486) for a residential-led development of up to 140 modern, energy efficient homes, 40% of which are currently proposed to be affordable.
Barratt Redrow is generally supportive of the Council's work in preparing the RLDP. The preparation of an up-to-date development plan for the Vale is plainly important and the Council is to be supported in progressing the RLDP through to Deposit stage. The principle of a plan-led strategy, rooted in settlement evidence, affordable housing need and sustainable transport objectives, is endorsed. That is particularly important in the current plan-led Welsh planning context.
That said, in its current form the Deposit RLDP is not sufficiently ambitious and, in our view, requires a number of important changes in order to ensure soundness. The key concerns relate to the overall housing requirement, the level of flexibility built into the strategy, the degree of reliance placed on key sites, windfalls and rolled forward supply, the unduly restrictive approach taken to sustainable settlements outside of the Strategic Growth Area and the introduction of onerous policies that when considered together could impact deliverability. Those issues are especially relevant to St Nicholas, which the Council's own evidence identifies as one of the better performing Minor Rural Settlements and one which has an established role in supporting a sustainable rural community.
The Council's own evidence base supports a stronger role for St Nicholas than the Deposit Plan currently allows. It demonstrates that proportionate growth in settlements such as St Nicholas is not a departure from the Council's established strategy; it is consistent with it. The Deposit RLDP should be amended so that it better reflects both national policy and the Council's own evidence, and in particular so that sustainable and deliverable opportunities such as St Nicholas are able to make an appropriate contribution to meeting the Vale's housing needs.
The remainder of these representations address the specific policies of the Deposit Plan.
Deposit Plan Plan Period Position: Object
Based on the Development Plans Manual, when a plan is adopted, there should be at least 10 years of the plan period remaining.
On the Council's current timetable, adoption is only anticipated for August/September 2027, and those post-Deposit stages are expressly identified in the Delivery Agreement as indicative, because they depend on external factors including the number of representations received and the examination process. The Deposit Plan runs only to 2036. That means that, even if the Council hits its best-case programme and adopts in September 2027, the Plan would have only about 8 years and 3 months left to run. That is already below the DPM expectation of at least 10 years remaining at adoption. Any slippage would make that position worse.
Based on the current timetable, an end date of 2038 (with associated increase in housing requirement) would therefore ensure a sound plan.
Policy SP1 – Sustainable Growth Strategy Position: Comment / Object in part
Barratt Redrow supports the broad objective of pursuing a sustainable growth strategy and agrees that growth should be directed towards the most sustainable locations. The emphasis on public transport connectivity, access to services and the need to align housing growth with wider regional aspirations is supported in principle. The Deposit Plan's summary of Future Wales correctly notes that the Vale lies within the Cardiff, Newport and the Valleys National Growth Area and that Local Development Plans should recognise this area as the focus for strategic economic and housing growth, services and facilities, and transport infrastructure. The Plan also correctly highlights Future Wales' wider outcomes, including vibrant rural places with access to homes, jobs and services.

Our concern is that the strategy as drafted is not sufficiently nuanced and, in practice, it places too much weight on the Strategic Growth Areas and not enough weight on sustainable settlements outside it. In doing so, it risks overlooking villages which perform well against the Council's own settlement evidence and which can accommodate proportionate growth in a highly sustainable way. St Nicholas is a clear example of that. The earlier Barratt David Wilson Homes representations made this point and it remains equally relevant now: the strategy should not be read as favouring rail-served locations to the exclusion of settlements with strong bus accessibility and established local services.
This is important because the Council's own evidence does not justify such a narrow interpretation of sustainable transport. The BP5 methodology was adapted specifically to better appreciate the role and function of settlements in the Vale, including their relationship to key services and facilities. In other words, the Council has already recognised in its evidence base that sustainability in the Vale cannot sensibly be reduced to rail access alone.
St Nicholas benefits from strong bus connectivity and a strategic relationship to Cardiff and other settlements. Supporting population growth in proximity to regular bus services can itself help reinforce the viability of those routes.
Para 3.45 of PPW states the following in respect of relationships beyond the Council's administrative area:
"The evidence to identify suitable areas and sites for development should not be confined by local authority boundaries. It should reflect realities like housing markets, travel to work areas, retail catchments and the nature of activity or development itself." (emphasis added)
Cardiff is by far the greatest attractor in terms of commuting destination, as shown in the below Census data for the Vale of Glamorgan:
St Nicholas is 16 minutes from Cardiff via bus. Not all people will want to live in towns (as recognised by the Council in their response to the draft NDF). The Spatial Option is depicted on Page 28 of the Spatial Options Background Paper (June 2023). This fails to show St Nicholas as a settlement with frequent bus connectivity despite it being served by excellent bus service provision.
Future Wales supports development which aligns with the South East Wales Metro which includes bus infrastructure and services as well as the rail network. The Deposit Plan's focus on settlements with railway stations ignores settlements with bus service provision such as St Nicholas where travel via bus is an attractive, sustainable and convenient option for residents. For example, the travel time on bus to Cardiff from St Nicholas is 15 minutes, whereas the travel time from Rhoose to Cardiff via train is over double the time at 36 minutes.
Settlements such as St Nicholas will require additional growth over the coming years in order to contribute to their vibrancy and support existing services and facilities such as the local school and bus service. That remains a legitimate and important planning point. Future Wales, as summarised in the Deposit Plan, requires local authorities to maximise opportunities arising from public transport investment and to plan for growth that supports sustainable connectivity more generally, not simply around rail stations.
There is therefore a soundness issue here. The Council's own evidence and national policy context support a strategy that captures sustainable bus-connected settlements as well as rail-served settlements. St Nicholas should be expressly recognised as one of those locations. If the Council is seeking to direct development to places "best served by public transport connectivity and [which] offer a good range of services and facilities", then it should ensure that this is applied consistently to settlements such as St Nicholas rather than in a way that, in practice, privileges only a narrow subset of locations.
For that reason, Policy SP1 should be amended to make clearer that sustainable settlements outside the Strategic Growth Area, where there is good bus connectivity, local facilities and a clear functional relationship with wider employment and service centres, are capable of accommodating proportionate growth. That change would make the strategy more aligned with the evidence base and would support a more robust and resilient pattern of housing delivery.
Policy SP2 – Settlement Hierarchy Position: Object
Barratt Redrow objects to Policy SP2 in its current form.
The Council's own evidence shows that St Nicholas performs strongly as a Minor Rural Settlement. It scored 39 points and ranked 5th out of 21 Minor Rural Settlements within the Settlement Appraisal Background Paper. It is one of the few settlements in this tier with a school in the village and that its strategic position and public transport accessibility lend support to it being treated as a sustainable settlement capable of accommodating further growth.
That broader conclusion is reinforced by the Deposit Plan itself. Paragraph 6.16 expressly identifies St Nicholas as one of the smaller rural settlements which contains a primary school serving a wider catchment area. The Plan goes on to recognise that, due to the functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported or enhanced where appropriate. Those are helpful and important acknowledgements.
However, notwithstanding that evidence, the policy framework remains highly restrictive. The Deposit Plan states that, in Minor Rural Settlements, general market housing will be limited to infill and conversion opportunities within the settlement boundary, whilst any more meaningful growth outside the Strategic Growth Area is essentially restricted to small scale affordable housing-led schemes with a minimum 50% affordable housing requirement. In our view that is too blunt an approach and is not justified by the evidence.
The reason this matters is because the Council's own historic and current evidence points in the opposite direction. BP5 explains that the adopted LDP provided for moderate growth in Minor Rural Settlements to help meet local housing need and support existing local services. The adopted LDP Written Statement similarly states that minor rural settlements such as St Nicholas play an important role in underpinning sustainable rural communities and that there is a need for some moderate growth in these settlements. The earlier strategy therefore recognised that such locations could accommodate growth without undermining their character or function. The successful development of by Redrow of Cae Newydd, St Nicholas provides an example of how new residential development can successfully integrate into a Minor Rural Settlement.
In our view the current Deposit strategy has moved too far away from that balanced position. The Plan now acknowledges the sustainability credentials of St Nicholas but does not allow those credentials to translate into an

appropriate development role. That disconnect between the evidence and the policy response is one of the main reasons why the Plan, as drafted, is not sound.
Accordingly, Policy SP2 should be amended. At the very least, it should be recast so that settlements such as St Nicholas are not treated as locations where only very limited growth can occur. A more proportionate and evidence-led approach would be to allow moderate mixed-tenure growth in the more sustainable Minor Rural Settlements, where this is supported by site-specific evidence and good placemaking. That would better reflect both the Council's own settlement appraisal and the adopted LDP approach that preceded it. As drafted, the Plan expects a great deal from a very limited rural supply offer. It seeks to secure a minimum 50% affordable housing provision on qualifying sites, requires the mix of homes to respond to latest evidence, including specialist and older persons' needs, and recognises the need for both affordable and market housing to support mixed communities in rural areas. The Plan also acknowledges the functional role of Minor Rural Settlements such as St Nicholas and the importance of supporting local services within them. In our view, those objectives are unlikely to be achieved through the very limited number of affordable housing-led allocations currently proposed. Additional sites in the more sustainable Minor Rural Settlements are therefore required if the Plan is to deliver what it seeks in a realistic, deliverable and sustainable manner.
Policy SP6 – Housing Requirement Position: Object
Barratt Redrow objects to Policy SP6.
Whilst we support the Council's intention to plan positively for housing growth through an up-to-date RLDP, the proposed housing requirement of 7,890 dwellings is not considered sufficiently ambitious and, in our view, is no longer justified by the most up-to-date evidence. The Deposit Plan identifies a requirement of 7,890 dwellings, equating to 526 dwellings per annum, with provision for 8,660 homes once the 10% flexibility allowance is applied. That requirement remains rooted in the RLDP's dwelling-led scenario, which the LHMA explains was derived from average completions over a 10-year period. In our view, that is too conservative an approach in present circumstances.
PPW and the Development Plans Manual is clear on this point. PPW sets out the following requirements for local authorities when setting a housing requirement at paragraph 4.2.6:
"The latest Welsh Government local authority level Household Projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) and the Well-being plan for a plan area, will form a fundamental part of the evidence base for development plans. These should be considered together with other key evidence in relation to issues such as what the plan is seeking to achieve, links between homes and jobs, the need for affordable housing, Welsh language considerations and the deliverability of the plan, in order to identify an appropriate strategy for the delivery of housing in the plan area. Appropriate consideration must also begiven to the wider social, economic, environmental and cultural factors in a plan area in order to ensure the creation of sustainable places and cohesive communities."
The Deposit Plan housing requirement is based on past delivery rates and does not take account of the above policy requirements. Whilst past build rates can be used as a benchmark for comparison, it is not appropriate for this to be used to set the future growth of the Authority Area. The Development Plans Manual states the following in this respect:
"5.55 Extrapolating forward past take-up rates for both jobs and homes over various time periods gives a factual representation of what has been delivered in the past. This approach can provide a useful benchmark against which to compare future employment and household growth, assuming previous conditions remained constant. However, this may have been constrained by contextual influences applicable at a previous point in time, for example global economic markets, or have led to undesirable outcomes which should not be repeated, such as a mismatch between the number of homes and jobs.
5.56 It will be important to understand the relationship between the past and the future direction of the plan, including such contextual circumstances. If there are/were limitations that hindered the ability to deliver growth previously, then until mechanisms are in place to address such matters this could have a bearing on future growth levels. Understanding the context within which delivery was/can be achieved will be important, particularly when considering a housing trajectory as this could influence the speed and increase delivery rates, or conversely result in a delivery cap until such matters are resolved.
5.57 Just relying on past build rates as the sole evidence base to quantify future employment and housing land requirements is not sufficient on its own. Additional evidence will be required to identify the scale of new jobs and homes necessary and the related land requirement."
Contextual factors that mean utilising past build rates in setting future housing growth is inappropriate include:
• Utilising past build rates incorporates recession-based trends. This includes supressed build rates following the 2008 recession and more recently, reduced housing completions as a result of the Covid-19 pandemic and the current cost of living crisis;
• Does not actively seek to address the area's ageing demographic;
• Does not reflect or take account of the Vale of Glamorgan's position within a Growth Area within Future Wales;
• Does not seek to leverage any of the investment into the region through the CCR City Deal;
• Conflicts with the Deposit Plan's ambition in terms of Homes For All and the Economy – in that there has been no recent job growth in the Vale of Glamorgan delivered under the current LDP and there is a shortage of housing and affordable housing. Applying the same build rate over the RLDP plan period would compound these issues; and
• During the period considered, many people were prevented from forming new households due to a lack of mortgage finance, lower employment levels and reduced rates of housing completions. There is a considerable body of evidence to show that household formation will return to long term trends if housing is made available. Research by the former National Housing and Planning Advice Unit (NHPAU)4 found that cohorts who are less able to access home ownership earlier in their housing career due to "boom" or "recession" factors impacting on affordability are nevertheless able to "catch-up" later on – 80% of the gap at the age of 30 is "caught-up" by the age of 40. This finding supports the resumption of long-term household formation trends.
In short, just relying on past build rates as the sole evidence base to quantify future housing land requirements is not sufficient on its own, and that additional evidence is required to identify the scale of new homes necessary, with

alternative scenarios considered rather than simply extrapolating previous delivery trends. That is directly relevant here. A housing requirement derived too closely from historic completion rates risks baking in past under-delivery rather than planning positively for future need.
That concern is reinforced by the updated Welsh Government evidence published after the RLDP's preferred growth scenario was formulated. The latest 2025-based estimates of additional housing need identify newly arising need in Wales of between 7,800 and 9,300 additional homes per annum over the first five years, with a central estimate of around 8,700 homes per annum, alongside a separate estimate of existing unmet need of 9,400 homes. Whilst those are national figures and do not automatically translate into a single local housing target, they plainly point towards a materially higher level of need than has previously been assumed and strengthen the case for local planning authorities, particularly in growth areas, to revisit conservative housing requirements.
The updated 2022-based household projections point in the same direction. Welsh Government's latest figures show that the number of households in Wales is projected to increase by 7.2% between mid-2022 and mid-2032, and that the Vale of Glamorgan is projected to experience one of the largest percentage increases in Wales, at 11.7%. The same release notes that the Vale is also amongst the authorities expected to experience some of the strongest private household population growth. In short, the latest demographic evidence does not support a low-growth or "business as usual" response for the Vale. It points the other way.
This sits uncomfortably with the Council's own housing evidence. The Deposit Plan records that the Vale has the highest affordability ratio in Wales and a significant need for affordable homes. It further records that the LHMA identifies affordable housing need averaging 461 dwellings per annum over 15 years using the principal projections, rising to 502 dwellings per annum under the RLDP projection figures. The Deposit Plan also acknowledges that only a proportion of new households will require affordable housing because others will meet their needs through the market. That is important, because it underlines the need for both affordable and open market housing, and therefore for a higher overall housing requirement than the Plan currently proposes.
The Deposit Plan principally seeks to address issues of affordability through a blanket 50% affordable housing requirement on sites other than the Key Sites. Whilst we fully support the Council in looking to address issues of affordability, we consider that an increase in the housing requirement and subsequent increase in housing supply (both open market and affordable) should be pursued.
There is a broader strategic point as well. The Vale sits within the wider Cardiff housing market and the Deposit Plan itself recognises the strong migration relationship with Cardiff and the role that strategic collaboration should play in considering housing growth. Against that background, and having regard to the updated Welsh Government evidence, the present requirement of 7,890 dwellings does not appear sufficiently ambitious for a National Growth Area authority with strong migration inflows, severe affordability pressures and one of the highest projected household growth rates in Wales. In our view, the Plan should test a higher housing requirement through examination.
A higher growth rate, such as the PG-5Y scenario or higher should be adopted to better align housing and job growth and redress socio economic trends. The likelihood of this of level of growth occurring is even greater in the context of the ambition and funding available to support the City Deal. However, in seeking to deliver the economic vision for the area, it is important to ensure that economic growth is not constrained by a lack of land (for either housing or employment). Whilst this is higher than past build rates, it should be noted that build rates are closely related to the availability of deliverable sites; therefore, the allocation of sufficient housing land in the RLDP would go a long way to increasing delivery. Current delivery rates have been supressed by wider socio economic trends and reliance within the existing LDP on large strategic sites (i.e. Barry Waterfront). Basing the RLDP Growth Option on past delivery would therefore result in an increase in the number of suppressed households. There is no rationale or justification to set future housing need by reference solely to past delivery rates.
The key point for soundness is therefore a simple one. The Development Plans Manual requires a housing requirement to be grounded in a broad evidence base and not simply in past completion trends. The latest demographic and housing need evidence now available points towards stronger growth pressure than that reflected in Policy SP6. In those circumstances, retaining the current requirement without revisiting it would not, in our view, be consistent with the Development Plans Manual or with a genuinely evidence-led plan-making exercise.
The Council's own evidence supports the use of a 4% household-to-dwelling conversion factor. The LHMA states that the RLDP preferred growth scenario assumes growth of 7,586 households, which equates to 7,890 dwellings once vacancy rates are applied, effectively applying a 4% uplift in practice. That approach is also consistent with the adopted Vale of Glamorgan LDP, which expressly applied a
1.04 household-to-dwelling conversion ratio in deriving part of its housing requirement. In those circumstances, and absent any robust local evidence justifying a different factor, it is entirely appropriate to apply the Development Plans Manual baseline uplift of 4% to any updated household-led requirement. On that basis, a requirement of 9,623 households would convert to 10,008 dwellings, which is around 26.8% above the 7,890 dwellings currently sought under Policy SP6 and further underlines that the Deposit RLDP is not sufficiently ambitious in housing terms.Accordingly, Policy SP6 should be amended to provide for a higher housing requirement. The precise figure is ultimately a matter for examination, but the current requirement is too low, too closely tied to past build rates, and insufficiently responsive to updated Welsh Government projections and housing need evidence. A higher requirement would also require a broader and more resilient supply portfolio, which in turn strengthens the case for additional deliverable sites in sustainable settlements such as St Nicholas.
Policy SP6 – Flexibility, housing land supply and trajectory Position: Object
Barratt Redrow also objects to the level of flexibility embedded within Policy SP6 and raises concern regarding the resilience of the housing land supply and the robustness of the housing trajectory.
The Development Plans Manual is clear that housing supply is the housing requirement plus a flexibility allowance. It further states that it will be extremely rare for all sites identified in a plan to come forward within the timescales anticipated, and that a development plan will not be effective if it cannot accommodate changing circumstances. For that

reason, a flexibility allowance must be embedded into the plan. Whilst the Manual says that 10% may be a starting point, it also makes clear that the level of flexibility is for each authority to determine based on local issues and that any chosen level must be robustly evidenced.
In our view, a 10% flexibility allowance is not sufficient in the context of this Plan. The Deposit Plan's housing provision of 8,660 dwellings is made up of 3,837 dwellings from the existing land supply, 3,520 dwellings on allocated sites and 1,303 dwellings from windfalls. The Council's housing land supply paper then shows that the allocation component itself includes 959 dwellings on rolled-forward LDP sites, 2,278 dwellings on key housing allocations, 122 dwellings on affordable housing-led sites and 161 dwellings on other allocations. That is a relatively exposed and finely balanced supply portfolio.
The resilience issue is due to a substantial element of the supply depends on a relatively small number of key sites, a significant rolled-forward component, and a large windfall assumption. The Development Plans Manual states that rolled-forward allocations require careful justification, that there must be a substantial change in circumstances to demonstrate such sites can be delivered and justify being included again, and that clear evidence will be required that those sites can be delivered. That is a demanding test, as it should be. In our view, the Plan's reliance on rolled-forward sites and key sites means that a modest flexibility allowance of 10% does not provide a sufficient margin of safety.
The housing trajectory also warrants closer scrutiny. The Development Plans Manual describes the housing trajectory as the key mechanism for demonstrating how all sites will be delivered in the identified timescales throughout the whole plan period. It states that lead-in times for larger sites, inter-relationships between sites, constraints, infrastructure timing and assumptions for both large and small windfalls must all be taken into account. It also requires trajectories to provide a steady flow of sites through the plan period and not to be unduly loaded towards the end of the period.
Against that benchmark, there is a legitimate question over whether the RLDP trajectory is sufficiently robust. The Council's own housing land supply paper records stakeholder concerns that the trajectory shows a significant step change in delivery above previous rates, that there is too great a reliance on key sites, and that the assumed timescales for pre-application work, application determination and discharge of conditions are too short. The consultation summary specifically records concern that delivery rises from around 400 to 500 dwellings per annum in the early monitored years to around 1,000 dwellings per annum by 2027/28, and that this represents a marked and pronounced step change. Those are not peripheral issues; they go directly to the credibility and resilience of the trajectory.
The same background paper also confirms that over 25% of the Plan's total provision is attributed to key sites. Again, that does not make the Plan unsound in itself, but it does mean the trajectory and flexibility allowance need to be particularly robust. In our view, the current Plan does not yet demonstrate that level of resilience. The delivery assumptions may prove achievable, but the point for examination is that they require close scrutiny and should not simply be accepted at face value, particularly when the Development Plans Manual emphasises realism, flexibility and steady delivery through the full plan period.
There is also a concern about the windfall component. The Council's evidence assumes delivery of 1,303 dwellings from large and small windfall developments over the lifetime of the plan. The Development Plans Manual accepts that windfalls can form part of supply, but it also requires the assumptions behind them to be evidenced and scrutinised. Here, the windfall figure is material, not marginal. That is another reason why the resilience of the identified allocation portfolio matters so much. Where a plan is relying on rolled-forward sites, key sites and substantial windfalls all at once, there is a stronger case for a higher flexibility allowance and for a broader pool of deliverable sites.
In our view, the sounder approach would be to increase the flexibility allowance from 10% to 15% and broaden the supply base through the inclusion of additional sustainable and deliverable sites. That would better reflect the Development Plans Manual's requirement for plans to remain effective in the face of delay and changing circumstances, and it would reduce the risk of the RLDP becoming over-dependent on a narrow set of sites and optimistic delivery assumptions. It would also be entirely consistent with wider Welsh plan-making practice, where flexibility allowances above 10% have been accepted where local circumstances justify it. By way of example, Flintshire's adopted LDP applies a flexibility allowance of over 13%, while Bridgend's recently adopted RLDP provides for a 14% flexibility allowance following examination. Against that background, and having regard to the Vale RLDP's reliance on key sites, rolled-forward allocations, a substantial windfall component and a stepped housing trajectory, a 15% allowance is justified here as a proportionate and robust response to the particular delivery risks of this Plan.This point also links directly back to St Nicholas. If the Plan is to be made sound, it should not rely so heavily on a small number of large, longer-lead sites and on a substantial windfall allowance. It should include a broader range of deliverable sites capable of contributing earlier and more reliably to the housing trajectory. A sustainable, mixed-tenure site at St Nicholas would assist in precisely that respect by diversifying the supply portfolio and improving resilience.
Policy SP7 – Affordable Housing Provision Position: Support in principle / Object in part
Barratt Redrow supports the objective of delivering affordable housing and agrees that this is one of the key issues the RLDP must address. Policy SP7 is therefore supported in principle. However, the policy should be read in conjunction with a more ambitious overall housing strategy, because affordable housing delivery cannot sensibly be divorced from the wider question of total supply.
The Deposit Plan is clear that the delivery of affordable housing is a key objective of the RLDP and that the strength of the Vale's housing market has resulted in many local people experiencing difficulties in purchasing suitable housing on the open market. Barratt Redrow supports that objective in principle. The policy also correctly identifies that a mix of affordable housing will be required, with reference to the LHMA, and that this should include a range of tenures, types and sizes of homes. That said, the wording of Policy SP7 lacks sufficient clarity. In particular, the reference to the affordable housing mix being "informed" by the LHMA is ambiguous. It is unclear whether the LHMA is intended to provide a broad evidence base and starting point for negotiation, or whether the Council expects schemes to replicate that mix as a fixed requirement. In our view, the policy should be clarified so that the LHMA is expressly treated as a guiding framework rather than a prescriptive formula, with the final tenure mix, type and size of affordable provision being determined having regard to site-specific circumstances, up-to-date evidence, viability and deliverability.The LHMA

is highly relevant here. It explains that affordable need is no longer confined to traditional social rented housing and that current economic conditions have squeezed many households out of both home ownership and the private rented sector, creating additional need for intermediate rent and low-cost home ownership products. It also notes that an ongoing supply of new build properties remains important to the operation of assisted home ownership products in the Vale.
That evidence is important because it confirms there is a need for both affordable and open market housing. The market sector is not separate from the affordable housing challenge; it is part of how that challenge is addressed. The LHMA also makes clear that only a proportion of new households will require affordable housing because others will meet their needs through the market. This is another reason why the overall housing requirement matters so much.
There is also a more local point relevant to St Nicholas. The LHMA identifies St Nicholas & Llancarfan as a distinct housing market area and shows need arising there across tenures. It is therefore not correct to approach St Nicholas on the basis that only one tenure or one product type is needed. The evidence points to a requirement for a broader mix.
The Deposit Plan itself supports that conclusion. It acknowledges that, in meeting Policy SP7, a range of affordable tenures, types and sizes of homes will be required. It also records that the Council will seek to secure an appropriate level and mix of affordable housing in all proposed residential developments.
In our view, the main issue with Policy SP7 is therefore not its objective, but the fact that the rest of the strategy is not sufficiently ambitious to support it. The Plan cannot identify very substantial affordable need and then pursue a relatively low overall housing requirement combined with a narrow rural growth model. A sound approach would be to increase the overall housing provision and broaden the pool of sustainable and deliverable mixed-tenure sites so that affordable housing delivery through the planning system can be maximised. St Nicholas should form part of that response.
Policy SP8 – Affordable Housing Requirements Position: Support in principle / Object in part
Barratt Redrow supports the principle that residential development should contribute towards affordable housing need. However, there are concerns about how Policy SP8 interacts with the rest of the strategy, especially outside the Strategic Growth Area.
The Deposit Plan confirms that, within Primary and Minor Rural Settlements, new development will generally be required to provide 40% affordable housing. It also confirms that outside delineated settlement boundaries proposals for additional housing will be strictly controlled and limited to affordable housing exception sites or housing in support of rural enterprises. The Plan then layers on the separate affordable housing-led model under Policy HG4, where a minimum of 50% affordable housing is required.
In principle, Barratt Redrow has no issue with seeking ambitious affordable housing delivery where supported by viability evidence. The concern is that the overall strategy becomes too rigid when SP8 is read alongside SP2, SP3, HG4 and other potentially onerous policy requirements, including Policy CC1. In practice, this risks leaving sustainable settlements such as St Nicholas with very little scope to contribute to general housing delivery unless schemes meet a highly demanding affordable-led model. That is not a balanced or flexible way to plan for rural communities. It also gives rise to a lack of clarity between Policies SP7 and SP8 which should be addressed. Policy SP7 states that the mix of affordable housing to be delivered over the plan period will be “informed” by the LHMA, waiting list data and the Older Persons Housing Strategy, but it is unclear whether that is intended simply as a starting point for negotiation or whether the Council expects the identified mix to be applied more prescriptively. By contrast, Policy SP8 expressly provides greater flexibility: it states that affordable housing will be negotiated on a site-by-site basis having regard to evidenced viability, that the exact mix of affordable housing will be considered on a case-by-case basis having regard to the Council’s latest needs evidence, and that where proven economic circumstances affect delivery the Council may negotiate the level, type, tenure and nature of provision. In our view, those two policies should be aligned. That would better reflect Planning Policy Wales, which requires planning authorities to develop evidence-based market and affordable housing policies, but also makes clear that affordable housing targets and policy expectations must take account of deliverability and viability considerations. In that context, Policy SP7 should be clarified so that the LHMA and related evidence are expressly treated as guiding the starting point for discussions on mix, rather than imposing a fixed outcome irrespective of site-specific circumstances, technical constraints, abnormal costs or viability. That is especially important given the Deposit Plan’s blanket affordable housing percentages across the Vale and the cumulative effect of other policy requirements, which may affect the deliverability of particular allocations and should therefore be capable of being addressed on a site-by-site basis.The Deposit Plan recognises that an appropriate mix of affordable housing will be required, and that in the rural Vale there is a desire for smaller market homes as well as affordable homes. It also accepts that affordable housing delivery may be lower than anticipated because of viability constraints and that, where proven economic circumstances affect delivery, the Council may negotiate the level, type, tenure and nature of provision. This should feed through into a more flexible strategy overall. In particular, the Plan should not be read or applied in a way that suppresses the delivery of mixed-tenure schemes in sustainable rural settlements where those schemes can contribute both market and affordable housing and support local services. That is especially so given the evidence in the LHMA that a range of tenures is required and that intermediate and low-cost home ownership products are an increasingly important part of the housing response.
8. Policy HG1 / Housing Allocations and overall supply portfolio Position: Comment / Object in part
Barratt Redrow does not object in principle to the Council allocating key sites and other strategic locations. However, there remains a significant concern that the Plan is overly reliant on a relatively narrow supply portfolio.
The Deposit Plan confirms that the allocation component of supply comprises 2,278 dwellings on key sites, 959 dwellings on rolled forward sites, 161 dwellings on new housing allocations and 122 dwellings on affordable housing-led sites. It also confirms that 1,303 dwellings are expected from windfalls. That means a large proportion of the Plan’s supply is tied up either in a small number of large sites, historic carry-over, or a substantial assumption about unallocated windfall delivery.
Our earlier Preferred Strategy reps raised exactly this issue and those points should all be carried forward. In particular:
• the Plan is overly reliant on a small number of key sites;

• medium-sized sites in sustainable locations can provide resilience to the housing trajectory;
• windfalls account for a significant proportion of the supply and provide less certainty over geographical distribution and delivery; and
• rolled forward allocations require careful justification if they are to be relied upon as part of the plan's effective provision.
The Deposit Plan's own figures support that concern. It states that only a small proportion of development is likely to take place outside of the Strategic Growth Area, with some of this reflecting permissions granted under the adopted strategy. It also shows that the total housing provision attributable to Minor Rural Settlements and Primary Settlements outside the Strategic Growth Area is only 390 dwellings. In our view that is too low, particularly given the evidence that some of those settlements perform relatively well and can help diversify the supply portfolio.
Based on the revised RLDP Delivery Agreement, should there be no further slippage the RLDP will be adopted in September 2027 with there being some 7 years before the end of the plan period (of 2034) post-adoption. There may of course be some slippage in the adoption of the RLDP. We therefore would query whether the quantum of homes proposed on the larger Key Sites can realistically be delivered within the plan period.
The following conclusions of Lichfield's Start to Finish (2nd Edition, Feb 2020) research are relevant in this respect:
• From the date at which an outline application is validated, the average figures can be 5.0-8.4 years for the first home to be delivered.
• If a scheme of more than 500 dwellings has an outline permission, then on average it delivers its first home in circa 3 years.
• The average build out rate of sites between 500-999 dwellings is 68 homes per annum and 107 homes per annum for sites between 1,000 and 1,499 dwellings.
All of the Key Sites have no outline application having been submitted. Given the revocation of TAN 1 and Welsh Government's emphasis on a plan led system, the very earliest that the Key Sites could have outline permission in place would be post-adoption of the plan limiting its housing land supply contribution within the early years of the plan period. Allowing for an appropriate amount of time to secure necessary permissions, consents and infrastructure delivery, the Key Sites' contribution to housing supply within the plan period would fall significantly below the quantum currently assumed in the Preferred Strategy. In that context, it is all the more important that sustainable and deliverable medium-sized sites are included in the Plan where appropriate. Again, St Nicholas is an obvious example.
In short, the issue is not that key sites should not exist. It is that the current portfolio is not broad enough and not resilient enough. The Plan should be strengthened through the inclusion of additional medium-sized, sustainable allocations capable of delivery within the plan period.
Policy HG4 – Rural Affordable Housing Led Sites Position: Support in principle / Object in part
Barratt Redrow supports the principle of identifying rural affordable housing-led sites. It is entirely appropriate that the RLDP seeks to respond to local housing need in rural communities and to secure affordable provision in settlements where opportunities may otherwise be more limited.
However, Policy HG4 also illustrates the broader weakness in the Plan's current rural strategy. The Deposit Plan allocates four affordable housing-led sites at Colwinston, Aberthin, Wick and Fferm Goch, totalling 122 dwellings. It also requires applicants to demonstrate how both the market and affordable housing on those sites will meet local housing needs in terms of tenure, type and size, so that a range of housing is delivered to meet different groups in the community. The supporting text then expressly notes that Planning Policy Wales requires a sufficient number of sites suitable for the full range of housing types, and that in the rural Vale there is demand for smaller market homes as well as affordable homes.
Those are important statements and, in our view, they assist the case being made here. They show that the Council itself accepts that rural settlements need a range and choice of homes, not just affordable housing in isolation. They also show that some open market housing in rural locations is not only acceptable, but in fact part of how mixed communities and affordable delivery are achieved.
The problem is that the strategy remains too narrow in how it applies that logic. The Plan effectively says that outside the Strategic Growth Area, growth should generally be confined to affordable-led schemes with a minimum 50% affordable requirement, and anything below that will not be supported. In our view that is too rigid and may well suppress otherwise sustainable and beneficial development, particularly where sites are capable of delivering a strong policy-compliant affordable contribution but not necessarily the precise affordable-led model the Council has chosen.
We continue to raise concerns that a blanket 50% affordable requirement could create deliverability issues, including reliance on complex developer/RSL arrangements and a level of uncertainty around funding and market conditions. Without repeating every operational point, the central planning concern remains valid: the strategy should not be so rigid that it prevents settlements from growing and adapting in a sustainable way. This is especially the case given the ever more challenging delivery context set by increasingly onerous policy requirements.
St Nicholas is relevant here because it demonstrates the missed opportunity in the current approach. The village is expressly identified by the Council as one of the smaller rural settlements with a primary school serving a wider catchment area. It performs well in the settlement appraisal and is the sort of place where a sensitive mixed-tenure allocation could help support local services, provide both market and affordable housing, and diversify the Plan's supply. In our view, the omission of St Nicholas from the rural housing strategy is not justified by the evidence currently before the Council.
Policy CC1 – Residential Operational Net Zero Carbon Development Position: Object
Barratt Redrow supports the wider objective of improving the energy performance of new homes and reducing carbon emissions from development. However, Policy CC1 in its current form gives rise to a number of concerns regarding consistency with national standards, deliverability, viability and practical implementation. The Deposit Plan is explicit that Policy CC1 is intended to require new dwellings to exceed current Building Regulations standards. Welsh Government's own sustainable buildings guidance confirms that Building Regulations set mandatory standards for the design and

construction of buildings, including environmental performance. In our view, that raises a legitimate question as to whether an additional local policy layer of this kind is necessary or proportionate, particularly where it risks inconsistency across local planning authorities and may duplicate, or move ahead of, the national regulatory framework.
There is also a need for greater precision in the policy wording itself. As drafted, Policy CC1 requires development to provide on-site renewable electricity generation equivalent to at least the annual energy consumption of the development, assessed through an energy performance model. The supporting text explains that the relevant metric is Energy Use Intensity, which measures all energy consumed by the building. If the policy approach is to be progressed, the policy should make clear that compliance relates only to regulated energy use, consistent with Building Regulations methodology. Developers can influence the performance of the building fabric and regulated building services, but they cannot control future occupant behaviour, appliance use, plug loads or other forms of unregulated energy demand. Without that clarification, there is a risk that the policy extends beyond matters that can reasonably and consistently be secured through the planning process.
A further issue is that the policy should expressly allow its requirements to fall away, or be treated as satisfied, where national Building Regulations subsequently catch up with or exceed the standards sought under Policy CC1, or where the national regime adopts a different but equivalent methodology. Without such a safeguard, there is a real risk that the RLDP imposes outdated or duplicative requirements later in the plan period, which would not only create unnecessary complexity but could also compromise the delivery of much-needed housing. That concern is heightened by the cumulative policy burden elsewhere in the Plan, including affordable housing, open space, placemaking, green infrastructure and other low carbon requirements. In our view, the Council should therefore demonstrate, through its viability work, that the housing allocations in Policy HG1 are capable of absorbing the cumulative costs of Policy CC1 alongside the wider requirements of the RLDP.
Clarification is also required in relation to the fallback Project Zero Fund contribution. The Deposit Plan states that where it is not technically feasible to provide a policy-compliant level of renewable energy on site, the residual energy is to be offset through an appropriate contribution to the Council's Project Zero Fund "as far as economic viability allows", with further detail to be provided in SPG. In our view, that is presently too uncertain. The policy should make clear how any such contribution will be calculated, what assumptions will be used, what evidence will be required, and how viability will be taken into account. These are all matters which go directly to deliverability and should not be left entirely to post-adoption guidance.
In summary, Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net-zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy. If a local approach is to be taken, as a minimum, Policy CC1 should be amended so that: (i) it applies only to regulated energy use; (ii) its requirements fall away, or are deemed satisfied, where Building Regulations subsequently meet or exceed them or adopt an alternative national methodology; and (iii) the policy and supporting text provide a clearer framework for viability, Project Zero contributions and practical implementation.
Policy CI1 – Open Space Provision
Position: Support in principle / Object in part
Barratt Redrow supports the objective of ensuring that new development makes appropriate provision for open space and recreation. That is entirely consistent with good placemaking and with national policy support for healthy, inclusive and green environments. However, Policy CI1 as drafted is overly prescriptive and, in our view, requires amendment to provide greater flexibility and to better reflect local context and design-led principles.
The main concern is the way in which the policy translates the Fields in Trust benchmarks into a rigid per-dwelling requirement of 62.2 sq m per dwelling. The Deposit Plan itself recognises, at paragraph 6.233, that on-site provision should be design led rather than standards led, and that the type of provision should respond to local context and identified local need having regard to the Open Space Background Paper. That is an important and sensible acknowledgement. In our view, however, the policy wording pulls in the opposite direction by setting out what reads in practice as a uniform quantitative requirement. Fields in Trust guidance is ordinarily framed around population and typologies, to be applied strategically and flexibly, rather than as a blanket per-dwelling metric irrespective of scheme context, form and composition. A rigid application of the standard risks disproportionate land take, unnecessary design constraints and, ultimately, pressure on viability and delivery.
There is also concern regarding the separate requirement for an Open Space Strategy for all housing and commercial developments meeting the thresholds. In many cases, the provision of open space within a development will already be addressed through the Design and Access Statement, Green Infrastructure Statement and the overall layout and placemaking rationale of the scheme. We would therefore question whether a standalone Open Space Strategy is necessary in every case. In our view, the policy should be amended so that open space can be addressed through the principal design and green infrastructure material submitted with the application, unless there is a particular site-specific reason why a separate strategy is required. That would avoid unnecessary duplication without weakening the quality of assessment.
Change sought: amend Policy CI1 and supporting text to make clear that the benchmark standards are to be applied flexibly and strategically, having regard to site context, typology and local need, and that open space provision may be addressed through the Design and Access Statement and/or Green Infrastructure material rather than requiring a standalone Open Space Strategy in every case.
Policy SP4 – Placemaking
Position: Support in principle / Comment
Barratt Redrow supports Policy SP4 in principle. The emphasis on placemaking is fully consistent with Planning Policy Wales and with the Deposit Plan's wider design-led approach to development. The policy framework rightly seeks to ensure that major development is shaped by the placemaking principles from the outset.
That said, the wording of the policy should better reflect the position already set out in the supporting text. Paragraph

6.34 of the Deposit Plan makes clear that the required Placemaking Statement should form part of the Design and Access Statement for most major planning applications. That is helpful and sensible. In our view, the policy itself should say the same thing expressly, so that there is no suggestion that applicants are expected to prepare a separate freestanding document in addition to the DAS.
Suggested wording amendment:
"Major development proposals must be supported by a Placemaking Statement, to be incorporated within the Design and Access Statement where one is required, demonstrating clearly how the proposal accords with the placemaking principles of the Plan."
That amendment would improve clarity, avoid duplication and align the policy wording with paragraph
6.34 of the supporting text.
Policy SP5 – Creating Healthy and Inclusive Places and Spaces Position: Support in principle / Comment in part
Barratt Redrow supports the objective of creating healthy and inclusive places and spaces and agrees that health and well-being are legitimate and important planning considerations. The wider thrust of Policy SP5 is consistent with PPW's placemaking agenda and with the Deposit Plan's recognition that the built environment can have a significant influence on health outcomes.
However, there is a need to ensure that the assessment requirements under Policy SP5 are proportionate and do not create unnecessary cost and duplication. The policy requires all qualifying major development to undertake screening at pre-application stage and, for significant developments, a rapid Health Impact Assessment. The supporting text explains that a rapid HIA may involve literature review, stakeholder engagement and wider evidence gathering. In our view, whilst that may be appropriate for larger or more complex schemes, the policy should recognise more clearly that the health implications of development will often already be addressed through the Design and Access Statement, Placemaking Statement, Green Infrastructure material, Transport Assessment and related application documents. There is a risk that the current wording adds a further procedural burden, with associated cost implications, without always adding materially new value.
We therefore consider that the policy should be applied proportionately, with the checklist and any rapid HIA focused on developments where there is a realistic prospect of significant or complex health implications, rather than as a routine additional requirement in every qualifying case. The policy would also benefit from clarification that the conclusions of the screening/HIA can be incorporated into the main design and supporting statements submitted with the application, rather than requiring standalone reporting unless specifically justified by the scale or sensitivity of the proposal.
Change sought: amend Policy SP5 and/or its supporting text to confirm that health assessment requirements will be applied proportionately, and that the outcomes of the checklist or rapid HIA may be integrated within other application documents, including the Design and Access Statement, Placemaking Statement and Green Infrastructure material, unless a standalone report is specifically justified.
Policy CC2 – Presumption Against Demolition Position: Support in principle / Object in part
Barratt Redrow supports the broad objective of encouraging the repair, refurbishment, re-use and re-purposing of existing buildings where that represents the most sustainable outcome. The policy's underlying intent, to avoid unnecessary loss of embodied carbon and encourage circular economy principles, is understood.
Nevertheless, Policy CC2 as drafted is overly onerous and risks giving rise to unintended consequences for deliverability. The policy establishes a strong presumption against demolition and requires extensive justification through either a Demolition Statement or an Energy Report / Whole Life Carbon Assessment. Whilst that may be appropriate in certain cases, a blanket presumption of this kind risks frustrating otherwise sustainable redevelopment proposals, including proposals involving poor quality farm buildings, obsolete structures, and buildings that are not well suited to modern standards of layout, accessibility, thermal performance or efficient land use. In some cases, insisting on retention or retrofit may not represent the most sustainable outcome overall.
There is also a tension with the wider objective of making the most effective and efficient use of land. Some buildings may be technically capable of retention, but only at disproportionate cost, with compromised design outcomes or reduced site efficiency. On previously developed or rural redevelopment sites alike, that could affect development timescales, viability and ultimately the ability to bring forward policy-compliant schemes. The policy does contain some flexibility through criteria 3 and 4, which recognise that a lower net carbon solution may in some circumstances arise from demolition and redevelopment. However, in our view, the overall wording still leans too heavily towards a presumption against demolition rather than a balanced assessment of the most sustainable whole-life outcome in each case.
The policy would therefore benefit from a more balanced formulation which supports retention and reuse where appropriate, but does not create a disproportionate barrier to demolition where redevelopment would deliver a better placemaking, operational carbon, viability or land-use outcome. That is particularly important in relation to sites containing redundant agricultural or rural buildings, and sites where retrofit would be impractical, inefficient or environmentally sub-optimal.
Change sought: amend Policy CC2 so that it supports the retention and re-use of existing buildings where feasible and sustainable, but allows demolition where this would deliver a more effective overall development outcome having regard to whole-life carbon, operational performance, design quality, viability, land efficiency and deliverability.
Land at St Nicholas / omission from the Deposit Plan Position: Object to omission
Barratt Redrow objects to the omission of land at St Nicholas from the Deposit Plan.
The case for St Nicholas is, in our view, strong and is rooted in the Council's own evidence base. As already noted, the settlement performs strongly in the BP5 appraisal, the adopted LDP and current review both identify the role of minor rural settlements in supporting sustainable communities, and both the adopted LDP and the current Deposit Plan recognise the specific significance of St Nicholas as a village with a primary school serving a wider catchment area.
Deposit Plan Conclusion
Overall, Barratt Redrow is supportive of the Council's continued work in preparing the RLDP and supports the objective

of putting in place a robust, plan-led framework for growth in the Vale of Glamorgan. However, the Plan in its current form is not sufficiently ambitious and requires modification in order to be sound.
In particular:
• The Plan Period is too short. An extended plan period (and associated increase in housing requirement) is required to provide for at least ten years post adoption;
• the housing requirement under Policy SP6 is too low and is too closely tied to past build rates;
• the 10% flexibility allowance is not sufficient given the structure and risk profile of the supply;
• the Plan relies too heavily on key sites, rolled forward sites and windfalls;
• the strategy for settlements outside the Strategic Growth Area is too restrictive and does not properly reflect the evidence on bus-connected, serviceable and functionally linked settlements; and
• the omission of St Nicholas is not justified by the Council's own evidence base.
The evidence before the Council supports a stronger role for St Nicholas. The adopted LDP and current BP5 review both recognise the role of Minor Rural Settlements in supporting sustainable rural communities and providing for moderate growth. The Deposit Plan itself acknowledges St Nicholas' role as a settlement with a primary school serving a wider catchment area. The LHMA demonstrates that there is a need for a range of housing products and tenures, and the Deposit Plan itself accepts that rural areas require both affordable and market housing to meet local needs.
For those reasons, Barratt Redrow seeks amendments to Policies SP1, SP2, SP6, SP7, SP8 and HG4, together with a more flexible and resilient housing strategy overall, and the inclusion of land at St Nicholas as an appropriate and deliverable source of mixed-tenure housing growth within the RLDP period.
Candidate Site Register - Site ID 486
Land to the south of the A48 at St Nicholas (Site ID 486) is being promoted by Barratt Redrow for a residential-led development.
Stage 2 Candidate Site Assessment
The Council's Stage 2 Candidate Site Assessment states:
"The development would have an adverse impact on the character and setting of the St Nicholas Conservation Area and would also be considered to represent an unacceptable intrusion in to the open countryside. Predictive Agricultural Land Classification Map indicates that the site is Grade 3a agricultural land loss of this land would be contrary to national policy."
The key issues raised are all capable of being overcome as part of the ongoing promotion of the site, as set out below:
Impact upon Character and Setting of the St Nicholas Conservation Area
Wessex Archaeology have prepared a Heritage Appraisal in support of the site's development. This concludes that future development within the site would unlikely cause harm to the significance of the designated heritage assets if the development is in keeping with the surrounding built character.
The impact upon the character and setting of the St Nicholas Conservation Area is considered acceptable and the site is considered to be the best option to accommodate the growth of St Nicholas in a sensitive manner, particularly with regard to the following:
• The Site is located outside of the Conservation Area whereas other fields outside the settlement boundary (e.g. to the south of The Manor House) are within the Conservation Area;
• The Conservation Area covers the majority of St Nicholas and most options for the village's growth would be within its setting;
• PPW Para. 6.5.22 advises that proposals should be tested against a Conservation Area Appraisal where they are available. The St Nicholas Conservation Area Appraisal does not identify any features or important characteristics on the candidate site; and
• The proposals for the site are being developed so that they are sensitively designed, in keeping with the surrounding built character and retain important landscape features and views beyond the site.
Countryside Impacts
The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on key receptors, the landscape character and types within the proposed site and its surrounds, with the inclusion of appropriate green infrastructure enhancement and mitigation.
The emerging proposals have been underpinned by existing landscape features, with green infrastructure areas and landscape edges proposed within and around the site. New parkland and amenity spaces, footpaths along with a network of sustainable drainage features are incorporated with tree planting proposed throughout. It is accordingly considered that the proposals will sit well within the receiving landscape with limited impacts beyond its immediate setting.
Agricultural Land Quality
Technical Advice Note (TAN) 6 notes that agricultural land within Grades 1, 2, and 3a are considered to be the "most flexible, productive and efficient land in terms of output". Paragraph 3.59 of PPW sets out the search sequence when considering allocating land within LDPs stating that poorer quality agricultural land should be considered ahead of higher quality land. Accordingly, whilst the site comprises Grade 3a agricultural land quality based on the currently available survey data, it comprises the poorest quality of other options for growth around St Nicholas. There is an overriding need for housing growth as part of the preparation of the RLDP and the allocation of the site would accord with the search sequence set out in PPW.
As the proposals for the site develop further, there is scope to include allotments/community growing areas and open space areas allowing much of the very good quality soils to be retained. The soils that are retained on site in the open spaces and gardens will still be able to provide various ecosystem functions, particularly in the support of biodiversity, and water and carbon storage.
Appendix 2 – Summary of Assessment

We comment on the Council's Summary of Assessment as follows:
• Developer Interest: should be amended from red to green. The site is under single positive control by Barratt Redrow who have a track record of successfully developing residential-led sites within the Vale of Glamorgan.
• Historic Environment: should be amended from red to green. The site and proposal's potential impact upon the historic environment is outlined within the candidate site submission and earlier within these representations as being acceptable.
• Special Landscape Area and Glamorgan Heritage Coast Designations: should be amended from red to green. The Urbanists have undertaken a Landscape and Visual Appraisal in support of the site's development. It concludes that the site could be developed without causing unacceptable visual impacts on these designations.
• Environmental & Physical Constraints Conclusions: should be amended from red to green. The site is not subject to any environmental or physical constraints which cannot be accommodated through the sensitive design approach adopted by Barrat Redrow.
• Access/proximity to services and facilities conclusions: should be amended from amber to green. The Transport Appraisal which formed part of the candidate site submission evidences the site's accessibility and proximity to services and facilities.
• Connectivity and Capacity: should be amended from red to green. The candidate site submission demonstrates the site's capacity for the quantum of development proposed and its connectivity to the settlement and other key locations in the Vale of Glamorgan via sustainable transport modes.
• Climate Change: should be amended from red to green. The site is in a sustainable location, with a number of local facilities including a bus stop, a school, health and wellbeing facilities all within a short walk from the site as well as the retail facilities situated within acceptable cycling distances site and highly accessible by public transport. Overall, the accessible location of the development will mean that there is a reduced need for private car journeys, in turn reducing overall pollution. The development will be supported by a Travel Plan in favour of sustainable modes of travel. Moreover, the dwellings will be built to Part L 2025 which means the new homes will produce reduced levels of CO2.
• Placemaking Character and Place: should be amended from red to green. The proposals comply with the National Sustainable Placemaking Outcomes, as set out within the Appraisal which formed part of the candidate site submission.
• Suitable for Further Consideration: should be amended from red to green for the reasons set out below and within the candidate site submission.
Suitability for Allocation and Key Benefits
For the sake of brevity, we do not intend to repeat the considerable and detailed content of the Candidate Site Submission here. The previously submitted information however contained substantial information to support the allocation of the site as well as a detailed sustainability and connectivity appraisal undertaken in accordance with PPW. In summary, the submission demonstrated that the site is suitable for allocation within the Council's RLDP and its inclusion would help contribute to the overall soundness of the emerging Plan. The proposed site fully accords with National Sustainable Placemaking Outcomes and Sustainable Transport Hierarchy set out in PPW and the site is considered to be deliverable and viable.
The proposed development of the site would deliver the following key benefits:
• Delivering a range and choice of housing (including a proportion of affordable housing) in a sustainable location on a deliverable site which can contribute towards the resilience of the RLDP's housing trajectory and the effectiveness of the Plan;
• The proposals would support the vibrancy of St Nicholas with the site being closely related to the settlement and capable of integrating effectively with the settlement to the benefit of existing and proposed residents;
• The provision of multi-functional open space – including amenity space for residents, play spaces, potential for local growing spaces, nature walks, sustainable drainage and wildlife habitats to achieve biodiversity enhancements;
• Encouraging and supporting active travel with cleaner, greener travel choices and reduced out commuting being located close to public transport provision;
• Good quality open spaces with significant biodiversity benefits (delivering a biodiversity enhancement), surface water resilience and efficient energy, water and communications infrastructure;
• Economic benefits – including that the proposed development is expected to:
o Support the employment of 434 people;
o Create circa £1,687,420 in additional tax, including £158,124 in council tax revenue for the Vale of Glamorgan Council.
It is accordingly concluded that allocation of the site would contribute to the soundness of the RLDP and would accord with the well-being goals specified in the Well-being of Future Generations (Wales) Act 2015.
Barratt Redrow, Highlight Planning and the project team are keen to work collaboratively with the Council and other parties to demonstrate the suitability of the land for development and its identification as an allocation in the RLDP.
I trust the above representations assist in the Council's preparation of the RLDP. We would welcome the opportunity to discuss the above matters with the Council if that would be helpful. If you have any queries please do not hesitate to contact us.

Change suggested by respondent:

Amend Policy CC1.

Sound: Not specified

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: Barratt Redrow Homes [2669]

Agent: Turley

Summary:

Current Building Regulations are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across LPAs and may exceed what is necessary to align with national policy.

Full text:

Policy SP1 - Sustainable Growth Strategy

Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.

The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.

It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.

In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:

"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"

Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy

The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable. As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking

We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.

The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.

Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:

"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have

already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic

highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.
Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy Cll requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at

Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Document Element: CC1 - Residential Operational Net Zero Carbon Development
Respondent: Barratt Redrow Homes [2669]
Agent: Turley

Summary:

The policy should clarify that it applies only to regulated energy use.
If this policy is to be kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CC1 to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of the policy during the lifetime of the RLDP.
Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in the policy relate to the date of planning approval.
The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non-Material Amendment applications.

Full text:

Policy SP1 - Sustainable Growth Strategy
Policy SPl sets out that the plan will deliver 7,890 dwellings by 2036, including a minimum of 3,070 affordable homes. Policy SP1 also sets out that outside of the Strategic Growth Areas, the allocation of new sites will be limited to small-scale affordable housing led sites.
The number of households in VoG in mid-2021 (i.e. the start of the RLDP period) was 57,676. Based on Welsh Government's 2022-based household projections, the number of households is projected to increase to 67,299 in VoG in mid-2036 (i.e. the end of the RLDP period). This equates to a household increase of 9,623 which is 22.0% more than the 7,890 dwellings the RLDP targets in Policy SPl. In addition, the Development Plan Manual requires a conversion factor from households to dwellings with 4% being the baseline (it is acknowledged that this will vary depending on local circumstances). Taking a 4% uplift, the dwelling requirement figure would be 10,008 which is 26.8% more than the RLDP seeks to deliver in Policy SPl. The number of overall dwellings identified in Policy SPl will therefore not meet the identified household growth needs ofVoG for the RLDP period. The Council should review the position in terms of the updated household projections.
It is important to note that the above calculations are purely to meet newly arising need and do not make any allowance for existing unmet affordable housing needs or any policy aspirations. As stated in the supporting text of Sustainable

Growth Strategy 4 of the RLDP (paragraph 5.23) "The Local Housing Market Assessment (LHMA) 2023 identifies a need for 1,075 affordable homes per annum over the next five years based on principal projections or 1,114 based on the RLDP projections. There is an identified backlog of need across all the sub-market areas in the Vale of Glamorgan, and the issue is acute in many communities." Policy SPl seeks to deliver only 3,070 affordable homes over the RLDP period, equating to 205 affordable dwellings per annum. This is only 18.4% of identified need per annum for the five-year period from 2023-2028 in the LHMA. The number of affordable homes identified in Policy SPl therefore falls drastically short of the identified need for affordable homes in VoG for the RLDP period.
In order for Policy SPl to achieve the third test of soundness (Will the plan deliver?), the policy must be updated to accommodate a greater level of housing delivery, that reflects the most up to date evidence. The Development Plans Manual states:
"In terms of considering the level of housing provision for a plan, the most up-to- date suite of Welsh Government Population and Household Projections are a fundamental part of the evidence base [paragraph 5.35]"
Policy SP1 as drafted sets out that the allocation of new [housing] sites will be primarily focused within the Strategic Growth Areas (SGA) identified on the Key Diagram and outside of the SGA, the allocation of sites will be limited to small-scale affordable housing led sites. The identification of St Athan as a settlement where development should be concentrated is supported.

Policy SP2 - Settlement Hierarchy
The identification of St Athan as a 'Primary Settlement' is supported. It is important that sufficient growth is directed to the Primary Settlements to reflect the opportunities presented for delivering new homes, both market and affordable.
As recognised at Paragraph 6.11 of the Deposit Plan, St Athan is a key location for employment growth and also benefits from a range of services and facilities. This is also reflected in the Integrated Sustainability Appraisal (Paragraph 9.2.10), which recognises that locating new development in proximity to the Cardiff Airport and Bro Tathan Enterprise Zone will help integrate housing and employment, supporting sustainable travel and local labour markets. Future growth at St Athan will therefore support its role within the wider regional growth area, as well as existing and future transport proposals.

Policy SP4 - Placemaking
We support the recognition in Policy SP4 that successful placemaking can add social, economic, environmental and culture value to new development. Placemaking is an important part of all developments brought forward by Barratt Redrow.
The identification of high level placemaking principles in the Deposit Plan is supported, but a degree of flexibility should be applied. This is important to ensure the appropriate placemaking approach can be applied for each site / development. For example, it will not necessarily be appropriate for all developments to incorporate a 'diverse mix of uses... ' or to be developed at 'high densities... and supporting mixed uses'. Where developments are delivered on a phased basis, any mix of uses, residential densities etc may vary between each phase.
Policy SP4 also requires all major development to provide a 'Placemaking Statement'. It should be made clear in the Policy, as per Paragraph 6.34 of the Deposit Plan, that this is not expected to be a standalone statement, but will form part of a Design and Access Statement. We recommend the policy is amended as follows:
"Placemaking Statements will be required as part of Design and Access Statements for all... " Paragraph 6.33, which supports Policy SP4 should also be amended. It is not appropriate to state that development will be 'favoured' where meaningful community involvement has been demonstrated. Taking allocated sites, significant consultation will have already taken place through the LDP process,
with further engagement required at the application stage through the PAC process. The RLDP should be amended to note that consultation will be 'encouraged' or similar.

Policy PGDl - Creating Well Designed and Inclusive Places
There is a degree of crossover and repetition between Policy PGDl and Policy SP4. For clarity and brevity of the Plan, a single policy could be taken forward.

Policy PGD2 - Residential Site Densities
It is noted that the minimum density sought for sites within the Key, Service Centre and Primary Settlements is higher than that currently required by the adopted LDP. It is important that flexibility is adopted where proposed allocations in the RLDP crossover with existing LDP allocations.

This is relevant to Church Farm, St Athan, which is allocated in the adopted LDP. The Deposit Plan retains this allocation, but also proposes a further phase of development to the east (through Policy HGl KS4). A planning application is currently being prepared for the first phase of development (relating to the existing allocation), which accords with the adopted LDP requirement of 30 dph. The RLDP should recognise that flexibility will be required where sites are delivered on a phased basis, with earlier phases also being identified in the adopted LDP.

The inclusion of caveats recognising that lower residential densities can, in some cases, be acceptable is welcomed. It is important that the characteristics of each site/ surrounding context can be taken into account, along with sites constraints and other technical requirements (such as SuDS).

Policy SP6 - Housing Requirement
Policy SP6 currently includes a flexibility allowance of 10%. The provision of a flexibility allowance is supported, but it should be increased to 15%. The Development Plan Manual 3 indicates that 10% should be the starting point. This would

be consistent with a number of other adopted and emerging LDPs, which have been based on allowance above the standard 10% (e.g. adopted Bridgend LDP at 14% and emerging Monmouthshire LDP at 15%). A higher figure is considered appropriate due to the low level of new allocations, the limited number of key sites allocated in the plan and the need to increase the level of required growth (as referred to in our response to Policy SPl).

The number of homes delivered through new allocations should be increased to make the Plan more ambitious and align with Future Wales and the Vale's identified role as a National Growth Area.

Policy HSI - Housing Allocations
We support the identification of Church Farm, St Athan as a 'Key Site'.

The table within Policy HG1 should be amended to make it clear that the number of units listed for each site are approximate figures, allowing a degree of flexibility.

Policy HG1 KS4 - Land at Church Farm, St Athan
Paragraph 6.96 rightly acknowledges that the allocation will be delivered on a phased basis. With the first phase (the western parcel), representing land allocated through the adopted LDP. A hybrid planning application is due to be submitted in March 2026 for this phase of development. The application proposes 232 new homes and a new Class Al foodstore - as per Paragraph 6.99 of the Deposit Plan.
Paragraph 6.102 states that there is limited capacity in West Aberthaw Waste Water Treatment Works (WwTW). It continues by stating that if the development wishes to connect in advance of the planned AMP scheme, a Developer Impact Assessment to establish the reinforcement works needed at the WwTW will be required. It should be recognised in the Deposit Plan that this applies to the wider allocation, with sufficient capacity existing for the first phase of development.
Policy HG1 KS4 should be amended to read that the site will deliver "approximately 532 homes over the plan period... ".
The policy requires the development to comply with the Placemaking Principles set out in Policy SP4. This policy has been commented on separately, but as previously noted, it is important that the phased nature of the Church Farm development is recognised when applying the placemaking principles. As a result, there may be slight differences in what is appropriate across each phase.
The policy currently requires affordable dwellings to be dispersed across the site in clusters of not more than 10. This should be amended to clusters of no more than 15 units.
Policy HG1 KS4 also sets out a number of other requirements that the development "must" comply with. We do not support the current wording and use of "must comply with". Some of the requirements listed will require further consideration during the design development of the scheme. This will be supported by detailed technical work to be prepared in support of a future planning application. The wording should be amended to reflect that the list 'requirements' will be subject to further consideration, and should not be treated as definitive.
For example, the points listed under 'Sustainable Transport and Highways' should be informed by a Transport Assessment. This is reflected in Background Paper BP44 (Infrastructure Delivery Plan), which recognises that contributions towards off-site improvements to the capacity/ flow of junctions will be determined through a site-specific Transport Assessment.
The first bullet point under Policy HGl KS4 should be amended to read:
"A proportionate contribution towards off-site improvements to the capacity and flow of junctions on the strategic highway network, if identified as being necessary by a site-specific Transport Assessment". As per Policy HGl KS4, the first phase of development at Church Farm has been developed on the basis of an access point from Gileston Road. This is as per the request from the Highway Authority. The hybrid planning application will also deliver localised road widening on Gileston Road and provision of a new active travel route.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
The third bullet point under the 'Sustainable Transport and Highways' heading should be amended. Transport work undertaken to date has demonstrated that there is no need for a new signalised junction at Gileston Road/ B4265. The need for and nature of any work required to this junction should be determined through the planning application process, informed by a Transport Assessment. It is therefore not appropriate for the Policy to state that an upgraded signalised junction 'must' be provided. The intention is for a second access point to be provided for the second phase of development from the B4265. This is in line with the access strategy requested by the Highway Authority. The form and nature of this access point will be agreed through the planning application process, informed by a Transport Assessment.
The hybrid planning application for the first phase makes provision for a new pedestrian and vehicular access to St Athan Primary School. Whilst the developer can make provision for such a link, it will be down to the Highway Authority and Education Department to determine whether it is provided. Policy HGl KS4 should be amended to reflect that it is not within the developers gift to guarantee the link is taken up, delivered or actually 'replace' the existing access on Rock Road. At the moment is unclear what type of access could be sought (e.g. pedestrian and / or vehicular) and whether this would solely be through Phase 1 (as indicated by Figure 16).
Upgrades to existing bus infrastructure is expected to be delivery through planning obligations. Again, the nature of any improvements will be determined through the planning application process.
The Policy sets out a number of requirements relating to 'Community Infrastructure'. This includes the transfer of land to the east of St Athan Primary School and an off-site contribution towards the delivery of additional school places. No detail is provided as to the quantum ofland expected to be transferred. It is also noted that Policy CI3 states that land 'may be' required.

Whilst the principle of transferring land for the redevelopment I expansion of St Athan Primary School would be considered in principle by BWD, further information will be required to consider this request in full. As it stands, no information has been provided as to the extent ofland required. It is also important that Policy HG1 KS4 recognises that the need to provide for/ contribute towards education facilities will need to be determined at the point of any future planning application.
If a land transfer is required and agreed as part of the second phase of development at Church Farm, this must be reflected in any request for off-site contributions. Background Paper 44 (Infrastructure Delivery Plan) states that the second phase of development will require the transfer ofland, or a Section 106 contribution of £5.8 million. The basis and justification for this sum of contribution is not detailed within the Plan or supporting documents. Full details will need to be provided and considered at the planning application stage.

(continued) Policy HG1 KS4 - Land at Church Farm, St Athan
Policy HG1 KS4 also identifies the need for a contribution towards the provision and enhancement of community facilities in the area, and a contribution towards training and development for the commercial element of Phase 1. Whilst the principle of providing a community facilities contribution is accepted, evidence of need for such a contribution will be required at the planning application stage. The Policy should also be amended to recognise that training and development could either be provided a contribution or as part of the development itself.
The need to respect the setting of the listed War Memorial is reflected in the hybrid planning application due to be submitted imminently for Phase 1. The scheme has been carefully designed, with the relocation of the proposed foodstore to the northwest corner of the site, setting housing back from the B4265 and realignment of the central green corridor.
The importance of green infrastructure, recreation spaces and biodiversity is recognised and supported. Land at Church Farm offers the opportunity to deliver high-quality landscape buffers, accessible green space, integrated SuDS features and pedestrian and cycle connectivity with the village of St Athan and the wider strategic active travel route.
It is important that the Policy is not overly prescriptive about the types of green infrastructure and open spaces to be provided, which could potentially constrain the ability to deliver a design and landscape led masterplan. Instead, the policy should focus on outcome-based placemaking principles and flexibility in how these outcomes are achieved through design. It is also important that the ability to provide GI and open space across the site reflects other policy requirements, such as the delivery of SuDS.
The Deposit Plan includes an indicative plan for Church Farm at Figure 16. Whilst referred to as 'indicative', the purpose and status of this plan should be made clear in the supporting text. It should only be treated as illustrative, with the final development for Phase 1 and 2 being subject to further detailed design and technical work. For example, it is noted that within the Phase 1 development, land identified as 'Significant POS' on the plan is actually intended to accommodate the main attenuation basin. Whilst it would serve a qualitative purpose, it would not act as POS per se.

Policy SP7 - Affordable Housing Provision

The provision of a range of tenures, types and sizes of affordable homes is supported in principle. This should be assessed on a site by site basis at the application stage, with the LHMA being a starting point for discussions with the Housing Strategy Service. This flexibility will ensure that the most appropriate mix of dwellings is brought forward based on factors such as site characteristics, local context, placemaking etc.

It is also important that Policy SP7 acknowledges that affordable housing provision should also consider the evidenced viability of a development. This would be consistent with Policy SPS.

Policy SP8 - Affordable Housing Requirements

Recognition that the provision of affordable housing should be negotiated on a site by basis, considering the evidenced viability of a development, is supported. Recognition that the exact mix of affordable housing will need to be considered on a case-by-case basis is also welcomed. This is important to ensure sufficient flexibility when discussing the most appropriate mix of affordable homes at the application stage.

Policy TRI - Transport Proposals
Policy TRI states that to mitigate the impact of development on the highway network, strategic highway improvements have been identified to the Gileston Road junction in St Athan. As per our comments under Policy HG I KS4, the need, and nature of any works to the Gileston Road / B4265 junction must be informed by detailed technical work.

We can confirm that the first phase of development, which will be subject to a hybrid planning application in March 2026, has been designed to not prejudice any future improvement works to the junction (should measures be demonstrated as necessary in the future).

Policy SP12 - Retail Floorspace Provision
The identification of new convenience floorspace at Church Farm, St Athan is supported. The provision of new retail floorspace in this location will support the existing and future population of St Athan, reducing the need to travel to other settlements to serve their needs.

Policy SP13 - Community Infrastructure and Planning Obligations.
We support the recognition in Policy SP13 that any requirement for planning obligations must be appropriate and have

regard for development viability.
Policy SP13 also states that the delivery of new/ improved infrastructure should be timed to meet the needs of communities prior to, or from the commencement of, relevant phases of development. It must be recognised in the policy or supporting text that the delivery / timing of some infrastructure measures will be outside the control of developers I developments. This is particularly the case where financial contributions are made and measures will be delivered by others. Flexibility should therefore be allowed for through Policy SP13.

Policy Cll - Open Space Provision
The wording of Policy Cll, and/ or the supporting text, must allow greater flexibility to be applied to the open space standards. This is essential to ensure that the spaces provided are design, rather than standards led. It is also important that the type and range of provision is reflective oflocal context/ needs. This is reflected in Paragraph 6.233 of the Deposit Plan but Policy Cll should also be amended to reference this directly.

The proposed 62.2 sq m per dwelling requirement is overly prescriptive and not aligned with FiT's methodology, which is per person and intended to be applied strategically across different open space typologies, not as a uniform per dwelling metric. FiT's approach emphasises flexibility, multifunctionality and local context, meaning that applying a rigid per dwelling standard oversimplifies the guidance and risks generating disproportionate land take and unnecessary design constraints. When combined with the wider cumulative policy requirements of the RLDP, such an approach has the potential to impact development viability and reduce delivery.
The recognition that in some instances off-site contributions will be appropriate in lieu of on-site provision is welcomed.

Policy Cll requires an 'Open Space Strategy' to be submitted for all housing developments that meet the relevant thresholds. In many instances, the provision of open space within a scheme will be addressed through a Design and Access Statement and/ or Green Infrastructure. This ensures that open space provision is considered as part of the comprehensive approach to design, landscape and biodiversity. We would question the need for a standalone strategy or statement. The Policy should be amended to reflect this.

Policy CI3 - New Community Facilities
Policy CI3 identifies the 'allocation' ofland at St Athan Primary School for new community facilities. The supporting text (Paragraph 6.245) confirms that this land is allocated for the redevelopment and expansion of the existing school site. It continues by stating that a "small area of additional land may be required required ... to facilitate the delivery of the school" as part of the Key Site allocation at Church Farm. It states that improved access "may also be necessary".

As worded, the Policy is not clear what land is allocated - whether it is actually within the Primary School and/ or adjoining land. Ifland may be required within the Church Farm development (as implied by Policy HG1 KS4), it is currently unclear what quantum ofland would be sought. Whilst the principle of transferring land for expansion of the school (as part of Church Farm Phase 2) and facilitating improved access would be considered by BDW, it is important that what is being sought is clear.

It is important that there is coordination between policies in the Plan - for example, Policy CI3 and Policy HG1 KS4. This should include an amendment to Policy HG1 KS4 that the land 'may' be required, rather than must be provided. It is also important that ifland is provided for the school expansion, or improved access is facilitated, by the development at Church Farm, this is reflected in other requirements and expectations across the Plan (e.g. in terms of design, planning obligations etc).

Policy CCI - Residential Operational Net Zero Carbon Development
Current Building Regulations targets are sufficient to achieve Welsh Government's objectives for improving energy efficiency and delivering net zero carbon development. Additional local policy requirements risk creating inconsistency across Local Planning Authorities and may exceed what is necessary to align with national policy.

The policy should clarify that it applies only to regulated energy use. Developers have no control over how future homeowners use their homes, and therefore unregulated energy consumption such as appliance use, occupant behaviour, and plug loads, cannot form part of compliance requirements. This is consistent with Building Regulations methodology

Alternatively, if Policy CCI is kept in the RLDP, there must be some flexibility introduced for the requirements of Policy CCI to fall away should Building Regulations catch up or exceed or require different provisions than the requirements of Policy CCI during the lifetime of the RLDP. To not provide this flexibility would mean that the ability of the RLDP to deliver the new homes in VoG needs could be compromised. Clarification is also required on how the contribution to the Council's Project Zero fund is to be calculated and whether the timeframes in Policy CCI relate to the date of planning approval.
Furthermore, the demands of Policy CCI have to be considered in the context of all of the other requirements that impact on development viability (e.g. affordable housing). The Council must provide evidence that an assessment has been undertaken to demonstrate that development, specifically the housing allocations in Policy HGI, can bear the cumulative policy costs of the RLDP, including Policy CCL

The policy wording should be amended so that the performance requirements apply based on the date of planning permission rather than the RLDP adoption date. Changes in energy performance requirements can significantly affect

site layout, building orientation, and design considerations. Without this amendment, approved schemes could unnecessarily require variations via Section 73 or Non Material Amendment applications.

Change suggested by respondent:

Amend policy wording.

Sound: Not specified

Document Element: CC1 - Residential Operational Net Zero Carbon Development

Respondent: H Jones, L Sungur and P John [3741]

Agent: Herbert R Thomas Commercial Agents Cardiff

Summary:

Whilst some of the supporting text to policy CC1 references viability, the ultimate viability of developments however must not be compromised in order to ensure delivery of the plan. The technical feasibility of renewable energy regeneration is referenced in the above policy however the 'development viability' should also be included.

Full text:

Strong support is expressed for the proposed allocation at Land north of Westwinds, Fferm Goch of rural affordable-led housing within the Vale of Glamorgan Draft Local Development Plan (LDP) under policy HG4(4).
As part of our comments to the above policy consideration must be attributed to viability on a site specific basis. Furthermore, questions are raised over whether sufficient affordable dwellings are proposed to 2036 in the Vale given current trends and forecasts.

The inclusion of the site within the settlement boundary is logical especially when viewed in the context of the linear settlement of Fferm Goch. In addition the site is further suited to development allocation as the northern and southern boundaries are built up and the main road runs along the eastern boundary. A flexible approach is encouraged with regard to the delivery of the dwellings in relation to a variety of factors and policy provisions including the housing needs across the Vale, the limit on numbers of rural affordable led sites in minor rural settlements, viability implications relating to obligations/carbon Zero and sustainability obligations and the potential to extend the allocation if the need for homes requires.

The 3 land owners remain committed to this development and local developers are waiting to deliver the allocation.

In summary the extension to the settlement boundary of Fferm Goch, to include the allocation HG4(4) is supported. The attached representation is made under the following policies:
• Policy SP1 – Sustainable Growth Strategy
• Policy SP2 – Settlement Hierarchy
• Policy PGD2 – Residential Development Densities
• Policy SP6 – Housing Requirement
• Policy SP7 – Affordable housing provision
• Policy SP8 – Affordable housing requirements
• Policy HG4 – Rural Affordable Housing Sites
• Policy SP13 – Community Infrastructure and planning obligations
• Policy CI1 – Open space provision
• Policy SP16 – Climate change mitigation and adaptation
• Policy DNP1 – Special landscape Areas

The test of soundness for a Local Development Plan (LDP) is a critical component of the planning process to ensure that the plan is prepared in accordance with legal and procedural
requirements. It involves demonstrating that the plan is 'sound' based on three tests set out by the Welsh Government in the Development Plans Manual (Edition 3). These tests have therefore been considered in our representation, the tests include:

• Test 1: Does the plan fit? (i.e. is it clear that the LDP is consistent with other plans?)
• Test 2: Is the plan appropriate? (i.e. is the plan appropriate for the area in the light of the evidence?)
• Test 3: Will the plan deliver (i.e. is it likely to be effective?)

SP1 – Sustainable Growth Strategy

The promotion of small scale affordable housing led development outside of the SGA, as proposed by SP1 is important as this provides essential affordable and market homes in the rural locations of the Vale as well as the SGA. Their provision is critical in meeting the area's housing needs, particularly affordable dwellings and supporting rural community stability, and ensuring that all parts of the Vale remain a place where people of all incomes are able to live and thrive during the plan period to 2036 and beyond.

The essence of Policy SP1 is supported, however it is well documented that there is a backlog in delivery of affordable homes and the need for affordable housing in the Vale is exacerbated by the high prevalence of single person households plus households comprising couples with no children, The Vale also has one of the highest affordability pressures in Wales. As stated in the 2023 Local Housing Market Assessment (LHMA) for the Vale of Glamorgan , the median house price in the Vale is around 8 times the median household income, well above the affordability threshold of 4.5 to 5 times household income for borrowing purposes. Private rents have also risen sharply in the area, commonly placing them out of reach for many low-to-middle income households. All of the above place further pressure on the need to deliver affordable homes in the locality.

The LHMA identifies a need for 1,075 affordable homes per year over the next 5 years based on principal projections (or 1,114 based on the RLDP projections). As mentioned previously past delivery rates fall significantly short and therefore a backlog is present, however despite the reported backlog the RLDP only proposes 3,070 (205/annum) affordable dwellings over the plan period to 2036. Despite the growth strategy of policy SP1 and allocations made through the RLDP, the figure of proposed affordable dwelling numbers is concerning as it falls significantly short of the demand evidenced within the most recent evidence of LHMA of 2023.

The housing figures quoted in SP1 indicate 7,890 dwellings (including the 3,070 affordable dwellings) to 2036, however these figures overall are inadequate over the plan period when considered against the 2022 WG household projections. The 2022-based household projections provide an indication of the future number of households, and their composition, based on population projections and assumptions about households from recent censuses. The vale of Glamorgan demonstrates an increase of almost 12% in the number of households between mid-2022 and mid-2032; note this is the highest percentage increase by Local authority in Wales and way above the average for Wales as a whole (that stands at around 7% increase). The concern is whether Policy SP1 goes far enough in providing for the scale of housing (both open market, but particularly Affordable) development across the Vale.

Without targeted allocations outside of the SGA, as outlined in Policy SP1, the gap described above will continue to widen, forcing more residents to leave the area and weakening community cohesion.

SP2 – Settlement Hierarchy

Policy SP2 states a range of rural settlements are categorised as ‘Minor Rural Settlements’. Within the
RLDP the supporting text of Policy SP2 states:
‘several of the smaller rural settlements such as Colwinston, St Nicholas and Fferm Goch include primary schools that serve a wider catchment area, whilst others also provide small scale local employment opportunities, either within or near the settlements. Due to these functional links between rural settlements, it is essential to ensure that existing services and facilities are safeguarded, supported, or enhanced where appropriate’.(Paragraph 6.16)
Fferm Goch is categorised as a Minor rural settlement within the Settlement hierarchy and given its size and range of facilities/services this is supported. It is noted however that both Fferm Goch and Colwinston are identified as serving a wider catchment due to the provision of their primary schools. The allocation of HG4 site at Fferm Goch will further support and sustain the following:
• The Llangan primary school that sits in the southern portion of the settlement boundary.
• The existing employment site of WestWinds Business Park.
• The community hall (Llangan and St Mary Hill Village Hall) to the north of the settlement.
These existing services and facilities should be supported and sustained through the new housing allocation (HG4(4) in the immediate locality. This allocation supports the Vale’s own strategic objectives for

sustainable growth. Locating affordable-led developments in areas with existing infrastructure such as primary schools will reduce car dependency, lower carbon emissions, and contribute to the Council’s climate change commitments.

Considering the above, the limit on small scale rural affordable housing led developments (RAHLD) to 25 for these settlements is questioned and further flexibility recommended on a case by case basis. It is understood the limit on numbers was imposed due to the existing scale of the settlement in which the RAHLD are located, however those allocations will only likely deliver at 50% affordable and therefore only provide 12.5 (or 13) affordable units as a maximum (note Fferm Goch would provide 11 affordable dwellings on current figures of 22 total dwellings). Given the concerns raised in response to Policy SP1 there remains an issue of whether the numbers proposed in the RLDP can meet the demonstrable need for affordable homes and if there is scope on a RAHLD to sensitively increase unit numbers without any material harm then the policy should be flexible to accommodate this.

Wick and Culverhouse Cross have been elevated to Primary Settlements outside the SGA; this is supported given the range of facilities and services provided in these settlements. It is also supported that these settlements are able to provide affordable led residential development of up to 50 dwellings (delivering 25 affordable units). However the provision of an increased number of units in the Primary Non SGA settlements must not be at the expense of a wider number of smaller rural sites with the ability to sustain smaller communities across the Vale, especially given the shortfall in numbers as outlined above.

PGD2 – Residential Development Densities

The best use of finite land is set out in PPW and consistent with the setting of the densities as prescribed in policy PGD2. The policy is considered to meet the 3 tests of soundness.

The approach of policy PGD2 is also supported through the proposed density of the site North of Westwinds business park, Fferm Goch in HG4 (4). This allocation that proposes to provide a density of just over 30/ha within Fferm Goch, a minor rural settlement.

SP6 – Housing Requirement

Affordable housing forms an important part of the housing requirement figures of Policy SP6. Whilst the total 122 dwellings proposed under policy HG4 is a relatively small contribution to the overall figures it provides important spatial distribution of homes across the Vale within the rural area.
